## U.S. TEAM Guide, December 2018

### FOREWORD

This is ERDC/CERL SR-03-16. **The report is based on information available in the Federal Register as of 30 October 2018.** The research was performed for the following under the listed Military Interdepartmental Purchase Request (MIPR)/FAD numbers:

- Air Force, F2MUAA8057GW04, Technical Monitor is Joe Reyna (AFCEC)
- Air National Guard, F9WFEV7159GW01, Technical Monitor is Keith Harris (NGB/A7AN)
- Active Army, Army National Guard, and Army Reserve under ACSIM HQ FAD ID 2303. Technical Monitor is William Dzeda (ACSIM)
- Corps of Engineers, FAD 3058, Technical Monitor is John Coho (Civil Works)
- Defense Logistics Agency (DLA), SP10011800309, Technical Monitor is Pam Hillis
- Missile Defense Agency (MDA), HQ0147862516, Technical Monitor is Barbara M. Young (MDA)
- U.S. Navy, N6258318MPGBA02, Technical Monitor is Jenna Sells (Navy)
- U.S. Marine Corps, M9549417MPFZ004, Technical Monitor is LtCol Droste (Marine Corps)

The research was performed for the following under the listed IAA/IAG/MOU numbers:

- Department of Commerce, MOU 1301-15-SA00102, Order #4, Technical Monitor is Anna Kavalieris
- Department of Homeland Security (DHS), IAA NUAS-18-00021, Technical Monitor is Dennis McMenamin
- FAA, DTFAWA-15-E-70000, Technical Monitor is George Kelley
- Food and Drug Administration (FDA), IAA 224-18-8004S, Technical Monitor is Jay Collert
- NASA, NNH17IA20P, Technical Monitor is Michael J. Green
- National Park Service, Western Region, P17PG00154, Technical Monitor is Steve J. Mitchell (NPS)
- U.S. Fish and Wildlife Service (FWS), F18PG00040, Technical Monitor is Kimberley Washington (FWS)
- U.S. Geological Survey (USGS), G18PG0004, Technical Monitor is Dilip Singh (USGS)
- U.S. Postal Service, IAA-15-CERL-03, Technical Monitor is Diane Hanna (USPS)
- VHA, VA101F15M0005, Technical Monitor is Jody McClarin (CEOSH)

The research was performed by the Ecological Processes Branch (CN-N), Installations Division (CN), U.S. Army Engineer Research and Development Center – Construction Engineering Research Laboratory (ERDC-CERL). The Principal Investigator was Donna J. Schell, CN-N. At the time of publication, Chris Rewerts was Chief, CEERD-CN-N and Michelle Hanson was Chief, CEERD-CN. The Deputy Director of ERDC-CERL was Dr. Kirankumar Topudurti and the Director was Dr. Lance Hansen.

CERL is an element of the U.S. Army Engineer Research and Development Center (ERDC), U.S. Army Corps of Engineers. The Director of ERDC is Dr. David Pittman, and the Commander and Executive Director was COL Ivan P. Beckman.

## **NOTICE**

This guide is intended as general guidance for personnel at Federal facilities. It is not, nor is it intended to be, a complete treatise on environmental laws and regulations. Neither the U.S. Government nor any agency thereof, nor any of their employees, makes any warranty, expressed or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information contained herein. For any specific questions about, or interpretations of, the legal references herein, consult appropriate counsel.

Summary of Changes Since September 2018

14	Environmental Management Systems (EMS)	14-1

## PROGRAM BACKGROUND

The Environmental Assessment and Management (TEAM) Guide was developed by a Department of Defense (DOD) working group chaired by Headquarters, U.S. Air Force (HQ USAF)/CEV, based on the Interservice Training Review Organization (ITRO) 1993 tasking to develop a “purple” compliance checklist. Sharing a common checklist provides the commonality needed to combine the training of evaluators, provides an excellent day-to-day management tool for Federal facility level personnel, and makes sense and saves dollars. Within 1 yr, the working group formed, organized, defined its goal, and produced the parameters for the TEAM Guide. The first edition of TEAM Guide was published November 1994. In 1998 the TEAM Committee opened its membership to non-DoD Federal agencies.

An annual review meeting of the TEAM Committee is held each year for all participants. The hosting of the meeting is rotated among the participants. Questions concerning the working group should be directed to Donna J. Schell, USACERL/CN-N, telephone 217-373-5841; EMAIL: donna.j.schell@usace.army.mil.

The following are the participating Federal agencies that have agreed to share the cost of development and maintenance of U.S. TEAM.

### TEAM Guide Participants and POCs [Revised October 2018]

Air Force	Joe Reyna AFCEC/CZCA 2261 Hughes Ave, Ste 155 Lackland AFB, TX 78236-9853 Phone: 210-572-9316 Email: Jose.reyna.4@us.af.mil
Air National Guard	Keith Harris NGB/A7AN Shepperd Hall 3501 Fetchet Ave Joint Base Andrews, MD 20762-5157 Phone: 240-612-8327 Email: keith.m.harris6.civ@mail.mil
Army	William Dzeda Office of the Assistant Chief of Staff for Installation Management (OACSIM) Installation Services - Environmental Division Attn: DAIM-ISE 600 Army Pentagon Washington DC, 20310 Phone: 571-256-9724 Email: william.e.dzeda2.civ@mail.mil
Army National Guard	Phil Dao ARNGRC/NGB-ARE 111 S. George Mason Dr. Arlington, VA 22204-1382 Phone: 703-607-7998, Fax: 703-607-7993 Email: phil.dao@us.army.mil

---------	---

Any change or suggestion for improving this guide should be forwarded to USACERL/CN-N, ATTN: Donna J. Schell, PO Box 9005, Champaign, IL 61826-9005, FAX No. 217-373-6724, email: donna.j.schell@usace.army.mil and/ or the POC listed above. The document is updated quarterly.

For a copy of this document, send requests to the agency POC as listed above. Revisions are posted on FedCenter quarterly and an annual final version is published each September.

## **TEAM GUIDE CONTENTS AND UNDERLYING INTENT**

The contents of this guide are based on Federal environmental regulations and are to be supplemented locally using state and local environmental regulations that are applicable to facilities and are more stringent than Federal regulations included in this guide. This guide also is to be supplemented with the Federal agency specific supplements detailing individual agency programs and regulations. This guide, with local supplements, is intended to serve as the primary tool in conducting an environmental compliance assessment. Specifically, this guide:

1. compiles applicable Federal regulations with facility operations and activities
2. synthesizes environmental regulations, management practices (MPs), and risk management issues into consistent and easy to use checklists
3. serves as an aid in the assessment process and management action development phases of Federal agency environmental assessment programs.

## ORGANIZATION OF THE TEAM GUIDE

Federal facilities engage in many operations and activities that can cause environmental impacts on public health and the environment if not controlled or properly managed. Many of these activities and operations are regulated by Federal, state, and local regulations, and by Agency regulations/policies. After a review of these activities at Federal facilities, it is apparent that there are major categories of environmental compliance into which most environmental regulations and Federal agency activities could be grouped. This guide is divided into 14 sections that correspond to major compliance categories:

1. Air Emissions Management
2. Cultural Resources Management
3. Hazardous Materials Management
4. Hazardous Waste Management
5. Natural Resource Management
6. Other Environmental Issues
7. Pesticide Management
8. Petroleum, Oil, and Lubricant (POL) Management
9. Solid Waste Management
10. Storage Tanks Management
11. Toxic Substances Management
12. Wastewater Management
13. Water Quality Management (potable water).\
14. Environmental Management Systems (EMS)

Each section is organized in the following format:

- A. Applicability.** This provides guidance on the major activities and operations included in the section and a brief description of the major application.
- B. Federal Legislation.** This identifies, in summary form, the key legislative issues associated with the compliance area in the Federal law.
- C. State/Local Requirement.** This identifies the typical compliance areas normally addressed in state and local regulations. This section does not present individual state/local requirements. An assessment of state and local requirements must be conducted and supplemental questions prepared to cover these requirements. The guide is prepared in loose-leaf form to allow state and local requirements to be inserted easily.
- D. Key Compliance Requirements.** This summarizes the significant compliance requirements associated with the regulations included in the checklist. It is a brief abstract summarizing the overall thrust of the regulations for that particular compliance category.
- E. Key Compliance Definitions.** This presents definitions taken from the Code of Federal Regulations (CFRs) for those key terms associated with each compliance category.
- F. Records To Review.** This lists documents and records that should be reviewed during the assessment process for each section.
- G. Physical Features To Inspect.** A list of facilities and activities that should be assessed for compliance with that section.
- H. Guidance for Checklist Users.** This is a table of contents for the following checklist.
- I. Compliance Assessment Checklists.** The final portion of each section and its appendices contain checklists composed of requirements or guidelines that serve as indicators to point out possible compliance problems as well as practices, conditions, and situations that could indicate potential problems. These checklists are intended to focus attention on the key compliance questions and issues that should be investigated.

## USING THE CHECKLISTS

Please consult Appendices 3 and 4 for samples of a portion of a checklist.

- **Explanation of Layout/Content.** The checklist portion of the assessment section is divided into two columns. The first of these is a statement of a requirement. This may be a strict regulatory requirement, in which case the citation is given, or it may be a requirement that is considered to be a good management practice to maintain compliance, but which is not specifically mandated by regulation.

The second column gives instructions to help conduct the compliance assessment. These instructions are intended to be specific action items that should be accomplished by the investigator. Some of the instructions may be a simple documentation check that takes a few minutes; others may require physical inspection of a Federal facility.

- **Checklist Item Numbering.** The checklist items are each assigned a three-part number. The first part of the number indicates the section the checklist item is in (i.e., SO for Solid Waste Management, HW for Hazardous Waste Management). The second part of the number indicates the topic within the section. For example, in Appendix 3, the first topic is All Federal Facilities (SO.1). In Appendix 4, the requirements for small quantity generators (SQGs) are spread out among several topic numbers. This second part increases by increments of five to provide for room to add new topics to the checklist. The third number indicates the placement of the checklist item within the topic. These checklist item numbers will be kept static from this year to next year. New checklist items will be added at the end of topics or inserted as entirely new topics.
- **Standard Checklist Items.** The first checklist item under the first two headings (i.e., SO.1.1 and SO.2.1) of each section of the guide are standardized. The first heading item (SO.1.1) requires a review of any previous assessment documents and agreements. The second heading item (SO.2.1) provides a place for assessors to write up findings that are based on regulations that have been promulgated since the publication of the guide or regulations not included in the guide. Appendix 3 provides an example of these two checklist items as found in the Solid Waste Management section.
- **Inserting and Deleting Pages.** Each section is structured so an assessor does not have to carry the whole section while doing the assessment. For example, if the assessor was reviewing compliance at an SQG of hazardous waste (see the provided sample checklist items in Appendix 4) and knows that the facility does not generate any restricted wastes, the checklist items pertaining to restricted wastes at SQGs can be pulled out of the guide without deleting any checklist items pertaining to other topics. Pages from the Agency-specific Supplements or state guides can be inserted in the appropriate chapters.

The assessment procedures are designed as an aid and should not be considered exhaustive. Use of the checklist requires the assessor's judgment to play a role in determining the focus and extent of further investigation. A review of appropriate state regulations should be conducted so additional review questions that reflect the substantive requirements of state/local regulations pertinent to individual facilities can be included in the checklists.

Supplemental information to aid the assessor and the facility in the assessment process and the compliance process is included on the following pages.

## **ACCESSING TEAM GUIDE ONLINE**

A copy of TEAM Guide, Agency-specific Supplements, State Supplements, and OCONUS manuals are available online for users with access Fedcenter.gov on the Web. The URL for Fedcenter.gov is <http://www.fedcenter.gov/>. Access to the manuals on Fedcenter.gov is limited to Federal employees of agencies which are paying TEAM partners. These individuals must be a member (i.e., have a login and password) of Fedcenter.gov.

## **Appendix 1, Glossary of Acronyms**

**[Revised January 2002]**

AAR	annual application rate
ACHP	Advisory Council on Historic Preservation
ACBM	asbestos-containing building material
ACM	asbestos-containing material
AHA	American Hospital Association
AHERA	Asbestos Hazard Emergency Response Act
ANSI	American National Standards Institute
API	American Petroleum Institute
APE	area of potential effects
AQCR	air quality control region
ARAR	applicable or relevant and appropriate requirement
ARI	Air Conditioning and Refrigeration Institute
ARPA	Archeological Resources Protection Act
ASME	American Society of Mechanical Engineers
AST	aboveground storage tank
ASTM	American Society for Testing and Materials
BACT	best available control technology
BAT	best available technology
BCT	best conventional technology
BDAT	best demonstrated available technology
BOD5	5 day biochemical oxygen demand
BOF	basic oxygen furnace
BPT	best practicable technology
Btu	British thermal unit
C	compliance
CA	cost analysis
CAA	Clean Air Act
CAMU	corrective action management unit
CAP	corrective action plan
CARC	Chemical Agent-Resistant Coating
CAS	Chemical Abstract Service
CCR	Consumer Confidence Report
CDC	Centers for Disease Control
CDL	commercial driver's license
CEMS	continuous emissions monitoring system
CEQ	Council on Environmental Quality

## **Appendix 1, Glossary of Acronyms**

**[Revised January 2002]**

CERCLA	Comprehensive Environmental Response, Compensation, and Liability Act
CESQG	conditionally exempt small quantity generator
CEQ	Council on Environmental Quality
CFC	chlorofluorocarbons
CFR	Code of Federal Regulations
CFU	colony formation units
COD	certificate of disposal
COTP	Captain of the Port
CPE	comprehensive performance evaluation
CPG	comprehensive procurement guideline
CQA	construction quality assurance
CRMP	Cultural Resources Management Plan
CRP	community relations plan
CT	residual disinfectant concentration (C in CT calculation)
CWA	Clean Water Act
CWT	centralized waste treatment
CX	categorical exclusions
DA	Department of the Army
DBP	disinfection byproduct precursors
DCA	departmental consulting archaeologist
DD	decision document
DENIX	Defense Environmental Network and Information Exchange
DERP	Defense Environmental Restoration Program
DHMIR	detailed hazardous material incident report
DIY	do-it-yourself
DLA	Defense Logistics Agency
DOD	Department of Defense
DOE	Department of Energy
DOI	Department of the Interior
DOT	Department of Transportation
DRE	destruction and removal efficiency
EA	environmental assessment
EAF	electric arc furnace
EBL	elevated blood level
EE/CA	engineering evaluation/cost analysis

## **Appendix 1, Glossary of Acronyms**

**[Revised January 2002]**

EIS	environmental impact statement
EMI	electromagnetic interference
EMP	electromagnetic pulse
EO	Executive Order
EPA	Environmental Protection Agency
EPCRA	Emergency Planning and Community Right-to-Know Act
ESA	Endangered Species Act
EUP	experimental use permit
FAO	Federal agency official
FAR	Federal Acquisition Regulations
FDA	Food and Drug Administration
FFCA	Federal Facilities Compliance Act
FIFRA	Federal Insecticide, Fungicide, and Rodenticide Act
FOTW	Federally owned treatment works
FNSI	finding of no significant impact
FR	Federal Register
FUDS	formally used defense sites
FWCA	Fish and Wildlife Conservation Act
FWS	Fish and Wildlife Service
FY	fiscal year
GGTP	gamma glutamyl transpeptidase
GWP	global warming potential
HAA5	haloacetic acids (five)
HAP	hazardous air pollutant
HCFC	hydrogenated chlorofluorocarbons
HCL	hydrogen chloride acid
HDPE	high density polyethylene
HEPA	high efficiency particulate air
HMIWI	hospital/medical/infectious waste incinerators
HOC	halogenated organic compounds
HPC	heterotrophic plate count
HPO	Historic Preservation Officer
HTRW	hazardous, toxic, and radioactive waste
HWM	hazardous waste management
HVLP	high volume low pressure
IAF	induced air flotation

## **Appendix 1, Glossary of Acronyms**

**[Revised January 2002]**

IAG	interagency agreement
IARC	International Agency for Research on Cancer
IBC	intermediate bulk container
ICAO	International Civil Aviation Organization
ID	identification
IOC	inorganic chemicals
IOPP	international oil pollution prevention
IRP	Installation Restoration Program
ISS	interim status standards
LAER	lowest achievable emission rate
LBP	lead-based paint
LDPE	low density polyethylene
LDR	land disposal restriction
LPG	liquid petroleum gas
LQG	large quantity generator
MBtu	Million British thermal units
MCL	maximum contaminant level
MCLG	maximum contaminant level goal
MDL	minimum detection level
MOA	memorandum of agreement
MODEF	mineral oil dielectric fluid
MOU	memorandum of understanding
MP	management practice
MPCD	marine pollution control device
MPN	most probable number
MPT	marine portable tanks
MRDL	maximum residual disinfectant level
MRDLG	maximum residual disinfectant level goal
MRL	minimum reporting level
MSDS	material safety data sheet
MSWLF	municipal solid waste landfill
MVAC	motor vehicle air-conditioner
MWC	municipal waste combustor
NA	not applicable
NAAQS	National Ambient Air Quality Standard
NAGRPA	Native American Graves Protection and Repatriation Act

## **Appendix 1, Glossary of Acronyms**

**[Revised January 2002]**

NASA	National Aeronautics and Space Administration
NACE	National Association of Corrosion Engineers
NARA	National Archives and Records Administration
NCP	national contingency plan
NEPA	National Environmental Policy Act
NESHAP	national emission standards for hazardous air pollutants
NFPA	National Fire Protection Association
NGB	National Guard Bureau
NHPA	National Historic Preservation Act
NIOSH	National Institute of Occupational Safety and Health
NLS	noxious liquid substance
NOI	notice of intent
NOV	notice of violation
NPDES	National Pollutant Discharge Elimination System
NPDWR	National Primary Drinking Water Regulation
NPL	National Priorities List
NRC	National Response Center
NSPS	new source performance standards
NTNC	nontransient noncommunity
NTP	National Toxicology Program
O&M	operations and maintenance
OB/OD	open burning/open detonation
ODA	Ocean Dumping Act
ODP	ozone depleting potential
ODS	ozone depleting substance
OECA	Office of Enforcement and Compliance Assurance
OHSPC	Oil and Hazardous Substances Pollution Contingency Plan
OMB	Office of Management and Budget
OPA	Oil Pollution Act
ORV	off-road vehicle
OSC	on-scene coordinator
OSHA	Occupational Safety and Health Act
PA	preliminary assessment
PCB	polychlorinated biphenyl
PEL	permissible exposure limit
PFC	perfluorocarbons

## **Appendix 1, Glossary of Acronyms**

**[Revised January 2002]**

PL	Public Law
PM	particulate matter
PMN	premanufacture notice
POC	point of contact
PODF	performance-based organic decontamination fluid
POHC	principle organic hazardous constituent
POL	petroleum, oil, and lubricant
POTW	publicly owned treatment works
PPA	Pollution Prevention Act
PPE	personal protective equipment
PQL	practical quantitation limit
PSD	prevention of significant deterioration
PSES	pretreatment standards for existing sources
PSNS	pretreatment standards for new indirect sources
PVC	polyvinyl chloride
PWS	public water system
PWSS	Public Water System Supervision
QA	quality assurance
RACM	regulated asbestos containing material
RCRA	Resource Conservation and Recovery Act
RD/RA	remedial design/remedial action
REC	Regional Environmental Coordinator
REI	restricted-entry interval
RDS	raw duplicate sample
RFS	raw field sample
RI/FS	remedial investigation/feasibility study
RMA	requires management action
RMAN	recovered materials advisory notice
RMP	risk management program
ROD	record of decision
RPD	relative percent difference
RQ	reportable quantity
RSPA	Research and Special Programs Administration
SARA	Superfund Amendments and Reauthorization Act
SCBA	self-contained breathing apparatus
SDWA	Safe Drinking Water Act

## **Appendix 1, Glossary of Acronyms**

**[Revised January 2002]**

SGOT	serum glutamic oxaloacetic transaminase
SGPT	serum glutamic pyruvic transaminase
SHPO	State Historic Preservation Officer
SI	site inspection
SIC	Standard Industrial Classification
SIP	State Implementation Plan
SIR	statistical inventory reconciliation
SMCL	secondary maximum contamination level
SMSA	Standard Metropolitan Statistical Area
SNAP	Significant New Alternatives Policy
SOC	synthetic organic chemicals
SOI	Secretary of the Interior
SOP	standard operating procedure
SOUR	specific oxygen uptake rate
SPCC	Spill Prevention Control and Countermeasure Plan
SPDES	State Pollution Discharge Elimination System
SQG	small quantity generator
STP	sewage treatment plant
SUVA	specific ultraviolet absorption
SWMU	solid waste management unit
SWTR	Surface Water Treatment Rule
TASC	training aid support centers
TCLP	toxicity characteristics leaching procedure
TDS	treated duplicate sample
TEC	transport equipment cleaning
TFS	treated field sample
THM	trihalomethanes
THPO	tribal historic preservation officer
TNT	ammonia nitrate explosive (trinitrotoluene)
TOC	total organic carbon
TPQ	threshold planning quantity
TRC	Technical Review Criteria
TRI	Toxic Release Inventory
TSCA	Toxic Substances Control Act
TSDF	treatment, storage, or disposal facility
TSS	total suspended solids

## **Appendix 1, Glossary of Acronyms**

**[Revised January 2002]**

TTHM	total trihalomethanes
TTO	total toxic organics
TU	temporary unit
UCM	unregulated contaminant monitoring
UCMR	unregulated contaminant monitoring regulation
UIC	underground injection control
UL	Underwriter's Laboratory
USACERL	U.S. Army Construction Engineering Research Laboratories
USC	U.S. Code
USDA	U.S. Department of Agriculture
USEPA	U.S. Environmental Protection Agency
USFWS	U.S. Fish and Wildlife Service
UST	underground storage tank
VHAP	volatile hazardous air pollutant
VOC	volatile organic compound
VOL	volatile organic liquid
XRF	x-ray fluorescence

## Appendix 2, Commonly Used Abbreviations

bbl	barrel	µg	microgram
C	Celsius	µm	micrometer
cm	centimeter	min	minute
cm <sup>2</sup>	square centimeter	MJ	Megajoule
dscf	dry standard cubic foot	mo	month
dscm	dry standard cubic meter	mm	millimeter
F	Fahrenheit	mrem	millirem
ft	foot	MW	Megawatt
ft <sup>2</sup>	square feet	ng	nanogram
ft <sup>3</sup>	cubic feet	NTU	nephelometric turbidity unit
g	gram	oz	ounce
gal	gallon	pCi	picoCurie
gJ	gigajoule	ppm	part per million
h	hour	ppmv	part per million by volume
ha	hectare		
hp	horsepower	ppmw	part per million by weight
in.	inch	psi	pound per square inch
J	Joule	psia	pounds per square inch absolute
kg	kilogram	psig	pounds per square inch gauge
km	kilometer	qt	quart
kPa	kilopascals	s	second
L	liter	scf	standard cubic foot
lb	pound	scm	standard cubic meter
m	meter	TU	turbidity unit
m <sup>3</sup>	cubic meter	V	volt
meq	milligram equivalent	yd	yard
mg	milligram	yd <sup>2</sup>	square yard
mi	mile	yr	year
mL	milliliter		

### Chemicals

CO	carbon monoxide	NO <sub>2</sub>	nitrogen dioxide
CO <sub>2</sub>	carbon dioxide	NO <sub>x</sub>	nitrogen oxides
Hg	mercury	SO <sub>2</sub>	sulfur dioxide

Appendix 3, Standard Checklist Items	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: September 1998
<p><b>SO.1</b></p> <p><b>ALL FEDERAL FACILITIES</b></p> <p><b>SO.1.1.</b> The current status of any ongoing or unresolved consent orders, compliance agreements, notice of violations (NOVs), inter-agency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, interagency agreements, or equivalent state enforcement actions.</p>

Appendix 3, Standard Checklist Items	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: September 1998
<p><b>SO.2</b></p> <p><b>MISSING CHECKLIST ITEMS</b></p> <p><b>SO.2.1.</b> Federal facilities are required to comply with all applicable regulatory requirements not contained in this checklist (a finding under this checklist item will have the citation of the applied regulation as a basis of finding).</p>	<p>Determine if any new regulations have been issued since the finalization of TEAM.</p> <p>Determine if the Federal facility has activities or facilities that are regulated, but not addressed in this checklist.</p> <p>Verify that the Federal facility is in compliance with all applicable and newly issued regulations.</p>

Appendix 4, Sample Checklist Items [Revised June 1998]	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: September 1998
<p><b>SQGs</b></p> <p><b>HW.25 Personnel Training</b></p> <p><b>HW.25.1.</b> SQG personnel are required to be thoroughly familiar with proper waste handling and emergency procedures (40 CFR 262.34(d)(5)(iii)) [February 1995].</p> <p><b>HW.25.2.</b> Training records should be maintained for all SQG staff who manage hazardous waste (MP).</p>	<p>Verify that personnel are thoroughly familiar with waste handling and emergency procedures relevant to their responsibilities during normal facility operation and emergencies.</p> <p>Examine training records and verify that they include the following:</p> <ul style="list-style-type: none"> <li>– job title and description for each employee by name</li> <li>– written description of how much training each position will obtain</li> <li>– documentation of training received by name.</li> </ul> <p>Determine if training records are retained for 3 yr after employment terminates at the Federal facility or until closure of the facility.</p>

<b>SQGs</b>
-------------

## HW.30

### Containers

**HW.30.1.** Empty containers at SQGs previously holding hazardous wastes must meet the regulatory definition of empty before they are exempted from hazardous waste requirements (40 CFR 261.7).

Verify that, for containers or inner liners holding hazardous waste:

- all wastes are removed that can be removed using common practices and no more than 2.5 cm [1 in.] of residue remains
- if the container is less than or equal to 110 gal, no more than 3 percent by weight of total container capacity remains
- when the container is greater than 110 gal, no more than 0.3 percent by weight of the total container capacity remains.

- Verify that, for containers that held a compressed gas, the pressure in the container approaches atmosphere.

approaches atmosphere.

Verify that, for containers or inner liners which held an acute hazardous waste listed in Appendix 4-5, one of the following is done:

- it is triple rinsed
- it is cleaned by another method identified through the literature or testing as achieving equivalent removal
- the inner liner is removed.

**HW.30.2.** Containers used to store hazardous waste at SQGs must be in good condition and not leaking (40 CFR 262.34(d)(2) and 265.171).

Verify that containers are not leaking, bulging, rusting, damaged, or dented.

Verify that waste is transferred to a new container or managed in another appropriate manner when necessary.

**HW.30.3.** Containers used at SQGs must be made of or lined with materials compatible with the waste stored in them (40 CFR 262.34(d)(2) and 265.172).

Verify that containers are compatible with waste, in particular, check that strong caustics and acids are not stored in metal drums.

**HW.30.4.** Containers of hazardous waste at SQGs must be closed during storage and handled in a safe manner (40 CFR 262.34(d)(2) and 265.173).

Verify that containers are closed, except when it is necessary to add or remove waste (check bungs on drums).

Verify that handling and storage practices do not cause damage to the containers or cause them to leak.

<b>Appendix 4, Sample Checklist Items</b> <b>[Revised June 1998]</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS:</b> <b>September 1998</b>
<p><b>HW.30.5.</b> The handling of incompatible wastes, or incompatible wastes and materials in containers at SQGs, must comply with safe management practices (40 CFR 262.34(d)(2) and 265.177).</p>	<p>Verify that incompatible wastes or incompatible wastes and materials are not placed in the same containers unless it is done so that it does not:</p> <ul style="list-style-type: none"> <li>– generate extreme heat or pressure, fire, or explosion, or violent reaction</li> <li>– produce uncontrolled toxic mists, fumes, dusts, or gases in sufficient quantities to threaten human health</li> <li>– produce uncontrolled flammable fumes or gases in sufficient quantities to pose a risk of fire or explosions</li> <li>– damage the structural integrity of the device or facility</li> <li>– by any other like means threaten human health.</li> </ul> <p>(NOTE: Incompatible wastes as listed in Appendix 4-6 should not be placed in the same drum.)</p> <p>Verify that hazardous wastes are not placed in an unwashed container that previously held an incompatible waste or material.</p> <p>Verify that containers holding hazardous wastes incompatible with wastes stored nearby in other containers, open tanks, piles, or surface impoundments are separated or protected from each other by a dike, berm, wall, or other device.</p>
<p><b>HW.30.6.</b> Containers of hazardous waste at SQGs should be managed in accordance with specific management practices (MP).</p>	<p>Determine the following by inspecting containers and storage areas:</p> <ul style="list-style-type: none"> <li>– containers are not stored more than two high and have pallets between them</li> <li>– containers of ignitable wastes are electrically grounded (check for clips and wires and make sure wires lead to ground rod or system)</li> <li>– at least 3 ft of aisle space is provided between rows of containers.</li> </ul>

<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS:</b> <b>September 1998</b>
<p><b>HW.45.4.</b> SQGs are required to keep specific documents pertaining to restricted wastes onsite (40 CFR 268.7(a)(4), 268.7(a)(6), 268.7(a)(7) and 268.7(a)(10))[Revised June 1998].</p> <p><b>HW.45.5.</b> The storage of hazardous waste that is restricted from land disposal is not allowed unless specific conditions are met (40 CFR 268.50).</p>	<p>agreement. The SQG will retain an onsite copy of the notification and certification along with the tolling agreement for at least 3 yr after the termination or expiration of the agreement.)</p> <p>Verify that, if generator knowledge is used to determine whether a waste or contaminated soil meets land disposal restriction requirements, the supporting data used in making this determination is retained onsite in the Federal facility operating files.</p> <p>Verify that, when it is determined whether a waste or contaminated soil is restricted using appropriate test methods, the waste analysis data are retained onsite in the files.</p> <p>Verify that, when managing a prohibited waste that is excluded from the definition of a hazardous waste or solid waste or exempt from RCRA Subtitle C, a one-time notice is placed in the files stating that the generated waste is excluded.</p> <p>Verify that a copy of all notices, certifications, demonstrations, waste analysis data, and other documentation is kept for at least 3 yr from the date the waste was last sent to onsite or offsite treatment, storage, or disposal.</p> <p>Verify that SQGs with a tolling agreement retain the agreement and copies of notification and certification for at least 3 yr after the agreement expires.</p> <p>Verify that land disposal restricted waste is not stored at the Federal facility unless: the SQG is storing the wastes in tanks, containers, or containment buildings onsite only for the purpose of accumulating enough hazardous waste to facilitate proper recovery, treatment, or disposal and all appropriate standards for containers, tanks, and containment buildings are met.</p> <p>Verify that transporters do not store manifested shipments of land disposal restricted wastes for more than 10 days.</p> <p>(NOTE: The prohibition on storage does not apply to hazardous wastes that have met treatment standards.)</p> <p>Verify that liquid hazardous wastes containing PCBs at concentrations greater than 50 ppm are stored at a site that meets the requirements of 40 CFR 761.65(b) (see the section titled Toxic Substances Management) and is removed from storage within 1 yr of the date it was first placed into storage.</p>

## SECTION 1

### AIR EMISSIONS MANAGEMENT U.S. TEAM Guide, December 2018

#### A. Applicability

This section includes regulations, responsibilities, and compliance requirements associated with air pollution emissions from stationary and mobile sources. The significant types and sources of air pollution emissions include:

- Particulates, SO<sub>2</sub>, NO<sub>x</sub>, CO, volatile organic compounds (VOCs), and hazardous air pollutants from fuel burning at steam and hot water generation plants and boilers.
- Particulates and toxic air emissions from the operation of hazardous waste, general waste, classified material, and medical, pathological, and/or infectious waste incinerators.
- Particulates, CO, metals, and toxic air pollutant emissions from open burning and open detonation operations.
- The emission of VOC vapors from the operation of degreasers and other processes (paint stripping and metal finishing) that use solvents.
- The emission of CO from vehicles and equipment.
- Fugitive particulate emissions from training activities and construction/ demolition operations.

Most facilities and activities have air emissions sources in one or more of these categories. Therefore this section is applicable to some extent at all facilities.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

#### B. Federal Legislation

- *The Clean Air Act Amendments of 1990 (CAAA90)*. This act, Public Law (PL) 101-549 (42 U.S. Code (USC) 7401-7671q), is currently the Federal legislation regulating the prevention and control of air pollution. It is composed of seven major titles that address various aspects of the national air pollution control program:
  1. Title I describes air pollution control requirements for geographic areas in the United States with respect to the National Ambient Air Quality Standards (NAAQS).
  2. Title II deals mostly with revised tailpipe emission standards for motor vehicles. These requirements compel automobile manufacturers to improve design standards to limit CO, hydrocarbon, and NO<sub>x</sub> emissions. Oxygenated gasoline will be required in cities with the worst ozone and CO nonattainment. Reformulated gasoline and gasoline with reduced Reid vapor pressure is used in ozone nonattainment areas.
  3. Title III potentially contains the most costly requirement of the CAAA90. The major elements of Title III deal with hazardous air pollutants through control of routine emissions, and contingency planning for accidental releases.
  4. Title IV addresses acid deposition control and applies only to commercial utilities that produce electricity for sale.
  5. Title V outlines the requirement of having states issue Federally enforceable operating permits to major stationary sources. The permits are designed to enhance the ability of the U.S. Environmental Protection Agency (USEPA), state regulatory agencies, and private citizens to enforce the requirements of the CAAA90. Permits will also be used to specify operation and control requirements for stationary sources.
  6. Title VI limits the emissions of chlorofluorocarbons (CFC), halons, and other halogenated chemicals that contribute to the destruction of stratospheric ozone. These requirements closely follow the control strategies recommended in June 1990 by the second meeting of parties to the Montreal Protocol. Also, procurement of ozone depleting substances is restricted by Federal agency acquisition policies.
  7. Title VII describes civil and criminal penalties that may be imposed for violation of new and existing air pollution control requirements. This title also gives authority to the USEPA to issue field citations for many types of violations.

- The Department of Justice, Office of Legal Counsel decision issued 16 July 1997 stipulates the USEPA is administratively authorized under the CAA to assess civil penalties against Federal agencies for violations of the CAA. States on the other hand, do not have the authority to assess civil penalties against Federal agencies for violations of the CAA **[Revised June 1998]**.
- *The Federal Water Pollution Control Act*. This act, commonly known as the Clean Water Act (CWA) governs the control of water pollution in the nation. The objective of this Act is to restore and maintain the chemical, physical, and biological integrity of the nation's waters. This act led to the promulgation of regulations concerning the incineration of sewage sludge. The regulations implementing regulations for the control of emissions from the incineration of sewage sludge are found in 40 CFR 503.40 through 503.48.
- *Resource Conservation and Recovery Act (RCRA) of 1976*. This is the Federal law that governs the disposal of solid waste. Subtitle D of this act, as last amended in November 1984, PL 98-616, 42 USC 6941-6949a, establishes Federal standards and requirements for state and regional authorities respecting solid waste disposal. The objectives of this subtitle are to assist in developing and encouraging methods for the disposal of solid wastes which are environmentally sound and which maximize the utilization of valuable resources recoverable from solid waste. The objectives are to be achieved through Federal technical and financial assistance to states and regional authorities for comprehensive planning (42 USC 6941).
- *Energy Policy Act of 1992 (EPACT)* – This act sets forth the statutory requirements for the acquisition of alternative fuel vehicles (AFVs) by Federal agencies. In fiscal year 2000 and beyond, 75 percent of light-duty vehicle acquisitions in “covered” fleets must be AFVs. In general, the EPACT requirements apply to agency fleets of 20 or more light-duty vehicles (vehicles under 8,500 lbs) that are “centrally fueled or capable of being centrally fueled” and are primarily operated in Metropolitan Statistical Areas (MSAs) or Consolidated Metropolitan Statistical Areas (CMSAs) with populations of 250,000 or more according to 1980 census data. Vehicles that do not meet these requirements are considered geographically exempt from the EPACT requirements. EPACT provides certain exemptions for law enforcement, emergency, and national security vehicles **[Added April 2005]**.
- *The Federal Employees Clean Air Incentives Act* – This act, dated 2 December 1993 (Public Law 103-172), was designed to improve air quality and reduce traffic congestion by having Federal agencies encourage their employees to commute by means other than single-occupancy vehicles. The legislation permitted the head of each agency to establish programs to promote initiatives such as transit passes, furnishing space, facilities or services to bicyclists, and provide nonmonetary incentives such alternative work schedules, flextime, telework, flexiplace, and related parking and shuttle arrangements **[Added April 2005]**.
- *Instructions for Implementing Climate Change Adaptation Planning in Accordance with Executive Order 13514*. This document, dated 4 March 2011, is issued by the Council on Environmental Quality (CEQ). The purpose of this document is to provide implementing instructions to be used by Federal agencies in climate change adaptation planning **[Added April 2011]**.
- EO 13150, *Federal Workforce Transportation* – This EO, dated 21 April 2000, was enacted to help reduce Federal employees' contribution to traffic congestion and air pollution and to expand their commuting alternatives. Federal agencies are required to implement mass transportation fringe benefit programs under this EO **[Added April 2005]**.
- Executive Order (EO) 13423, *Strengthening Federal Environmental, Energy, and Transportation Management*. This EO, dated 24 January 2007, requires Federal agencies to lead by example in advancing the nation's energy security and environmental performance by achieving goals outlined in the EO. In relation to air emissions management, if an agency operates a fleet of at least 20 motor vehicles, the agency, relative to agency baselines for fiscal year 2005 **[Added January 2007]**:
  1. reduces the fleet's total consumption of petroleum products by 2 percent annually through the end of fiscal year 2015,
  2. increases the total fuel consumption that is non-petroleum-based by 10 percent annually, and

3. uses plug-in hybrid (PIH) vehicles when PIH vehicles are commercially available at a cost reasonably comparable, on the basis of life-cycle cost, to non-PIH vehicles.

Additionally, agencies must reduce greenhouse gas emissions of the agency, through reduction of energy intensity by:

1. 3 percent annually through the end of fiscal year 2015, or
2. 30 percent by the end of fiscal year 2015, relative to the baseline of the agency's energy use in fiscal year 2003.

This EO revokes the following EOs:

1. Executive Order 13101, Greening the Government Through Waste Prevention, Recycling, and Federal Acquisition of September 14, 1998;
  2. Executive Order 13123, Greening the Government Through Efficient Energy Management of June 3, 1999;
  3. Executive Order 13134, *Developing and Promoting Biobased Products and Bioenergy* of August 12, 1999, as amended;
  4. Executive Order 13148, Greening the Government through Leadership in Environmental Management of April 21, 2000; and
  5. Executive Order 13149, Greening the Government Through Federal Fleet and Transportation Efficiency of April 21, 2000.
- EO 13432: *Cooperation Among Agencies in Protecting the Environment With Respect to Greenhouse Gas Emissions From Motor Vehicles, Nonroad Vehicles, and Nonroad Engines*. This EO, dated 14 May 2007, endorses the coordinated and effective exercise of the authorities of the President and the heads of the Department of Transportation, the Department of Energy, and the Environmental Protection Agency to protect the environment with respect to greenhouse gas emissions from motor vehicles, nonroad vehicles, and nonroad engines, in a manner consistent with sound science, analysis of benefits and costs, public safety, and economic growth [Added July 2007].

### C. State/Local Regulations

For information on regulations in specific states, see the State Supplements to TEAM Guide.

CAA Section 118(a) requires that each agency and employee of the Federal government comply with all Federal, State, interstate and local requirements respecting the control and abatement of air pollution in the same manner and the same extent as any non-governmental entity [Added April 2005].

The primary mechanisms regulating air pollutant emissions are the state air quality regulations. These regulations will normally follow the Federal guidelines for state programs and will have many similar features. However, depending on the type and degree of air pollutant problems within the state/region, the individual regulations will vary. As an example, ozone problems are widespread in California; therefore, various local authorities in that state have stringent VOC emission requirements. The State of North Dakota has no such problem and, therefore, has fewer and less stringent VOC regulations.

A permit is normally required for new, expanded, or modified sources of air pollutants. There are Federal, state, and local permits required for various sources. Large sources, and activities as a whole, may require a permit to operate. States review permit applications for construction or operation of many sources. Open burning permits are typically handled locally.

Some state regulations apply directly to some activities and operations without requiring a permit. At a minimum, state regulations should be reviewed for the following activities:

1. fugitive dust emissions
2. control of particulate emissions from the transportation of refuse or materials in open vehicles
3. certification requirements for boiler operators
4. emissions and emission control requirements for the operation of existing fossil fuel-fired steam generators
5. open burning
6. vehicle exhaust emissions testing
7. spray painting of vehicles, buildings, or furniture

8. certification of vehicles transporting VOC liquids
9. paving of roads and parking lots
10. toxic air pollutants
11. operation of cold cleaners, degreasers, and open-top vapor degreasers

Facility administrators are responsible for ensuring that all Federally owned government vehicles subject to a state I/M program are tested/inspected in accordance with the appropriate I/M program requirements. As stated in Section I, the government vehicle must comply with the I/M program in effect for the area where the vehicle is primarily operated. The program area where the vehicle is primarily operated is usually the program area where the government vehicle is garaged. Thus, no two program areas can compel testing of any one government vehicle. If the Federal agency or facility wishes to submit a government vehicle to I/M program requirements in a program area other than (and in lieu of) the one where the government vehicle is garaged, the Federal agency or facility should retain mileage records that substantiates the program area in which the government vehicle primarily operates **[Added April 2005]**.

In relation to vehicle emissions testing of government vehicles, under CAA section 118(c) “each department, agency, and instrumentality of executive, legislative, and judicial branches of the Federal Government shall comply with all applicable provisions of a valid inspection and maintenance program established under the provisions of subpart 2 of part D or subpart 3 of part D except for such vehicles that are considered military tactical vehicles.” (NOTE: subpart 2 of part D concerns additional provisions for ozone nonattainment areas and subpart 3 of part D concerns additional provisions for CO nonattainment areas.) Each department, agency, and instrumentality of executive, legislative, and judicial branches of the Federal Government having jurisdiction over any property or facility shall require all employees which operate motor vehicles on the property or facility to furnish proof of compliance with the applicable requirements of any vehicle inspection and maintenance program established under the provisions of subpart 2 of part D or subpart 3 of part D for the State in which such property or facility is located (without regard to whether such vehicles are registered in the State). The facility shall use one of the following methods to establish proof of compliance **[Added April 2005]**.

1. presentation by the vehicle owner of a valid certificate of compliance from the vehicle inspection and maintenance program;
2. presentation by the vehicle owner of proof of vehicle registration within the geographic area covered by the vehicle inspection and maintenance program (except for any program whose enforcement mechanism is not through the denial of vehicle registration);
3. another method approved by the vehicle inspection and maintenance program administrator [42 U.S.C. 7418].

As of 16 May 2012 the EPA Administrator has determined that onboard refueling vapor recovery (ORVR) systems are in widespread use in the motor vehicle fleet within the United States. Therefore, the EPA Administrator waives the requirement of Clean Air Act section 182(b)(3) for Stage II vapor recovery systems in ozone nonattainment areas regardless of classification. States must submit and receive EPA approval of a revision to their approved State Implementation Plans (SIPs) before removing Stage II requirements that are contained in their SIPs **[Added July 2012]**.

#### **D. Key Compliance Requirements**

- Steam Generating Units (greater than 29 MW (100 MMBtu/h)) - Steam generating units with capacity greater than 29 MW (100 MMBtu/h) that started construction or modification after 19 June 1984 are required to meet emissions limitation for particulates, SO<sub>2</sub>, and NO<sub>x</sub>. The limit that applies is dependent on the type of fuel being burned. Records are required to be kept of the amounts of fuel combusted each day (40 CFR 60.40b through 49b) **[Revised April 2011]**.
- Steam Generating Units (2.9 MW (10 MMBtu/h) - 29 MW (100 MMBtu/h)) - Steam generating units that started construction, modification, or reconstruction after 3 June 1989 with a maximum design heat input capacity of greater than or equal to 2.9 MW (10 MMBtu/h) but equal to or less than 29 MW (100 MMBtu/h) are required to

limit emissions of SO<sub>2</sub> and particulates. Emission rates are to be monitored. Excess emission reports are required to be submitted for any calendar quarter in which it exceeds opacity limits. If the limits are not exceeded in a given year, a semiannual report must be filed affirming this fact. Quarterly reports must also be submitted for steam generating units required to meet SO<sub>2</sub> emission limits (40 CFR 60.40c through 60.48c) [**Revised April 2011**]

- Fuel Burning Facilities (greater than 73 MW (250 MMBtu/h)) - Fuel burning facilities constructed or modified after 17 August 1971 with greater than 73 MW (250 MMBtu/h) heat input are required to limit emissions of particulates, SO<sub>2</sub>, and NO<sub>x</sub>. Monitoring of these pollutants and fuel analysis is also required to be done (40 CFR 60.44 and 60.45).
- Stationary Gas Turbines - Stationary gas turbines, with a heat input greater than or equal to 10.7 gJ/ h [approx. 10 MBtu/h], that were constructed or modified after 3 October 1977, are required to limit the amounts of NO<sub>x</sub> and SO<sub>2</sub> emitted. In addition to the emissions, the sulfur and nitrogen content of the fuel being fired must also be monitored (40 CFR 60.330 through 60.335).
- Municipal Waste Combustor - Municipal waste combustors, with a capacity greater than 225 Mg (250 tons) per day, that started construction or modification after 20 December 1989, are required to limit the amounts of dioxin/furan, SO<sub>2</sub>, hydrogen chloride, CO, and NO<sub>x</sub> emitted. The chief municipal waste combustor operator and shift supervisors are required to be certified to operate the combustor, and there must be an operating manual that is updated yearly (40 CFR 60.50a through 60.58a).
- New Municipal Waste Combustors - New MWCs with a combustion capacity greater than 250 tons/day of municipal solid waste for which construction is started after 20 September 1994 or for which modification or reconstruction is started after 19 June 1996, are required to limit the amounts of dioxin/furan, SO<sub>2</sub>, hydrogen chloride, CO, and NO<sub>x</sub> emitted. The chief municipal waste combustor operator and shift supervisors are required to be certified to operate the combustor, and there must be an operating manual that is updated yearly (40 CFR 60.50b through 60.58b) [**Revised December 1997**].
- Incinerators - Incinerators with greater than 45 metric tons/day (50 tons/day) charging rate that started construction or modification after 17 August 1971 are required to meet emissions limitations for particulates. Additionally, they are to maintain records of daily charging rates and hours of operation (40 CFR 60.50 through 60.54).
- Medical Waste Incinerators - Hospital/medical/infectious waste incinerators (HMIWI) are required to limit discharges of particulates, CO, dioxins/furans, hydrogen chloride, SO<sub>2</sub>, NO<sub>x</sub>, lead, cadmium, and mercury. Emissions limitations will be performed by the use of appropriate filters and scrubbers and the implementation of extensive monitoring and operating parameters. Existing HMIWIs will be required to comply with the new regulations as USEPA approves state-developed plans. The deadline for compliance will be no later than September 2002 (40 CFR 60.50c through 60.58c) [**Added December 1997**].
- Sewage Sludge Incinerators - Sewage sludge incinerators that combust greater than 1000 kg/day (2205 lb/day), which were constructed or modified after 11 June 1973, are required to limit their emissions of particulates. Monitoring devices are required; depending on what type of incinerator is being operated. Semiannual reports are required (40 CFR 60.150 through 60.156).
- Beryllium Incinerators - Incinerators for beryllium containing waste, beryllium, beryllium oxide, or beryllium alloys cannot emit more than 10 g [0.32 oz] of beryllium over a 24 h period into the atmosphere. Records of emissions tests are required to be kept for 2 yr (40 CFR 61.30 through 61.34).
- Incineration of Sewage Sludge - Incinerators that fire sewage sludge must meet specific emissions standards for beryllium emissions, mercury emissions, and hydrocarbons. The incinerators are required to have continuous monitoring devices for hydrocarbons and oxygen in the exit gas, and continuous monitoring for combustion temperature as specified by the permitting authority. Assorted reports are required to be submitted and records kept (40 CFR 503.40 through 503.48).

- Gasoline Dispensing - Leaded gasoline shall not be introduced into any motor vehicle that is labeled unleaded gasoline only or that is equipped with a gasoline tank filler inlet designed for introduction of unleaded gasoline. Fuel pumps are required to display signs stating the type of fuel in each pump and that only unleaded gas can be introduced into labeled vehicles. The nozzles of the pumps are required to be properly sized. Depending on whether the oxygenated gas is still in the control period, or the area has an oxygenated gasoline program with a credit program, pumps dispensing oxygenated gasoline are required to be labeled. During 1992 and later, high ozone seasons, and regulatory control periods, gasoline shall not be sold, offered for sale, imported, dispensed, supplied, or transported that exceeds Reid vapor pressure standards in Appendix 1-1. No diesel fuel shall be distributed, transported, offered for sale, or dispensed for use in motor vehicles unless it is free of the dye 1,4-dialkylamino-antraquinone and has an cetane index of at least 40, or a maximum aromatic content of 35 volume percent and a sulfur percentage of less than 0.05 percent (40 CFR 80.22(a), 80.22(d), 80.22(e), 80.24(a)(1), 80.27(a)(2), 80.35, 80.80(d), and 80.29(a)).
- Rotogravure Printing Presses - Publication rotogravure printing presses, except for proof presses, that started construction or modification after 28 October 1980, are required to ensure that gases are not being discharged containing VOC equal to more than 16 percent of the total mass of VOC solvent and water used at that press during any one performance averaging period (40 CFR 60.430 through 60.435).
- Fugitive Emissions - The emission of volatile hazardous air pollutants (VHAPs), vinyl chloride, and benzene, is required to be managed, monitored, and controlled according to specific requirements. These include taking certain actions when a leak is detected, ensuring that certain records are maintained, ensuring that pumps and compressors meet certain standards, and that pressure relief devices in gas/vapor service have no detectable emissions except during pressure releases. Valves and lines in VHAP service are required to be monitored monthly and repairs done within 15 days of leak detection. Systems and devices used to control VHAP emissions must recover vapors with 95 percent efficiency or greater. Enclosed combustion devices will be designed and operated to reduce VHAP and benzene emissions and closed-vent systems will have no detectable emissions (40 CFR 61.240 through 61.242-10, 61.246, and 61.247).
- Sulfuric and Nitric Acid Plants - These plants are required to limit their emissions and install continuous monitoring systems (40 CFR 60.70 through 60.85).
- CFCs and Halons - To protect the ozone layer, no person repairing or servicing motor vehicles for payment can service a motor vehicle air-conditioner (MVAC) in any way that affects the refrigerant unless they have been trained and certified and are using approved equipment. Additionally, persons who maintain, service, or repair appliances, except MVACs, and persons who dispose of appliances, except for small appliances, room air conditioners, MVACs, and MVAC-like appliances are required to be certified through an approved technician certification program. As of 15 November 1992, no Class I or Class II substances suitable for use in motor vehicles as a refrigerant can be sold or distributed in any container that is less than 20 lb to any person unless that person is trained and certified. When Class I or Class II substances suitable for use as a refrigerant are sold in containers of less than 20 lb, a sign with certain wording must be displayed. The servicing of appliances containing CFCs and halons is required to be done in a manner to prevent emissions (40 CFR 82.34(a), 82.34(b), 82.42(a) through 82.42(c), and 82.150 through 82.166) **[Revised December 1997]**.????????????????
- Degreasing Operations - Batch cold cleaning machines, batch vapor-cleaning machines, and in-line cleaning machines have to have tightly fitting covers and assorted emission control devices to prevent excess emissions. Operators of these types of units are also required to submit notifications, operating reports, exceedance reports, and solvent use reports. These regulations specifically apply to each individual batch vapor, in-line vapor, in-line cold, and batch cold **solvent-cleaning** machine that uses any solvent containing methylene chloride, perchloroethylene, trichloroethylene, 1,1,1-trichloroethane, carbon tetrachloride, or chloroform or any combination of these halogenated HAP solvents, in total concentration greater than 5 percent by weight, as a cleaning and/or drying agent (40 CFR 63.460 through 63.469)
- Aerospace Manufacturing/ Rework Facilities - Aerospace manufacturing/rework facilities are required to control HAP emissions from hand-wipe cleaning operations, spray gun cleaning operations, and flush cleaning operations. There are emissions limitations imposed on primer and topcoat applications, repainting operations,

and chemical milling maskant operations. Monitoring requirements are based on whether carbon adsorbers, incinerators, dry particulate filters, or waterwash systems are used to comply with emissions limitations (40 CFR 63.740 through 63.745) [Added January 1998].

## E. Key Compliance Definitions

(NOTE: The definitions provided are specific to the regulations cited in the checklist. Other regulations may define the terms differently.)

- *10-day Rolling Average* - the arithmetic mean of the previous 240 hours of valid operating data. Valid data excludes hours during startup and shutdown, data collected during periods when the monitoring system is out of control as specified in your site-specific monitoring plan, while conducting repairs associated with periods when the monitoring system is out of control, or while conducting required monitoring system quality assurance or quality control activities, and periods when this unit is not operating. The 240 hours should be consecutive, but not necessarily continuous if operations were intermittent (40 CFR 63.7575) [Added April 2013].
- *10-day Rolling Average* - the arithmetic mean of all valid hours of data from 10 successive operating days, except for periods of startup and shutdown and periods when the unit is not operating (40 CFR 63.11237) [Added April 2013].
- *30-day Rolling Average* - the arithmetic mean of the previous 720 hours of valid CO CEMS. The 720 hours should be consecutive, but not necessarily continuous if operations were intermittent. For parameters other than CO, 30-day rolling average means either the arithmetic mean of all valid hours of data from 30 successive operating days or the arithmetic mean of the previous 720 hours of valid operating data. Valid data excludes hours during startup and shutdown, data collected during periods when the monitoring system is out of control as specified in your site-specific monitoring plan, while conducting repairs associated with periods when the monitoring system is out of control, or while conducting required monitoring system quality assurance or quality control activities, and periods when this unit is not operating (40 CFR 63.7575) [Added April 2013; Revised January 2016].
- *30-day Rolling Average* - the arithmetic mean of all valid hours of data from 30 successive operating days, except for periods of startup and shutdown and periods when the unit is not operating (40 CFR 63.11237) [Added April 2013].
- *Accidental Release* - an unanticipated emission of a regulated substance or other extremely hazardous substance into the ambient air from a stationary source (40 CFR 68.3) [Added January 2005].
- *Accuracy of a Measurement at a Specified Level (e.g., one percent of full scale or one percent of the value measured)* – the mean of repeat measurements made by a device or technique are within 95 percent of the range bounded by the true value plus or minus the specified level (40 CFR 98.6) [Added January 2010].
- *Acid Rain Program* - the program established under title IV of the Clean Air Act, and implemented under 40 CFR 72 through 78 for the reduction of sulfur dioxide and nitrogen oxides emissions (40 CFR 98.6) [Added January 2010].
- *Active Measures* - risk management measures or engineering controls that rely on mechanical, or other energy input to detect and respond to process deviations. Examples of active measures include alarms, safety instrumented systems, and detection hardware (such as hydrocarbon sensors) (40 CFR 68.3) [Added April 2017].
- *Actual Annual Average Temperature, for Organic Liquids* - the temperature determined using the following methods (40 CFR 63.2406) [Added April 2004]:
  1. For heated or cooled storage tanks, use the calculated annual average temperature of the stored organic liquid as determined from a design analysis of the storage tank.
  2. For ambient temperature storage tanks:

- a. Use the annual average of the local (nearest) normal daily mean temperatures reported by the National Climatic Data Center; or
  - b. Use any other method that the EPA approves.
- *Additive* - a material that is added to a coating after purchase from a supplier (e.g., catalysts, activators, accelerators) (40 CFR 63.11180) [**Added April 2011**].
- *Administrative Controls* - written procedural mechanisms used for hazard control (40 CFR 68.3) [**Added January 2014**].
- *Administrator* - for the purposes of this rulemaking, the Administrator of the U.S. Environmental Protection Agency or the State or local agency that is granted delegation for implementation of this 40 CFR 63, Subpart HHHHHH (40 CFR 63.11180) [**Added April 2011**].
- *Administrator* – means the following (40 CFR 60.51b) [**Added July 2006**]:
  1. For approved and effective State Section 111(d)/129 plans, the Director of the State air pollution control agency, or employee of the State air pollution control agency that is delegated the authority to perform the specified task;
  2. For Federal Section 111(d)/129 plans, the Administrator of the EPA, an employee of the EPA, the Director of the State air pollution control agency, or employee of the State air pollution control agency to whom the authority has been delegated by the Administrator of the EPA to perform the specified task; and
  3. For NSPS, the Administrator of the EPA, an employee of the EPA, the Director of the State air pollution control agency, or employee of the State air pollution control agency to which the authority has been delegated by the Administrator of the EPA to perform the specified task.
- *Aeration Process* - any time when ethylene oxide is removed from the aeration unit through the aeration unit vent or from the combination sterilization unit through the sterilization unit vent, while aeration or off-gassing is occurring (40 CFR 63.10448) [**Added January 2008**].
- *Aeration Unit* - any vessel that is used to facilitate off-gassing of ethylene oxide (40 CFR 63.10448) [**Added January 2008**].
- *Aerospace Affected Sources* - These requirements apply to facilities that are engaged, either in part or in whole, in the manufacture or rework of *commercial*, civil, or military aerospace vehicles or components and that are major sources. The activities subject to these requirements are limited to the manufacture or rework of aerospace vehicles or components. The affected sources are as follows (40 CFR 63.741(a) through 63.741(c) [**Added January 1999; Revised January 2016**]):
  1. all hand-wipe cleaning operations constitute an affected source
  2. each spray gun cleaning operation constitutes an affected source
  3. all flush cleaning operations constitute an affected source
  4. for organic HAP or VOC emissions, each primer application operation, which is the total of all primer applications at the facility
  5. for organic HAP or VOC emissions, each topcoat application operation, which is the total of all topcoat applications at the facility
  6. for organic HAP or VOC emissions, each specialty coating application operation, which is the total of all specialty coating applications at the facility
  7. for organic HAP or VOC emissions, each repainting operation, which is the total of all repainting at the facility
  8. each chemical milling maskant application operation, which is the total of all chemical milling maskant applications at the facility
  9. each waste storage and handling operation, which is the total of all waste handling and storage at the facility
  10. for inorganic HAP emissions, each spray booth, portable enclosure, or hangar that contains a primer or topcoat application operation subject to inorganic HAP emissions requirements (40 CFR 63.745(g)) or

a depainting operation generating airborne inorganic HAP emission from dry media blasting equipment (40 CFR 63.746(b)(4)).)

- *Aerospace Exempted Sources* - The following are exemptions from compliance with 40 CFR 63.741 through 63.753 (40 CFR 63.741(f), 63.741(h), 63.741(j)) [**Added January 1999; Revised January 2016**]:
  1. research and development, quality control, and laboratory testing activities, chemical milling, metal finishing, electrodeposition (except for electrodeposition of paints), composites processing (except for cleaning and coating of composite parts or components that become part of an aerospace vehicle or component as well as composite tooling that comes in contact with such composite parts or components prior to cure), electronic parts and assemblies (except for cleaning and topcoating of completed assemblies), manufacture of aircraft transparencies, and wastewater operations at aerospace facilities.
  2. the rework of aircraft or aircraft components if the holder of the Federal Aviation Administration (FAA) design approval, or the holder's licensee, is not actively manufacturing the aircraft or aircraft components
  3. parts and assemblies not critical to the vehicle's structural integrity or flight performance
  4. primers, topcoats, specialty coatings, chemical milling maskants, strippers, and cleaning solvents that meet the definition of non-HAP material, as determined from manufacturer's representations, such as in a material safety data sheet or product data sheet, or testing, except that if an owner or operator chooses to include one or more non-HAP primer, topcoat, specialty coating, or chemical milling maskant in averaging under 40 CFR 63.743(d), then the recordkeeping requirements of 40 CFR 63.752(c)(4) apply
  5. primers, topcoats, and specialty coatings that meet the definition of "classified national security information" in 40 CFR 63.742
  6. regulated activities associated with space vehicles designed to travel beyond the limit of the earth's atmosphere, including but not limited to satellites, space stations, and the Space Shuttle System (including orbiter, external tanks, and solid rocket boosters), are exempt
  7. rework operations performed on antique aerospace vehicles or components are exempt.
- *Aerospace Facility* - any facility that produces, reworks, or repairs in any amount any commercial, civil, or military aerospace vehicle or component (40 CFR 63.742) [**Added January 1999**].
- *Aerospace Vehicle or Component* - any fabricated part, processed part, assembly of parts, or completed unit, with the exception of electronic components, of any aircraft including but not limited to airplanes, helicopters, missiles, rockets, and space vehicles (40 CFR 63.742 and 63.11180) [**Added January 1999, Citation Revised April 2011**].
- *Affected Federal Land Manager* - the Federal agency or the Federal official charged with direct responsibility for management of an area designated as Class I under the Act (42 U.S.C. 7472) that is located within 100 km of the proposed Federal action (40 CFR 93.152) [**Added April 2009**].
- *Affected Site Remediation Sources* – 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US] applies to each of the following new, reconstructed, or existing affected sources (40 CFR 63.7882(a)) [**Added April 2004**]:
  1. Process vents. The affected source is the entire group of process vents associated with the in-situ and ex-situ remediation processes used at your site to remove, destroy, degrade, transform, or immobilize hazardous substances in the remediation material subject to remediation. Examples of such in-situ remediation processes include, but are not limited to, soil vapor extraction and bioremediation processes. Examples of such ex-situ remediation processes include but are not limited to, thermal desorption, bioremediation, and air stripping processes.
  2. Remediation material management units. Remediation material management unit means a tank, surface impoundment, container, oil-water separator, organic-water separator, or transfer system, as defined in 40 CFR 63.7957 and is used at the site to manage remediation material. The affected source is the entire group of remediation material management units used for the site remediations at the site. For the purpose of this 40 CFR 63, 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items

AE.300.1.US through AE.300.12.US], a tank or container that is also equipped with a vent that serves as a process vent, as defined in 40 CFR 63.7957, is not a remediation material management unit, but instead this unit is considered to be a process vent affected source under paragraph 1.

3. Equipment leaks. The affected source is the entire group of equipment components (pumps, valves, etc.) used to manage remediation materials and meeting both of the following conditions. If either of these conditions do not apply to an equipment component, then that component is not part of the affected source for equipment leaks.
    - a. The equipment component contains or contacts remediation material having a concentration of total HAP listed in Table 1 of this 40 CFR 63, Subpart GGGGG (Appendix 1-27) equal to or greater than 10 percent by weight.
    - b. The equipment component is intended to operate for 300 h or more during a calendar year in remediation material service, as defined in 40 CFR 63.7957.
- *Affected Source* - the group of all equipment that comprise the POTW treatment plant (40 CFR 63.1595) [**Added January 2000**].
  - *Affected Source* - a sewage sludge incineration unit as defined in 40 CFR 60.4930 (40 CFR 60.4930) [**Added April 2011**].
  - *Affected Source* – in relation to the NESHAPS for stationary RICE, this is any existing, new, or reconstructed stationary RICE located at a major or area source of HAP emissions, excluding stationary RICE being tested at a stationary RICE test cell/stand (40 CFR 63.6590(a)) [**Added April 2013**].
  - *Affected Source* – in relation to engine test cells, an affected source is the collection of all equipment and activities associated with engine test cells/stands used for testing uninstalled stationary or uninstalled mobile (motive) engines located at a major source of HAP emissions (40 CFR 63.9290(a)) [**Added July 2003**].
  - *Affirmative Defense* - in the context of an enforcement proceeding, a response or defense put forward by a defendant, regarding which the defendant has the burden of proof, and the merits of which are independently and objectively evaluated in a judicial or administrative proceeding (40 CFR 60.4930) [**Added April 2011**].
  - *AGA* - the American Gas Association.
  - *Agricultural By-Products* - those parts of arable crops that are not used for the primary purpose of producing food. Agricultural by-products include, but are not limited to, oat, corn and wheat straws, bagasse, peanut shells, rice and coconut husks, soybean hulls, palm kernel cake, cottonseed and sunflower seed cake, and pomace (40 CFR 98.6) [**Added January 2011**].
  - *Agricultural Waste* - vegetative agricultural materials such as nut and grain hulls and chaff (e.g., almond, walnut, peanut, rice, and wheat), bagasse, orchard prunings, corn stalks, coffee bean hulls and grounds, and other vegetative waste materials generated as a result of agricultural operations (40 CFR 62.14840) [**Added January 2004**].
  - *AICHE/CCPS* - the American Institute of Chemical Engineers/Center for Chemical Process Safety (40 CFR 68.3) [**Added January 2005**].
  - *Air Blanket* - the layer of air inside the **solvent-cleaning** machine freeboard located above the solvent/air interface. The centerline of the air blanket is equidistant between the sides of the machine (40 CFR 63.461).
  - *Air Curtain Incinerator* – an incinerator that operates by forcefully projecting a curtain of air across an open chamber or open pit in which combustion occurs. Incinerators of that type can be constructed above or below ground and with or without refractory walls and floor (40 CFR 60.1435 and 60.1465) [**Added April 2001**].
  - *Air Curtain Incinerator* - an incineration unit operating by forcefully projecting a curtain of air across an open, integrated combustion chamber (fire box) or open pit or trench (trench burner) in which combustion occurs. For

the purpose of this subpart and 40 CFR subpart FFFF of this part only, air curtain incinerators include both firebox and trench burner units (40 CFR 60.2977) **[Added January 2006]**.

- *Air Curtain Incinerator* - an incinerator that operates by forcefully projecting a curtain of air across an open chamber or pit in which combustion occurs. Incinerators of this type can be constructed above or below ground and with or without refractory walls and floor. (Air curtain incinerators are different from conventional combustion devices which typically have enclosed fireboxes and controlled air technology such as mass burn, modular, and fluidized bed combustors.) (40 CFR 62.14840) **[Added January 2004]**. *Air Knife System* - a device that directs forced air at high pressure, high volume, or a combination of high pressure and high volume, through a small opening directly at the surface of a continuous web part. The purpose of this system is to remove the solvent film from the surfaces of the continuous web part (40 CFR 63.461) **[Added October 1999]**.
- *Air Pollution Control Device* - a catalytic oxidizer, acid-water scrubber, or any other air pollution control equipment that reduces the quantity of **ethylene oxide** in the effluent gas stream from sterilization and aeration processes (40 CFR 63.10448) **[Added January 2008]**.
- *Air Pollution Control Device* - one or more processes used to treat the exit gas from a sewage sludge incinerator stack (40 CFR 503.41(a)).
- *Aircraft Fluid Systems* - those systems that handle hydraulic fluids, fuel, cooling fluids, or oils (40 CFR 63.742) **[Added January 1999]**.
- *Aircraft Transparency* - the aircraft windshield, canopy, passenger windows, lenses, and other components that are constructed of transparent materials (40 CFR 63.742) **[Added January 1999]**.
- *Airless and Air-Assisted Airless Spray* - any coating spray application technology that relies solely on the fluid pressure of the coating to create an atomized coating spray pattern and does not apply any atomizing compressed air to the coating before it leaves the spray gun nozzle. Air-assisted airless spray uses compressed air to shape and distribute the fan of atomized coating, but still uses fluid pressure to create the atomized coating (40 CFR 63.472) **[Added January 2016]**.
- *Alaska Railbelt Grid* - the service areas of the six regulated public utilities that extend from Fairbanks to Anchorage and the Kenai Peninsula. These utilities are Golden Valley Electric Association; Chugach Electric Association; Matanuska Electric Association; Homer Electric Association; Anchorage Municipal Light & Power; and the City of Seward Electric System (40 CFR 63.6675 and 63.4219) **[Added April 2013; Revised October 2016]**.
- *Alkali Bypass* - a duct between the feed end of the kiln and the preheater tower through which a portion of the kiln exit gas stream is withdrawn and quickly cooled by air or water to avoid excessive buildup of alkali, chloride and/or sulfur on the raw feed. This may also be referred to as the “kiln exhaust gas bypass” (40 CFR 98.6) **[Added January 2010]**.
- *Anaerobic Digester* - the system where wastes are collected and anaerobically digested in large containment vessels or covered lagoons. Anaerobic digesters stabilize waste by the microbial reduction of complex organic compounds to CO<sub>2</sub> and CH<sub>4</sub>, which is captured and may be flared or used as fuel (40 CFR 98.6) **[Added January 2010]**.
- *Anaerobic Digestion Systems* - includes but are not limited to covered lagoon, complete mix, plug flow, and fixed film digesters (40 CFR 98.6) **[Added January 2010]**.
- *Anaerobic Lagoon* – with respect to 40 CFR 98, subpart JJ [40 CFR 98.360 – 98.368: Manure Management] a type of liquid storage system component that is designed and operated to stabilize wastes using anaerobic microbial processes. Anaerobic lagoons may be designed for combined stabilization and storage with varying lengths of retention time (up to a year or greater), depending on the climate region, the volatile solids loading rate, and other operational factors (40 CFR 98.6) **[Added January 2010, Revised July 2010]**.

- *Ancillary Equipment* - the equipment used with a dry cleaning machine in a dry cleaning system including, but not limited to, emission control devices, pumps, filters, muck cookers, stills, solvent tanks, solvent containers, water separators, exhaust dampers, diverter valves, interconnecting piping, hoses, and ducts (40 CFR 63.321).
- *Annual Average True Vapor Pressure* - the equilibrium partial pressure exerted by the total Table 1 organic HAP (see Appendix 1-11a) in the stored or transferred organic liquid. For the purpose of determining if a liquid meets the definition of an organic liquid, the vapor pressure is determined using standard conditions of 77 °F and 29.92 in of Hg. For the purpose of determining whether an organic liquid meets the applicability criteria in Table 2, items 1 through 6 (see Appendix 1-11b), use the actual annual average temperature as defined in 40 CFR 63, Subpart EEEE. The vapor pressure value in either of these cases is determined (40 CFR 63.2406) **[Added April 2004; Revised January 2007]**:
  1. In accordance with methods described in American Petroleum Institute Publication 2517, Evaporative Loss from External Floating-Roof Tanks (incorporated by reference, see 40 CFR 63.14);
  2. Using standard reference texts;
  3. By the American Society for Testing and Materials Method D2879-83, 96 (incorporated by reference, see 40 CFR 63.14); or
  4. Using any other method that the EPA approves.
- *Annual Capacity Factor* - the ratio between the actual heat input to a steam generating unit from the fuels listed in 40 CFR 60.42b(a), 60.43b(a), or 60.44b(a) (see checklist item AE.10.5.US and AE.10.5.US), as applicable, during a calendar year and the potential heat input to the steam generating unit had it been operated for 8,760 h during a calendar year at the maximum steady state design heat input capacity. In the case of steam generating units that are rented or leased, the actual heat input shall be determined based on the combined heat input from all operations of the affected facility in a calendar year (40 CFR 60.41b) **[Added July 2007]**.
- *Annual Capacity Factor* - the ratio between the actual heat input to a steam generating unit from an individual fuel or combination of fuels during a period of 12 consecutive calendar months and the potential heat input to the steam generating unit from all fuels had the steam generating unit been operated for 8,760 hours during that 12-month period at the maximum design heat input capacity. In the case of steam generating units that are rented or leased, the actual heat input shall be determined based on the combined heat input from all operations of the affected facility during a period of 12 consecutive calendar months (40 CFR 60.41c) **[Revised January 2006; Revised July 2007]**.
- *Annual Capacity Factor* - the ratio between the actual heat input to a boiler or process heater from the fuels burned during a calendar year and the potential heat input to the boiler or process heater had it been operated for 8,760 hours during a year at the maximum steady state design heat input capacity (40 CFR 63.7575) **[Added April 2013]**.
- *Annual Capacity Factor* - the ratio between the actual heat input to a boiler from the fuels burned during a calendar year and the potential heat input to the boiler had it been operated for 8,760 hours during a year at the maximum steady state design heat input capacity (40 CFR 63.11237) **[Added October 2016]**.
- *Annual Heat Input* - the heat input for the 12 mo preceding the compliance demonstration (40 CFR 63.7575) **[Added April 2011]**.
- *Annual Heat Input* - the heat input for the 12 mo preceding the compliance demonstration (40 CFR 63.11237) **[Added April 2013]**.
- *Annual Heat Input Basis* - the heat input for the 12 mo preceding the compliance demonstration (40 CFR 63.11237) **[Added April 2011]**.
- *Anode Effect* - a process upset condition of an aluminum electrolysis cell caused by too little alumina dissolved in the electrolyte. The anode effect begins when the voltage rises rapidly and exceeds a threshold voltage, typically 8 volts (40 CFR 98.6) **[Added January 2010]**.

