<b>PO.90</b>  <b>DUST SUPPRESSION WITH USED OIL</b>  <b>PO.90.1.US.</b> Used oil cannot be used for dust suppression unless allowed by the state (40 CFR 279.12(b) and 279.82) [Revised March 2000].	Verify that used oil is not used for dust suppression.

## Appendix 8-1

### Compliance Dates for Facilities Requiring a Response Plan (40 CFR 112.20) [Revised July 2000]

Facility Type	Due Date
1. Facilities that started operations after 18 February 1993 but before 30 August 1994 that could, because of location, be reasonably expected to cause substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines.	30 August 1994
2. Newly constructed facilities that started operations after 30 August 1994 that could, because of location, be reasonably expected to cause substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines.	Prior to start of operations
<b>3. Facilities which are required to submit a plan after 30 August 1994 because of changes in design, construction, operation, or maintenance rendering the facility such that it could, because of location, be reasonably expected to cause substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines.</b>	Prior to the changed part of the facility starting operation
4. Facilities which are required to submit a plan after 30 August 1994 as a result of unplanned events or change in facility characteristics rendering the facility such that it could, because of location, be reasonably expected to cause substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines.	Within 6 mo of the unplanned event or change
5. Animal fat and vegetable oil facilities that are newly constructed that commences operation after 31 July 2000.	Prior to start of operations
6. Animal fat and vegetable oil facilities that are required to prepare and submit a plan after 31 July 2000 as a result of a planned or unplanned change in facility characteristics that causes the facility to become regulated.	Prior to the changed part of the facility starting operation Within 6 mo of the unplanned change

			exceed one for each net ton of the vessel.		
Motor	Vessels not over 15 gross tons.  Vessels over 15 gross tons except seagoing motor vessels of 300 gross tons and over.	All vessels carrying combustible or flammable liquid cargo in bulk.  All vessels carrying combustible or flammable liquid cargo in bulk. <sup>5</sup>	All vessels carrying more than 6 passengers. <sup>7</sup>  1. All vessels carrying more than 12 passengers on an international voyage, except yachts. 2. All vessels not over 65 ft in length which carry more than 6 passengers. <sup>7</sup> 3. All other vessels of over 65 ft in length carrying passengers for hire except documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew.	Those vessels carrying dangerous cargoes when required by 46 CFR 98 or 49 CFR 171-179.  All vessels carrying freight for hire except those covered by columns 3 and 4.	All vessels except those covered by columns 3, 4, 5, and 7.  All vessels except those covered by columns 3, 4, 5, and 7.
	Seagoing motor vessels of 300 gross tons and over.	All vessels carrying combustible or flammable liquid cargo in bulk. <sup>5</sup>	1. All vessels carrying more than 12 passengers on an international voyage, except yachts. 2. All other vessels carrying passengers, <sup>7</sup> except: a. Yachts. b. Documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew.	All vessels except those covered by columns 3 and 4, and those engaged in the fishing, oystering, clamming crabbing, or any other branch of the fishery, kelp, or sponge industry.	All vessels except those covered by columns 3, 4, 5, and 7.

Method of propulsion	Size or other limitations <sup>1</sup> under subchapter	Classes of vessels (including motorboats) examined or inspected under various Coast Guard regulations <sup>1</sup>			
		Vessels inspected and certificated Passenger D- Tank Vessels <sup>2</sup>	Vessels inspected and certificated under either subchapter H- Cargo and Vessel 2, 3 ,4, 5 or Subchapter T- Small Passenger Vessels <sup>2, 3, 4</sup>	Vessels inspected and certificated under subchapter I- Uninspected Misc. Vessels <sup>2, 5</sup>	Vessels subject to provisions of subchapter C- Vessels <sup>2 3, 6, 7, 8</sup>
Column 1	Column 2	Column 3	Column 4	Column 5	Column 6
Sail	Vessels not over 700 gross tons.	All vessels carrying combustible or liquid cargo in bulk.	All vessels carrying more than 6 passengers. <sup>7</sup>	Those vessels carrying dangerous cargoes when required by 46 CFR 98 or 49 CFR 171-179.	None
	Vessels over 700 gross tons.	All vessels carrying combustible or liquid cargo in bulk.	All vessels carrying passengers for hire.	Those vessels carrying dangerous cargoes when required by 46 CFR 98 or 146.	None
Nonself-propelled	Vessels less than 100 gross tons.	All vessels carrying combustible or liquid cargo in bulk.	Those vessels carrying dangerous cargoes when required by 49 CFR 171-179.	Those Vessels carrying dangerous cargoes when required by 46 CFR 98 or 49 CFR 171-179.	All barges carrying passengers except those covered by column 4.
	Vessels 100 gross tons or over.	All vessels carrying combustible or flammable liquid cargo in bulk.	All seagoing barges except those covered by columns 3 and 4; and those inland barges carrying dangerous car goes when required by 49 CFR 171- 179.	All seagoing barges except those covered by columns 3 and 4; and those inland barges carrying dangerous cargoes when required by 46 CFR 98 or 49 CFR 171- 179.	All barges carrying passengers except columns 4 and 7.