- *Anode Effect Minutes Per Cell Day* (24 h) - the total minutes during which an electrolysis cell voltage is above the threshold voltage, typically 8 volts (40 CFR 98.6) [**Added January 2010**].
- *Antique Aerospace Vehicle or Component* - an aircraft or component thereof that was built at least 30 yr ago. An antique aerospace vehicle would not routinely be in commercial or military service in the capacity for which it was designed (40 CFR 63.742) [**Added January 1999**].
- *ANSI* - the American National Standards Institute.
- *API* - the American Petroleum Institute (40 CFR 68.3) [**Added January 2005**].
- *Appliance* - any device which contains and uses a class I or class II substance or substitute as a refrigerant and which is used for household or commercial purposes, including any air conditioner, motor vehicle air conditioner, refrigerator, chiller, or freezer. For a system with multiple circuits, each independent circuit is considered a separate appliance (40 CFR 82.152) [**Revised April 2004; Revised January 2017**].
- *Applicable Implementation Plan or Applicable SIP* - the portion (or portions) of the SIP or most recent revision thereof, which has been approved under section 110 of the Act, or promulgated under section 110(c) of the Act (Federal implementation plan), or promulgated or approved pursuant to regulations promulgated under section 301(d) of the Act and which implements the relevant requirements of the Act (40 CFR 93.152) [**Added April 2009**].
- *Apprentice* - any person who is currently registered as an apprentice in maintenance, service, repair, or disposal of appliances with the U.S. Department of Labor's Office of Apprenticeship (or a State Apprenticeship Council recognized by the Office of Apprenticeship). A person may only be an apprentice for two years from the date of first registering with that office (40 CFR 82.152) [**Revised January 2017**].
- *Approved Equipment Testing Organization* - any organization that has applied for and received approval from the administrator pursuant to 40 CFR 82.160 (40 CFR 82.152).
- *Appurtenance* - any accessory to a stationary structure coated at the site of installation, whether installed or detached, including but not limited to: bathroom and kitchen fixtures; cabinets; concrete forms; doors; elevators; fences; hand railings; heating equipment, air conditioning equipment, and other fixed mechanical equipment or stationary tools; lamp posts; partitions; pipes and piping systems; rain gutters and downspouts; stairways, fixed ladders, catwalks, and fire escapes; and window screens (40 CFR 63.11180) [**Added April 2011**].
- *Architectural Coating* - a coating to be applied to stationary structures or their appurtenances at the site of installation, to portable buildings at the site of installation, to pavements, or to curbs (40 CFR 63.11180) [**Added April 2011**].
- *Area Source* - any stationary source of HAP that is not a major source as defined in 40 CFR 63 (40 CFR 63.1595, 63.6175, 63.6675) [**Added July 2004**].
- *Area Source of HAP* - a source of HAP that is not a major source of HAP, is not located at a major source, and is not part of a major source of HAP emissions. A major source of HAP emissions is any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit any single HAP at a rate of 9.07 megagrams (Mg) (10 tons) or more per year, or emit any combination of HAP at a rate of 22.68 Mg (25 tons) or more per year (40 CFR 63.11170(b)) [**Added April 2011**].
- *Areawide Air Quality Modeling Analysis* - an assessment on a scale that includes the entire nonattainment or maintenance area which uses an air quality dispersion model to determine the effects of emissions on air quality (40 CFR 93.152) [**Added April 2009**].

- *Article* - a manufactured item, as defined under 29 CFR 1910.1200(b), that is formed to a specific shape or design during manufacture, that has end use functions dependent in whole or in part upon the shape or design during end use, and that does not release or otherwise result in exposure to a regulated substance under normal conditions of processing and use (40 CFR 68.3) **[Added January 2005]**.
- *Articles* - clothing, garments, textiles, fabrics, leather goods, and the like, that are dry cleaned (40 CFR 63.321).
- *ASABE* - the American Society of Agricultural and Biological Engineers.
- *ASME* - the American Society of Mechanical Engineers.
- *Asphalt* - a dark brown-to-black cement-like material obtained by petroleum processing and containing bitumens as the predominant component. It includes crude asphalt as well as the following finished products: cements, fluxes, the asphalt content of emulsions (exclusive of water), and petroleum distillates blended with asphalt to make cutback asphalts (40 CFR 98.6) **[Added January 2010]**.
- *Associated Equipment* - as used in 40 CFR 63 as referred to in section 112(n)(4) of the CAA, equipment associated with an oil or natural gas exploration or production well, and includes all equipment from the well bore to the point of custody transfer, except glycol dehydration units, storage vessels with potential for flash emissions, combustion turbines, and stationary reciprocating internal combustion engines (40 CFR 63.6175 and 63.6675) **[Added April 2004; Citation Revised July 2004]**.
- *ASTM* - the American Society of Testing and Materials.
- *Automated Parts Handling System* - a mechanical device that carries all parts and parts baskets at a controlled speed from the initial loading of soiled or wet parts through the removal of the cleaned or dried parts. Automated parts handling systems include, but are not limited to, hoists and conveyors (40 CFR 63.461).
- *Auxiliary Fuel* - fuel used to augment the fuel value of sewage sludge. This includes, but is not limited to, natural gas, fuel oil, coal, gas generated during anaerobic digestion of sewage sludge, and municipal solid waste (not to exceed 30 percent of the dry weight of sewage sludge and auxiliary fuel together (40 CFR 503.41(b)).
- *Auxiliary Fuel* - natural gas, liquified petroleum gas, fuel oil, or diesel fuel (40 CFR 60.2977, 60.4930, and 62.14840) **[Added January 2004; Citation Revised January 2006, Citation Revised April 2011]**.
- *Average Annual Heat Input Rate* - total heat input divided by the hours of operation for the 12 months preceding the compliance demonstration (40 CFR 63.7575) **[Added April 2013]**.
- *Average Daily Concentration* - the arithmetic mean of the concentration of a pollutant in milligrams per kilogram of sewage sludge (dry weight basis) in the samples collected and analyzed in a month (40 CFR 503.41) **[Added October 1999]**.
- *Aviation Gasoline* - a complex mixture of volatile hydrocarbons, with or without additives, suitably blended to be used in aviation reciprocating engines. Specifications can be found in ASTM Specification D910-07a, Standard Specification for Aviation Gasolines (incorporated by reference, see 40 CFR 98.7) (40 CFR 98.6) **[Added January 2010]**.
- *Bag Leak Detection System* - an instrument that is capable of monitoring particulate matter loadings in the exhaust of a fabric filter (i.e., baghouse) in order to detect bag failures. A bag leak detection system includes, but is not limited to, an instrument that operates on triboelectric, light scattering, light transmittance, or other principle to monitor relative particulate matter loadings (40 CFR 60.4930 and 62.14840) **[Added January 2004; Revised October 2004; Citation Revised April 2011]**.

- *Bag Leak Detection System* - a group of instruments that are capable of monitoring particulate matter loadings in the exhaust of a fabric filter (i.e., baghouse) in order to detect bag failures. A bag leak detection system includes, but is not limited to, an instrument that operates on electrodynamic, triboelectric, light scattering, light transmittance, or other principle to monitor relative particulate matter loadings (40 CFR 63.7575 and 63.11237) [Added April 2011].
- *B<sub>0</sub>* - the maximum CH<sub>4</sub> producing capacity of a waste stream, kg CH<sub>4</sub>/kg COD (40 CFR 98.6) [Added January 2010].
- *Backup Power for Renewable Energy* - an engine that provides backup power to a facility that generates electricity from renewable energy resources, as that term is defined in Alaska Statute 42.45.045(l)(5) (incorporated by reference, see 40 CFR 63.14) (40 CFR 63.6675) [Added April 2013].
- *Bag Leak Detection System* - a group of instruments that are capable of monitoring particulate matter loadings in the exhaust of a fabric filter (i.e., baghouse) in order to detect bag failures. A bag leak detection system includes, but is not limited to, an instrument that operates on electrodynamic, triboelectric, light scattering, light transmittance, or other principle to monitor relative particulate matter loadings (40 CFR 63.11237) [Revised April 2013].
- *Base Load* - the load level at which a gas turbine is normally operated (40 CFR 60.331) [Added October 2004].
- *Basic Oxygen Furnace* - any refractory-lined vessel in which high-purity oxygen is blown under pressure through a bath of molten iron, scrap metal, and fluxes to produce steel (40 CFR 98.6) [Added January 2010].
- *Batch* - a single bulk cylinder of refrigerant after all reclamation has been completed prior to packaging or shipping to the market (40 CFR 82.152) [Added January 2017].
- *Batch* - quantity of diesel fuel (or other product subject to the requirements of this subpart I) which is homogeneous with regard to those properties that are specified for MVNRLM diesel fuel or ECA marine fuel under this subpart I, has the same designation under this subpart I (if applicable), and whose custody is transferred from one facility to another facility (40 CFR 80.502(d)) [Added July 2006. Revised July 2010]:
  1. In the case of aggregated facilities consisting of a refinery and a truck loading terminal, a batch may be defined by one of the following methods:
    - a. The sum of the deliveries from the truck loading terminal rack to trucks for periods not to exceed 1 month;
    - b. Each individual truck or truck compartment; or
    - c. For refineries with “certification tanks” where testing is performed and “rack tanks” that feed the truck loading terminal rack, each transfer from the certification tank to the rack tank. If this method of determining a batch is selected, it must be the sole method used and must be performed such that no double-counting or undercounting of volumes occurs.
- *Batch Cleaning Machine* - a **solvent-cleaning** machine in which individual parts or a set of parts move through the entire cleaning cycle before new parts are introduced into the **solvent-cleaning** machine. An open top vapor-cleaning machine is a type of batch cleaning machine. A **solvent-cleaning** machine, such as a ferris wheel or a cross rod degreaser, that cleans multiple batch loads simultaneously and are manually loaded are batch cleaning machine (40 CFR 63.461).
- *Batch HMIWI* - an HMIWI that is designed such that neither waste charging nor ash removal can occur during combustion (40 CFR 60.51c) [Added December 1997].
- *Batch HMIWI* - an HMIWI that is designed such that neither waste charging nor ash removal can occur during combustion (40 CFR 62.14490) [Added October 2000].

- *Batch Municipal Waste Combustor* - an incinerator that operates by forcefully projecting a curtain of air across an open chamber or pit in which burning occurs. Incinerators of this type can be constructed above or below ground and with or without refractory walls and floor (40 CFR 60.51b).
- *Batch Municipal Waste Combustion Unit* - a municipal waste combustion unit designed so it cannot combust municipal solid waste continuously 24 hours per day because the design does not allow waste to be fed to the unit or ash to be removed during combustion (40 CFR 60.1465) [Added April 2001].
- *Batch OSWI Unit* - an OSWI unit that is designed such that neither waste charging nor ash removal can occur during combustion (40 CFR 60.2977) [Added January 2006].
- *Benchmark* - the fuel heat input for a boiler or process heater for the one-year period before the date that an energy demand reduction occurs, unless it can be demonstrated that a different time period is more representative of historical operations (40 CFR 63.7575) [Added April 2013].
- *Benzene Service* - a piece of equipment that either contains or contacts a fluid (liquid or gas) that is at least 10 percent benzene by weight (40 CFR 61.111).
- *Biodiesel* - a mono-alkyl ester derived from biomass and conforming to ASTM D6751-11b, Standard Specification for Biodiesel Fuel Blend Stock (B100) for Middle Distillate Fuels (incorporated by reference, see 40 CFR 63.14) (40 CFR 63.7575 and 63.11237) [Added April 2013].
- *Biodiesel* - a mono-alkyl ester derived from biomass and conforming to ASTM D6751-08, Standard Specification for Biodiesel Fuel Blend Stock (B100) for Middle Distillate Fuels (40 CFR 98.6) [Added January 2010].
- *Biogas* - the combination of CO<sub>2</sub>, CH<sub>4</sub>, and other gases produced by the biological breakdown of organic matter in the absence of oxygen (40 CFR 98.358) [Added July 2010].
- *Biogas* - gas produced by the anaerobic digestion or fermentation of organic matter including manure, sewage sludge, municipal solid waste, biodegradable waste, or any other biodegradable feedstock, under anaerobic conditions. Biogas is comprised primarily of methane and CO<sub>2</sub> (40 CFR 60.4420) [Added April 2009].
- *Biogenic CO<sub>2</sub>* - carbon dioxide emissions generated as the result of biomass combustion from combustion units for which emission calculations are required by an applicable 40 CFR 98 subpart (40 CFR 98.6) [Added January 2010].
- *Biologicals* - preparations made from living organisms and their products, including vaccines, cultures, etc., intended for use in diagnosing, immunizing, or treating humans or animals or in research pertaining thereto (40 CFR 60.51c and 62.14490) [Added October 2000].
- *Biomass* - non-fossilized and biodegradable organic material originating from plants, animals or microorganisms, including products, by-products, residues and waste from agriculture, forestry and related industries as well as the non-fossilized and biodegradable organic fractions of industrial and municipal wastes, including gases and liquids recovered from the decomposition of non-fossilized and biodegradable organic material (40 CFR 98.6) [Added January 2010].
- *Biomass* - any biomass-based solid fuel that is not a solid waste. This includes, but is not limited to, wood residue and wood products (e.g., trees, tree stumps, tree limbs, bark, lumber, sawdust, sander dust, chips, scraps, slabs, millings, and shavings); animal manure, including litter and other bedding materials; vegetative agricultural and silvicultural materials, such as logging residues (slash), nut and grain hulls and chaff (e.g., almond, walnut, peanut, rice, and wheat), bagasse, orchard prunings, corn stalks, coffee bean hulls and grounds. This definition of biomass is not intended to suggest that these materials are or are not solid waste (40 CFR 63.11237) [Added April 2011].

- *Biomass or Bio-Based Solid Fuel* - any biomass-based solid fuel that is not a solid waste. This includes, but is not limited to, wood residue; wood products (e.g., trees, tree stumps, tree limbs, bark, lumber, sawdust, sander dust, chips, scraps, slabs, millings, and shavings); animal manure, including litter and other bedding materials; vegetative agricultural and silvicultural materials, such as logging residues (slash), nut and grain hulls and chaff (e.g., almond, walnut, peanut, rice, and wheat), bagasse, orchard prunings, corn stalks, coffee bean hulls and grounds. This definition of biomass is not intended to suggest that these materials are or are not solid waste (40 CFR 63.7575) [**Added April 2011**].
- *Biomass Subcategory* - includes any boiler that burns any biomass and is not in the coal subcategory (40 CFR 63.11237) [**Revised April 2013**].
- *Black Start Engine* - an engine whose only purpose is to start up a combustion turbine (40 CFR 63.6675) [**Added April 2010**].
- *Blast Furnace* - a furnace that is located at an integrated iron and steel plant and is used for the production of molten iron from iron ore pellets and other iron bearing materials (40 CFR 98.6) [**Added January 2010**].
- *Blast Furnace Gas Fuel-fired Boiler or Process Heater* - an industrial/commercial/institutional boiler or process heater that receives 90 percent or more of its total annual gas volume from blast furnace gas (40 CFR 63.7575) [**Added April 2011**].
- *Blendstock for Oxygenate Blending* - gasoline blendstock which could become gasoline solely upon the addition of an oxygenate (40 CFR 80.1500) [**Added October 2011**].
- *Blendstocks* - petroleum products used for blending or compounding into finished motor gasoline. These include RBOB (reformulated blendstock for oxygenate blending) and CBOB (conventional blendstock for oxygenate blending), but exclude oxygenates, butane, and pentanes plus (40 CFR 98.6) [**Added January 2010**].
- *Blendstocks -- Others* - products used for blending or compounding into finished motor gasoline that are not defined elsewhere. Excludes Gasoline Treated as Blendstock (GTAB), Diesel Treated as Blendstock (DTAB), conventional blendstock for oxygenate blending (CBOB), reformulated blendstock for oxygenate blending (RBOB), oxygenates (e.g. fuel ethanol and methyl tertiary butyl ether), butane, and pentanes plus (40 CFR 98.6) [**Added January 2010**].
- *Blood Products* - any product derived from human blood, including but not limited to, blood plasma, platelets, red or white blood corpuscles, and other derived licensed products, such as interferon, etc. (40 CFR 60.51c) [**Added December 1997**].
- *Blood Products* - any product derived from human blood, including but not limited to blood plasma, platelets, red or white blood corpuscles, and other derived licensed products, such as interferon, etc (40 CFR 62.14490) [**Added October 2000**].
- *Blowdown* - the act of emptying or depressuring a vessel. This may also refer to the discarded material such as blowdown water from a boiler or cooling tower (40 CFR 98.6) [**Added January 2010**].
- *Body Fluids* - liquid emanating or derived from humans and limited to blood; dialysate; amniotic, cerebrospinal, synovial, pleural, peritoneal, and pericardial fluids; and semen and vaginal secretions (40 CFR 60.51c) [**Added December 1997**].
- *Boiler* - an enclosed combustion device that extracts useful energy in the form of steam and is not an incinerator or a process heater (40 CFR 63.7957) [**Added April 2004**].
- *Boiler* - an enclosed device using controlled flame combustion and having the primary purpose of recovering thermal energy in the form of steam or hot water. Controlled flame combustion refers to a steady-state, or near

steady-state, process wherein fuel and/or oxidizer feed rates are controlled. A device combusting solid waste, as defined in 40 CFR 241.3 of this chapter, is not a boiler unless the device is exempt from the definition of a solid waste incineration unit as provided in section 129(g)(1) of the Clean Air Act. Waste heat boilers are excluded from this definition (40 CFR 63.7575) **[Revised April 2013]**.

- *Boiler* - an enclosed device using controlled flame combustion in which water is heated to recover thermal energy in the form of steam and/or hot water. Controlled flame combustion refers to a steady-state, or near steady-state, process wherein fuel and/or oxidizer feed rates are controlled. A device combusting solid waste, as defined in 40 CFR 241.3 of this chapter, is not a boiler unless the device is exempt from the definition of a solid waste incineration unit as provided in section 129(g)(1) of the Clean Air Act. Waste heat boilers, process heaters, and autoclaves are excluded from the definition of Boiler (40 CFR 63.11237) **[Revised April 2013]**.
- *Boiler Operating Day* - a 24-h period between 12 midnight and the following midnight during which any fuel is combusted at any time in the steam-generating unit. It is not necessary for fuel to be combusted the entire 24-h period (40 CFR 60.41) **[Added July 2007]**.
- *Boiler System* - the boiler and associated components, such as, the feed water system, the combustion air system, the fuel system (including burners), blowdown system, combustion control systems, steam systems, and condensate return systems (40 CFR 63.7575) **[Revised April 2013]**.
- *Boiler System* - the boiler and associated components, such as, feedwater systems, combustion air systems, fuel systems (including burners), blowdown systems, combustion control systems, steam systems, and condensate return systems, directly connected to and serving the energy use systems (40 CFR 63.11237) **[Revised April 2013]**.
- *Bottoms Receiver* - a tank that collects distillation bottoms before the stream is sent for storage or for further processing downstream (40 CFR 63.2406) **[Added January 2007]**.
- *British Thermal Unit or Btu* - the quantity of heat required to raise the temperature of one pound of water by one degree Fahrenheit at about 39.2° Fahrenheit (40 CFR 98.6) **[Added January 2010]**.
- *Bulk* - with respect to industrial GHG suppliers and CO<sub>2</sub> suppliers, means the transfer of a product inside containers, including but not limited to tanks, cylinders, drums, and pressure vessels (40 CFR 98.6) **[Added January 2010]**.
- *Bulk Gasoline Terminal* - any gasoline facility that receives gasoline by pipeline, ship, or barge, and has throughput greater than 75,000 L/day approx. 19,998 gal/day] (40 CFR 60.501).
- *Bulk Natural Gas Liquid or NGL* - mixtures of hydrocarbons that have been separated from natural gas as liquids through the process of absorption, condensation, adsorption, or other methods. Generally, such liquids consist of ethane, propane, butanes, and pentanes plus. Bulk NGL is sold to fractionators or to refineries and petrochemical plants where the fractionation takes place (40 CFR 98.6) **[Added January 2010; Revised January 2011]**.
- *Butane, or n-Butane* - a paraffinic straight-chain hydrocarbon with molecular formula C<sub>4</sub>H<sub>10</sub> (40 CFR 98.6) **[Added January 2010]**.
- *Butylene, or n-Butylene* - an olefinic straight-chain hydrocarbon with molecular formula C<sub>4</sub>H<sub>10</sub> (40 CFR 98.6) **[Added January 2010]**.
- *Bypass Stack* - a device used for discharging combustion gases to avoid severe damage to the air pollution control device or other equipment (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Bypass Stack* - a device used for discharging combustion gases to avoid severe damage to the air pollution control device or other equipment (40 CFR 60.4930) **[Added April 2011]**.

- *By-product Coke Oven Battery* - a group of ovens connected by common walls, where coal undergoes destructive distillation under positive pressure to produce coke and coke oven gas from which by-products are recovered (40 CFR 98.6) **[Added January 2010]**.
- *Byproduct/waste* - any liquid or gaseous substance produced at chemical manufacturing plants, petroleum refineries, or pulp and paper mills (except natural gas, distillate oil, or residual oil) and combusted in a steam generating unit for heat recovery or for disposal. Gaseous substances with CO<sub>2</sub> levels greater than 50 percent or CO levels greater than 10 percent are not byproduct/waste for the purpose of this 40 CFR Subpart Db (40 CFR 60.41b) **[Added July 2007]**.
- *CBI* - confidential business information (40 CFR 68.3) **[Added April 2017]**.
- *CBOB-Summer* (conventional blendstock for oxygenate blending) - a petroleum product which, when blended with a specified type and percentage of oxygenate, meets the definition of Conventional-Summer (40 CFR 98.6) **[Added January 2010]**.
- *CBOB-Winter* (Conventional Blendstock for Oxygenate Blending) - a petroleum product which, when blended with a specified type and percentage of oxygenate, meets the definition of Conventional-Winter (40 CFR 98.6) **[Added January 2010]**.
- *CH<sub>4</sub>* - methane.
- *COD* - the chemical oxygen demand as determined using methods specified pursuant to 40 CFR 136 (40 CFR 98.6) **[Added January 2010]**.
- *Calendar Year* - the period between January 1 and December 31, inclusive, for a given year (40 CFR 63.7575) **[Added April 2011]**.
- *Calcination* - the process of thermally treating minerals to decompose carbonates from ore (40 CFR 98.6) **[Added January 2010]**.
- *Calculation Methodology* - a methodology prescribed under the section "Calculating GHG Emissions" in any subpart of 40 CFR 98 (40 CFR 98.6) **[Added January 2010]**.
- *Calendar Quarter* - 3 consecutive months (non-overlapping) beginning on: January 1, April 1, July 1, or October 1 (40 CFR 62.14840) **[Added January 2004]**.
- *Calendar Quarter* - 3 consecutive months (nonoverlapping) beginning on: January 1, April 1, July 1, or October 1 (40 CFR 60.2977) **[Added January 2006]**.
- *Calendar Year* - 365 consecutive days starting on January 1 and ending on December 31 (40 CFR 60.2977) **[Added January 2006]**.
- *Calendar Year* - 365 consecutive days starting on January 1 and ending on December 31 (40 CFR 62.14840) **[Added January 2004]**.
- *Calendar Year* - the period between January 1 and December 31, inclusive, for a given year (40 CFR 63.11237) **[Added April 2013]**.
- *Carbon Adsorber* - a bed of activated carbon into which an air-perchloroethylene gas-vapor stream is routed and which adsorbs the perchloroethylene on the carbon (40 CFR 63.321).
- *Carbon Adsorber* - a bed of activated carbon into which an air solvent gas vapor stream is routed and which adsorbs the solvent on the carbon (40 CFR 63.461).

- *Carbon Adsorber* - one vessel in a series of vessels in a carbon adsorption system that contains carbon and is used to remove gaseous pollutants from a gaseous emission source (40 CFR 63.742) **[Added January 1999]**.
- *Carbon Adsorber Control Efficiency* - the total efficiency of the control system, determined by the product of the capture efficiency and the control device efficiency (40 CFR 63.742) **[Added January 1999]**.
- *Carbon Dioxide Equivalent or CO<sub>2</sub>e* - the number of metric tons of CO<sub>2</sub> emissions with the same global warming potential as one metric ton of another greenhouse gas, and is calculated using Equation A-1 of this subpart (40 CFR 98.6) **[Added January 2010]**.
- *Carbon Dioxide Production Well* - any hole drilled in the earth for the primary purpose of extracting carbon dioxide from a geologic formation or group of formations which contain deposits of carbon dioxide (40 CFR 98.6) **[Added January 2010]**.
- *Carbon Dioxide Production Well Facility* - one or more carbon dioxide production wells that are located on one or more contiguous or adjacent properties, which are under the control of the same entity. Carbon dioxide production wells located on different oil and gas leases, mineral fee tracts, lease tracts, subsurface or surface unit areas, surface fee tracts, surface lease tracts, or separate surface sites, whether or not connected by a road, waterway, power line, or pipeline, shall be considered part of the same CO<sub>2</sub> production well facility if they otherwise meet the definition. (40 CFR 98.6) **[Added January 2010]**.
- *Carbon Dioxide Stream* - carbon dioxide that has been captured from an emission source (e.g. a power plant or other industrial facility) or extracted from a carbon dioxide production well plus incidental associated substances either derived from the source materials and the capture process or extracted with the carbon dioxide (40 CFR 98.6) **[Added January 2010]**.
- *Carbon Share* - the percent of total mass that carbon represents in any product (40 CFR 98.6) **[Added January 2010]**.
- *Carbonate* - compounds containing the radical CO<sub>3</sub><sup>-2</sup>. Upon calcination, the carbonate radical decomposes to evolve carbon dioxide (CO<sub>2</sub>). Common carbonates consumed in the mineral industry include calcium carbonate (CaCO<sub>3</sub>) or calcite; magnesium carbonate (MgCO<sub>3</sub>) or magnesite; and calcium-magnesium carbonate (CaMg(CO<sub>3</sub>)<sub>2</sub>) or dolomite (40 CFR 98.6) **[Added January 2010]**.
- *Carbonate-based Mineral* - any of the following minerals used in the manufacture of glass: Calcium carbonate (CaCO<sub>3</sub>), calcium magnesium carbonate (CaMg(CO<sub>3</sub>)<sub>2</sub>), sodium carbonate (Na<sub>2</sub>CO<sub>3</sub>), barium carbonate (BaCO<sub>3</sub>), potassium carbonate (K<sub>2</sub>CO<sub>3</sub>), lithium carbonate (Li<sub>2</sub>CO<sub>3</sub>), and strontium carbonate (SrCO<sub>3</sub>) (40 CFR 98.6) **[Added January 2010; Revised January 2011]**.
- *Carbonate-based Mineral Mass Fraction* - the following: For limestone, the mass fraction of calcium carbonate (CaCO<sub>3</sub>) in the limestone; for dolomite, the mass fraction of calcium magnesium carbonate (CaMg(CO<sub>3</sub>)<sub>2</sub>) in the dolomite; for soda ash, the mass fraction of sodium carbonate (Na<sub>2</sub>CO<sub>3</sub>) in the soda ash; for barium carbonate, the mass fraction of barium carbonate (BaCO<sub>3</sub>) in the barium carbonate; for potassium carbonate, the mass fraction of potassium carbonate (K<sub>2</sub>CO<sub>3</sub>) in the potassium carbonate; for lithium carbonate, the mass fraction of lithium carbonate (Li<sub>2</sub>CO<sub>3</sub>); and for strontium carbonate, the mass fraction of strontium carbonate (SrCO<sub>3</sub>) (40 CFR 98.6) **[Added January 2010; Revised January 2011]**.
- *Carbonate-based Raw Material* - any of the following materials used in the manufacture of glass: Limestone, dolomite, soda ash, barium carbonate, potassium carbonate, lithium carbonate, and strontium carbonate (40 CFR 98.6) **[Added January 2010; Revised January 2011]**.
- *Cargo Tank* - a liquid-carrying tank permanently attached and forming an integral part of a motor vehicle or truck trailer. This term also refers to the entire cargo tank motor vehicle or trailer. For the purpose of 40 CFR 63, Subpart EEEE [40 CFR 63.2330 through 63.2406, see checklist items AE.57.1.US through AE.57.15.US],

vacuum trucks used exclusively for maintenance or spill response are not considered cargo tanks (40 CFR 63.2406) **[Added April 2004]**.

- *Carrier* - any distributor who transports or stores or causes the transportation or storage of gasoline or diesel fuel without taking title to or otherwise having any ownership of the gasoline or diesel fuel, and without altering either the quality or quantity of the gasoline or diesel fuel (40 CFR 80.2(t) and 80.1500) **[Revised October 2011]**.
- *Cartridge Filter* - a discrete filter unit containing both filter paper and activated carbon that traps and removes contaminants from petroleum solvent, together with the piping and ductwork used in installing this device (40 CFR 60.621).
- *Category 3 Marine Vessels* - for the purposes of 40 CFR 80, are vessels that are propelled by engines meeting the definition of "Category 3" in 40 CFR 1042.901 (40 CFR 80.2(uuu)) **[Added July 2010]**.
- *Catalytic Cracking Unit* - a refinery process unit in which petroleum derivatives are continuously charged and hydrocarbon molecules in the presence of a catalyst are fractured into smaller molecules, or react with a contact material suspended in a fluidized bed to improve feedstock quality for additional processing and the catalyst or contact material is continuously regenerated by burning off coke and other deposits. Catalytic cracking units include both fluidized bed systems, which are referred to as fluid catalytic cracking units (FCCU), and moving bed systems, which are also referred to as thermal catalytic cracking units. The unit includes the riser, reactor, regenerator, air blowers, spent catalyst or contact material stripper, catalyst or contact material recovery equipment, and regenerator equipment for controlling air pollutant emissions and for heat recovery (40 CFR 98.6) **[Added January 2010]**.
- *Catastrophic Release* - a major uncontrolled emission, fire, or explosion, involving one or more regulated substances that presents imminent and substantial endangerment to public health and the environment (40 CFR 68.3) **[Added January 2005]**.
- *Cause or Contribute to a New Violation* - a Federal action that (40 CFR 93.152) **[Added April 2009]**:
  1. Causes a new violation of a national ambient air quality standard (NAAQS) at a location in a nonattainment or maintenance area which would otherwise not be in violation of the standard during the future period in question if the Federal action were not taken; or
  2. Contributes, in conjunction with other reasonably foreseeable actions, to a new violation of a NAAQS at a location in a nonattainment or maintenance area in a manner that would increase the frequency or severity of the new violation.
- *Caused By* - as used in the terms "direct emissions" and "indirect emissions," emissions that would not otherwise occur in the absence of the Federal action (40 CFR 93.152) **[Added April 2009]**.
- *Cement Kiln Dust* - non-calcined to fully calcined dust produced in the kiln or pyroprocessing line. Cement kiln dust is a fine-grained, solid, highly alkaline material removed from the cement kiln exhaust gas by scrubbers (filtration baghouses and/or electrostatic precipitators) (40 CFR 98.6) **[Added July 2010]**.
- *Certified Emissions Life* - the period during which the engine is designed to properly function in terms of reliability and fuel consumption, without being remanufactured, specified as a number of hours of operation or calendar years, whichever comes first. The values for certified emissions life for stationary CI ICE with a displacement of less than 10 liters per cylinder are given in 40 CFR 1039.101(g). The values for certified emissions life for stationary CI ICE with a displacement of greater than or equal to 10 liters per cylinder and less than 30 liters per cylinder are given in 40 CFR 94.9(a) (40 CFR 60.4219) **[Added July 2011]**.
- *Certified Emissions Life* - the period during which the engine is designed to properly function in terms of reliability and fuel consumption, without being remanufactured, specified as a number of hours of operation or calendar years, whichever comes first. The values for certified emissions life for stationary SI ICE with a maximum engine power less than or equal to 19 KW (25 HP) are given in 40 CFR 90.105, 40 CFR 1054.107, and

40 CFR 1060.101, as appropriate. The values for certified emissions life for stationary SI ICE with a maximum engine power greater than 19 KW (25 HP) certified to 40 CFR part 1048 are given in 40 CFR 1048.101(g). The certified emissions life for stationary SI ICE with a maximum engine power greater than 75 KW (100 HP) certified under the voluntary manufacturer certification program of this subpart is 5,000 hours or 7 years, whichever comes first. You may request in your application for certification that we approve a shorter certified emissions life for an engine family. EPA may approve a shorter certified emissions life, in hours of engine operation but not in years, if we determine that these engines will rarely operate longer than the shorter certified emissions life. If engines identical to those in the engine family have already been produced and are in use, your demonstration must include documentation from such in-use engines. In other cases, your demonstration must include an engineering analysis of information equivalent to such in-use data, such as data from research engines or similar engine models that are already in production. Your demonstration must also include any overhaul interval that you recommend, any mechanical warranty that you offer for the engine or its components, and any relevant customer design specifications. Your demonstration may include any other relevant information. The certified emissions life value may not be shorter than any of the following (40 CFR 60.4248) **[Added April 2008; Revised July 2011]**:

1. 1,000 hours of operation.
  2. Your recommended overhaul interval.
  3. Your mechanical warranty for the engine.
- *Certified Refrigerant Recovery or Recycling Equipment* - equipment manufactured before 15 November 1993, that meets the standards in 40 CFR 82.158(c), 82.158(e), or 82.158(g) (see checklist item AE.90.2.US); equipment certified by an approved equipment testing organization to meet the standards in 40 CFR 82.158(b), (d), or (f); or equipment certified pursuant to 40 CFR 82.36(a) (40 CFR 82.152) **[Revised October 2003]**.
  - *Certified Standards* - calibration gases certified by the manufacturer of the calibration gases to be accurate to within 2 percent of the value on the label or calibration gases (40 CFR 98.6) **[Added January 2010]**.
  - *Certified Stationary Internal Combustion Engine* - an engine that belongs to an engine family that has a certificate of conformity that complies with the emission standards and requirements in this part, or of 40 CFR 90 or 40 CFR 1048, as appropriate (40 CFR 60.4248) **[Added April 2008]**.
  - *Chemical Manufacturing Plants* - industrial plants that are classified by the Department of Commerce under Standard Industrial Classification (SIC) Code 28 (40 CFR 60.41b) **[Added July 2007]**.
  - *Chemical Milling Maskant* - a coating that is applied directly to aluminum components to protect surface areas when chemical milling the component with a Type I or Type II etchant. Type I chemical milling maskants are used with a Type I etchant and Type II chemical milling maskants are used with a Type II etchant. This definition does not include bonding maskants, critical use and line sealer maskants, and seal coat maskants. Additionally, maskants that must be used with a combination of Type I or II etchants and any of the above types of maskants (*i.e.*, bonding, critical use and line sealer, and seal coat) are also not included in this definition. (*See* also Type I and Type II etchant definitions.) (40 CFR 63.742) **[Added January 1999; Revised January 2016]**.
  - *Chemical Milling Maskant Application Operation* - application of chemical milling maskant for use with Type I or Type II chemical milling etchants (40 CFR 63.742) **[Added January 1999]**.
  - *Chemical Recovery Combustion Unit* - a combustion device, such as a recovery furnace or fluidized-bed reactor where spent pulping liquor from sulfite or semi-chemical pulping processes is burned to recover pulping chemicals (40 CFR 98.6) **[Added January 2010]**.
  - *Chemical Recovery Furnace* - an enclosed combustion device where concentrated spent liquor produced by the kraft or soda pulping process is burned to recover pulping chemicals and produce steam. Includes any recovery furnace that burns spent pulping liquor produced from both the kraft and soda pulping processes (40 CFR 98.6) **[Added January 2010]**.

- *Chemotherapeutic Waste* - waste material resulting from the production or use of antineoplastic agents used for the purpose of stopping or reversing the growth of malignant cells (40 CFR 60.51c, 60.2977, 62.14490, and 62.14840) [**Revised January 2004; Revised January 2006**].
- *Chief Facility Operator* - the person in direct charge and control of the operation of a municipal waste combustion unit. That person is responsible for daily onsite supervision, technical direction, management, and overall performance of the municipal waste combustion unit (40 CFR 60.1465) [**Added April 2001**].
- *Chloride Process* - a production process where titanium dioxide is produced using calcined petroleum coke and chlorine as raw materials (40 CFR 98.6) [**Added January 2010**].
- *City Gate* - a location at which natural gas ownership or control passes from one party to another, neither of which is the ultimate consumer. In this rule, in keeping with common practice, the term refers to a point or measuring station at which a local gas distribution utility receives gas from a natural gas pipeline company or transmission system. Meters at the city gate station measure the flow of natural gas into the local distribution company system and typically are used to measure local distribution company system sendout to customers (40 CFR 98.6) [**Added January 2010**].
- *Class I* - refers to an ozone-depleting substance that is listed in 40 CFR part 82 subpart A, appendix A (40 CFR 82.152) [**Added January 2017**].
- *Class II* - refers to an ozone-depleting substance that is listed in 40 CFR part 82 subpart A, appendix B (40 CFR 82.152) [**Added January 2017**].
- *Class II Municipal Solid Waste Landfill* - a landfill that meets 4 criteria: (40 CFR 60.2977) [**Added January 2006**].
  1. Accepts, for incineration or disposal, less than 20 tons per day of municipal solid waste or other solid wastes based on an annual average;
  2. Is located on a site where there is no evidence of groundwater pollution caused or contributed to by the landfill;
  3. Is not connected by road to a Class I municipal solid waste landfill, as defined by Alaska regulatory code 18 AAC 60.300(c) or, if connected by road, is located more than 50 miles from a Class I municipal solid waste landfill; and
  4. Serves a community that meets one of two criteria:
    - a. Experiences for at least three months each year, an interruption in access to surface transportation, preventing access to a Class I municipal solid waste landfill; or
    - b. Has no practicable waste management alternative, with a landfill located in an area that annually receives 25 inches or less of precipitation.
- *Class I Small Municipal Waste Combustion Units* - Class I units are small municipal waste combustion units that are located at municipal waste combustion plants with an aggregate plant combustion capacity greater than 250 tons per day of municipal solid waste. (See the definition of "municipal waste combustion plant capacity" in 40 CFR 60.1465 for specification of which units at a plant are included in the aggregate capacity calculation.) (40 CFR 60.1045(a)(1)) [**Added April 2001**].
- *Class II Small Municipal Waste Combustion Units* - Class II units are small municipal waste combustion units that are located at municipal waste combustion plants with an aggregate plant combustion capacity less than or equal to 250 tons per day of municipal solid waste. (See the definition of "municipal waste combustion plant capacity" in 40 CFR 60.1465 for specification of which units at a plant are included in the aggregate capacity calculation.) (40 CFR 60.1045(a)(2)) [**Added April 2001**].
- *Class I Substance* - any substance designated as class I in appendix A to 40 CFR 82, Subpart A [40 CFR 82.1 through 82.24, see checklist items AE.85.6.US, AE.95.4.US through AE.95.7.US], including chlorofluorocarbons, halons, carbon tetrachloride and methyl chloroform and any other substance so designated by the Agency at a later date (40 CFR 82.104(a)) [**Added July 2004**].

- *Class II Substance* - any substance designated as class II in appendix A to 40 CFR 82, Subpart A [40 CFR 82.1 through 82.24, see checklist items AE.85.6.US, AE.95.4.US through AE.95.7.US], including hydrochlorofluorocarbons and any other substance so designated by the Agency at a later date (40 CFR 82.104(b)) **[Added July 2004]**.
- *Class I Units* - small municipal waste combustion units subject to 40 CFR 60, Subpart AAAAA [40 CFR 60.1000 through 60.1465, see checklist items AE.36.17.US through AE.36.28.US] that are located at municipal waste combustion plants with an aggregate plant combustion capacity greater than 250 tons per day of municipal solid waste. See the definition in this section of “municipal waste combustion plant capacity” for specification of which units at a plant site are included in the aggregate capacity calculation (40 CFR 60.1465) **[Added April 2001]**.
- *Class II Units* - small municipal waste combustion units subject to 40 CFR 60, Subpart AAAAA [40 CFR 60.1000 through 60.1465, see checklist items AE.36.17.US through AE.36.28.US] that are located at municipal waste combustion plants with an aggregate plant combustion capacity less than or equal to 250 tons per day of municipal solid waste. See the definition in this section of “municipal waste combustion plant capacity” for specification of which units at a plant site are included in the aggregate capacity calculation (40 CFR 60.1465) **[Added April 2001]**.
- *Class III Municipal Solid Waste Landfill* - landfill that is not connected by road to a Class I municipal solid waste landfill, as defined by Alaska regulatory code 18 AAC 60.300(c) or, if connected by road, is located more than 50 miles from a Class I municipal solid waste landfill, and that accepts, for disposal, either of the following two criteria: (40 CFR 60.2977) **[Added January 2006]**.
  1. Ash from incinerated municipal waste in quantities less than 1 ton per day on an annual average, which ash must be free of food scraps that might attract animals; or
  2. Less than 5 tons per day of municipal solid waste, based on an annual average, and is not located in a place that meets either of the following criteria:
    - a. Where public access is restricted, including restrictions on the right to move to the place and reside there; or
    - b. That is provided by an employer and that is populated totally by persons who are required to reside there as a condition of employment and who do not consider the place to be their permanent residence.
- *Classified Information* – “classified information” as defined in the Classified Information Procedures Act, 18 U.S.C. App. 3, section 1(a) as “any information or material that has been determined by the United States Government pursuant to an executive order, statute, or regulation, to require protection against unauthorized disclosure for reasons of national security” (40 CFR 68.3) **[Added January 2005]**.
- *Classified National Security Information* - information that has been determined pursuant to Executive Order 13526, “Classified National Security Information,” December 29, 2009 or any successor order to require protection against unauthorized disclosure and is marked to indicate its classified status when in documentary form. The term “Classified Information” is an alternative term that may be used instead of “Classified National Security Information” (40 CFR 63.472) **[Added January 2016]**.
- *Clean Dry Biomass* - any biomass-based solid fuel that have not been painted, pigment-stained, or pressure treated, does not contain contaminants at concentrations not normally associated with virgin biomass materials and has a moisture content of less than 20 percent and is not a solid waste (40 CFR 63.7575) **[Added January 2016]**.
- *Clean Liquid Solvent* - fresh, unused solvent, recycled solvent, or used solvent that has been cleaned of soils (e.g., skimmed of oils or sludge and strained of metal ships) (40 CFR 63.461).
- *Clean Lumber* - wood or wood products that have been cut or shaped and include wet, air-dried, and kiln-dried wood products. Clean lumber does not include wood products that have been painted, pigment-stained, or pressure-treated by compounds such as chromate copper arsenate, pentachlorophenol, and creosote (40 CFR 62.14840) **[Added January 2004]**.

- *Clean Lumber* - wood or wood products that have been cut or shaped and include wet, air-dried, and kiln-dried wood products. Clean lumber does not include wood products that have been painted, pigment-stained, or pressure-treated by compounds such as chromate copper arsenate, pentachlorophenol, and creosote, or manufactured wood products that contain adhesives or resins (e.g., plywood, particle board, flake board, and oriented strand board) (40 CFR 60.2977) **[Added January 2006]**.
- *Clean Wood* - untreated wood or untreated wood products including clean untreated lumber, tree stumps (whole or chipped), and tree limbs (whole or chipped). Clean wood does not include two items (40 CFR 60.1465) **[Added April 2001]**:
  1. Yard waste
  2. Construction, renovation, or demolition wastes (for example, railroad ties and telephone poles) that are exempt from the definition of “municipal solid waste”.
- *Cleaning Capacity* - for a cleaning machine without a solvent/air interface, the maximum volume of parts that can be cleaned at one time. In most cases, the cleaning capacity is equal to the volume (length time width time height) of the cleaning chamber (40 CFR 63.461).
- *Cleaning Material* - a solvent used to remove contaminants and other materials, such as dirt, grease, or oil, from a substrate before or after coating application or from equipment associated with a coating operation, such as spray booths, spray guns, racks, tanks, and hangers. Thus, it includes any cleaning material used on substrates or equipment or both (40 CFR 63.11180) **[Added April 2011]**.
- *Cleaning Operation* - collectively spray gun, hand-wipe, and flush cleaning operations (40 CFR 63.742) **[Added January 1999]**.
- *Cleaning Solvent* - a liquid material used for hand-wipe, spray gun, or flush cleaning. This definition does not include solutions that contain HAP and VOC below the de minimis levels specified in 40 CFR 63.741(f) (40 CFR 63.742) **[Added January 1999]**.
- *Closed-cycle Depainting System* - a dust-free, automated process that removes permanent coating in small sections at a time and maintains a continuous vacuum around the area(s) being depainted to capture emissions. (40 CFR 63.742) **[Added January 1999]**
- *Closed-Vent System* - a system that is not open to the atmosphere and is composed of piping, connections, and, if necessary, flow-inducing devices that transport gas or vapor from a piece or pieces of equipment to a control device (40 CFR 61.241).
- *Closed Vent System* - a system that is not open to the atmosphere and is composed of piping, ductwork, connections, and, if necessary, flow-inducing devices that transport gas or vapors from an emission point to a control device. This system does not include the vapor collection system that is part of some transport vehicles or the loading arm or hose that is used for vapor return. For transfer racks, the closed vent system begins at, and includes, the first block valve on the downstream side of the loading arm or hose used to convey displaced vapors (40 CFR 63.2406) **[Added April 2004]**.
- *Closed Vent System* - a system that is not open to the atmosphere and is composed of hard-piping, ductwork, connections, and, if necessary, fans, blowers, or other flow-inducing device that conveys gas or vapor from an emissions point to a control device (40 CFR 63.7957) **[Added April 2004]**.
- *Closure Device* - a cap, hatch, lid, plug, seal, valve, or other type of fitting that prevents or reduces air pollutant emissions to the atmosphere by blocking an opening in a cover when the device is secured in the closed position. Closure devices include devices that are detachable from the cover (e.g., a sampling port cap), manually operated (e.g., a hinged access lid or hatch), or automatically operated (e.g., a spring-loaded pressure relief valve) (40 CFR 63.7957) **[Added April 2004]**.

- *Coal* - all solid fuels classified as anthracite, bituminous, subbituminous, or lignite by ASTM D388 (incorporated by reference, see 40 CFR 60.17) (40 CFR 60.41) **[Added July 2007]**.
- *Coal* - all solid fuels classified as anthracite, bituminous, sub-bituminous, or lignite by the American Society for Testing and Materials Designation ASTM D388–05 Standard Classification of Coals by Rank (incorporated by reference, see 40 CFR 98.7) (40 CFR 98.6) **[Added January 2010]**.
- *Coal* - all solid fuels classified as anthracite, bituminous, subbituminous, or lignite by the American Society of Testing and Materials in ASTM D388 (incorporated by reference, see 40 CFR 60.17), coal refuse, and petroleum coke. Coal-derived synthetic fuels, including but not limited to solvent refined coal, gasified coal not meeting the definition of natural gas, coal-oil mixtures, coke oven gas, and coal-water mixtures, are also included in this definition for the purposes of 40 CFR Subpart Db (40 CFR 60.41b) **[Added July 2007; Revised April 2009]**.
- *Coal* - all solid fuels classified as anthracite, bituminous, subbituminous, or lignite by the American Society of Testing and Materials in ASTM D388 (incorporated by reference, see 40 CFR 60.17), coal refuse, and petroleum coke. Coal-derived synthetic fuels derived from coal for the purposes of creating useful heat, including but not limited to solvent refined coal, gasified coal not meeting the definition of natural gas, coal-oil mixtures, and coal-water mixtures, are also included in this definition for the purposes of 40 CFR 60, Subpart Dc (40 CFR 60.41c) **[Added July 2006; Revised July 2007; Revised April 2009]**.
- *Coal* - all solid fuels classifiable as anthracite, bituminous, sub-bituminous, or lignite by ASTM D388 (incorporated by reference, see 40 CFR 63.14), coal refuse, and petroleum coke. For the purposes of 40 CFR 63, Subpart DDDDD, this definition of “coal” includes synthetic fuels derived from coal for creating useful heat, including but not limited to, solvent-refined coal, coal-oil mixtures, and coal-water mixtures. Coal derived gases are excluded from this definition (40 CFR 63.7575 and 63.11237) **[Added April 2011]**.
- *Coal* - all solid fuels classifiable as anthracite, bituminous, sub-bituminous, or lignite by ASTM D388 (incorporated by reference, see 40 CFR 63.14), coal refuse, and petroleum coke. For the purposes of this subpart, this definition of “coal” includes synthetic fuels derived from coal, including but not limited to, solvent-refined coal, coal-oil mixtures, and coal-water mixtures. Coal derived gases are excluded from this definition (40 CFR 63.7575) **[Revised April 2013]**.
- *Coal Refuse* - any waste products of coal mining, cleaning, and coal preparation operations (e.g., culm, gob) containing coal, matrix material, clay, and other organic and inorganic material (40 CFR 60.41a).
- *Coal Refuse* - any byproduct of coal mining or coal cleaning operations with an ash content greater than 50 percent, by weight, and a heating value less than 13,900 kJ/kg (6,000 Btu/lb) on a dry basis (40 CFR 60.41b, 60.41c, and 63.7575) **[Added July 2007; Citation Revised April 2011]**.
- *Coal Refuse* - waste-products of coal mining, cleaning, and coal preparation operations (e.g. culm, gob, etc.) containing coal, matrix material, clay, and other organic and inorganic material (40 CFR 60.41) **[Added July 2007]**.
- *Coal Subcategory* - includes any boiler that burns any solid fossil fuel and no more than 15 percent biomass on an annual heat input basis (40 CFR 63.11237) **[Added April 2011]**.
- *Coating* - a material that is applied to a substrate for decorative, protective, or functional purposes. Such materials include, but are not limited to, paints, sealants, liquid plastic coatings, caulks, inks, adhesives, and maskants. Decorative, protective, or functional materials that consist only of protective oils for metal, acids, bases, or any combination of these substances; paper film or plastic film which may be precoated with an adhesive by the film manufacturer; or pre-impregnated composite sheets are not considered coatings for the purposes of 40 CFR Subpart GG. Materials in handheld non-refillable aerosol containers, touch-up markers, and marking pens are also not considered coatings for the purposes of this subpart. A liquid plastic coating means a coating made from fine particle-size polyvinyl chloride (PVC) in solution (also referred to as a plastisol) (40 CFR 63.742) **[Added January 1999; Revised January 2016]**.

- *Coating* -, for the purposes of 40 CFR 63, Subpart HHHHHH (40 CFR 63.11169 through 63.11180), a material spray-applied to a substrate for decorative, protective, or functional purposes. For the purposes of 40 CFR 63, Subpart HHHHHH, coating does not include the following materials (40 CFR 63.11180) **[Added April 2011]**:
  1. Decorative, protective, or functional materials that consist only of protective oils for metal, acids, bases, or any combination of these substances.
  2. Paper film or plastic film that may be pre-coated with an adhesive by the film manufacturer.
  3. Adhesives, sealants, maskants, or caulking materials.
  4. Temporary protective coatings, lubricants, or surface preparation materials.
  5. In-mold coatings that are spray applied in the manufacture of reinforced plastic composite parts.
- *Coating Operation* - the use of a spray booth, tank, or other enclosure or any area, such as a hangar, for the application of a single type of coating (e.g., primer); the use of the same spray booth for the application of another type of coating (e.g., topcoat) constitutes a separate coating operation for which compliance determinations are performed separately (40 CFR 63.742) **[Added January 1999]**.
- *Coating Unit* - a series of one or more coating applicators and any associated drying area and/or oven wherein a coating is applied, dried, and/or cured. A coating unit ends at the point where the coating is dried or cured, or prior to any subsequent application of a different coating. It is not necessary to have an oven or flashoff area in order to be included in this definition (40 CFR 63.742) **[Added January 1999]**.
- *Co-fired Combustion Unit* - a unit that combusts municipal solid waste with nonmunicipal solid waste fuel (for example, coal, industrial process waste). To be considered a co-fired combustion unit, the unit must be subject to a federally enforceable permit that limits it to combusting a fuel feed stream which is 30 percent or less (by weight) municipal solid waste as measured each calendar quarter (40 CFR 60.1465) **[Added April 2001]**.
- *Cofired Combustor* - a unit combusting municipal solid waste with nonmunicipal solid waste fuel (e.g., coal, industrial process waste) and subject to a Federally enforceable permit limiting the unit to combusting a fuel feed stream, 30 percent or less of the weight of which is comprised of municipal solid waste as measured on a calendar quarter basis (40 CFR 60.51a and 60.51b) **[Added December 1997]**.
- *Co-fired Combustor* - a unit combusting hospital waste and/or medical/infectious waste with other fuels or wastes (e.g., coal, municipal solid waste) and subject to an enforceable requirement limiting the unit to combusting a fuel feed stream, 10 percent or less of the weight of which is comprised, in aggregate, of hospital waste and medical/infectious waste as measured on a calendar quarter basis. For purposes of this definition, pathological waste, chemotherapeutic waste, and low-level radioactive waste are considered “other” wastes when calculating the percentage of hospital waste and medical/infectious waste combusted (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Cogeneration* - also known as combined heat and power, means a facility that simultaneously produces both electric (or mechanical) and useful thermal energy from the same primary energy source (40 CFR 60.41b) **[Added April 2006; Revised July 2007]**.
- *Cogeneration Steam Generating Unit* - a steam generating unit that simultaneously produces both electrical (or mechanical) and thermal energy from the same primary energy source (40 CFR 60.41c) **[Revised July 2007]**.
- *Cogeneration Cycle Stationary Combustion Turbine* - any stationary combustion turbine that recovers heat from the stationary combustion turbine exhaust gases using an exhaust heat exchanger, such as a heat recovery steam generator (40 CFR 63.6175) **[Added April 2004]**.
- *Cogeneration Unit* - a unit that produces electrical energy and useful thermal energy for industrial, commercial, or heating or cooling purposes, through the sequential or simultaneous use of the original fuel energy (40 CFR 98.6) **[Added October 2010]**.

- *Coin-Operated Dry Cleaning Machine* - a dry cleaning machine that is operated by the customer (that is, the customer places articles into the machine, turns the machine on, and removes articles from the machine) (40 CFR 63.321).
- *Coke Burn-off* - the coke removed from the surface of a catalyst by combustion during catalyst regeneration. Coke burn-off also means the coke combusted in fluid coking unit burner (40 CFR 98.6) **[Added January 2010]**.
- *Coke Oven Gas* - the volatile constituents generated in the gaseous exhaust during the carbonization of bituminous coal to form coke (40 CFR 60.41b) **[Added July 2007]**.
- *Cokemaking* - the production of coke from coal in either a by-product coke oven battery or a non-recovery coke oven battery (40 CFR 98.6) **[Added January 2010]**.
- *Cold Cleaning Machine* - any device or piece of equipment that contains and/or uses liquid solvent, into which parts are placed to remove soils from the surface of the parts or to dry the parts. Cleaning machines that contain and use heated, nonboiling, solvent to clean the parts are classified as cold cleaning machine (40 CFR 63.461).
- *Collected From* - the transfer of material from the site at which the material is generated to a separate site where the material is burned (40 CFR 60.2977) **[Added January 2006]**.
- *Colorimetric Detector Tube* - a glass tube (sealed prior to use), containing material impregnated with a chemical that is sensitive to perchloroethylene and is designed to measure the concentration of perchloroethylene in the air (40 CFR 63.321).
- *Combination Sterilization Unit* - any enclosed vessel in which both the sterilization process and the aeration process occur within the same vessel, i.e., the vessel is filled with ethylene oxide gas or an ethylene oxide/inert gas mixture for the purpose of sterilizing and is followed by off-gassing of ethylene oxide (40 CFR 63.10448) **[Added January 2008]**.
- *Combined Cycle Gas Turbine* - any stationary gas turbine which recovers heat from the gas turbine exhaust gases to heat water or generate steam (40 CFR 60.331) **[Added October 2004]**.
- *Combined Squeegee and Air-Knife System* - a system consisting of a combination of a squeegee system and an air-knife system within a single enclosure (40 CFR 63.461) **[Added January 2000]**.
- *Combined Cycle Combustion Turbine* - any stationary combustion turbine which recovers heat from the combustion turbine exhaust gases to generate steam that is only used to create additional power output in a steam turbine (40 CFR 60.4420) **[Added April 2009]**.
- *Combined Cycle Stationary Combustion Turbine* - any stationary combustion turbine that recovers heat from the stationary combustion turbine exhaust gases using an exhaust heat exchanger to generate steam for use in a steam turbine (40 CFR 63.6175) **[Added April 2004]**.
- *Combined Cycle System* - a system in which a separate source, such as a gas turbine, internal combustion engine, kiln, etc., provides exhaust gas to a steam generating unit (40 CFR 60.41b and 60.41c) **[Added July 2007]**.
- *Combined Heat and Power Combustion Turbine* - any stationary combustion turbine which recovers heat from the exhaust gases to heat water or another medium, generate steam for useful purposes other than additional electric generation, or directly uses the heat in the exhaust gases for a useful purpose (40 CFR 60.4420) **[Added April 2009]**.
- *Combustion Device* - an individual unit of equipment, such as a flare, oxidizer, catalytic oxidizer, process heater, or boiler, used for the combustion of organic emissions (40 CFR 63.2406) **[Added April 2004]**.

- *Combustion Research* - the experimental firing of any fuel or combination of fuels in a steam generating unit for the purpose of conducting research and development of more efficient combustion or more effective prevention or control of air pollutant emissions from combustion, provided that, during these periods of research and development, the heat generated is not used for any purpose other than preheating combustion air for use by that steam generating unit (i.e., the heat generated is released to the atmosphere without being used for space heating, process heating, driving pumps, preheating combustion air for other units, generating electricity, or any other purpose) (40 CFR 60.41c) **[Added July 2007]**.
- *Combustion Turbine* - all equipment, including but not limited to the turbine, the fuel, air, lubrication and exhaust gas systems, control systems (except emissions control equipment), and any ancillary components and sub-components comprising any simple cycle combustion turbine, any regenerative/recuperative cycle combustion turbine, the combustion turbine portion of any cogeneration cycle combustion system, or the combustion turbine portion of any combined cycle steam/electric generating system (40 CFR 60.4219 and 60.4248) **[Added October 2006; Revised April 2008]**.
- *Combustion Turbine Model* - a group of combustion turbines having the same nominal air flow, combustor inlet pressure, combustor inlet temperature, firing temperature, turbine inlet temperature and turbine inlet pressure (40 CFR 60.4420) **[Added April 2009]**.
- *Combustion Research* - the experimental firing of any fuel or combination of fuels in a steam generating unit for the purpose of conducting research and development of more efficient combustion or more effective prevention or control of air pollution emissions from combustion, provided that, during these periods of research and development, the heat generated is not used for any purpose other than preheating combustion air for use by that steam generating unit (i.e., the heat generated is released to the atmosphere without being used for space heating, process heating, driving pumps, preheating combustion air for other units, generating electricity, or any other purpose) (40 CFR 60.41c).
- *Combustion Turbine Engine* - a device in which air is compressed in a compressor, enters a combustion chamber, and is compressed further by the combustion of fuel injected into the combustion chamber. The hot compressed combustion gases then expand over a series of curved vanes or blades arranged on a central spindle that rotates (40 CFR 63.9375) **[Added July 2003]**.
- *Combustion Turbine Engine Test Cells/Stands* - engine test cells/stands, as defined in 40 CFR 63, Subpart P [40 CFR 63.4480 through 63.4581][40 CFR 63.9280 through 63.9375, see checklist items AE.230.1.US through AE.230.4.US], that test stationary combustion turbines (40 CFR 63.6175) **[Added April 2004]**.
- *Combustion Turbine Test Cell/Stand* - any apparatus used for testing uninstalled stationary or uninstalled mobile (motive) combustion turbines (40 CFR 60.4420) **[Added April 2009]**.
- *Comfort Cooling* - the air-conditioning appliances used to provide cooling in order to control heat and/or humidity in occupied facilities including but not limited to residential, office, and commercial buildings. Comfort cooling appliances include but are not limited to chillers, commercial split systems, and packaged roof-top units (40 CFR 82.152) **[Added January 2017]**.
- *Commercial Boiler* - a boiler used in commercial establishments such as hotels, restaurants, and laundries to provide electricity, steam, and/or hot water (40 CFR 63.11237) **[Added April 2011]**.
- *Commercial Emergency Stationary RICE* - an emergency stationary RICE used in commercial establishments such as office buildings, hotels, stores, telecommunications facilities, restaurants, financial institutions such as banks, doctor's offices, and sports and performing arts facilities (40 CFR 63.6675) **[Added October 2010]**.
- *Commercial/Institutional Boiler* - a boiler used in commercial establishments or institutional establishments such as medical centers, nursing homes, research centers, institutions of higher education, elementary and secondary schools, libraries, religious establishments, governmental buildings, hotels, restaurants, and laundries to provide electricity, steam, and/or hot water (40 CFR 63.7575) **[Revised April 2013]**.

- *Commercial Applications* - executing a commercial transaction subject to a contract. A commercial application includes transferring custody of a product from one facility to another if it otherwise meets the definition (40 CFR 98.6) **[Added January 2010]**.
- *Commercial and Industrial Solid Waste Incineration (CISWI) Unit* - any combustion device that combusts commercial and industrial waste, as defined in 40 CFR 62, Subpart III [40 CFR 62.14500 through 62.14840, see checklist items AE.26.1.US through AE.26.10.US]. The boundaries of a CISWI unit are defined as, but not limited to, the commercial or industrial solid waste fuel feed system, grate system, flue gas system, and bottom ash. The CISWI unit does not include air pollution control equipment or the stack. The CISWI unit boundary starts at the commercial and industrial solid waste hopper (if applicable) and extends through two areas (40 CFR 62.14840) **[Added January 2004]**:
  1. The combustion unit flue gas system, which ends immediately after the last combustion chamber.
  2. The combustion unit bottom ash system, which ends at the truck loading station or similar equipment that transfers the ash to final disposal. It includes all ash handling systems connected to the bottom ash handling system.
- *Commercial and Industrial Waste* - for the purposes of 40 CFR 62.14500 through 62.14840, this means solid waste combusted in an enclosed device using controlled flame combustion without energy recovery that is a distinct operating unit of any commercial or industrial facility (including field-erected, modular, and custom built incineration units operating with starved or excess air), or solid waste combusted in an air curtain incinerator without energy recovery that is a distinct operating unit of any commercial or industrial facility (40 CFR 62.14840) **[Added January 2004]**.
- *Commercial Refrigeration* - the refrigeration appliances used in the retail food and cold storage warehouse sectors. Retail food appliances include the refrigeration equipment found in supermarkets, convenience stores, restaurants and other food service establishments. Cold storage includes the refrigeration equipment used to store meat, produce, dairy products, and other perishable goods (40 CFR 82.152) **[Revised January 2017]**.
- *Commercial/Retail Waste* - material discarded by stores, offices, restaurants, warehouses, nonmanufacturing activities at industrial facilities, and other similar establishments or facilities (40 CFR 60.51a).
- *Common Aeration Time* - that items require the same length of time to off-gas ethylene oxide (40 CFR 63.10448) **[Added January 2008]**.
- *Common Stack* - the exhaust of emissions from two or more affected units through a single flue. Affected units with a common stack may each have separate air pollution control systems located before the common stack, or may have a single air pollution control system located after the exhausts come together in a single flue (40 CFR 63.7575) **[Added April 2011]**.
- *Common Stack* - the exhaust of emissions from two or more affected units through a single flue. Affected units with a common stack may each have separate air pollution control systems located before the common stack, or may have a single air pollution control system located after the exhausts come together in a single flue (40 CFR 63.11237) **[Added April 2013]**.
- *Company Records* - in reference to the amount of fuel consumed by a stationary combustion unit (or by a group of such units), a complete record of the methods used, the measurements made, and the calculations performed to quantify fuel usage. Company records may include, but are not limited to, direct measurements of fuel consumption by gravimetric or volumetric means, tank drop measurements, and calculated values of fuel usage obtained by measuring auxiliary parameters such as steam generation or unit operating hours. Fuel billing records obtained from the fuel supplier qualify as company records (40 CFR 98.6) **[Added January 2010]**.
- *Component* - a part of the refrigerant circuit within an appliance including, but not limited to, compressors, condensers, evaporators, receivers, and all of its connections and subassemblies (40 CFR 82.152) **[Added January 2017]**.

- *Compression Ignition* - relating to a type of stationary internal combustion engine that is not a spark ignition engine (40 CFR 60.4219, 60.4248, and 60.6675) [Added October 2006; Revised April 2008].
- *Compressor Station* - any permanent combination of compressors that move natural gas at increased pressure from fields, in transmission pipelines, or into storage (40 CFR 63.6175) [Added April 2004].
- *Completely Destroy* - to cause the destruction of a controlled substance by one of the five destruction processes approved by the Parties at a demonstrable destruction efficiency of 98 percent or more or a greater destruction efficiency if required under other applicable federal regulations (40 CFR 82.104(c)) [Added July 2004].
- *Condensate* - hydrocarbon liquid separated from natural gas that condenses due to changes in temperature, pressure, or both, and remains liquid at standard conditions (40 CFR 68.3) [Added January 2005].
- *Confined Space* - a space that: (1) is large enough and so configured that an employee can bodily enter and perform assigned work; (2) has limited or restricted means for entry or exit (for example, fuel tanks, fuel vessels, and other spaces that have limited means of entry); and (3) is not suitable for continuous employee occupancy (40 CFR 63.742) [Added January 1999].
- *Connector* - to flanged, screwed, or other joined fittings used to connect pipe line segments, tubing, pipe components (such as elbows, reducers, “T”s or valves) or a pipe line and a piece of equipment or an instrument to a pipe, tube or piece of equipment. A common connector is a flange. Joined fittings welded completely around the circumference of the interface are not considered connectors for the purpose of 40 CFR 98 (40 CFR 98.6) [Added January 2010].
- *Construction and Demolition (C&D) Waste Landfill* - a solid waste disposal facility subject to the requirements 40 CFR 257, subparts A or B that receives construction and demolition waste and does not receive hazardous waste (defined in 40 CFR 261.3) or industrial solid waste (defined in 40 CFR 258.2) or municipal solid waste (as defined in 40 CFR 98.6) other than residential lead-based paint waste. A C&D waste landfill typically receives any one or more of the following types of solid wastes: Roadwork material, excavated material, demolition waste, construction/renovation waste, and site clearance waste (40 CFR 98.348) [Added January 2011].
- *Construction and Demolition (C&D) Waste Landfill* - a solid waste disposal facility subject to the requirements of subparts A or B of 40 CFR 257 that receives construction and demolition waste and does not receive hazardous waste (defined in 40 CFR 261.3) or industrial solid waste (defined in 40 CFR 258.2) or municipal solid waste (defined in 40 CFR 98.6) other than residential lead-based paint waste. A C&D waste landfill typically receives any one or more of the following types of solid wastes: roadwork material, excavated material, demolition waste, construction/renovation waste, and site clearance waste (40 CFR 98.468) [Added January 2012].
- *Consumer* - a commercial or non-commercial purchaser of a product or container that has been introduced into interstate commerce (40 CFR 82.104(d)) [Added July 2004].
- *Contained Gaseous Material* - gases that are in a container when that container is combusted (40 CFR 60.2977 and 62.14840) [Added January 2004; Revised January 2006].
- *Container* - a portable unit used to hold material. Examples of containers include, but are not limited to drums, dumpsters, roll-off boxes, bulk cargo containers commonly known as portable tanks or totes, cargo tank trucks, dump trucks, and rail cars. For the purpose of 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US], a front-end loader, excavator, backhoe, or other type of self-propelled excavation equipment is not a container (40 CFR 63.7957) [Added April 2004].
- *Container* - a portable unit in which a material can be stored, transported, treated, disposed of, or otherwise handled. Examples of containers include, but are not limited to, drums and portable cargo containers known as “portable tanks” or “tote” (40 CFR 63.2406) [Added April 2004].

- *Container* - the immediate vessel in which a controlled substance is stored or transported (40 CFR 82.104(e)) **[Added July 2004]**.
- *Container Containing* - a container that physically holds a controlled substance within its structure that is intended to be transferred to another container, vessel or piece of equipment in order to realize its intended use (40 CFR 82.104(f)) **[Added July 2004]**.
- *Container Glass* - glass made of soda-lime recipe, clear or colored, which is pressed and/or blown into bottles, jars, ampoules, and other products listed in North American Industry Classification System 327213 (NAICS 327213) (40 CFR 98.6) **[Added January 2010]**.
- *Continuous Automated Sampling System* - the total equipment and procedures for automated sample collection and sample recovery/analysis to determine a pollutant concentration or emission rate by collecting a single or multiple integrated sample(s) of the pollutant (or diluent gas) for subsequent on-or off-site analysis; integrated sample(s) collected are representative of the emissions for the sample time as specified by the applicable requirement (40 CFR 60.51b) **[Added July 2006]**.
- *Continuous Automated Sampling System* - the total equipment and procedures for automated sample collection and sample recovery/analysis to determine a pollutant concentration or emission rate by collecting a single integrated sample(s) or multiple integrated sample(s) of the pollutant (or diluent gas) for subsequent on- or off-site analysis; integrated sample(s) collected are representative of the emissions for the sample time as specified by the applicable requirement (40 CFR 60.4930) **[Added April 2011]**.
- *Continuous Bleed* - a continuous flow of pneumatic supply natural gas to the process control device (e.g. level control, temperature control, pressure control) where the supply gas pressure is modulated by the process condition, and then flows to the valve controller where the signal is compared with the process set-point to adjust gas pressure in the valve actuator (40 CFR 98.6) **[Added January 2014]**.
- *Continuous Burning* - the continuous, semicontinuous, or batch feeding of municipal solid waste to dispose of the waste, produce energy, or provide heat to the combustion system in preparation for waste disposal or energy production. Continuous burning does not mean the use of municipal solid waste solely to thermally protect the grate or hearth during the startup period when municipal solid waste is not fed to the grate or hearth (40 CFR 60.1465) **[Added April 2001]**.
- *Continuous Cleaning Machine* - see In-line Cleaning Machine.
- *Continuous Emission Monitoring System* - a monitoring system that continuously measures the emissions of a pollutant from a municipal waste combustion unit (40 CFR 60.1465) **[Added April 2001]**.
- *Continuous Emissions Monitoring System (CEMS)* - a monitoring system for continuously measuring the emissions of a pollutant from an affected facility (40 CFR 60.51a and 60.51b) **[Added December 1997]**.
- *Continuous Emission Monitoring System or CEMS* - a monitoring system for continuously measuring and recording the emissions of a pollutant from an OSWI unit (40 CFR 60.2977) **[Added January 2006]**.
- *Continuous Emission Monitoring System (CEMS)* - a monitoring system for continuously measuring and recording the emissions of a pollutant (40 CFR 62.14490) **[Added October 2000]**.
- *Continuous Emission Monitoring System (CEMS)* - the total equipment required to sample, analyze, measure, and provide, by means of readings recorded at least once every 15 min, a permanent record of gas concentrations, pollutant emission rates, or gas volumetric flow rates from stationary sources (40 CFR 98.6) **[Added January 2010]**.

- *Continuous Emissions Monitoring System* - a monitoring system for continuously measuring and recording the emissions of a pollutant from an affected facility (40 CFR 60.4930) **[Added April 2011]**.
- *Continuous HMIWI* - an HMIWI that is designed to allow waste charging and ash removal during combustion (40 CFR 60.51c) **[Added December 1997]**.
- *Continuous HMIWI* - an HMIWI that is designed to allow waste charging and ash removal during combustion (40 CFR 62.14490) **[Added October 2000]**.
- *Continuous Monitoring System (CMS)* - a continuous emissions monitoring system, continuous automated sampling system, continuous parameter monitoring system, or other manual or automatic monitoring that is used for demonstrating compliance with an applicable regulation on a continuous basis as defined by this subpart. The term refers to the total equipment used to sample and condition (if applicable), to analyze, and to provide a permanent record of emissions or process parameters (40 CFR 60.4930) **[Added April 2011]**.
- *Continuous OSWI Unit* - an OSWI unit that is designed to allow waste charging and ash removal during combustion (40 CFR 60.2977) **[Added January 2006]**.
- *Continuous Parameter Monitoring System* - a monitoring system for continuously measuring and recording operating conditions associated with air pollution control device systems (e.g., operating temperature, pressure, and power) (40 CFR 60.4930) **[Added April 2011]**.
- *Continuous Record* - documentation of data values measured at least once every 15 min and recorded at the frequency specified in 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US] (40 CFR 63.7957) **[Added April 2004]**.
- *Continuous Recorder* - a data recording device that either records an instantaneous data value at least once every 15 min or records 15-min or more frequent block averages (40 CFR 63.7957) **[Added April 2004]**.
- *Continuous Web Cleaning Machine* - a solvent-cleaning machine in which parts such as film, coils, wire, and metal strips are cleaned at speeds typically in excess of 11 feet per minute. Parts are generally uncoiled, cleaned such that the same part is simultaneously entering and exiting the solvent application area of the solvent-cleaning machine, and then recoiled or cut. For the purposes of 40 CFR 63, Subpart T [40 CFR 63.460 through 63.470, see checklist items AE.116.1.US through AE.118.7.US], all continuous web cleaning machines are considered to be a subset of in-line solvent-cleaning machines (40 CFR 63.461) **[Revised January 2000]**.
- *Control Device* - destruction and/or recovery equipment used to destroy or recover HAP or VOC emissions generated by a regulated operation (40 CFR 63.742) **[Added January 1999]**.
- *Control Device* - equipment used recovering, removing, oxidizing, or destroying organic vapors. Examples of such equipment include but are not limited to carbon adsorbers, condensers, vapor incinerators, flares, boilers, and process heaters (40 CFR 63.7957) **[Added April 2004]**.
- *Control Device* - any combustion device, recovery device, recapture device, or any combination of these devices used to comply with 40 CFR 63, Subpart EEEE [40 CFR 63.2330 through 63.2406, see checklist items AE.57.1.US through AE.57.15.US]. Such equipment or devices include, but are not limited to, absorbers, adsorbers, condensers, and combustion devices. Primary condensers, steam strippers, and fuel gas systems are not considered control devices (40 CFR 63.2406) **[Added April 2004]**.
- *Control Efficiency* - the mass of a pollutant in the sewage sludge fed to an incinerator minus the mass of that pollutant in the exit gas from the incinerator stack divided by the mass of the pollutant in the sewage sludge fed to the incinerator (40 CFR 503.41(c)).

- *Control System* - a combination of pollutant capture system(s) and control device(s) used to reduce discharge to the atmosphere of HAP or VOC emissions generated by a regulated operation (40 CFR 63.742) **[Added January 1999]**.
- *Controlled Substance* - a class I or class II ozone-depleting substance (40 CFR 82.104(g)) **[Added July 2004]**.
- *Conventional Blendstock For Oxygenate Blending* - gasoline blendstock which could become conventional gasoline solely upon the addition of an oxygenate (40 CFR 80.1500) **[Added October 2011]**.
- *Conventional Gasoline* - has the same meaning as defined in 40 CFR 80.2(ff) (40 CFR 80.1500) **[Added October 2011]**.
- *Conventional—Summer* - refers to finished gasoline formulated for use in motor vehicles, the composition and properties of which do not meet the requirements of the reformulated gasoline regulations promulgated by the U.S. EPA under 40 CFR 80.40, but which meet summer RVP standards required under 40 CFR 80.27 or as specified by the state. Note: This category excludes conventional gasoline for oxygenate blending (CBOB) as well as other blendstock (40 CFR 98.6) **[Added January 2010]**.
- *Conventional Technology* - wet flue gas desulfurization (FGD) technology, dry FGD technology, atmospheric fluidized bed combustion technology, and oil hydrodesulfurization technology (40 CFR 60.41b and 60.41c) **[Added July 2007]**.
- *Conventional—Winter* - refers to finished gasoline formulated for use in motor vehicles, the composition and properties of which do not meet the requirements of the reformulated gasoline regulations promulgated by the U.S. EPA under 40 CFR 80.40 or the summer RVP standards required under 40 CFR 80.27 or as specified by the state. Note: This category excludes conventional blendstock for oxygenate blending (CBOB) as well as other blendstock (40 CFR 98.6) **[Added January 2010]**.
- *Cost-effective Energy Conservation Measure* - a measure that is implemented to improve the energy efficiency of the boiler or facility that has a payback (return of investment) period of 2 yr or less (40 CFR 63.7575) **[Added April 2011]**.
- *Cover* - a device that prevents or reduces air pollutant emissions to the atmosphere by forming a continuous barrier over the waste material managed in a treatment unit. A cover may have openings (such as access hatches, sampling ports, gauge wells) that are necessary for operation, inspection, maintenance, and repair of the treatment unit on which the cover is used. A cover may be a separate piece of equipment that can be detached and removed from the treatment unit, or a cover may be formed by structural features permanently integrated into the design of the treatment unit. The cover and its closure devices must be made of suitable materials that will minimize exposure of the waste material to the atmosphere, to the extent practical, and will maintain the integrity of the cover and its closure devices throughout its intended service life (40 CFR 63.461) **[Added January 2000]**.
- *Cover* - a device that prevents or reduces air pollutant emissions to the atmosphere by forming a continuous barrier over the remediation material managed in a unit. A cover may have openings (such as access hatches, sampling ports, gauge wells) that are necessary for operation, inspection, maintenance, and repair of the unit on which the cover is used. A cover may be a separate piece of equipment which can be detached and removed from the unit (such as a tarp) or a cover may be formed by structural features permanently integrated into the design of the unit (40 CFR 63.7957) **[Added April 2004]**.
- *Covered Process* - a process that has a regulated substance present in more than a threshold quantity as determined under 40 CFR 68.115 (40 CFR 68.3) **[Added January 2005]**.
- *Criteria Pollutant or Standard* - any pollutant for which there is established a NAAQS at 40 CFR 50 (40 CFR 93.152) **[Added April 2009]**.

- *Critical Component* - for the purpose of 82.156(i) (see checklist items AE.19.16.US, AE.19.18.US, and AE.19.19.US), a component without which industrial process refrigeration equipment will not function, will be unsafe in its intended environment, and/or will be subject to failures that would cause the industrial process served by the refrigeration appliance to be unsafe (40 CFR 82.152).
- *Cross Rod Solvent-cleaning Machine* - a batch solvent-cleaning machine in which parts baskets are suspended from "cross-rods" as they are moved through the machine. In a cross rod cleaning machine, parts are loaded semi-continuously, and enter and exit the machine from a single portal (40 CFR 63.431).
- *Crude Oil* - any naturally occurring, unrefined petroleum liquid (40 CFR 68.3) **[Added January 2005]**.
- *Crude Oil* - a mixture of hydrocarbons that exists in liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities (40 CFR 98.6) **[Added January 2010; Revised January 2011]**.
  1. Depending upon the characteristics of the crude stream, it may also include any of the following:
    - a. Small amounts of hydrocarbons that exist in gaseous phase in natural underground reservoirs but are liquid at atmospheric conditions (temperature and pressure) after being recovered from oil well (casing-head) gas in lease separators and are subsequently commingled with the crude stream without being separately measured. Lease condensate recovered as a liquid from natural gas wells in lease or field separation facilities and later mixed into the crude stream is also included.
    - b. Small amounts of non-hydrocarbons, such as sulfur and various metals.
    - c. Drip gases, and liquid hydrocarbons produced from tar sands, oil sands, gilsonite, and oil shale.
    - d. Petroleum products that are received or produced at a refinery and subsequently injected into a crude supply or reservoir by the same refinery owner or operator.
  2. Liquids produced at natural gas processing plants are excluded. Crude oil is refined to produce a wide array of petroleum products, including heating oils; gasoline, diesel and jet fuels; lubricants; asphalt; ethane, propane, and butane; and many other products used for their energy or chemical content.
- *Crude Oil* - any of the naturally occurring liquids commonly referred to as crude oil, regardless of specific physical properties. Only those crude oils downstream of the first point of custody transfer after the production field are considered crude oils in 40 CFR 63, Subpart EEEE [40 CFR 63.2330 through 63.2406, see checklist items AE.57.1.US through AE.57.15.US] (40 CFR 63.2406) **[Added April 2004]**.
- *Custody Transfer* - the transfer of hydrocarbon liquids or natural gas: after processing and/or treatment in the producing operations, or from storage vessels or automatic transfer facilities or other such equipment, including product loading racks, to pipelines or any other forms of transportation. For the purposes of 40 CFR 63, Subpart YYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US], the point at which such liquids or natural gas enters a natural gas processing plant is a point of custody transfer (40 CFR 63.6175 and 63.6675) **[Added April 2004]**.
- *Custody Transfer* - the transfer of hydrocarbon liquids after processing and/or treatment in the producing operations, or from storage tanks or automatic transfer facilities to pipelines or any other forms of transportation (40 CFR 63.2406) **[Added April 2004]**.
- *Custom-built* - that the industrial process equipment or any of its components cannot be purchased and/or installed without being uniquely designed, fabricated and/or assembled to satisfy a specific set of industrial process conditions (40 CFR 82.152) **[Revised January 2017]**.
- *Cyclonic Barrel Burner* - a combustion device for waste materials that is attached to a 55 gal, open-head drum. The device consists of a lid, which fits onto and encloses the drum, and a blower that forces combustion air into the drum in a cyclonic manner to enhance the mixing of waste material and air (40 CFR 62.14840) **[Added January 2004]**.

- *DIPE* (Diisopropyl Ether,  $(\text{CH}_3)_2\text{CHOCH}(\text{CH}_3)_2$ ) - an ether as described in “Oxygenates” (40 CFR 98.6) [Added January 2010].
- *DOC<sub>f</sub>* - the fraction of DOC that actually decomposes under the (presumably anaerobic) conditions within the landfill (40 CFR 98.6) [Added January 2010].
- *Daily Block Average* - the arithmetic mean of all valid emission concentrations or parameter levels recorded when a unit is operating measured over the 24-hour period from 12 a.m. (midnight) to 12 a.m. (midnight), except for periods of startup and shutdown or downtime (40 CFR 63.7575) [Added April 2013].
- *Daily Block Average* - the arithmetic mean of all valid emission concentrations or parameter levels recorded when a unit is operating measured over the 24-hour period from 12 a.m. (midnight) to 12 a.m. (midnight), except for periods of startup and shutdown and periods when the unit is not operating (40 CFR 63.11237) [Added April 2013].
- *Daily Spread* - a manure management system component in which manure is routinely removed from a confinement facility and is applied to cropland or pasture within 24 h of excretion (40 CFR 98.6) [Added January 2010].
- *Date of Manufacture* - one of the following things (40 CFR 60.4219 and 60.4248) [Added July 2011]:
  1. For freshly manufactured engines and modified engines, date of manufacture means the date the engine is originally produced.
  2. For reconstructed engines, date of manufacture means the date the engine was originally produced, except as specified in paragraph (3) of this definition.
  3. Reconstructed engines are assigned a new date of manufacture if the fixed capital cost of the new and refurbished components exceeds 75 percent of the fixed capital cost of a comparable entirely new facility. An engine that is produced from a previously used engine block does not retain the date of manufacture of the engine in which the engine block was previously used if the engine is produced using all new components except for the engine block. In these cases, the date of manufacture is the date of reconstruction or the date the new engine is produced.
- *Day* - any consistently designated 24 hour period during which an emission unit is operated (40 CFR 98.6) [Added January 2010].
- *Decarburization Vessel* - any vessel used to further refine molten steel with the primary intent of reducing the carbon content of the steel, including but not limited to vessels used for argon-oxygen decarburization and vacuum oxygen decarburization (40 CFR 98.6) [Added January 2010; Revised January 2011].
- *Deep Bedding Systems for Cattle Swine* - a manure management system in which, as manure accumulates, bedding is continually added to absorb moisture over a production cycle and possibly for as long as 6 to 12 months. This manure management system also is known as a bedded pack manure management system and may be combined with a dry lot or pasture (40 CFR 98.6) [Added January 2010].
- *Degasification System* - the entirety of the equipment that is used to drain gas from underground coal mines. This includes all degasification wells and gob gas vent holes at the underground coal mine. Degasification systems include gob and premine surface drainage wells, gob and premine in-mine drainage wells, and in-mine gob and premine cross-measure borehole wells (40 CFR 98.6) [Added July 2010; Revised January 2014].
- *Degradable Organic Carbon (DOC)* - the fraction of the total mass of a waste material that can be biologically degraded (40 CFR 98.6) [Added January 2010].
- *Density* - the mass contained in a given unit volume (mass/volume) (40 CFR 98.6) [Added January 2010].

- *Depainting* - the removal of a permanent coating from the outer surface of an aerospace vehicle or component, whether by chemical or nonchemical means. For nonchemical means, this definition excludes hand and mechanical sanding, and any other nonchemical removal processes that do not involve blast media or other mechanisms that would result in airborne particle movement at high velocity (40 CFR 63.742) **[Added January 1999]**.
- *Depainting Operation* - the use of a chemical agent, media blasting, or any other technique to remove permanent coatings from the outer surface of an aerospace vehicle or components. The depainting operation includes washing of the aerospace vehicle or component to remove residual stripper, media, or coating residue (40 CFR 63.742) **[Added January 1999]**.
- *Design Capacity* - the maximum amount of solid waste a landfill can accept. For the purposes of this subpart, for landfills that have a permit, the design capacity can be determined in terms of volume or mass in the most recent permit issued by the state, local, or Tribal agency responsible for regulating the landfill, plus any in-place waste not accounted for in the most recent permit. If the owner or operator chooses to convert the design capacity from volume to mass to determine its design capacity, the calculation must include a site-specific density. If the design capacity is within 10 percent of the applicability threshold in 40 CFR 98.460(a) and there is a change in the production process that can reasonably be expected to change the site-specific waste density, the site-specific waste density must be redetermined and the design capacity must be recalculated based on the new waste density (40 CFR 98.468) **[Added January 2012]**.
- *Design Evaluation* - a procedure for evaluating control devices that complies with the requirements in 40 CFR 63.985(b)(1)(i) (40 CFR 63.2406) **[Added April 2004]**.
- *Designated Agency* - the state, local, or Federal agency designated by the state under the provisions of 40 CFR 68.215(d) (40 CFR 68.3) **[Added January 2005]**.
- *Designated Pollutant* - any air pollutant, the emissions of which are subject to a standard of performance for new stationary sources, but for which air quality criteria have not been issued and that is not included on a list published under section 108(a) or section 112(b)(1)(A) of the Act (40 CFR 60.21(a)) **[Added October 2005; Revised January 2012; Revised April 2012]**.
- *Designated Volatility Nonattainment Area* - any area designated as being in nonattainment with the NAAQS for ozone pursuant to rule making under Section 107(d)(4)(A)(ii) of the CAAA90 (40 CFR 80.2).
- *Designated Volatility Attainment Area* - an area not designated as being in nonattainment with the NAAQS for ozone (40 CFR 80.2).
- *Destruction* - the expiration of a controlled substance to the destruction efficiency actually achieved, unless considered completely destroyed. Such destruction does not result in a commercially useful end product and uses one of the following controlled processes approved by the Parties to the Protocol (40 CFR 82.3) **[Added April 2003]**:
  1. Liquid injection incineration;
  2. Reactor cracking;
  3. Gaseous/fume oxidation;
  4. Rotary kiln incineration;
  5. Cement kiln;
  6. Radio frequency plasma; or
  7. Municipal waste incinerators only for the destruction of foams.
- *Destruction* - the expiration of a controlled substance, that does not result in a commercially useful end product using one of the following controlled processes in a manner that complies at a minimum with the "Code of Good Housekeeping" of Chapter 5.5 of the United Nations Environment Programme (UNEP) report entitled, Ad-Hoc Technical Advisory Committee on ODS Destruction Technologies, as well as the whole of Chapter 5 from that report, or with more stringent requirements as applicable. The report is available from the Environmental

Protection Agency, Public Docket A-91-60, 401 M Street, SW., Washington, DC 20460. The controlled processes are:

1. Liquid injection incineration;
  2. Reactor cracking;
  3. Gaseous/fume oxidation;
  4. Rotary kiln incineration; or
  5. Cement kiln (40 CFR 82.104(h)) [**Added July 2004**].
- *Destruction* - with respect to landfills and manure management, the combustion of methane in any on-site or off-site combustion technology. Destroyed methane includes, but is not limited to, methane combusted by flaring, methane destroyed by thermal oxidation, methane combusted for use in on-site energy or heat production technologies, methane that is conveyed through pipelines (including natural gas pipelines) for off-site combustion, and methane that is collected for any other on-site or off-site use as a fuel (40 CFR 98.6) [**Added January 2010**].
  - *Destruction* - with respect to fluorinated GHGs, the expiration of a fluorinated GHG to the destruction efficiency actually achieved. Such destruction does not result in a commercially useful end product (40 CFR 98.6) [**Added January 2010**].
  - *Destruction Device* - for the purposes of subparts II [Industrial Wastewater Treatment] and TT [Industrial Waste Landfills] of 40 CFR 98, means a flare, thermal oxidizer, boiler, turbine, internal combustion engine, or any other combustion unit used to destroy or oxidize methane contained in landfill gas or wastewater biogas (40 CFR 98.6) [**Added July 2010**].
  - *Destruction Device* - a flare, thermal oxidizer, boiler, turbine, internal combustion engine, or any other combustion unit used to destroy or oxidize methane contained in landfill gas (40 CFR 98.348) [**Added January 2011**].
  - *Destruction Efficiency* - the efficiency with which a destruction device reduces the mass of a greenhouse gas fed into the device. Destruction efficiency, or flaring destruction efficiency, refers to the fraction of the gas that leaves the flare partially or fully oxidized. The destruction efficiency is expressed in Equation A-2 as follows:(40 CFR 98.6) [**Added January 2010; Revised January 2011**]:
 
$$DE = 1 - \frac{tGHG_{iOUT}}{tGHG_{iIN}}$$

Where:

    - DE = Destruction Efficiency
    - tGHGiIN = The mass of GHG i fed into the destruction device
    - tGHGiOUT = The mass of GHG i exhausted from the destruction device
  - *Deviation* - any instance in which a unit that meets the requirements in 40 CFR 60.2885, or an owner or operator of such a source: (40 CFR 60.2977) [**Added January 2006**].
    1. Fails to meet any requirement or obligation established by this subpart, including but not limited to any emission limitation, operating limit, or operator qualification and accessibility requirements;
    2. Fails to meet any term or condition that is adopted to implement an applicable requirement in this subpart and that is included in the operating permit for any unit that meets the requirements in 40 CFR 60.2885 and is required to obtain such a permit; or
    3. Fails to meet any emission limitation, operating limit, or operator qualification and accessibility requirement in this subpart during startup, shutdown, or malfunction, regardless of whether or not such failure is allowed by this subpart.
  - *Deviation* - any instance in which an affected source subject to 40 CFR 62, Subpart III [40 CFR 62.14500 through 62.14840, see checklist items AE.26.1.US through AE.26.10.US], or an owner or operator of such a source (40 CFR 62.14840) [**Added January 2004**]:

1. Fails to meet any requirement or obligation established by 40 CFR 62, Subpart III [40 CFR 62.14500 through 62.14840, see checklist items AE.26.1.US through AE.26.10.US], including but not limited to any emission limitation, operating limit, or operator qualification and accessibility requirements;
  2. Fails to meet any term or condition that is adopted to implement an applicable requirement in 40 CFR 62, Subpart III [40 CFR 62.14500 through 62.14840, see checklist items AE.26.1.US through AE.26.10.US] and that is included in the operating permit for any affected source required to obtain such a permit; or
  3. Fails to meet any emission limitation, operating limit, or operator qualification and accessibility requirement in 40 CFR 62, Subpart III [40 CFR 62.14500 through 62.14840, see checklist items AE.26.1.US through AE.26.10.US] during startup, shutdown, or malfunction, regardless of whether or not such failure is permitted by 40 CFR 62, Subpart III.
- *Deviation* - any instance in which an affected source subject to 40 CFR 60, Subpart LLLL, or an owner or operator of such a source (40 CFR 60.4930) [**Added April 2011**]:
    1. Fails to meet any requirement or obligation established by 40 CFR 60, Subpart LLLL, including but not limited to any emission limit, operating limit, or operator qualification and accessibility requirements.
    2. Fails to meet any term or condition that is adopted to implement an applicable requirement in this subpart and that is included in the operating permit for any affected source required to obtain such a permit.
  - *Deviation* - any instance in which an affected source subject to this subpart, or an owner or operator of such a source (40 CFR 63.7575 and 63.11237) [**Revised April 2013**]:
    1. Fails to meet any applicable requirement or obligation established by this subpart including, but not limited to, any emission limit, operating limit, or work practice standard; or
    2. Fails to meet any term or condition that is adopted to implement an applicable requirement in this subpart and that is included in the operating permit for any affected source required to obtain such a permit.

A deviation is not always a violation.
  - *Deviation* - any instance in which an affected source, subject to this subpart, or an owner or operator of such a source fails to meet any requirement or obligation established by 40 CFR 63, Subpart HHHHHH (40 CFR 63.11169 through 63.11180) (40 CFR 63.11180) [**Added April 2011**].
  - *Deviation* - any instance in which an affected source subject to 40 CFR 63, Subpart EEEE [40 CFR 63.2330 through 63.2406, see checklist items AE.57.1.US through AE.57.15.US], or portion thereof, or an owner or operator of such a source (40 CFR 63.2406) [**Added April 2004**]:
    1. Fails to meet any requirement or obligation established by 40 CFR 63, Subpart EEEE [40 CFR 63.2330 through 63.2406, see checklist items AE.57.1.US through AE.57.15.US] including, but not limited to, any emission limitation (including any operating limit) or work practice standard;
    2. Fails to meet any term or condition that is adopted to implement an applicable requirement in 40 CFR 63, Subpart EEEE [40 CFR 63.2330 through 63.2406, see checklist items AE.57.1.US through AE.57.15.US], and that is included in the operating permit for any affected source required to obtain such a permit; or
    3. Fails to meet any emission limitation (including any operating limit) or work practice standard in 40 CFR 63, Subpart EEEE [40 CFR 63.2330 through 63.2406, see checklist items AE.57.1.US through AE.57.15.US] during SSM.
  - *Deviation* - any instance in which an affected source subject to 40 CFR 63, Subpart ZZZZ [40 CFR 63.6580 through 63.6675, see checklist items AE.21.1.US through AE.21.10.US], or an owner or operator of such a source (40 CFR 63.6675) [**Added July 2004**]:
    1. Fails to meet any requirement or obligation established by 40 CFR 63, Subpart ZZZZ [40 CFR 63.6580 through 63.6675, see checklist items AE.21.1.US through AE.21.10.US], including but not limited to any emission limitation or operating limitation;
    2. Fails to meet any term or condition that is adopted to implement an applicable requirement in 40 CFR 63, Subpart ZZZZ [40 CFR 63.6580 through 63.6675, see checklist items AE.21.1.US through AE.21.10.US] and that is included in the operating permit for any affected source required to obtain such a permit; or

3. Fails to meet any emission limitation or operating limitation in 40 CFR 63, Subpart ZZZZ [40 CFR 63.6580 through 63.6675, see checklist items AE.21.1.US through AE.21.10.US] during malfunction, regardless of whether or not such failure is permitted by Subpart ZZZZ.
  4. Fails to conform to any provision of the applicable startup, shutdown, or malfunction plan, or to satisfy the general duty to minimize emissions established by 40 CFR 63.6(e)(1)(i).
- *Deviation* - any instance in which an affected source subject to 40 CFR 63, Subpart GGGGG (40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US), or an owner or operator of such a source (40 CFR 63.7957) **[Added April 2004; Revised January 2007]**:
    1. Fails to meet any requirement or obligation established by 40 CFR 63, Subpart GGGGG, including but not limited to any emissions limitation (including any operating limit), or work practice standard;
    2. Fails to meet any term or condition that is adopted to implement an applicable requirement in 40 CFR 63, Subpart GGGGG and that is included in the operating permit for any affected source required to obtain such a permit; or
    3. Fails to meet any emissions limitation, (including any operating limit), or work practice standard in 40 CFR 63, Subpart GGGGG during startup, shutdown, or malfunction, regardless of whether or not such failure is permitted by this subpart.
  - *Deviation* - any instance in which an affected source subject to 40 CFR 63, Subpart YYYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US], or an owner or operator of such a source (40 CFR 63.6175) **[Added April 2004]**:
    1. Fails to meet any requirement or obligation established by 40 CFR 63, Subpart YYYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US], including but not limited to any emission limitation or operating limitation;
    2. Fails to meet any term or condition that is adopted to implement an applicable requirement in 40 CFR 63, Subpart YYYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US] and that is included in the operating permit for any affected source required to obtain such a permit;
    3. Fails to meet any emission limitation or operating limitation in 40 CFR 63, Subpart YYYYY during malfunction, regardless of whether or not such failure is permitted by 40 CFR 63, Subpart YYYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US]; or
    4. Fails to conform to any provision of the applicable startup, shutdown, or malfunction plan, or to satisfy the general duty to minimize emissions established by 40 CFR 63.6(e)(1)(i).
  - *Deviation* - any instance in which an affected source subject to 40 CFR 63, Subpart PTTTT [40 CFR 63.9280 through 63.9375, see checklist items AE.230.1.US through AE.230.4.US] (i.e., engine test cells), or an owner or operator of such a source (40 CFR 63.9375) **[Added July 2003]**:
    1. Fails to meet any requirement or obligation established by Subpart PTTTT, including but not limited to any emission limitations;
    2. Fails to meet any term or condition that is adopted to implement an applicable requirement in Subpart PTTTT and that is included in the operating permit for any affected source required to obtain such a permit; or
    3. Fails to meet any emission limitation in Subpart PTTTT during malfunction, regardless of whether or not such failure is permitted by Subpart PTTTT.
  - *Deviation* - any instance in which an affected source subject to 40 CFR 63, Subpart YYYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US], or an owner or operator of such a source (40 CFR 63.6175) **[Added April 2004; Revised July 2006]**:
    1. Fails to meet any requirement or obligation established by 40 CFR 63, Subpart YYYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US], including but not limited to any emission limitation or operating limitation;
    2. Fails to meet any term or condition that is adopted to implement an applicable requirement in 40 CFR 63, Subpart YYYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US] and that is included in the operating permit for any affected source required to obtain such a permit;
    3. Fails to meet any emission limitation or operating limitation in 40 CFR 63, Subpart YYYYY during malfunction, regardless of whether or not such failure is permitted by 40 CFR 63, Subpart YYYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US]; or

4. Fails to satisfy the general duty to minimize emissions established by 40 CFR 63.6(e)(1)(i).
- *Deviation* - any instance in which an affected source subject to 40 CFR 63, Subpart ZZZZ [40 CFR 63.6580 through 63.6675, see checklist items AE.21.1.US through AE.21.10.US], or an owner or operator of such a source (40 CFR 63.6675) [**Added July 2006**]:
    1. Fails to meet any requirement or obligation established by 40 CFR 63, Subpart ZZZZ [40 CFR 63.6580 through 63.6675, see checklist items AE.21.1.US through AE.21.10.US], including but not limited to any emission limitation or operating limitation;
    2. Fails to meet any term or condition that is adopted to implement an applicable requirement in 40 CFR 63, Subpart ZZZZ [40 CFR 63.6580 through 63.6675, see checklist items AE.21.1.US through AE.21.10.US] and that is included in the operating permit for any affected source required to obtain such a permit; or
    3. Fails to meet any emission limitation or operating limitation in 40 CFR 63, Subpart ZZZZ [40 CFR 63.6580 through 63.6675, see checklist items AE.21.1.US through AE.21.10.US] during malfunction, regardless of whether or not such failure is permitted by Subpart ZZZZ.
    4. Fails to satisfy the general duty to minimize emissions established by 40 CFR 63.6(e)(1)(i).
  - *Diesel Engine* - any stationary RICE in which a high boiling point liquid fuel injected into the combustion chamber ignites when the air charge has been compressed to a temperature sufficiently high for auto-ignition. This process is also known as compression ignition (40 CFR 63.6675) [**Added July 2004**].
  - *Diesel Fuel* - any liquid obtained from the distillation of petroleum with a boiling point of approximately 150 to 360 degrees Celsius. One commonly used form is fuel oil number 2. Diesel fuel also includes any non-distillate fuel with comparable physical and chemical properties (e.g. biodiesel) that is suitable for use in compression ignition engines (40 CFR 63.6675) [**Added April 2010**].
  - *Diesel Fuel* - any fuel sold in any State or Territory of the United States and suitable for use in diesel engines, and that is (40 CFR 80.2(x)) [**Revised October 2011**]:
    1. A distillate fuel commonly or commercially known or sold as No. 1 diesel fuel or No. 2 diesel fuel;
    2. A non-distillate fuel other than residual fuel with comparable physical and chemical properties (e.g., biodiesel fuel); or
    3. A mixture of fuels meeting the criteria of paragraphs (1) and (2) of this definition.
  - *Diesel Fuel* - any liquid obtained from the distillation of petroleum with a boiling point of approximately 150 to 360 °Celsius. One commonly used form is number 2 distillate oil (40 CFR 60.4219) [**Added October 2006**].
  - *Diesel Fuel* - any fuel sold in any state and suitable for use in diesel motor vehicles and diesel motor vehicle engines that is commonly or commercially known or sold as diesel fuel (40 CFR 80.2).
  - *Diesel Fuel* - any liquid obtained from the distillation of petroleum with a boiling point of approximately 150 to 360 °C. One commonly used form is fuel oil number 2 (40 CFR 60.4248 and 63.6675) [**Added July 2004; Revised April 2008**].
  - *Diesel-Other* - any distillate fuel oil not defined elsewhere, including Diesel Treated as Blendstock (DTAB) (40 CFR 98.6) [**Added January 2010**].
  - *Diesel Particulate Filter* - an emission control technology that reduces PM emissions by trapping the particles in a flow filter substrate and periodically removes the collected particles by either physical action or by oxidizing (burning off) the particles in a process called regeneration (40 CFR 60.4219) [**Added October 2006**].
  - *Diffusion Flame Gas-Fired Stationary Combustion Turbine* - (40 CFR 63.6175) [**Added April 2004**]:
    - 1.a. Each stationary combustion turbine which is equipped only to fire gas using diffusion flame technology,
    - b. Each stationary combustion turbine which is equipped both to fire gas using diffusion flame technology and to fire oil, during any period when it is firing gas, and

- c. Each stationary combustion turbine which is equipped both to fire gas using diffusion flame technology and to fire oil, and is located at a major source where all new, reconstructed, and existing stationary combustion turbines fire oil no more than an aggregate total of 1000 h during the calendar year.
- 2. Diffusion flame gas-fired stationary combustion turbines do not include:
  - a. Any emergency stationary combustion turbine,
  - b. Any stationary combustion turbine located on the North Slope of Alaska, or
  - c. Any stationary combustion turbine burning landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, or any stationary combustion turbine where gasified MSW is used to generate 10 percent or more of the gross heat input on an annual basis.
- *Diffusion Flame Oil-Fired Stationary Combustion Turbine* - (40 CFR 63.6175) **[Added April 2004]**:
  - 1.a. Each stationary combustion turbine which is equipped only to fire oil using diffusion flame technology, and
  - b. Each stationary combustion turbine which is equipped both to fire oil using diffusion flame technology and to fire gas, and is located at a major source where all new, reconstructed, and existing stationary combustion turbines fire oil more than an aggregate total of 1000 h during the calendar year, during any period when it is firing oil.
- 2. Diffusion flame oil-fired stationary combustion turbines do not include:
  - a. Any emergency stationary combustion turbine, or
  - b. Any stationary combustion turbine located on the North Slope of Alaska.
- *Diffusion Flame Stationary Combustion Turbine* - any stationary combustion turbine where fuel and air are injected at the combustor and are mixed only by diffusion prior to ignition. A unit which is capable of operating in both lean premix and diffusion flame modes is considered a lean premix stationary combustion turbine when it is in the lean premix mode, and it is considered a diffusion flame stationary combustion turbine when it is in the diffusion flame mode (40 CFR 60.331) **[Added October 2004]**.
- *Diffusion Flame Stationary Combustion Turbine* - any stationary combustion turbine where fuel and air are injected at the combustor and are mixed only by diffusion prior to ignition (40 CFR 60.4420) **[Added April 2009]**.
- *Diffusion Flame Technology* - a configuration of a stationary combustion turbine where fuel and air are injected at the combustor and are mixed only by diffusion prior to ignition (40 CFR 63.6175) **[Added April 2004]**.
- *Digester Gas* - any gaseous by-product of wastewater treatment typically formed through the anaerobic decomposition of organic waste materials and composed principally of methane and CO<sub>2</sub> (40 CFR 60.4248, 63.6175 and 63.6675) **[Added July 2004; Revised April 2008]**.
- *Dioxins/Furans* - tetra- through octachlorinated dibenzo-p-dioxins and dibenzofurans (40 CFR 60.1465, 60.2977, and 62.14840) **[Revised January 2004; Revised January 2006]**.
- *Dioxins/Furans* - the combined emissions of tetra-through octa-chlorinated dibenzo-para-dioxins and dibenzofurans, as measured by USEPA Reference Method 23 (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Dioxins/Furans* - tetra- through octachlorinated dibenzo-p-dioxins and dibenzofurans (40 CFR 60.4930) **[Added April 2011]**.
- *Dioxins/Furans* - tetra- through octa-chlorinated dibenzo-p-dioxins and dibenzofurans (40 CFR 63.7575) **[Added April 2011]**.
- *Direct Emissions* - those emissions of a criteria pollutant or its precursors that are caused or initiated by the Federal action and occur at the same time and place as the action (40 CFR 93.152) **[Added April 2009]**.

- *Discard* - for purposes of 40 CFR 62, Subpart III [40 CFR 62.14500 through 62.14840, see checklist items AE.26.1.US through AE.26.10.US], and 40 CFR 60, Subpart DDDD [40 CFR 60.2500 through 60.2875], only, burned in an incineration unit without energy recovery (40 CFR 62.14840) [**Added January 2004**].
- *Dispersion Factor* - the ratio of the increase in the ground level ambient air concentrations for a pollutant at or beyond the property line of the site where the sewage sludge incinerator is located to the mass emission rate for the pollutant from the incinerator stack (40 CFR 503.41(d)).
- *Disposal* - the process leading to and including (40 CFR 82.152) [**Revised January 2017**]:
  1. The discharge, deposit, dumping or placing of any discarded appliance into or on any land or water;
  2. The disassembly of any appliance for discharge, deposit, dumping or placing of its discarded component parts into or on any land or water;
  3. The vandalism of any appliance such that the refrigerant is released into the environment or would be released into the environment if it had not been recovered prior to the destructive activity;
  4. The disassembly of any appliance for reuse of its component parts; or
  5. The recycling of any appliance for scrap.
- *Disposal of Halon* - the process leading to and including discarding of halon from halon-containing equipment (40 CFR 82.260) [**Added March 1998**].
- *Disposal of Halon-containing Equipment* - the process leading to and including (40 CFR 82.260) [**Added March 1998**]:
  1. The discharge, deposit, dumping, or placing of any discarded halon-containing equipment into or on any land or water
  2. The disassembly of any halon-containing equipment for discharge, deposit, or dumping or placing of its discarded component parts into or on any land or water
  3. The disassembly of any halon-containing equipment for reuse of its component parts.
- *Distillate Fuel* - diesel fuel and other petroleum fuels that can be used in engines that are designed for diesel fuel. For example, jet fuel, heating oil, kerosene, No. 4 fuel, DMX, DMA, DMB, and DMC are distillate fuels; and natural gas, LPG, gasoline, and residual fuel are not distillate fuels. Blends containing residual fuel may be distillate fuels (40 CFR 80.2(aaa)) [**Added October 2011**].
- *Distillate Fuel Oil* - a classification for one of the petroleum fractions produced in conventional distillation operations and from crackers and hydrotreating process units. The generic term distillate fuel oil includes kerosene, kerosene-type jet fuel, diesel fuels (Diesel Fuels No. 1, No. 2, and No. 4), and fuel oils (Fuel Oils No. 1, No. 2, and No. 4) (40 CFR 98.6) [**Added January 2010; Revised January 2011**].
- *Distillate Oil* - fuel oils that contain 0.05 weight percent nitrogen or less and comply with the specifications for fuel oil numbers 1 and 2, as defined by the American Society of Testing and Materials in ASTM D396 (incorporated by reference, see 40 CFR 60.17), diesel fuel oil numbers 1 and 2, as defined by the American Society for Testing and Materials in ASTM D975 (incorporated by reference, see 40 CFR 60.17), kerosine, as defined by the American Society of Testing and Materials in ASTM D3699 (incorporated by reference, see 40 CFR 60.17), biodiesel as defined by the American Society of Testing and Materials in ASTM D6751 (incorporated by reference, see 40 CFR 60.17), or biodiesel blends as defined by the American Society of Testing and Materials in ASTM D7467 (incorporated by reference, see 40 CFR 60.17) (40 CFR 60.41b) [**Added July 2007; Revised April 2009; Revised January 2012; Revised April 2012**].
- *Distillate Oil* - fuel oil that complies with the specifications for fuel oil numbers 1 or 2, as defined by the American Society for Testing and Materials in ASTM D396 (incorporated by reference, see 40 CFR 60.17), diesel fuel oil numbers 1 or 2, as defined by the American Society for Testing and Materials in ASTM D975 (incorporated by reference, see 40 CFR 60.17), kerosine, as defined by the American Society of Testing and Materials in ASTM D3699 (incorporated by reference, see 40 CFR 60.17), biodiesel as defined by the American Society of Testing and Materials in ASTM D6751 (incorporated by reference, see 40 CFR 60.17), or biodiesel blends as defined by

the American Society of Testing and Materials in ASTM D7467(incorporated by reference, see 40 CFR 60.17) (40 CFR 60.41c) [Added July 2007; Revised April 2009; Revised January 2012; Revised April 2012].

- *Distillate Oil* - any liquid obtained from the distillation of petroleum with a boiling point of approximately 150 to 360 °C. One commonly used form is fuel oil number 2 (40 CFR 63.6175) [Added April 2004].
- *Distillate Oil* - fuel oils that contain 0.05 weight percent nitrogen or less and comply with the specifications for fuel oil numbers 1 and 2, as defined by the American Society of Testing and Materials in ASTM D396 (incorporated by reference, see 40 CFR 63.14) or diesel fuel oil numbers 1 and 2, as defined by the American Society for Testing and Materials in ASTM D975 (incorporated by reference, see 40 CFR 63.14), kerosene, and biodiesel as defined by the American Society of Testing and Materials in ASTM D6751-11b (incorporated by reference, see 40 CFR 60.14) (40 CFR 63.7575 and 63.11237) [Revised April 2013].
- *Distributor* - any person who transports or stores or causes the transportation or storage of gasoline or diesel fuel at any point between any gasoline or diesel fuel refinery or importer's facility and any retail outlet or wholesale purchaser-consumer's facility (40 CFR 80.2) [Added October 2011].
- *Distributor* - a person to whom a product is delivered or sold for purposes of subsequent resale, delivery or export (40 CFR 82.104(i)) [Added July 2004].
- *Diverter Valve* - a flow control device that prevents room air from passing through a refrigerated condenser when the door of the dry cleaning machine is open (40 CFR 63.321).
- *Downstream Location* - any point in the diesel fuel distribution system that is downstream of refineries and import facilities, for example, diesel fuel at facilities of distributors, carriers, retailers, kerosene blenders, and wholesale purchaser-consumers (40 CFR 80.502(e)) [Added July 2006].
- *Drum Reclamation Unit* - a unit that burns residues out of drums (e.g., 55 gal drums) so that the drums can be reused (40 CFR 62.14840) [Added January 2004].
- *Dry Cleaning Cycle* - the washing and drying of articles in a dry-to-dry machine or transfer machine system (40 CFR 63.321).
- *Dry Cleaning Facility* - an establishment with one or more dry cleaning systems (40 CFR 63.321).
- *Dry Cleaning Machine* - a dry-to-dry machine or each machine of a transfer machine system (40 CFR 63.321).
- *Dry Cleaning Machine Drum* - the perforated container inside the dry cleaning machine that holds the articles during dry cleaning (40 CFR 63.321).
- *Dry Cleaning Systems* - a dry-to-dry machine and its ancillary equipment or a transfer machine system and its ancillary equipment (40 CFR 63.321).
- *Dry Flue Gas Desulfurization Technology* - a SO<sub>2</sub> control system that is located downstream of the steam generating unit and removes sulfur oxides from the combustion gases of the steam generating unit by contacting the combustion gases with an alkaline reagent and water, whether introduced separately or as a premixed slurry or solution and forming a dry powder material. This definition includes devices where the dry powder material is subsequently converted to another form. Alkaline slurries or solutions used in dry flue gas desulfurization technology include but are not limited to lime and sodium (40 CFR 60.41b) [Added July 2007].
- *Dry Flue Gas Desulfurization Technology* - a SO<sub>2</sub> control system that is located between the steam generating unit and the exhaust vent or stack, and that removes sulfur oxides from the combustion gases of the steam generating unit by contacting the combustion gases with an alkaline reagent and water, whether introduced separately or as a premixed slurry or solution and forming a dry powder material. This definition includes devices

where the dry powder material is subsequently converted to another form. Alkaline reagents used in dry flue gas desulfurization systems include, but are not limited to, lime and sodium compounds (40 CFR 60.41c) **[Added July 2007]**.

- *Dry Lot* - a manure management system component consisting of a paved or unpaved open confinement area without any significant vegetative cover where accumulating manure may be removed periodically (40 CFR 98.6) **[Added January 2010]**.
- *Dry Media Blasting* - abrasive blasting using dry media. Dry media blasting relies on impact and abrasion to remove paint from a substrate. Typically, a compressed air stream is used to propel the media against the coated surface (40 CFR 63.11180) **[Added April 2011]**.
- *Dry Scrubber* - an add-on air pollution control system that injects dry alkaline sorbent (dry injection) or sprays an alkaline sorbent (spray dryer) to react with and neutralize acid gases in the HMIWI exhaust stream forming a dry powder material (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Dry Scrubber* - an add-on air pollution control system that injects dry alkaline sorbent (dry injection) or sprays an alkaline sorbent (spray dryer) to react with and neutralize acid gas in the exhaust stream forming a dry powder material. Sorbent injection systems used as control devices in fluidized bed boilers are included in this definition. A dry scrubber is a dry control system (40 CFR 63.11237) **[Added October 2016]**.
- *Dry Scrubber* - an add-on air pollution control system that injects dry alkaline sorbent (dry injection) or sprays an alkaline sorbent (spray dryer) to react with and neutralize acid gas in the exhaust stream forming a dry powder material. Sorbent injection systems used as control devices in fluidized bed boilers and process heaters are included in this definition. A dry scrubber is a dry control system (40 CFR 63.7575 and 63.22137) **[Revised April 2013]**.
- *Dryer* - a machine used to remove petroleum solvent from articles of clothing or other textile or leather goods, after washing and removing excess petroleum solvent, and the piping and ductwork used in the installation of this device (40 CFR 60.621).
- *Dryer* - a machine used to remove perchloroethylene from articles by tumbling them in a heated air stream (40 CFR 63.321).
- *Dry-to-Dry Machine* - a one machine dry cleaning operation in which washing and drying are performed in the same machine (40 CFR 63.321).
- *Dual-fuel Engine* - any stationary RICE in which a liquid fuel (typically diesel fuel) is used for compression ignition and gaseous fuel (typically natural gas) is used as the primary fuel (40 CFR 63.6675) **[Added July 2004]**.
- *Dual-point Vapor Balance System* - a type of vapor balance system in which the storage tank is equipped with an entry port for a gasoline fill pipe and a separate exit port for a vapor connection (40 CFR 63.11132) **[Added April 2008]**.
- *Duct Burner* - a device that combusts fuel and is placed in the exhaust duct from another source (such as a stationary gas turbine, internal combustion engine, kiln, etc.) to allow the firing of additional fuel to heat the exhaust gases before the exhaust gases enter a steam generating unit (40 CFR 60.41b, 60.41c and 60.331) **[Revised October 2004; Citation Revised July 2007]**.
- *Duct Burner* - a device that combusts fuel and that is placed in the exhaust duct from another source, such as a stationary combustion turbine, internal combustion engine, kiln, etc., to allow the firing of additional fuel to heat the exhaust gases before the exhaust gases enter a heat recovery steam generating unit (40 CFR 60.4420) **[Added April 2009]**.

- *Dutch Oven* - a unit having a refractory-walled cell connected to a conventional boiler setting. Fuel materials are introduced through an opening in the roof of the dutch oven and burn in a pile on its floor. Fluidized bed boilers are not part of the dutch oven design category (40 CFR 63.7575) **[Revised April 2013]**.
- *Dwell* - the technique of holding parts within the freeboard area but above the vapor zone of the solvent-cleaning machine. Dwell occurs after cleaning to allow solvent to drain from the parts or parts baskets back into the solvent-cleaning machine (40 CFR 63.461).
- *E0* - a gasoline that contains no ethanol (40 CFR 80.1500) **[Added October 2011]**.
- *E10* - a gasoline-ethanol blend that contains at least 9.0 and no more than 10.0 volume percent ethanol (40 CFR 80.1500) **[Added October 2011]**.
- *E15* - a gasoline-ethanol blend that contains greater than 10.0 volume percent ethanol and not more than 15.0 volume percent ethanol (40 CFR 80.1500) **[Added October 2011]**.
- *ECA Marine Fuel* - diesel, distillate, or residual fuel that meets the criteria of paragraph 1., but not the criteria of paragraph 2. of this section (40 CFR 80.2(ttt)) **[Added July 2010]**:
  1. All diesel, distillate, or residual fuel used, intended for use, or made available for use in Category 3 marine vessels while the vessels are operating within an Emission Control Area (ECA) is ECA marine fuel, unless it meets the criteria of paragraph 2.
  2. ECA marine fuel does not include any of the following fuel:
    - a. Fuel that is allowed by 40 CFR part 1043 to exceed the fuel sulfur limits for operation in an ECA (such as fuel used by excluded vessels or vessels equipped with equivalent emission controls in conformance with 40 CFR 1043.55).
    - b. Fuel that conforms fully to the requirements of this part for NRLM diesel fuel (including being designated as NRLM).
  3. Fuel used, or made available for use, in any diesel engines not installed on a Category 3 marine vessel.
- *ETBE (Ethyl Tertiary Butyl Ether, (CH<sub>3</sub>)<sub>3</sub>COC<sub>2</sub>H)* - an ether as described in "Oxygenates" (40 CFR 98.6) **[Added January 2010]**.
- *EX* - a gasoline-ethanol blend that contains less than 9 volume percent ethanol where X equals the maximum volume percent ethanol in the gasoline-ethanol blend (40 CFR 80.1500) **[Added October 2011]**.
- *EXX* - a gasoline-ethanol blend above E15 where XX equals the maximum volume percent ethanol in the gasoline-ethanol blend (40 CFR 80.1500) **[Added October 2011]**.
- *Effective Dose Equivalent* - the sum of the products of absorbed dose and appropriate factors to account for differences in biological effectiveness due to the quality of radiation and its distribution in the body of reference man. The unit of the effective dose equivalent is the rem. For purposes of 40 CFR 61, Subpart I [40 CFR 61.100 through 61.108. see checklist items AE.350.1.US through AE.350.5.US], doses caused by radon-222 and its decay products formed after the radon is released from the facility are not included. The method for calculating effective dose equivalent and the definition of reference man are outlined in the International Commission on Radiological Protection's Publication No. 26 (40 CFR 61.101) **[Added July 2004]**.
- *Effective Dose Equivalent* - the sum of the products of absorbed dose and appropriate factors to account for differences in biological effectiveness due to the quality of radiation and its distribution in the body of reference man. The unit of the effective dose equivalent is the rem. For purposes of this subpart, doses caused by radon-222 and its respective decay products formed after the radon is released from the facility are not included. The method for calculating effective dose equivalent and the definition of reference man are outlined in the International Commission on Radiological Protection's Publication No. 26 (40 CFR 61.91(a)) **[Added July 2006]**.

- *Efficiency - the gas turbine* manufacturer's rated heat rate at peak load in terms of heat input per unit of power output based on the lower heating value of the fuel (40 CFR 60.331) **[Added October 2004]**.
- *Efficiency - the combustion turbine* manufacturer's rated heat rate at peak load in terms of heat input per unit of power output--based on the higher heating value of the fuel (40 CFR 60.4420) **[Added April 2009]**.
- *Efficiency Credit* - emission reductions above those required by 40 CFR 63, subpart DDDDD. Efficiency credits generated may be used to comply with the emissions limits. Credits may come from pollution prevention projects that result in reduced fuel use by affected units. Boilers that are shut down cannot be used to generate credits unless the facility provides documentation linking the permanent shutdown to implementation of the energy conservation measures identified in the energy assessment (40 CFR 63.7575) **[Added April 2013]**.
- *Eight-hour Block Average* - the average of all hourly emission concentrations or parameter levels when the municipal waste combustion unit operates and combusts municipal solid waste measured over any of three 8-h periods of **time (40 CFR 60.1465) [Added April 2001]**:
  1. 12:00 midnight to 8:00 a.m.
  2. 8:00 a.m. to 4:00 p.m.
  3. 4:00 p.m. to 12:00 midnight.
- *Electric Boiler* - a boiler in which electric heating serves as the source of heat. Electric boilers that burn gaseous or liquid fuel during periods of electrical power curtailment or failure are included in this definition (40 CFR 63.11237) **[Added April 2013, Revised October 2016]**.
- *Electric Power Transmission or Distribution Entity* - any entity that transmits, distributes, or supplies electricity to a consumer or other user, including any company, electric cooperative, public electric supply corporation, a similar Federal department (including the Bureau of Reclamation or the Corps of Engineers), a municipally owned electric department offering service to the public, an electric public utility district, or a jointly owned electric supply project (40 CFR 98.308) **[Added January 2011]**.
- *Electric Utility Stationary Gas Turbine* - any stationary gas turbine **constructed for the purpose** of supplying more than one-third of its potential electric output capacity to any utility power distribution system for sale (40 CFR 60.331) **[Added October 2004]**.
- *Electric Utility Steam Generating Unit (EGU)* – in relation to NESHAPs regulations, a fossil fuel-fired combustion unit of more than 25 megawatts electric (MWe) that serves a generator that produces electricity for sale. A fossil fuel-fired unit that cogenerates steam and electricity and supplies more than one-third of its potential electric output capacity and more than 25 MWe output to any utility power distribution system for sale is considered an electric utility steam generating unit. To be “capable of combusting” fossil fuels, an EGU would need to have these fuels allowed in their operating permits and have the appropriate fuel handling facilities on-site or otherwise available (e.g., coal handling equipment, including coal storage area, belts and conveyers, pulverizers, etc.; oil storage facilities). In addition, fossil fuel-fired EGU means any EGU that fired fossil fuel for more than 10.0 percent of the average annual heat input in any 3 consecutive calendar years or for more than 15.0 percent of the annual heat input during any one calendar year after 16 April 2012 (40 CFR 63.7575) **[Revised April 2013]**.
- *Electric Utility Steam Generating Unit (EGU)* - a fossil fuel-fired combustion unit of more than 25 megawatts that serves a generator that produces electricity for sale. A fossil fuel-fired unit that cogenerates steam and electricity and supplies more than one-third of its potential electric output capacity and more than 25 megawatts electrical output to any utility power distribution system for sale is considered an electric utility steam generating unit. To be “capable of combusting” fossil fuels, an EGU would need to have these fuels allowed in their operating permits and have the appropriate fuel handling facilities on-site or otherwise available (e.g., coal handling equipment, including coal storage area, belts and conveyers, pulverizers, etc.; oil storage facilities). In addition, fossil fuel-fired EGU means any EGU that fired fossil fuel for more than 10.0 percent of the average annual heat input in any 3 consecutive calendar years or for more than 15.0 percent of the annual heat input during any one calendar year after 16 April 2015 (40 CFR 63.11237) **[Added April 2013, Revised October 2016]**.

- *Electrodeposition of Paint* - the application of a coating using a water-based electrochemical bath process. The component being coated is immersed in a bath of the coating. An electric potential is applied between the component and an oppositely charged electrode hanging in the bath. The electric potential causes the ionized coating to be electrically attracted, migrated, and deposited on the component being coated (40 CFR 63.742) **[Added January 1999]**.
- *Electrostatic Application* - any method of coating application where an electrostatic attraction is created between the part to be coated and the atomized paint particles (40 CFR 63.11180) **[Added April 2011]**.
- *Electrostatic Precipitator (ESP)* - an add-on air pollution control device used to capture particulate matter by charging the particles using an electrostatic field, collecting the particles using a grounded collecting surface, and transporting the particles into a hopper. An electrostatic precipitator is usually a dry control system (40 CFR 63.7575) **[Added April 2011]**.
- *Electrostatic Precipitator (ESP)* - an add-on air pollution control device used to capture particulate matter by charging the particles using an electrostatic field, collecting the particles using a grounded collecting surface, and transporting the particles into a hopper. An electrostatic precipitator is usually a dry control system (40 CFR 63.11237) **[Revised April 2013]**.
- *Electrostatic Precipitator or Wet Electrostatic Precipitator* - an air pollution control device that uses both electrical forces and, if applicable, water to remove pollutants in the exit gas from a sewage sludge incinerator stack (40 CFR 60.4930) **[Added April 2011]**.
- *Electrostatic Spray* - a method of applying a spray coating in which an electrical charge is applied to the coating and the substrate is grounded. The coating is attracted to the substrate by the electrostatic potential between them (40 CFR 63.742) **[Added January 1999]**.
- *Emergency* - a situation where extremely quick action on the part of the Federal agencies involved is needed and where the timing of such Federal activities makes it impractical to meet the requirements of 40 CFR 93, Subpart B, such as natural disasters like hurricanes or earthquakes, civil disturbances such as terrorist acts and military mobilizations (40 CFR 93.152) **[Added April 2009]**.
- *Emergency Combustion Turbine* - any stationary combustion turbine which operates in an emergency situation. Examples include stationary combustion turbines used to produce power for critical networks or equipment, including power supplied to portions of a facility, when electric power from the local utility is interrupted, or stationary combustion turbines used to pump water in the case of fire or flood, etc. Emergency stationary combustion turbines do not include stationary combustion turbines used as peaking units at electric utilities or stationary combustion turbines at industrial facilities that typically operate at low capacity factors. Emergency combustion turbines may be operated for the purpose of maintenance checks and readiness testing, provided that the tests are required by the manufacturer, the vendor, or the insurance company associated with the turbine. Required testing of such units should be minimized, but there is no time limit on the use of emergency combustion turbines (40 CFR 60.4420) **[Added April 2009]**.
- *Emergency Fuel* - a fuel fired by a gas turbine only during circumstances, such as natural gas supply curtailment or breakdown of delivery system, that make it impossible to fire natural gas in the gas turbine (40 CFR 60.331) **[Added October 2004]**.
- *Emergency Gas Turbine* - any stationary gas turbine which operates as a mechanical or electrical power source only when the primary power source for a facility has been rendered inoperable by an emergency situation (40 CFR 60.331) **[Added October 2004]**.
- *Emergency Generator* - a stationary combustion device, such as a reciprocating internal combustion engine or turbine that serves solely as a secondary source of mechanical or electrical power whenever the primary energy supply is disrupted or discontinued during power outages or natural disasters that are beyond the control of the owner or operator of a facility. An emergency generator operates only during emergency situations, for training

of personnel under simulated emergency conditions, as part of emergency demand response procedures, or for standard performance testing procedures as required by law or by the generator manufacturer. A generator that serves as a back-up power source under conditions of load shedding, peak shaving, power interruptions pursuant to an interruptible power service agreement, or scheduled facility maintenance shall not be considered an emergency generator (40 CFR 98.6) **[Added January 2010]**.

- *Emergency Equipment* - any auxiliary fossil fuel-powered equipment, such as a fire pump, that is used only in emergency situations (40 CFR 98.6) **[Added January 2010]**.
- *Emergency Stationary Combustion Turbine* - any stationary combustion turbine that operates in an emergency situation. Examples include stationary combustion turbines used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility is interrupted, or stationary combustion turbines used to pump water in the case of fire or flood, etc. Emergency stationary combustion turbines do not include stationary combustion turbines used as peaking units at electric utilities or stationary combustion turbines at industrial facilities that typically operate at low capacity factors. Emergency stationary combustion turbines may be operated for the purpose of maintenance checks and readiness testing, provided that the tests are required by the manufacturer, the vendor, or the insurance company associated with the turbine. Required testing of such units should be minimized, but there is no time limit on the use of emergency stationary combustion turbines (40 CFR 63.6175) **[Added April 2004]**.
- *Emergency Stationary Internal Combustion Engine* – in relationship to NSPS regulations, any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary ICE must comply with the requirements specified in 40 CFR 60.4211(f) [or 60.4243(d)] in order to be considered emergency stationary ICE. If the engine does not comply with the requirements specified in 40 CFR 60.4211(f) [or 60.4243(d)], then it is not considered to be an emergency stationary ICE under 40 CFR 60, subpart IIII (40 CFR 60.4219 and 60.4248) **[Revised April 2013]**:
  1. The stationary ICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary ICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary ICE used to pump water in the case of fire or flood, etc.
  2. The stationary ICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 60.4211(f) [or 40 CFR 60.4243(d)]
  3. The stationary ICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 60.4211(f)(2)(ii) or (iii) and 40 CFR 60.4211(f)(3)(i) [or 60.4243(d)(2)(ii) or (iii) and 40 CFR 60.4243(d)(3)(i)].
- *Emergency Stationary RICE* – in relation to the NESHAPs regulations, any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in 40 CFR 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in 40 CFR 63.6640(f), then it is not considered to be an emergency stationary RICE under this 40 CFR 63, subpart ZZZZ (40 CFR 63.6675) **[Revised April 2013]**:
  1. The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.
  2. The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 63.6640(f).
  3. The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 63.6640(f)(2)(ii) or (iii) and 40 CFR 63.6640(f)(4)(i) or (ii).

- *Emerging Technology* - any SO<sub>2</sub> control system that is not defined as a conventional technology under this section, and for which the owner or operator of the facility has applied to the Administrator and received approval to operate as an emerging technology under 40 CFR 60.48c(a)(4) or 40 CFR 60.49b(a)(4) (40 CFR 60.41b and 60.41c) **[Revised July 2007]**.
- *Emission Control Area* - an Emission Control Area (ECA), for the purposes of this subpart, means the "ECA" as defined in 40 CFR 1043.20 as well as "ECA associated area" as defined in 40 CFR 1043.20 (40 CFR 80.502(g)) **[Added July 2010]**.
- *Emission Limitation* - an emission limit, opacity limit, operating limit, or visible emission limit (40 CFR 63.2406 and 63.7957) **[Added April 2004]**.
- *Emission Points and Control Requirements for an Industrial POTW Treatment Plant* - the emission points and control requirements for an existing industrial POTW treatment plant are specified in the appropriate NESHAPs for the industrial users. For example, an existing industrial POTW treatment plant that provides treatment for a facility subject to 40 CFR 63, Subpart FF, the *National Emission Standard for Benzene Waste Operations*, must meet the treatment and control requirements specified in 40 CFR 61.348(d)(4). The emission points and control requirements for a new or reconstructed industrial POTW treatment plant are either those specified by the particular NESHAPs which apply to the industrial users who discharge their waste for treatment to the POTW, or those emission points and control requirements set forth in 40 CFR 63.1586 for non-industrial POTW treatment plants. The set of control requirements which applies to a particular new or reconstructed POTW is that set which requires the most stringent overall control of HAP emissions (40 CFR 63.1583) **[Added January 2000]**.
- *Emission Standard* - a legally enforceable regulation setting forth an allowable rate of emissions into the atmosphere, establishing an allowance system, or prescribing equipment specifications for control of air pollution emissions (40 CFR 60.21(f)) **[Added October 2005; Revised January 2012; Revised April 2012]**.
- *Emissions Budgets* - those portions of the applicable SIP's projected emission inventories that describe the levels of emissions (mobile, stationary, area, etc.) that provide for meeting reasonable further progress milestones, attainment, and/or maintenance for any criteria pollutant or its precursors (40 CFR 93.152) **[Added April 2009]**.
- *Emissions That a Federal Agency has a Continuing Program Responsibility For* - emissions that are specifically caused by an agency carrying out its authorities, and does not include emissions that occur due to subsequent activities, unless such activities are required by the Federal agency. When an agency, in performing its normal program responsibilities, takes actions itself or imposes conditions that result in air pollutant emissions by a non-Federal entity taking subsequent actions, such emissions are covered by the meaning of a continuing program responsibility (40 CFR 93.152) **[Added April 2009]**.
- *Emissions Offsets* - for purposes of 40 CFR 93.158, are emissions reductions which are quantifiable, consistent with the applicable SIP attainment and reasonable further progress demonstrations, surplus to reductions required by, and credited to, other applicable SIP provisions, enforceable at both the State and Federal levels, and permanent within the timeframe specified by the program (40 CFR 93.152) **[Added April 2009]**.
- *Emissions Point* - an individual tank, surface impoundment, container, oil-water, organic-water separator, transfer system, vent, or enclosure (40 CFR 63.7957) **[Added April 2004]**.
- *Enclosure* - a structure that surrounds a tank or container, captures organic vapors emitted from the tank or container, and vents the captured vapor through a closed vent system to a control device (40 CFR 63.7957) **[Added April 2004]**.
- *Energy Assessment* - the following for the emission units covered by 40 CFR Subpart DDDDD (40 CFR 63.7575 and 63.11237) **[Revised April 2013; Revised January 2016]**:

1. The energy assessment for facilities with affected boilers and process heaters with a combined heat input capacity of less than 0.3 trillion Btu (TBtu) per year will be 8 on-site technical labor hours in length maximum, but may be longer at the discretion of the owner or operator of the affected source. The boiler system(s), process heater(s), and any on-site energy use system(s) accounting for at least 50 percent of the affected boiler(s) energy (e.g., steam, hot water, process heat, or electricity) production, as applicable, will be evaluated to identify energy savings opportunities, within the limit of performing an 8-hour on-site energy assessment.
  2. The energy assessment for facilities with affected boilers and process heaters with a combined heat input capacity of 0.3 to 1.0 TBtu/year will be 24 on-site technical labor hours in length maximum, but may be longer at the discretion of the owner or operator of the affected source. The boiler system(s), process heater(s), and any on-site energy use system(s) accounting for at least 33 percent of the energy (e.g., steam, hot water, process heat, or electricity) production, as applicable, will be evaluated to identify energy savings opportunities, within the limit of performing a 24-hour on-site energy assessment.
  3. The energy assessment for facilities with affected boilers and process heaters with a combined heat input capacity greater than 1.0 TBtu/year will be up to 24 on-site technical labor hours in length for the first TBtu/yr plus 8 on-site technical labor hours for every additional 1.0 TBtu/yr not to exceed 160 on-site technical hours, but may be longer at the discretion of the owner or operator of the affected source. The boiler system(s), process heater(s), and any on-site energy use system(s) accounting for at least 20 percent of the energy (e.g., steam, process heat, hot water, or electricity) production, as applicable, will be evaluated to identify energy savings opportunities.
  4. The on-site energy use systems serving as the basis for the percent of affected boiler(s) and process heater(s) energy production in paragraphs (1), (2), and (3) of this definition may be segmented by production area or energy use area as most logical and applicable to the specific facility being assessed (e.g., product X manufacturing area; product Y drying area; Building Z).
- *Energy Management Practices* - the set of practices and procedures designed to manage energy use that are demonstrated by the facility's energy policies, a facility energy manager and other staffing responsibilities, energy performance measurement and tracking methods, an energy saving goal, action plans, operating procedures, internal reporting requirements, and periodic review intervals used at the facility (40 CFR 63.7575) [**Added April 2011**].
  - *Energy Management Program* - a program that includes a set of practices and procedures designed to manage energy use that are demonstrated by the facility's energy policies, a facility energy manager and other staffing responsibilities, energy performance measurement and tracking methods, an energy saving goal, action plans, operating procedures, internal reporting requirements, and periodic review intervals used at the facility. Facilities may establish their program through energy management systems compatible with ISO 50001 (40 CFR 63.7575 and 63.11237) [**Added April 2013**].
  - *Energy Recovery* - the process of recovering thermal energy from combustion for useful purposes such as steam generation or process heating (40 CFR 60.2977 and 62.14840) [**Added January 2004; Revised January 2006**].
  - *Energy Use System* - the following systems located on-site that use energy (steam, hot water, or electricity) provided by the affected boiler or process heater: process heating; compressed air systems; machine drive (motors, pumps, fans); process cooling; facility heating, ventilation, and air-conditioning systems; hot water systems; building envelop; and lighting; or other systems that use steam, hot water, process heat, or electricity provided by the affected boiler or process heater. Energy use systems are only those systems using energy clearly produced by affected boilers and process heaters (40 CFR 63.7575) [**Added April 2013**].
  - *Energy Use System* - includes the following systems located on the site of the affected boiler that use energy provided by the boiler (40 CFR 63.11237) [**Revised April 2013**].
    1. Process heating; compressed air systems; machine drive (motors, pumps, fans); process cooling; facility heating, ventilation, and air conditioning systems; hot water systems; building envelop; and lighting; or
    2. Other systems that use steam, hot water, process heat, or electricity, provided by the affected boiler.

Energy use systems are only those systems using energy clearly produced by affected boilers.

- *Engine* - any internal combustion engine, any combustion turbine engine, or any rocket engine (40 CFR 63.9375) **[Added July 2003]**.
- *Engine Manufacturer* - the manufacturer of the engine. See the definition of “manufacturer” in this section (40 CFR 60.4219 and 60.4248) **[Added October 2006]**.
- *Engine Startup* - the time from initial start until applied load and engine and associated equipment reaches steady state or normal operation. For stationary engine with catalytic controls, engine startup means the time from initial start until applied load and engine and associated equipment, including the catalyst, reaches steady state or normal operation (40 CFR 63.6675) **[Added April 2010]**.
- *Engine Test Cell/Stand* - any apparatus used for testing uninstalled stationary or uninstalled mobile (motive) engines (40 CFR 63.9375) **[Added July 2003]**.
- *Entity* - any refiner, importer, distributor, retailer or wholesale-purchaser consumer of any distillate fuel or other product subject to the requirements of 40 CFR 80, subpart I) (40 CFR 80.502(a)) **[Added July 2006, Revised July 2010]**.
- *Environmental Receptor* - natural areas such as national or state parks, forests, or monuments; officially designated wildlife sanctuaries, preserves, refuges, or areas; and Federal wilderness areas, that could be exposed at any time to toxic concentrations, radiant heat, or overpressure greater than or equal to the endpoints provided in 40 CFR 68.22(a), as a result of an accidental release and that can be identified on local U. S. Geological Survey maps (40 CFR 68.3) **[Added January 2005]**.
- *Equipment* - each pump, pressure relief device, sampling connection system, valve, and connector used in remediation material service at a facility (40 CFR 63.7957) **[Added April 2004]**.
- *Equipment Cleaning* - the use of an organic solvent to remove coating residue from the surfaces of paint spray guns and other painting related equipment, including, but not limited to stir sticks, paint cups, brushes, and spray booths (40 CFR 63.11180) **[Added April 2011]**.
- *Equipment Leak Component* - each pump, valve, and sampling connection system used in organic liquids service at an OLD operation. Valve types include control, globe, gate, plug, and ball. Relief and check valves are excluded (40 CFR 63.2406) **[Added April 2004]**.
- *Equivalent* - the following only as this term is used in Table 6 of 40 CFR 63, Subpart DDDDD or Table 5 to 40 CFR 63, Subpart JJJJ (40 CFR 63.7575 and 63.11237) **[Added April 2011]**:
  1. An equivalent sample collection procedure means a published voluntary consensus standard or practice (VCS) or EPA method that includes collection of a minimum of three composite fuel samples, with each composite consisting of a minimum of three increments collected at approximately equal intervals over the test period.
  2. An equivalent sample compositing procedure means a published VCS or EPA method to systematically mix and obtain a representative subsample (part) of the composite sample.
  3. An equivalent sample preparation procedure means a published VCS or EPA method that: Clearly states that the standard, practice or method is appropriate for the pollutant and the fuel matrix; or is cited as an appropriate sample preparation standard, practice or method for the pollutant in the chosen VCS or EPA determinative or analytical method.
  4. An equivalent procedure for determining heat content means a published VCS or EPA method to obtain gross calorific (or higher heating) value.
  5. An equivalent procedure for determining fuel moisture content means a published VCS or EPA method to obtain moisture content. If the sample analysis plan calls for determining metals (especially the mercury, selenium, or arsenic) using an aliquot of the dried sample, then the drying temperature must be modified to prevent vaporizing these metals. On the other hand, if metals analysis is done on an “as received” basis, a

separate aliquot can be dried to determine moisture content and the metals concentration mathematically adjusted to a dry basis.

6. An equivalent pollutant (mercury, hydrogen chloride, hydrogen sulfide) determinative or analytical procedure means a published VCS or EPA method that clearly states that the standard, practice, or method is appropriate for the pollutant and the fuel matrix and has a published detection limit equal or lower than the methods listed in Table 6 to this subpart for the same purpose.
- *Equivalent* - the following only as this term is used in Table 6 to this subpart (40 CFR 63.7575) [**Added April 2013**].
    1. An equivalent sample collection procedure means a published voluntary consensus standard or practice (VCS) or EPA method that includes collection of a minimum of three composite fuel samples, with each composite consisting of a minimum of three increments collected at approximately equal intervals over the test period.
    2. An equivalent sample compositing procedure means a published VCS or EPA method to systematically mix and obtain a representative subsample (part) of the composite sample.
    3. An equivalent sample preparation procedure means a published VCS or EPA method that: Clearly states that the standard, practice or method is appropriate for the pollutant and the fuel matrix; or is cited as an appropriate sample preparation standard, practice or method for the pollutant in the chosen VCS or EPA determinative or analytical method.
    4. An equivalent procedure for determining heat content means a published VCS or EPA method to obtain gross calorific (or higher heating) value.
    5. An equivalent procedure for determining fuel moisture content means a published VCS or EPA method to obtain moisture content. If the sample analysis plan calls for determining metals (especially the mercury, selenium, or arsenic) using an aliquot of the dried sample, then the drying temperature must be modified to prevent vaporizing these metals. On the other hand, if metals analysis is done on an “as received” basis, a separate aliquot can be dried to determine moisture content and the metals concentration mathematically adjusted to a dry basis.
    6. An equivalent pollutant (mercury, HCl) determinative or analytical procedure means a published VCS or EPA method that clearly states that the standard, practice, or method is appropriate for the pollutant and the fuel matrix and has a published detection limit equal or lower than the methods listed in Table 6 to this subpart for the same purpose.
  - *Ethane* - a paraffinic hydrocarbon with molecular formula  $C_2H_6$  (40 CFR 98.6) [**Added January 2010**].
  - *Ethanol* - an anhydrous alcohol with molecular formula  $C_2H_5OH$  (40 CFR 98.6) [**Added January 2010**].
  - *Ethanol Production* - an operation that produces ethanol from the fermentation of sugar, starch, grain, or cellulosic biomass feedstocks, or the production of ethanol synthetically from petrochemical feedstocks, such as ethylene or other chemicals (40 CFR 98.358) [**Added July 2010**].
  - *Ethylene* - an olefinic hydrocarbon with molecular formula  $C_2H_4$  (40 CFR 98.6) [**Added January 2010**].
  - *Excess Emissions* - a specified averaging period over which either (40 CFR 60.331) [**Added October 2004**]:
    1. The  $NO_x$  emissions are higher than the applicable emission limit in 40 CFR 60.332;
    2. The total sulfur content of the fuel being combusted in the affected facility exceeds the limit specified in 40 CFR 60.333; or
    3. The recorded value of a particular monitored parameter is outside the acceptable range specified in the parameter monitoring plan for the affected unit.
  - *Excess Emissions* - a specified averaging period over which either (40 CFR 60.4420) [**Added April 2009**]:
    1. the  $NO_x$  emissions are higher than the applicable emission limit in 40 CFR 60.4320;
    2. the total sulfur content of the fuel being combusted in the affected facility exceeds the limit specified in 40 CFR 60.4330; or
    3. the recorded value of a particular monitored parameter is outside the acceptable range specified in the parameter monitoring plan for the affected unit.