<sup>1</sup>Where length is used in this table it means the length measured from end to end over the deck, excluding sheer. This expression means a straight line measurement of the overall length from the foremost part of the vessel to the aftermost part of the vessel, measured parallel to the centerline.

<sup>2</sup>Subchapter E (Load Lines), F (Marine Engineering), J (Electrical Engineering), and N (Dangerous Cargoes) of this chapter may also be applicable under certain conditions. The provisions of 49 CFR 171-179 apply whenever hazardous materials are on board vessels (including motorboats), except when specifically exempted by law.

<sup>3</sup>Public nautical schoolships, other than vessels of the Navy and Coast Guard, shall meet the requirements of 46 CFR 167 of subchapter R (Nautical Schools) of this chapter. Civilian nautical schools, as defined by 46 USC 1331, shall meet the requirements of subchapter H (Passenger Vessels) and 46 CFR 168 of subchapter R (Nautical Schools) of this chapter.

<sup>4</sup>Subchapter H (Passenger Vessels) of this chapter covers only those vessels of 100 gross tons or more. Subchapter T (Small Passenger Vessels) covers only those vessels of less than 100 gross tons.

<sup>5</sup>Vessels covered by subchapter H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter, where the principal purpose or use of the vessel is not the carriage of liquid cargo, may be granted a permit to carry a limited amount of flammable or combustible liquid cargo in bulk. The portion of the vessel used for the carriage of the flammable or combustible liquid cargo shall meet the requirements of subchapter D (Tank Vessels) in addition to the requirements of subchapter H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter.

<sup>6</sup>Any vessel on an international voyage is subject to the requirements of the International Convention for Safety of Life at Sea, 1974.

<sup>7</sup>The meaning of the term *passenger* is as defined in the act of 10 May 1956 (Section 1, 70 Statute 151; 46 USC 390). On oceanographic vessels scientific personnel on board shall not be deemed to be passengers or seamen, but for calculations of lifesaving equipment, etc., shall be counted as persons.

<sup>8</sup>Boilers and machinery are subject to examination on vessels over 40 ft in length.

### Appendix 8-3

#### Used Oil Classifications

(40 CFR 261.3(a)(2)(v), 279.10 and 279.11)

**[Revised June 1998; Reviewed March 2000; Revised October 2003; Revised January 2007, Revised January 2017]**

Used Oils Which Are Required to be Handled According to the Requirements in 40 CFR 279 (40 CFR 279.10(b)(2)(ii), 279.10(b)(2)(iii), 279.10(b)(3), 279.10(c)(2), 279.10(d), 279.10(e)(2), 279.10(i), and 279.11)