- *Excluded OSWI* – the following types of units are excluded from compliance with 40 CFR Subpart EEEE (40 CFR 60.2880 through 60.2977) [**Added January 2006**]:
  1. Cement kilns, the unit is excluded if it is regulated under 40 CFR 63, Subpart LLL (National Emission Standards for Hazardous Air Pollutants from the Portland Cement Manufacturing Industry).
  2. Co-fired combustors, the unit, that would otherwise be considered a very small municipal waste combustion unit, is excluded if it meets the following five requirements
    - a. The unit has a Federally enforceable permit limiting the combustion of municipal solid waste to 30 percent of the total fuel input by weight.
    - b. the Administrator is notified that the unit qualifies for the exclusion.
    - c. the Administrator is provided with a copy of the Federally enforceable permit.
    - d. the weights are recorded, each calendar quarter, of municipal solid waste and of all other fuels combusted.
    - e. Each report is kept for 5 yr. These records must be kept on site for at least 2 years. The records may be kept off site for the remaining 3 yr.
  3. Cogeneration facilities are excluded if they meet the following three requirements:
    - a. The unit qualifies as a cogeneration facility under section 3(18)(B) of the Federal Power Act (16 U.S.C. 796(18)(B)).
    - b. The unit burns homogeneous waste (not including refuse-derived fuel) to produce electricity and steam or other forms of energy used for industrial, commercial, heating, or cooling purposes.
    - c. The Administrator is notified that the unit meets all of these criteria.
  4. Commercial and industrial solid waste incineration units are excluded if the unit is regulated under 40 CFR subparts CCCC or DDDD and is required to meet the emission limitations established in those subparts.
  5. Hazardous waste combustion units are excluded if they meet either of the following two criteria:
    - a. A permit for the unit is obtained under section 3005 of the *Solid Waste Disposal Act*.
    - b. The unit is regulated under 40 CFR part 63, subpart EEE (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors).
  6. Hospital/medical/infectious waste incinerators. Your unit is excluded if it is regulated under 40 CFR, subparts Ce or Ec (New Source Performance Standards and Emission Guidelines for Hospital/Medical/Infectious Waste Incinerators).
  7. Incinerators and air curtain incinerators in isolated areas of Alaska are excluded if it is used at a solid waste disposal site in Alaska that is classified as a Class II or Class III municipal solid waste landfill, as defined in 40 CFR 60.2977.
  8. Rural institutional waste incinerators are excluded if it is an institutional waste incineration unit, as defined in 40 CFR 60.2977, and the application for exclusion has been approved by the Administrator as follows:
    - a. Prior to initial startup, an application and supporting documentation demonstrating that the institutional waste incineration unit meets the following two requirements and the documentation is submitted to and approved by the Administrator.
      - i. The unit is located more than 50 mi from the boundary of the nearest Metropolitan Statistical Area,
      - ii. Alternative disposal options are not available or are economically infeasible.
    - b. The application described in paragraph (a)(i) above is revised and resubmitted to the Administrator for approval every 5 yr following the initial approval of the exclusion for the unit.
    - c. If the facility re-applied for an exclusion and were denied exclusion by the Administrator, the facility has 3 yr from the expiration date of the current exclusion to comply with the emission limits and all other applicable requirements.
  9. Institutional boilers and process heaters are excluded if they are regulated under 40 CFR 63, Subpart DDDDD (National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers and Process Heaters).
  10. Laboratory Analysis Units are excluded if they burn samples of materials only for the purpose of chemical or physical analysis.
  11. Materials recovery units are excluded if they combusts waste for the primary purpose of recovering metals. Examples include primary and secondary smelters.
  12. Pathological waste incineration units such as the facility's institutional waste incineration unit or very small municipal waste combustion unit are excluded from if they burn 90 percent or more by weight (on a calendar quarter basis and excluding the weight of auxiliary fuel and combustion air) of pathological waste,

low-level radioactive waste, and/or chemotherapeutic waste as defined in 40 CFR 60.2977 and you the Administrator is notified that the unit meets these criteria.

13. Small or large municipal waste combustion units are excluded if they are regulated under 40 CFR 60, Subparts AAAA, BBBB, Ea, Eb, or Cb, and are required to meet the emission limitations established in those subparts.
  14. Small power production facilities are excluded if they meet the following three requirements:
    - a. The unit qualifies as a small power-production facility under section 3(17)(C) of the Federal Power Act (16 U.S.C. 796(17)(C)).
    - b. The unit burns homogeneous waste (not including refuse-derived fuel) to produce electricity.
    - c. The Administrator is notified that the unit meets all of these criteria.
  15. Temporary-use incinerators and air curtain incinerators used in disaster recovery are excluded if it is used on a temporary basis to combust debris from a disaster or emergency such as a tornado, hurricane, flood, ice storm, high winds, or act of bioterrorism and the facility complies with the requirements in 40 CFR 60.2969.
  16. Units that combust contraband or prohibited goods are excluded if the unit is owned or operated by a government agency such as police, customs, agricultural inspection, or a similar agency to destroy only illegal or prohibited goods such as illegal drugs, or agricultural food products that can not be transported into the country or across State lines to prevent biocontamination. The exclusion does not apply to items either confiscated or incinerated by private, industrial, or commercial entities.
  17. Incinerators used for national security are excluded if they meet either of the following requirements:
    - a. The incineration unit is used solely during military training field exercises to destroy national security materials integral to the field exercises.
    - b. The incineration unit is used solely to incinerate national security materials, its use is necessary to safeguard national security, and the following exclusion request requirements are met and the Administrator has approved the request for exclusion:
      - i. The request for exclusion and supporting documentation must demonstrate both that the incineration unit is used solely to destroy national security materials and that a reliable alternative to incineration that ensures acceptable destruction of national security materials is unavailable, on either a permanent or temporary basis.
      - ii. The request for exclusion must be submitted to and approved by the Administrator prior to initial startup.
- *Exempt Solvent* - specified organic compounds that have been determined by the USEPA to have negligible photochemical reactivity and are listed in 40 CFR 51.100 (40 CFR 63.742) [**Added January 1999**].
  - *Exempted New Municipal Waste Combustors* – this includes (40 CFR 60.50b(b) through 60.50b(p)) [**Moved July 2003**]:
    1. any waste combustion unit that is capable of combusting more than 250 tons/day of municipal solid waste and is subject to a Federally enforceable permit limiting the plant wide maximum amount of municipal solid waste that may be combusted to less than or equal to 11 tons/day if the owner or operator:
      - a. notifies the USEPA Administrator of an exemption claim
      - b. provides a copy of the Federally enforceable permit
      - c. keeps records of the amount of municipal solid waste fired on a daily basis
    2. physical or operational changes made to an existing unit so it will comply with emissions guidelines
    3. a qualifying small power production facility that burns homogeneous waste (such as auto tires or used oil, but not including refuse-derived fuel) for the production of electric energy if the owner or operator:
      - a. notifies the USEPA Administrator of an exemption claim
      - b. provides data documenting that the unit qualifies for the exemption
    4. a qualifying cogeneration facility that burns homogeneous waste (such as auto tires or used oil, but not including refuse-derived fuel) for the production of electric energy and steam or forms of useful energy that are used for industrial, commercial, heating, or cooling purposes if the owner or operator:
      - a. notifies the USEPA of an exemption claim
      - b. provides data documenting that the unit qualifies for the exemption
    5. any unit combusting a single item waste stream of tires if the owner or operator:
      - a. notifies the USEPA Administrator of an exemption claim
      - b. provides data documenting that the unit qualifies for the exemption

6. any unit required to have a permit under section 3005 of the SWDA
  7. any materials recovery facility (including primary and secondary smelters) that combust waste for the primary purpose of recovering metals
  8. any cofired combustor with an aggregate capacity greater than 35 Mg/day if the owner or operator:
    - a. notifies the USEPA Administrator of an exemption claim
    - b. provides data documenting that the unit qualifies for the exemption
    - c. keeps a record on a calendar quarter basis of the weight of municipal solid waste combusted at the cofired combustor and the weight of all other fuels combusted in the cofired combustor
  9. air curtain incinerators located at a plant with an aggregate capacity greater than 35 Mg/day that combust a fuel stream composed of 100 percent yard waste are exempt from everything except the opacity limit, testing procedures, and reporting and recordkeeping requirements
  10. pyrolysis/combustion units that are an integrated part of a plastics/rubber recycling unit if the owner or operator:
    - a. keeps records of the weight of plastics, rubber, and/or rubber tires processed on a calendar quarter basis
    - b. keeps records of the weight of chemical plant feedstocks and petroleum refinery feedstocks produced and marketed on a calendar quarter basis
    - c. keeps records of the name and address of the purchaser of the feedstock
  11. cement kilns firing municipal solid waste.)
- *Exempted Site Remediation* - the requirements in 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US] do not apply if the site remediation qualifies for any of one of the following exemptions (40 CFR 63.7881(b)) **[Added April 2004]**:
    1. the site remediation only cleans up material that does not contain any of the HAP listed in Table 1 (Appendix 1-27)
    2. the site remediation will be performed under the authority of CERCLA as a remedial action or a non time-critical removal action
    3. the site remediation will be performed under a RCRA corrective action conducted at a TSDF that is either required by the facility permit issued by either the USEPA or an authorized State program; required by orders authorized under RCRA; or required by orders authorized under RCRA section 7003
    4. the site remediation is conducted at a gasoline service station to clean up remediation material from a leaking UST
    5. the site remediation is conducted at a farm or residential site.
    6. the site remediation is conducted at a research and development facility that meets the requirements under CAA section 112(c)(7).)
  - *Exhaust Damper* - a flow control device that prevents the air-perchloroethylene gas-vapor stream from exiting the dry cleaning machine into a carbon adsorber before room air is drawn into the dry cleaning machine (40 CFR 63.321).
  - *Existing* - in relation to perchloroethylene dry cleaners, it means commenced construction or reconstruction before 9 December 1991 (40 CFR 63.321).
  - *Existing* - any solvent-cleaning machine the construction or reconstruction of which was commenced on or before 29 November 1993, but did not meet the definition of a solvent-cleaning machine on 2 December 1994 because it did not use halogenated HAP solvent liquid or vapor covered under 40 CFR 63, Subpart T [40 CFR 63.460 through 63.470, see checklist items AE.116.1.US through AE.118.7.US] to remove soils, becomes an existing source when it commences to use such liquid or vapor. A solvent-cleaning machine moved within a contiguous facility or to another facility under the same ownership, constitutes an existing machine (40 CFR 63.461).
  - *Existing Affected Source* – in relation to engine test cells, an affected source is existing if you commenced construction or reconstruction of the affected source on or before 14 May 2002. A change in ownership of an existing affected source does not make that affected source a new or reconstructed affected source (40 CFR 63.9290(a)(1) **[Added July 2003]**).

- *Existing Sewage Sludge Incineration Unit* - a sewage sludge incineration unit the construction of which is commenced on or before 14 October 2010 (40 CFR 60.4930) **[Added April 2011]**.
- *Existing Site Remediation Sources*- the facility commenced construction or reconstruction of the affected source before 30 July 2002 (40 CFR 63.7882(b)) **[Added April 2004]**.
- *Existing Stationary RICE* - in relation to the NESHAPS for stationary RICE, this is defined as follows (40 CFR 63.6590(a)(1)) **[Added April 2013]**:
  1. for stationary RICE with a site rating of more than 500 brake horsepower (HP) located at a major source of HAP emissions, a stationary RICE is existing if construction or reconstruction of the stationary RICE started before 19 December 2002
  2. for stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, a stationary RICE is existing if construction or reconstruction of the stationary RICE started before 12 June 2006
  3. for a stationary RICE located at an area source of HAP emissions, a stationary RICE is existing if construction or reconstruction of the stationary RICE started before 12 June 2006
  4. change in ownership of an existing stationary RICE does not make that stationary RICE a new or reconstructed stationary RICE.)
- *Export* - to transport a product from inside the United States to persons outside the United States, excluding any such transport on behalf of the United States military including foreign military sales under the *Arms Export Control Act* (40 CFR 98.6) **[Added January 2010]**.
- *Export* - the transport of virgin, used, or recycled class I or class II substances or products manufactured or containing class I or class II substances from inside the United States or its territories to persons outside the United States or its territories, excluding United States military bases and ships for on-board use (40 CFR 82.104(j)) **[Added July 2004]**.
- *Exporter* - the person who contracts to sell class I or class II substances or products manufactured with or containing class I or class II substances for export or transfers such substances or products to his affiliate in another country (40 CFR 82.104(k)) **[Added July 2004]**.
- *Exporter* - any person, company or organization of record that transfers for sale or for other benefit, domestic products from the United States to another country or to an affiliate in another country, excluding any such transfers on behalf of the United States military or military purposes including foreign military sales under the *Arms Export Control Act*. An exporter is not the entity merely transporting the domestic products, rather an exporter is the entity deriving the principal benefit from the transaction (40 CFR 98.6) **[Added January 2010]**.
- *Exterior Primer* - the first layer and any subsequent layers of identically formulated coating applied to the exterior surface of an aerospace vehicle or component where the component is used on the exterior of the aerospace vehicle. Exterior primers are typically used for corrosion prevention, protection from the environment, functional fluid resistance, and adhesion of subsequent exterior topcoats. Coatings that are defined as specialty coatings are not included under this definition (40 CFR 63.742) **[Added January 2000]**.*External Floating Roof* - a pontoon-type or double-deck type cover that rests on the liquid surface in a tank with no fixed roof (40 CFR 63.7957) **[Added April 2004]**.
- *Fabric Filter* - an add-on air pollution control device used to capture particulate matter by filtering gas streams through filter media, also known as a baghouse (40 CFR 62.14840) **[Added January 2004; Revised October 2004]**.
- *Fabric Filter* - an add-on air pollution control device used to capture particulate matter by filtering gas streams through filter media, also known as a baghouse (40 CFR 60.4930) **[Added April 2011]**.

- *Fabric Filter* - an add-on air pollution control device used to capture particulate matter by filtering gas streams through filter media, also known as a baghouse. A fabric filter is a dry control system (40 CFR 63.7575 and 63.11237) [Added April 2011].
- *Fabric Filter or Baghouse* - an add-on air pollution control system that removes particulate matter (PM) and nonvaporous metals emissions by passing flue gas through filter bags (40 CFR 60.51c and 62.14490) [Added October 2000].
- *Facilities Manager* - the individual in charge of purchasing, maintaining, and operating the HMIWI or the owner's or operator's representative responsible for the management of the HMIWI. Alternative titles may include director of facilities or vice president of support services (40 CFR 62.14490) [Added October 2000].
- *Facility* - all buildings, structures and operations on one contiguous site (40 CFR 61.91(b)) [Added July 2006].
- *Facility* - any physical property, plant, building, structure, source, or stationary equipment **located on one** or *more* contiguous or adjacent properties in actual physical contact or separated solely by a public roadway or other public right-of-way and under common ownership or common control, that emits or may emit any greenhouse gas. Operators of military installations may classify such installations as more than a single facility based on distinct and independent functional groupings within contiguous military properties (40 CFR 98.6) [Added January 2010].
- *Facility* - any place, or series of places, where an entity produces, imports, or maintains custody of any distillate fuel (or other product subject to the requirements of this subpart I) from the time it is received to the time custody is transferred to another entity, except as described in paragraphs 1 through 4 below (40 CFR 80.502(a)) [Added July 2006, Revised July 2010]
  1. Where an entity maintains custody of a batch of diesel fuel (or other product subject to the requirements of this subpart I) from one place in the distribution system to another place (e.g., from a pipeline to a terminal), all owned by the same entity, both places combined are considered to be one single aggregated facility, except where an entity chooses to treat components of such an aggregated facility as separate facilities. The choice made to treat these places as separate facilities may not be changed by the entity during any applicable compliance period. Except as specified in paragraph (b)(2), where compliance requirements depend upon facility-type, the entire facility must comply with the requirements that apply to its components as follows:
    - a. If an aggregated facility includes a refinery, the entire facility must comply with the requirements applicable to refineries.
    - b. If an aggregated facility includes a truck loading terminal but not a refinery, the entire facility must comply with the requirements applicable to truck loading terminals.
    - c. Situations where a refinery is aggregated with a truck loading terminal.
      - i. Where a refinery is aggregated with a truck loading terminal, diesel fuel or other product subject to the requirements of this subpart I produced by such refinery and distributed over the truck terminal rack must be included in refinery batches that may be based on shipments to a truck terminal rack tank or on the total volumes delivered to tanker trucks for a period not to exceed 1 calendar month per batch.
      - ii. Where a refinery is aggregated with a truck loading terminal, diesel fuel or other product subject to the requirements of this subpart I that were imported or produced by another refinery, and that are distributed through the refinery or truck terminal rack, must be treated as previously designated fuel for which the aggregated facility is responsible for all applicable balance and downgrade requirements under 40 CFR 80.527, 80.598, 80.599 and related recordkeeping and reporting requirements like any other distributor downstream from the refiner or importer.
  2. A refinery or import facility may not be aggregated with facilities that receive fuel from other refineries or import facilities, either directly or indirectly. For example, a refinery may not be aggregated with a terminal that receives any fuel from a common carrier pipeline. However, a refinery may be aggregated with a pipeline and terminal that are owned by the same entity and which receive no fuel from any source other

than the refinery. If a refinery or import facility is aggregated with other facilities, then the aggregated facility is treated as a refinery or import facility.

3. Retail outlets or wholesale purchaser consumers may not be aggregated with any other facility.
  4. Where an entity maintains custody of diesel fuel in one or more mobile components (e.g., rail, barge, or trucking operations) the mobile components may be aggregated as a single facility. Mobile components may also be aggregated with a facility from which they receive fuel or a facility to which they deliver fuel. However, mobile components may not be aggregated with both a facility from which they receive fuel and a facility to which they deliver fuel.
  5. An individual refinery or contiguous pipeline may not be subdivided into more than one facility. An individual terminal may not be subdivided into more than one facility unless approved by the Administrator.
- *Facility* - all contiguous or adjoining property that is under common control including properties that are separated only by a road or other public right-of-way. Common control includes properties that are owned, leased, or operated by the same entity, parent entity, subsidiary, or any combination thereof. A unit or group of units within a contiguous property that are not under common control (e.g., a wastewater treatment unit located at the facility but is owned by a different company) is a different facility (40 CFR 63.7957) [**Added April 2004**].
  - *Facility* - all buildings, structures and operations on one contiguous site (40 CFR 61.101) [**Added July 2004**].
  - *Facility Maintenance* - for the purposes of this subpart, surface coating performed as part of the routine repair or renovation of the tools, equipment, machinery, and structures that comprise the infrastructure of the affected facility and that are necessary for the facility to function in its intended capacity. Facility maintenance also includes surface coating associated with the installation of new equipment or structures, and the application of any surface coating as part of janitorial activities. Facility maintenance includes the application of coatings to stationary structures or their appurtenances at the site of installation, to portable buildings at the site of installation, to pavements, or to curbs.

*Facility Maintenance* also includes the refinishing of mobile equipment in the field or at the site where they are used in service and at which they are intended to remain indefinitely after refinishing. Such mobile equipment includes, but is not limited to, farm equipment and mining equipment for which it is not practical or feasible to move to a dedicated mobile equipment refinishing facility. Such mobile equipment also includes items, such as fork trucks, that are used in a manufacturing facility and which are refinished in that same facility.

*Facility Maintenance* does not include surface coating of motor vehicles, mobile equipment, or items that routinely leave and return to the facility, such as delivery trucks, rental equipment, or containers used to transport, deliver, distribute, or dispense commercial products to customers, such as compressed gas canisters (40 CFR 63.11180) [**Added April 2011**].

- *Facility, With Respect To An Electric Power System* - the electric power system as defined in this paragraph. An electric power system is comprised of all electric transmission and distribution equipment insulated with or containing SF<sub>6</sub> or PFCs that is linked through electric power transmission or distribution lines and functions as an integrated unit, that is owned, serviced, or maintained by a single electric power transmission or distribution entity (or multiple entities with a common owner), and that is located between (40 CFR 98.308) [**Added January 2011**]:
  1. The point(s) at which electric energy is obtained from an electricity generating unit or a different electric power transmission or distribution entity that does not have a common owner, and
  2. The point(s) at which any customer or another electric power transmission or distribution entity that does not have a common owner receives the electric energy. The facility also includes servicing inventory for such equipment that contains SF<sub>6</sub> or PFCs.
- *Federal Action* - any activity engaged in by a department, agency, or instrumentality of the Federal government, or any activity that a department, agency or instrumentality of the Federal government supports in any way, provides financial assistance for, licenses, permits, or approves, other than activities related to transportation plans, programs, and projects developed, funded, or approved under title 23 U.S.C. or the Federal Transit Act (49

U.S.C. 1601 et seq.). Where the Federal action is a permit, license, or other approval for some aspect of a non-Federal undertaking, the relevant activity is the part, portion, or phase of the non-Federal undertaking that requires the Federal permit, license, or approval (40 CFR 93.152) **[Added April 2009]**.

- *Federal Agency* - for purposes of 40 CFR 93, Subpart B, a Federal department, agency, or instrumentality of the Federal government (40 CFR 93.152) **[Added April 2009]**.
- *Federal Facility* - any facility owned or operated by any department, commission, agency, office, bureau or other unit of the government of the United States of America except for facilities owned or operated by the Department of Energy (40 CFR 61.101) **[Added July 2004]**.
- *Federally Enforceable* - all limitations and conditions that are enforceable by EPA including the requirements of 40 CFR 60, 40 CFR 61, and 40 CFR 63, requirements within any applicable State implementation plan, and any permit requirements established under 40 CFR 52.21 or under 40 CFR 51.18 and 40 CFR 51.24 (40 CFR 60.51b) **[Added July 2006]**.
- *Federally Enforceable* - all limits and conditions the Administrator can enforce (including the requirements of 40 CFR Parts 60, 61, and 63), requirements in a State's implementation plan, and any permit requirements established under 40 CFR 52.21 or under 40 CFR 51.18 and 40 CFR 51.24 (40 CFR 60.1465) **[Added April 2001]**.
- *Federally Enforceable* - all limitations and conditions that are enforceable by the Administrator, including the requirements of 40 CFR 60 and 61, requirements within any applicable State Implementation Plan, and any permit requirements established under 40 CFR 52.21 or under 40 CFR 51.18 and 51.24 (40 CFR 60.41b and 60.41c) **[Revised October 2004; Revised July 2007; Citation Revised April 2011]**.
- *Federally Enforceable* - all limitations and conditions that are enforceable by the EPA Administrator, including, but not limited to, the requirements of 40 CFR parts 60, 61, 63, and 65, requirements within any applicable state implementation plan, and any permit requirements established under 40 CFR 52.21 or under 40 CFR 51.18 and 40 CFR 51.24 (40 CFR 63.7575 and 63.11237) **[Added April 2013]**.
- *Feed* - the prepared and mixed materials, which include but are not limited to materials such as limestone, clay, shale, sand, iron ore, mill scale, cement kiln dust and fly ash that are fed to the kiln. Feed does not include the fuels used in the kiln to produce heat to form the clinker product (40 CFR 98.6) **[Added January 2010]**.
- *Feedstock* - raw material inputs to a process that are transformed by reaction, oxidation, or other chemical or physical methods into products and by-products. Supplemental fuel burned to provide heat or thermal energy is not a feedstock (40 CFR 98.6) **[Added January 2010]**.
- *Field Gas* - gas extracted from a production well before the gas enters a natural gas processing plant (40 CFR 68.3) **[Added January 2005]**.
- *Filter* - a porous device through which PCE is passed to remove contaminants in suspension. Examples include, but are not limited to, lint filter, button trap, cartridge filter, tubular filter, regenerative filter, prefilter, polishing filter, and spin disc filter (40 CFR 63.321) **[Added October 2006]**.
- *Final Cover* - materials used at a landfill to meet final closure regulations of the competent federal, state, or local authority (40 CFR 98.348) **[Added January 2017]**.
- *Fire-Fighting Turbine* - any stationary gas turbine that is used solely to pump water for extinguishing fires (40 CFR 60.331) **[Added October 2004]**.
- *Fire Pump Engine* - an emergency stationary internal combustion engine certified to NFPA requirements that is used to provide power to pump water for fire suppression or protection (40 CFR 60.4219) **[Added October 2006]**.

- *First Calendar Half* - the period that starts on January 1 and ends on June 30 in any year (40 CFR 60.1465) **[Added April 2001]**.
- *Fischer-Tropsch Process* - a catalyzed chemical reaction in which synthesis gas, a mixture of carbon monoxide and hydrogen, is converted into liquid hydrocarbons of various forms (40 CFR 98.6) **[Added January 2010]**.
- *Fixed Roof* - a cover that is mounted on a unit in a stationary position and does not move with fluctuations in the level of the liquid managed in the unit (40 CFR 63.7957) **[Added April 2004]**.
- *Flame Zone* - the portion of the combustion chamber in a boiler or process heater occupied by the flame envelope (40 CFR 63.7957) **[Added April 2004]**.
- *Flare* - a combustion device, whether at ground level or elevated, that uses an open flame to burn combustible gases with combustion air provided by uncontrolled ambient air around the flame (40 CFR 98.6) **[Added January 2010]**.
- *Flex-Fuel Vehicle* - has the same meaning as flexible-fuel vehicle as defined in 40 CFR 86.1803-01 (40 CFR 80.1500) **[Added October 2011]**.
- *Floating Roof* - a cover consisting of a double deck, pontoon single deck, or internal floating cover which rests upon and is supported by the liquid being contained, and is equipped with a continuous seal (40 CFR 63.7957) **[Added April 2004]**.
- *Flow Indicator* - a device that indicates whether gas is flowing, or whether the valve position would allow gas to flow in a bypass line (40 CFR 63.7957) **[Added April 2004]**.
- *Flowmeter* - a device that measures the mass or volumetric rate of flow of a gas, liquid, or solid moving through an open or closed conduit (e.g. flowmeters include, but are not limited to, rotameters, turbine meters, coriolis meters, orifice meters, ultra-sonic flowmeters, and vortex flowmeters) (40 CFR 98.6) **[Added January 2010]**.
- *Fluidized Bed Boiler* - a boiler utilizing a fluidized bed combustion process that is not a pulverized coal boiler (40 CFR 63.7575 and 63.11237) **[Added April 2013]**.
- *Fluidized Bed Boiler With An Integrated Fluidized Bed Heat Exchanger* - a boiler utilizing a fluidized bed combustion where the entire tube surface area is located outside of the furnace section at the exit of the cyclone section and exposed to the flue gas stream for conductive heat transfer. This design applies only to boilers in the unit designed to burn coal/solid fossil fuel subcategory that fire coal refuse (40 CFR 63.7575) **[Added April 2013]**.
- *Fluidized Bed Combustion* - a process where a fuel is burned in a bed of granulated particles, which are maintained in a mobile suspension by the forward flow of air and combustion products (40 CFR 63.11237) **[Added April 2013]**.
- *Fluidized Bed Combustion* - a process where a fuel is burned in a bed of granulated particles, which are maintained in a mobile suspension by the forward flow of air and combustion products (40 CFR 63.7575) **[Added April 2011]**.
- *Fluidized Bed Combustion Technology* - combustion of fuel in a bed or series of beds (including but not limited to bubbling bed units and circulating bed units) of limestone aggregate (or other sorbent materials) in which these materials are forced upward by the flow of combustion air and the gaseous products of combustion (40 CFR 60.41b) **[Added July 2007]**.
- *Fluidized Bed Combustion Technology* - a device wherein fuel is distributed onto a bed (or series of beds) of limestone aggregate (or other sorbent materials) for combustion; and these materials are forced upward in the

device by the flow of combustion air and the gaseous products of combustion. Fluidized bed combustion technology includes, but is not limited to, bubbling bed units and circulating bed units (40 CFR 60.41c) **[Added July 2007]**.

- *Fluidized Bed Combustion Unit* - a unit where municipal waste is combusted in a fluidized bed of material. The fluidized bed material may remain in the primary combustion zone or may be carried out of the primary combustion zone and returned through a recirculation loop (40 CFR 60.1465) **[Added April 2001]**.
- *Fluidized Bed Incinerator* - an enclosed device in which organic matter and inorganic matter in sewage sludge are combusted in a bed of particles in the combustion chamber gas (40 CFR 503.41(e)).
- *Fluidized Bed Incinerator* - an enclosed device in which organic matter and inorganic matter in sewage sludge are combusted in a bed of particles suspended in the combustion chamber gas (40 CFR 60.4930) **[Added April 2011]**.
- *Fluorinated Greenhouse Gas* - sulfur hexafluoride (SF<sub>6</sub>), nitrogen trifluoride (NF<sub>3</sub>), and any fluorocarbon except for controlled substances as defined at 40 CFR 82, subpart A and substances with vapor pressures of less than 1 mm of Hg absolute at 25° C. With these exceptions, “fluorinated GHG” includes but is not limited to any hydrofluorocarbon, any perfluorocarbon, any fully fluorinated linear, branched or cyclic alkane, ether, tertiary amine or aminoether, any perfluoropolyether, and any hydrofluoropolyether (40 CFR 98.6) **[Added January 2010]**.
- *Flush Cleaning* - the removal of contaminants such as dirt, grease, oil, and coatings from an aerospace vehicle or component or coating equipment by passing solvent over, into, or through the item being cleaned. The solvent may simply be poured into the item being cleaned and then drained, or be assisted by air or hydraulic pressure, or by pumping. Hand-wipe cleaning operations where wiping, scrubbing, mopping, or other hand action are used are not included (40 CFR 63.742) **[Added January 1999]**.
- *Follow-up Verification Test* - those tests that involve checking the repairs to an appliance after a successful initial verification test and after the appliance has returned to normal operating characteristics and conditions to verify that the repairs were successful. Potential methods for follow-up verification tests include, but are not limited to, the use of soap bubbles as appropriate, electronic or ultrasonic leak detectors, pressure or vacuum tests, fluorescent dye and black light, infrared or near infrared tests, and handheld gas detection devices (40 CFR 82.152) **[Revised January 2017]**.
- *Food Processing* - an operation used to manufacture or process meat, poultry, fruits, and/or vegetables as defined under NAICS 3116 (Meat Product Manufacturing) or NAICS 3114 (Fruit and Vegetable Preserving and Specialty Food Manufacturing). For information on NAICS codes, see <http://www.census.gov/eos/www/naics/> (40 CFR 98.358) **[Added July 2010]**.
- *Four-hour Block Average or 4-h Block Average* - the average of all hourly emission concentrations or parameter levels when the municipal waste combustion unit operates and combusts municipal solid waste measured over any of six 4-hour periods (40 CFR 60.1465) **[Added April 2001]**:
  1. 12:00 midnight to 4:00 a.m.
  2. 4:00 a.m. to 8:00 a.m.
  3. 8:00 a.m. to 12:00 noon.
  4. 12:00 noon to 4:00 p.m.
  5. 4:00 p.m. to 8:00 p.m.
  6. 8:00 p.m. to 12:00 midnight.
- *Four-stroke Engine* - any type of engine which completes the power cycle in two crankshaft revolutions, with intake and compression strokes in the first revolution and power and exhaust strokes in the second revolution (40 CFR 60.4248 and 63.6675) **[Added July 2004; Revised April 2008]**.

- *Fossil Fuel* - natural gas, petroleum, coal, and any form of solid, liquid, or gaseous fuel derived from such materials for the purpose of creating useful heat (40 CFR 60.41 and 60.41a; 40 CFR 98.6) [**Revised July 2007, Revised January 2011**].
- *Fossil Fuel* - natural gas, oil, coal, and any form of solid, liquid, or gaseous fuel derived from such material (40 CFR 63.7575) [**Added January 2016**].
- *Fossil Fuel* - natural gas, oil, coal, and any form of solid, liquid, or gaseous fuel derived from such material (40 CFR 63.11237) [**Added October 2016**].
- *Fossil Fuel and Wood Residue-Fired Steam Generating Unit* - a furnace or boiler used in the process of burning fossil fuel and wood residue for the purpose of producing steam by heat transfer (40 CFR 60.41) [**Added July 2007**].
- *Fossil Fuel-Fired* - powered by combustion of fossil fuel, alone or in combination with any other fuel, regardless of the percentage of fossil fuel consumed (40 CFR 98.6) [**Added January 2010**].
- *Fossil-Fuel-Fired Steam Generating Unit* - a furnace or boiler used in the process of burning fossil fuel for the purpose of producing steam by heat transfer (40 CFR 60.41) [**Added July 2007**].
- *Force Majeure* - an event that will be or has been caused by circumstances beyond the control of the affected facility, its contractors, or any entity controlled by the affected facility that prevents the owner or operator from complying with the regulatory requirement to conduct performance tests within the specified timeframe despite the affected facility's best efforts to fulfill the obligation. Examples of such events are acts of nature, acts of war or terrorism, or equipment failure or safety hazard beyond the control of the affected facility (40 CFR 61.2 and 63.2) [**Added July 2007**].
- *Fraction Emitted* - the fraction of the mass of HAP entering the POTW wastewater treatment plant which is emitted prior to secondary treatment. The value is calculated using the following steps (40 CFR 63.1583) [**Added January 2000**]:
  1. Determine mass emissions from all equipment up to, but not including, secondary treatment for each HAP listed in Table 1 to 40 CFR 63, Subpart DD [40 CFR 63.680 through 63.698]
  2. Sum the HAP emissions ( $\Sigma E$ )
  3. Sum the HAP mass loadings ( $\Sigma L$ ) in the influent to the POTW wastewater treatment plant
  4. Calculate the fraction emitted (fe monthly) using  $fe\ monthly = \Sigma E / \Sigma L$ .
- *Fractionators* - plants that produce fractionated natural gas liquids (NGLs) extracted from produced natural gas and separate the NGLs individual component products: ethane, propane, butanes and pentane-plus (C5+). Plants that only process natural gas but do not fractionate NGLs further into component products are not considered fractionators. Some fractionators do not process production gas, but instead fractionate bulk NGLs received from natural gas processors. Some fractionators both process natural gas and fractionate bulk NGLs received from other plants (40 CFR 98.6) [**Added January 2010**].
- *Freeboard Area* - for a batch cleaning machine, this is the area within the solvent-cleaning machine that extends from the solvent/air interface to the top of the solvent-cleaning machine; for an in-line cleaning machine, it is the area within the solvent-cleaning machine that extends from the solvent/air interface to the bottom of the entrance or exit opening, whichever is lower (40 CFR 63.461).
- *Freeboard Ratio* - the ratio of the solvent-cleaning machine freeboard height to the smaller interior dimensions (length, width, or diameter) of the solvent-cleaning machine (40 CFR 63.461).
- *Freshly Manufactured Engine* - an engine that has not been placed into service. An engine becomes freshly manufactured when it is originally produced (40 CFR 60.4219 and 60.4248) [**Added July 2011**].

- *Fuel* - solid, liquid or gaseous combustible material (40 CFR 98.6) **[Added January 2010]**.
- *Fuel Cell* - a boiler type in which the fuel is dropped onto suspended fixed grates and is fired in a pile. The refractory-lined fuel cell uses combustion air preheating and positioning of secondary and tertiary air injection ports to improve boiler efficiency. Fluidized bed, dutch oven, pile burner, hybrid suspension grate, and suspension burners are not part of the fuel cell subcategory (40 CFR 63.7575) **[Revised April 2013]**.
- *Fuel Dispenser* - the apparatus used to dispense fuel into motor vehicles or nonroad vehicles, engines or equipment, or into a portable fuel container as defined at 40 CFR 59.680 (40 CFR 80.1500) **[Added October 2011]**.
- *Fuel Gas* - gas generated at a petroleum refinery or petrochemical plant and that is combusted separately or in any combination with any type of gas (40 CFR 98.6) **[Added January 2011]**.
- *Fuel Pretreatment* - a process that removes a portion of the sulfur in a fuel before combustion of the fuel in a steam generating unit (40 CFR 60.41b and 60.41c) **[Revised July 2007]**.
- *Fuel Type* - each category of fuels that share a common name or classification. Examples include, but are not limited to, bituminous coal, sub-bituminous coal, lignite, anthracite, biomass, distillate oil, residual oil. Individual fuel types received from different suppliers are not considered new fuel types (40 CFR 63.11237) **[Added April 2011]**.
- *Fuel Type* - each category of fuels that share a common name or classification. Examples include, but are not limited to, bituminous coal, sub-bituminous coal, lignite, anthracite, biomass, distillate oil, residual oil. Individual fuel types received from different suppliers are not considered new fuel types (40 CFR 63.7575) **[Revised April 2013]**.
- *Fugitive Emissions* - air pollutants entering into the atmosphere from other than a stack chimney, vent, or other functionally equivalent opening. Example: vapors, dust, and fumes (40 CFR 51.301j).
- *Full Capacity* - operation of the steam generating unit at 90 percent or more of the maximum steady-state design heat input capacity (40 CFR 60.41b) **[Added July 2007]**.
- *Full Charge* - the amount of refrigerant required for normal operating characteristics and conditions of the appliance as determined by using one or a combination of the following four methods (40 CFR 82.152) **[Revised April 2005; Revised January 2017]**:
  1. Use of the equipment manufacturer's determination of the full charge;
  2. Use of appropriate calculations based on component sizes, density of refrigerant, volume of piping, and other relevant considerations;
  3. Use of actual measurements of the amount of refrigerant added to or evacuated from the appliance, including for seasonal variances; and/or
  4. Use of an established range based on the best available data regarding the normal operating characteristics and conditions for the appliance, where the midpoint of the range will serve as the full charge.
- *Full Load* - the maximum number of items that does not impede proper air removal, humidification of the load, or sterilant penetration and evacuation in the sterilization unit (40 CFR 63.10448) **[Added January 2008]**.
- *Furnace Slag* - a by-product formed in metal melting furnaces when slagging agents, reducing agents, and/or fluxes (e.g., coke ash, limestone, silicates) are added to remove impurities from the molten metal (40 CFR 98.6) **[Added July 2010]**.
- *GPA* - the Gas Processors Association.

- *GTBA* (Gasoline-Grade Tertiary Butyl Alcohol,  $(\text{CH}_3)_3\text{COH}$ ), or t-butanol, - an alcohol as described in "Oxygenates" (40 CFR 98.6) [Added January 2010].
- *Garrison Facility* - any permanent military installation (40 CFR 60.331) [Added October 2004].
- *Gas Collection System or Landfill Gas Collection System* - a system of pipes used to collect landfill gas from different locations in the landfill by means of a fan or similar mechanical draft equipment (forced convection) to a single location for treatment (thermal destruction) or use. Landfill gas collection systems may also include knock-out or separator drums and/or a compressor. A single landfill may have multiple gas collection systems. Landfill gas collection systems do not include "passive" systems, whereby landfill gas flows naturally (without forced convection) to the surface of the landfill where an opening or pipe (vent) is installed to allow for the flow of landfill gas to the atmosphere or to a remote flare installed to combust landfill gas that is passively emitted from the vent. Landfill gas collection systems also do not include "active venting" systems, whereby landfill gas is conveyed to the surface of the landfill using forced convection, but the landfill gas is never recovered or thermally destroyed prior to release to the atmosphere (40 CFR 98.6) [Revised January 2017].
- *Gas-fired Boiler* - includes any boiler that burns gaseous fuels not combined with any solid fuels and burns liquid fuel only during periods of gas curtailment, gas supply interruption, startups, or for periodic testing, maintenance, or operator training on liquid fuel. Periodic testing, maintenance, or operator training on liquid fuel shall not exceed a combined total of 48 hours during any calendar year (40 CFR 63.11237) [Added April 2013, Revised October 2016].
- *Gas-Fired Unit* - a stationary combustion unit that derives more than 50 percent of its annual heat input from the combustion of gaseous fuels, and the remainder of its annual heat input from the combustion of fuel oil or other liquid fuels (40 CFR 98.6) [Added January 2010].
- *Gas Monitor* - an instrument that continuously measures the concentration of a particular gaseous species in the effluent of a stationary source (40 CFR 98.6) [Added January 2010].
- *Gas Turbine Model* - a group of gas turbines having the same nominal air flow, combustor inlet pressure, combustor inlet temperature, firing temperature, turbine inlet temperature and turbine inlet pressure (40 CFR 60.331) [Added October 2004].
- *Gaseous Fuel* - a material used for combustion which is in the gaseous state at standard atmospheric temperature and pressure conditions (40 CFR 63.6675) [Added July 2004].
- *Gaseous Fuel* - a material that is in the gaseous state at standard atmospheric temperature and pressure conditions and that is combusted to produce heat and/or energy (40 CFR 98.6) [Added January 2010].
- *Gaseous Fuel* - any fuel that is a gas at ISO conditions. This includes, but is not limited to, natural gas and gasified coal (including coke oven gas) (40 CFR 60.41b) [Added July 2007; Revised April 2009].
- *Gaseous Fuel* - includes, but is not limited to, natural gas, process gas, landfill gas, coal derived gas, refinery gas, and biogas. Blast furnace gas and process gases that are regulated under another subpart of 40 CFR 63, or part 60, part 61, or part 65 of this chapter, are exempted from this definition (40 CFR 63.7575) [Revised April 2013].
- *Gaseous Fuels* - includes, but is not limited to, natural gas, process gas, landfill gas, coal derived gas, refinery gas, hydrogen, and biogas (40 CFR 63.11237) [Added April 2011].
- *Gasification* - the conversion of a solid or liquid raw material into a gas (40 CFR 98.6) [Added January 2010].
- *Gasoline* - any petroleum distillate or petroleum distillate/alcohol blend having a Reid vapor pressure of 27.6 kPa (4.0 psia) or greater which is used as a fuel for internal combustion engines. Aviation gasoline is included in this definition (40 CFR 63.2406) [Added April 2004].

- *Gasoline* - any fuel sold in any State for use in motor vehicles and motor vehicle engines, or nonroad or stationary engines, and commonly or commercially known or sold as gasoline (40 CFR 60.4248 and 40 CFR 63.6675) **[Added April 2008]**.
- *Gasoline* - any fuel sold in any State for use in motor vehicles and motor vehicle engines, and commonly or commercially known or sold as gasoline. (40 CFR 80.2(c) and 80.1500). NOTE: State means a State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa and the Commonwealth of the Northern Mariana Islands **[Added January 2006, Revised October 2011]**.
- *Gasoline Blending Stock, Blendstock, or Component* - any liquid compound which is blended with other liquid compounds to produce gasoline (40 CFR 80.2(s)) **[Added October 2011]**.
- *Gasoline Cargo Tank* - a delivery tank truck or railcar which is loading gasoline or which has loaded gasoline on the immediately previous load (40 CFR 63.11132) **[Added April 2008]**.
- *Gasoline Carrier* - any distributor who transports or stores, or causes the transportation or storage of, gasoline or diesel fuel without taking title to or otherwise having any ownership of the gasoline, and without altering either the quality or quantity of the gasoline or diesel fuel (40 CFR 80.2).
- *Gasoline Dispensing Facility (GDF)* - any stationary facility which dispenses gasoline into the fuel tank of a motor vehicle (40 CFR 63.11132) **[Added April 2008]**.
- *Gasoline Distributor* - any person who transports or stores or causes the transportation or storage of gasoline or diesel fuel at any point between any gasoline refinery or importer's facility and any retail outlet or wholesale purchaser consumer facility (40 CFR 80.2).
- *Gasoline – Other* - any gasoline that is not defined elsewhere, including GTAB (gasoline treated as blendstock) (40 CFR 98.6) **[Added January 2010]**.
- *Gasoline Treated as Blendstock (GTAB)* - imported gasoline that is excluded from the import facility's compliance calculations, but is treated as blendstock in a related refinery that includes the GTAB in its refinery compliance calculations (40 CFR 80.2(ww)) **[Added January 2006]**.
- *Global Warming Potential (GWP)* - how much a given mass of a chemical contributes to global warming over a given time period compared to the same mass of carbon dioxide. Carbon dioxide's global warming potential is defined as 1.0 (48 CFR 2.101(b)(2)) **[Added July 2016]**.
- *Global Warming Potential (GWP)* - the ratio of the time-integrated radiative forcing from the instantaneous release of one kilogram of a trace substance relative to **that of one kilogram-** of a reference gas, i.e., CO<sub>2</sub> (40 CFR 98.6) **[Added January 2010]**.
- *Glycol Dehydration Unit* - a device in which a liquid glycol (including, but not limited to, ethylene glycol, diethylene glycol, or triethylene glycol) absorbent directly contacts a natural gas stream and absorbs water in a contact tower or absorption column (absorber). The glycol contacts and absorbs water vapor and other gas stream constituents from the natural gas and becomes "rich" glycol. This glycol is then regenerated in the glycol dehydration unit reboiler. The "lean" glycol is then recycled (40 CFR 63.6175 and 63.6675) **[Added April 2004]**.
- *Greenhouse Gas (GHG)* - carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), sulfur hexafluoride (SF<sub>6</sub>), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and other fluorinated greenhouse gases as defined in this section (40 CFR 98.6) **[Added January 2010]**.
- *Gross Output* - the gross useful work performed by the steam generated. For units generating only electricity, the gross useful work performed is the gross electrical output from the turbine/generator set. For cogeneration units, the gross useful work performed is the gross electrical or mechanical output plus 75 percent of the useful thermal

output measured relative to ISO conditions that is not used to generate additional electrical or mechanical output or to enhance the performance of the unit (i.e., steam delivered to an industrial process) (40 CFR 60.41b) **[Added July 2007; Revised April 2009]**.

- *Gross Useful Output* - the gross useful work performed by the stationary combustion turbine system. For units using the mechanical energy directly or generating only electricity, the gross useful work performed is the gross electrical or mechanical output from the turbine/generator set. For combined heat and power units, the gross useful work performed is the gross electrical or mechanical output plus the useful thermal output (i.e., thermal energy delivered to a process) (40 CFR 60.4420) **[Added April 2009]**.
- *Halogenated Hazardous Air Pollutant (HAP) Solvent* - methylene chloride (CAS No. 75-09-2), perchloroethylene (CAS No. 127-18-4), trichloroethylene (CAS No. 79-01-6), 1,1,1-trichloroethane (CAS No. 71-55-6), carbon tetrachloride (CAS No. 56-23-5), and chloroform (CAS 67-66-3) (40 CFR 63.461).
- *Halogenated Hydrocarbon Detector* - a portable device capable of detecting vapor concentrations of PCE of 25 ppmv and indicating a concentration of 25 ppmv or greater by emitting an audible or visual signal that varies as the concentration changes (40 CFR 63.321) **[Added October 2006]**.
- *Halon* - any of the Class I, Group II substances listed in Appendix A of 40 CFR 82, Subpart A [40 CFR 82.1 through 82.24, see checklist items AE.85.6.US, AE.95.4.US through AE.95.7.US]. This group consists of the three halogenated hydrocarbons known as Halon 1211, Halon 1301, and Halon 2402, and all isomers of these chemicals (40 CFR 82.260) **[Added March 1998]**.
- *Halon Blend* - any mixture or combination of substances that contains two or more halons (40 CFR 82.260) **[Added March 1998]**.
- *Halon-containing Equipment* - equipment used to store, transfer, and/or disperse halon (40 CFR 82.260) **[Added March 1998]**.
- *Halon Product* - any mixture or combination of substances that contains only one halon (e.g., Halon 1301 plus dinitrogen gas (40 CFR 82.260) **[Added March 1998]**.
- *Hand-wipe Cleaning Operation* - the removal of contaminants such as dirt, grease, oil, and coatings from an aerospace vehicle or component by physically rubbing it with a material such as a rag, paper, or cotton swab that has been moistened with a cleaning solvent (40 CFR 63.742) **[Added January 1999]**.
- *HAP* - hazardous air pollutants (40 CFR 63.1583) **[Added January 2000]**.
- *Hazardous Air Pollutant (HAP)* - any air pollutant listed in or pursuant to section 112(b) of the Act [NOTE: See <http://www.epa.gov/ttn/atw/188polls.html>] (40 CFR 63.742, 63.6175, and 63.6675) **[Added January 1999, Citation Revised April 2004]**.
- *HCFC-141b Exemption Allowances* - the privileges granted to a HCFC-141b formulator; an agency, department, or instrumentality of the U.S.; or a non-governmental space vehicle entity by 40 CFR 82, Subpart A [40 CFR 82.1 through 82.24, see checklist items AE.85.6.US, AE.95.4.US through AE.95.7.US] to order production of or to import HCFC-141b, as determined in accordance with 40 CFR 82.16(h) (40 CFR 82.3) **[Added April 2003]**.
- *Heat Input* - heat derived from combustion of fuel in a steam generating unit and does not include the heat derived from preheated combustion air, recirculated flue gases, or exhaust gases from other sources (such as stationary gas turbines, internal combustion engines, and kilns) (40 CFR 60.41c) **[Revised July 2007]**.
- *Heat Input* - heat derived from combustion of fuel in a boiler or process heater and does not include the heat input from preheated combustion air, recirculated flue gases, or exhaust gases from other sources such as gas turbines,

internal combustion engines, kilns, etc (40 CFR 60.41b) [Added October 2004; Revised July 2007; Citation Revised April 2011].

- *Heat Input* - heat derived from combustion of fuel in a boiler or process heater and does not include the heat input from preheated combustion air, recirculated flue gases, returned condensate, or exhaust gases from other sources such as gas turbines, internal combustion engines, kilns, etc (40 CFR 63.7575) [Added April 2013].
- *Heat Input* - heat derived from combustion of fuel in a boiler and does not include the heat input from preheated combustion air, recirculated flue gases, returned condensate, or exhaust gases from other sources such as gas turbines, internal combustion engines, kilns (40 CFR 63.11237) [Revised April 2013].
- *Heat Recovery Steam Generating Unit* - a unit where the hot exhaust gases from the combustion turbine are routed in order to extract heat from the gases and generate steam, for use in a steam turbine or other device that utilizes steam. Heat recovery steam generating units can be used with or without duct burners (40 CFR 60.4420) [Added April 2009].
- *Heat Release Rate* - the steam generating unit design heat input capacity (in MW or Btu/hr) divided by the furnace volume (in cubic meters or cubic feet); the furnace volume is that volume bounded by the front furnace wall where the burner is located, the furnace side waterwall, and extending to the level just below or in front of the first row of convection pass tubes (40 CFR 60.41b) [Added July 2007].
- *Heat Transfer Medium* - any material that is used to transfer heat from one point to another point (40 CFR 60.41b and 60.41c) [Added July 2007].
- *Heating Oil* - any 1, 2, or non-petroleum diesel blend that is sold for use in furnaces, boilers, and similar applications and which is commonly or commercially known or sold as heating oil, fuel oil, and similar trade names, and that is not jet fuel, kerosene, or MVNRLM diesel fuel (40 CFR 80.2(ccc)) [Added July 2006, Revised July 2010].
- *Heavy Gas Oils* - petroleum distillates with an approximate boiling range from 651 °F to 1,000 °F (40 CFR 98.6) [Added January 2010].
- *Heavy Liquid* - includes residual oil and any other liquid fuel not classified as a light liquid (40 CFR 63.7575) [Added April 2013].
- *Heel* - the amount of a controlled substance that remains in a container after it is discharged or off-loaded (that is no more than ten percent of the volume of the container) (40 CFR 82.3) [Added October 2006].
- *Heel* - the amount of gas that remains in a shipping container after it is discharged or off-loaded (that is no more than ten percent of the volume of the container) (40 CFR 98.6) [Added January 2010].
- *High-air Phase* - the stage of the batch operating cycle when the primary chamber reaches and maintains maximum operating temperatures (40 CFR 60.51c and 62.14490) [Added October 2000].
- *High Efficiency Particulate Air (HEPA) Filter* - a filter that has a 99.97 percent reduction efficiency for 0.3 micron aerosol (40 CFR 63.742) [Added January 1999].
- *High Global Warming Potential Hydrofluorocarbons* - any hydrofluorocarbons in a particular end use for which EPA's Significant New Alternatives Policy (SNAP) program has identified other acceptable alternatives that have lower global warming potential. The SNAP list of alternatives is found at 40 CFR part 82, subpart G, with supplemental tables of alternatives available at <http://www.epa.gov/snap/> (48 CFR 2.101(b)(2)) [Added July 2016]

- *High Heat Release Rate* - a heat release rate greater than 730,000 J/sec-m<sup>3</sup> (70,000 Btu/hr-ft<sup>3</sup>) (40 CFR 60.41b) **[Added July 2007]**.
- *High Heat Value (HHV)* - the high or gross heat content of the fuel with the heat of vaporization included. The water is assumed to be in a liquid state (40 CFR 98.6) **[Added January 2010]**.
- *High-pressure Appliance* - an appliance that uses a refrigerant with a liquid phase saturation pressure between 170 psia and 355 psia at 104 °F. Examples include but are not limited to appliances using R-22, R-407A, R-407C, R-410A, and R-502 (40 CFR 82.152) **[Revised April 2004; Revised January 2017]**.
- *High Throughput Transfer Rack* - those transfer racks that transfer into transport vehicles (for existing affected sources) or into transport vehicles and containers (for new affected sources) a total of 11.8 million L/yr or greater of organic liquids (40 CFR 63.2406) **[Added January 2007]**.
- *High Volume Low Pressure (HVLP) Spray Equipment* - spray equipment that is used to apply coating by means of a spray gun that operates at 10.0 psig of atomizing air pressure or less at the air cap (40 CFR 63.742) **[Added January 1999]**.
- *High-volume, Low-pressure (HVLP) Spray Equipment* - spray equipment that is permanently labeled as such and used to apply any coating by means of a spray gun which is designed and operated between 0.1 and 10 pounds per square inch gauge (psig) air atomizing pressure measured dynamically at the center of the air cap and at the air horns (40 CFR 63.11180) **[Added April 2011]**.
- *Hospital* - a facility that provides medical care and treatment for patients who are acutely ill or chronically ill on an inpatient basis under supervision of licensed physicians and under nursing care offered 24 h/day. Hospitals include diagnostic and major surgery facilities but exclude doctor's offices, clinics, or other facilities whose primary purpose is to provide medical services to humans or animals on an outpatient basis (40 CFR 63.10448) **[Added January 2008]**.
- *Hospital* - any facility which has an organized medical staff, maintains at least six inpatient beds, and where the primary function of the institution is to provide diagnostic and therapeutic patient services and continuous nursing care primarily to human inpatients who are not related and who stay on average in excess of 24 h per admission. This definition does not include facilities maintained for the sole purpose of providing nursing or convalescent care to human patients who generally are not acutely ill but who require continuing medical supervision (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Hospital Central Services Staff* - a healthcare professional, including manager and technician, who is either directly involved in or responsible for sterile processing at a hospital (40 CFR 63.10448) **[Added January 2008]**.
- *Hospital/Medical/Infectious Waste Incinerator or HMIWI or HMIWI Unit* - any device that combusts any amount of hospital waste and/or medical/infectious waste (40 CFR 60.51c) **[Added December 1997]**.
- *Hospital/Medical/Infectious Waste Incinerator (HMIWI) or HMIWI Unit* - any device that combusts any amount of hospital waste and/or medical/infectious waste (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Hospital/Medical/Infectious Waste Incinerator Operator or HMIWI Operator* - any person who operates, controls or supervises the day-to-day operation of an HMIWI (40 CFR 62.14490) **[Added October 2000]**.
- *Hospital Waste* - discards generated at a hospital, except unused items returned to the manufacturer. The definition of hospital waste does not include human corpses, remains, and anatomical parts that are intended for interment or cremation (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Hot Water Heater* - a closed vessel with a capacity of no more than 120 U.S. gallons in which water is heated by combustion of gaseous, liquid, or biomass/bio-based solid fuel and is withdrawn for use external to the vessel.

Hot water boilers (i.e., not generating steam) combusting gaseous, liquid, or biomass fuel with a heat input capacity of less than 1.6 million Btu per hour are included in this definition. The 120 U.S. gallon capacity threshold to be considered a hot water heater is independent of the 1.6 MMBtu/hr heat input capacity threshold for hot water boilers. Hot water heater also means a tankless unit that provides on demand hot water (40 CFR 63.7575 and 63.11237) **[Revised April 2013]**.

- *Hot Work* - work involving electric or gas welding, cutting, brazing, or similar flame or spark-producing operations (40 CFR 68.3) **[Added January 2005]**.
- *Hourly Average* - the arithmetic mean of all measurements taken during 1 h. At least two measurements must be taken during the hour (40 CFR 503.41(f)).
- *Hourly Average* - the arithmetic average of at least four CMS data values representing the four 15-minute periods in an hour, or at least two 15-min data values during an hour when CMS calibration, quality assurance, or maintenance activities are being performed (40 CFR 63.7575) **[Added April 2011]**.
- *Hourly Average* - the arithmetic average of at least four CMS data values representing the four 15-minute periods in an hour, or at least two 15-minute data values during an hour when CMS calibration, quality assurance, or maintenance activities are being performed (40 CFR 63.11237) **[Added April 2013]**.
- *Household Waste* - includes material discarded by single and multiple residential dwellings, hotels, motels, and other similar permanent or temporary housing (40 CFR 60.51a).
- *Hybrid Suspension Grate Boiler* - a boiler designed with air distributors to spread the fuel material over the entire width and depth of the boiler combustion zone. The biomass fuel combusted in these units exceeds a moisture content of 40 percent on an as-fired annual heat input basis as demonstrated by monthly fuel analysis. The drying and much of the combustion of the fuel takes place in suspension, and the combustion is completed on the grate or floor of the boiler. Fluidized bed, dutch oven, and pile burner designs are not part of the hybrid suspension grate boiler design category (40 CFR 63.7575) **[Revised April 2013; Revised January 2016]**.
- *Hydrofluorocarbons* - compounds that contain only hydrogen, fluorine, and carbon (48 CFR 2.101(b)(2)) **[Added July 2016]**
- *Hydrofluorocarbons (HFCs)* - a class of GHGs consisting of hydrogen, fluorine, and carbon (40 CFR 98.6) **[Added January 2010]**.
- *Ice Fog* - an atmospheric suspension of highly reflective ice crystals (40 CFR 60.331) **[Added October 2004]**.
- *Idling Mode* - the time period when a solvent-cleaning machine is not actively cleaning parts and the sump heating coils, if present, are turned on (40 CFR 63.461).
- *Idling Mode Cover* - any cover or solvent-cleaning machine design that allows for the cover to shield the cleaning machine openings during the idling mode. A cover that meets this definition can also be used as a working mode cover if that definition is also met (40 CFR 63.461).
- *Immersion Cold Cleaning Machine* - a cold cleaning machine in which the parts are immersed in the solvent when being cleaned. A remote reservoir cold cleaning machine that is also an immersion cold cleaning machine is considered an immersion cold cleaning machine for the purposes of 40 CFR 63, Subpart T [40 CFR 63.460 through 63.470, see checklist items AE.116.1.US through AE.118.7.US] (40 CFR 63.461).
- *Implementing Agency* - the state or local agency that obtains delegation for an accidental release prevention program under 40 CFR 63, Subpart E: *Approval of State Programs and Delegation of Federal Authorities*. The implementing agency may, but is not required to, be the state or local air permitting agency. If no state or local

agency is granted delegation, EPA will be the implementing agency for that state (40 CFR 68.3) [**Added January 2005**].

- *Import* - to land on, bring into, or introduce into, or attempt to land on, bring into, or introduce into any place subject to the jurisdiction of the United States whether or not such landing, bringing, or introduction constitutes an importation within the meaning of the customs laws of the United States, with the following exemptions (40 CFR 82.3) [**Added April 2003**]:
  1. Off-loading used or excess controlled substances or controlled products from a ship during servicing,
  2. Bringing controlled substances into the U.S. from Mexico where the controlled substance had been admitted into Mexico in bond and was of U.S. origin, and
  3. Bringing a controlled product into the U.S. when transported in a consignment of personal or household effects or in a similar non-commercial situation normally exempted from U.S. Customs attention.
- *Import* - to land on, bring into, or introduce into, or attempt to land on, bring into, or introduce into any place subject to the jurisdiction of the United States whether or not such landing, bringing, or introduction constitutes an importation within the meaning of the customs laws of the United States, with the exception of temporary off-loading of products manufactured with or containers containing class I or class II substances from a ship are used for servicing of that ship (40 CFR 82.104(l)) [**Added July 2004**].
- *Import* - to land on, bring into, or introduce into, any place subject to the jurisdiction of the United States whether or not such landing, bringing, or introduction constitutes an importation within the meaning of the customs laws of the United States, with the following exemptions (40 CFR 98.6) [**Added January 2010**]:
  1. Off-loading used or excess fluorinated GHGs or nitrous oxide of U.S. origin from a ship during servicing.
  2. Bringing fluorinated GHGs or nitrous oxide into the U.S. from Mexico where the fluorinated GHGs or nitrous oxide had been admitted into Mexico in bond and were of U.S. origin.
  3. Bringing fluorinated GHGs or nitrous oxide into the U.S. when transported in a consignment of personal or household effects or in a similar non-commercial situation normally exempted from U.S. Customs attention.
  4. Bringing fluorinated GHGs or nitrous into U.S. jurisdiction exclusively for U. S. military purposes.
- *Importer* - any person who imports a controlled substance or a controlled product into the United States. "Importer" includes the person primarily liable for the payment of any duties on the merchandise or an authorized agent acting on his or her behalf. The term also includes, as appropriate (40 CFR 82.3) [**Added April 2003; Revised October 2006**]:
  - 1) The consignee;
  - 2) The importer of record (listed on U.S. Customs Service forms for imported controlled substances, used controlled substances or controlled products);
  - 3) The actual owner; or
  - 4) The transferee, if the right to draw merchandise in a bonded warehouse has been transferred.
- *Importer* - any person who imports a controlled substance, a product containing a controlled substance, a product manufactured with a controlled substance, or any other chemical substance (including a chemical substance shipped as part of a mixture or article), into the United States. "Importer" includes the person primarily liable for the payment of any duties on the merchandise or an authorized agent acting on his or her behalf. The term also includes, as appropriate (40 CFR 82.104(m)) [**Added July 2004**]:
  1. The consignee;
  2. The importer of record listed on U.S. Customs Service forms for the import;
  3. The actual owner if an actual owner's declaration and superseding bond has been filed; or
  4. The transferee, if the right to draw merchandise in a bonded warehouse has been transferred
- *Importer* - any person, company, or organization of record that for any reason brings a product into the United States from a foreign country, excluding introduction into U.S. jurisdiction exclusively for United States military purposes. An importer is the person, company, or organization primarily liable for the payment of any duties on the merchandise or an authorized agent acting on their behalf. The term includes, as appropriate (40 CFR 98.6) [**Added January 2010**]:

1. The consignee.
  2. The importer of record.
  3. The actual owner.
  4. The transferee, if the right to draw merchandise in a bonded warehouse has been transferred.
- *Importer* - the importer of record listed on U.S. Customs Service forms for imported controlled substances, used controlled substances or controlled products (40 CFR 82.3) [**Added April 2003**].
  - *Incineration* - in relation to sewage sludge, the combustion of organic matter and inorganic matter in sewage sludge by high temperatures in an enclosed device (40 CFR 503.41(g)).
  - *Incinerator* - any furnace used in the process of burning solid waste for the purpose of reducing the volume of the waste by removing combustible matter (40 CFR 60.51).
  - *Incinerator Operating Combustion Temperature* - the arithmetic mean of the temperature readings in the hottest zone of the furnace recorded in a day (24 h) when the temperature is averaged and recorded at least hourly during the hours the incinerator operates in a day (40 CFR 503.41) [**Added October 1999**].
  - *Increase the Frequency or Severity of Any Existing Violation of Any Standard in Any Area* - to cause a nonattainment area to exceed a standard more often or to cause a violation at a greater concentration than previously existed and/or would otherwise exist during the future period in question, if the project were not implemented (40 CFR 93.152) [**Added April 2009**].
  - *Indirect Emissions* - those emissions of a criteria pollutant or its precursors that (40 CFR 93.152) [**Added April 2009**]:
    1. Are caused by the Federal action, but may occur later in time and/or may be further removed in distance from the action itself but are still reasonably foreseeable; and
    2. The Federal agency can practicably control and will maintain control over due to a continuing program responsibility of the Federal agency.
  - *Individual Drain System* - a stationary system used to convey wastewater streams or residuals to a remediation material management unit or to discharge or disposal. The term includes hard-piping, all drains and junction boxes, together with their associated sewer lines and other junction boxes (e.g., manholes, sumps, and lift stations) conveying wastewater streams or residuals. For the purpose of 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US], an individual drain system is not a drain and collection system that is designed and operated for the sole purpose of collecting rainfall runoff (e.g., stormwater sewer system) and is segregated from all other individual drain systems (40 CFR 63.7957) [**Added April 2004**].
  - *Industrial Boiler* - a boiler used in manufacturing, processing, mining, and refining or any other industry to provide steam, hot water, and/or electricity (40 CFR 63.7575) [**Revised April 2013**].
  - *Industrial Boiler* - a boiler used in manufacturing, processing, mining, and refining or any other industry to provide steam, hot water, and/or electricity (40 CFR 63.11237) [**Added April 2011**].
  - *Industrial Greenhouse Gases* - nitrous oxide or any fluorinated greenhouse gas (40 CFR 98.6) [**Added January 2010**].
  - *Industrial POTW* - a POTW that accepts a waste stream regulated by an industrial NESHAP and provides treatment and controls as an agent for the industrial discharger. The industrial discharger complies with its NESHAP by using the treatment and controls located at the POTW. For example, an industry discharges its benzene-containing waste stream to the POTW for treatment to comply with 40 CFR 61, Subpart FF: *National Emission Standard for Benzene Waste Operations*. This definition does not include POTW treating waste streams not specifically regulated under another NESHAP (40 CFR 63.1583) [**Added January 2000**].

- *Industrial Process Refrigeration* - complex customized appliances that are directly linked to the processes used in, for example, the chemical, pharmaceutical, petrochemical, and manufacturing industries. This sector also includes industrial ice machines, appliances used directly in the generation of electricity, and ice rinks. Where one appliance is used for both industrial process refrigeration and other applications, it will be considered industrial process refrigeration equipment if 50 percent or more of its operating capacity is used for industrial process refrigeration (40 CFR 82.152) **[Revised January 2017]**.
- *Industrial Process Shutdown* - when an industrial process or facility temporarily ceases to operate or manufacture whatever is being produced at that facility (40 CFR 82.152) **[Revised January 2017]**.
- *Industrial Sludge* - the residual, semi-solid material left from industrial wastewater treatment processes or wet air pollution control devices (e.g., wet scrubbers). Industrial sludge includes underflow material collected in primary or secondary clarifiers, settling basins, or precipitation tanks as well as dredged materials from wastewater tanks or impoundments. Industrial sludge also includes the semi-solid materials remaining after these materials are dewatered via a belt process, centrifuge, or similar dewatering process (40 CFR 98.468) **[Added January 2014]**.
- *Industrial User* - a nondomestic source introducing any pollutant or combination of pollutants into a POTW. Industrial users can be commercial or industrial facilities whose wastes enter local sewers (40 CFR 63.1583) **[Added January 2000]**.
- *Industrial Waste Landfill* - any landfill other than a municipal solid waste landfill, a RCRA Subtitle C hazardous waste landfill, or a TSCA hazardous waste landfill, in which industrial solid waste, such as a RCRA Subtitle D wastes (nonhazardous industrial solid waste, defined in 40 CFR 257.2 of this chapter), commercial solid wastes, or conditionally exempt small quantity generator wastes, is placed. An industrial waste landfill includes all disposal areas at the facility (40 CFR 98.348) **[Added January 2011]**.
- *Industrial Wastewater* - water containing wastes from an industrial process. Industrial wastewater includes water which comes into direct contact with or results from the storage, production, or use of any raw material, intermediate product, finished product, by-product, or waste product. Examples of industrial wastewater include, but are not limited to, paper mill white water, wastewater from equipment cleaning, wastewater from air pollution control devices, rinse water, contaminated stormwater, and contaminated cooling water (40 CFR 98.358) **[Added July 2010]**.
- *Industrial Wastewater Treatment Sludge* - solid or semi-solid material resulting from the treatment of industrial wastewater, including but not limited to biosolids, screenings, grit, scum, and settled solids (40 CFR 98.358) **[Added July 2010]**.
- *Infectious Agent* - any organism (such as a virus or bacteria) that is capable of being communicated by invasion and multiplication in body tissues and capable of causing disease or adverse health impacts in humans (40 CFR 60.51c). **[Added December 1997]**
- *Infectious Agent* - any organism (such as a virus or bacteria) that is capable of being communicated by invasion and multiplication in body tissues and capable of causing disease or adverse health impacts in humans (40 CFR 62.14490) **[Added October 2000]**.
- *Inherently Safer Technology or Design* - risk management measures that minimize the use of regulated substances, substitute less hazardous substances, moderate the use of regulated substances, or simplify covered processes in order to make accidental releases less likely, or the impacts of such releases less severe (40 CFR 68.3) **[Added April 2017]**.
- *Initial Startup* - the first time equipment is brought online in a paint stripping or surface coating operation, and paint stripping or surface coating is first performed (40 CFR 63.11180) **[Added April 2011]**.
- *Initial Verification Test* - those leak tests that are conducted after the repair is finished to verify that a leak or leaks have been repaired before refrigerant is added back to the appliance (40 CFR 82.152) **[Revised January 2017]**.

- *Injury* - any effect on a human that results either from direct exposure to toxic concentrations; radiant heat; or overpressures from accidental releases or from the direct consequences of a vapor cloud explosion (such as flying glass, debris, and other projectiles) from an accidental release and that requires medical treatment or hospitalization (40 CFR 68.3) [**Added January 2005**].
- *In-Line Cleaning Machine or Continuous Cleaning Machine* - a solvent-cleaning machine that uses an automated parts handling system, typically a conveyor, to automatically provide a continuous supply of parts to be cleaned. These units are fully enclosed except for the conveyor inlet and exit portals. In-line cleaning machines can be either cold or vapor-cleaning machines (40 CFR 63.461).
- *Inorganic Hazardous Air Pollutant (HAP)* - any HAP that is not organic (40 CFR 63.742) [**Added January 1999**].
- *Inorganic Liquids Service* - that an equipment leak component contains or contacts organic liquids having 5 percent by weight or greater of the organic HAP listed in Table 1 to 40 CFR 63, Subpart EEEE [40 CFR 63.2330 through 63.2406, see checklist items AE.51.1.US through AE.57.15.US] (40 CFR 63.2406) [**Added April 2004**].
- *Installed* - the engine is placed and secured at the location where it is intended to be operated (40 CFR 60.4219 and 60.4248) [**Added July 2011**].
- *Institutional Boiler* - a boiler used in institutional establishments such as, but not limited to, medical centers, nursing homes, research centers, institutions of higher education, elementary and secondary schools, libraries, religious establishments, and governmental buildings to provide electricity, steam, and/or hot water (40 CFR 63.11237) [**Revised April 2013**].
- *Institutional Emergency Stationary RICE* - an emergency stationary RICE used in institutional establishments such as medical centers, nursing homes, research centers, institutions of higher education, correctional facilities, elementary and secondary schools, libraries, religious establishments, police stations, and fire stations (40 CFR 63.6675) [**Added October 2010**].
- *Institutional Facility* - a land-based facility owned and/or operated by an organization having a governmental, educational, civic, or religious purpose such as a school, hospital, prison, military installation, church, or other similar establishment or facility (40 CFR 60.2977) [**Added January 2006**].
- *Institutional Waste* - includes materials discarded by hospitals, schools, nonmanufacturing activities at prisons, and government facilities (40 CFR 60.51a).
- *Institutional Waste* - solid waste (as defined in this subpart) that is combusted at any institutional facility using controlled flame combustion in an enclosed, distinct operating unit: whose design does not provide for energy recovery (as defined in this subpart); operated without energy recovery (as defined in this subpart); or operated with only waste heat recovery (as defined in this subpart). Institutional waste also means solid waste (as defined in this subpart) combusted on site in an air curtain incinerator that is a distinct operating unit of any institutional facility (40 CFR 60.2977) [**Added January 2006**].
- *Institutional Waste Incineration Unit* - any combustion unit that combusts institutional waste (as defined in this subpart) and is a distinct operating unit of the institutional facility that generated the waste. Institutional waste incineration units include field-erected, modular, cyclonic burn barrel, and custom built incineration units operating with starved or excess air, and any air curtain incinerator that is a distinct operating unit of the institutional facility that generated the institutional waste (except those air curtain incinerators listed in 40 CFR 60.2888(b)) (40 CFR 60.2977) [**Added January 2006**].
- *Integrated Gasification Combined Cycle Electric Utility Steam Generating Unit* - a coal-fired electric utility steam generating unit that burns a synthetic gas derived from coal in a combined-cycle gas turbine. No solid coal is directly burned in the unit during operation (40 CFR 60.4420) [**Added April 2009**].

- *Intermediate or Interim Cover* - the placement of material over waste in a landfill for a period of time prior to the disposal of additional waste and/or final closure as defined by state regulation, permit, guidance or written plan, or state accepted best management practice (40 CFR 98.348) **[Added January 2017]**.
- *Intermittent Bleed Pneumatic Devices* - automated flow control devices powered by pressurized natural gas and used for automatically maintaining a process condition such as liquid level, pressure, delta-pressure and temperature. These are snap-acting or throttling devices that discharge all or a portion of the full volume of the actuator intermittently when control action is necessary, but does not bleed continuously (40 CFR 98.6) **[Added January 2014]**.
- *Intermittent HMIWI* - an HMIWI that is designed to allow waste charging, but not ash removal, during combustion (40 CFR 60.51c) **[Added December 1997]**.
- *Intermittent HMIWI* - an HMIWI that is designed to allow waste charging, but not ash removal, during combustion (40 CFR 62.14490) **[Added October 2000]**.
- *Intermittent OSWI Unit* - an OSWI unit that is designed to allow waste charging, but not ash removal, during combustion (40 CFR 60.2977) **[Added January 2006]**.
- *Internal Combustion Engine* - a device in which air enters a combustion chamber, is mixed with fuel, compressed in the chamber, and combusted. Fuel may enter the combustion chamber with the air or be injected into the combustion chamber. Expansion of the hot combustion gases in the chamber rotates a shaft, either through a reciprocating or rotary action. For purposes of 40 CFR 63, Subpart P [40 CFR 63.9280 through 63.9375, see checklist item AE.230.1.US through AE.230.4.US], this definition does not include combustion turbine engines (40 CFR 63.9375) **[Added July 2003]**.
- *Internal Floating Roof* - a cover that rests or floats on the liquid surface (but not necessarily in complete contact with it inside a tank that has a fixed roof) (40 CFR 63.7957) **[Added April 2004]**.
- *Interstate Commerce* - the distribution or transportation of any product between one state, territory, possession or the District of Columbia, and another state, territory, possession or the District of Columbia, or the sale, use or manufacture of any product in more than one state, territory, possession or District of Columbia. The entry points for which a product is introduced into interstate commerce are the release of a product from the facility in which the product was manufactured, the entry into a warehouse from which the domestic manufacturer releases the product for sale or distribution, and at the site of United States Customs clearance (40 CFR 82.104(n)) **[Added July 2004]**.
- *ISO Conditions* - 288° Kelvin, 60 percent relative humidity and 101.3 kilopascals pressure (40 CFR 60/41b and 60.4420) **[Added July 2007, Revised April 2009]**.
- *ISO Standard Day Conditions* – 288 °Kelvin (15 °C), 60 percent relative humidity and 101.3 kPa pressure (40 CFR 60.331, 63.6175 and 63.6675) **[Added April 2004; Revised October 2004]**.
- *Isobutane* - a paraffinic branch chain hydrocarbon with molecular formula C<sub>4</sub>H<sub>10</sub> (40 CFR 98.6) **[Added January 2010]**.
- *Isobutylene* - an olefinic branch chain hydrocarbon with molecular formula C<sub>4</sub>H<sub>8</sub> (40 CFR 98.6) **[Added January 2010]**.
- *Kerosene* - a light petroleum distillate with a maximum distillation temperature of 400 °F at the 10 percent recovery point, a final maximum boiling point of 572 °F, a minimum flash point of 100 °F, and a maximum freezing point of -22 °F. Included are No. 1-K and No. 2-K, distinguished by maximum sulfur content (0.04 and 0.30 percent of total mass, respectively), as well as all other grades of kerosene called range or stove oil. Excluded is kerosene-type jet fuel (see definition herein) (40 CFR 98.6) **[Added January 2010]**.

- *Kerosene-Type Jet Fuel* - a kerosene-based product used in commercial and military turbojet and turboprop aircraft. The product has a maximum distillation temperature of 400 °F at the 10 percent recovery point and a final maximum boiling point of 572 °F. Included are Jet A, Jet A-1, JP-5, and JP-8 (40 CFR 98.6) [**Added January 2010**].
- *Landfill* - an area of land or an excavation in which wastes are placed for permanent disposal and that is not a land application unit, surface impoundment, injection well, or waste pile as those terms are defined under 40 CFR 257.2 (40 CFR 98.6) [**Added January 2010**].
- *Landfill Capacity* - the maximum amount of solid waste a landfill can accept. For the purposes of this subpart, for landfills that have a permit, the landfill capacity can be determined in terms of volume or mass in the most recent permit issued by the state, local, or Tribal agency responsible for regulating the landfill, plus any in-place waste not accounted for in the most recent permit. If the owner or operator chooses to convert from volume to mass to determine its capacity, the calculation must include a site-specific density (40 CFR 98.348) [**Added January 2014**].
- *Landfill Gas* - a gaseous by-product of the land application of municipal refuse typically formed through the anaerobic decomposition of waste materials and composed principally of methane and CO<sub>2</sub> (40 CFR 60.4248, 63.6175, and 63.6675) [**Added April 2004; Revised April 2008**].
- *Landfill Gas* - gas produced as a result of anaerobic decomposition of waste materials in the landfill. Landfill gas generally contains 40 to 60 percent methane on a dry basis, typically less than 1 percent non-methane organic chemicals, and the remainder being carbon dioxide (40 CFR 98.6) [**Added January 2010**].
- *Large Commercial Aircraft* - an aircraft of more than 110,000 lb, maximum certified take-off weight manufactured for non-military use (40 CFR 63.742) [**Added January 2000**].
- *Large HMIWI* (40 CFR 60.51c) [**Added December 1997**]:
  1. except as provided in 2:
    - a. an HMIWI whose maximum design waste burning capacity is more than 500 lb/h
    - b. a continuous or intermittent HMIWI whose maximum charge rate is more than 500 lb/h
    - c. a batch HMIWI whose maximum charge rate is more than 4000 lb/day.
  2. the following are not large HMIWI:
    - a. a continuous or intermittent HMIWI whose maximum charge rate is less than or equal to 500 lb/h
    - b. a batch HMIWI whose maximum charge rate is less than or equal to 4000 lb/day.
- *Large HMIWI* (40 CFR 62.14490) [**Added October 2000**]:
  1. an HMIWI whose maximum design waste burning capacity is more than 500 lb/h; or
  2. a continuous or intermittent HMIWI whose maximum charge rate is more than 500 lb/h; or
  3. a batch HMIWI whose maximum charge rate is more than 4,000 lb/day.
 The following are not large HMIWI:
  1. a continuous or intermittent HMIWI whose maximum charge rate is less than or equal to 500 lb/h; or
  2. a batch HMIWI whose maximum charge rate is less than or equal to 4,000 lb/day.
- *Leachate Recirculation* - the practice of taking the leachate collected from the landfill and reapplying it to the landfill by any of one of a variety of methods, including pre-wetting of the waste, direct discharge into the working face, spraying, infiltration ponds, vertical injection wells, horizontal gravity distribution systems, and pressure distribution systems (40 CFR 98.348) [**Added January 2014**].
- *Lead Additive* - any substance containing lead or lead compounds (40 CFR 80.2(e)) [**Added October 2011**].
- *Leak* - any visible leakage, including misting and clouding (40 CFR 63.742) [**Added January 1999**].
- *Leak Inspection* - the examination of an appliance to determine the location of refrigerant leaks. Potential methods include, but are not limited to, ultrasonic tests, gas-imaging cameras, bubble tests as appropriate, or the use of a

leak detection device operated and maintained according to manufacturer guidelines. Methods that determine whether the appliance is leaking refrigerant but not the location of a leak, such as standing pressure/vacuum decay tests, sight glass checks, viewing receiver levels, pressure checks, and charging charts, must be used in conjunction with methods that can determine the location of a leak (40 CFR 82.152) **[Added January 2017]**.

- *Leak Rate* - the rate at which an appliance is losing refrigerant, measured between refrigerant charges. The leak rate is expressed in terms of the percentage of the appliance's full charge that would be lost over a 12-mo period if the current rate of loss were to continue over that period. The rate must be calculated using one of the following methods. The same method must be used for all appliances subject to the leak repair requirements located at an operating facility (40 CFR 82.152) **[Added April 2005; Revised January 2017]**:

1. Annualizing Method.

- Step 1. Take the number of pounds of refrigerant added to the appliance to return it to a full charge, whether in one addition or if multiple additions related to same leak, and divide it by the number of pounds of refrigerant the appliance normally contains at full charge;
- Step 2. Take the shorter of the number of days that have passed since the last day refrigerant was added or 365 days and divide that number by 365 days;
- Step 3. Take the number calculated in Step 1 and divide it by the number calculated in Step 2; and
- (iv) Step 4. Multiply the number calculated in Step 3 by 100 to calculate a percentage. This method is summarized in the formula represented in the text of 40 CFR 82.152.

2. Rolling Average Method.

- Step 1. Take the sum of the pounds of refrigerant added to the appliance over the previous 365-day period (or over the period that has passed since the last successful follow-up verification test showing all identified leaks in the appliance were repaired, if that period is less than one year);
- Step 2. Divide the result of Step 1 by the pounds of refrigerant the appliance normally contains at full charge; and
- Step 3. Multiply the result of Step 2 by 100 to obtain a percentage. This method is summarized in the formula represented in the text of 40 CFR 82.152.

- *Lean Burn Engine* - any two-stroke or four-stroke spark ignited engine that does not meet the definition of a rich burn engine (40 CFR 60.4248 and 63.6675) **[Added July 2004; Revised April 2008]**.
- *Lean Premix Gas-Fired Stationary Combustion Turbine* - (40 CFR 63.6175) **[Added April 2004]**:
  - 1.a. Each stationary combustion turbine which is equipped only to fire gas using lean premix technology,
  - b. Each stationary combustion turbine which is equipped both to fire gas using lean premix technology and to fire oil, during any period when it is firing gas, and
  - c. Each stationary combustion turbine which is equipped both to fire gas using lean premix technology and to fire oil, and is located at a major source where all new, reconstructed, and existing stationary combustion turbines fire oil no more than an aggregate total of 1000 hours during the calendar year.
- 2. Lean premix gas-fired stationary combustion turbines do not include:
  - a. Any emergency stationary combustion turbine,
  - b. Any stationary combustion turbine located on the North Slope of Alaska, or
  - c. Any stationary combustion turbine burning landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, or any stationary combustion turbine where gasified MSW is used to generate 10 percent or more of the gross heat input on an annual basis.
- *Lean Premix Oil-fired Stationary Combustion Turbine* - (40 CFR 63.6175) **[Added April 2004]**:
  - 1.a. Each stationary combustion turbine which is equipped only to fire oil using lean premix technology, and
  - b. Each stationary combustion turbine which is equipped both to fire oil using lean premix technology and to fire gas, and is located at a major source where all new, reconstructed, and existing stationary combustion turbines fire oil more than an aggregate total of 1000 hours during the calendar year, during any period when it is firing oil.
- 2. Lean premix oil-fired stationary combustion turbines do not include:
  - a. Any emergency stationary combustion turbine, or
  - b. Any stationary combustion turbine located on the North Slope of Alaska.

- *Lean Premix Stationary Combustion Turbine* - any stationary combustion turbine where the air and fuel are thoroughly mixed to form a lean mixture for combustion in the combustor. Mixing may occur before or in the combustion chamber. A unit which is capable of operating in both lean premix and diffusion flame modes is considered a lean premix stationary combustion turbine when it is in the lean premix mode, and it is considered a diffusion flame stationary combustion turbine when it is in the diffusion flame mode (40 CFR 60.331) **[Added October 2004]**.
- *Lean Premix Stationary Combustion Turbine* - any stationary combustion turbine where the air and fuel are thoroughly mixed to form a lean mixture before delivery to the combustor. Mixing may occur before or in the combustion chamber. A lean premixed turbine may operate in diffusion flame mode during operating conditions such as startup and shutdown, extreme ambient temperature, or low or transient load (40 CFR 60.4420) **[Added April 2009]**.
- *Lean Premix Technology* - a configuration of a stationary combustion turbine where the **air and fuel are thoroughly mixed to form a lean mixture for combustion** in the combustor. Mixing may occur before or in the combustion chamber (40 CFR 63.6175) **[Added April 2004]**.
- *LEPC* - local emergency planning committee as established under 42 U.S.C. 11001(c) (40 CFR 68.3) **[Added April 2017]**.
- *Liberated* - released from coal and surrounding rock strata during the mining process. This includes both methane emitted from the ventilation system and methane drained from degasification systems (40 CFR 98.6) **[Added July 2010]**.
- *Light Liquid* - includes distillate oil, biodiesel, or vegetable oil (40 CFR 63.11237) **[Added April 2013]**.
- *Lignite* - coal that is classified as lignite A or B according to the American Society for Testing and Materials (ASTM) standards (40 CFR 60.41a).
- *Lignite* - a type of coal classified as lignite A or lignite B by the American Society of Testing and Materials in ASTM D388 (incorporated by reference, see 40 CFR 60.17) (40 CFR 60.41b) **[Added July 2007]**.
- *Lime* - the generic term for a variety of chemical compounds that are produced by the calcination of limestone or dolomite. These products include but are not limited to calcium oxide, high-calcium quicklime, calcium hydroxide, hydrated lime, dolomitic quicklime, and dolomitic hydrate (40 CFR 98.6) **[Added January 2010]**.
- *Limited Access Space* - internal surfaces or passages of an aerospace vehicle or component that cannot be reached without the aid of an airbrush or a spray gun extension for the application of coatings (40 CFR 63.742) **[Added January 1999]**.
- *Limited-use Boiler* - any boiler that burns any amount of solid or liquid fuels and has a federally enforceable annual capacity factor of no more than 10 percent (40 CFR 63.11237) **[Added April 2013, Revised October 2016]**.
- *Limited-use Boiler or Process Heater* - any boiler or process heater that burns any amount of solid, liquid, or gaseous fuels and has a federally enforceable annual capacity factor of no more than 10 percent (40 CFR 63.7575) **[Revised April 2013; Revised January 2016]**.
- *Limited Use Stationary RICE* - any stationary RICE that operates less than 100 h/yr (40 CFR 63.6675) **[Added July 2004]**.

- *Lip Exhaust* - a device installed at the top of the opening of a solvent-cleaning machine that draws in air and solvent vapor from the freeboard area and ducts the air and vapor away from the solvent-cleaning area (40 CFR 63.461).
- *Liquefied Petroleum Gas* - any liquefied hydrocarbon gas obtained as a by-product in petroleum refining or natural gas production (40 CFR 60.4248 and 63.6675) [**Added July 2004; Revised April 2008**].
- *Liquid Fuel* - includes, but is not limited to, light liquid, heavy liquid, any form of liquid fuel derived from petroleum, used oil, liquid biofuels, biodiesel, vegetable oil, and comparable fuels as defined under 40 CFR 261.38 (40 CFR 63.7575) [**Revised April 2013**].
- *Liquid Fuel* - includes, but is not limited to, distillate oil, residual oil, any form of liquid fuel derived from petroleum, used oil meeting the specification in 40 CFR 279.11, liquid biofuels, biodiesel, and vegetable oil (40 CFR 63.11237) [**Added April 2013, Revised October 2016**].
- *Liquid Fuel* - includes, but is not limited to, light liquid, heavy liquid, any form of liquid fuel derived from petroleum, used oil, liquid biofuels, biodiesel, and vegetable oil (40 CFR 63.7575) [**Revised April 2013; Revised January 2016**].
- *Liquid/Slurry* - a manure management component in which manure is stored as excreted or with some minimal addition of water to facilitate handling and is stored in either tanks or earthen ponds, usually for periods less than 1 yr (40 CFR 98.6) [**Added January 2010**].
- *Load Fraction* - the actual heat input of a boiler or process heater divided by heat input during the performance test that established the minimum sorbent injection rate or minimum activated carbon injection rate, expressed as a fraction (e.g., for 50 percent load the load fraction is 0.5). For boilers and process heaters that cofire natural gas or refinery gas with a solid or liquid fuel, the load fraction is determined by the actual heat input of the solid or liquid fuel divided by heat input of the solid or liquid fuel fired during the performance test (e.g., if the performance test was conducted at 100 percent solid fuel firing, for 100 percent load firing 50 percent solid fuel and 50 percent natural gas the load fraction is 0.5) (40 CFR 63.7575) [**Revised April 2013; Revised January 2016**].
- *Load Fraction* - the actual heat input of a boiler divided by heat input during the performance test that established the minimum sorbent injection rate or minimum activated carbon injection rate, expressed as a fraction (e.g., for 50 percent load the load fraction is 0.5). For boilers that co-fire natural gas with a solid or liquid fuel, the load fraction is determined by the actual heat input of the solid or liquid fuel divided by heat input of the solid or liquid fuel fired during the performance test (e.g., if the performance test was conducted at 100 percent solid fuel firing, for 100 percent load firing 50 percent solid fuel and 50 percent natural gas, the load fraction is 0.5) (40 CFR 63.11237) [**Added April 2013, Revised October 2016**].
- *Local Air Quality Modeling Analysis* - an assessment of localized impacts on a scale smaller than the entire nonattainment or maintenance area, including, for example, congested roadway intersections and highways or transit terminals, which uses an air quality dispersion model to determine the effects of emissions on air quality (40 CFR 93.152) [**Added April 2009**].
- *Low Heat Release Rate* - a heat release rate of 730,000 J/sec-m<sup>3</sup> (70,000 Btu/hr-ft<sup>3</sup>) or less (40 CFR 60.41b) [**Added July 2007**].
- *Low-level Radioactive Waste* - waste material which contains radioactive nuclides emitting primarily beta or gamma radiation, or both, in concentrations or quantities that exceed applicable federal or State standards for unrestricted release. Low-level radioactive waste is not high-level radioactive waste, spent nuclear fuel, or by-product material as defined by the *Atomic Energy Act* of 1954 (42 U.S.C. 2014(e)(2)) (40 CFR 60.51c, 60.2977, 62.14490 and 62.14840) [**Revised January 2004; Revised January 2006**].

- *Low-loss Fitting* - any device that is intended to establish a connection between hoses, appliances, or recovery and/or recycling machines and that is designed to close automatically or to be closed manually when disconnected, minimizing the release of refrigerant from hoses, appliances, and recovery and/or recycling machines (40 CFR 82.152) [**Revised January 2017**].
- *Low-pressure Appliance* - an appliance that uses a refrigerant with a liquid phase saturation pressure below 45 psia at 104 °F. Examples include but are not limited to appliances using R-11, R-123, R-113, and R-245fa (40 CFR 82.152) [**Revised April 2004; Revised January 2017**].
- *Low Throughput Transfer Rack* - those transfer racks that transfer into transport vehicles (for existing affected sources) or into transport vehicles and containers (for new affected sources) less than 11.8 million L/ yr of organic liquids (40 CFR 63.2406) [**Added January 2007**].
- *Lubricants* – includes all grades of lubricating oils, from spindle oil to cylinder oil to those used in greases. Petroleum lubricants may be produced from distillates or residues (40 CFR 98.6) [**Added January 2010**].
- *Mcf* - thousand cubic feet.
- *MMBtu* - million British thermal units.
- *Mscf* - thousand standard cubic feet (40 CFR 98.6) [**Added January 2010; Revised January 2011**].
- *MTBE (Methyl Tertiary Butyl Ether, (CH<sub>3</sub>)<sub>3</sub>COCH<sub>3</sub>)* - an ether as described in “Oxygenates” (40 CFR 98.6) [**Added January 2010**].
- *Maintenance Area* - an area with a maintenance plan approved under section 175A of the Act (40 CFR 93.152) [**Added April 2009**].
- *Maintenance Plan* - a revision to the applicable SIP, meeting the requirements of section 175A of the Act (40 CFR 93.152) [**Added April 2009**].
- *Major Change* - introduction of a new process, process equipment, or regulated substance, an alteration of process chemistry that results in any change to safe operating limits, or other alteration that introduces a new hazard (40 CFR 68.3) [**Added January 2005**].
- *Major Maintenance, Service, or Repair* - any maintenance, service, or repair that involves the removal of any or all of the following appliance components: compressor, condenser, evaporator, or auxiliary heat exchange coil; or any maintenance, service, or repair that involves uncovering an opening of more than 4 in<sup>2</sup> of “flow area” for more than 15 min (40 CFR 82.152) [**Revised October 2003**].
- *Major Source* - in relation to dry cleaning facilities, any dry cleaning facility that emits or has the potential to emit more than 9.1 Mg/yr (10 tons/yr) of perchloroethylene to the atmosphere. In lieu of measuring a facility’s potential to emit perchloroethylene emissions or determining a facility’s potential to emit perchloroethylene emissions, a dry cleaning facility is a major source if (40 CFR 63.321):
  1. it includes only dry-to-dry machines and has a total yearly perchloroethylene consumption greater than 8000 L (2100 gal)
  2. it includes only transfer machine systems or both dry-to-dry and transfer machine systems and has a total yearly perchloroethylene consumption greater than 6800 L (1800 gal).
- *Major Source* - as used in 40 CFR 63, Subpart YYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US], shall have the same meaning as in 40 CFR 63.2, except that (40 CFR 63.6175) [**Added April 2004**]:
  1. Emissions from any oil or gas exploration or production well (with its associated equipment (as defined in this section)) and emissions from any pipeline compressor station or pump station shall not be aggregated

- with emissions from other similar units, to determine whether such emission points or stations are major sources, even when emission points are in a contiguous area or under common control;
  - 2. For oil and gas production facilities, emissions from processes, operations, or equipment that are not part of the same oil and gas production facility, as defined in this section, shall not be aggregated;
  - 3. For production field facilities, only HAP emissions from glycol dehydration units, storage vessel with the potential for flash emissions, combustion turbines and reciprocating internal combustion engines shall be aggregated for a major source determination; and
  - 4. Emissions from processes, operations, and equipment that are not part of the same natural gas transmission and storage facility, as defined in this section, shall not be aggregated.
- *Major Source* - as used in 40 CFR 63, Subpart ZZZZ [40 CFR 63.6580 through 63.6675, see checklist items AE.21.1.US through AE.21.10.US], shall have the same meaning as in 40 CFR 63.2, except that (40 CFR 63.6675) **[Added July 2004]**:
    1. Emissions from any oil or gas exploration or production well (with its associated equipment (as defined in 63.6675) and emissions from any pipeline compressor station or pump station shall not be aggregated with emissions from other similar units, to determine whether such emission points or stations are major sources, even when emission points are in a contiguous area or under common control;
    2. For oil and gas production facilities, emissions from processes, operations, or equipment that are not part of the same oil and gas production facility, as defined in 40 CFR 63.1271, Subpart HHH: *National Emission Standards for HAP from Natural Gas Transmission and Storage Facilities*, shall not be aggregated;
    3. For production field facilities, only HAP emissions from glycol dehydration units, storage vessel with the potential for flash emissions, combustion turbines and reciprocating internal combustion engines shall be aggregated for a major source determination; and
    4. Emissions from processes, operations, and equipment that are not part of the same natural gas transmission and storage facility, as defined in 40 CFR 63.1271 of 40 CFR, Subpart HHH: *National Emission Standards for HAP from Natural Gas Transmission and Storage Facilities*, shall not be aggregated.
  - *Major Source for Oil and Natural Gas Production Facilities* - as used in this subpart, shall have the same meaning as in 40 CFR 63.2, except that (40 CFR 63.7575) **[Added April 2013]**.
    1. Emissions from any oil or gas exploration or production well (with its associated equipment, as defined in this section), and emissions from any pipeline compressor station or pump station shall not be aggregated with emissions from other similar units to determine whether such emission points or stations are major sources, even when emission points are in a contiguous area or under common control;
    2. Emissions from processes, operations, or equipment that are not part of the same facility, as defined in this section, shall not be aggregated; and
    3. For facilities that are production field facilities, only HAP emissions from glycol dehydration units and storage vessels with the potential for flash emissions shall be aggregated for a major source determination. For facilities that are not production field facilities, HAP emissions from all HAP emission units shall be aggregated for a major source determination.
  - *Major Source of HAP Emissions* - a contiguous site under common control that emits or has the potential to emit any single HAP at a rate of 10 tons (9.07 megagrams) or more per year or any combination of HAP at a rate of 25 tons (22.68 megagrams) or more per year, except that for oil and gas production facilities, a major source of HAP emissions is determined for each surface site (40 CFR 63.6085(a)) **[Added April 2004]**.
  - *Major Source of HAP Emissions* - any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit any single HAP at a rate of 9.07 megagrams (Mg) (10 tons) or more per year, or emit any combination of HAP at a rate of 22.68 Mg (25 tons) or more per year (40 CFR 63.11170(b)) **[Added April 2011]**.
  - *Malfunction* - any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or usual manner which causes or has the potential to cause the emission limitations in this standard to be exceeded. Failures that are caused in part by poor maintenance or careless operation are not malfunctions (40 CFR 63. 301 and 63.6175) **[Added April 2004; Revised July 2006]**.

- *Malfunction* - any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or usual manner. Failures that are caused, in part, by poor maintenance or careless operation are not malfunctions. During periods of malfunction the operator must operate within established parameters as much as **possible, and monitoring of all applicable** operating parameters must continue until all waste has been combusted or until the malfunction ceases, whichever comes first (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Malfunction* -any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or usual manner. Failures that are caused in part by poor maintenance or careless operation are not malfunctions (40 CFR 60.2977, 62.14840, 63.6675, and 63.9375) **[Revised January 2004; Revised January 2006]**.
- *Malfunction* - any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or usual manner which causes or has the potential to cause the emission limitations in this standard to be exceeded. Failures that are caused in part by poor maintenance or careless operation are not malfunctions (40 CFR 63. 301 and 63.6175) **[Added April 2004; Revised July 2006]**.
- *Malfunction* - any sudden, infrequent, and not reasonably preventable failure of air pollution control and monitoring equipment, process equipment, or a process to operate in a normal or usual manner. Failures that are caused, in part, by poor maintenance or careless operation are not malfunctions (40 CFR 60.4930) **[Added April 2011]**.
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Manufactured End Product* - any end product in product and service codes (PSC) 1000-9999, except (48 CFR 2.101(b)(2)) **[Added July 2016]**:
  1. PSC 5510, Lumber and Related Basic Wood Materials;
  2. Product or service group (PSG) 87, Agricultural Supplies;
  3. PSG 88, Live Animals;
  4. PSG 89, Subsistence;
  5. PSC 9410, Crude Grades of Plant Materials;
  6. PSC 9430, Miscellaneous Crude Animal Products, Inedible;
  7. PSC 9440, Miscellaneous Crude Agricultural and Forestry Products
  8. PSC 9610, Ores;
  9. PSC 9620, Minerals, Natural and Synthetic; and
  10. PSC 9630, Additive Metal Materials.
- *Manufactured With a Controlled Substance* - that the manufacturer of the product itself used a controlled substance directly in the product's manufacturing, but the product itself does not contain more than trace quantities of the controlled substance at the point of introduction into interstate commerce. The following situations are excluded from the meaning of the phrase “manufactured with” a controlled substance:
  1. Where a product has not had physical contact with the controlled substance;
  2. Where the manufacturing equipment or the product has had physical contact with a controlled substance in an intermittent manner, not as a routine part of the direct manufacturing process;
  3. Where the controlled substance has been transformed, except for trace quantities; or
  4. Where the controlled substance has been completely destroyed.
- *Manufacturer* - has the meaning given in section 216(1) of the Act. In general, this term includes any person who manufactures a stationary engine for sale in the United States or otherwise introduces a new stationary engine into commerce in the United States. This includes importers who import stationary engines for sale or resale (40 CFR 60.4219) **[Added October 2006]**.

- *Manure Composting* - the biological oxidation of a solid waste including manure usually with bedding or another organic carbon source typically at thermophilic temperatures produced by microbial heat production. There are four types of composting employed for manure management: static, in vessel, intensive windrow and passive windrow. Static composting typically occurs in an enclosed channel, with forced aeration and continuous mixing. In vessel composting occurs in piles with forced aeration but no mixing. Intensive windrow composting occurs in windrows with regular turning for mixing and aeration. Passive windrow composting occurs in windrows with infrequent turning for mixing and aeration (40 CFR 98.6) **[Added January 2010]**.
- *Marine Diesel Engine* - for the purposes of 40 CFR 80, subpart I only, marine diesel engine means a diesel engine installed on a Category 1 (C1) or Category 2 (C2) marine vessel (40 CFR 80.501(h)) **[Added July 2010]**.
- *Mass Burn Refractory Municipal Waste Combustor* - a field erected combustor that combusts municipal solid waste in a refractory wall furnace. Unless otherwise specified, this includes combustions with a cylindrical rotary refractory wall furnace (40 CFR 60.51a and 60.51b).
- *Mass Burn Refractory Municipal Waste Combustion Unit* - a field-erected municipal waste combustion unit that combusts municipal solid waste in a refractory wall furnace. Unless otherwise specified, that includes municipal waste combustion units with a cylindrical rotary refractory wall furnace (40 CFR 60.1465) **[Added April 2001]**.
- *Mass Burn Rotary Waterwall Municipal Waste Combustor* - a field erected combustor that combusts municipal solid waste in a cylindrical rotary waterwall furnace (40 CFR 60.51a).
- *Mass Burn Rotary Waterwall Municipal Waste Combustor* - a field erected combustor that combusts municipal solid waste in a cylindrical rotary waterwall furnace or on a tumbling-tile grate (40 CFR 60.51b) **[Revised October 2001]**.
- *Mass Burn Rotary Waterwall Municipal Waste Combustion Unit* - a field-erected municipal waste combustion unit that combusts municipal solid waste in a cylindrical rotary waterwall furnace (40 CFR 60.1465) **[Added April 2001]**.
- *Mass Burn Waterwall Municipal Waste Combustion Unit* - a field-erected municipal waste combustion unit that combusts municipal solid waste in a waterwall furnace (40 CFR 60.1465) **[Added April 2001]**.
- *Mass-feed Stoker Steam Generating Unit* - a steam generating unit where solid fuel is introduced directly into a retort or is fed directly onto a grate where it is combusted (40 CFR 60.41b) **[Added July 2007]**.
- *Materials Separation Plan* - a plan that identifies both a goal and an approach to separate certain components of municipal solid waste for a given service area in order to make the separated materials available for recycling (40 CFR 60.51b).
- *Materials Separation Plan* - a plan that identifies a goal and an approach for separating certain components of municipal solid waste for a given service area in order to make the separated materials available for recycling. A materials separation plan may include three items (40 CFR 60.1465) **[Added April 2001]**:
  1. Elements such as dropoff facilities, buy-back or deposit-return incentives, curbside pickup programs, or centralized mechanical separation systems.
  2. Different goals or approaches for different subareas in the service area.
  3. No materials separation activities for certain subareas or, if warranted, the entire service area.
- *Materials That Contain HAP or HAP Containing Materials* - for the purposes of this subpart, materials that contain 0.1 percent or more by mass of any individual HAP that is an OSHA defined carcinogen as specified in 29 CFR 1910.1200(d)(4), or 1.0 percent or more by mass for any other individual HAP (40 CFR 63.11180) **[Added April 2011]**.
- *Maximum Charge Rate* (40 CFR 60.51c and 62.14490) **[Added October 2000]**:

1. for continuous and intermittent HMIWI, 110 percent of the lowest 3-h average charge rate measured during the most recent performance test demonstrating compliance with all applicable emission limits.
  2. for batch HMIWI, 110 percent of the lowest daily charge rate measured during the most recent performance test demonstrating compliance with all applicable emission limits.
- *Maximum Demonstrated Load of a Municipal Waste Combustion Unit* - the highest 4-h block arithmetic average municipal waste combustion unit load achieved during 4 consecutive hours in the course of the most recent dioxins/furans stack test that demonstrates compliance with the applicable emission limit for dioxins/furans specified in 40 CFR 60, Subpart AAAA [40 CFR 60.1000 through 60.1465, see checklist items AE.36.17.US through AE.36.28.US] (40 CFR 60.1465) **[Added April 2001]**.
  - *Maximum Demonstrated Temperature of the Particulate Matter Control Device* - the highest 4-h block arithmetic average flue gas temperature measured at the inlet of the particulate matter control device during 4 consecutive hours in the course of the most recent stack test for dioxins/furans emissions that demonstrates compliance with the limits specified in 40 CFR 60, Subpart AAAA [40 CFR 60.1000 through 60.1465, see checklist items AE.36.17.US through AE.36.28.US] (40 CFR 60.1465) **[Added April 2001]**.
  - *Maximum Design Heat Input Capacity* - the ability of a steam generating unit to combust a stated maximum amount of fuel (or combination of fuels) on a steady state basis as determined by the physical design and characteristics of the steam generating unit (40 CFR 60.41c) **[Added July 2007]**.
  - *Maximum Design Waste Burning Capacity* (40 CFR 60.51c) **[Added December 1997]**:
    1. for intermittent and continuous HMIWI
 
$$C = P_v \times 15,000/8500$$
 where,  
 C = HMIWI capacity, lb/h  
 P<sub>v</sub> = primary chamber volume, ft<sup>3</sup>  
 15,000 = primary chamber heat release rate factor, Btu/ft<sup>3</sup>/h  
 8500 = standard waste heating value, Btu/lb
    2. for batch HMIWI
 
$$C = P_v \times 4.5/8$$
 where,  
 C = HMIWI capacity, lb/h  
 P<sub>v</sub> = primary chamber volume, ft<sup>3</sup>  
 4.5 = waste density, lb/ft<sup>3</sup>  
 8 = typical hours of operation of a batch HMIWI, hours.
  - *Maximum Engine Power* - maximum engine power as defined in 40 CFR 1039.801 (40 CFR 60.4219) **[Added October 2006]**.
  - *Maximum Fabric Filter Inlet Temperature* - 110 percent of the lowest 3-h average temperature at the inlet to the fabric filter (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the dioxin/furan emission limit (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
  - *Maximum Flue Gas Temperature* - 110 percent of the lowest 3-h average temperature at the outlet from the wet scrubber (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the mercury (Hg) emission limit (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
  - *Maximum HAP Vapor Pressure* - the sum of the individual HAP equilibrium partial pressure exerted by remediation material at the temperature equal to either: the monthly average temperature as reported by the National Weather Service when the remediation material is stored or treated at ambient temperature; or the highest calendar-month average temperature of the remediation material when the remediation material is stored at temperatures above the ambient temperature or when the remediation material is stored or treated at temperatures

below the ambient temperature. For the purpose of 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US], maximum HAP vapor pressure is determined using the procedures specified in 40 CFR 63.7944 (40 CFR 63.7957) **[Added April 2004]**.

- *Maximum Heat Input Capacity* - the ability of a steam generating unit to combust a stated maximum amount of fuel on a steady state basis, as determined by the physical design and characteristics of the steam generating unit (40 CFR 60.41b) **[Added July 2007]**.
- *Maximum Heat Input Capacity of a Steam Generating Unit* - is determined by operating the facility at maximum capacity for 24 h and using the heat loss method described in Sections 5 and 7.3 of the American Society of Mechanical Engineers (ASME) Power Test Codes 4.1 (see 40 CFR 60.17(h)) no later than 180 days after initial startup of the facility and within 60 days after reaching maximum production rate at which the facility will be operated (40 CFR 60.51a).
- *Maximum Rated Heat Input Capacity* - the hourly heat input to a unit (in mmBtu/hr), when it combusts the maximum amount of fuel per hour that it is capable of combusting on a steady state basis, as of the initial installation of the unit, as specified by the manufacturer (40 CFR 98.6) **[Added January 2010]**.
- *Maximum Rated Input Capacity* - the maximum charging rate of a municipal waste combustor unit expressed in tons per day of municipal solid waste combusted, calculated according to the procedures under 40 CFR 60.58b(j) (40 CFR 98.6) **[Added January 2010]**.
- *Mechanical Integrity* - the process of ensuring that process equipment is fabricated from the proper materials of construction and is properly installed, maintained, and replaced to prevent failures and accidental releases (40 CFR 68.3) **[Added January 2005]**.
- *Mechanical Sanding* - aerospace vehicle or component surface conditioning that uses directional and random orbital abrasive tools and aluminum oxide or nylon abrasive pads for the purpose of corrosion rework, substrate repair, prepaint surface preparation, and other maintenance activities (40 CFR 63.742) **[Added January 1999]**.
- *Medical Treatment* - treatment, other than first aid, administered by a physician or registered professional personnel under standing orders from a physician (40 CFR 68.3) **[Added January 2005]**.
- *Medical/Infectious Waste* - any waste generated in the diagnosis, treatment, or immunization of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals that is listed in paragraphs (1) through (7) of this definition. The definition of medical/infectious waste does not include hazardous waste identified or listed under the regulations in 40 CFR 261; household waste, as defined in 40 CFR 261.4(b)(1); ash from incineration of medical/infectious waste, once the incineration process has been completed; human corpses, remains, and anatomical parts that are intended for interment or cremation; and domestic sewage materials identified in 40 CFR 261.4(a)(1) (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
  1. cultures and stocks of infectious agents and associated biologicals, including: Cultures from medical and pathological laboratories; cultures and stocks of infectious agents from research and industrial laboratories; wastes from the production of biologicals; discarded live and attenuated vaccines; and culture dishes and devices used to transfer, inoculate, and mix cultures
  2. human pathological waste, including tissues, organs, and body parts and body fluids that are removed during surgery or autopsy, or other medical procedures, and specimens of body fluids and their containers
  3. human blood and blood products including:
    - a. liquid waste human blood
    - b. products of blood
    - c. items saturated and/or dripping with human blood; or
    - d. items that were saturated and/or dripping with human blood that are now caked with dried human blood; including serum, plasma, and other blood components, and their containers, which were used or intended for use in either patient care, testing and laboratory analysis or the development of pharmaceuticals. Intravenous bags are also included in this category.

4. sharps that have been used in animal or human patient care or treatment or in medical, research, or industrial laboratories, including hypodermic needles, syringes (with or without the attached needle), Pasteur pipettes, scalpel blades, blood vials, needles with attached tubing, and culture dishes (regardless of presence of infectious agents). Also included are other types of broken or unbroken glassware that were in contact with infectious agents, such as used slides and cover slips
  5. animal waste including contaminated animal carcasses, body parts, and bedding of animals that were known to have been exposed to infectious agents during research (including research in veterinary hospitals), production of biologicals or testing of pharmaceuticals
  6. isolation wastes including biological waste and discarded materials contaminated with blood, excretions, exudates, or secretions from humans who are isolated to protect others from certain highly communicable diseases, or isolated animals known to be infected with highly communicable diseases
  7. unused sharps including the following unused, discarded sharps: hypodermic needles, suture needles, syringes, and scalpel blades.
- *Medical/Infectious Waste* - any waste meeting the definition of “medical/infectious waste” in 40 CFR 60.51c (40 CFR 60.1465) [**Added April 2001**].
  - *Medically Necessary* - circumstances that a hospital central services staff, a hospital administrator, or a physician concludes, based on generally accepted medical practices, necessitate sterilizing without a full load in order to protect human health (40 CFR 63.10448) [**Added January 2008**].
  - *Medium HMIWI* (40 CFR 60.51c) [**Added December 1997**]:
    1. Except as provided in paragraph (2):
      - a. an HMIWI whose maximum design waste burning capacity is more than 200 lb/h but less than or equal to 500 lb/h
      - b. a continuous or intermittent HMIWI whose maximum charge rate is more than 200 lb/h but less than or equal to 500 lb/h
      - c. a batch HMIWI whose maximum charge rate is more than 1600 lb/day but less than or equal to 4000 lb/day.
    2. The following are not medium HMIWI:
      - a. a continuous or intermittent HMIWI whose maximum charge rate is less than or equal to 200 lb/h or more than 500 lb/h
      - b. a batch HMIWI whose maximum charge rate is more than 4000 lb/day or less than or equal to 1600 lb/day.
  - *Medium HMIWI* (40 CFR 62.14490) [**Added October 2000**]:
    1. an HMIWI whose maximum design waste burning capacity is more than 200 lb/h but less than or equal to 500 lb/h; or
    2. a continuous or intermittent HMIWI whose maximum charge rate is more than 200 lb/h but less than or equal to 500 lb/h; or
    3. a batch HMIWI whose maximum charge rate is more than 1,600 lb/day but less than or equal to 4,000 lb/day.

The following are not medium HMIWI:

    1. a continuous or intermittent HMIWI whose maximum charge rate is less than or equal to 200 lb/h or more than 500 lb/h; or
    2. a batch HMIWI whose maximum charge rate is more than 4,000 lb/day or less than or equal to 1,600 lb/day.
  - *Medium-pressure Appliance* - an appliance that uses a refrigerant with a liquid phase saturation pressure between 45 psia and 170 psia at 104 °F. Examples include but are not limited to appliances using R-114, R-124, R-12, R-134a, and R-500 [**Revised April 2004; Revised January 2017**].
  - *Metal Process Furnaces* - a subcategory of process heaters, as defined in this subpart, which include natural gas-fired annealing furnaces, preheat furnaces, reheat furnaces, aging furnaces, heat treat furnaces, and homogenizing furnaces (40 CFR 63.7575) [**Revised April 2013**].

- *Methane Conversion Factor* - the extent to which the CH<sub>4</sub> producing capacity (Bo) is realized in each type of treatment and discharge pathway and system. Thus, it is an indication of the degree to which the system is anaerobic (40 CFR 98.6) **[Added January 2010]**.
- *Methane Correction Factor* - an adjustment factor applied to the methane generation rate to account for portions of the landfill that remain aerobic. The methane correction factor can be considered the fraction of the total landfill waste volume that is ultimately disposed of in an anaerobic state. Managed landfills that have soil or other cover materials have a methane correction factor of 1 (40 CFR 98.6) **[Added January 2010]**.
- *Methanol (CH<sub>3</sub>OH)* - an alcohol as described in “Oxygenates” (40 CFR 98.6) **[Added January 2010]**.
- *Metropolitan Statistical Area* - any areas listed as metropolitan statistical areas in OMB Bulletin No. 05-02 entitled “Update of Statistical Area Definitions and Guidance on Their Uses” dated February 22, 2005 (available on the Web at <http://www.whitehouse.gov/omb/bulletins/>) (40 CFR 60.2977) **[Added January 2006]**.
- *Metropolitan Planning Organization (MPO)* - that organization designated as being responsible, together with the State, for conducting the continuing, cooperative, and comprehensive planning process under 23 U.S.C. 134 and 49 U.S.C. 1607 (40 CFR 93.152) **[Added April 2009]**.
- *Midgrade Gasoline* - has an octane rating greater than or equal to 88 and less than or equal to 90. This definition applies to the midgrade categories of Conventional-Summer, Conventional-Winter, Reformulated-Summer, and Reformulated-Winter. For midgrade categories of RBOB-Summer, RBOB-Winter, CBOB-Summer, and CBOB-Winter, this definition refers to the expected octane rating of the finished gasoline after oxygenate has been added to the RBOB or CBOB (40 CFR 98.6) **[Added January 2010]**.
- *Military Munitions* - all ammunition products and components produced or used by or for the U.S. Department of Defense (DoD) or for the U.S. Armed Services for national defense and security, including military munitions under the control of the Department of Defense, the U.S. Coast Guard, the National Nuclear Security Administration (NNSA), U.S. Department of Energy (DOE), and National Guard personnel. The term military munitions includes: confined gaseous, liquid, and solid propellants, explosives, pyrotechnics, chemical and riot control agents, smokes, and incendiaries used by DoD components, including bulk explosives and chemical warfare agents, chemical munitions, biological weapons, rockets, guided and ballistic missiles, bombs, warheads, mortar rounds, artillery ammunition, small arms ammunition, grenades, mines, torpedoes, depth charges, cluster munitions and dispensers, demolition charges, nonnuclear components of nuclear weapons, wholly inert ammunition products, and all devices and components of any items listed in this definition (40 CFR 63.11180) **[Added April 2011]**.
- *Million Btu (MMBtu)* - one million British thermal units (40 CFR 63.7575) **[Added April 2011]**.
- *Minimum Activated Carbon Injection Rate* - load fraction multiplied by the lowest hourly average activated carbon injection rate measured according to Table 7 to this subpart during the most recent performance test demonstrating compliance with the applicable emission limit (40 CFR 63.7575) **[Revised April 2013]**.
- *Minimum Activated Carbon Injection Rate* - load fraction multiplied by the lowest hourly average activated carbon injection rate measured according to Table 6 to 40 CFR 63, subpart JJJJ during the most recent performance stack test demonstrating compliance with the applicable emission limit (40 CFR 63.11237) **[Revised April 2013]**.
- *Minimum Dioxin/Furan Sorbent Flow Rate* - 90 percent of the highest 3-h average dioxin/furan sorbent flow rate (taken, at a minimum, once every hour) measured during the most recent performance test demonstrating compliance with the dioxin/furan emission limit (40 CFR 60.51c) **[Added December 1997]**.
- *Minimum Dioxin/Furan Sorbent Flow Rate* - 90 percent of the highest 3-h average dioxin/furan sorbent flow rate (taken, at a minimum, once every hour) measured during the most recent performance test demonstrating compliance with the dioxin/furan emission limit (40 CFR 62.14490) **[Added October 2000]**.

- *Minimum Hg Sorbent Flow Rate* - 90 percent of the highest 3-h average Hg sorbent flow rate (taken, at a minimum, once every hour) measured during the most recent performance test demonstrating compliance with the Hg emission limit (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Minimum Hydrogen Chloride (HCl) Sorbent Flow Rate* - 90 percent of the highest 3-h average HCl sorbent flow rate (taken, at a minimum, once every hour) measured during the most recent performance test demonstrating compliance with the HCl emission limit (40 CFR 60.51c) **[Added December 1997]**.
- *Minimum Horsepower or Amperage* - 90 percent of the highest 3-h average horsepower or amperage to the wet scrubber (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the applicable emission limits (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Minimum Hydrogen Chloride (HCl) Sorbent Flow Rate* - 90 percent of the highest 3-h average HCl sorbent flow rate (taken, at a minimum, once every hour) measured during the most recent performance test demonstrating compliance with the HCl emission limit (40 CFR 62.14490) **[Added October 2000]**.
- *Minimum Oxygen Level* - the lowest hourly average oxygen level measured according to Table 7 to this subpart during the most recent performance test demonstrating compliance with the applicable emission limit (40 CFR 63.7575) **[Added April 2013]**.
- *Minimum Oxygen Level* - the lowest hourly average oxygen level measured according to Table 6 to 40 CFR 63, subpart JJJJJ during the most recent performance stack test demonstrating compliance with the applicable carbon monoxide emission limit (40 CFR 63.11237) **[Revised April 2013]**.
- *Minimum PM Scrubber Pressure Drop* - the lowest 1-hour average PM scrubber pressure drop measured according to Table 6 to 40 CFR 63, Subpart JJJJJ during the most recent performance stack test demonstrating compliance with the applicable emission limit (40 CFR 63.11237) **[Added April 2011]**.
- *Minimum Pressure Drop* - the lowest hourly average pressure drop measured according to Table 7 of 40 CFR 63, Subpart DDDDD during the most recent performance test demonstrating compliance with the applicable emission limit (40 CFR 63.7575) **[Added April 2011]**.
- *Minimum Pressure Drop Across the Wet Scrubber* - 90 percent of the highest 3-h average pressure drop across the wet scrubber PM control device (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the PM emission limit (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Minimum Scrubber Effluent pH* - the lowest hourly average sorbent liquid pH measured at the inlet to the wet scrubber according to Table 7 of 40 CFR 63, Subpart DDDDD during the most recent performance test demonstrating compliance with the applicable hydrogen chloride emission limit (40 CFR 63.7575) **[Added April 2011]**.
- *Minimum Scrubber Liquid Flow Rate* - the lowest hourly average liquid flow rate (e.g., to the PM scrubber or to the acid gas scrubber) measured according to Table 7 to this subpart during the most recent performance stack test demonstrating compliance with the applicable emission limit (40 CFR 63.7575) **[Revised April 2013]**.
- *Minimum Scrubber Liquid Flow Rate* - the lowest hourly average scrubber liquid flow rate (e.g., to the particulate matter scrubber) measured according to Table 6 to 40 CFR 63, subpart JJJJJ during the most recent performance stack test demonstrating compliance with the applicable emission limit (40 CFR 63.11237) **[Revised April 2013]**.
- *Minimum Scrubber Liquor Flow Rate* - 90 percent of the highest 3-h average liquor flow rate at the inlet to the wet scrubber (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with all applicable emission limits (40 CFR 60.51c) **[Added December 1997]**.

- *Minimum Scrubber Liquor Flow Rate* - 90 percent of the highest 3-h average liquor flow rate at the inlet to the wet scrubber (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with all applicable emission limits (40 CFR 62.14490) **[Added October 2000]**.
- *Minimum Scrubber Liquor pH* - 90 percent of the highest 3-h average liquor pH at the inlet to the wet scrubber (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the HCl emission limit (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Minimum Scrubber Pressure Drop* - the lowest hourly average scrubber pressure drop measured according to Table 7 of 40 CFR 63, Subpart DDDDD during the most recent performance test demonstrating compliance with the applicable emission limit (40 CFR 63.7575) **[Added April 2011]**.
- *Minimum Scrubber Pressure Drop* - the lowest hourly average scrubber pressure drop measured according to Table 6 to 40 CFR 63, subpart JJJJJ during the most recent performance stack test demonstrating compliance with the applicable emission limit (40 CFR 63.11237) **[Added April 2013]**.
- *Minimum Secondary Chamber Temperature* - 90 percent of the highest 3-h average secondary chamber temperature (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the PM, CO, or dioxin/furan emission limits (40 CFR 60.51c) **[Added December 1997]**.
- *Minimum Secondary Chamber Temperature* - 90 percent of the highest 3-h average secondary chamber temperature (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the PM, CO, or dioxin/furan emission limits (40 CFR 62.14490) **[Added October 2000]**.
- *Minimum Sorbent Flow Rate* - the boiler load (percent) multiplied by the lowest 2-hour average sorbent (or activated carbon) injection rate measured according to Table 6 to 40 CFR 63, Subpart JJJJJ during the most recent performance stack test demonstrating compliance with the applicable emission limits (40 CFR 63.11237) **[Added April 2011]**.
- *Minimum Sorbent Injection Rate* – this means: (40 CFR 63.7575) **[Revised April 2013; Revised January 2016]**.
  1. The load fraction multiplied by the lowest hourly average sorbent injection rate for each sorbent measured according to Table 7 to 40 CFR, Subpart DDDDD during the most recent performance test demonstrating compliance with the applicable emission limits; or
  2. For fluidized bed combustion not using an acid gas wet scrubber or dry sorbent injection control technology to comply with the HCl emission limit,, the lowest average ratio of sorbent to sulfur measured during the most recent performance test.
- *Minimum Sorbent Injection Rate* – under 40 CFR 63, subpart JJJJJ this means: (40 CFR 63.11237) **[Added April 2013]**.
  1. The load fraction multiplied by the lowest hourly average sorbent injection rate for each sorbent measured according to Table 6 to 40 CFR 63, subpart JJJJJ during the most recent performance stack test demonstrating compliance with the applicable emission limits; or
  2. For fluidized bed combustion, the lowest average ratio of sorbent to sulfur measured during the most recent performance test.
- *Minimum Total Secondary Electric Power* - the lowest hourly average total secondary electric power determined from the values of secondary voltage and secondary current to the electrostatic precipitator measured according to Table 7 of 40 CFR 63, Subpart DDDDD during the most recent performance test demonstrating compliance with the applicable emission limits (40 CFR 63.7575) **[Added April 2011]**.

- *Minimum Total Secondary Electric Power* - the lowest hourly average total secondary electric power determined from the values of secondary voltage and secondary current to the electrostatic precipitator measured according to Table 6 to this subpart during the most recent performance stack test demonstrating compliance with the applicable emission limits (40 CFR 63.11237) **[Added April 2013]**.
- *Minimum Voltage Or Amperage* - the lowest 1-hour average total electric power value (secondary voltage x secondary current = secondary electric power) to the electrostatic precipitator measured according to Table 6 to 40 CFR 63, Subpart JJJJJ during the most recent performance stack test demonstrating compliance with the applicable emission limits (40 CFR 63.11237) **[Added April 2011]**.
- *Miscellaneous Parts And/Or Products* - any part or product made of metal or plastic, or combinations of metal and plastic. Miscellaneous parts and/or products include, but are not limited to, metal and plastic components of the following types of products as well as the products themselves: motor vehicle parts and accessories for automobiles, trucks, recreational vehicles; automobiles and light duty trucks at automobile and light duty truck assembly plants; boats; sporting and recreational goods; toys; business machines; laboratory and medical equipment; and household and other consumer products (40 CFR 63.11180) **[Added April 2011]**.
- *Miscellaneous Products* - include all refined petroleum products not defined elsewhere. It includes, but is not limited to, naphtha-type jet fuel (Jet B and JP-4), petrolatum lube refining by-products (aromatic extracts and tars), absorption oils, ram-jet fuel, petroleum rocket fuels, synthetic natural gas feedstocks, waste feedstocks, and specialty oils. It excludes organic waste sludges, tank bottoms, spent catalysts, and sulfuric acid (40 CFR 98.6) **[Added January 2010]**.
- *Miscellaneous Surface Coating Operation* - the collection of equipment used to apply surface coating to miscellaneous parts and/or products made of metal or plastic, including applying cleaning solvents to prepare the surface before coating application, mixing coatings before application, applying coating to a surface, drying or curing the coating after application, and cleaning coating application equipment, but not plating. A single surface coating operation may include any combination of these types of equipment, but always includes at least the point at which a coating material is applied to a given part. A surface coating operation includes all other steps (such as surface preparation with solvent and equipment cleaning) in the affected source where HAP are emitted from the coating of a part. The use of solvent to clean parts (for example, to remove grease during a mechanical repair) does not constitute a miscellaneous surface coating operation if no coatings are applied. A single affected source may have multiple surface coating operations. Surface coatings applied to wood, leather, rubber, ceramics, stone, masonry, or substrates other than metal and plastic are not considered miscellaneous surface coating operations for the purposes of this subpart (40 CFR 63.11180) **[Added April 2011]**.
- *Mitigation or Mitigation System* - specific activities, technologies, or equipment designed or deployed to capture or control substances upon loss of containment to minimize exposure of the public or the environment. Passive mitigation means equipment, devices, or technologies that function without human, mechanical, or other energy input. Active mitigation means equipment, devices, or technologies that need human, mechanical, or other energy input to function (40 CFR 68.3) **[Added January 2005]**.
- *Mixed Fuel-Fired (Pulverized Coal/Refuse-Derived Fuel) Combustion Unit* - a combustion unit that combusts coal and refuse-derived fuel simultaneously, in which pulverized coal is introduced into an air stream that carries the coal to the combustion chamber of the unit where it is combusted in suspension. That includes both conventional pulverized coal and micropulverized coal (40 CFR 60.1465) **[Added April 2001]**.
- *Mobile Equipment* - any device that may be drawn and/or driven on a roadway including, but not limited to, heavy-duty trucks, truck trailers, fleet delivery trucks, buses, mobile cranes, bulldozers, street cleaners, agriculture equipment, motor homes, and other recreational vehicles (including camping trailers and fifth wheels) (40 CFR 63.11180) **[Added April 2011]**.
- *Model Year* - the calendar year in which an engine is manufactured (see ``date of manufacture"), except as follows (40 CFR 60.4219 and 60.4248) **[Added October 2006; Revised July 2011]**:

1. Model year means the annual new model production period of the engine manufacturer in which an engine is manufactured (see “date of manufacture”), if the annual new model production period is different than the calendar year and includes January 1 of the calendar year for which the model year is named. It may not begin before January 2 of the previous calendar year and it must end by December 31 of the named calendar year.
  2. For an engine that is converted to a stationary engine after being placed into service as a nonroad or other non-stationary engine, model year means the calendar year or new model production period in which the engine was manufactured (see “date of manufacture”).
- *Modification* - in relation to new source performance standards (NSPS), any physical or operational change to an existing facility that results in an increase in the emission rate to the atmosphere of any pollutant to which a standard applies except (40 CFR 60.14) **[Added December 1997]**:
    1. maintenance, repair, and replacement which the administrator determines to be routine for a source category
    2. an increase in production rate of an existing facility, if that increase can be accomplished without a capital expenditure on the facility
    3. an increase in the hours of operation
    4. use of an alternate fuel or raw material if, prior to the date any standard under this part becomes applicable to that source type, the existing facility was designed to accommodate that alternate use. A facility will be designed to accommodate an alternative fuel or raw material if that use could be accomplished under the facility’s construction specifications as assessed prior to the change.
    5. the addition or use of any system or device whose primary function is the reduction of air pollutants, except when an emission control system is removed or replaced by a system which the Administrator determines to be less than environmentally beneficial
    6. the relocation or change in ownership of an existing facility.
  - *Modification* - a change to an existing SSI unit later than 21 September 2011 and that meets one of two criteria (40 CFR 60.4930) **[Added April 2011]**:
    1. The cumulative cost of the changes over the life of the unit exceeds 50 percent of the original cost of building and installing the SSI unit (not including the cost of land) updated to current costs (current dollars). To determine what systems are within the boundary of the SSI unit used to calculate these costs, see the definition of SSI unit.
    2. Any physical change in the SSI unit or change in the method of operating it that increases the amount of any air pollutant emitted for which section 129 or section 111 of the Clean Air Act has established standards.
  - *Modification or Modified CISWI Unit* - a CISWI unit you have changed later than promulgation of the final CISWI emission guidelines in 40 CFR 60, Subpart DDDD: Emissions Guidelines and Compliance Times for Commercial and Industrial Solid Waste Incineration Units That Commenced Construction On or Before 30 November 1999 and that meets one of two criteria (40 CFR 62.14840) **[Added January 2004]**:
    1. The cumulative cost of the changes over the life of the unit exceeds 50 percent of the original cost of building and installing the CISWI unit (not including the cost of land) updated to current costs (current dollars). To determine what systems are within the boundary of the CISWI unit used to calculate these costs, see the definition of CISWI unit.
    2. Any physical change in the CISWI unit or change in the method of operating it that increases the amount of any air pollutant emitted for which section 129 or section 111 of the *Clean Air Act* has established standards.
  - *Modification or Modified HMIWI* - any change to an HMIWI unit after the effective date of these standards such that (40 CFR 60.51c):
    1. The cumulative costs of the modifications, over the life of the unit, exceed 50 per centum of the original cost of the construction and installation of the unit (not including the cost of any land purchased in connection with such construction or installation) updated to current costs, or
    2. The change involves a physical change in or change in the method of operation of the unit which increases the amount of any air pollutant emitted by the unit for which standards have been established under section 129 or section 111.

- *Modification or Modified HMIWI* - any change to an HMIWI unit after 16 March 1998, such that (40 CFR 62.14490) **[Added October 2000]**:
  1. the cumulative costs of the modifications, over the life of the unit, exceed 50 per centum of the original cost of the construction and installation of the unit (not including the cost of any land purchased in connection with such construction or installation) updated to current costs, or
  2. the change involves a physical change in or change in the method of operation of the unit which increases the amount of any air pollutant emitted by the unit for which standards have been established under section 129 or section 111.
- *Modification or Modified Municipal Waste Combustion Unit* - a municipal waste combustion unit that has changed after 6 June 2001 and that meets one of two criteria (40 CFR 60.1465) **[Added April 2001]**:
  1. The cumulative cost of the changes over the life of the unit exceeds 50 percent of the original cost of building and installing the unit (not including the cost of land) updated to current costs.
  2. Any physical change in the municipal waste combustion unit or change in the method of operating it that increases the emission level of any air pollutant for which new source performance standards have been established under section 129 or section 111 of the CAA. Increases in the emission level of any air pollutant are determined when the municipal waste combustion unit operates at 100 percent of its physical load capability and are measured downstream of all air pollution control devices. Load restrictions based on permits or other nonphysical operational restrictions cannot be considered in the determination.
- *Modification or Modified Unit* - an incineration unit you have changed on or after 16 June 2006 and that meets one of two criteria: (40 CFR 60.2977) **[Added January 2006]**.
  1. The cumulative cost of the changes over the life of the unit exceeds 50 percent of the original cost of building and installing the unit (not including the cost of land) updated to current costs (current dollars). For an OSWI unit, to determine what systems are within the boundary of the unit used to calculate these costs, see the definition of OSWI unit.
  2. Any physical change in the unit or change in the method of operating it that increases the amount of any air pollutant emitted for which section 129 or section 111 of the Clean Air Act has established standards.
- *Modular Excess-Air Municipal Waste Combustion Unit* - a municipal waste combustion unit that combusts municipal solid waste, is not field-erected, and has multiple combustion chambers, all of which are designed to operate at conditions with combustion air amounts in excess of theoretical air requirements (40 CFR 60.1465) **[Added April 2001]**.
- *Modular Starved-Air Municipal Waste Combustion Unit* - a municipal waste combustion unit that combusts municipal solid waste, is not field-erected, and has multiple combustion chambers in which the primary combustion chamber is designed to operate at substoichiometric conditions (40 CFR 60.1465) **[Added April 2001]**.
- *Monthly Throughput* - the total volume of gasoline that is loaded into all gasoline storage tanks during a month, as calculated on a rolling 30-day average (40 CFR 63.11132) **[Added April 2008]**.
- *Mothball* - to evacuate refrigerant from an appliance, or the affected isolated section or component of an appliance, to at least atmospheric pressure, and to temporarily shut down that appliance (40 CFR 82.152) **[Added January 2017]**
- *Motor Gasoline (Finished)* - a complex mixture of volatile hydrocarbons, with or without additives, suitably blended to be used in spark ignition engines. Motor gasoline includes conventional gasoline, reformulated gasoline, and all types of oxygenated gasoline. Gasoline also has seasonal variations in an effort to control ozone levels. This is achieved by lowering the Reid Vapor Pressure (RVP) of gasoline during the summer driving season. Depending on the region of the country the RVP is lowered to below 9.0 psi or 7.8 psi. The RVP may be further lowered by state regulations (40 CFR 98.6) **[Added January 2010]**.

- *Motor Vehicle* - any self-propelled vehicle, including, but not limited to, automobiles, light duty trucks, golf carts, vans, and motorcycles (40 CFR 63.11180) **[Added April 2011]**.
- *Motor Vehicle Air-Conditioner (MVAC)* - mechanical vapor compression refrigeration equipment used to cool the driver's or passenger's compartment of any motor vehicle. This definition is not intended to encompass hermetically sealed refrigeration systems used on motor vehicles for refrigerated cargo and the air conditioning systems on passenger buses using HCFC-22 refrigerant (40 CFR 82.32(d)) **[Revised December 1997]**.
- *Motor Vehicle And Mobile Equipment Surface Coating* - the spray application of coatings to assembled motor vehicles or mobile equipment. For the purposes of this subpart, it does not include the surface coating of motor vehicle or mobile equipment parts or subassemblies at a vehicle assembly plant or parts manufacturing plant (40 CFR 63.11180) **[Added April 2011]**.
- *Motor Vehicle Diesel Fuel* - any diesel fuel or other distillate fuel that is used, intended for use, or made available for use in motor vehicles or motor vehicle engines (40 CFR 80.2(y)) **[Added October 2011]**.
- *Motor Vehicle Disposal Facility* - any commercial facility that engages in the disposal (which includes dismantling, crushing, or recycling) of MVACs or MVAC-like appliances, including but not limited to automotive recycling facilities, scrap yards, landfills, and salvage yards engaged in such operations. Motor vehicle repair and/or servicing facilities, including collision repair facilities, are not considered motor vehicle disposal facilities (40 CFR 82.32(I)) **[Added December 1997]**.
- *Muck Cooker* - a device for heating perchloroethylene-laden waste material to volatilize and recover perchloroethylene (40 CFR 63.321).
- *Multiple Hearth Incinerator* - a circular steel furnace that contains a number of solid refractory hearths and a central rotating shaft; rabble arms that are designed to slowly rake the sludge on the hearth are attached to the rotating shaft. Dewatered sludge enters at the top and proceeds downward through the furnace from hearth to hearth, pushed along by the rabble arms (40 CFR 60.4930) **[Added April 2011]**.
- *Municipal-type Solid Waste* - refuse, more than 50 percent of which is waste consisting of a mixture of paper, wood, yard wastes, food wastes, plastics, leather, rubber, and other combustible materials, and noncombustible materials such as glass and rock (40 CFR 60.41b) **[Added July 2007]**.
- *Municipal Solid Waste or Municipal-Type Solid Waste* - household, commercial/retail, and/or institutional waste. Household waste includes materials discarded by single and multiple residential dwellings, hotels, motels, and other similar permanent or temporary housing establishments or facilities. Commercial/retail waste includes materials discarded by stores, offices, restaurants, warehouses, nonmanufacturing activities at industrial facilities, and other similar establishments or facilities. Institutional waste includes material discarded by schools, nonmedical waste discarded by hospitals, material discarded by nonmanufacturing activities at prisons and government facilities, and material discarded by other similar establishments. Household, commercial/retail, and institutional waste does not include used oil; sewage sludge; wood pallets; construction, renovation, and demolition wastes (which includes but is not limited to railroad ties and telephone poles); clean wood; industrial process or manufacturing wastes; medical waste; or motor vehicles. Household, commercial/retail, and institutional waste does include: yard waste; refused derived fuel; and motor vehicle maintenance materials limited to vehicle batteries and tires except as specified in 40 CFR 60.50a(c) and 60.50b(g) (40 CFR 60.51a and 60.51b).
- *Municipal Solid Waste or Municipal-Type Solid Waste* - household, commercial/retail, or institutional waste. Household waste includes material discarded by residential dwellings, hotels, motels, and other similar permanent or temporary housing. Commercial/retail waste includes material discarded by stores, offices, restaurants, warehouses, nonmanufacturing activities at industrial facilities, and other similar establishments or facilities. Institutional waste includes materials discarded by schools, by hospitals (nonmedical), by nonmanufacturing activities at prisons and government facilities, and other similar establishments or facilities. Household, commercial/retail, and institutional waste does include yard waste and refuse-derived fuel. Household,

commercial/retail, and institutional waste does not include used oil; sewage sludge; wood pallets; construction, renovation, and demolition wastes (which include railroad ties and telephone poles); clean wood; industrial process or manufacturing wastes; medical waste; or motor vehicles (including motor vehicle parts or vehicle fluff) (40 CFR 60.1465) [**Added April 2001**].

- *Municipal Solid Waste* - as used in this subpart is as defined in 40 CFR 60.1465 of 40 CFR 60, Subpart AAAA [40 CFR 60.1000 through 60.1465, see checklist items AE.36.17.US through AE.36.28.US] (40 CFR 63.6175) [**Added April 2004**].
- *Municipal Solid Waste* - refuse (and refuse-derived fuel) collected from the general public and from residential, commercial, institutional, and industrial sources consisting of paper, wood, yard wastes, food wastes, plastics, leather, rubber, and other combustible materials and non-combustible materials such as metal, glass and rock, provided that: (1) the term does not include industrial process wastes or medical wastes that are segregated from such other wastes; and (2) an incineration unit shall not be considered to be combusting municipal solid waste for purposes of this subpart if it combusts a fuel feed stream, 30 percent or less of the weight of which is comprised, in aggregate, of municipal solid waste, as determined by 40 CFR 60.2887(b) (40 CFR 60.2977) [**Added January 2006**].
- *Municipal Solid Waste (MSW)* - solid phase household, commercial/retail, and/or institutional waste. Household waste includes material discarded by single and multiple residential dwellings, hotels, motels, and other similar permanent or temporary housing establishments or facilities. Commercial/retail waste includes material discarded by stores, offices, restaurants, warehouses, non-manufacturing activities at industrial facilities, and other similar establishments or facilities. Institutional waste includes material discarded by schools, nonmedical waste discarded by hospitals, material discarded by non-manufacturing activities at prisons and government facilities, and material discarded by other similar establishments or facilities. Household, commercial/retail, and institutional wastes include yard waste, refuse-derived fuel, and motor vehicle maintenance materials. Insofar as there is separate collection, processing and disposal of industrial source waste streams consisting of used oil, wood pallets, construction, renovation, and demolition wastes (which includes, but is not limited to, railroad ties and telephone poles), paper, clean wood, plastics, industrial process or manufacturing wastes, medical waste, motor vehicle parts or vehicle fluff, or used tires that do not contain hazardous waste identified or listed under 42 U.S.C. Sec. 6921, such wastes are not municipal solid waste. However, such wastes qualify as municipal solid waste where they are collected with other municipal solid waste or are otherwise combined with other municipal solid waste for processing and/or disposal (40 CFR 98.6) [**Added January 2010; Revised January 2011**].
- *Municipal Solid Waste Landfill or MSW Landfill* - an entire disposal facility in a contiguous geographical space where household waste is placed in or on land. An MSW landfill may also receive other types of RCRA Subtitle D wastes (40 CFR 257.2) such as commercial solid waste, nonhazardous sludge, conditionally exempt small quantity generator waste, and industrial solid waste. Portions of an MSW landfill may be separated by access roads, public roadways, or other public right-of-ways. An MSW landfill may be publicly or privately owned (40 CFR 98.6) [**Added January 2010**].
- *Municipal Waste Combustion Plant* - one or more municipal waste combustion units at the same location as specified under Applicability (40 CFR 60.1015(a) and (b)) (40 CFR 60.1465) [**Added April 2001**].
- *Municipal Waste Combustion Plant Capacity* - the aggregate municipal waste combustion capacity of all municipal waste combustion units at the plant that are subject to 40 CFR 60, Subpart Ea [40 CFR 60.50a through 60.59a, see checklist items AE.35.1.US through AE.35.3.US]. Subpart Eb [40 CFR 60.50b through 60.59b, see checklist items AE.36.1.US through AE.36.16.US] or Subpart AAAA [40 CFR 60.1000 through 60.1465, see checklist items AE.36.17.US through AE.36.28.US] (40 CFR 60.1465) [**Added April 2001**].
- *Municipal Waste Combustion Unit* - any setting or equipment that combusts solid, liquid, or gasified municipal solid waste including, but not limited to, field-erected combustion units (with or without heat recovery), modular combustion units (starved-air or excess-air), boilers (for example, steam generating units), furnaces (whether suspension-fired, grate-fired, mass-fired, air curtain incinerators, or fluidized bed-fired), and

pyrolysis/combustion units. Two criteria further define municipal waste combustion units (40 CFR 60.1465) **[Added April 2001]**:

1. Municipal waste combustion units do not include pyrolysis or combustion units located at a plastics or rubber recycling unit as specified under Applicability (40 CFR 60.1020(h) and (i)). Municipal waste combustion units also do not include cement kilns that combust municipal solid waste as specified under Applicability (40 CFR 60.1020(j)). Municipal waste combustion units also do not include internal combustion engines, gas turbines, or other combustion devices that combust landfill gases collected by landfill gas collection systems.
  2. The boundaries of a municipal waste combustion unit are defined as follows. The municipal waste combustion unit includes, but is not limited to, the municipal solid waste fuel feed system, grate system, flue gas system, bottom ash system, and the combustion unit water system. The municipal waste combustion unit does not include air pollution control equipment, the stack, water treatment equipment, or the turbine-generator set. The municipal waste combustion unit boundary starts at the municipal solid waste pit or hopper and extends through three areas:
    - a. The combustion unit flue gas system, which ends immediately after the heat recovery equipment or, if there is no heat recovery equipment, immediately after the combustion chamber.
    - b. The combustion unit bottom ash system, which ends at the truck loading station or similar equipment that transfers the ash to final disposal. It includes all ash handling systems connected to the bottom ash handling system.
    - c. The combustion unit water system, which starts at the feed water pump and ends at the piping that exits the steam drum or superheater.
- *Municipal Waste Combustion Unit* - for the purpose of this subpart and 40 CFR 60, subpart FFFF, any setting or equipment that combusts municipal solid waste (as defined in this subpart) including, but not limited to, field-erected, modular, cyclonic burn barrel, and custom built incineration units (with or without energy recovery) operating with starved or excess air, boilers, furnaces, pyrolysis/combustion units, and air curtain incinerators (except those air curtain incinerators listed in 40 CFR 60.2888(b)) (40 CFR 60.2977) **[Added January 2006]**.
  - *Municipal Waste Combustor, MWC, or Municipal Waste Combustor Unit* - any setting or equipment that combusts solid, liquid, gasified MSW including, but not limited to, field erected incinerators (with or without heat recovery), modular incinerators (starved air or excess air), boilers (i.e., steam generating units), furnaces (whether suspension fired, grate-fired, mass-fired, air curtain incinerators, or fluidized bed-fired), and pyrolysis/combustion units. MWCs do not include pyrolysis/combustion units located at plastics/rubber recycling units. MWCs do not include cement kilns firing MSW. MWCs do not include internal combustion engines, gas turbines, or other combustion devices that combust landfill gases collected by landfill gas collection systems (40 CFR 60.51b) **[Added December 1997]**.
  - *Municipal Wastewater Treatment Plant* - a series of treatment processes used to remove contaminants and pollutants from domestic, business, and industrial wastewater collected in city sewers and transported to a centralized wastewater treatment system such as a publicly owned treatment works (POTW) (40 CFR 98.6) **[Added July 2010]**.
  - *MVAC-like Appliance* - a mechanical vapor compression, open-drive compressor appliance with a full charge of 20 lbs or less of refrigerant used to cool the driver's or passenger's compartment of off-road vehicles or equipment. This includes, but is not limited to, the air-conditioning equipment found on agricultural or construction vehicles. This definition is not intended to cover appliances using R-22 refrigerant **[Revised October 2003; Revised January 2017]**.
  - *NAICS* - North American Industry Classification System (40 CFR 68.3) **[Added January 2005]**.
  - *NFPA* - the National Fire Protection Association (40 CFR 68.3) **[Added January 2005]**.
  - *NIST* - the United States National Institute of Standards and Technology.