1. Used oil containing more than 1000 ppm of total halogens but the generator has demonstrated that the used oil does not contain hazardous waste.
2. Used metalworking oils/fluids containing chlorinated paraffins when they are recycled or disposed of and the generator has demonstrated that the used oil does not contain hazardous waste.
3. Used oils contaminated with CFCs that have been mixed with used oil from sources other than refrigeration units (or from refrigeration units but the unit is destined for reclamation) and the generator has demonstrated that the used oil does not contain hazardous waste.
4. Materials produced from used oil that are burned for energy recovery.
5. Mixtures of used oil and a characteristic hazardous waste if the resultant mixture does not exhibit any characteristics of hazardous waste.
6. Mixtures of used oil and a waste that is hazardous solely because it exhibits the characteristic of ignitability and is not a listed waste, provided that the mixture does not exhibit the ignitability characteristic.
7. Mixtures of used oil and very small quantity generator (VSQG) hazardous waste.
8. Mixtures of used oil and fuels or other fuel products, except those mixed on-site by the generator for use in the generators own vehicles if the used oil and the diesel fuel have been mixed.
9. Used oil burned for energy recovery, and any fuel produced from used oil by processing, blending, or other treatment unless the used oil is shown not to exceed any of the allowable levels of the constituents and properties in the following specifications. (NOTE: Once used oil that is to be burned for energy recovery has been shown not to exceed any specification and the person making that showing complies with 40 CFR 279.72, 279.73, and 279.74(b), the used oil is no longer subject to 40 CFR 279.)

Arsenic	5 ppm maximum
Cadmium	2 ppm maximum
Chromium	10 ppm maximum
Lead	100 ppm maximum
Flash Point	100 F minimum
Total halogens	4000 ppm maximum
10. Materials containing or otherwise contaminated with used oil that are burned for energy recovery.
11. Used oil drained or removed from materials containing or otherwise contaminated with used oil.
12. Used oil containing PCBs (as defined at 40 CFR 761.3) at any concentration less than 50 ppm is subject to the requirements of 40 CFR 279 unless, because of dilution, it is regulated under 40 CFR 761 as a used oil containing PCBs at 50 ppm or greater. PCB-containing used oil subject to the requirements of 40 CFR 279 may also be subject to the prohibitions and requirements found at 40 CFR 761, including 40 CFR 761.20(d) and (e). No person may avoid these provisions by diluting used oil containing PCBs, unless otherwise specifically provided for in 40 CFR 279 or 40 CFR 761.

Used Oil that is Required to be Handled as a Hazardous Waste (40 CFR 261.3(a)(2)(v), 279.10(b)).

1. Mixtures of used oil and listed hazardous waste.
2. Used oil containing more than 1000 ppm total halogens (NOTE: Used oil containing more than 1,000 ppm total halogens is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in subpart D of part 261 of this chapter. Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste (for example, by showing that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in appendix VIII of 40 CFR 261).
3. Used metalworking oils/fluids containing chlorinated paraffins if processed through a tolling agreement.
4. Used oil contaminated with CFCs removed from refrigeration units where the CFCs are destined for reclamation.
5. Mixtures of used oil and hazardous waste if the resultant mixture exhibits characteristics of a hazardous waste.

Used Oil that is not Subject to the Requirements of 40 CFR 279, Nor is it to be Handled as a Hazardous Waste Unless Testing Indicates Hazardous Constituents (40 CFR 279.10(c)(1), 279.10(d)(2), 279.10(e)(1), 279.10(e)(3), 279.10(e)(4), and 279.10(f) through 279.10(i)).

1. Mixtures of used oil and diesel fuel mixed on-site by the generator of the used oil for use in the generator's own vehicles.
2. Materials that are reclaimed from used oil that are used beneficially and are not burned for energy recovery or used in a manner constituting disposal.
3. Materials derived from used oil that are disposed of or used in a manner constituting disposal.
4. Used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products.
5. Wastewater discharges with de minimis quantities of used oil.
6. Used oil within a crude oil or natural gas pipeline.
7. Used oil on vessels.
8. Materials containing or otherwise contaminated with used oil from which the used oil has been properly drained or removed so that no signs of visible free-flowing remains.
9. Used oil containing PCBs at concentrations of 50 ppm or greater is not subject to the requirements of 40 CFR 279, but is subject to regulation under 40 CFR 761. No person may avoid these provisions by diluting used oil containing PCBs, unless otherwise specifically provided for in 40 CFR 279 or 40 CFR 761.

## Appendix 8-4

### Response Plan Requirements Specific to MTR Facility Type (33 CFR 154.1035, 154.1040, and 154.1041) [Added October 2010]

(NOTE: This Appendix contains content information for the following three situations:

- I. For facilities that could reasonably be expected to cause significant and substantial harm to the environment.*
- II. For facilities that could reasonably be expected to cause substantial harm to the environment.*
- III. Mobile MTR facilities.*

***I. Specific response plan requirements for facilities that could reasonably be expected to cause significant and substantial harm to the environment.***

- A. Introduction and plan content. This section of the plan must include facility and plan information as follows:
1. The facility's name, street address, city, county, state, ZIP code, facility telephone number, and fax number, if so equipped. Include mailing address if different from street address.
  2. The facility's location described in a manner that could aid both a reviewer and a responder in locating the specific facility covered by the plan, such as, river mile or location from a known landmark that would appear on a map or chart.
  3. The name, address, and procedures for contacting the facility's owner or operator on a 24-h basis.
  4. A table of contents.
  5. During the period that the submitted plan does not have to conform to the format contained in 33 CFR 154, Subpart F, a cross index, if appropriate.
  6. A record of change(s) to record information on plan updates.

B. Emergency Response Action Plan. This section of the plan must be organized in the subsections described in this paragraph:

1. Notification procedures.
  - (i) This subsection must contain a prioritized list identifying the person(s), including name, telephone number, and their role in the plan, to be notified of a discharge or substantial threat of a discharge of oil. The telephone number need not be provided if it is listed separately in the list of contacts required in the plan. This Notification Procedures listing must include--
    - A. Facility response personnel, the spill management team, oil spill removal organizations, and the qualified individual(s) and the designated alternate(s); and
    - B. Federal, State, or local agencies, as required.
  - (ii) This subsection must include a form, such as that depicted in Figure 1, which contains information to be provided in the initial and follow-up notifications to Federal, State, and local agencies. The form shall include notification of the National Response Center as required in part 153 of this chapter. Copies of the form also must be placed at the location(s) from which notification may be made. The initial notification form must include space for the information contained in Figure 1. The form must contain a prominent statement that initial notification must not be delayed pending collection of all information.

2. Facility's spill mitigation procedures.

- (i) This subsection must describe the volume(s) and oil groups that would be involved in the--
  - (A) Average most probable discharge from the MTR facility;
  - (B) Maximum most probable discharge from the MTR facility;
  - (C) Worst case discharge from the MTR facility; and
  - (D) Where applicable, the worst case discharge from the non-transportation-related facility. This must be the same volume provided in the response plan for the non-transportation-related facility.
- (ii) This subsection must contain prioritized procedures for facility personnel to mitigate or prevent any discharge or substantial threat of a discharge of oil resulting from operational activities associated with internal or external facility transfers including specific procedures to shut down affected operations. Facility personnel responsible for performing specified procedures to mitigate or prevent any discharge or potential discharge shall be identified by job title. A copy of these procedures shall be maintained at the facility operations center. These procedures must address actions to be taken by facility personnel in the event of a discharge, potential discharge, or emergency involving the following equipment and scenarios:
  - (A) Failure of manifold, mechanical loading arm, other transfer equipment, or hoses, as appropriate;
  - (B) Tank overflow;
  - (C) Tank failure;
  - (D) Piping rupture;
  - (E) Piping leak, both under pressure and not under pressure, if applicable;
  - (F) Explosion or fire; and
  - (G) Equipment failure (e.g. pumping system failure, relief valve failure, or other general equipment relevant to operational activities associated with internal or external facility transfers.)
- (iii) This subsection must contain a listing of equipment and the responsibilities of facility personnel to mitigate an average most probable discharge.

3. Facility's response activities.

- (i) This subsection must contain a description of the facility personnel's responsibilities to initiate a response and supervise response resources pending the arrival of the qualified individual.
- (ii) This subsection must contain a description of the responsibilities and authority of the qualified individual and alternate as required in 33 CFR 154.1026.
- (iii) This subsection must describe the organizational structure that will be used to manage the response actions. This structure must include the following functional areas.
  - (A) Command and control;
  - (B) Public information;
  - (C) Safety;
  - (D) Liaison with government agencies;
  - (E) Spill Operations;
  - (F) Planning;
  - (G) Logistics support; and
  - (H) Finance.
- (iv) This subsection must identify the oil spill removal organizations and the spill management team to:
  - (A) Be capable of providing the following response resources:
    - (1) Equipment and supplies to meet the requirements of 33 CFR 154.1045, 33 CFR 154.1047 or subparts H or I of 33 CFR 154, as appropriate; and
    - (2) Trained personnel necessary to continue operation of the equipment and staff of the oil spill removal organization and spill management team for the first 7 days of the response.
  - (B) This section must include job descriptions for each spill management team member within the organizational structure described in paragraph (b)(3)(iii) of this section. These job descriptions should include the responsibilities and duties of each spill management team member in a response action.