- *N<sub>2</sub>O* - nitrous oxide.
- *Naphthas* (< 401 °F) - a generic term applied to a petroleum fraction with an approximate boiling range between 122 °F and 400 °F. The naphtha fraction of crude oil is the raw material for gasoline and is composed largely of paraffinic hydrocarbons (40 CFR 98.6) [**Added January 2010**].
- *National Ambient Air Quality Standards (NAAQS)* - those standards established pursuant to section 109 of the Act and include standards for carbon monoxide (CO), lead (Pb), nitrogen dioxide, ozone, particulate matter (PM-10), and sulfur dioxide (40 CFR 93.152) [**Added April 2009**].
- *Natural Draft Opening* - any opening in a room, building, or total enclosure that remains open during operation of the facility and that is not connected to a duct in which a fan is installed. The rate and direction of the natural draft through such an opening is a consequence of the difference in pressures on either side of the wall containing the opening (40 CFR 63.742) [**Added January 1999**].
- *Natural Gas* - a naturally occurring fluid mixture of hydrocarbons (e.g., methane, ethane, or propane) produced in geological formations beneath the Earth's surface that maintains a gaseous state at standard atmospheric temperature and pressure under ordinary conditions. Additionally, natural gas must either be composed of at least 70 percent methane by volume or have a gross calorific value between 950 and 1,100 British thermal units (Btu) per standard cubic foot. Natural gas does not include the following gaseous fuels: landfill gas, digester gas, refinery gas, sour gas, blast furnace gas, coal-derived gas, producer gas, coke oven gas, or any gaseous fuel produced in a process which might result in highly variable sulfur content or heating value (40 CFR 60.4420) [**Added April 2009**].
- *Natural Gas* - a fluid mixture of hydrocarbons (e.g., methane, ethane, or propane), composed of at least 70 percent methane by volume or that has a gross calorific value between 35 and 41 megajoules (MJ) per dry standard cubic meter (950 and 1,100 Btu per dry standard cubic foot), that maintains a gaseous state under ISO conditions. In addition, natural gas contains 20.0 grains or less of total sulfur per 100 standard cubic feet. Finally, natural gas does not include the following gaseous fuels: landfill gas, digester gas, refinery gas, sour gas, blast furnace gas, coal-derived gas, producer gas, coke oven gas, or any gaseous fuel produced in a process which might result in highly variable sulfur content or heating value (40 CFR 60.41) [**Added January 2012; Revised April 2012**].
- *Natural Gas* – this means (40 CFR 60.41b and 60.41c) [**Added July 2007; Revised April 2009**]:
  1. A naturally occurring mixture of hydrocarbon and nonhydrocarbon gases found in geologic formations beneath the earth's surface, of which the principal constituent is methane; or
  2. Liquefied petroleum gas, as defined by the American Society for Testing and Materials in ASTM D1835 (incorporated by reference, see 40 CFR 60.17); or
  3. A mixture of hydrocarbons that maintains a gaseous state at ISO conditions. Additionally, natural gas must either be composed of at least 70 percent methane by volume or have a gross calorific value between 34 and 43 megajoules (MJ) per dscm (910 and 1,150 Btu/dscf).
- *Natural Gas* - a naturally occurring mixture of hydrocarbon and non-hydrocarbon gases found in geologic formations beneath the earth's surface, of which the principal constituent is methane. Natural gas may be field quality or pipeline quality (40 CFR 98.6) [**Added January 2010; Revised January 2011**].
- *Natural Gas* - a naturally occurring fluid mixture of hydrocarbons (e.g., methane, ethane, or propane) produced in geological formations beneath the Earth's surface that maintains a gaseous state at standard atmospheric temperature and pressure under ordinary conditions. Natural gas contains 20.0 grains or less of total sulfur per 100 scf. Equivalents of this in other units are as follows: 0.068 weight percent total sulfur, 680 parts ppmw total sulfur, and 338 ppmv at 20 °C total sulfur. Additionally, natural gas must either be composed of at least 70 percent methane by volume or have a gross calorific value between 950 and 1100 Btu/scf. Natural gas does not include the following gaseous fuels: landfill gas, digester gas, refinery gas, sour gas, blast furnace gas, coal-derived gas, producer gas, coke oven gas, or any gaseous fuel produced in a process which might result in highly variable sulfur content or heating value (40 CFR 60.331) [**Added October 2004**].

- *Natural Gas* - a naturally occurring mixture of hydrocarbon and non-hydrocarbon gases found in geologic formations beneath the Earth's surface, of which the principal constituent is methane. May be field or pipeline quality. For the purposes of 40 CFR 63, Subpart YYYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US], the definition of natural gas includes similarly constituted fuels such as field gas, refinery gas, and syngas (40 CFR 63.6175) **[Added April 2004]**.
- *Natural Gas*: (40 CFR 63.7575) **[Revised April 2013]**.
  1. A naturally occurring mixture of hydrocarbon and nonhydrocarbon gases found in geologic formations beneath the earth's surface, of which the principal constituent is methane; or
  2. Liquefied petroleum gas, as defined in ASTM D1835 (incorporated by reference, see 40 CFR 63.14); or
  3. A mixture of hydrocarbons that maintains a gaseous state at ISO conditions. Additionally, natural gas must either be composed of at least 70 percent methane by volume or have a gross calorific value between 35 and 41 megajoules (MJ) per dry standard cubic meter (950 and 1,100 Btu per dry standard cubic foot); or
  4. Propane or propane derived synthetic natural gas. Propane means a colorless gas derived from petroleum and natural gas, with the molecular structure C<sub>3</sub>H<sub>8</sub>.
- *Natural Gas*: (40 CFR 63.11237) **[Revised April 2013]**.
  1. A naturally occurring mixture of hydrocarbon and nonhydrocarbon gases found in geologic formations beneath the earth's surface, of which the principal constituent is methane; or
  2. Liquefied petroleum gas, as defined by the American Society for Testing and Materials in ASTM D1835 (incorporated by reference, see 40 CFR 63.14); or
  3. A mixture of hydrocarbons that maintains a gaseous state at ISO conditions (i.e., a temperature of 288 Kelvin, a relative humidity of 60 percent, and a pressure of 101.3 kilopascals). Additionally, natural gas must either be composed of at least 70 percent methane by volume or have a gross calorific value between 35 and 41 megajoules (MJ) per dry standard cubic meter (950 and 1,100 Btu per dry standard cubic foot); or
  4. Propane or propane-derived synthetic natural gas. Propane means a colorless gas derived from petroleum and natural gas, with the molecular structure C<sub>3</sub>H<sub>8</sub>.
- *Natural Gas Liquids (NGLs)* - those hydrocarbons in natural gas that are separated from the gas as liquids through the process of absorption, condensation, adsorption, or other methods. Generally, such liquids consist of ethane, propane, butanes, and pentanes plus. Bulk NGLs refers to mixtures of NGLs that are sold or delivered as undifferentiated product from natural gas processing plants (40 CFR 98.6) **[Added January 2010; Revised January 2011]**.
- *Natural Gas Processing Plant (Gas Plant)* - any processing site engaged in the extraction of natural gas liquids from field gas, fractionation of mixed natural gas liquids to natural gas products, or both, classified as North American Industrial Classification System (NAICS) code 21112 (previously Standard Industrial Classification (SIC) code 1321) (40 CFR 68.3) **[Added January 2005]**.
- *Natural Gas Transmission* - the pipelines used for the long distance transport of **natural gas (excluding processing)**. Specific equipment used in natural gas transmission includes the land, mains, valves, meters, boosters, regulators, storage vessels, dehydrators, compressors, and their driving units and appurtenances, and equipment used transporting gas from a production plant, delivery point of purchased gas, gathering system, storage area, or other wholesale source of gas to one or more distribution area(s). Natural gas transmission and storage facility means any grouping of equipment where natural gas is processed, compressed, or stored prior to entering a pipeline to a local distribution company or (if there is no local distribution company) to a final end user. Examples of a facility for this source category are: an underground natural gas storage operation; or a natural gas compressor station that receives natural gas via pipeline, from an underground natural gas storage operation, or from a natural gas processing plant. The emission points associated with these phases include, but are not limited to, process vents. Processes that may have vents include, but are not limited to, dehydration and compressor station engines. Facility, for the purpose of a major source determination, means natural gas transmission and storage equipment that is located inside the boundaries of an individual surface site (as defined in this section) and is connected by ancillary equipment, such as gas flow lines or power lines. Equipment that is

part of a facility will typically be located within close proximity to other equipment located at the same facility. Natural gas transmission and storage equipment or groupings of equipment located on different gas leases, mineral fee tracts, lease tracts, subsurface unit areas, surface fee tracts, or surface lease tracts shall not be considered part of the same facility (40 CFR 63.6175) [**Added April 2004**].

- *Natural Gasoline* - a mixture of liquid hydrocarbons (mostly pentanes and heavier hydrocarbons) extracted from natural gas. It includes isopentane (40 CFR 98.6) [**Added January 2010**].
- *New* - in relation to a perchloroethylene dry cleaning facility, commenced construction or reconstruction on or after 9 December 1991 (40 CFR 63.321).
- *New* - in relation to solvent-cleaning machines, any solvent-cleaning machine the construction or reconstruction of which is commenced after 29 November 1993 (40 CFR 63.461).
- *New Affected Source* – in relation to engine test cells, an affected source is new if you commenced construction of the affected source after 14 May 14, 2002 (40 CFR 63.9290(a)(2)) [**Added July 2003**].
- *New Sewage Sludge Incineration Unit* - a SSI unit the construction of which is commenced after October 14, 2010 which would be applicable to such unit or a modified solid waste incineration unit (40 CFR 60.4930) [**Added April 2011**].
- *New Site Remediation Sources*- the facility commenced construction or reconstruction of the affected source on or after 30 July 2002. An affected source is reconstructed if it meets the definition of reconstruction in 40 CFR 63.2 (40 CFR 63.7882(b)) [**Added April 2004**].
- *New Stationary RICE* - in relation to the NESHAPS for stationary RICE, this is defined as follows (40 CFR 63.6590(a)(2)) [**Added April 2013**]:
  1. a stationary RICE with a site rating > 500 brake HP located at a major source of HAP emissions is new if construction of the stationary RICE started on or after 19 December 2002
  2. a stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions is new if construction of the stationary RICE started on or after 12 June 2006
  3. a stationary RICE located at an area source of HAP emissions is new if construction of the stationary RICE started on or after 12 June 2006.
- *Nitrogen Excreted* - the nitrogen that is excreted by livestock in manure and urine (40 CFR 98.6) [**Added January 2010**].
- *Nitric Acid Production Unit* - any facility producing nitric acid which is 30 to 70 percent in strength by either the pressure or atmospheric pressure process (40 CFR 60.70).
- *No Detectable Organic Emissions* - no escape of organics to the atmosphere as determined using the procedure specified in 40 CFR 63.694(k) (40 CFR 63.7957) [**Added April 2004**].
- *Non-chemical Based Depainting Equipment* - any depainting equipment or technique, including, but not limited to, media blasting equipment, that can depaint an aerospace vehicle or component in the absence of a chemical stripper. This definition does not include mechanical sanding or hand sanding (40 CFR 63.742) [**Added January 1999**].
- *Non-crude Feedstocks* - any petroleum product or natural gas liquid that enters the refinery to be further refined or otherwise used on site (40 CFR 98.6) [**Added January 2010; Revised January 2011**].
- *Non-HAP Material* -, for the purposes of 40 CFR Subpart GG, a primer, topcoat, specialty coating, chemical milling maskant, cleaning solvent, or stripper that contains no more than 0.1 percent by mass of any individual

organic HAP that is an Occupational Safety and Health Administration-defined carcinogen as specified in 29 CFR 1910.1200(d)(4) and no more than 1.0 percent by mass for any other individual HAP (40 CFR 63.472) **[Added January 2016]**.

- *Non-HAP Solvent* - for the purposes of this subpart, a solvent (including thinners and cleaning solvents) that contains less than 0.1 percent by mass of any individual HAP that is an OSHA-defined carcinogen as specified in 29 CFR 1910.1200(d)(4) and less than 1.0 percent by mass for any other individual HAP (40 CFR 63.11180) **[Added April 2011]**.
- *Non-industrial POTW* - a POTW that does not meet the definition of an industrial POTW (40 CFR 63.1583) **[Added January 2000]**.
- *Non-petroleum diesel (NP diesel)* - a diesel fuel that contains at least 80 percent mono-alkyl esters of long chain fatty acids derived from vegetable oils or animal fats (40 CFR 80.2(sss)) **[Added July 2006]**.
- *Nonattainment Area* - an area designated as nonattainment under section 107 of the Act and described in 40 CFR 81 (40 CFR 93.152) **[Added April 2009]**.
- *Noncontinental Area* - the State of Hawaii, the Virgin Islands, Guam, American Samoa, the Commonwealth of Puerto Rico, or the Northern Mariana Islands (40 CFR 60.41b, 60.41c. and 60.4420) **[Added July 2007, Revised April 2009]**.
- *Nonregenerative Carbon Adsorber* - a carbon adsorber vessel in which the spent carbon bed does not undergo carbon regeneration in the adsorption vessel (40 CFR 63.742) **[Added January 1999]**.
- *Nonroad (NR) Diesel Fuel* - any NRLM diesel fuel that is not "locomotive or marine (LM) diesel fuel." (40 CFR 80.2(ooo)) **[Added October 2011]**.
- *Nonroad, Locomotive, or Marine (NRLM) Diesel Fuel* - any diesel fuel or other distillate fuel that is used, intended for use, or made available for use, as a fuel in any nonroad diesel engines, including locomotive and marine diesel engines, except the following (40 CFR 80.2(nnn)) ((40 CFR 80.2(uuu)) **[Added July 2010]**:
  1. Distillate fuel with a T90 at or above 700 F that is used only in Category 2 and 3 marine engines is not NRLM diesel fuel, and ECA marine fuel is not NRLM diesel fuel (note that fuel that conforms to the requirements of NRLM diesel fuel is excluded from the definition of "ECA marine fuel" in this section without regard to its actual use). Use the distillation test method specified in 40 CFR 1065.1010 to determine the T90 of the fuel. NR diesel fuel and LM diesel fuel are subcategories of NRLM diesel fuel.
  2. Any diesel fuel that is sold for use in stationary engines that are required to meet the requirements of 40 CFR 80.510(a) and/or (b), when such provisions are applicable to nonroad engines, shall be considered NRLM diesel fuel.
- *Non-selective Catalytic Reduction (NSCR)* - an add-on catalytic NO<sub>x</sub> control device for rich burn engines that, in a two-step reaction, promotes the conversion of excess oxygen, NO<sub>x</sub>, CO, and volatile organic compounds (VOC) into CO<sub>2</sub>, nitrogen, and water (40 CFR 63.6675) **[Added July 2004]**.
- *Normal Operating Characteristics and Conditions* - appliance operating temperatures, pressures, fluid flows, speeds, and other characteristics, including full charge of the appliance, that would be expected for a given process load and ambient condition during normal operation. Normal operating characteristics and conditions are marked by the absence of atypical conditions affecting the operation of the appliance (40 CFR 82.152) **[Added January 2017]**
- *Normally Containing a Quantity of Refrigerant* - containing the quantity of refrigerant within the appliance or appliance component when the appliance is operating with a full charge of refrigerant (40 CFR 82.152).

- *North American Industry Classification System (NAICS) Code(s)* - the six-digit code(s) that represents the product(s)/activity(s)/service(s) at a facility or supplier as listed in the Federal Register and defined in "North American Industrial Classification System Manual 2007," available from the U.S. Department of Commerce, National Technical Information Service, Alexandria, VA 22312, phone (703) 605-6000 or (800) 553-6847. <http://www.census.gov/eos/www/naics/> (40 CFR 98.6) **[Added October 2010]**.
- *North Slope of Alaska* - the area north of the Arctic Circle (latitude 66.5 degrees North) (40 CFR 63.6175) **[Added April 2004]**.
- *Offshore Platform Gas Turbines* - any stationary gas turbine located on a platform in an ocean (40 CFR 60.331) **[Added October 2004]**.
- *Offsite* - areas beyond the property boundary of the stationary source, and areas within the property boundary to which the public has routine and unrestricted access during or outside business hours (40 CFR 68.3) **[Added January 2005]**.
- *Oil* - crude oil or petroleum or a liquid fuel derived from crude oil or petroleum, including distillate and residual oil (40 CFR 60.41b and 60.41c) **[Added July 2007]**.
- *Oil and Gas Production Facility* - as used in 40 CFR 63, Subpart ZZZZ [40 CFR 63.6580 through 63.6675, see checklist items AE.21.1.US through AE.21.10.US] means any grouping of equipment where hydrocarbon liquids are processed, upgraded (i.e., remove impurities or other constituents to meet contract specifications), or stored prior to the point of custody transfer; or where natural gas is processed, upgraded, or stored prior to entering the natural gas transmission and storage source category. For purposes of a major source determination, facility (including a building, structure, or installation) means oil and natural gas production and processing equipment that is located within the boundaries of an individual surface site as defined in this section. Equipment that is part of a facility will typically be located within close proximity to other equipment located at the same facility. Pieces of production equipment or groupings of equipment located on different oil and gas leases, mineral fee tracts, lease tracts, subsurface or surface unit areas, surface fee tracts, surface lease tracts, or separate surface sites, whether or not connected by a road, waterway, power line or pipeline, shall not be considered part of the same facility. Examples of facilities in the oil and natural gas production source category include, but are not limited to, well sites, satellite tank batteries, central tank batteries, a compressor station that transports natural gas to a natural gas processing plant, and natural gas processing plants (40 CFR 63.6175 and 63.6675) **[Added April 2004]**.
- *Oil-Fired Unit* - a stationary combustion unit that derives more than 50 percent of its annual heat input from the combustion of fuel oil, and the remainder of its annual heat input from the combustion of natural gas or other gaseous fuels (40 CFR 98.6) **[Added January 2010]**.
- *Oil Subcategory* - includes any boiler that burns any liquid fuel and is not in either the biomass or coal subcategories. Gas-fired boilers that burn liquid fuel only during periods of gas curtailment, gas supply interruptions, startups, or for periodic testing are not included in this definition. Periodic testing on liquid fuel shall not exceed a combined total of 48 hours during any calendar year (40 CFR 63.11237) **[Revised April 2013]**.
- *Oil-water Separator* - a separator as defined for 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US] that is used to separate oil from water (40 CFR 63.7957) **[Added April 2004]**.
- *One-time Expansion Device* - an appliance that relies on the one-time release of its refrigerant charge to the environment in order to provide a cooling effect (40 CFR 82.152) **[Revised April 2004]**.
- *On-Site or On Site* - with respect to records required to be maintained by 40 CFR 63, Subpart EEEE [63.2330 through 63.2406, see checklist items AE.57.1.US through AE.57.15.US] or required by another subpart referenced by 40 CFR 63, Subpart EEEE, that records are stored at a location within a major source which encompasses the affected source. Onsite includes, but is not limited to, storage at the affected source to which the

records pertain, storage in central files elsewhere at the major source, or electronically available at the site (40 CFR 63.2406) **[Added April 2004]**.

- *One-time Expansion Device* - an appliance that relies on the release of its refrigerant charge to the environment in order to provide a cooling effect. These are typically single releases but could also include products that are designed to release refrigerant to the environment through multiple individual charges **[Revised April 2004; Revised January 2017]**.
- *Opacity* - the degree to which emissions reduce the transmission of light and obscure the view of an object in the background (40 CFR 60.2, 63.7575, and 63.11237) **[Revised October 2004; Revised Citation April 2011]**.
- *Open-Ended Valve or Lines (OELs)* - any valve, except pressure relief valves, having one side of the valve seat in contact with process fluid and one side open to atmosphere, either directly or through open piping (40 CFR 98.6) **[Added January 2010]**.
- *Open Top Vapor-cleaning machine* - a batch solvent-cleaning machine that has its upper surface open to the air and boils solvents to create solvent vapor used to clean and/or dry parts (40 CFR 63.461).
- *Opening an Appliance* - any maintenance, service, repair, or disposal of an appliance that would release any refrigerant in the appliance to the atmosphere. Connecting and disconnecting hoses and gauges to measure pressures, add refrigerant, or recover refrigerant from the appliance are not considered “opening an appliance” **[Revised April 2004; Revised January 2017]**.
- *Operating Day* - a 24-h period between 12:00 midnight and the following midnight during which any amount of hospital waste or medical/infectious waste is combusted at any time in the HMIWI (40 CFR 60.51c and 62.14490) **[Added October 2000]**.
- *Operating Day* - a 24-hour period between 12 midnight and the following midnight during which any fuel is combusted at any time in the boiler or process heater unit. It is not necessary for fuel to be combusted for the entire 24-h period. For calculating rolling average emissions, an operating day does not include the hours of operation during startup or shutdown (40 CFR 63.7575) **[Added April 2011; Revised January 2016]**.
- *Operating Day* - a 24-h period between 12:00 midnight and the following midnight during which any amount of sewage sludge is combusted at any time in the SSI unit (40 CFR 60.4930) **[Added April 2011]**.
- *Operating Day* - a 24-h period between 12 midnight and the following midnight during which any fuel is combusted at any time in the boiler unit. It is not necessary for fuel to be combusted for the entire 24-hour period (40 CFR 63.11237) **[Added April 2013]**.
- *Operating Hours* - the duration of time in which a process or process unit is utilized; this excludes shutdown, maintenance, and standby (40 CFR 98.6) **[Added January 2010]**.
- *Operating Parameter Value* - a minimum or maximum value established for a control device or process parameter which, if achieved by itself or in combination with one or more other operating parameter values, determines that an owner or operator has complied with an applicable emission limitation (40 CFR 63.742) **[Added January 1999]**.
- *Operating Parameter Value* - a minimum or maximum value established for a control device or treatment process parameter which, if achieved by itself or in combination with one or more other operating parameter values, determines that an owner or operator has complied with an applicable emissions limitation or standard (40 CFR 63.7957) **[Added April 2004]**.
- *Operation* - the period during which waste is combusted in the incinerator excluding periods of startup or shutdown (40 CFR 60.51c and 62.14490) **[Added October 2000]**.

- *Operational Change* - for purposes of 40 CFR 98.3(b), a change in the type of feedstock or fuel used, a change in operating hours, or a change in process production rate (40 CFR 98.6) **[Added January 2010]**.
- *Operator* - any person who operates or supervises a facility or supplier (40 CFR 98.6) **[Added January 2010]**.
- *Organic Hazardous Air Pollutant (HAP)* - any HAP that is organic (40 CFR 63.742) **[Added January 1999]**.
- *Organic Liquid* (40 CFR 63.2406) **[Added April 2004]**.
  1. Any non-crude oil liquid or liquid mixture that contains 5 percent by weight or greater of the organic HAP
  2. Any crude oils downstream of the first point of custody transfer.
  3. Organic liquids for purposes of 40 CFR 63, Subpart EEEE [40 CFR 63.2330 through 63.2406, see checklist items AE.57.1.US through AE.57.15.US] do not include the following liquids:
    - a. Gasoline (including aviation gasoline), kerosene (No. 1 distillate oil), diesel (No. 2 distillate oil), asphalt, and heavier distillate oils and fuel oils;
    - b. Any fuel consumed or dispensed on the plant site directly to users (such as fuels for fleet refueling or for refueling marine vessels that support the operation of the plant);
    - c. Hazardous waste;
    - d. Wastewater;
    - e. Ballast water; or
    - f. Any non-crude oil liquid with an annual average true vapor pressure less than 0.7 kilopascals (0.1 psia).
- *Organic Liquids Distribution (OLD) Operation* - the combination of activities and equipment used to store or transfer organic liquids into, out of, or within a plant site regardless of the specific activity being performed. Activities include, but are not limited to, storage, transfer, blending, compounding, and packaging (40 CFR 63.2406) **[Added April 2004]**.
- *Organic-water Separator* - a separator as defined for 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US] that is used to separate organics from water (40 CFR 63.7957) **[Added April 2004]**.
- *Other Combustor* - a unit designed to burn solid fuel that is not classified as a dutch oven, fluidized bed, fuel cell, hybrid suspension grate boiler, pulverized coal boiler, stoker, sloped grate, or suspension boiler as defined in this subpart (40 CFR 63.7575) **[Added April 2013]**.
- *Other Gas 1 Fuel* - a gaseous fuel that is not natural gas or refinery gas and does not exceed a maximum concentration of 40 micrograms/cubic meters of mercury (40 CFR 63.7575) **[Revised April 2013]**.
- *Other Internal Combustion Engine* - any internal combustion engine, except combustion turbines, which is not a reciprocating internal combustion engine or rotary internal combustion engine (40 CFR 60.4219) **[Added October 2006]**.
- *Other Oils (> 401 °F)* - oils with a boiling range equal to or greater than 401 °F that are generally intended for use as a petrochemical feedstock and are not defined elsewhere (40 CFR 98.6) **[Added January 2010]**.
- *Other Solid Waste Incineration (OSWI) Unit* - either a very small municipal waste combustion unit or an institutional waste incineration unit, as defined in this subpart. Unit types listed in 40 CFR 60.2887 as being excluded from the subpart are not OSWI units subject to this subpart. While not all OSWI units will include all of the following components, an OSWI unit includes, but is not limited to, the municipal or institutional solid waste feed system, grate system, flue gas system, waste heat recovery equipment, if any, and bottom ash system. The OSWI unit does not include air pollution control equipment or the stack. The OSWI unit boundary starts at the municipal or institutional waste hopper (if applicable) and extends through two areas: (40 CFR 60.2977) **[Added January 2006]**.
  1. The combustion unit flue gas system, which ends immediately after the last combustion chamber or after the waste heat recovery equipment, if any; and

2. The combustion unit bottom ash system, which ends at the truck loading station or similar equipment that transfers the ash to final disposal. The OSWI unit includes all ash handling systems connected to the bottom ash handling system.
- *Owner* - any person who has legal or equitable title to, has a leasehold interest in, or control of a facility or supplier, except a person whose legal or equitable title to or leasehold interest in the facility or supplier arises solely because the person is a limited partner in a partnership that has legal or equitable title to, has a leasehold interest in, or control of the facility or supplier shall not be considered an “owner” of the facility or supplier (40 CFR 98.6) [Added January 2010].
  - *Owner or Operator* - any person who owns, leases, operates, controls, or supervises a stationary source (40 CFR 68.3) [Added January 2005].
  - *Oxidation Catalyst* - an add-on catalytic control device that controls CO and VOC by oxidation (40 CFR 63.6675) [Added July 2004].
  - *Oxidation Catalyst Emission Control Device* - an emission control device that incorporates catalytic oxidation to reduce CO emissions (40 CFR 63.6175) [Added April 2004].
  - *Oxygen Analyzer System* - all equipment required to determine the oxygen content of a gas stream and used to monitor oxygen in the boiler or process heater flue gas, boiler or process heater, firebox, or other appropriate location. This definition includes oxygen trim systems. The source owner or operator must install, calibrate, maintain, and operate the oxygen analyzer system in accordance with the manufacturer's recommendations (40 CFR 63.7575) [Added April 2013].
  - *Oxygen Analyzer System* - all equipment required to determine the oxygen content of a gas stream and used to monitor oxygen in the boiler flue gas, boiler firebox, or other appropriate intermediate location. This definition includes oxygen trim systems (40 CFR 63.11237) [Added April 2013].
  - *Oxygen Trim System* - a system of monitors that is used to maintain excess air at the desired level in a combustion device over its operating load range. A typical system consists of a flue gas oxygen and/or CO monitor that automatically provides a feedback signal to the combustion air controller or draft controller (40 CFR 63.7575) [Added April 2013; Revised January 2016].
  - *Oxygen Trim System* - a system of monitors that is used to maintain excess air at the desired level in a combustion device over its operating load range. A typical system consists of a flue gas oxygen and/or carbon monoxide monitor that automatically provides a feedback signal to the combustion air controller or draft controller (40 CFR 63.11237) [Added October 2016].
  - *Oxygenate* - any substance which, when added to gasoline, increases the oxygen content of that gasoline. Lawful use of any of the substances or any combination of these substances requires that they be “substantially similar” under section 211(f)(1) of the Clean Air Act, or be permitted under a waiver granted by the Administrator under the authority of section 211(f)(4) of the Clean Air Act (40 CFR 80.2(jj)) [Added October 2011].
  - *Oxygenate Blender* - any person who owns, leases, operates, controls, or supervises an oxygenate blending facility, or who owns or controls the blendstock or gasoline used or the gasoline produced at an oxygenate blending facility (40 CFR 80.2(mm) and 80.1500) [Added October 2011].
  - *Oxygenate Blending Facility* - any facility (including a truck) at which oxygenate is added to gasoline or blendstock, and at which the quality or quantity of gasoline is not altered in any other manner except for the addition of deposit control additives (40 CFR 80.2(ll) and 80.1500) [Added October 2011].
  - *Oxygenated Gasoline* - gasoline which contains a measurable amount of oxygenate (40 CFR 80.2(rr)) [Added October 2011].

- *Oxygenates* - substances which, when added to gasoline, increase the oxygen content of the gasoline. Common oxygenates are ethanol, methyl tertiary butyl ether (MTBE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), diisopropyl ether (DIPE), and methanol (40 CFR 98.6) [**Added January 2010**].
- *PADD* - for the purposes of 40 CFR 80, Subpart I only, the following definitions of PADDs apply (40 CFR 80.502(f)) [**Added July 2006**]:
  1. The following States are included in PADD I: Connecticut; Delaware; District of Columbia; Florida; Georgia; Maine; Maryland; Massachusetts; New Hampshire; New Jersey; New York; North Carolina; Pennsylvania; Rhode Island; South Carolina; Vermont; Virginia; West Virginia
  2. The following States are included in PADD II: Illinois; Indiana; Iowa; Kansas; Kentucky; Michigan; Minnesota; Missouri; Nebraska; North Dakota; Ohio; Oklahoma; South Dakota; Tennessee; Wisconsin
  3. The following States are included in PADD III: Alabama; Arkansas; Louisiana; Mississippi; New Mexico; Texas
  4. The following States are included in PADD IV: Colorado; Idaho; Montana; Utah; Wyoming
  5. The following States are included in PADD V: Alaska; Arizona; California; Hawaii; Nevada; Oregon; Washington
  6. The following areas are included in PADD VI: U.S. Virgin Islands and Commonwealth of Puerto Rico
- *POTW Treatment Plant* - that portion of the POTW which is designed to provide treatment (including recycling and reclamation) of municipal sewage and industrial waste (40 CFR 63.1583) [**Added January 2000**].
- *Paint Stripping And/Or Miscellaneous Surface Coating Source or Facility* - any shop, business, location, or parcel of land where paint stripping or miscellaneous surface coating operations are conducted (40 CFR 63.11180) [**Added April 2011**].
- *Paint Stripping* - the removal of dried coatings from wood, metal, plastic, and other substrates. A single affected source may have multiple paint stripping operations (40 CFR 63.11180) [**Added April 2011**].
- *Painter* - any person who spray applies coating (40 CFR 63.11180) [**Added April 2011**].
- *Particulate Matter or PM* - the total particulate matter emitted from an HMIWI as measured by USEPA Reference Method 5 or USEPA Reference Method 29 (40 CFR 62.14490) [**Added October 2000**].
- *Particulate Matter* - total particulate matter emitted from municipal waste combustion units as measured using USEPA Reference Method 5 in Appendix A of 40 CFR 60 and the procedures specified in 40 CFR 60.1300 (40 CFR 60.1465) [**Added April 2001**].
- *Particulate Matter* - total particulate matter emitted from OSWI units as measured by Method 5 or Method 29 of appendix A 40 CFR 60 (40 CFR 60.2977) [**Added January 2006**].
- *Particulate Matter* - total particulate matter emitted from CISWI units as measured by Method 5 or Method 29 of 40 CFR 60, Appendix A (40 CFR 62.14840) [**Added January 2004**].
- *Particulate Matter (PM)* - any finely divided solid or liquid material, other than uncombined water, as measured by the test methods specified under 40 CFR 63, Subpart DDDDD or JJJJJ, or an approved alternative method (40 CFR 63.7575) [**Added April 2011**].
- *Particulate Matter (PM)* - any finely divided solid or liquid material, other than uncombined water, as measured by the test methods specified under this subpart, or an approved alternative method (40 CFR 63.11237) [**Revised April 2013**].
- *Particulate Matter Emissions* - any airborne finely divided solid or liquid material, except uncombined water, emitted to the ambient air (40 CFR 60.2).

- *Parts Reclamation Unit* - a unit that burns coatings off parts (e.g., tools, equipment) so that the parts can be reconditioned and reused (40 CFR 62.14840) [**Added January 2004**].
- *Passive Measures* - risk management measures that use design features that reduce either the frequency or consequence of the hazard without human, mechanical, or other energy input. Examples of passive measures include pressure vessel designs, dikes, berms, and blast walls (40 CFR 68.3) [**Added April 2017**].
- *Passive Vent* - a pipe or a system of pipes that allows landfill gas to flow naturally, without the use of a fan or similar mechanical draft equipment, to the surface of the landfill where an opening or pipe (vent) allows for the free flow of landfill gas to the atmosphere or to a passive vent flare without diffusion through the top layer of surface soil (40 CFR 98.348) [**Added January 2017**].
- *Pasture/Range/Paddock* - the manure from pasture and range grazing animals is allowed to lie as deposited, and is not managed (40 CFR 98.6) [**Added January 2010**].
- *Pathological Waste* - waste material consisting of only human or animal remains, anatomical parts, and/or tissue, the bags/containers used to collect and transport the waste material, and animal bedding (if applicable) (40 CFR 60.51c, 60.2977, 62.14490, and 62.14840) [**Revised January 2004**].
- *PCE Gas Analyzer* - a flame ionization detector, photoionization detector, or infrared analyzer capable of detecting vapor concentrations of PCE of 25 ppmv (40 CFR 63.321) [**Added October 2006**].
- *Peak Load* - 100 percent of the manufacturer's design capacity of the gas turbine at ISO standard day conditions (40 CFR 60.331 and 60.4420) [**Added October 2004, Revised April 2009**].
- *Peaking Unit or Engine* - any standby engine intended for use during periods of high demand that are not emergencies (40 CFR 63.6675) [**Added July 2004**].
- *Pentanes Plus or C5+* - a mixture of hydrocarbons that is a liquid at ambient temperature and pressure, and consists mostly of pentanes (five carbon chain) and higher carbon number hydrocarbons. Pentanes plus includes, but is not limited to, normal pentane, isopentane, hexanes-plus (natural gasoline), and plant condensate (40 CFR 98.6) [**Added January 2010**].
- *Percent Load* - the fractional power of an engine compared to its maximum manufacturer's design capacity at engine site conditions. Percent load may range between 0 percent to above 100 percent (40 CFR 63.6675) [**Added July 2004**].
- *Perceptible Leaks* - any perchloroethylene vapor or liquid leaks that are obvious from (40 CFR 63.321):
  1. the odor of perchloroethylene
  2. visual observation, such as pools or droplets of liquid
  3. the detection of gas flow by passing the fingers over the surface of the equipment.
- *Perchloroethylene Consumption* - the total volume of perchloroethylene purchased based upon purchase receipts or other reliable measures (40 CFR 63.321).
- *Perfluorocarbons or PFCs* - a class of greenhouse gases consisting on the molecular level of carbon and fluorine (40 CFR 98.6) [**Added January 2010**].
- *Performance Testing* - the collection of data resulting from the execution of a test method used (either by stack testing or fuel analysis) to demonstrate compliance with a relevant emission standard (40 CFR 63.11237) [**Added April 2011**].
- *Period of Gas Curtailment or Supply Interruption* - a period of time during which the supply of gaseous fuel to an affected boiler or process heater is restricted or halted for reasons beyond the control of the facility. The act of

entering into a contractual agreement with a supplier of natural gas established for curtailment purposes does not constitute a reason that is under the control of a facility for the purposes of this definition. An increase in the cost or unit price of natural gas due to normal market fluctuations not during periods of supplier delivery restriction does not constitute a period of natural gas curtailment or supply interruption. On-site gaseous fuel system emergencies or equipment failures qualify as periods of supply interruption when the emergency or failure is beyond the control of the facility (40 CFR 63.7575) **[Revised April 2013]**.

- *Period of Gas Curtailment or Supply Interruption* - a period of time during which the supply of gaseous fuel to an affected boiler is restricted or halted for reasons beyond the control of the facility. The act of entering into a contractual agreement with a supplier of natural gas established for curtailment purposes does not constitute a reason that is under the control of a facility for the purposes of this definition. An increase in the cost or unit price of natural gas due to normal market fluctuations not during periods of supplier delivery restriction does not constitute a period of natural gas curtailment or supply interruption. On-site gaseous fuel system emergencies or equipment failures qualify as periods of supply interruption when the emergency or failure is beyond the control of the facility (40 CFR 63.11237) **[Revised April 2013]**.
- *Permitting Authority* - one of the following (40 CFR 63.2406) **[Added April 2004]**:
  1. The State Air Pollution Control Agency, local agency, or other agency authorized by the EPA Administrator to carry out a permit program under 40 CFR 70; or
  2. The EPA Administrator, in the case of EPA-implemented permit programs under title V of the CAA (42 U.S.C. 7661) and 40 CFR 71.
- *Petrochemical* - methanol, acrylonitrile, ethylene, ethylene oxide, ethylene dichloride, and any form of carbon black (40 CFR 98.6) **[Added January 2010]**.
- *Petrochemical Feedstocks* - feedstocks derived from petroleum for the manufacture of chemicals, synthetic rubber, and a variety of plastics. This category is usually divided into naphthas less than 401 °F and other oils greater than 401 °F (40 CFR 98.6) **[Added January 2010]**.
- *Petroleum* - oil removed from the earth and the oil derived from tar sands and shale (40 CFR 98.6) **[Added January 2010]**
- *Petroleum Coke* - a black solid residue, obtained mainly by cracking and carbonizing of petroleum derived feedstocks, vacuum bottoms, tar and pitches in processes such as delayed coking or fluid coking. It consists mainly of carbon (90 to 95 percent), has low ash content, and may be used as a feedstock in coke ovens. This product is also known as marketable coke or catalyst coke (40 CFR 98.6) **[Added January 2010]**.
- *Petroleum Dry Cleaner* - a dry cleaning facility that uses petroleum solvent in a combination of washers, dryers, filters, stills, and settling tanks (40 CFR 60.621).
- *Petroleum Product* - all refined and semi-refined products that are produced at a refinery by processing crude oil and other petroleum-based feedstocks, including petroleum products derived from co-processing biomass and petroleum feedstock together, but not including plastics or plastic products. Petroleum products may be combusted for energy use, or they may be used either for non-energy processes or as non-energy products. The definition of petroleum product for importers and exporters excludes waxes (40 CFR 98.6) **[Added January 2010]**.
- *Petroleum Refinery* - industrial plants as classified by the Department of Commerce under Standard Industrial Classification (SIC) Code 29 (40 CFR 60.41b) **[Added July 2007]**.
- *Petroleum Refining Process Unit* - a process unit used in an establishment primarily engaged in petroleum refining as defined in NAICS code 32411 for petroleum refining (formerly SIC code 2911) and used for the following: Producing transportation fuels (such as gasoline, diesel fuels, and jet fuels), heating fuels (such as kerosene, fuel gas distillate, and fuel oils), or lubricants; Separating petroleum; or Separating, cracking, reacting, or reforming intermediate petroleum streams. Examples of such units include, but are not limited to, petroleum based solvent

units, alkylation units, catalytic hydrotreating, catalytic hydrorefining, catalytic hydrocracking, catalytic reforming, catalytic cracking, crude distillation, lube oil processing, hydrogen production, isomerization, polymerization, thermal processes, and blending, sweetening, and treating processes. Petroleum refining process units include sulfur plants (40 CFR 68.3) **[Added January 2005]**.

- *Physical Address* - with respect to a United States parent company as defined in this section means the street address, city, state and zip code of that company's physical location (40 CFR 98.6) **[Added October 2010]**.
- *Pile Burner* - a boiler design incorporating a design where the anticipated biomass fuel has a high relative moisture content. Grates serve to support the fuel, and underfire air flowing up through the grates provides oxygen for combustion, cools the grates, promotes turbulence in the fuel bed, and fires the fuel. The most common form of pile burning is the dutch oven (40 CFR 63.7575) **[Added April 2013]**.
- *Pit Storage Below Animal Confinement (Deep Pits)* - the collection and storage of manure typically below a slatted floor in an enclosed animal confinement facility. This usually occurs with little or no added water for periods less than 1 yr (40 CFR 98.6) **[Added January 2010]**.
- *Plant Code* - either of the following (40 CFR 98.6) **[Added January 2014]**:
  1. The Plant ID code assigned by the Department of Energy's Energy Information Administration. The Energy Information Administration Plant ID code is also referred to as the "ORIS code", "ORISPL code", "Facility ID", or "Facility code", among other names.
  2. If a Plant ID code has not been assigned by the Department of Energy's Energy Information Administration, then plant code means a code beginning with "88" assigned by the EPA's Clean Air Markets Division for electronic reporting.
- *Plant Site* - all contiguous or adjoining surface property that is under common control, including surface properties that are separated only by a road or other public right-of-way. Common control includes surface properties that are owned, leased, or operated by the same entity, parent entity, subsidiary, or any combination (40 CFR 63.2406) **[Added April 2004]**.
- *Plastic* - refers to substrates containing one or more resins and may be solid, porous, flexible, or rigid. Plastics include fiber reinforced plastic composites (40 CFR 63.11180) **[Added April 2011]**.
- *Plastics or Rubber Recycling Unit* - an integrated processing unit for which plastics, rubber, or rubber tires are the only feed materials (incidental contaminants may be in the feed materials). The feed materials are processed and marketed to become input feedstock for chemical plants or petroleum refineries. The following three criteria further define a plastics or rubber recycling unit (40 CFR 60.1465) **[Added April 2001]**:
  1. Each calendar quarter, the combined weight of the feed stock that a plastics or rubber recycling unit produces must be more than 70 percent of the combined weight of the plastics, rubber, and rubber tires that recycling unit processes.
  2. The plastics, rubber, or rubber tires fed to the recycling unit may originate from separating or diverting plastics, rubber, or rubber tires from municipal or industrial solid waste. The feed materials may include manufacturing scraps, trimmings, and off-specification plastics, rubber, and rubber tire discards.
  3. The plastics, rubber, and rubber tires fed to the recycling unit may contain incidental contaminants (for example, paper labels on plastic bottles or metal rings on plastic bottle caps).
- *PM<sub>10</sub>* - particulate matter with an aerodynamic diameter less than or equal to a nominal 10 micrometers (40 CFR 58.1).
- *Population* - the public (40 CFR 68.3) **[Added January 2005]**.
- *Portable* - designed and capable of being carried or moved from one location to another. Indications of portability include but are not limited to wheels, skids, carrying handles, dolly, trailer, or platform. Equipment is not portable if any one of the following conditions exists (40 CFR 98.6) **[Added January 2010]**:

1. The equipment is attached to a foundation.
  2. The equipment or a replacement resides at the same location for more than 12 consecutive months.
  3. The equipment is located at a seasonal facility and operates during the full annual operating period of the seasonal facility, remains at the facility for at least 2 yr, and operates at that facility for at least 3 mo each year.
  4. The equipment is moved from one location to another in an attempt to circumvent the portable residence time requirements of this definition.
- *Potential Hydrogen Chloride Emissions* - the level of emissions from a municipal waste combustion unit that would occur from combusting municipal solid waste without emission controls for acid gases (40 CFR 60.1465) **[Added April 2001]**.
  - *Potential Mercury Emissions* - the level of emissions from a municipal waste combustion unit that would occur from combusting municipal solid waste without controls for mercury emissions (40 CFR 60.1465) **[Added April 2001]**.
  - *Potential Sulfur Dioxide Emission Rate* - the theoretical SO<sub>2</sub> emissions (nanograms per joule (ng/J) or lb/MMBtu heat input) that would result from combusting fuel in an uncleaned state and without using emission control systems (40 CFR 60.41c) **[Added July 2007, Citation Revised April 2009]**.
  - *Potential Sulfur Dioxide Emission Rate* - the theoretical SO<sub>2</sub> emissions (nanograms per joule (ng/J) or lb/MMBtu heat input) that would result from combusting fuel in an uncleaned state and without using emission control systems. For gasified coal or oil that is desulfurized prior to combustion, the Potential sulfur dioxide emission rate is the theoretical SO<sub>2</sub> emissions (ng/J or lb/MMBtu heat input) that would result from combusting fuel in a cleaned state without using any post combustion emission control systems (40 CFR 60.41b) **[Added April 2009]**.
  - *Potential Sulfur Dioxide Emissions* - the level of emissions from a municipal waste combustion unit that would occur from combusting municipal solid waste without emission controls for acid gases (40 CFR 60.1465) **[Added April 2001]**.
  - *Potential to Emit* - the maximum capacity of a stationary source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the stationary source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is federally enforceable (40 CFR 63.9375) **[Added July 2003]**.
  - *Potential to Emit* - the maximum capacity of a stationary source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the stationary source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is federally enforceable. For oil and natural gas production facilities subject to 40 CFR 63, Subpart HH, the potential to emit provisions in 40 CFR 63.760(a) may be used. For natural gas transmission and storage facilities subject to 40 CFR 63, Subpart HHH, the maximum annual facility gas throughput for storage facilities may be determined according to 40 CFR 63.1270(a)(1) and the maximum annual throughput for transmission facilities may be determined according to 40 CFR 63.1270(a)(2) (40 CFR 63.6175 and 63.6675) **[Added April 2004]**.
  - *Potentially Available* - that adequate information exists to make a determination that the substitute is technologically feasible, environmentally acceptable and economically viable (40 CFR 82.104(p)) **[Added July 2004]**
  - *Poultry Manure With Litter* - a manure management system component that is similar to cattle and swine deep bedding except usually not combined with a dry lot or pasture. The system is typically used for poultry breeder flocks and for the production of meat type chickens (broiler) and other fowl (40 CFR 98.6) **[Added January 2010]**.

- *Poultry Manure Without Litter* - a manure management system component that may manage manure in a liquid form, similar to open pits in enclosed animal confinement facilities. These systems may alternatively be designed and operated to dry manure as it accumulates. The latter is known as a high-rise manure management system and is a form of passive windrow manure composting when designed and operated properly (40 CFR 98.6) [**Added January 2010**].
- *Power Input to the Electrostatic Precipitator* - the product of the test-run average secondary voltage and the test-run average secondary amperage to the electrostatic precipitator collection plates (40 CFR 60.4930) [**Added April 2011**].
- *Practicability* - the capability of being successfully accomplished within a reasonable time, accounting for economic, environmental, legal, social, and technological factors. Environmental factors would include consideration of potential transferred risks for new risk reduction measures (40 CFR 68.3) [**Added April 2017**].
- *Precision of a Measurement at a Specified Level (e.g., one percent of full scale or one percent of the value measured)* - that 95 percent of repeat measurements made by a device or technique are within the range bounded by the mean of the measurements plus or minus the specified level (40 CFR 98.6) [**Added January 2010**].
- *Precursors of a Criteria Pollutant* - these are (40 CFR 93.152) [**Added April 2009**]:
  1. For ozone, nitrogen oxides (NO<sub>x</sub>), unless an area is exempted from NO<sub>x</sub> requirements under section 182(f) of the Act, and volatile organic compounds (VOC).
  2. For PM-10, those pollutants described in the PM-10 nonattainment area applicable SIP as significant contributors to the PM-10 levels.
  3. For PM<sub>2.5</sub>:
    - a. Sulfur dioxide in all PM<sub>2.5</sub> nonattainment and maintenance areas,
    - b. Nitrogen oxides in all PM<sub>2.5</sub> nonattainment and maintenance areas unless both the State and EPA determine that it is not a significant precursor, and
    - c. Volatile organic compounds (VOC) and ammonia only in PM<sub>2.5</sub> nonattainment or maintenance areas where either the State or EPA determines that they are significant precursors.
- *Premium Grade Gasoline* - gasoline having an antiknock index, i.e., octane rating, greater than 90. This definition applies to the premium grade categories of Conventional-Summer, Conventional-Winter, Reformulated-Summer, and Reformulated-Winter. For premium grade categories of RBOB-Summer, RBOB-Winter, CBOB-Summer, and CBOB-Winter, this definition refers to the expected octane rating of the finished gasoline after oxygenate has been added to the RBOB or CBOB (40 CFR 98.6) [**Added January 2010**].
- *Pressure Relief Device or Pressure Relief Valve or Pressure Safety Valve* - a safety device used to prevent operating pressures from exceeding the maximum allowable working pressure of the process equipment. A common pressure relief device is but not limited to a spring loaded pressure relief valve. Devices that are actuated either by a pressure of less than or equal to 2.5 psig or by a vacuum are not pressure relief devices (40 CFR 98.6) [**Added January 2010**].
- *Primary Chamber* - the chamber in an HMIWI that receives waste material, in which the waste is ignited, and from which ash is removed (40 CFR 60.51c and 62.14490) [**Added October 2000**].
- *Primary Fuel* - the fuel that provides the greatest percentage of the annual heat input to a stationary fuel combustion unit (40 CFR 98.6) [**Added January 2011**].
- *Primer* - the first layer and any subsequent layers of identically formulated coating applied to the surface of an aerospace vehicle or component. Primers are typically used for corrosion prevention, protection from the environment, functional fluid resistance, and adhesion of subsequent coatings. Coatings that are defined as specialty coatings are not included under this definition (40 CFR 63.742) [**Added January 1999**].
- *Principal Display Panel (PDP)* - the entire portion of the surface of a product, container or its outer packaging that is most likely to be displayed, shown, presented, or examined under customary conditions of retail sale. The

area of the PDP is not limited to the portion of the surface covered with existing labeling; rather it includes the entire surface, excluding flanges, shoulders, handles, or necks (40 CFR 82.104(q)) **[Added July 2004]**

- *Procedural Measures* - risk management measures such as policies, operating procedures, training, administrative controls, and emergency response actions to prevent or minimize incidents (40 CFR 68.3) **[Added April 2017]**.
- *Process* - any activity involving a regulated substance including any use, storage, manufacturing, handling, or on-site movement of such substances, or combination of these activities. For the purposes of this definition, any group of vessels that are interconnected, or separate vessels that are located such that a regulated substance could be involved in a potential release, shall be considered a single process (40 CFR 68.3) **[Added January 2005]**.
- *Process Change* - a significant permit revision, but only with respect to those pollutant-specific emission units for which the proposed permit revision is applicable, including but not limited to (40 CFR 60.4930) **[Added April 2011]**:
  1. A change in the process employed at the wastewater treatment facility associated with the affected SSI unit (e.g., the addition of tertiary treatment at the facility, which changes the method used for disposing of process solids and processing of the sludge prior to incineration).
  2. A change in the air pollution control devices used to comply with the emission limits for the affected SSI unit (e.g., change in the sorbent used for activated carbon injection).
- *Process Emissions* - the emissions from industrial processes (e.g., cement production, ammonia production) involving chemical or physical transformations other than fuel combustion. For example, the calcination of carbonates in a kiln during cement production or the oxidation of methane in an ammonia process results in the release of process CO<sub>2</sub> emissions to the atmosphere. Emissions from fuel combustion to provide process heat are not part of process emissions, whether the combustion is internal or external to the process equipment (40 CFR 98.6) **[Added January 2010]**.
- *Process Heater* - a device that is primarily used to heat a material to initiate or promote a chemical reaction in which the material participates as a reactant or catalyst (40 CFR 60.41b and 60.41c) **[Added July 2007]**.
- *Process Heater* - an enclosed device using controlled flame, and the unit's primary purpose is to transfer heat indirectly to a process material (liquid, gas, or solid) or to a heat transfer material (e.g., glycol or a mixture of glycol and water) for use in a process unit, instead of generating steam. Process heaters are devices in which the combustion gases do not come into direct contact with process materials. A device combusting solid waste, as defined in 40 CFR 241.3 of this chapter, is not a process heater unless the device is exempt from the definition of a solid waste incineration unit as provided in section 129(g)(1) of the Clean Air Act. Process heaters do not include units used for comfort heat or space heat, food preparation for on-site consumption, or autoclaves. Waste heat process heaters are excluded from this definition (40 CFR 63.7575) **[Revised April 2013]**.
- *Process Heater* - an enclosed device using controlled flame, and the unit's primary purpose is to transfer heat indirectly to a process material (liquid, gas, or solid) or to a heat transfer material (e.g., glycol or a mixture of glycol and water) for use in a process unit, instead of generating steam. Process heaters are devices in which the combustion gases do not come into direct contact with process materials. Process heaters include units that heat water/water mixtures for pool heating, sidewalk heating, cooling tower water heating, power washing, or oil heating (40 CFR 63.11237) **[Added April 2013]**.
- *Process Stub* - a length of tubing that provides access to the refrigerant inside a small appliance or room air-conditioner and can be resealed at the conclusion of repair or service (40 CFR 82.152).
- *Process Unit* - the equipment assembled and connected by pipes and ducts to process raw materials and to manufacture either a final product or an intermediate used in the onsite production of other products. The process unit also includes the purification of recovered byproducts (40 CFR 98.6) **[Added January 2010]**.

- *Process Vent* - any open-ended pipe, stack, duct, or other opening intended to allow the passage of gases, vapors, or fumes to the atmosphere and this passage is caused by mechanical means (such as compressors, vacuum-producing systems or fans) or by process-related means (such as volatilization produced by heating). For the purposes of 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US], a process vent is neither a safety device (as defined in this section) nor a stack, duct or other opening used to exhaust combustion products from a boiler, furnace, heater, incinerator, or other combustion device (40 CFR 63.7957) **[Added April 2004]**.
- *Process Vent* - a gas stream that (40 CFR 98.6) **[Added January 2010]**:
  1. is discharged through a conveyance to the atmosphere either directly or after passing through a control device;
  2. originates from a unit operation, including but not limited to reactors (including reformers, crackers, and furnaces, and separation equipment for products and recovered byproducts); and
  3. contains or has the potential to contain GHG that is generated in the process. Process vent does not include safety device discharges, equipment leaks, gas streams routed to a fuel gas system or to a flare, discharges from storage tanks.
- *Produced Water* - water extracted from the earth from an oil or natural gas production well, or that is separated from oil or natural gas after extraction (40 CFR 68.3) **[Added January 2005]**.
- *Product* - an item or category of items manufactured from raw or recycled materials, or other products, which is used to perform a function or task (40 CFR 82.104(r)) **[Added July 2004]**
- *Product Containing* - a product including, but not limited to, containers, vessels, or pieces of equipment, that physically holds a controlled substance at the point of sale to the ultimate consumer which remains within the product (40 CFR 82.104(s)) **[Added July 2004]**
- *Production Field Facility* - those oil and gas production facilities located prior to the point of custody transfer (40 CFR 63.6175 and 63.6675) **[Added April 2004]**.
- *Production Well* - any hole drilled in the earth from which crude oil, condensate, or field natural gas is extracted (40 CFR 63.6175 and 63.6675) **[Added April 2004]**.
- *Products* - has the same meaning as supplies (48 CFR 2.101(b)(2)) **[Added July 2016]**.
- *Promotional Printed Material* - any informational or advertising material (including, but not limited to, written advertisements, brochures, circulars, desk references and fact sheets) that is prepared by the manufacturer for display or promotion concerning a product or container, and that does not accompany the product to the consumer (40 CFR 82.104(t)) **[Added July 2004]**
- *Propane* - a colorless gas derived from petroleum and natural gas, with the molecular structure C<sub>3</sub>H<sub>8</sub> (40 CFR 63.6675) **[Added July 2004]**.
- *Propane* - a paraffinic hydrocarbon with molecular formula C<sub>3</sub>H<sub>8</sub> (40 CFR 98.6) **[Added January 2010]**.
- *Propylene* - an olefinic hydrocarbon with molecular formula C<sub>3</sub>H<sub>6</sub> (40 CFR 98.6) **[Added January 2010]**.
- *Protective Oil* - organic material that is applied to metal for the purpose of providing lubrication or protection from corrosion without forming a solid film. This definition of protective oil includes, but is not limited to, lubricating oils, evaporative oils (including those that evaporate completely), and extrusion oils (40 CFR 63.11180) **[Added April 2011]**.
- *Public* - any person except employees or contractors at the stationary source (40 CFR 68.3) **[Added January 2005]**.

- *Public Receptor* - offsite residences, institutions (e.g., schools, hospitals), industrial, commercial, and office buildings, parks, or recreational areas inhabited or occupied by the public at any time without restriction by the stationary source where members of the public could be exposed to toxic concentrations, radiant heat, or overpressure, as a result of an accidental release (40 CFR 68.3) **[Added January 2005]**.
- *Pulverized Coal Boiler* - a boiler in which pulverized coal or other solid fossil fuel is introduced into an air stream that carries the coal to the combustion chamber of the boiler where it is fired in suspension (40 CFR 63.7575) **[Added April 2011]**.
- *Publication Rotogravure Printing* - any number of rotogravure printing units capable of printing simultaneously on the same continuous web or substrate and includes any associated device for continuous cutting and folding the printed web, where the following sellable paper products are printed: catalogues; direct mail advertisements; display advertisements; magazines; miscellaneous advertisements including brochures, pamphlets, catalogue sheets, circular folders, and announcements; newspapers; periodicals; and telephone and other directories (40 CFR 60.431).
- *Publicly Owned Treatment Works (POTW)* - a treatment works, as that term is defined by section 112(e)(5) of the CAA, which is owned by a municipality (as defined by section 502(4) of the *Clean Water Act (CWA)*), a state, an intermunicipal or interstate agency, or any department, agency, or instrumentality of the Federal Government. This definition includes any intercepting sewers, outfall sewers, sewage collection systems, pumping, power, and other equipment. The wastewater treated by these facilities is generated by industrial, commercial, and domestic sources. As used in this regulation, the term POTW refers to both any publicly owned treatment works which is owned by a state, municipality, or intermunicipal or interstate agency and therefore eligible to receive grant assistance under the Subchapter II of the CWA, and any federally owned treatment works as that term is described in section 3023 of the *Solid Waste Disposal Act* (40 CFR 63.1583) **[Added January 2000]**.
- *Pulp and Paper Mills* - industrial plants that are classified by the Department of Commerce under North American Industry Classification System (NAICS) Code 322 or Standard Industrial Classification (SIC) Code 26 (40 CFR 60.41b) **[Added July 2007]**.
- *Pulverized Coal-Fired Steam Generating Unit* - a steam generating unit in which pulverized coal is introduced into an air stream that carries the coal to the combustion chamber of the steam generating unit where it is fired in suspension. This includes both conventional pulverized coal-fired and micropulverized coal-fired steam generating units. Residual oil means crude oil, fuel oil numbers 1 and 2 that have a nitrogen content greater than 0.05 weight percent, and all fuel oil numbers 4, 5 and 6, as defined by the American Society of Testing and Materials in ASTM D396 (incorporated by reference, see 40 CFR 60.17) (40 CFR 60.41b) **[Added July 2007]**.
- *Pyrolysis* - the endothermic gasification of hospital waste and/or medical/infectious waste using external energy (40 CFR 60.51c and 62.14490) **[Added December 1997; Revised October 2000]**.
- *Pyrolysis/Combustion Unit* - a unit that produces gases, liquids, or solids by heating municipal solid waste. The gases, liquids, or solids produced are combusted and the emissions vented to the atmosphere (40 CFR 60.1465) **[Added April 2001]**.
- *Pyrolysis/Combustion Unit* - a unit that produces gases, liquids, or solids through the heating of municipal solid waste, and the gases, liquids, or solids produced are combusted and emissions vented to the atmosphere (40 CFR 60.51b) **[Added December 1997]**.
- *Qualified Energy Assessor*: (40 CFR 63.7575 and 63.11237) **[Revised April 2013]**.
  1. Someone who has demonstrated capabilities to evaluate energy savings opportunities for steam generation and major energy using systems, including, but not limited to:
    - a. Boiler combustion management.
    - b. Boiler thermal energy recovery, including
      - i. Conventional feed water economizer,

- ii. Conventional combustion air preheater, and
    - iii. Condensing economizer.
  - c. Boiler blowdown thermal energy recovery.
  - d. Primary energy resource selection, including
    - i. Fuel (primary energy source) switching, and
    - ii. Applied steam energy versus direct-fired energy versus electricity.
  - e. Insulation issues.
  - f. Steam trap and steam leak management.
  - g. Condensate recovery.
  - h. Steam end-use management.
2. Capabilities and knowledge includes, but is not limited to:
- a. Background, experience, and recognized abilities to perform the assessment activities, data analysis, and report preparation.
  - b. Familiarity with operating and maintenance practices for steam or process heating systems.
  - c. Additional potential steam system improvement opportunities including improving steam turbine operations and reducing steam demand.
  - d. Additional process heating system opportunities including effective utilization of waste heat and use of proper process heating methods.
  - e. Boiler-steam turbine cogeneration systems.
  - f. Industry specific steam end-use systems.
- *Quality Control Activities* – surface coating or paint stripping activities that meet all of the following criteria (40 CFR 63.11180) **[Added April 2011]**:
    - 1. The activities associated with a surface coating or paint stripping operation are intended to detect and correct defects in the final product by selecting a limited number of samples from the operation, and comparing the samples against specific performance criteria.
    - 2. The activities do not include the production of an intermediate or final product for sale or exchange for commercial profit; for example, parts that are surface coated or stripped are not sold and do not leave the facility.
    - 3. The activities are not a normal part of the surface coating or paint stripping operation; for example, they do not include color matching activities performed during a motor vehicle collision repair.
    - 4. The activities do not involve surface coating or stripping of the tools, equipment, machinery, and structures that comprise the infrastructure of the affected facility and that are necessary for the facility to function in its intended capacity; that is, the activities are not facility maintenance.
  - *RBOB-Summer (Reformulated Blendstock for Oxygenate Blending)* - a petroleum product which, when blended with a specified type and percentage of oxygenate, meets the definition of Reformulated-Summer (40 CFR 98.6) **[Added January 2010]**.
  - *RBOB-Winter (Reformulated Blendstock for Oxygenate Blending)* - a petroleum product which, when blended with a specified type and percentage of oxygenate, meets the definition of Reformulated-Winter (40 CFR 98.6) **[Added January 2010]**.
  - *Rack Reclamation Unit* - a unit that burns the coatings off racks used to hold small items for application of a coating. The unit burns the coating overspray off the rack so the rack can be reused (40 CFR 62.14840) **[Added January 2004]**.
  - *Radioactive Mixed Waste* - a material that contains both hazardous waste subject to RCRA and source, special nuclear, or by-product material subject to the *Atomic Energy Act of 1954* (40 CFR 63.7957) **[Added April 2004]**.
  - *Radionuclide* - a type of atom which spontaneously undergoes radioactive decay (40 CFR 61.91(c)) **[Added July 2006]**.

- *Radionuclide* - a type of atom which spontaneously undergoes radioactive decay (40 CFR 61.101) [**Added July 2004**].
- *Radome* - the non-metallic protective housing for electromagnetic transmitters and receivers (e.g., radar, electronic countermeasures, etc.) (40 CFR 63.742) [**Added January 1999**].
- *Rated Power* - the maximum power output of an engine in use (40 CFR 63.9375) [**Added July 2003**].
- *Reasonably Foreseeable Emissions* - projected future indirect emissions that are identified at the time the conformity determination is made; the location of such emissions is known and the emissions are quantifiable, as described and documented by the Federal agency based on its own information and after reviewing any information presented to the Federal agency (40 CFR 93.152) [**Added April 2009**].
- *Reciprocating Internal Combustion Engine* - any internal combustion engine which uses reciprocating motion to convert heat energy into mechanical work (40 CFR 60.4219) [**Added October 2006**].
- *Reclaim* - to reprocess recovered refrigerant to all of the specifications in appendix A of this subpart (based on AHRI Standard 700-2016, Specifications for Refrigerants) that are applicable to that refrigerant and to verify that the refrigerant meets these specifications using the analytical methodology prescribed in section 5 of appendix A of this subpart (40 CFR 82.152) [**Added January 2017**].
- *Reclaimer* - a machine used to remove perchloroethylene from articles by tumbling them in a heated air stream (40 CFR 63.321).
- *Reconstructed Affected Source* – in relation to engine test cells, an affected source is reconstructed if you meet the definition of reconstruction in 40 CFR 63.2 and reconstruction is commenced after 14 May 2002. Changes made to an existing affected source primarily for the purpose of complying with revisions to engine testing requirements under 40 CFR 80, 86, 89, 90, 91, or 92 are not considered a modification or reconstruction. In addition, passive measurement and control instrumentation and electronics are not included as part of any affected source reconstruction evaluation (40 CFR 63.9290(a)(3)) [**Added July 2003**].
- *Reconstructed Stationary RICE* - in relation to the NESHAPS for stationary RICE, this is defined as follows (40 CFR 63.6590(a)(3)) [**Added April 2013**]:
  1. a stationary RICE with a site rating of > 500 brake HP located at a major source of HAP emissions is reconstructed if the definition of reconstruction in 40 CFR 63.2 is met and reconstruction commenced on or after 19 December 2002
  2. a stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions is reconstructed if the definition of reconstruction in 40 CFR 63.2 is met and reconstruction is commenced on or after 12 June 2006
  3. a stationary RICE located at an area source of HAP emissions is reconstructed if the definition of reconstruction in 40 CFR 63.2 is met and reconstruction is commenced on or after 12 June 2006.)
- *Reconstruction* - rebuilding a municipal waste combustion unit and meeting two criteria (40 CFR 60.1465) [**Added April 2001**]:
 

The reconstruction begins after June 6, 2001.

The cumulative cost of the construction over the life of the unit exceeds 50 percent of the original cost of building and installing the municipal waste combustion unit (not including land) updated to current costs (current dollars). To determine what systems are within the boundary of the municipal waste combustion unit used to calculate those costs, see the definition in this section of “municipal waste combustion unit.”
- *Reconstruction* - rebuilding an incineration unit and meeting two criteria (40 CFR 60.2977) [**Added January 2006**]:
  1. The reconstruction begins on or after 16 June 2006.

2. The cumulative cost of the construction over the life of the incineration unit exceeds 50 percent of the original cost of building and installing the unit (not including land) updated to current costs (current dollars). For an OSWI unit, to determine what systems are within the boundary of the unit used to calculate these costs, see the definition of OSWI unit.
- *Reconstruction* - in relation to perchloroethylene drycleaners, it means replacement of a washer, dryer, or reclaimer, or replacement of any components of a dry cleaning system to such an extent that the fixed capital cost of the new components exceeds 50 percent of the fixed capital cost that would be required to construct a comparable new source (40 CFR 63.321).
  - *Reconstruction* - the replacement of components of an affected or a previously unaffected stationary source such that (40 CFR 63.1583) **[Added January 2000]**:
    1. The fixed capital cost of the new components exceeds 50 percent of the fixed capital cost that would be required to construct a comparable new source; and
    2. It is technologically and economically feasible for the reconstructed source to meet the relevant standards established by the Administrator (or a state) pursuant to section 112 of the Act. Upon reconstruction, an affected source, or a stationary source that becomes an affected source, is subject to relevant standards for new sources, including compliance dates, irrespective of any change in emissions of HAP from that source.
  - *Reconstruction* - rebuilding a CISWI unit and meeting two criteria (40 CFR 62.14840) **[Added January 2004]**:
    1. The reconstruction begins on or after promulgation of the final CISWI emission guidelines in 40 CFR 60, Subpart DDDD: Emissions Guidelines and Compliance Times for Commercial and Industrial Solid Waste Incineration Units That Commenced Construction On or Before 30 November 1999.
    2. The cumulative cost of the construction over the life of the incineration unit exceeds 50 percent of the original cost of building and installing the CISWI unit (not including land) updated to current costs (current dollars). To determine what systems are within the boundary of the CISWI unit used to calculate these costs, see the definition of CISWI unit.
  - *Recover* - to remove refrigerant in any condition from an appliance and to store it in an external container without necessarily testing or processing it in any way (40 CFR 82.152) **[Added January 2017]**.
  - *Recovery Device* - an individual unit of equipment capable of and normally used for the purpose of recovering chemicals for fuel value, use, or reuse. Examples of equipment that may be recovery devices include absorbers, carbon adsorbers, condensers, oil-water separators, or organic-water separators or organic removal devices such as decanters, strippers, or thin-film evaporation units (40 CFR 63.742) **[Added January 1999]**.
  - *Recovery Efficiency* - the percentage of refrigerant in an appliance that is recovered by a piece of recovery and/or recycling equipment (40 CFR 82.152) **[Revised January 2017]**.
  - *Recycle* - referring to refrigerant, means to extract refrigerant from an appliance (except MVACs) and clean it for reuse in equipment of the same owner without meeting all of the requirements for reclamation. In general, recycled refrigerant is cleaned using oil separation and single or multiple passes through devices, such as replaceable core filter-driers, which reduce moisture, acidity, and particulate matter (40 CFR 82.152) **[Added January 2017]**.
  - *Refinery Gas* - any gas that is generated at a petroleum refinery and is combusted. Refinery gas includes natural gas when the natural gas is combined and combusted in any proportion with a gas generated at a refinery. Refinery gas includes gases generated from other facilities when that gas is combined and combusted in any proportion with gas generated at a refinery (40 CFR 63.7575) **[Added April 2011]**.
  - *Reformulated Gasoline* - any gasoline whose formulation has been certified under 40 CFR 80.40, and which meets each of the standards and requirements prescribed under 40 CFR 80.41 (40 CFR 80.2(ee)) **[Added January 2006]**.

- *Reformulated Gasoline Credit* - the unit of measure for the paper transfer of benzene content resulting from reformulated gasoline which contains less than 0.95 volume percent benzene (40 CFR 80.1(ii)) **[Added April 2006]**.
- *Reformulated—Summer* - refers to finished gasoline formulated for use in motor vehicles, the composition and properties of which meet the requirements of the reformulated gasoline regulations promulgated by the U.S. Environmental Protection Agency under 40 CFR 80.40 and 40 CFR 80.41, and summer RVP standards required under 40 CFR 80.27 or as specified by the state. Reformulated gasoline excludes Reformulated Blendstock for Oxygenate Blending (RBOB) as well as other blendstock (40 CFR 98.6) **[Added January 2010]**.
- *Reformulated—Winter* - refers to finished gasoline formulated for use in motor vehicles, the composition and properties of which meet the requirements of the reformulated gasoline regulations promulgated by the U.S. Environmental Protection Agency under 40 CFR 80.40 and 40 CFR 80.41, but which do not meet summer RVP standards required under 40 CFR 80.27 or as specified by the state. Note: This category includes Oxygenated Fuels Program Reformulated Gasoline (OPRG). Reformulated gasoline excludes Reformulated Blendstock for Oxygenate Blending (RBOB) as well as other blendstock (40 CFR 98.6) **[Added January 2010]**.
- *Refractory Unit or Refractory Wall Furnace* - a municipal waste combustion unit that has no energy recovery (such as through a waterwall) in the furnace of the municipal waste combustion unit (40 CFR 60.1465) **[Added April 2001]**.
- *Refrigerant* - for purposes of this subpart, any substance, including blends and mixtures, consisting in part or whole of a class I or class II ozone-depleting substance or substitute that is used for heat transfer purposes and provides a cooling effect (40 CFR 82.152) **[Added January 2017]**.
- *Refrigerant Circuit* - the parts of an appliance that are normally connected to each other (or are separated only by internal valves) and are designed to contain refrigerant (40 CFR 82.152) **[Added January 2017]**.
- *Refrigerated Condenser* - a vapor recovery system into which an air-perchloroethylene gas-vapor stream is routed and the perchloroethylene is condensed by cooling the gas-vapor stream (40 CFR 63.321).
- *Refuse-Derived Fuel* - combustible or organic portion of municipal waste that has been separated out and processed for use as fuel (40 CFR 60.51a).
- *Refuse Derived Fuel* - a type of municipal solid waste produced by processing municipal solid waste through shredding and size classification. This includes all classes of refuse-derived fuel including low-density fluff refuse-derived fuel through densified refuse derived fuel and pelletized refuse- derived fuel (40 CFR 60.51b).
- *Refuse-Derived Fuel* - a type of municipal solid waste produced by processing municipal solid waste through shredding and size classification. That includes all classes of refuse-derived fuel including two fuels (40 CFR 60.1465, 60.2977, and 62.14840) **[Added April 2001; Revised January 2004]**:
  1. Low-density fluff refuse-derived fuel through densified refuse-derived fuel.
  2. Pelletized refuse-derived fuel.
- *Regenerative Cycle Combustion Turbine* - any stationary combustion turbine which recovers heat from the combustion turbine exhaust gases to preheat the inlet combustion air to the combustion turbine (40 CFR 60.4420) **[Added April 2009]**.
- *Regenerative Cycle Gas Turbine* - any stationary gas turbine which recovers heat from the gas turbine exhaust gases to preheat the inlet combustion air to the gas turbine (40 CFR 60.331) **[Added October 2004]**.
- *Regenerative/Recuperative Cycle Stationary Combustion Turbine* - any stationary combustion turbine that recovers heat from the stationary combustion turbine exhaust gases using an exhaust heat exchanger to preheat the combustion air entering the combustion chamber of the stationary combustion turbine (40 CFR 63.6175) **[Added April 2004]**.