- (v) For mobile facilities that operate in more than one COTP zone, the plan must identify the oil spill removal organization and the spill management team in the applicable geographic-specific appendix. The oil spill removal organization(s) and the spill management team discussed in paragraph (b)(3)(iv)(A) of this section must be included for each COTP zone in which the facility will handle, store, or transport oil in bulk.
4. Fish and wildlife and sensitive environments.
- (i) This section of the plan must identify areas of economic importance and environmental sensitivity, as identified in the ACP, which are potentially impacted by a worst case discharge. ACPs are required under section 311(j)(4) of the FWPCA to identify fish and wildlife and sensitive environments. The applicable ACP shall be used to designate fish and wildlife and sensitive environments in the plan. Changes to the ACP regarding fish and wildlife and sensitive environments shall be included in the annual update of the response plan, when available.
  - (ii) For a worst case discharge from the facility, this section of the plan must--
    - (A) List all fish and wildlife and sensitive environments identified in the ACP which are potentially impacted by a discharge of persistent oils, non-persistent oils, or non-petroleum oils.
    - (B) Describe all the response actions that the facility anticipates taking to protect these fish and wildlife and sensitive environments.
    - (C) Contain a map or chart showing the location of those fish and wildlife and sensitive environments which are potentially impacted. The map or chart shall also depict each response action that the facility anticipates taking to protect these areas. A legend of activities must be included on the map page.
  - (iii) For a worst case discharge, this section must identify appropriate equipment and required personnel, available by contract or other approved means as described in 33 CFR 154.1028, to protect fish and wildlife and sensitive environments which fall within the distances calculated using the methods outlined in this paragraph as follows:
    - (A) Identify the appropriate equipment and required personnel to protect all fish and wildlife and sensitive environments in the ACP for the distances, as calculated in paragraph (b)(4)(iii)(B) of this section, that the persistent oils, non-persistent oils, or non-petroleum oils are likely to travel in the noted geographic area(s) and number of days listed in table 2 of appendix C of this part;
    - (B) Calculate the distances required by paragraph (b)(4)(iii)(A) of this section by selecting one of the methods described in this paragraph:
      - (1) Distances may be calculated as follows:
        - (i) For persistent oils and non-petroleum oils discharged into non-tidal waters, the distance from the facility reached in 48 hours at maximum current.
        - (ii) For persistent and non-petroleum oils discharged into tidal waters, 15 miles from the facility down current during ebb tide and to the point of maximum tidal influence or 15 miles, whichever is less, during flood tide.
        - (iii) For non-persistent oils discharged into non-tidal waters, the distance from the facility reached in 24 hours at maximum current.
        - (iv) For non-persistent oils discharged into tidal waters, 5 miles from the facility down current during ebb tide and to the point of maximum tidal influence or 5 miles, whichever is less, during flood tide.
      - (2) A spill trajectory or model may be substituted for the distances calculated under paragraph (b)(4)(iii)(B)(1) of this section. The spill trajectory or model must be acceptable to the COTP.
      - (3) The procedures contained in the Environmental Protection's Agency's regulations on oil pollution prevention for non-transportation-related onshore facilities at 40 CFR 112, appendix C, Attachment C III may be substituted for the distances listed in non-tidal and tidal waters; and
    - (C) Based on historical information or a spill trajectory or model, the COTP may require the additional fish and wildlife and sensitive environments also be protected.
5. Disposal Plan. This subsection must describe any actions to be taken or procedures to be used to ensure that all recovered oil and oil contaminated debris produced as a result of any discharge are disposed according to Federal, state, or local requirements.