- *Regional Water and/or Wastewater Projects* – these include construction, operation, and maintenance of water or wastewater conveyances, water or wastewater treatment facilities, and water storage reservoirs which affect a large portion of a nonattainment or maintenance area (40 CFR 93.152) **[Added April 2009]**.
- *Regionally Significant Action* - a Federal action for which the direct and indirect emissions of any pollutant represent 10 percent or more of a nonattainment or maintenance area's emission inventory for that pollutant (40 CFR 93.152) **[Added April 2009]**.
- *Regular Grade Gasoline* - gasoline having an antiknock index, i.e., octane rating, greater than or equal to 85 and less than 88. This definition applies to the regular grade categories of Conventional-Summer, Conventional-Winter, Reformulated-Summer, and Reformulated-Winter. For regular grade categories of RBOB-Summer, RBOB-Winter, CBOB-Summer, and CBOB-Winter, this definition refers to the expected octane rating of the finished gasoline after oxygenate has been added to the RBOB or CBOB (40 CFR 98.6) **[Added January 2010]**.
- *Regulated Gas Stream* - an offgas stream that is routed to a boiler or process heater for the purpose of achieving compliance with a standard under another subpart of this part or part 60, part 61, or part 65 of this chapter (40 CFR 63.7575) **[Added April 2013]**.
- *Regulated Gas Stream* - an offgas stream that is routed to a boiler for the purpose of achieving compliance with a standard under another subpart of 40 CFR 63 or part 60, part 61, or part 65 of this chapter (40 CFR 63.11237) **[Added April 2013]**.
- *Regulated Substance* - any substance listed pursuant to section 112(r)(3) of the *Clean Air Act* as amended, in 40 CFR 68.130 (40 CFR 68.3) **[Added January 2005]**.
- *Regulatory Control Periods* - has the same meaning as defined in 40 CFR 80.27(a)(2)(ii) or in any State Implementation Plan (SIP) approved or promulgated under Sections 110 or 172 of the *Clean Air Act* (40 CFR 80.1500) **[Added October 2011]**.
- *Remediation Material* - a material that contains one or more of the HAP listed in Table 1 of 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US], and this material is one of the following (40 CFR 63.7957) **[Added April 2004]**:
  1. A material found in naturally occurring media such as soil, groundwater, surface water, sediments, or a mixture of such materials with liquids, sludges, or solids which is inseparable by simple mechanical removal processes and is made up primarily of media. This material does not include debris as defined in 40 CFR 268.2.
  2. A material found in intact or substantially intact containers, tanks, storage piles, or other storage units that requires clean up because this material poses a reasonable potential threat to contaminating media. Examples of these materials include, but are not limited to, solvents, oils, paints, and other volatile or semi-volatile organic liquids found in buried drums, cans, or other containers; gasoline, fuel oil, or other fuels in leaking underground storage tanks; and solid materials containing volatile or semi-volatile organics in unused or abandoned piles. Remediation material is not a waste or residue generated by routine equipment maintenance activities performed at a facility such as, but not limited to, tank bottoms and sludges removed during tank cleanouts; sludges and sediments removed from active wastewater treatment tanks, surface impoundments, or lagoons; spent catalyst removed from process equipment; residues removed from air pollution control equipment; and debris removed during heat exchanger and pipeline cleanouts.
- *Remediation Material Management Unit* - a tank, container, surface impoundment, oil-water separator, organic-water separator, or transfer system used to remove, destroy, degrade, transform, immobilize, or otherwise manage remediation material (40 CFR 63.7957) **[Added April 2004]**.
- *Remediation Material Service* - any time when a pump, compressor, agitator, pressure relief device, sampling connection system, open-ended valve or line, valve, connector, or instrumentation system contains or contacts remediation material (40 CFR 63.7957) **[Added April 2004]**.

- *Remote Reservoir Cold Cleaning Machine* - any device in which liquid solvent is pumped to a sink- like work area that drains solvent back into an enclosed container while parts are being cleaned, allowing no solvent to pool in the work area (40 CFR 63.461).
- *Remote Areas of Alaska* - areas of Alaska that meet either paragraph (1) or (2) of this definition (40 CFR 63.4219) **[Added October 2016]**.
  1. Areas of Alaska that are not accessible by the Federal Aid Highway System (FAHS).
  2. Areas of Alaska that meet all of the following criteria:
    - a. The only connection to the FAHS is through the Alaska Marine Highway System, or the stationary CI ICE operation is within an isolated grid in Alaska that is not connected to the statewide electrical grid referred to as the Alaska Railbelt Grid.
    - b. At least 10 percent of the power generated by the stationary CI ICE on an annual basis is used for residential purposes.
    - c. The generating capacity of the source is less than 12 megawatts, or the stationary CI ICE is used exclusively for backup power for renewable energy.
- *Remote Reservoir Continuous Web Cleaning Machine* - a continuous web cleaning machine in which there is no exposed solvent sump. In these units, the solvent is pumped from an enclosed chamber and is typically applied to the continuous web part through a nozzle or series of nozzles. The solvent then drains from the part and is collected and recycled through the sump, allowing no solvent to pool in the work or cleaning area (40 CFR 63.461) **[Added October 1999]**.
- *Remote Stationary RICE* - stationary RICE meeting any of the following criteria (40 CFR 63.6675) **[Added April 2013]**:
  1. Stationary RICE located in an offshore area that is beyond the line of ordinary low water along that portion of the coast of the United States that is in direct contact with the open seas and beyond the line marking the seaward limit of inland waters.
  2. Stationary RICE located on a pipeline segment that meets both of the criteria in paragraphs (2)(i) and (ii) of this definition.
    - (i) A pipeline segment with 10 or fewer buildings intended for human occupancy and no buildings with four or more stories within 220 yards (200 meters) on either side of the centerline of any continuous 1-mile (1.6 kilometers) length of pipeline. Each separate dwelling unit in a multiple dwelling unit building is counted as a separate building intended for human occupancy.
    - (ii) The pipeline segment does not lie within 100 yards (91 meters) of either a building or a small, well-defined outside area (such as a playground, recreation area, outdoor theater, or other place of public assembly) that is occupied by 20 or more persons on at least 5 days a week for 10 weeks in any 12-month period. The days and weeks need not be consecutive. The building or area is considered occupied for a full day if it is occupied for any portion of the day.
    - (iii) For purposes of this paragraph (2), the term pipeline segment means all parts of those physical facilities through which gas moves in transportation, including but not limited to pipe, valves, and other appurtenance attached to pipe, compressor units, metering stations, regulator stations, delivery stations, holders, and fabricated assemblies. Stationary RICE located within 50 yards (46 meters) of the pipeline segment providing power for equipment on a pipeline segment are part of the pipeline segment. Transportation of gas means the gathering, transmission, or distribution of gas by pipeline, or the storage of gas. A building is intended for human occupancy if its primary use is for a purpose involving the presence of humans.

Stationary RICE that are not located on gas pipelines and that have 5 or fewer buildings intended for human occupancy and no buildings with four or more stories within a 0.25 mile radius around the engine. A building is intended for human occupancy if its primary use is for a purpose involving the presence of humans.
- *Rendered Animal Fat, or Tallow* - fats extracted from animals which are generally used as a feedstock in making biodiesel (40 CFR 98.6) **[Added January 2010]**.

- *Replacement In Kind* - a replacement that satisfies the design specifications (40 CFR 68.3) [**Added January 2005**].
- *Reporting Year* – effective 1 January 2018, this is the calendar year during which the GHG data are required to be collected for purposes of the annual GHG report. For example, reporting year 2014 is 1 January 2014 through 31 December 2014, and the annual report for reporting year 2014 is submitted to EPA on 31 March 2015 (40 CFR 98.6) [**Added January 2017**].
- *Research and Development* - an operation whose primary purpose is for research and development of new processes and products, that is conducted under the close supervision of technically trained personnel, and is not involved in the manufacture of final or intermediate products for commercial purposes, except in a de minimis manner (40 CFR 63.742) [**Added January 1999**].
- *Research and Development* - those activities conducted in process units or at laboratory bench-scale settings whose purpose is to conduct research and development for new processes, technologies, or products and whose purpose is not for the manufacture of products for commercial sale, except in a de minimis manner (40 CFR 98.6) [**Added January 2010**].
- *Research and Development Facility* - laboratory and pilot plant operations whose primary purpose is to conduct research and development into new processes and products, where the operations are under the close supervision of technically trained personnel, and which are not engaged in the manufacture of products for commercial sale, except in a de minimis manner (40 CFR 63.2406) [**Added April 2004**].
- *Research And Laboratory Activities* - surface coating or paint stripping activities that meet one of the following criteria (40 CFR 63.11180) [**Added April 2011**]:
  1. Conducted at a laboratory to analyze air, soil, water, waste, or product samples for contaminants, or environmental impact.
  2. Activities conducted to test more efficient production processes, including alternative paint stripping or surface coating materials or application methods, or methods for preventing or reducing adverse environmental impacts, provided that the activities do not include the production of an intermediate or final product for sale or exchange for commercial profit.
  3. Activities conducted at a research or laboratory facility that is operated under the close supervision of technically trained personnel, the primary purpose of which is to conduct research and development into new processes and products and that is not engaged in the manufacture of products for sale or exchange for commercial profit.
- *Research or Laboratory Facility* - any stationary source whose primary purpose is to conduct research and development into new processes and products, where such source is operated under the close supervision of technically trained personnel and is not engaged in the manufacture of products for commercial sale in commerce, except in a de minimis matter (40 CFR 63.6175) [**Added April 2004**].
- *Residence* – any home, house, apartment building, or other place of dwelling which is occupied during any portion of the relevant year (40 CFR 61.91(d)) [**Added July 2006**].
- *Residence* - any dwelling or housing in which people reside excluding short-term housing that is occupied by the same person for a period of less than 180 days (such as a hotel room) (40 CFR 63.321) [**Added October 2006**].
- *Residential Boiler* - a boiler used to provide heat and/or hot water and/or as part of a residential combined heat and power system. This definition includes boilers located at an institutional facility (e.g., university campus, military base, church grounds) or commercial/industrial facility (e.g., farm) used primarily to provide heat and/or hot water for: (40 CFR 63.7575 and 63.11237) [**Added April 2013**].

1. A dwelling containing four or fewer families; or

2. A single unit residence dwelling that has since been converted or subdivided into condominiums or apartments.
- *Residential/Commercial/Institutional Emergency Stationary RICE* - an emergency stationary RICE used in residential establishments such as homes or residences, commercial establishments such as office buildings, hotels, or stores, or institutional establishments such as medical centers, research centers, and institutions of higher education (40 CFR 63.6675) **[Added April 2010]**.
  - *Residential Emergency Stationary RICE* - an emergency stationary RICE used in residential establishments such as homes or apartment buildings (40 CFR 63.6675) **[Added October 2010]**.
  - *Residual Fuel Oil No. 5 (Navy Special)* - a classification for the heavier fuel oil generally used in steam powered vessels in government service and inshore power plants. It has a minimum flash point of 131 °F (40 CFR 98.6) **[Added January 2010]**.
  - *Residual Fuel Oil No. 6 (a.k.a. Bunker C)* - a classification for the heavier fuel oil generally used for the production of electric power, space heating, vessel bunkering and various industrial purposes. It has a minimum flash point of 140 °F (40 CFR 98.6) **[Added January 2010]**.
  - *Residual Oil* - crude oil, fuel oil that does not comply with the specifications under the definition of distillate oil, and all fuel oil numbers 4, 5, and 6, as defined by the American Society for Testing and Materials in ASTM D396 (incorporated by reference, see 40 CFR 60.17) (40 CFR 60.41c) **[Added July 2007]**.
  - *Residual Oil* - crude oil, fuel oil that does not comply with the specifications under the definition of distillate oil, and all fuel oil numbers 4, 5, and 6, as defined by the American Society of Testing and Materials in ASTM D396-10 (incorporated by reference, see 40 CFR 63.14(b)) (40 CFR 63.7575 and 63.11237) **[Added April 2013]**.
  - *Residuum* - residue from crude oil after distilling off all but the heaviest components, with a boiling range greater than 1,000 °F (40 CFR 98.6) **[Added January 2010]**.
  - *Responsible Official* - responsible official as defined in 40 CFR 70.2 and 40 CFR 71.2, as applicable (40 CFR 63.2406) **[Added April 2004]**.
  - *Responsible Official* - responsible official as defined in 40 CFR 70.2 (40 CFR 63.6675, 63.7575, 63.7957, 63.9375, and 63.11237) **[Added April 2004; Citation Revised April 2011]**.
  - *Retail Facility* - a stationary source at which more than one-half of the income is obtained from direct sales to end users or at which more than one-half of the fuel sold, by volume, is sold through a cylinder exchange program (40 CFR 68.3) **[Added January 2005]**.
  - *Retail Outlet* - any establishment at which gasoline, diesel fuel, methanol, natural gas or liquefied petroleum gas is sold or offered for sale for use in motor vehicles or nonroad engines, including locomotive engines or marine engines (40 CFR 80.2(j) and 80.1500) **[Added October 2011]**.
  - *Retailer* - any person who owns, leases, operates, controls, or supervises a retail outlet (40 CFR 80.2(k) and 80.1500) **[Added October 2011]**.
  - *Retailer* - a person to whom a product is delivered or sold, if such delivery or sale is for purposes of sale or distribution in commerce to consumers who buy such product for purposes other than resale (40 CFR 82.104(u)) **[Added July 2004]**
  - *Retire* - when referring to an appliance, means the removal of the refrigerant and the disassembly or impairment of the refrigerant circuit such that the appliance as a whole is rendered unusable by any person in the future (40 CFR 82.152) **[Added January 2017]**.

- *Retrofit* - to convert an appliance from one refrigerant to another refrigerant. Retrofitting includes the conversion of the appliance to achieve system compatibility with the new refrigerant and may include, but is not limited to, changes in lubricants, gaskets, filters, driers, valves, o-rings or appliance components (40 CFR 82.152) **[Added January 2017]**.
- *Rich Burn Engine* - any four-stroke spark ignited engine where the manufacturer's recommended operating air/fuel ratio divided by the stoichiometric air/fuel ratio at full load conditions is less than or equal to 1.1. Engines originally manufactured as rich burn engines, but modified prior to 19 December 2002 with passive emission control technology for NO<sub>x</sub> (such as pre-combustion chambers) will be considered lean burn engines. Also, existing engines where there are no manufacturer's recommendations regarding air/fuel ratio will be considered a rich burn engine if the excess oxygen content of the exhaust at full load conditions is less than or equal to 2 percent (40 CFR 63.6675) **[Added July 2004]**.
- *Risk Specific Concentration* - the allowable increase in the average daily ground level ambient air concentrations for a pollutant from the incineration of sewage sludge at or beyond the property line of the site where the sewage sludge incinerator is located (40 CFR 503.41(i)).
- *Road Oil* - any heavy petroleum oil, including residual asphaltic oil used as a dust palliative and surface treatment on roads and highways. It is generally produced in six grades, from 0, the most liquid, to 5, the most viscous (40 CFR 98.6) **[Added January 2010]**.
- *Rocket Engine* - a device consisting of a combustion chamber in which materials referred to as propellants, which provide both the fuel and the oxygen for combustion, are burned. Combustion gases escape through a nozzle, providing thrust (40 CFR 63.9375) **[Added July 2003]**.
- *Rolling Average* - the average of all data collected during the applicable averaging period. For demonstration of compliance with a CO CEMS-based emission limit based on CO concentration a 30-day (10-day) rolling average is comprised of the average of all the hourly average concentrations over the previous 720 (240) operating hours calculated each operating day. To demonstrate compliance on a 30-day rolling average basis for parameters other than CO, you must indicate the basis of the 30-day rolling average period you are using for compliance, as discussed in 40 CFR 63.7545(e)(2)(iii). If you indicate the 30 operating day basis, you must calculate a new average value each operating day and shall include the measured hourly values for the preceding 30 operating days. If you select the 720 operating hours basis, you must average of all the hourly average concentrations over the previous 720 operating hours calculated each operating day (40 CFR 63.7575) **[Added January 2016]**.
- *Room Enclosure* - a stationary structure that encloses a transfer machine system and is vented to a carbon adsorber or an equivalent control device during operation of the transfer machine system (40 CFR 63.321).
- *Root Cause* - a fundamental, underlying, system-related reason why an incident occurred (40 CFR 68.3) **[Added April 2017]**.
- *Rotary Internal Combustion Engine* - any internal combustion engine which uses rotary motion to convert heat energy into mechanical work (40 CFR 60.4219) **[Added October 2006]**.
- *SF<sub>6</sub>* - sulfur hexafluoride.
- *Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU)*. Signed on August 10, 2005 SAFETEA-LU authorizes the Federal surface transportation programs for highways, highway safety, and transit for the 5-yr period 2005-2009. SAFETEA-LU includes the following **[Added October 2005]**:
  1. Significant new environmental requirements for the Statewide and Metropolitan Planning process.
  2. Modifications intended to provide greater flexibility in transportation planning and air quality conformity, without reducing protection for air quality.
- *Safety Device* - a closure device such as a pressure relief valve, frangible disc, fusible plug, or any other type of device that functions exclusively to prevent physical damage or permanent deformation to a unit or its air emission

control equipment by venting gases or vapors directly to the atmosphere during unsafe conditions resulting from an unplanned, accidental, or emergency event (40 CFR 63.2406) **[Added April 2004]**.

- *Safety Device* - a closure device such as a pressure relief valve, frangible disc, fusible plug, or any other type of device which functions to prevent physical damage or permanent deformation to equipment by venting gases or vapors during unsafe conditions resulting from an unplanned, accidental, or emergency event. For the purpose of 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US], a safety device is not used for routine venting of gases or vapors from the vapor headspace underneath a cover such as during filling of the unit or to adjust the pressure in this vapor headspace in response to normal daily diurnal ambient temperature fluctuations. A safety device is designed to remain in a closed position during normal operations and open only when the internal pressure, or another relevant parameter, exceeds the device threshold setting applicable to the equipment as determined by the owner or operator based on manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, combustible, explosive, reactive, or hazardous materials (40 CFR 63.7957) **[Added April 2004]**.
- *Safety Device* - a closure device such as a pressure relief valve, frangible disc, fusible plug, or any other type of device which functions exclusively to prevent physical damage or permanent deformation to a unit or its air emission control equipment by venting gases or vapors directly to the atmosphere during unsafe conditions resulting from an unplanned, accidental, or emergency event. A safety device is not used for routine venting of gases or vapors from the vapor headspace underneath a cover such as during filling of the unit or to adjust the pressure in response to normal daily diurnal ambient temperature fluctuations. A safety device is designed to remain in a closed position during normal operations and open only when the internal pressure, or another relevant parameter, exceeds the device threshold setting applicable to the air emission control equipment as determined by the owner or operator based on manufacturer recommendations, applicable regulations, fire protection and prevention codes and practices, or other requirements for the safe handling of flammable, combustible, explosive, reactive, or hazardous materials (40 CFR 98.6) **[Added January 2010]**.
- *Same Location* - the same or contiguous property that is under common ownership or control including properties that are separated only by a street, road, highway, or other public right of way. Common ownership or control includes properties that are owned, leased, or operated by the same entity, parent entity, subsidiary, subdivision, or any combination thereof including any municipality or other governmental unit (40 CFR 60.51b).
- *Same Location* - the same or contiguous properties under common ownership or control, including those separated only by a street, road, highway, or other public right-of-way. Common ownership or control includes properties that are owned, leased, or operated by the same entity, parent entity, subsidiary, subdivision, or any combination thereof. Entities may include a municipality, other governmental unit, or any quasi-governmental authority (for example, a public utility district or regional authority for waste disposal) (40 CFR 60.1465) **[Added April 2001]**.
- *Seasonal Boiler* - a boiler that undergoes a shutdown for a period of at least 7 consecutive months (or 210 consecutive days) each 12-mo period due to seasonal conditions, except for periodic testing. Periodic testing shall not exceed a combined total of 15 days during the 7-mo shutdown. This definition only applies to boilers that would otherwise be included in the biomass subcategory or the oil subcategory (40 CFR 63.11237) **[Added April 2013]**.
- *Seasonal Variance* - the removal of refrigerant from an appliance due to a change in ambient conditions caused by a change in season, followed by the subsequent addition of an amount that is less than or equal to the amount of refrigerant removed in the prior change in season, where both the removal and addition of refrigerant occurs within one consecutive 12-month period (40 CFR 82.152) **[Added January 2017]**
- *Second Calendar Half* - the period that starts on July 1 and ends on December 31 in any year (40 CFR 60.1465) **[Added April 2001]**.
- *Secondary Chamber* - a component of the HMIWI that receives combustion gases from the primary chamber and in which the combustion process is completed (40 CFR 60.51c and 62.14490) **[Added October 2000]**.

- *Secondary Material* - the material as defined in 40 CFR 241.2 of this chapter (40 CFR 63.7575) [**Added April 2013**].
- *Secondary Treatment* - treatment processes, typically biological, designed to reduce the concentrations of dissolved and colloidal organic matter in wastewater (40 CFR 63.1583) [**Added January 2000**].
- *Self-contained Recovery Equipment* - refrigerant recovery and/or recycling equipment that is capable of removing the refrigerant from an appliance without the assistance of components contained in the appliance (40 CFR 82.152) [**Revised January 2017**].
- *Self-priming Topcoat* - a topcoat that is applied directly to an uncoated aerospace vehicle or component for purposes of corrosion prevention, environmental protection, and functional fluid resistance. More than one layer of identical coating formulation may be applied to the vehicle or component (40 CFR 63.742) [**Added January 1999**].
- *Semi-aqueous Cleaning Solvent* - a solution in which water is a primary ingredient (60 percent of the solvent solution as applied must be water) (40 CFR 63.742) [**Added January 1999**].
- *Semi-refined Petroleum Product* - all oils requiring further processing. Included in this category are unfinished oils which are produced by the partial refining of crude oil and include the following: naphthas and lighter oils; kerosene and light gas oils; heavy gas oils; and residuum, and all products that require further processing or the addition of blendstocks (40 CFR 98.6) [**Added January 2010**].
- *Self-sealing Valve* - a valve affixed to a container of refrigerant that automatically seals when not dispensing refrigerant and meets or exceeds established performance criteria as identified in 40 CFR 82.154(c)(2) (40 CFR 82.152) [**Added January 2017**].
- *Sendout* - in the context of a local distribution company, the total deliveries of natural gas to customers over a specified time interval (typically hour, day, month, or year). Sendout is the sum of gas received through the city gate, gas withdrawn from on-system storage or peak shaving plants, and gas produced and delivered into the distribution system; and is net of any natural gas injected into on-system storage. It comprises gas sales, exchange, deliveries, gas used by company, and unaccounted for gas. Sendout is measured at the city gate station, and other on-system receipt points from storage, peak shaving, and production (40 CFR 98.6) [**Added January 2010**].
- *Sensor* - a device that measures a physical quantity/quality or the change in a physical quantity/quality, such as temperature, pressure, flow rate, pH, or liquid level (40 CFR 98.6) [**Added January 2010**].
- *Separator* - a remediation material management unit, generally a tank, used to separate oil or organics from water. A separator consists of not only the separation unit but also the forebay and other separator basins, skimmers, weirs, grit chambers, sludge hoppers, and bar screens that are located directly after the individual drain system and prior to any additional treatment units such as an air flotation unit clarifier or biological treatment unit. Examples of a separator include, but are not limited to, an API separator, parallel-plate interceptor, and corrugated-plate interceptor with the associated ancillary equipment (40 CFR 63.7957) [**Added April 2004**].
- *Service Involving Refrigerant* - any service during which discharge or release of refrigerant from the MVAC or MVAC-like appliance to the atmosphere can reasonably be expected to occur. Service involving refrigerant includes any service in which an MVAC or MVAC-like appliance is charged with refrigerant but no other service involving refrigerant is performed (i.e., a top-off) (40 CFR 82.32(h)) [**Added December 1997**].
- *Sewage Sludge* - solid, semi-solid, or liquid residue generated during the treatment of domestic sewage in a treatment works. Sewage sludge includes, but is not limited to, domestic septage; scum or solids removed in primary, secondary, or advanced wastewater treatment processes; and a material derived from sewage sludge. Sewage sludge does not include ash generated during the firing of sewage sludge in a sewage sludge incineration unit or grit and screenings generated during preliminary treatment of domestic sewage in a treatment works (40 CFR 60.4930) [**Added April 2011**].

- *Sewage Sludge Feed Rate* - either the average daily amount of sewage sludge fired in all sewage sludge incinerators within the property line of the site where the sewage sludge incinerators are located for the numbers of days in a 365-day period that each sewage sludge incinerator operates, or the average daily design capacity for all sewage sludge incinerators within the property line of the site where the sewage sludge incinerators are located (40 CFR 503.41(j)).
- *Sewage Sludge Feed Rate* - the rate at which sewage sludge is fed into the incinerator unit (40 CFR 60.4930) **[Added April 2011]**.
- *Sewage Sludge Incineration (SSI) Unit* - an incineration unit combusting sewage sludge for the purpose of reducing the volume of the sewage sludge by removing combustible matter. Sewage sludge incineration unit designs include fluidized bed and multiple hearth. A SSI unit also includes, but is not limited to, the sewage sludge feed system, auxiliary fuel feed system, grate system, flue gas system, waste heat recovery equipment, if any, and bottom ash system. The SSI unit includes all ash handling systems connected to the bottom ash handling system. The combustion unit bottom ash system ends at the truck loading station or similar equipment that transfers the ash to final disposal. The SSI unit does not include air pollution control equipment or the stack (40 CFR 60.4930) **[Added April 2011]**.
- *Sewage Sludge Incinerator* - an enclosed device in which only sewage sludge and auxiliary fuel are fired (40 CFR 503.41(k)).
- *Shift Supervisor* - the person who is in direct charge and control of operating a municipal waste combustion unit and who is responsible for onsite supervision, technical direction, management, and overall performance of the municipal waste combustion unit during an assigned shift (40 CFR 60.1465) **[Added April 2001]**.
- *Shutdown* - the period of time after all waste has been combusted in the primary chamber. For continuous HMIWI, shutdown must commence no less than 2 hours after the last charge to the incinerator. For intermittent HMIWI, shutdown must commence no less than 4 hours after the last charge to the incinerator. For batch HMIWI, shutdown must commence no less than 5 hours after the high-air phase of combustion has been completed (40 CFR 62.14490) **[Added October 2000]**.
- *Shutdown* - the period of time after all waste has been combusted in the primary chamber. For continuous OSWI, shutdown shall commence no less than 2 h after the last charge to the incinerator. For intermittent OSWI, shutdown shall commence no less than 4 h after the last charge to the incinerator. For batch OSWI, shutdown shall commence no less than 5 h after the high-air phase of combustion has been completed (40 CFR 60.2977) **[Added January 2006]**.
- *Shutdown* - the period of time after all waste has been combusted in the primary chamber (40 CFR 62.14840) **[Added January 2004]**.
- *Shutdown* - the cessation of operation of an OLD affected source, or portion thereof (other than as part of normal operation of a batch-type operation), including equipment required or used to comply with 40 CFR 63, Subpart EEEE, or the emptying and degassing of a storage tank. Shutdown as defined here includes, but is not limited to, events that result from periodic maintenance, replacement of equipment, or repair (40 CFR 63.2406) **[Added April 2004; Revised January 2007]**.
- *Shutdown* - the period in which cessation of operation of a boiler is initiated for any purpose. Shutdown begins when the boiler no longer supplies useful thermal energy (such as steam or hot water) for heating, cooling, or process purposes or generates electricity, or when no fuel is being fed to the boiler, whichever is earlier. Shutdown ends when the boiler no longer supplies useful thermal energy (such as steam or hot water) for heating, cooling, or process purposes or generates electricity, and no fuel is being combusted in the boiler (40 CFR 63.11237) **[Added April 2013, Revised October 2016]**.
- *Shutdown* - the cessation of operation of an emission source for any purpose (40 CFR 98.6) **[Added January 2010]**.

- *Shutdown* - the period of time after all sewage sludge has been combusted in the primary chamber (40 CFR 60.4930) **[Added April 2011]**.
- *Shutdown* - the period in which cessation of operation of a boiler or process heater is initiated for any purpose. Shutdown begins when the boiler or process heater no longer supplies useful thermal energy (such as heat or steam) for heating, cooling, or process purposes and/or generates electricity or when no fuel is being fed to the boiler or process heater, whichever is earlier. Shutdown ends when the boiler or process heater no longer supplies useful thermal energy (such as steam or heat) for heating, cooling, or process purposes and/or generates electricity, and no fuel is being combusted in the boiler or process heater (40 CFR 62.7575) **[Added January 2016]**.
- *Silicon Carbide* - an artificial abrasive produced from silica sand or quartz and petroleum coke (40 CFR 98.6) **[Added January 2010]**.
- *Simple Cycle Combustion Turbine* - any stationary combustion turbine which does not recover heat from the combustion turbine exhaust gases to preheat the inlet combustion air to the combustion turbine, or which does not recover heat from the combustion turbine exhaust gases for purposes other than enhancing the performance of the combustion turbine itself (40 CFR 60.4420) **[Added April 2009]**.
- *Simple Cycle Gas Turbine* - any stationary gas turbine which does not recover heat from the gas turbine exhaust gases to preheat the inlet combustion air to the gas turbine, or which does not recover heat from the gas turbine exhaust gases to heat water or generate steam (40 CFR 60.331) **[Added October 2004]**.
- *Simple Cycle Stationary Combustion Turbine* - any stationary combustion turbine that does not recover heat from the stationary combustion turbine exhaust gases (40 CFR 63.6175) **[Added April 2004]**.
- *Site-rated HP* - the maximum manufacturer's design capacity at engine site conditions (40 CFR 63.6675) **[Added July 2004]**.
- *Site Remediation* - one or more activities or processes used to remove, destroy, degrade, transform, immobilize, or otherwise manage remediation material. The monitoring or measuring of contamination levels in environmental media using wells or by sampling is not considered to be a site remediation (40 CFR 63.7957) **[Added April 2004]**.
- *Site Remediation Sources* –40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US] applies to each new, reconstructed, or existing affected source for site remediation as designated in the following (40 CFR 63.7882(a)) **[Added April 2004]**:
  1. Process vents. The affected source is the entire group of process vents associated with the in-situ and ex-situ remediation processes used at your site to remove, destroy, degrade, transform, or immobilize hazardous substances in the remediation material subject to remediation. Examples of such in-situ remediation processes include, but are not limited to, soil vapor extraction and bioremediation processes. Examples of such ex-situ remediation processes include but are not limited to, thermal desorption, bioremediation, and air stripping processes.
  2. Remediation material management units. Remediation material management unit means a tank, surface impoundment, container, oil-water separator, organic-water separator, or transfer system, as defined in 40 CFR 63.7957, and is used at your site to manage remediation material. The affected source is the entire group of remediation material management units used for the site remediations at your site. For the purpose of 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US], a tank or container that is also equipped with a vent that serves as a process vent, as defined in 40 CFR 63.7957, is not a remediation material management unit, but instead this unit is considered to be a process vent affected source under paragraph 1.
  3. Equipment leaks. The affected source is the entire group of equipment components (pumps, valves, etc.) used to manage remediation materials and meeting both of the conditions specified in paragraphs a and b. If either of these conditions do not apply to an equipment component, then that component is not part of the affected source for equipment leaks.

- a. The equipment component contains or contacts remediation material having a concentration of total HAP listed in Table 1 of 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US] equal to or greater than 10 percent by weight.
  - b. The equipment component is intended to operate for 300 h or more during a calendar year in remediation material service, as defined in 40 CFR 63.7957.
- *Sloped Grate* - a unit where the solid fuel is fed to the top of the grate from where it slides downwards; while sliding the fuel first dries and then ignites and burns. The ash is deposited at the bottom of the grate. Fluidized bed, dutch oven, pile burner, hybrid suspension grate, suspension burners, and fuel cells are not considered to be a sloped grate design (40 CFR 63.7575) [**Added April 2013**].
- *Sludge* - sludge as defined in 40 CFR 260.10 (40 CFR 63.7957) [**Added April 2004**].
- *Small Appliance* - any appliance that is fully manufactured, charged, and hermetically sealed in a factory with 5 lbs or less of refrigerant, including, but not limited to, refrigerators and freezers (designed for home, commercial, or consumer use), medical or industrial research refrigeration equipment, room air conditioners (including window air conditioners, portable air conditioners, and packaged terminal air heat pumps), dehumidifiers, under-the-counter ice makers, vending machines, and drinking water coolers (40 CFR 82.152) [**Revised October 2003; Revised January 2017**].
- *Small HMIWI* (40 CFR 60.51c and 62.14490) [**Added October 2000**]:
  - 1. Except as provided in paragraph (2):
    - a. an HMIWI whose maximum design waste burning capacity is less than or equal to 200 lb/h
    - b. a continuous or intermittent HMIWI whose maximum charge rate is less than or equal to 200 lb/h
    - c. a batch HMIWI whose maximum charge rate is less than 1600 lb/day.
  - 2. The following are not small HMIWI:
    - a. a continuous or intermittent HMIWI whose maximum charge rate is more than 200 lb/h
    - b. a batch HMIWI whose maximum charge rate is more than 1600 lb/day.
- *Small Rural HMIWI* - a small HMIWI which is located more than 50 miles from the boundary of the nearest Standard Metropolitan Statistical Area and which burns less than 2,000 pounds per week of hospital waste and medical/ infectious waste (40 CFR 62.14490) [**Added October 2000**].
- *Softener* - a liquid that is applied to an aerospace vehicle or component to degrade coatings such as primers, topcoats, and specialty coatings specifically as a preparatory step to subsequent depainting by non-chemical based depainting equipment. Softeners may contain VOC but shall not contain any HAP as determined from MSDS's or manufacturer supplied information (40 CFR 63.742) [**Added January 1999; Revised January 2016**].
- *Soil* - unconsolidated earth material composing the superficial geologic strata (material overlying bedrock), consisting of clay, silt, sand, or gravel size particles (sizes as classified by the U.S. Soil Conservation Service), or a mixture of such materials with liquids, sludges, or solids which is inseparable by simple mechanical removal processes and is made up primarily of soil (40 CFR 63.7957) [**Added April 2004**].
- *Solid Fossil Fuel* - includes, but is not limited to, coal, coke, petroleum coke, and tire derived fuel (40 CFR 63.7575 and 63.11237) [**Revised April 2013**].
- *Solid Fuel* - any solid fossil fuel or biomass or bio-based solid fuel (40 CFR 63.7575 and 63.11237) [**Revised April 2013**].
- *Solid Storage* - the storage of manure, typically for a period of several months, in unconfined piles or stacks. Manure is able to be stacked due to the presence of a sufficient amount of bedding material or loss of moisture by evaporation (40 CFR 98.6) [**Added January 2010**].
- *Solid Waste* - any garbage, refuse, sludge from a waste treatment plant, water supply treatment plant, or air pollution control facility and other discarded material, including solid, liquid, semisolid, or contained gaseous

material resulting from industrial, commercial, mining, agricultural operations, and from community activities, but does not include solid or dissolved material in domestic sewage, or solid or dissolved materials in irrigation return flows or industrial discharges which are point sources subject to permits under section 402 of the Federal Water Pollution Control Act, as amended (86 Stat. 880), or source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954, as amended (68 Stat. 923). For purposes of 40 CFR 62, Subpart III [40 CFR 62.14500 through 62.14840, see checklist items AE.26.1.US through AE.26.10.US] and 40 CFR 60, Subpart DDDD: *Emissions Guidelines and Compliance Times for Commercial and Industrial Solid Waste Incineration Units That Commenced Construction On or Before 30 November 1999*, only, solid waste does not include the waste burned in the fifteen types of units described in 40 CFR 60.2555 and 40 CFR 62.14525 (40 CFR 62.14840) [Added January 2004].

- *Solid Waste* - any garbage, refuse, sludge from a waste treatment plant, water supply treatment plant, or air pollution control facility and other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from industrial, commercial, mining, agricultural operations, and from community activities, but does not include solid or dissolved material in domestic sewage, or solid or dissolved materials in irrigation return flows or industrial discharges that are point sources subject to permits under section 402 of the Federal Water Pollution Control Act, as amended (33 U.S.C. 1342), or source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954, as amended (42 U.S.C. 2014) (40 CFR 60.2977) [Added January 2006].
- *Solid Waste* - any garbage, refuse, sewage sludge from a waste treatment plant, water supply treatment plant, or air pollution control facility and other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from industrial, commercial, mining, agricultural operations, and from community activities, but does not include solid or dissolved material in domestic sewage, or solid or dissolved materials in irrigation return flows or industrial discharges which are point sources subject to permits under section 402 of the Federal Water Pollution Control Act, as amended (33 U.S.C. 1342), or source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954, as amended (42 U.S.C. 2014) (40 CFR 60.4930) [Added April 2011].
- *Solids* - the non-volatile portion of the coating that, after drying, makes up the dry film (40 CFR 63.742) [Added January 1999].
- *Solvent* - a fluid containing organic compounds used to perform paint stripping, surface prep, or cleaning of surface coating equipment (40 CFR 63.11180) [Added April 2011].
- *Solvent/Air Interface* - for a vapor-cleaning machine, the location of contact between the concentrated solvent vapor layer and the air. This location of contact is defined as the in-line height of the primary condenser coils. For a cold cleaning machine, it is the location of contact between the liquid solvent and the air (40 CFR 63.461).
- *Solvent-cleaning Machine* - any device or piece of equipment that uses halogenated HAP solvent liquid or vapor to remove soils from the surface of materials. Types of solvent-cleaning machines include, but are not limited to, batch vapor, in-line vapor, in-line cold, and batch cold solvent-cleaning machines. Buckets, pails, and beakers with capacities of 7.6 L (2 gal) or less are not considered solvent-cleaning machines (40 CFR 63.461).
- *Solvent Yellow 124* - Nethyl-N-[2-[1-(2-methylpropoxy)ethoxyl]-4-phenylazo]-benzeneamine (40 CFR 80.2(rrr)) [Added October 2011].
- *Sour Gas* - any gas that contains significant concentrations of hydrogen sulfide. Sour gas may include untreated fuel gas, amine stripper off-gas, or sour water stripper gas (40 CFR 98.6) [Added January 2010].
- *Source Facility* - the location at which a used controlled substance was recovered from a piece of equipment, including the name of the company responsible for, or owning the piece of equipment, a contact person at the location, the mailing address for that specific location, and a phone number and a fax number for the contact person at the location (40 CFR 82.3) [Added April 2003].

- *Space Vehicle* - a man-made device, either manned or unmanned, designed for operation beyond earth's atmosphere. This definition includes integral equipment such as models, mock-ups, prototypes, molds, jigs, tooling, hardware jackets, and test coupons. Also included is auxiliary equipment associated with test, transport, and storage, which, through contamination, can compromise the space vehicle performance (40 CFR 63.742) **[Added January 1999]**.
- *Space Vehicle* - a man-made device, either manned or unmanned, designed for operation beyond earth's atmosphere. This definition includes integral equipment such as models, mock-ups, prototypes, molds, jigs, tooling, hardware jackets, and test coupons. Also included is auxiliary equipment associated with tests, transport, and storage, which through contamination can compromise the space vehicle performance (40 CFR 82.3) **[Added April 2003]**.
- *Space Vehicle* - vehicles designed to travel beyond the limit of the earth's atmosphere, including but not limited to satellites, space stations, and the Space Shuttle System (including orbiter, external tanks, and solid rocket boosters) (40 CFR 63.11180) **[Added April 2011]**.
- *Spare Parts* - those parts that are supplied by a manufacturer to another manufacturer, distributor, or retailer, for purposes of replacing similar parts with such parts in the repair of a product (40 CFR 82.104(v)) **[Added July 2004]**
- *Spark Ignition* - relating to a gasoline, natural gas, or liquefied petroleum gas fueled engine or any other type of engine with a spark plug (or other sparking device) and with operating characteristics significantly similar to the theoretical Otto combustion cycle. Spark ignition engines usually use a throttle to regulate intake air flow to control power during normal operation. Dual-fuel engines in which a liquid fuel (typically diesel fuel) is used for CI and gaseous fuel (typically natural gas) is used as the primary fuel at an annual average ratio of less than 2 parts diesel fuel to 100 parts total fuel on an energy equivalent basis are spark ignition engines (40 CFR 60.4219) **[Added October 2006]**.
- *Spark Ignition* - relating to either: A gasoline-fueled engine; or any other type of engine with a spark plug (or other sparking device) and with operating characteristics significantly similar to the theoretical Otto combustion cycle. Spark ignition engines usually use a throttle to regulate intake air flow to control power during normal operation. Dual-fuel engines in which a liquid fuel (typically diesel fuel) is used for CI and gaseous fuel (typically natural gas) is used as the primary fuel at an annual average ratio of less than 2 parts diesel fuel to 100 parts total fuel on an energy equivalent basis are spark ignition engines (40 CFR 63.6675) **[Added April 2008; Revised April 2011]**.
- *Special Naphthas* - all finished products with the naphtha boiling range (290° to 470 °F) that are generally used as paint thinners, cleaners or solvents. These products are refined to a specified flash point. Special naphthas include all commercial hexane and cleaning solvents conforming to ASTM Specification D1836-07, Standard Specification for Commercial Hexanes, and D235-02 (Reapproved 2007), Standard Specification for Mineral Spirits (Petroleum Spirits) (Hydrocarbon Dry Cleaning Solvent), respectively. Naphthas to be blended or marketed as motor gasoline or aviation gasoline, or that are to be used as petrochemical and synthetic natural gas (SNG) feedstocks are excluded (40 CFR 98.6) **[Added January 2010]**.
- *Specialty Coating* - a coating that, even though it meets the definition of a primer, topcoat, or self-priming topcoat, has additional performance criteria beyond those of primers, topcoats, and self-priming topcoats for specific applications. These performance criteria may include, but are not limited to, temperature or fire resistance, substrate compatibility, antireflection, temporary protection or marking, sealing, adhesively joining substrates, or enhanced corrosion protection. Individual specialty coatings are defined in Appendix A to 40 CFR 63, Subpart GG [40 CFR 63.741 through 63.759, see checklist items AE.170.1.US through AE.170.13.US] and in the CTG for Aerospace Manufacturing and Rework Operations (EPA 453/R-97-004) (40 CFR 63.742) **[Added January 1999]**.
- *Spot Stripping* - the depainting of an area where it is not technically feasible to use a nonchemical depainting technique (40 CFR 63.742) **[Added January 1999]**.

- *Spray-applied Coating Operations* - coatings that are applied using a hand-held device that creates an atomized mist of coating and deposits the coating on a substrate. For the purposes of this subpart, spray-applied coatings do not include the following materials or activities (40 CFR 63.11180) **[Added April 2011]**:
  1. Coatings applied from a hand-held device with a paint cup capacity that is equal to or less than 3.0 fluid ounces (89 cubic centimeters).
  2. Surface coating application using powder coating, hand-held, non-refillable aerosol containers, or non-atomizing application technology, including, but not limited to, paint brushes, rollers, hand wiping, flow coating, dip coating, electrodeposition coating, web coating, coil coating, touch-up markers, or marking pens.
  3. Thermal spray operations (also known as metallizing, flame spray, plasma arc spray, and electric arc spray, among other names) in which solid metallic or non-metallic material is heated to a molten or semi-molten state and propelled to the work piece or substrate by compressed air or other gas, where a bond is produced upon impact.
- *Spray-applied Coating Operation* - coatings that are applied using a device that creates an atomized mist of coating and deposits the coating on a substrate. For the purposes of this subpart, spray-applied coatings do not include the following materials or activities (40 CFR 63.742) **[Added January 2016]**:
  1. Coatings applied from a hand-held device with a paint cup capacity that is equal to or less than 3.0 fluid ounces (89 cubic centimeters) in which no more than 3.0 fluid ounces of coating is applied in a single application (*i.e.*, the total volume of a single coating formulation applied during any one day to any one aerospace vehicle or component). Under this definition, the use of multiple small paint cups and the refilling of a small paint cup to spray apply more than 3.0 fluid ounces of a coating is a spray-applied coating operation. Under this definition, the use of a paint cup liner in a reusable holder or cup that is designed to hold a liner with a capacity of more than 3.0 fluid ounces is a spray-applied coating operation.
  2. Application of coating using powder coating, hand-held nonrefillable aerosol containers, or nonatomizing application technology, including but not limited to paint brushes, rollers, flow coating, dip coating, electrodeposition coating, web coating, coil coating, touch-up markers, marking pens, trowels, spatulas, daubers, rags, sponges, mechanically and/or pneumatic-driven syringes, and inkjet machines.
  3. Application of adhesives, sealants, maskants, caulking materials, and inks.
- *Spray Gun* - a device that atomizes a coating or other material and projects the particulates or other material onto a substrate (40 CFR 63.742) **[Added January 1999]**.
- *Spreader Stoker, Mixed Fuel-Fired (Coal/Refuse-Derived Fuel) Combustion Unit* - a municipal waste combustion unit that combusts coal and refuse-derived fuel simultaneously, in which coal is introduced to the combustion zone by a mechanism that throws the fuel onto a grate from above. Combustion takes place both in suspension and on the grate (40 CFR 60.1465) **[Added April 2001]**.
- *Squeegee System* - a system that uses a series of pliable surfaces to remove the solvent film from the surfaces of the continuous web part. These pliable surfaces, called squeegees, are typically made of rubber or plastic media, and need to be periodically replaced to ensure continued proper function (40 CFR 63.461) **[Added October 1999]**.
- *Stabilization Process* - any physical or chemical process used to either reduce the mobility of contaminants in media or eliminate free liquids as determined by Test Method 9095--Paint Filter Liquids Test in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication No. SW-846, Third Edition, September 1986, as amended by Update I, November 15, 1992. (As an alternative, you may use any more recent, updated version of Method 9095 approved by the EPA). A stabilization process includes mixing remediation material with binders or other materials, and curing the resulting remediation material and binder mixture. Other synonymous terms used to refer to this process are fixation or solidification. A stabilization process does not include the adding of absorbent materials to the surface of remediation material, without mixing, agitation, or subsequent curing, to absorb free liquid (40 CFR 63.7957) **[Added April 2004]**.

- *Standard Conditions* - a temperature of 20 °C and a pressure of 101.3 kPa (40 CFR 60.51c, 60.2977, and 62.14490) **[Added October 2000]**.
- *Standard Conditions* - when referring to units of measure, means a temperature of 68 °F (20 °C) and a pressure of 1 atmosphere (101.3 kilopascals) (40 CFR 62.14840) **[Added January 2004]**.
- *Standard Conditions or Standard Temperature and Pressure (STP)* – either 60° or 68° Fahrenheit and 14.7 pounds per square inch absolute (40 CFR 98.6) **[Added January 2010; Revised January 2011]**.
- *Standard Conditions When Referring to Units of Measure* - a temperature of 20 °C and a pressure of 101.3 kilopascals (40 CFR 60.1465) **[Added April 2001]**.
- *Standard Metropolitan Statistical Area or SMSA* - any areas listed in OMB Bulletin No. 93-17 entitled “Revised Statistical Definitions for Metropolitan Areas” dated June 30, 1993. This information can also be obtained from the nearest Metropolitan Planning Organization (40 CFR 62.14490) **[Added October 2000]**.
- *Startup* - the period of time between the activation, including the firing of fuels (e.g., natural gas or distillate oil), of the system and the first feed to the unit (40 CFR 60.4930) **[Added April 2011]**.
- *Startup* – one of the following (40 CFR 63.7575) **[Added April 2013; Revised January 2016]**:
  1. either the first-ever firing of fuel in a boiler or process heater for the purpose of supplying useful thermal energy heating and/or producing electricity, or for any other purpose, or the firing of fuel in a boiler after a shutdown event for any purpose. Startup ends when any of the useful thermal energy from the boiler or process heater is supplied for heating, and/or producing electricity, or for any other purpose; or
  2. the period in which operation of a boiler or process heater is initiated for any purpose. Startup begins with either the first-ever firing of fuel in a boiler or process heater for the purpose of supplying useful thermal energy (such as steam or heat) for heating, cooling or process purposes, or producing electricity, or the firing of fuel in a boiler or process heater for any purpose after a shutdown event. Startup ends four hours after when the boiler or process heater supplies useful thermal energy (such as heat or steam) for heating, cooling, or process purposes, or generates electricity, whichever is earlier.
- *Startup* – for 40 CFR 63, Subpart JJJJJ (40 CFR 63.11237) **[Added April 2013, Revised October 2016]**:
  1. Either the first-ever firing of fuel in a boiler for the purpose of supplying useful thermal energy (such as steam or hot water) for heating and/or producing electricity, or for any other purpose, or the firing of fuel in a boiler after a shutdown event for any purpose. Startup ends when any of the useful thermal energy (such as steam or hot water) from the boiler is supplied for heating and/or producing electricity, or for any other purpose, or
  2. The period in which operation of a boiler is initiated for any purpose. Startup begins with either the first-ever firing of fuel in a boiler for the purpose of supplying useful thermal energy (such as steam or hot water) for heating, cooling or process purposes or producing electricity, or the firing of fuel in a boiler for any purpose after a shutdown event. Startup ends 4 hours after when the boiler supplies useful thermal energy (such as steam or hot water) for heating, cooling, or process purposes or generates electricity, whichever is earlier.
- *Startup Period* - the period of time between the activation of the system and the first charge to the OSWI unit. For batch OSWI, startup means the period of time between activation of the system and ignition of the waste (40 CFR 60.2977) **[Added January 2006]**.
- *State or Local Regulation* - a regulation at the State or local level that requires a hospital to reduce the quantity of ethylene oxide emissions from ethylene oxide sterilization units (40 CFR 63.10448) **[Added January 2008]**.
- *Stationary Combustion Turbine* - all equipment, including but not limited to the turbine, the fuel, air, lubrication and exhaust gas systems, control systems (except emissions control equipment), heat recovery system, and any ancillary components and sub-components comprising any simple cycle stationary combustion turbine, any

regenerative/recuperative cycle stationary combustion turbine, any combined cycle combustion turbine, and any combined heat and power combustion turbine based system. Stationary means that the combustion turbine is not self propelled or intended to be propelled while performing its function. It may, however, be mounted on a vehicle for portability (40 CFR 60.4420) [**Added April 2009**].

- *Stationary Gas Turbine* - any simple cycle gas turbine, regenerative cycle gas turbine or any gas turbine portion of a combined cycle steam/electric generating system that is not self propelled. It may, however, be mounted on a vehicle for portability (40 CFR 60.331) [**Added October 2004**].
- *Stationary Internal Combustion Engine* - any internal combustion engine, except combustion turbines, that converts heat energy into mechanical work and is not mobile. Stationary ICE differ from mobile ICE in that a stationary internal combustion engine is not a nonroad engine as defined at 40 CFR 1068.30 (excluding paragraph (2)(ii) of that definition), and is not used to propel a motor vehicle, aircraft, or a vehicle used solely for competition. Stationary ICE include reciprocating ICE, rotary ICE, and other ICE, except combustion turbines (40 CFR 60.4219 and 60.4248) [**Added October 2006; Revised July 2011**].
- *Stationary Internal Combustion Engine Test Cell/Stand* - an engine test cell/stand, as defined in 40 CFR 63, Subpart P [40 CFR 63.9280 through 63.9375, see checklist item AE.230.1.US through AE.230.4.US], that tests stationary ICE (40 CFR 60.4248) [**Added July 2011**].
- *Stationary Reciprocating Internal Combustion Engine (RICE)* - any reciprocating internal combustion engine which uses reciprocating motion to convert heat energy into mechanical work and which is not mobile. Stationary RICE differ from mobile RICE in that a stationary RICE is not a non-road engine as defined at 40 CFR 1068.30, and is not used to propel a motor vehicle or a vehicle used solely for competition (40 CFR 63.6675) [**Added July 2004**].
- *Stationary RICE Test Cell/Stand* - an engine test cell/stand, as defined in 40 CFR 63, Subpart P [40 CFR 63.9280 through 63.9375, see checklist item AE.230.1.US through AE.230.4.US], that tests stationary RICE (40 CFR 63.6675) [**Added July 2004**].
- *Stationary Source* - any buildings, structures, equipment, installations, or substance emitting stationary activities which belong to the same industrial group, which are located on one or more contiguous properties, which are under the control of the same person (or persons under common control), and from which an accidental release may occur. The term stationary source does not apply to transportation, including storage incident to transportation, of any regulated substance or any other extremely hazardous substance under the provisions of this part. A stationary source includes transportation containers used for storage not incident to transportation and transportation containers connected to equipment at a stationary source for loading or unloading. Transportation includes, but is not limited to, transportation subject to oversight or regulation under 49 CFR 192, 193, or 195, or a state natural gas or hazardous liquid program for which the state has in effect a certification to DOT under 49 U.S.C. section 60105. A stationary source does not include naturally occurring hydrocarbon reservoirs. Properties shall not be considered contiguous solely because of a railroad or pipeline right-of-way (40 CFR 68.3) [**Added January 2005**].
- *Startup* - the period of time between the activation of the system and the first charge to the unit. For batch HMIWI, startup means the period of time between activation of the system and ignition of the waste (40 CFR 60.51c and 62.14490) [**Added October 2000**].
- *Startup* - the setting in operation of an OLD affected source, or portion thereof, for any purpose. Startup also includes the placing in operation of any individual piece of equipment required or used to comply with this 40 CFR 63, Subpart E [40 CFR 63.2330 through 63.2406, see checklist items AE.57.1.US through AE.57.15.US], including, but not limited to, control devices and monitors (40 CFR 63.2406) [**Added April 2004**].
- *Startup Period* - the period when a municipal waste combustion unit begins the continuous combustion of municipal solid waste. It does not include any warmup period during which the municipal waste combustion unit

combusts fossil fuel or other solid waste fuel but receives no municipal solid waste (40 CFR 60.1465) [**Added April 2001**].

- *Startup Period* - the period of time between the activation of the system and the first charge to the unit (40 CFR 62.14840) [**Added January 2004**].
- *Stationary* - that the combustion turbine is not self propelled or intended to be propelled while performing its function. Stationary combustion turbines do not include turbines located at a research or laboratory facility, if research is conducted on the turbine itself and the turbine is not being used to power other applications at the research or laboratory facility (40 CFR 63.6175) [**Added April 2004**].
- *Stationary Combustion Turbine* - all equipment, including but not limited to the turbine, the fuel, air, lubrication and exhaust gas systems, control systems (except emissions control equipment), and any ancillary components and sub-components comprising any simple cycle stationary combustion turbine, any regenerative/recuperative cycle stationary combustion turbine, the combustion turbine portion of any stationary cogeneration cycle combustion system, or the combustion turbine portion of any stationary combined cycle steam/electric generating system (40 CFR 63.6175) [**Added April 2004**].
- *Stationary Combustion Turbine* - all equipment, including but not limited to the turbine, the fuel, air, lubrication and exhaust gas systems, control systems (except emissions control equipment), and any ancillary components and sub-components comprising any simple cycle stationary combustion turbine, any regenerative/recuperative cycle stationary combustion turbine, the combustion turbine portion of any stationary cogeneration cycle combustion system, or the combustion turbine portion of any stationary combined cycle steam/electric generating system. Stationary means that the combustion turbine is not self propelled or intended to be propelled while performing its function, although it may be mounted on a vehicle for portability or transportability. Stationary combustion turbines covered by 40 CFR 63, Subpart YYYYY [40 CFR 63.6080 through 63.6175, see checklist items AE.20.3.US through AE.20.10.US] include simple cycle stationary combustion turbines, regenerative/recuperative cycle stationary combustion turbines, cogeneration cycle stationary combustion turbines, and combined cycle stationary combustion turbines. Stationary combustion turbines subject to 40 CFR 63, Subpart YYYYY do not include turbines located at a research or laboratory facility, if research is conducted on the turbine itself and the turbine is not being used to power other applications at the research or laboratory facility (40 CFR 63.6085(a)) [**Added April 2004**].
- *Stationary Gas Turbines* - any simple cycle gas turbine, regenerative cycle gas turbine, or any gas turbine portion of a combined cycle steam/electric generating system that is not self-propelled. It may be mounted on a vehicle for portability (40 CFR 60.331).
- *Steam Generating Unit* - any furnace, boiler, or other device used for combusting fuel for the purpose of producing steam (including fossil fuel-fired steam generators associated with combined cycle gas turbines) nuclear steam generators are not included (40 CFR 60.41a).
- *Steam Generating Unit* - a device that combusts any fuel or byproduct/waste and produces steam or heats water or heats any heat transfer medium. This term includes any municipal-type solid waste incinerator with a heat recovery steam generating unit or any steam generating unit that combusts fuel and is part of a cogeneration system or a combined cycle system. This term does not include process heaters as they are defined in 40 CFR 60, Subpart Db (40 CFR 60.41b) [**Added April 2009**].
- *Steam Generating Unit* - a device that combusts any fuel and produces steam or heats water or heats any heat transfer medium. This term includes any duct burner that combusts fuel and is part of a combined cycle system. This term does not include process heaters as defined in 40 CFR 60, Subpart Dc (40 CFR 60.41c) [**Added April 2009**].
- *Steam Reforming* - a catalytic process that involves a reaction between **natural gas or other light hydrocarbons and steam**. The result is a mixture of hydrogen, carbon monoxide, carbon dioxide, and water (40 CFR 98.6) [**Added January 2010**].

- *Sterilization Facility* - the group of ethylene oxide sterilization units at a hospital using ethylene oxide gas or an ethylene oxide/inert gas mixture for the purpose of sterilizing (40 CFR 63.10448) **[Added January 2008]**.
- *Sterilization Process* - any time when ethylene oxide is removed from the sterilization unit or combination sterilization unit through the sterilization unit vent (40 CFR 63.10448) **[Added January 2008]**.
- *Sterilization Unit* - any enclosed vessel that is filled with ethylene oxide gas or an ethylene oxide/inert gas mixture for the purpose of sterilizing. As used in this subpart, the term includes combination sterilization units (40 CFR 63.10448) **[Added January 2008]**.
- *Stoichiometric* - the theoretical air-to-fuel ratio required for complete combustion (40 CFR 63.6675) **[Added July 2004]**.
- *Stoker* - a unit consisting of a mechanically operated fuel feeding mechanism, a stationary or moving grate to support the burning of fuel and admit under-grate air to the fuel, an overfire air system to complete combustion, and an ash discharge system. This definition of stoker includes air swept stokers. There are two general types of stokers: Underfeed and overfeed. Overfeed stokers include mass feed and spreader stokers. Fluidized bed, dutch oven, pile burner, hybrid suspension grate, suspension burners, and fuel cells are not considered to be a stoker design (40 CFR 63.7575) **[Revised April 2013]**.
- *Stoker (Refuse-Derived Fuel) Combustion Unit* - a steam generating unit that combusts refuse-derived fuel in a semisuspension combusting mode, using air-fed distributors (40 CFR 60.1465) **[Added April 2001]**.
- *Stoker/Sloped Grate/Other Unit Designed to Burn Kiln Dried Biomass* - the unit is in the units designed to burn biomass/bio-based solid subcategory that is either a stoker, sloped grate, or other combustor design and is not in the stoker/sloped grate/other units designed to burn wet biomass subcategory(40 CFR 63.7575) **[Added April 2013]**.
- *Stoker/Sloped Grate/Other Unit Designed to Burn Wet Biomass* - the unit is in the units designed to burn biomass/bio-based solid subcategory that is either a stoker, sloped grate, or other combustor design and any of the biomass/bio-based solid fuel combusted in the unit exceeds 20 percent moisture on an annual heat input basis (40 CFR 63.7575) **[Added April 2013]**.
- *Storage Tank* - a stationary unit that is constructed primarily of nonearthen materials (such as wood, concrete, steel, or reinforced plastic) that provide structural support and is designed to hold a bulk quantity of liquid. Storage tanks do not include (40 CFR 63.2406) **[Added April 2004]**:
  1. Units permanently attached to conveyances such as trucks, trailers, rail cars, barges, or ships;
  2. Pressure vessels designed to operate in excess of 204.9 kilopascals and without emissions to the atmosphere;
  3. Bottoms receiver tanks;
  4. Surge control vessels;
  5. Vessels storing wastewater; or
  6. Reactor vessels associated with a manufacturing process unit.
- *Storage Tank* - a vessel (excluding sumps) that is designed to contain an accumulation of crude oil, condensate, intermediate hydrocarbon liquids, or produced water and that is constructed entirely of non-earthen materials (e.g., wood, concrete, steel, plastic) that provide structural support (40 CFR 98.6) **[Added January 2010]**.
- *Storage Vessel With the Potential for Flash Emissions* - any storage vessel that contains a hydrocarbon liquid with a stock tank gas-to-oil ratio equal to or greater than 0.31 m<sup>3</sup>/L and an American Petroleum Institute gravity equal to or greater than 40° and an actual annual average hydrocarbon liquid throughput equal to or greater than 79,500 L/day. Flash emissions occur when dissolved hydrocarbons in the fluid evolve from solution when the fluid pressure is reduced (40 CFR 63.6175 and 63.6675) **[Added April 2004]**.
- *Stripper* - a liquid that is applied to an aerospace vehicle or component to remove permanent coatings such as primers, topcoats, and specialty coatings (40 CFR 63.742) **[Added January 1999; Revised January 2016]**.

- *Submerged Filling* - for the purposes of 40 CFR 63, Subpart CCCCCC, the filling of a gasoline storage tank through a submerged fill pipe whose discharge is no more than the applicable distance specified in 40 CFR 63.11117(b) from the bottom of the tank. Bottom filling of gasoline storage tanks is included in this definition (40 CFR 63.11132) [**Added April 2008**].
- *Substitute* - any chemical or product, whether existing or new, that is used as a refrigerant to replace a class I or II ozone-depleting substance. Examples include, but are not limited to hydrofluorocarbons, perfluorocarbons, hydrofluoroolefins, hydrofluoroethers, hydrocarbons, ammonia, carbon dioxide, and blends thereof. As used in this subpart, the term “exempt substitutes” refers to certain substitutes when used in certain end-uses that are specified in 40 CFR 82.154(a)(1) as exempt from the venting prohibition and the requirements of this subpart, and the term “non-exempt substitutes” refers to all other substitutes and end-uses not so specified in 40 CFR 82.154(a)(1) (40 CFR 82.152) [**Revised April 2004; Revised January 2017**].
- *Suitable Replacement Refrigerant* - for the purpose of 82.156(i)(7)(i) (see checklist item AE.19.18.US), this is a refrigerant that is acceptable under section 612(c) of the CAAA90 and all regulations promulgated under that section, compatible with other materials with which it may come into contact, and able to achieve the temperatures required for the affected industrial process in a technically feasible manner (40 CFR 82.152).
- *Sulfur Percentage* - the percentage of sulfur in diesel fuel by weight, as determined using the applicable sampling and testing methodologies set forth in 40 CFR 80.580 (40 CFR 80.2(bb)) [**Added October 2011**].
- *Sulfur Recovery Plant* - all process units which recover sulfur or produce sulfuric acid from hydrogen sulfide (H<sub>2</sub>S) and/or sulfur dioxide (SO<sub>2</sub>) from a common source of sour gas at a petroleum refinery. The sulfur recovery plant also includes sulfur pits used to store the recovered sulfur product, but it does not include secondary sulfur storage vessels or loading facilities downstream of the sulfur pits. For example, a Claus sulfur recovery plant includes: reactor furnace and waste heat boiler, catalytic reactors, sulfur pits, and, if present, oxidation or reduction control systems, or incinerator, thermal oxidizer, or similar combustion device. Multiple sulfur recovery units are a single sulfur recovery plant only when the units share the same source of sour gas. Sulfur recovery units that receive source gas from completely segregated sour gas treatment systems are separate sulfur recovery plants.
- *Supplemental Fuel* - a fuel burned within a petrochemical process that is not produced within the process itself (40 CFR 98.6) [**Added January 2010**].
- *Supplier* - a producer, importer, or exporter in any supply category included in Table A-5 (see Appendix 1-40), as defined by the corresponding subpart of 40 CFR 98. (40 CFR 98.6) [**Added January 2010; Revised January 2012**].
- *Surface Preparation* - the removal of contaminants from the surface of an aerospace vehicle or component, or the activation or reactivation of the surface in preparation for the application of a coating (40 CFR 63.742) [**Added January 1999**].
- *Surface Preparation Or Surface Prep* - use of a cleaning material on a portion of or all of a substrate prior to the application of a coating (40 CFR 63.11180) [**Added April 2011**].
- *Surface Site* - any combination of one or more graded pad sites, gravel pad sites, foundations, platforms, or the immediate physical location upon which equipment is physically affixed (40 CFR 63.6675) [**Added July 2004**].
- *Sulfuric Acid Production Unit* - any facility producing sulfuric acids by the contact process by burning elemental sulfur, alkylation acid, hydrogen sulfide, organic sulfides and mercaptans, or acid sludge, but does not include facilities where conversion to sulfuric acid is used primarily as a means of preventing emissions to the atmosphere of SO<sub>2</sub> or other sulfur compounds (40 CFR 60.81).
- *Superheated Part Technology* - a system that is part of the continuous web cleaning process that heats the continuous web part either directly or indirectly to a temperature above the boiling point of the cleaning solvent.

This could include a process step, such as a tooling die that heats the part as it is processed, as long as the part remains superheated through the cleaning machine (40 CFR 63.461) [Added October 1999].

- *Superheated Vapor System* - a system that heats the solvent vapor either passively or actively, to a temperature above the solvents boiling point. Parts are held in the superheated vapor before exiting the machine to evaporate the liquid solvent on them. Hot vapor recycle is an example of a superheated vapor system (40 CFR 63.461).
- *Supplemental Printed Material* - any informational material (including, but not limited to, package inserts, fact sheets, invoices, material safety data sheets, procurement and specification sheets, or other material) which accompanies a product or container to the consumer at the time of purchase (40 CFR 82.104(w)) [Added July 2004]
- *Surface Impoundment* - a unit that is a natural topographical depression, man-made excavation, or diked area formed primarily of earthen materials (although it may be lined with man-made materials), which is designed to hold an accumulation of liquids. Examples of surface impoundments include holding, storage, settling, and aeration pits, ponds, and lagoons (40 CFR 63.7957) [Added April 2004].
- *Surface Site* - any combination of one or more graded pad sites, gravel pad sites, foundations, platforms, or the immediate physical location upon which equipment is physically affixed (40 CFR 63.6175) [Added April 2004].
- *Surge Control Vessel* - feed drums, recycle drums, and intermediate vessels. Surge control vessels are used within chemical manufacturing processes when in-process storage, mixing, or management of flow rates or volumes is needed to assist in production of a product (40 CFR 63.2406) [Added January 2007].
- *Suspension Burner* - a unit designed to fire dry biomass/biobased solid particles in suspension that are conveyed in an airstream to the furnace like pulverized coal. The combustion of the fuel material is completed on a grate or floor below. The biomass/biobased fuel combusted in the unit shall not exceed 20 percent moisture on an annual heat input basis. Fluidized bed, dutch oven, pile burner, and hybrid suspension grate units are not part of the suspension burner subcategory (40 CFR 63.7575) [Added April 2013].
- *System-Dependent Recovery Equipment* - refrigerant recovery equipment that requires the assistance of components contained in an appliance to remove the refrigerant from the appliance (40 CFR 82.152).
- *System Mothballing* - the intentional shutting down of a refrigeration appliance undertaken for an extended period of time by the owners or operators of the facility, where the refrigerant has been evacuated from the appliance or the affected isolated section of the appliance, at least to atmospheric pressure (40 CFR 82.152).
- *System Receiver* - the isolated portion of the appliance, or a specific vessel within the appliance, that is used to hold the refrigerant charge during the servicing or repair of that appliance (40 CFR 82.152) [Added January 2017].
- *TAME* - tertiary amyl methyl ether,  $(\text{CH}_3)_2(\text{C}_2\text{H}_5)(\text{COCH}_3)$  (40 CFR 98.6) [Added January 2010].
- *Tank* - a stationary unit that is constructed primarily of nonearthen materials (such as wood, concrete, steel, fiberglass, or plastic) which provide structural support and is designed to hold an accumulation of liquids or other materials (40 CFR 63.7957) [Added April 2004].
- *Tank Car* - a car designed to carry liquid freight by rail, and including a permanently attached tank (40 CFR 63.2406) [Added April 2004].
- *Tank Truck* - a truck and/or trailer used to transport or cause the transportation of gasoline or diesel fuel, that meets the definition of motor vehicle in section 216(2) of the Act (40 CFR 80.2(ss)) [Added October 2011].

- *Target HAP* - compounds of chromium (Cr), lead (Pb), manganese (Mn), nickel (Ni), or cadmium (Cd) (40 CFR 63.11180) **[Added April 2011]**.
- *Target HAP Containing Coating* - a spray-applied coating that contains any individual target HAP that is an Occupational Safety and Health Administration (OSHA)–defined carcinogen as specified in 29 CFR 1910.1200(d)(4) at a concentration greater than 0.1 percent by mass, or greater than 1.0 percent by mass for any other individual target HAP compound. For the purpose of determining whether materials you use contain the target HAP compounds, you may rely on formulation data provided by the manufacturer or supplier, such as the material safety data sheet (MSDS), as long as it represents each target HAP compound in the material that is present at 0.1 percent by mass or more for OSHA-defined carcinogens as specified in 29 CFR 1910.1200(d)(4) and at 1.0 percent by mass or more for other target HAP compounds (40 CFR 63.11180) **[Added April 2011]**.
- *Technician* - any person who in the course of maintenance, service, or repair of an appliance (except MVACs) could be reasonably expected to violate the integrity of the refrigerant circuit and therefore release refrigerants into the environment. Technician also means any person who in the course of disposal of an appliance (except small appliances, MVACs, and MVAC-like appliances) could be reasonably expected to violate the integrity of the refrigerant circuit and therefore release refrigerants from the appliances into the environment. Activities reasonably expected to violate the integrity of the refrigerant circuit include but are not limited to: Attaching or detaching hoses and gauges to and from the appliance; adding or removing refrigerant; adding or removing components; and cutting the refrigerant line. Activities such as painting the appliance, rewiring an external electrical circuit, replacing insulation on a length of pipe, or tightening nuts and bolts are not reasonably expected to violate the integrity of the refrigerant circuit. Activities conducted on appliances that have been properly evacuated pursuant to 40 CFR 82.156 are not reasonably expected to release refrigerants unless the activity includes adding refrigerant to the appliance. Technicians could include but are not limited to installers, contractor employees, in-house service personnel, and owners and/or operators of appliances (40 CFR 82.152) **[Revised April 2004; Revised January 2017]**.
- *Technician* - any person who performs testing, maintenance, service, or repair that could reasonably be expected to release halons from equipment into the atmosphere. Technician also means any person who performs disposal of equipment that could reasonably be expected to release halons from the equipment into the atmosphere. Technician includes, but is not limited to, installers, contractor employees, in-house service personnel, and, in some cases, owners (40 CFR 82.260) **[Added March 1998]**.
- *Temperature Monitoring Device* - a piece of equipment used to monitor temperature and having an accuracy of  $\pm 1$  percent of the temperature being monitored expressed in degrees Celsius ( $^{\circ}\text{C}$ ) or  $\pm 1.2$   $^{\circ}\text{C}$ , whichever value is greater (40 CFR 63.7957) **[Added April 2004]**.
- *Temporary Boiler* - any gaseous or liquid fuel-fired steam generating unit that is designed to, and is capable of, being carried or moved from one location to another by means of, for example, wheels, skids, carrying handles, dollies, trailers, or platforms. A steam generating unit is not a temporary boiler if any one of the following conditions exists (40 CFR 60.40b and 60.41b) **[Added January 2012; Citation Revised April 2012]**:
  1. The equipment is attached to a foundation.
  2. The steam generating unit or a replacement remains at a location for more than 180 consecutive days. Any temporary boiler that replaces a temporary boiler at a location and performs the same or similar function will be included in calculating the consecutive time period.
  3. The equipment is located at a seasonal facility and operates during the full annual operating period of the seasonal facility, remains at the facility for at least 2 years, and operates at that facility for at least 3 mo each year.
  4. The equipment is moved from one location to another in an attempt to circumvent the residence time requirements of this definition.
- *Temporary Boiler* - a steam generating unit that combusts natural gas or distillate oil with a potential  $\text{SO}_2$  emissions rate no greater than 26 ng/J (0.060 lb/MMBtu), and the unit is designed to, and is capable of, being carried or moved from one location to another by means of, for example, wheels, skids, carrying handles, dollies,

trailers, or platforms. A steam generating unit is not a temporary boiler if any one of the following conditions exists (40 CFR 60.40c and 60.41c) **[Added January 2012; Citation Revised April 2012]**:

1. The equipment is attached to a foundation.
  2. The steam generating unit or a replacement remains at a location for more than 180 consecutive days. Any temporary boiler that replaces a temporary boiler at a location and performs the same or similar function will be included in calculating the consecutive time period.
  3. The equipment is located at a seasonal facility and operates during the full annual operating period of the seasonal facility, remains at the facility for at least 2 yr, and operates at that facility for at least 3 mo each year.
  4. The equipment is moved from one location to another in an attempt to circumvent the residence time requirements of this definition.
- *Temporary Boiler* - any gaseous or liquid fuel boiler or process heater that is designed to, and is capable of, being carried or moved from one location to another by means of, for example, wheels, skids, carrying handles, dollies, trailers, or platforms. A boiler is not a temporary boiler or process heater if any one of the following conditions exists (40 CFR 63.7575 and 63.11237) **[Revised April 2013]**.
    1. The equipment is attached to a foundation.
    2. The boiler or process heater or a replacement remains at a location within the facility and performs the same or similar function for more than 12 consecutive months, unless the regulatory agency approves an extension. An extension may be granted by the regulating agency upon petition by the owner or operator of a unit specifying the basis for such a request. Any temporary boiler or process heater that replaces a temporary boiler or process heater at a location and performs the same or similar function will be included in calculating the consecutive time period.
    3. The equipment is located at a seasonal facility and operates during the full annual operating period of the seasonal facility, remains at the facility for at least 2 yr, and operates at that facility for at least 3 mo each year.
    4. The equipment is moved from one location to another within the facility but continues to perform the same or similar function and serve the same electricity, process heat, steam, and/or hot water system in an attempt to circumvent the residence time requirements of this definition.
  - *Temporary Total Enclosure* - a total enclosure that is constructed for the sole purpose of measuring the emissions from an affected source that are not delivered to an emission control device. A temporary total enclosure must be constructed and ventilated (through stacks suitable for testing) so that it has minimal impact on the performance of the permanent emission capture system. A temporary total enclosure will be assumed to achieve total capture of fugitive emissions if it conforms to the requirements found in 40 CFR 63.750(g)(4) and if all natural draft openings are at least four duct or hood equivalent diameters away from each exhaust duct or hood. Alternatively, the owner or operator may apply to the Administrator for approval of a temporary enclosure on a case-by-case basis (40 CFR 63.742) **[Added January 1999]**.
  - *Third-party Audit* - a compliance audit conducted pursuant to the requirements of 40 CFR 68.59 and/or 40 CFR 68.80, performed or led by an entity (individual or firm) meeting the competency and independence described in 40 CFR 68.59(c) or 40 CFR 68.80(c) (40 CFR 68.3) **[Added April 2017]**. *Threshold Quantity* - the quantity specified for regulated substances pursuant to section 112(r)(5) of the Clean Air Act as amended, listed in 40 CFR 68.130 and determined to be present at a stationary source as specified in 40 CFR 68.115 (40 CFR 68.3) **[Added January 2005]**.
  - *Topcoat* - a coating that is applied over a primer on an aerospace vehicle or component for appearance, identification, camouflage, or protection. Coatings that are defined as specialty coatings are not included under this definition (40 CFR 63.742) **[Added January 1999]**.
  - *Total Actual Annual Facility-Level Organic Liquid Loading Volume* - the total facility-level actual volume of organic liquid loaded for transport within or out of the facility through transfer racks that are part of the affected source into transport vehicles (for existing affected sources) or into transport vehicles and containers (for new

affected sources) based on a 3-year rolling average, calculated annually (40 CFR 63.2406) [Added January 2007].