C. Training and exercises. This section must be divided into the following two subsections:

1. Training procedures. This subsection must describe the training procedures and programs of the facility owner or operator to meet the requirements in 33 CFR 154.1050.
2. Exercise procedures. This subsection must describe the exercise program to be carried out by the facility owner or operator to meet the requirements in 33 CFR 154.1055.

D. Plan review and update procedures. This section must address the procedures to be followed by the facility owner or operator to meet the requirements of 33 CFR 154.1065 and the procedures to be followed for any post-discharge review of the plan to evaluate and validate its effectiveness.

E. Appendices. This section of the response plan must include the appendices described in this paragraph.

1. Facility-specific information. This appendix must contain a description of the facility's principal characteristics.
  - (i) There must be a physical description of the facility including a plan of the facility showing the mooring areas, transfer locations, control stations, locations of safety equipment, and the location and capacities of all piping and storage tanks.
  - (ii) The appendix must identify the sizes, types, and number of vessels that the facility can transfer oil to or from simultaneously.
  - (iii) The appendix must identify the first valve(s) on facility piping separating the transportation-related portion of the facility from the non-transportation-related portion of the facility, if any. For piping leading to a manifold located on a dock serving tank vessels, this valve is the first valve inside the secondary containment required by 40 CFR 112.
  - (iv) The appendix must contain information on the oil(s) and hazardous material handled, stored, or transported at the facility in bulk. A material safety data sheet meeting the requirements of 29 CFR 1910.1200, 33 CFR 154.310(a)(5) or an equivalent will meet this requirement. This information can be maintained separately providing it is readily available and the appendix identifies its location. This information must include:
    - (A) The generic or chemical name;
    - (B) A description of the appearance and odor;
    - (C) The physical and chemical characteristics;
    - (D) The hazards involved in handling the oil(s) and hazardous materials. This shall include hazards likely to be encountered if the oil(s) and hazardous materials come in contact as a result of a discharge; and
    - (E) A list of firefighting procedures and extinguishing agents effective with fires involving the oil(s) and hazardous materials.
  - (v) The appendix may contain any other information which the facility owner or operator determines to be pertinent to an oil spill response.
2. List of contacts. This appendix must include information on 24-hour contact of key individuals and organizations. If more appropriate, this information may be specified in a geographic-specific appendix. The list must include:
  - (i) The primary and alternate qualified individual(s) for the facility;
  - (ii) The contact(s) identified under paragraph (b)(3)(iv) of this section for activation of the response resources; and
  - (iii) Appropriate Federal, State, and local officials.
3. Equipment list and records. This appendix must include the information specified in this paragraph.
  - (i) The appendix must contain a list of equipment and facility personnel required to respond to an average most probable discharge, as defined in 33 CFR 154.1020. The appendix must also list the location of the equipment.
  - (ii) The appendix must contain a detailed listing of all the major equipment identified in the plan as belonging to an oil spill removal organization(s) that is available, by contract or other approved means as described in 33 CFR 154.1028(a), to respond to a maximum most probable or worst case discharge, as defined in 33 CFR 154.1020. The detailed listing of all major equipment may be located in a separate document referenced by the plan. Either the appendix or the separate document referenced in the plan must provide the location of the major response equipment.
  - (iii) It is not necessary to list response equipment from oil spill removal organization(s) when the organization has been classified by the Coast Guard and their capacity has been determined to equal or exceed the response capability needed by the facility. For oil spill removal organization(s) classified by the Coast Guard, the classification must be noted in this section of the plan. When it is necessary

for the appendix to contain a listing of response equipment, it shall include all of the following items that are identified in the response plan: Skimmers; booms; dispersant application, in-situ burning, bioremediation equipment and supplies, and other equipment used to apply other chemical agents on the NCP Product Schedule (if applicable); communications, firefighting, and beach cleaning equipment; boats and motors; disposal and storage equipment; and heavy equipment. The list must include for each piece of equipment:

- (A) The type, make, model, and year of manufacture listed on the nameplate of the equipment;
  - (B) For oil recovery devices, the effective daily recovery rate, as determined using section 6 of appendix C of this part;
  - (C) For containment boom, the overall boom height (draft and freeboard) and type of end connectors;
  - (D) The spill scenario in which the equipment will be used for or which it is contracted;
  - (E) The total daily capacity for storage and disposal of recovered oil;
  - (F) For communication equipment, the type and amount of equipment intended for use during response activities. Where applicable, the primary and secondary radio frequencies must be specified.
  - (G) Location of the equipment; and
  - (H) The date of the last inspection by the oil spill removal organization(s).
4. Communications plan. This appendix must describe the primary and alternate method of communication during discharges, including communications at the facility and at remote locations within the areas covered by the response plan. The appendix may refer to additional communications packages provided by the oil spill removal organization. This may reference another existing plan or document.
  5. Site-specific safety and health plan. This appendix must describe the safety and health plan to be implemented for any response location(s). It must provide as much detailed information as is practicable in advance of an actual discharge. This appendix may reference another existing plan requiring under 29 CFR 1910.120.
  6. List of acronyms and definitions. This appendix must list all acronyms used in the response plan including any terms or acronyms used by Federal, State, or local governments and any operational terms commonly used at the facility. This appendix must include all definitions that are critical to understanding the response plan.

## ***II. Specific requirements for facilities that could reasonably be expected to cause substantial harm to the environment.***

The response plan will meet all of the requirements listed in Part I of this Appendix, except as modified below:

1. The facility's response activities section of the response plan need not list the facility or corporate organizational structure that will be used to manage the response
2. The owner or operator of a facility must ensure the availability of response resources required to be identified in the plan by contract or other approved means.
3. A facility owner or operator must have at least 200 ft of containment boom and the means of deploying and anchoring the boom available at the spill site within 1 h of the detection of a spill to respond to the average most probable discharge in lieu of 1,000 ft of containment boom or two times the length of the largest vessel that regularly conducts petroleum oil transfer to or from the facility, whichever is greater. Based on site-specific or facility-specific information, the COTP may specify that additional quantities of containment boom are available within one hour. In addition, there must be adequate sorbent material for initial response to an average most probable discharge. If the facility is a fixed facility, the containment boom and sorbent material must be located at the facility. If the facility is a mobile facility, the containment boom and sorbent must be available locally and be at the site of the discharge within 1 hour of its discovery.

## ***III Response information to be maintained on mobile MTR facilities.***

Each mobile MTR facility must carry the following information as contained in the response plan when performing transfer operations:

1. A description of response activities for a discharge which may occur during transfer operations. This may be a narrative description or a list of procedures to be followed in the event of a discharge.
2. Identity of response resources to respond to a discharge from the mobile MTR facility.

3. List of the appropriate persons and agencies (including the telephone numbers) to be contacted in regard to a discharge and its handling, including the National Response Center.

(NOTE: The owner or operator of the mobile facility must also retain the information in this paragraph at the principal place of business.)

## SECTION 9

### SOLID WASTE MANAGEMENT U.S. TEAM Guide, December 2018

#### A. Applicability

This section addresses the collection, storage, and disposal of solid waste at facilities. Solid waste is considered to be non-hazardous trash, rubbish, garbage, bulky wastes, liquids or sludges generated by any operations and activities. The handling and disposal of asbestos waste materials are addressed in Section 11, Toxic Substances Management.

Recycling and resource recovery activities are also included in this section because they are considered a form of solid waste management.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions that have been added or revised as a result of this review are identified as being reviewed, revised, or added in March 2000, for example **[Added March 2000]**.

#### B. Federal Legislation

- *Resource Conservation and Recovery Act (RCRA)* of 1976. This is the Federal law that governs the disposal of solid waste. Subtitle D of this act, as last amended in November 1984, Public Law (PL) 98-616, 42 U.S. Code (USC) 6941-6949a, establishes Federal standards and requirements for state and regional authorities respecting solid waste disposal. The objectives of this subtitle are to assist in developing and encouraging methods for the disposal of solid waste which are environmentally sound and which maximize the utilization of valuable resources recoverable from solid waste. The objectives are to be achieved through Federal technical and financial assistance to states and regional authorities for comprehensive planning (42 USC 6941).
- *The Solid Waste Disposal Act* of 1965, as amended. This act requires that Federal facilities comply with all Federal, state, interstate, and local requirements concerning the disposal and management of solid wastes. These requirements include permitting, licensing, and reporting.
- *The Occupational Safety and