1. For existing affected sources, each 3-yr rolling average is based on actual facility-level loading volume during each CY (January 1 through December 31) in the 3-yr period. For CY 2004 only (the first year of the initial 3-year rolling average), if an owner or operator of an affected source does not have actual loading volume data for the time period from 1 January 2004, through 2 February 2004 (the time period prior to the effective date of the OLD NESHAP), the owner or operator shall compute a facility-level loading volume for this time period as follows: At the end of the 2004 CY, the owner or operator shall calculate a daily average facility-level loading volume (based on the actual loading volume for 3 February 2004, through 31 December 2004) and use that daily average to estimate the facility-level loading volume for the period of time from 1 January 2004, through 2 February 2004. The owner or operator shall then sum the estimated facility-level loading volume from 1 January 2004, through 2 February 2004, and the actual facility-level loading volume from 3 February 2004, through 31 December 2004, to calculate the annual facility-level loading volume for CY 2004.
2. For new affected sources, the 3-yr rolling average is calculated as an average of three 12-mo periods. An owner or operator must select as the beginning calculation date with which to start the calculations as either the initial startup date of the new affected source or the first day of the calendar month following the month in which startup occurs. Once selected, the date with which the calculations begin cannot be changed.

(NOTE: The initial 3-yr rolling average is based on the projected maximum facility-level annual loading volume for each of the 3 yr following the selected beginning calculation date. The second 3-yr rolling average is based on actual facility-level loading volume for the first year of operation plus a new projected maximum facility-level annual loading volume for second and third years following the selected beginning calculation date. The third 3-yr rolling average is based on actual facility-level loading volume for the first 2 yr of operation plus a new projected maximum annual facility-level loading volume for the third year following the beginning calculation date. Subsequent 3-yr rolling averages are based on actual facility-level loading volume for each year in the 3-yr rolling average.)

- *Total Enclosure* - a permanent structure that is constructed around a gaseous emission source so that all gaseous pollutants emitted from the source are collected and ducted through a control device, such that 100% capture efficiency is achieved. There are no fugitive emissions from a total enclosure. The only openings in a total enclosure are forced makeup air and exhaust ducts and any natural draft openings such as those that allow raw materials to enter and exit the enclosure for processing. All access doors or windows are closed during routine operation of the enclosed source. Brief, occasional openings of such doors or windows to accommodate process equipment adjustments are acceptable, but if such openings are routine or if an access door remains open during the entire operation, the access door must be considered a natural draft opening. The average inward face velocity across the natural draft openings of the enclosure must be calculated including the area of such access doors. The drying oven itself may be part of the total enclosure. An enclosure that meets the requirements found in 40 CFR 63.750(g)(4) is a permanent total enclosure (40 CFR 63.742) [Added January 1999].
- *Total Mass Dioxins/Furans or Total Mass* - the total mass of tetra-through octachlorinated dibenzo-p-dioxins and dibenzofurans as determined using USEPA Reference Method 23 in Appendix A of 40 CFR 60 and the procedures specified in 40 CFR 60.1300 (40 CFR 60.1465) [Added April 2001].
- *Total of Direct and Indirect Emissions* - the sum of direct and indirect emissions increases and decreases caused by the Federal action; i.e., the "net" emissions considering all direct and indirect emissions. The portion of emissions which are exempt or presumed to conform under 40 CFR 93.153(c), (d), (e), or (f) are not included in the "total of direct and indirect emissions." The "total of direct and indirect emissions" includes emissions of criteria pollutants and emissions of precursors of criteria pollutants (40 CFR 93.152) [Added April 2009].
- *Total Selected Metals (TSM)* - the sum of the following metallic hazardous air pollutants: arsenic, beryllium, cadmium, chromium, lead, manganese, nickel and selenium (40 CFR 63.7575) [Added April 2013].
- *Touch-up and Repair Operation* - that portion of the coating operation that is the incidental application of coating used to cover minor imperfections in the coating finish or to achieve complete coverage. This definition includes out-of-sequence or out-of-cycle coating (40 CFR 63.742) [Added January 1999].

- *Trace Concentrations* - concentrations of less than 0.1 percent by mass of the process stream (40 CFR 98.6) **[Added January 2010]**.
- *Traditional Fuel* - the fuel as defined in 40 CFR 241.2 of this chapter (40 CFR 63.7575) **[Added April 2013]**.
- *Transfer Efficiency* - the amount of coating solids adhering to the object being coated divided by the total amount of coating solids sprayed, expressed as a percentage. Coating solids means the nonvolatile portion of the coating that makes up the dry film (40 CFR 63.11180) **[Added April 2011]**.
- *Transfer Machine System* - a multiple-machine dry cleaning operation in which washing and drying are performed in different machines. Examples include, but are not limited to (40 CFR 63.321):
  1. a washer and dryer
  2. a washer and reclaimer
  3. a dry-to-dry machine and reclaimer.
- *Transfer Rack* - a single system used to load organic liquids into, or unload organic liquids out of, transport vehicles or containers. It includes all loading and unloading arms, pumps, meters, shutoff valves, relief valves, and other piping and equipment necessary for the transfer operation. Transfer equipment and operations that are physically separate (i.e., do not share common piping, valves, and other equipment) are considered to be separate transfer racks (40 CFR 63.2406) **[Added April 2004; Revised January 2007]**.
- *Transfer System* - a stationary system for which the predominant function is to convey liquids or solid materials from one point to another point within a waste management operation or recovery operation. For the purpose of 40 CFR 63, Subpart GGGGG (40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US), the conveyance of material using a container (as defined for 40 CFR 63, Subpart GGGGG) or a self-propelled vehicle (e.g., a front-end loader) is not a transfer system. Examples of a transfer system include but are not limited to a pipeline, an individual drain system, a gravity-operated conveyor (such as a chute), and a mechanically-powered conveyor (such as a belt or screw conveyor) (40 CFR 63.7957) **[Added April 2004; Revised January 2007]**.
- *Transform* - to use and entirely consume (except for trace quantities) a controlled substance in the manufacture of other chemicals for commercial purposes (40 CFR 82.3) **[Added April 2003]**.
- *Transform* - to use and entirely consume a class I or class II substance, except for trace quantities, by changing it into one or more substances not subject to 40 CFR 82, Subpart E [40 CFR 82.100 through 82.124, see checklist item AE.85.7.US] in the manufacturing process of a product or chemical (40 CFR 82.104(x)) **[Added July 2004]**
- *Transform* - to use and entirely consume (except for trace concentrations) nitrous oxide or fluorinated GHGs in the manufacturing of other chemicals for commercial purposes. Transformation does not include burning of nitrous oxide (40 CFR 98.6) **[Added January 2010]**.
- *Transport Vehicle* - a cargo tank or tank car (40 CFR 63.2406) **[Added April 2004]**.
- *Transshipment* - the continuous shipment of nitrous oxide or a fluorinated GHG from a foreign state of origin through the United States or its territories to a second foreign state of final destination, as long as the shipment does not enter into United States jurisdiction. A transshipment, as it moves through the United States or its territories, cannot be re-packaged, sorted or otherwise changed in condition (40 CFR 98.6) **[Added January 2010]**.
- *Tribal Plan* - a plan submitted by a Tribal Authority pursuant to 40 CFR parts 9, 35, 49, 50, and 81 that implements and enforces 40 CFR 60, Subpart DDDD: *Emissions Guidelines and Compliance Times for Commercial and Industrial Solid Waste Incineration Units That Commenced Construction On or Before 30 November 1999* (40 CFR 62.14840) **[Added January 2004]**.

- *Treatment Process* - a process in which remediation material is physically, chemically, thermally, or biologically treated to destroy, degrade, or remove hazardous air pollutants contained in the material. A treatment process can be composed of a single unit (e.g., a steam stripper) or a series of units (e.g., a wastewater treatment system). A treatment process can be used to treat one or more remediation material streams at the same time (40 CFR 63.7957) [**Added April 2004**].
- *Truck Bed Liner Coating* - any coating, excluding color coats, labeled and formulated for application to a truck bed to protect it from surface abrasion (40 CFR 63.11180) [**Added April 2011**].
- *Truck Loading Terminal* - any facility that dyes (nonroad, locomotive, or marine) NRLM diesel fuel or ECA marine fuel, pays taxes on motor vehicle diesel fuel per IRS code (26 CFR 48), or adds a fuel marker pursuant to 40 CRR 80.510 to heating oil and delivers diesel fuel or heating oil into trucks for delivery to retail or ultimate consumer locations (40 CFR 80.502(c)) [**Added July 2006, Revised July 2010**].
- *Tumbling-Tile* - a grate tile hinged at one end and attached to a ram at the other end. When the ram extends, the grate tile rotates around the hinged end (40 CFR 60.51b) [**Added October 2001**].
- *Tune-up* - adjustments made to a boiler or process heater in accordance with the procedures outlined in 40 CFR 63.7540(a)(10) (i.e., Major Source ICI Boiler NESHAPs) (40 CFR 63.7575) [**Revised April 2013**].
- *Tune-up* - adjustments made to a boiler in accordance with the procedures outlined in 40 CFR 63.11223(b) (i.e., Area Source ICI Boiler NESHAPs) (40 CFR 63.11237) [**Added April 2013**].
- *Turbines Employed in Oil/Gas Production or Oil/Gas Transportation* - any stationary gas turbine used to provide power to extract crude oil/natural gas from the earth or to move crude oil/natural gas, or products refined from these substances through pipelines (40 CFR 60.331) [**Added October 2004**].
- *Twenty-four Hour Daily Average or 24-h Daily Average* - either the arithmetic mean or geometric mean (as specified) of all hourly emission concentrations when the municipal waste combustion unit operates and combusts municipal solid waste measured during the 24 hours between 12:00 midnight and the following midnight (40 CFR 60.1465) [**Added April 2001**].
- *Two-Stage Filter System* - a dry particulate filter system using two layers of filter media to remove particulate. The first stage is designed to remove the bulk of the particulate and a higher efficiency second stage is designed to remove smaller particulate (40 CFR 63.742) [**Added January 1999**].
- *Two-stroke Engine* - a type of engine which completes the power cycle in single crankshaft revolution by combining the intake and compression operations into one stroke and the power and exhaust operations into a second stroke. This system requires auxiliary scavenging and inherently runs lean of stoichiometric (40 CFR 63.6675) [**Added July 2004**].
- *Type I Etchant* - a chemical milling etchant that contains varying amounts of dissolved sulfur and does not contain amines (40 CFR 63.742) [**Added January 1999**].
- *Type II Etchant* - a chemical milling etchant that is a strong sodium hydroxide solution containing amines (40 CFR 63.742) [**Added January 1999**].
- *Type Size* - the actual height of the printed image of each capital letter as it appears on a label (40 CFR 82.104(y)) [**Added July 2004**].
- *Typical Meteorological Conditions* - the temperature, wind speed, cloud cover, and atmospheric stability class, prevailing at the site based on data gathered at or near the site or from a local meteorological station (40 CFR 68.3) [**Added January 2005**].

- *Ultimate Analysis* - the determination of the percentages of carbon, hydrogen, nitrogen, sulfur, and chlorine and (by difference) oxygen in the gaseous products and ash after the complete combustion of a sample of an organic material (40 CFR 98.6) **[Added January 2010]**.
- *Ultimate Consumer* - the first commercial or non-commercial purchaser of a container or product that is not intended for re-introduction into interstate commerce as a final product or as part of another product (40 CFR 82.104(z)) **[Added July 2004]**
- *Ultra Low Sulfur Liquid Fuel* - a distillate oil that has less than or equal to 15 ppm sulfur (40 CFR 63.7575) **[Added April 2013]**.
- *Ultra-Low-Sulfur Liquid Fuel* - a distillate oil that has less than or equal to 15 parts per million (ppm) sulfur (40 CFR 63.11237) **[Added October 2016]**.
- *Unexpended HCFC-141b Exemption Allowances* - HCFC-141b exemption allowances that have not been used. A person's unexpended HCFC-141b exemption allowances are the total of the quantity of the HCFC-141b exemption allowances the person has authorization under 40 CFR 82.16(h) to hold for that control period, minus the quantity of HCFC-141b that the person has had produced or has had imported at that time during the same control period (40 CFR 82.3) **[Added April 2003]**.
- *Unfinished Oils* - all oils requiring further processing, except those requiring only mechanical blending (40 CFR 98.6) **[Added January 2010]**.
- *Uninstalled Engine* - an engine not installed in, or an integrated part of, the final product (40 CFR 63.9375) **[Added July 2003]**.
- *Unit Designed To Burn Biomass/Bio-Based Solid Subcategory* - includes any boiler or process heater that burns at least 10 percent biomass or bio-based solids on an annual heat input basis in combination with solid fossil fuels, liquid fuels, or gaseous fuels (40 CFR 63.7575) **[Added April 2011]**.
- *Unit Designed to Burn Coal/Solid Fossil Fuel Subcategory* - includes any boiler or process heater that burns any coal or other solid fossil fuel alone or at least 10 percent coal or other solid fossil fuel on an annual heat input basis in combination with liquid fuels, gaseous fuels, or less than 10 percent biomass and bio-based solids on an annual heat input basis (40 CFR 63.7575) **[Added April 2011]**.
- *Unit Designed to Burn Gas 1 Subcategory* - includes any boiler or process heater that burns only natural gas, refinery gas, and/or other gas 1 fuels. Gaseous fuel boilers and process heaters that burn liquid fuel for periodic testing of liquid fuel, maintenance, or operator training, not to exceed a combined total of 48 hours during any calendar year, are included in this definition. Gaseous fuel boilers and process heaters that burn liquid fuel during periods of gas curtailment or gas supply interruptions of any duration are also included in this definition (40 CFR 63.7575) **[Revised April 2013]**.
- *Unit Designed to Burn Gas 2 (Other) Subcategory* - includes any boiler or process heater that is not in the unit designed to burn gas 1 subcategory and burns any gaseous fuels either alone or in combination with less than 10 percent coal/solid fossil fuel, and less than 10 percent biomass/bio-based solid fuel on an annual heat input basis, and no liquid fuels. Gaseous fuel boilers and process heaters that are not in the unit designed to burn gas 1 subcategory and that burn liquid fuel for periodic testing of liquid fuel, maintenance, or operator training, not to exceed a combined total of 48 hours during any calendar year, are included in this definition. Gaseous fuel boilers and process heaters that are not in the unit designed to burn gas 1 subcategory and that burn liquid fuel during periods of gas curtailment or gas supply interruption of any duration are also included in this definition (40 CFR 63.7575) **[Added April 2013]**.
- *Unit Designed to Burn Heavy Liquid Subcategory* - a unit in the unit designed to burn liquid subcategory where at least 10 percent of the heat input from liquid fuels on an annual heat input basis comes from heavy liquids (40 CFR 63.7575) **[Added April 2013]**.

- *Unit Designed to Burn Light Liquid Subcategory* - a unit in the unit designed to burn liquid subcategory that is not part of the unit designed to burn heavy liquid subcategory (40 CFR 63.7575) **[Added April 2013]**.
- *Unit Designed to Burn Liquid Subcategory* - includes any boiler or process heater that burns any liquid fuel, but less than 10 percent coal/solid fossil fuel and less than 10 percent biomass/bio-based solid fuel on an annual heat input basis, either alone or in combination with gaseous fuels. Units in the unit design to burn gas 1 or unit designed to burn gas 2 (other) subcategories that burn liquid fuel for periodic testing of liquid fuel, maintenance, or operator training, not to exceed a combined total of 48 hours during any calendar year are not included in this definition. Units in the unit design to burn gas 1 or unit designed to burn gas 2 (other) subcategories during periods of gas curtailment or gas supply interruption of any duration are also not included in this definition (40 CFR 63.7575) **[Revised April 2013]**.
- *Unit Designed To Burn Liquid Fuel That Is A Non-continental Unit* - an industrial, commercial, or institutional boiler or process heater meeting the definition of the unit designed to burn liquid subcategory located in the State of Hawaii, the Virgin Islands, Guam, American Samoa, the Commonwealth of Puerto Rico, or the Northern Mariana Islands (40 CFR 63.7575) **[Revised April 2013]**.
- *Unit Designed To Burn Solid Fuel Subcategory* - any boiler or process heater that burns only solid fuels or at least 10 percent solid fuel on an annual heat input basis in combination with liquid fuels or gaseous fuels (40 CFR 63.7575) **[Revised April 2013]**.
- *Unit Operating Day* - a 24-h period between 12:00 midnight and the following midnight during which any fuel is combusted at any time in the unit. It is not necessary for fuel to be combusted continuously for the entire 24-h period (40 CFR 60.331 and 60.4420) **[Added October 2004, Citation Revised April 2009]**.
- *Unit Operating Hour* - a clock hour during which any fuel is combusted in the affected unit. If the unit combusts fuel for the entire clock hour, it is considered to be a full unit operating hour. If the unit combusts fuel for only part of the clock hour, it is considered to be a partial unit operating hour (40 CFR 60.331 and 60.4420) **[Added October 2004, Citation Revised April 2009]**.
- *United States* - the 50 states, the District of Columbia, and U.S. possessions and territories (40 CFR 98.6) **[Added January 2010]**.
- *United States Parent Company(s)* – the highest-level United States company(s) with an ownership interest in the facility or supplier as of December 31 of the year for which data are being reported (40 CFR 98.6) **[Added October 2010; Revised January 2012]**.
- *Unleaded Gasoline* - gasoline which is produced without the use of any lead additive and which contains not more than 0.05 gram of lead per gallon and not more than 0.005 gram of phosphorus per gallon (40 CFR 80.2(g)) **[Added October 2011]**.
- *Untreated Lumber* - wood or wood products that have been cut or shaped and include wet, air-dried, and kiln-dried wood products. Untreated lumber does not include wood products that have been painted, pigment-stained, or pressure-treated by compounds such as chromate copper arsenate, pentachlorophenol, and creosote (40 CFR 60.1465) **[Added April 2001]**.
- *Use Of A Class II Controlled Substance* - for the purposes of 40 CFR 82.15, includes but is not limited to, use in a manufacturing process, use in manufacturing a product, intermediate uses such as formulation or packaging for other subsequent uses, and use in maintaining, servicing, or repairing an appliance or other piece of equipment. Use of a class II controlled substance also includes use of that controlled substance when it is removed from a container used for the transportation or storage of the substance but does not include use of a manufactured product containing a controlled substance (40 CFR 82.3) **[Added January 2015]**.
- *Used Oil* - a petroleum-derived or synthetically-derived oil whose physical properties have changed as a result of handling or use, such that the oil cannot be used for its original purpose. Used oil consists primarily of automotive

oils (e.g., used motor oil, transmission oil, hydraulic fluids, brake fluid, etc.) and industrial oils (e.g., industrial engine oils, metalworking oils, process oils, industrial grease, etc) (40 CFR 98.6) **[Added January 2011]**.

- *Useful Thermal Energy* - energy (i.e., steam, hot water, or process heat) that meets the minimum operating temperature, flow, and/or pressure required by any energy use system that uses energy provided by the affected boiler or process heater (40 CFR 63.7575) **[Added January 2016]**.
- *Useful Thermal Energy* - energy (i.e., steam or hot water) that meets the minimum operating temperature, flow, and/or pressure required by any energy use system that uses energy provided by the affected boiler (40 CFR 63.11237) **[Added October 2016]**.
- *Useful Thermal Output* - the thermal energy made available for use in any industrial or commercial process, or used in any heating or cooling application, i.e., total thermal energy made available for processes and applications other than electrical or mechanical generation. Thermal output for this subpart means the energy in recovered thermal output measured against the energy in the thermal output at 15° C and 101.325 kilopascals of pressure (40 CFR 60.4420) **[Added April 2009]**.
- *Valve* - any device for halting or regulating the flow of a liquid or gas through a passage, pipeline, inlet, outlet, or orifice; including, but not limited to, gate, globe, plug, ball, butterfly and needle valves (40 CFR 98.6) **[Added January 2010]**.
- *Vapor Balance System* - a combination of pipes and hoses that create a closed system between the vapor spaces of an unloading gasoline cargo tank and a receiving storage tank such that vapors displaced from the storage tank are transferred to the gasoline cargo tank being unloaded (40 CFR 63.11132) **[Added April 2008]**.
- *Vapor Balancing System* - (1) A piping system that collects organic HAP vapors displaced from transport vehicles or containers during loading and routes the collected vapors to the storage tank from which the liquid being loaded originated or to another storage tank connected to a common header. For containers, the piping system must route the displaced vapors directly to the appropriate storage tank or to another storage tank connected to a common header in order to qualify as a vapor balancing system; or (2) a piping system that collects organic HAP vapors displaced from the loading of a storage tank and routes the collected vapors to the transport vehicle from which the storage tank is filled (40 CFR 63.2406) **[Added April 2004; Revised January 2007]**.
- *Vapor Barrier Enclosure* - a room that encloses a dry cleaning system and is constructed of vapor barrier material that is impermeable to perchloroethylene. The enclosure shall be equipped with a ventilation system that exhausts outside the building and is completely separate from the ventilation system for any other area of the building. The exhaust system shall be designed and operated to maintain negative pressure and a ventilation rate of at least one air change per five minutes. The vapor barrier enclosure shall be constructed of glass, plexiglass, polyvinyl chloride, PVC sheet 22 mil thick (0.022 in.), sheet metal, metal foil face composite board, or other materials that are impermeable to perchloroethylene vapor. The enclosure shall be constructed so that all joints and seams are sealed except for inlet make-up air and exhaust openings and the entry door (40 CFR 63.321) **[Added October 2006]**.
- *Vapor-cleaning Machine* - a batch or in-line solvent-cleaning machine that boils liquid solvent generating solvent vapor that is used as a part of the cleaning or drying cycle (40 CFR 63.461).
- *Vapor Collection System* - any equipment located at the source (i.e., at the OLD operation) that is not open to the atmosphere; that is composed of piping, connections, and, if necessary, flow-inducing devices; and that is used for (40 CFR 63.2406) **[Added April 2004; Revised January 2007]**:
  1. Containing and conveying vapors displaced during the loading of transport vehicles to a control device;
  2. Containing and directly conveying vapors displaced during the loading of containers; or
  3. Vapor balancing. This does not include any of the vapor collection equipment that is installed on the transport vehicle.

- *Vapor Leak* - a PCE vapor concentration exceeding 25 ppmv (50 ppmv as methane) as indicated by a halogenated hydrocarbon detector or PCE gas analyzer (40 CFR 63.321) **[Added October 2006]**.
- *Vapor-Tight* - equipment that allows no loss of vapors. Compliance with vapor-tight requirements can be determined by checking to ensure that the concentration at a potential leak source is not equal to or greater than 100 percent of the Lower Explosive Limit (LEL) when measured with a combustible gas detector, calibrated with propane, at a distance of 1 in from the source (40 CFR 63.11132) **[Added April 2008]**.
- *Vapor-tight Transport Vehicle* - a transport vehicle that has been demonstrated to be vapor-tight. To be considered vapor-tight, a transport vehicle equipped with vapor collection equipment must undergo a pressure change of no more than 250 pascals (1 in of water) within 5 min after it is pressurized to 4,500 pascals (18 in. of water). This capability must be demonstrated annually using the procedures specified in EPA Method 27 of 40 CFR 60, appendix A. For all other transport vehicles, vapor tightness is demonstrated by performing the U.S. DOT pressure test procedures for tank cars and cargo tanks (40 CFR 63.2406) **[Added April 2004]**.
- *Vegetable Oil* - oils extracted from vegetation (40 CFR 63.7575 and 63.11237) **[Added April 2013]**.
- *Vegetable Oil* - oils extracted from vegetation that are generally used as a feedstock in making biodiesel (40 CFR 98.6) **[Added January 2010]**.
- *Ventilation System* - a system that is used to control the concentration of methane and other gases within mine working areas through mine ventilation, rather than a mine degasification system. A ventilation system consists of fans that move air through the mine workings to dilute methane concentrations. This includes all ventilation shafts and wells at the underground coal mine (40 CFR 98.6) **[Added July 2010]**.
- *Very High-pressure Appliance* - an appliance that uses a refrigerant with a critical temperature below 104 °F or with a liquid phase saturation pressure above 355 psia at 104 °F. Examples include but are not limited to appliances using R-13, R-23, R-503, R-508A, and R-508B (40 CFR 82.152) **[Revised April 2004; Revised January 2017]**.
- *Very Low Sulfur Oil* - for units constructed, reconstructed, or modified on or before 28 February 2005, oil that contains no more than 0.5 weight percent sulfur or that, when combusted without SO<sub>2</sub> emission control, has a SO<sub>2</sub> emission rate equal to or less than 215 ng/J (0.5 lb/MMBtu) heat input. For units constructed, reconstructed, or modified after 28 February 2005 and not located in a noncontinental area, very low sulfur oil means oil that contains no more than 0.30 weight percent sulfur or that, when combusted without SO<sub>2</sub> emission control, has a SO<sub>2</sub> emission rate equal to or less than 140 ng/J (0.32 lb/MMBtu) heat input. For units constructed, reconstructed, or modified after 28 February 2005 and located in a noncontinental area, very low sulfur oil means oil that contains no more than 0.5 weight percent sulfur or that, when combusted without SO<sub>2</sub> emission control, has a SO<sub>2</sub> emission rate equal to or less than 215 ng/J (0.50 lb/MMBtu) heat input (40 CFR 60.41b) **[Added April 2006; Revised April 2009]**.
- *Very Small Municipal Waste Combustion Unit* - any municipal waste combustion unit that has the capacity to combust less than 35 tons per day of municipal solid waste or refuse-derived fuel, as determined by the calculations in 40 CFR 60.2975 (40 CFR 60.2977) **[Added January 2006]**.
- *Vessel* - any reactor, tank, drum, barrel, cylinder, vat, kettle, boiler, pipe, hose, or other container (40 CFR 68.3) **[Added January 2005]**.
- *Ventilation Hole or Shaft* - a vent hole or shaft employed at an underground coal mine to serve as the outlet or conduit to move air from the ventilation system out of the mine (40 CFR 98.6) **[Added July 2010; Revised January 2014]**
- *Ventilation System* - a system that is used to control the concentration of methane and other gases within mine working areas through mine ventilation, rather than a mine degasification system. A ventilation system consists

of fans that move air through the mine workings to dilute methane concentrations (40 CFR 98.6) **[Added July 2010; Revised January 2014]**.

- *VHAP Service* - a piece of equipment that either contains or contacts a fluid (liquid or gas) that is at least 10 percent by weight a volatile hazardous air pollutant (VHAP) (40 CFR 61.241).
- *VOC Service* - in relationship to fugitive emissions, this is when a piece of equipment contains or contacts a process fluid that is at least 10 percent VOC by weight (40 CFR 61.241).
- *Volatile Hazardous Air Pollutant (VHAP)* - a substance regulated under 40 CFR 61, Subpart V [40 CFR 61.240 through 61.247, see checklist items AE.65.1.US through AE.65.5.US], for which a standard for equipment leaks of the substance has been proposed and promulgated. Benzene and vinyl chloride are VHAPs (40 CFR 61.241).
- *Volatile Organic Compound (VOC)* - any compound of carbon, excluding CO, CO<sub>2</sub>, carbonic acid, metallic carbides, or carbonates, and ammonium carbonate, that participates in atmospheric photochemical reactions. See the text of 40 CFR 51.100 for a lengthy list of organic compounds which have been determined to have negligible photochemical reactivity (40 CFR 51.100(s)) **[Revised April 2013]**.
- *Volatile Organic Compound (VOC)* - any compound defined as VOC in 40 CFR 51.100. This includes any organic compound other than those determined by the USEPA to be an exempt solvent. For purposes of determining compliance with emission limits, VOC will be measured by the approved test methods. Where such a method also inadvertently measures compounds that are exempt solvent, an owner or operator may exclude these exempt solvents when determining compliance with an emission standard (40 CFR 63.742) **[Added January 1999]**.
- *Volatile Organic Hazardous Air Pollutant (VOHAP) Concentration* - the fraction by weight of the HAP listed in Table 1 of 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US] that are contained in the remediation material as measured using Method 305, 40 CFR 63, appendix A and expressed in terms of parts per million (ppm). As an alternative to using Method 305, 40 CFR 63, appendix A, you may determine the HAP concentration of the remediation material using any one of the other test methods specified in 40 CFR 63.694(b)(2)(ii). When a test method specified in 40 CFR 63.694(b)(2)(ii) other than Method 305 in 40 CFR 63, appendix A is used to determine the speciated HAP concentration of the contaminated material, the individual compound concentration may be adjusted by the corresponding fm305 listed in Table 1 of 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US] to determine a VOHAP concentration (40 CFR 63.7957) **[Added April 2004]**.
- *Volatile Solids* - the organic material in livestock manure and consist of both biodegradable and non-biodegradable fractions (40 CFR 98.6) **[Added January 2010]**.
- *Voluntary Certification Program* - a technician testing program operated by a person before that person obtained approval of a technician certification program (40 CFR 82.152).
- *Voluntary Consensus Standards or VCS* - technical standards (e.g., materials specifications, test methods, sampling procedures, business practices) developed or adopted by one or more voluntary consensus bodies. EPA/Office of Air Quality Planning and Standards, by precedent, has only used VCS that are written in English. Examples of VCS bodies are: American Society of Testing and Materials (ASTM 100 Barr Harbor Drive, P.O. Box CB700, West Conshohocken, Pennsylvania 19428-B2959, (800) 262-1373, <http://www.astm.org>), American Society of Mechanical Engineers (ASME ASME, Three Park Avenue, New York, NY 10016-5990, (800) 843-2763, <http://www.asme.org>), International Standards Organization (ISO 1, ch. de la Voie-Creuse, Case postale 56, CH-1211 Geneva 20, Switzerland, +41 22 749 01 11, <http://www.iso.org/iso/home.htm>), Standards Australia (AS Level 10, The Exchange Centre, 20 Bridge Street, Sydney, GPO Box 476, Sydney NSW 2001, + 61 2 9237 6171 <http://www.stadards.org.au>), British Standards Institution (BSI, 389 Chiswick High Road, London, W4 4AL, United Kingdom, +44 (0)20 8996 9001, <http://www.bsigroup.com>), Canadian Standards Association (CSA 5060 Spectrum Way, Suite 100, Mississauga, Ontario L4W 5N6, Canada, 800-463-6727, <http://www.csa.ca>), European Committee for Standardization (CEN CENELEC Management Centre Avenue Marnix 17 B-1000

Brussels, Belgium +32 2 550 08 11, <http://www.cen.eu/cen>), and German Engineering Standards (VDI VDI Guidelines Department, P.O. Box 10 11 39 40002, Duesseldorf, Germany, +49 211 6214-230, <http://www.vdi.eu>). The types of standards that are not considered VCS are standards developed by: The United States, e.g., California (CARB) and Texas (TCEQ); industry groups, such as American Petroleum Institute (API), Gas Processors Association (GPA), and Gas Research Institute (GRI); and other branches of the U.S. government, e.g., Department of Defense (DOD) and Department of Transportation (DOT). This does not preclude EPA from using standards developed by groups that are not VCS bodies within their rule. When this occurs, EPA has done searches and reviews for VCS equivalent to these non-EPA methods (40 CFR 63.7575) [**Added April 2011**].

- *Voluntary Consensus Standards (VCS)* - technical standards (e.g., materials specifications, test methods, sampling procedures, business practices) developed or adopted by one or more voluntary consensus bodies. EPA/Office of Air Quality Planning and Standards, by precedent, has only used VCS that are written in English. Examples of VCS bodies are: American Society of Testing and Materials (ASTM, 100 Barr Harbor Drive, P.O. Box CB700, West Conshohocken, Pennsylvania 19428-B2959, (800) 262-1373, <http://www.astm.org>), American Society of Mechanical Engineers (ASME, Three Park Avenue, New York, NY 10016-5990, (800) 843-2763, <http://www.asme.org>), International Standards Organization (ISO 1, ch. de la Voie-Creuse, Case postale 56, CH-1211 Geneva 20, Switzerland, +41 22 749 01 11, <http://www.iso.org/iso/home.htm>), Standards Australia (AS Level 10, The Exchange Centre, 20 Bridge Street, Sydney, GPO Box 476, Sydney NSW 2001, +61 2 9237 6171 <http://www.standards.org.au>), British Standards Institution (BSI, 389 Chiswick High Road, London, W4 4AL, United Kingdom, +44 (0)20 8996 9001, <http://www.bsigroup.com>), Canadian Standards Association (CSA, 5060 Spectrum Way, Suite 100, Mississauga, Ontario L4W 5N6, Canada, 800-463-6727, <http://www.csa.ca>), European Committee for Standardization (CEN CENELEC Management Centre Avenue Marnix 17 B-1000 Brussels, Belgium +32 2 55008 11, <http://www.cen.eu/cen>), and German Engineering Standards (VDI Guidelines Department, P.O. Box 10 11 39 40002, Duesseldorf, Germany, +49 211 6214-230, <http://www.vdi.eu>). The types of standards that are not considered VCS are standards developed by: the United States, e.g., California Air Resources Board (CARB) and Texas Commission on Environmental Quality (TCEQ); industry groups, such as American Petroleum Institute (API), Gas Processors Association (GPA), and Gas Research Institute (GRI); and other branches of the U.S. Government, e.g., Department of Defense (DOD) and Department of Transportation (DOT). This does not preclude EPA from using standards developed by groups that are not VCS bodies within their rule. When this occurs, EPA has done searches and reviews for VCS equivalent to these non-EPA methods (40 CFR 63.11237) [**Added April 2013, Revised October 2016**].
- *Warning Label* - the warning statement required by section 611 of the Act. The term warning statement shall be synonymous with warning label for purposes of this subpart (40 CFR 82.104(aa)) [**Added July 2004**]
- *Washer* - a machine used to clean articles by immersing them in perchloroethylene. This includes a dry-to-dry machine when used with a reclaimers (40 CFR 63.321).
- *Waste* - for purposes of 40 CFR 82, Subpart E [40 CFR 82.100 through 82.124, see checklist item AE.85.7.US], items or substances that are discarded with the intent that such items or substances will serve no further useful purpose (40 CFR 82.104(bb)) [**Added July 2004**]
- *Waste and Wastewater* - a material, or spent or used water or waste, generated from residential, industrial, commercial, mining, or agricultural operations or from community activities that contain dissolved or suspended matter, and that is discarded, discharged, or is being accumulated, stored, or physically, chemically, thermally, or biologically treated in a POTW (40 CFR 63.1583) [**Added January 2000**].
- *Waste Heat Boiler* - a device that recovers normally unused energy (i.e., hot exhaust gas) and converts it to usable heat. Waste heat boilers are also referred to as heat recovery steam generators. Waste heat boilers are heat exchangers generating steam from incoming hot exhaust gas from an industrial (e.g., thermal oxidizer, kiln, furnace) or power (e.g., combustion turbine, engine) equipment. Duct burners are sometimes used to increase the temperature of the incoming hot exhaust gas (40 CFR 63.7575 and 63.11237) [**Revised April 2013**].

- *Waste Heat Process Heater* - an enclosed device that recovers normally unused energy (i.e., hot exhaust gas) and converts it to usable heat. Waste heat process heaters are also referred to as recuperative process heaters. This definition includes both fired and unfired waste heat process heaters (40 CFR 63.7575) [**Revised April 2013**].
- *Waste Heat Recovery* - the process of recovering heat from the combustion flue gases outside of the combustion firebox by convective heat transfer only (40 CFR 60.2977) [**Added January 2006**].
- *Waste Stream* - industrial solid waste material that is generated by a specific manufacturing process or client. For wastes generated at the facility that includes the industrial waste landfill, a waste stream is the industrial solid waste material generated by a specific processing unit at that facility. For industrial solid wastes that are received from off-site facilities, a waste stream can be defined as each waste shipment or group of waste shipments received from a single client or group of clients that produce industrial solid wastes with similar waste properties (40 CFR 98.468) [**Added July 2010**].
- *Wastewater Treatment System* - the collection of all processes that treat or remove pollutants and contaminants, such as soluble organic matter, suspended solids, pathogenic organisms, and chemicals from wastewater prior to its reuse or discharge from the facility (40 CFR 98.358) [**Added July 2010**].
- *Water Separator* - any device used to recover perchloroethylene from a water-perchloroethylene mixture (40 CFR 63.321).
- *Waterborne (Water-Reducible) Coating* - any coating that contains more than 5 percent water by weight as applied in its volatile fraction (40 CFR 63.742) [**Added January 1999**].
- *Waterfall Furnace* - a combustion unit having energy (heat) recovery in the furnace (i.e., radiant heat transfer section of the combustor (40 CFR 60.51b).
- *Waterwall Furnace* - a municipal waste combustion unit that has energy (heat) recovery in the furnace (for example, radiant heat transfer section) of the combustion unit (40 CFR 60.1465) [**Added April 2001**].
- *Waterwash System* - a control system that utilizes flowing water to remove particulate emissions from the exhaust air stream in spray coating application or dry media blast depainting operations (40 CFR 63.742) [**Added January 1999**].
- *Waxes* - a solid or semi-solid material at 77 °F consisting of a mixture of hydrocarbons obtained or derived from petroleum fractions, or through a Fischer-Tropsch type process, in which the straight chained paraffin series predominates. This includes all marketable wax, whether crude or refined, with a congealing point between 80 (or 85) and 240 °F and a maximum oil content of 50 weight percent (40 CFR 98.6) [**Added January 2010**].
- *Wet Scrubber* - an add-on air pollution control device that utilizes an alkaline scrubbing liquor to collect particulate matter (including nonvaporous metals and condensed organics) and/or to absorb and neutralize acid gases (40 CFR 60.51c, 62.14490, and 62.14840) [**Added October 2000; Revised January 2004**].
- *Wet Scrubber* - an add-on air pollution control device that utilizes an aqueous or alkaline scrubbing liquor to collect particulate matter (including nonvaporous metals and condensed organics) and/or to absorb and neutralize acid gases (40 CFR 60.2977) [**Added January 2006**].
- *Wet Scrubber* - an add-on air pollution control device that utilizes an aqueous or alkaline scrubbing liquid to collect particulate matter (including nonvaporous metals and condensed organics) and/or to absorb and neutralize acid gases (40 CFR 60.4930) [**Added April 2011**].
- *Wet Scrubber* - any add-on air pollution control device that mixes an aqueous stream or slurry with the exhaust gases from a boiler or process heater to control emissions of particulate matter or to absorb and neutralize acid

gases, such as hydrogen chloride. A wet scrubber creates an aqueous stream or slurry as a byproduct of the emissions control process (40 CFR 63.7575) [**Added April 2011**].

- *Wet Scrubber* - any add-on air pollution control device that mixes an aqueous stream or slurry with the exhaust gases from a boiler to control emissions of particulate matter or to absorb and neutralize acid gases, such as hydrogen chloride. A wet scrubber creates an aqueous stream or slurry as a byproduct of the emissions control process (40 CFR 63.11237) [**Added April 2013**].
- *Wholesale Purchaser-Consumer* - any person that is an ultimate consumer of gasoline, diesel fuel, methanol, natural gas, or liquified petroleum gas and which purchases or obtains gasoline, diesel fuel, natural gas or liquified petroleum gas from a supplier for use in motor vehicles or nonroad engines, including locomotive engines or marine engines and, in the case of gasoline, diesel fuel, methanol or liquified petroleum gas, receives delivery of that product into a storage tank of at least 550-gal capacity substantially under the control of that person (40 CFR 80.2(o) and 80.1500) [**Revised October 2011**].
- *Wholesaler* - a person to whom a product is delivered or sold, if such delivery or sale is for purposes of sale or distribution to retailers who buy such product for purposes of resale (40 CFR 82.104(cc)) [**Added July 2004**].
- *Wood Residuals* - materials recovered from three principal sources: Municipal solid waste (MSW); construction and demolition debris; and primary timber processing. Wood residuals recovered from MSW include wooden furniture, cabinets, pallets and containers, scrap lumber (from sources other than construction and demolition activities), and urban tree and landscape residues. Wood residuals from construction and demolition debris originate from the construction, repair, remodeling and demolition of houses and non-residential structures. Wood residuals from primary timber processing include bark, sawmill slabs and edgings, sawdust, and peeler log cores. Other sources of wood residuals include, but are not limited to, railroad ties, telephone and utility poles, pier and dock timbers, wastewater process sludge from paper mills, trim, sander dust, and sawdust from wood products manufacturing (including resinated wood product residuals), and logging residues (40 CFR 98.6) [**Added January 2011**].
- *Wood Waste* - untreated wood and untreated wood products, including tree stumps (whole or chipped), trees, tree limbs (whole or chipped), bark, sawdust, chips, scraps, slabs, millings, and shavings. Wood waste does not include (40 CFR 62.14840) [**Added January 2004**]:
  1. Grass, grass clippings, bushes, shrubs, and clippings from bushes and shrubs from residential, commercial/retail, institutional, or industrial sources as part of maintaining yards or other private or public lands
  2. Construction, renovation, or demolition wastes
  3. Clean lumber.
- *Wood Waste* - untreated wood and untreated wood products, including tree stumps (whole or chipped), trees, tree limbs (whole or chipped), bark, sawdust, chips, scraps, slabs, millings, and shavings. Wood waste does not include (40 CFR 60.2977) [**Added January 2006**]:
  1. Grass, grass clippings, bushes, shrubs, and clippings from bushes and shrubs from residential, commercial/retail, institutional, or industrial sources as part of maintaining yards or other private or public lands.
  2. Construction, renovation, or demolition wastes.
  3. Clean lumber.
  4. Treated wood and treated wood products, including wood products that have been painted, pigment-stained, or pressure treated by compounds such as chromate copper arsenate, pentachlorophenol, and creosote, or manufactured wood products that contain adhesives or resins (e.g., plywood, particle board, flake board, and oriented strand board).
- *Wool Fiberglass* - fibrous glass of random texture, including fiberglass insulation, and other products listed in NAICS 327993 (40 CFR 98.6) [**Added January 2010**].

- *Work Practice Standard* - any design, equipment, work practice, or operational standard, or combination thereof, that is promulgated pursuant to section 112(h) of the CAA (40 CFR 63.2406, 63.7575, 63.7957, and 63.11237) **[Added April 2004; Revised October 2004; Citation Revised April 2011]**.
- *Working Capacity* - for the purposes of subpart TT [Industrial Waste Landfills] 40 CFR 98, means the maximum volume or mass of waste that is actually placed in the landfill from an individual or representative type of container (such as a tank, truck, or roll-off bin) used to convey wastes to the landfill, taking into account that the container may not be able to be 100 percent filled and/or 100 percent emptied for each load (40 CFR 98.6) **[Added July 2010]**.
- *Working Capacity* - the maximum volume or mass of waste that is actually placed in the landfill from an individual or representative type of container (such as a tank, truck, or roll-off bin) used to convey wastes to the landfill, taking into account that the container may not be able to be 100 percent filled and/or 100 percent emptied for each load (40 CFR 98.348) **[Added January 2011]**.
- *Working Mode* - the time period when the solvent-cleaning machine is actively cleaning parts (40 CFR 63.461).
- *Working Mode Cover* - any cover or solvent-cleaning machine design that allows the cover to shield the cleaning machine openings from outside air disturbances while parts are being cleaned in the cleaning machine. A cover that is used during the working mode is opened only during parts entry and removal. A cover that meets this definition can also be used as an idling mode cover if that definition is also met (40 CFR 63.461).
- *Worst-Case Release* - the release of the largest quantity of a regulated substance from a vessel or process line failure that results in the greatest distance to an endpoint defined in 40 CFR 68.22(a) (40 CFR 68.3) **[Added January 2005]**.
- *Yard Waste* - grass, grass clippings, bushes, shrubs, and clippings from bushes and shrubs that are generated by residential, commercial/retail, institutional, and/or industrial sources as a part of maintenance activities associated with yards or other private or public lands. Yard waste does not include construction, renovation, and demolition wastes which are exempt from the definition of municipal solid waste in this section. Yard waste does not include clean wood (40 CFR 60.51b).
- *Yard Waste* - grass, grass clippings, bushes, shrubs, and clippings from bushes and shrubs. They come from residential, commercial/retail, institutional, or industrial sources as part of maintaining yards or other private or public lands. Yard waste does not include (40 CFR 60.1440 and 60.1455) **[Added April 2001]**:
  1. construction, renovation, and demolition wastes that are exempt from the definition of "municipal solid waste" in 40 CFR 60.1465
  2. clean wood that is exempt from the definition of "municipal solid waste" in 40 CFR 60.1465.
- *Yard Waste* - grass, grass clippings, bushes, shrubs, and clippings from bushes and shrubs. Yard waste comes from residential, commercial/retail, institutional, or industrial sources as part of maintaining yards or other private or public lands. Yard waste does not include two items (40 CFR 60.2977) **[Added January 2006]**:
  1. Construction, renovation, and demolition wastes.
  2. Clean lumber.
- *Yard Waste* - grass, grass clippings, bushes, shrubs, and clippings from bushes and shrubs from residential, commercial/retail, institutional, or industrial sources as part of maintaining yards or other private or public lands (40 CFR 62.14840) **[Added January 2004]**.

## F. Records To Review

- State and local air pollution control regulations
- Emissions inventory
- All air pollution source permits

- Plans and procedures applicable to air pollution control
- Emission monitoring records
- Opacity records
- Notices of violation (NOVs) from regulatory authorities
- Instrument calibration and maintenance records
- Reports/complaints concerning air quality
- Air Emergency Episode Plan
- State and/or Federal regulatory inspections
- Regulatory inspection reports
- Documentation of preventive measure or action
- Results of air sampling at the conclusion of response action
- Pollution prevention management plan
- Training and certification records for federal employees who reclaim/recycle refrigerant.

#### **G. Physical Features To Inspect**

- All air pollution sources (fuel burners, incinerators, VOC sources, etc.)
- Air pollution monitoring and control devices
- Air emission stacks
- Air intake vents.

## Potential Air Pollution Sources

<p><b>Heat/Steam/Energy Production</b></p> <ul style="list-style-type: none"> <li>• coal-fired power plants</li> <li>• package boilers</li> <li>• diesel generators</li> <li>• emergency generators</li> <li>• peak shaving generators</li> <li>• turbines</li> </ul> <p><b>Petroleum Product Storage and Transport</b></p> <ul style="list-style-type: none"> <li>• tank farms</li> <li>• gasoline service stations</li> <li>• loading racks</li> <li>• tanker transfer</li> <li>• underground storage tanks</li> <li>• aboveground storage tanks</li> </ul> <p><b>Graphic Arts</b></p> <ul style="list-style-type: none"> <li>• letterpress</li> <li>• rotogravure</li> <li>• offset lithography</li> <li>• silkscreening</li> </ul> <p><b>Degreasing Operations</b></p> <ul style="list-style-type: none"> <li>• vapor degreasers</li> <li>• cold solvent-cleaning</li> <li>• solvent dip tanks</li> </ul> <p><b>Surface Coating Operations</b></p> <ul style="list-style-type: none"> <li>• paint booths</li> <li>• metal parts coating lines</li> <li>• furniture refinishing</li> <li>• architectural coatings</li> <li>• traffic striping</li> </ul> <p><b>Firing Ranges</b></p> <ul style="list-style-type: none"> <li>• artillery</li> <li>• small caliber weapons</li> </ul>	<p><b>Waste Disposal</b></p> <ul style="list-style-type: none"> <li>• incineration of medical/pathological or hazardous waste</li> <li>• open burning/open detonation</li> <li>• landfills</li> <li>• surface impoundment</li> <li>• landfarms/bioremediation</li> </ul> <p><b>Additional Sources</b></p> <ul style="list-style-type: none"> <li>• air-conditioning/refrigeration shops</li> <li>• pesticide/herbicide applications</li> <li>• asphalt production</li> <li>• wastewater treatment plants</li> <li>• controlled forest and agricultural burning</li> <li>• firefighter training burns</li> <li>• smoke generators</li> <li>• engine test cells/dynamometers</li> <li>• ethylene oxide sterilizers</li> <li>• laboratory hood vents</li> <li>• sandblasting operations</li> <li>• woodworking operations</li> <li>• quarries</li> <li>• plastics production</li> <li>• explosive and munitions production</li> <li>• acid production</li> <li>• forging and annealing operation</li> <li>• metal treatment and plating</li> <li>• waferboard manufacturing</li> <li>• foam packing operations</li> <li>• unpaved roads</li> <li>• storage piles</li> <li>• storage silos</li> <li>• paint stripping operations</li> <li>• dry cleaning operations</li> <li>• photoprocessing operations</li> <li>• training aid support centers (TASC)</li> <li>• chemical recycling and recovery</li> <li>• jet engine test cells</li> </ul>

## H. Guidance for Air Emissions Management Checklist Users

	REFER TO CHECKLIST ITEMS:
All Facilities	AE.1.1.US through AE.1.18.US
Missing, Risk Management, and Positive Checklist Items	AE.2.1.US through AE.2.3.US
Steam Generators	AE.10.1.US through AE.10.18.US
Mercury-Budget Trading Program	AE.12.1.US through AE.12.11.US
Fuel Burning Equipment	AE.15.1.US through AE.15.17.US
Gas Turbines	AE.20.1.US through AE.20.13.US
Internal Combustion Engines	AE.21.1.US through AE.21.30.US
Miscellaneous Incinerators	AE.25.1.US through AE.25.19.US
Existing Commercial and Industrial Solid Waste Incinerators (CISWI)	AE.26.1.US through AE.26.10.US
Medical Waste Incinerators	
General	AE.30.1.US. through AE.30.12.US
Monitoring	AE.32.1.US through AE.32.3.US
Reporting/Recordkeeping Requirements	AE.34.1.US through AE.34.7.US
Municipal Waste Combustors	AE.35.1.US through AE.35.3.US
New Municipal Waste Combustors	AE.36.1.US through AE.36.28.US
Sewage Sludge Incinerators	AE.45.1.US through AE.45.15.US
Thermal Processing Facilities	AE.50.1.US and AE.50.2.US
Gasoline/Fuels	AE.55.1.US through AE.55.14.US
Organic Liquids Distribution (Non-Gasoline)	AE.57.1.US through AE.57.16.US
Printing Presses and Graphic Arts	AE.60.1.US
Fugitive Emissions	AE.65.1.US through AE.65.7.US
Dry Cleaning Operations	
Petroleum Solvent Dry Cleaning	AE.70.1.US
Perchloroethylene Dry Cleaning	AE.75.1.US through AE.75.15.US
Acid Production Units	AE.80.1.US and AE.80.2.US
CFCs and Halons	
Purchasing/Procurement	AE.85.1.US through AE.85.9.US
Repair/Recycling	AE.90.1.US through AE.90.26.US
Recordkeeping	AE.95.1.US through AE.95.9.US

Coating Operations	AE.100.1.US through AE.100.8.US
Degreasing Operations	
General	AE.115.1.US and AE.115.2.US
Cold Cleaning	AE.116.1.US through AE.116.3.US
Vapor Cleaning	AE.117.1.US through AE.117.12.US
Reporting	AE.118.1.US through AE.118.7.US
Ethylene Oxide Sources	AE.150.1.US through AE.150.3.US
Aerospace Manufacturing/Rework Facilities	
General	AE.170.1.US through AE.170.13.US
Monitoring	AE.171.1.US through AE.171.3.US
Reporting/Recordkeeping Requirements	AE.172.1.US through AE.172.11.US
Wastewater Treatment	
General	AE.180.1.US and AE.180.2.US
Reporting/Recordkeeping Requirements	AE.190.1.US through AE.190.3.US
Greenhouse Gas Emissions	
Reporting	AE.205.1.US through AE.205.9.US
Engine Test Cells	
General	AE.230.1.US through AE.30.4.US
Monitoring	AE.240.1.US through AE.240.3.US
Documentation	AE.250.1.US through AE.250.3.US
Remediation Site Emissions	
General	AE.300.1.US through AE.300.12.US
Process Vents	AE.305.1.US through AE.305.4.US
Material Management Units	AE.307.1.US
Equipment Leak Sources	AE.309.1.US
Containers	AE.313.1.US through AE.313.4.US
Surface Impoundments	AE.315.1.US through AE.315.4.US
Separators	AE.317.1.US through AE.317.4.US
Transfer Systems	AE.319.1.US through AE.319.4.US
Equipment Leaks	AE.321.1.US through AE.321.3.US
Closed Vent Systems and Control Devices	AE.323.1.US through AE.323.4.US
Radionuclide Emissions	AE.350.1.US through AE.350.8.US

<b>AE.15.2.US.</b> Industrial, commercial, or institutional boiler or process heaters located at, or a part of, a major source of HAP must meet specific operating limitations as well as safety and good air pollution control practices (40 CFR 63.7500(a)(2), 63.7500(a)(3), 63.7500(b), through 63.7500(f)) [Added April 2011; Revised April 2013].	<p>facility ceases combusting solid waste, the facility must be in compliance with this checklist item on the effective date of the switch from waste to fuel.)</p> <p>Verify that, if the facility has an applicable emission limit and it chooses to comply using definition 2 of “startup,” the facility has developed and implements a written startup and shutdown plan (SSP) according to the requirements in Table 3 (see Appendix 1-42).</p> <p>(NOTE: See checklist item AE.15.1.US for information on the applicability, exemptions, and compliance dates for this checklist item.)</p> <p>Verify that the facility meets each operating limit in Table 4 (see Appendix 1-42) that applies to facility boilers or process heaters.</p> <p>(NOTE: If the facility uses a control device or combination of control devices not covered in Table 4 [see Appendix 1-42], or the facility wishes to establish and monitor an alternative operating limit or an alternative monitoring parameter, the facility must apply to the EPA Administrator for approval of alternative monitoring.)</p> <p>(NOTE: EPA may approve use of an alternative to the work practice standards.)</p> <p>Verify that, at all times, the facility operates and maintains any applicable boiler or process heater, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions.</p> <p>(NOTE: Determination of whether good operation and maintenance procedures are being used will be based on information available to the Administrator that may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records, and inspection of the source.)</p> <p>Verify that limited-use boilers and process heaters complete a tune-up every 5 yr.</p> <p>(NOTE: Limited-use boilers and process heaters are not subject to the annual tune-up, or the energy assessment requirements in Table 3, or the operating limits in Table 4 [see Appendix 1-42].)</p> <p>Verify that boilers and process heaters with a heat input capacity of less than or equal to 5 million Btu per hour in the units designed to burn gas 2 (other) fuels subcategory or units designed to burn light liquid fuels subcategory complete a tune-up every 5 yr.</p> <p>Verify that boilers and process heaters in the units designed to burn gas 1 fuels subcategory with a heat input capacity of less than or equal to 5 million Btu per hour complete a tune-up every 5 yr.</p>

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>AE.15.3.US.</b> In specific situations, facilities with industrial, commercial, or institutional boiler or process heaters located at, or a part of, a major source of HAP must develop and implement a site-specific monitoring plan (40 CFR 63.7505(d)) <b>[Added April 2011; Revised April 2013; Revised January 2016].</b></p>	<p>Verify that boilers and process heaters in the units designed to burn gas 1 fuels subcategory with a heat input capacity greater than 5 million Btu per hour and less than 10 million Btu per hour complete a tune-up every 2 yr.</p> <p>(NOTE: Boilers and process heaters in the units designed to burn gas 1 fuels subcategory are not subject to the operating limits in Table 4 [see Appendix 1-42].)</p> <p>(NOTE: These standards apply at all times the affected unit is operating, except during periods of startup and shutdown during which time the facility must comply only with Table 3 [see Appendix 1-42].)</p> <p>(NOTE: See checklist item AE.15.1.US for information on the applicability, exemptions, and compliance dates for this checklist item.)</p> <p>Verify that, if the facility demonstrates compliance with any applicable emission limit through performance testing and subsequent compliance with operating limits through use of CPMS, or with a CEMS, or COMS, the facility develops a site-specific monitoring plan for the use of any CEMS, COMS, or CPMS.</p> <p>(NOTE: The requirement for a site-specific monitoring plan also applies to a facility if they petition the EPA Administrator for alternative monitoring parameters.)</p> <p>Verify that the site-specific monitoring plan is submitted, if requested, at least 60 days before the initial performance evaluation of the CMS.</p> <p>(NOTE: The requirement to develop and submit a site specific monitoring plan does not apply to affected sources with existing CEMS or COMS operated according to the performance specifications under 40 CFR 60, appendix B and that meet the requirements of 40 CFR 63.7525 [see checklist item AE.15.4.US].)</p> <p>Verify that, for each required CMS (including CEMS, COMS, or CPMS), The facility develops, and submits to the delegated authority for approval upon request, a site-specific monitoring plan that addresses the following:</p> <ul style="list-style-type: none"> <li>– installation of the CMS sampling probe or other interface at a measurement location relative to each affected process unit such that the measurement is representative of control of the exhaust emissions (e.g., on or downstream of the last control device)</li> <li>– performance and equipment specifications for the sample interface, the pollutant concentration or parametric signal analyzer, and the data collection and reduction systems</li> <li>– performance evaluation procedures and acceptance criteria (e.g., calibrations, accuracy audits, analytical drift).</li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>AE.15.4.US.</b> Facilities with industrial, commercial, or institutional boilers or process heaters located at, or a part of, a major source of HAP must conduct monitoring (40 CFR 63.7525) [Added April 2011; Revised April 2013; Revised January 2016].</p>	<p>Verify that the following are also addressed in the site-specific monitoring plan:</p> <ul style="list-style-type: none"> <li>– ongoing operation and maintenance procedures</li> <li>– ongoing data quality assurance procedures</li> <li>– ongoing recordkeeping and reporting procedures</li> </ul> <p>Verify that the facility conducts a performance evaluation of each CMS in accordance with the site-specific monitoring plan.</p> <p>Verify that the facility operates and maintains the CMS in continuous operation according to the site-specific monitoring plan.</p> <p>(NOTE: See checklist item AE.15.1.US for information on the applicability, exemptions, and compliance dates for this checklist item.)</p> <p>Verify that, if the facility’s boiler or process heater is subject to a CO emission limit in Table 1, 2, (see Appendix 1-42) or Tables 11 through 13 (see text for alternative limitations), the facility installs, operates, and maintains an oxygen analyzer system or installs, certifies, operates and maintains continuous monitoring systems for CO and oxygen (or carbon dioxide [CO<sub>2</sub>])</p> <p>(NOTE: See the text of 40 CFR 63.7525(a)(1) through 63.7525(a)(7) for technical information on the installation, operation, and maintenance of a continuous oxygen monitor.)</p> <p>Verify that, if the boiler or process heater is in the unit designed to burn coal/solid fossil fuel subcategory or the unit designed to burn heavy liquid subcategory and has an average annual heat input rate greater than 250 MMBtu per hour from solid fossil fuel and/or heavy liquid, and the facility demonstrates compliance with the PM limit instead of the alternative TSM limit, the facility installs, certifies, maintains, and operates a PM CPMS monitoring emissions discharged to the atmosphere and records the output of the system.</p> <p>(NOTE: As an alternative to use of a PM CPMS to demonstrate compliance with the PM limit, the facility may choose to use a PM CEMS. If the facility chooses to use a PM CEMS to demonstrate compliance with the PM limit instead of the alternative TSM limit, the facility must install, certify, maintain, and operate a PM CEMS monitoring emissions discharged to the atmosphere and recording the output. For other boilers or process heaters, the facility may elect to use a PM CPMS or PM CEMS operated in accordance with 40 CFR 63.7525 in lieu of using other CMS for monitoring PM compliance (e.g., bag leak detectors, ESP secondary power, PM scrubber pressure). Owners of boilers and process heaters who elect to comply with the alternative TSM limit are not required to install a PM CPMS.)</p>

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>AE.15.5.US.</b> Facilities with industrial, commercial, or institutional boiler or process heaters located at, or a part of, a major source of HAP must monitor and collect data to demonstrate continuous compliance (40 CFR 63.7535, 63.7540, and 63.7541) [Added April 2011; Revised April 2013; Revised January 2016].</p>	<p>(NOTE: See the text of 40 CFR 63.7525(b)(1) through 63.7525(b)(8) for technical information on the installation, certification, maintenance, and operation of a CEMS measuring PM emissions.)</p> <p>Verify that, if the facility is subject to opacity operating limit under 40 CFR 63, Subpart DDDDD, and are not otherwise required or elect to install and operate a PM CPMS, PM CEMS or a bag leak detection system, the facility installs, operates, certifies and maintains COMS.</p> <p>(NOTE: See the text of 40 CFR 63.7525(c)(1) through 63.7525(c)(7) for technical information on the installation, certification, maintenance, and operation of COMS.)</p> <p>(NOTE: 40 CFR 63.7525 also provides technical information on the installation, maintenance, and operation of the following types of monitoring which may be required depending on the applicable operating limits:</p> <ul style="list-style-type: none"> <li>– CMS</li> <li>– CEMS</li> <li>– a flow monitoring system</li> <li>– a pressure monitoring system</li> <li>– a pH monitoring system</li> <li>– a secondary electric power monitoring system for an electrostatic precipitator operated with a wet scrubber</li> <li>– a monitoring system to measure sorbent injection rate [e.g., weigh belt, weigh hopper, or hopper flow measurement device].)</li> </ul> <p>Verify that for each unit that meets the definition of limited-use boiler or process heater, the facility monitors and records the operating hours per year for that unit.</p> <p>(NOTE: See checklist item AE.15.1.US for information on the applicability, exemptions, and compliance dates for this checklist item.)</p> <p>Verify that the facility operates the monitoring system and collects data at all required intervals at all times each boiler or process heater is operating, except for periods of monitoring system malfunctions or out of control periods, and required monitoring system quality assurance or control activities, including, as applicable, calibration checks and required zero and span adjustments, and scheduled CMS maintenance as defined in the site-specific monitoring plan.</p> <p>(NOTE: A monitoring system malfunction is any sudden, infrequent, not reasonably preventable failure of the monitoring system to provide valid data. Monitoring system failures that are caused in part by poor maintenance or careless operation are not malfunctions.)</p>

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>Verify that the facility completes monitoring system repairs in response to monitoring system malfunctions or out-of-control periods and to return the monitoring system to operation as expeditiously as practicable.</p> <p>(NOTE: The facility may not use data recorded during periods of startup or shutdown, monitoring system malfunctions or out-of-control periods, repairs associated with monitoring system malfunctions or out-of-control periods, or required monitoring system quality assurance or control activities in data averages and calculations used to report emissions or operating levels.)</p> <p>Verify that the facility records, and makes available upon request, results of CMS performance audits and dates and duration of periods when the CMS is out of control to completion of the corrective actions necessary to return the CMS to operation consistent with the site-specific monitoring plan.</p> <p>Verify that all the data collected during all other periods is used in assessing the operation of the control device and associated control system.</p> <p>(NOTE: Except for periods of monitoring system malfunctions, repairs associated with monitoring system malfunctions, and required monitoring system quality assurance or quality control activities (including, as applicable, system accuracy audits, calibration checks, and required zero and span adjustments), failure to collect required data is a deviation of the monitoring requirements. In calculating monitoring results, do not use any data collected during periods when the monitoring system is out of control as specified in the site-specific monitoring plan, while conducting repairs associated with periods when the monitoring system is out of control, or while conducting required monitoring system quality assurance or quality control activities. Calculate monitoring results using all other monitoring data collected while the process is operating.)</p> <p>Verify that all periods when the monitoring system is out of control is reported in the semi-annual report.</p> <p>(NOTE: See the text of 40 CFR 63.7540 for the technical details on demonstrating continuous compliance with emission limitations, fuel specifications, and work practice standards.)</p> <p>Verify that, in relation to the emissions averaging provision, the owner or operator demonstrates compliance on a continuous basis by meeting the following requirements:</p> <ul style="list-style-type: none"> <li>– for each calendar month, demonstrate compliance with the average weighted emissions limit for the existing units participating in the emissions averaging option</li> <li>– maintain the applicable opacity limit as follows:</li> </ul>

<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>all times other than startup in Tables 1a, 2a, 2c, and 2d (see Appendices 1-28, 1-29, and 1-29a).</p> <p>(NOTE: If the facility owns or operates a stationary CI engine that is subject to the work, operation or management practices in items 1 or 2 of Table 2c (see Appendix 1-29a) or in items 1 or 4 of Table 2d (see Appendix 1-29a), the facility has the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d. The analysis program must at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows:</p> <ul style="list-style-type: none"> <li>– Total Base Number is less than 30 percent of the Total Base Number of the oil when new</li> <li>– viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new</li> <li>– percent water content (by volume) is greater than 0.5.</li> </ul> <p>If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before commencing operation, whichever is later. The owner or operator must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine.)</p> <p>(NOTE: If the facility owns or operates a stationary SI engine that is subject to the work, operation or management practices in items 6, 7, or 8 of Table 2c (see Appendix 1-29a) or in items 5, 6, 7, 9, or 11 of Table 2d (see Appendix 1-29a), the facility has the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d. The analysis program must at a minimum analyze the following three parameters: Total Acid Number, viscosity, and percent water content. The condemning limits for these parameters are as follows:</p> <ul style="list-style-type: none"> <li>– Total Acid Number increases by more than 3.0 milligrams of potassium hydroxide (KOH) per gram from Total Acid Number of the oil when new</li> <li>– viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new</li> <li>– percent water content (by volume) is greater than 0.5.</li> </ul> <p>If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before</p>

**REGULATORY  
REQUIREMENTS:**

**REVIEWER CHECKS**  
**December 2018**

Verify that the facility accepts:

- comments at the public meeting
- written comments anytime during the period that begins on the date the document is distributed to the main public libraries and ends 30 days after the date of the public meeting.

Verify that the facility holds a public meeting in the county where the municipal waste combustion unit will be constructed and the meeting is scheduled to occur at least 30 days after the draft materials separation plan is made available to the public.

Verify that a transcript of the public meeting on the draft materials separation plan is prepared.

(NOTE: The public meeting may be combined with any other public meeting required as part of any other Federal, State, or local permit review. However, it may not be combined with the public meeting required for the siting analysis. At the public meeting, the facility is encouraged to address the following topics for the draft materials separation plan:

- expected size of the service area for your municipal waste combustion unit
- amount of waste to be collected in the service area
- types and estimated amounts of materials proposed for separation
- methods proposed for materials separation
- amount of residual waste for disposal
- alternate disposal methods for handling the residual waste
- where the facility's responses to public comments on the draft materials separation plan will be available for inspection
- where the revised materials separation plan will be available for inspection.)

Verify that the facility:

- prepares written responses to any public comments received during the public comment period and summarize the responses to public
- comments in a document that is separate from the revised materials separation plan
- makes the comment response document available to the public in the service area where the municipal waste combustion unit will be constructed and distribute the document at least to the main public libraries used to announce the public meeting
- prepares a revised materials separation plan for the municipal waste combustion unit that includes, as appropriate, changes made in response to any public comments received during the public comment period.

Verify that the following items are submitted to the Administrator by the date the facility submits the application for a construction permit under 40 CFR 51, Subpart I, or 40 CFR 52:

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>AE.36.26.US.</b> New small waste combustors are required to meet certain</p>	<p>(NOTE: Stack testing may be done less often if the facility owns or operates a Class II municipal waste combustion unit and if all stack tests for a given pollutant over 3 consecutive years show compliance with the emission limit. In that case, the facility is not required to conduct a stack test for that pollutant for the next 2 yr. However, the facility must conduct another stack test within 36 mo of the anniversary date of the third consecutive stack test that shows compliance with the emission limit. After that, the facility must perform stack tests every 3rd year but no later than 36 mo following the previous stack tests. If a stack test shows noncompliance with an emission limit, the facility must resume annual stack tests for that pollutant until all stack tests over 3 consecutive years show compliance with the emission limit for that pollutant. The provision applies to: dioxins/furans, cadmium, lead, mercury, particulate matter, opacity, hydrogen chloride, and fugitive ash.)</p> <p>(NOTE: The facility can test less often for dioxins/furans emissions if it owns or operates a municipal waste combustion plant that meets two conditions:</p> <ul style="list-style-type: none"> <li>– there are multiple municipal waste combustion units onsite that are subject to these requirements</li> <li>– all those municipal waste combustion units have demonstrated levels of dioxins/furans emissions less than or equal to 7 nanograms per dscm (total mass) for 2 consecutive years.</li> </ul> <p>If the above circumstances exist, the facility may choose to conduct annual stack tests on only one municipal waste combustion unit per year. In that case, stack tests are conducted no more than 13 mo following a stack test on any municipal waste combustion unit subject to these requirements at the plant. Each year, test a different municipal waste combustion unit subject to these requirements and test all municipal waste combustion units in a sequence that the facility determines. Once a testing sequence is determined, it must not be changed without approval by the Administrator. If each annual stack test shows levels of dioxins/furans emissions less than or equal to 7 nanograms per dscm (total mass), the facility may continue stack tests on only one municipal waste combustion unit per year. If any annual stack test indicates levels of dioxins/furans emissions greater than 7 nanograms per dscm (total mass), subsequent annual stack tests must be conducted on all municipal waste combustion units subject to these requirements at the facility. The facility may return to testing one municipal waste combustion unit per year if it can demonstrate dioxins/furans emission levels less than or equal to 7 nanograms per dscm (total mass) for all municipal waste combustion units at the facility plant subject to these requirements for 2 consecutive years.)</p> <p>Verify that the facility does not deviate from the 13-mo testing schedules unless it applies apply to the Administrator for an alternative schedule, and the Administrator approves the request for alternate scheduling prior to the date on which the facility would otherwise have been required to conduct the next stack test.</p> <p>(NOTE: This checklist item applies if the municipal waste combustion unit is a new municipal waste combustion unit and the unit has the capacity to combust at least 35 tons per day but no more than 250 tons per day of municipal solid waste or refuse-</p>
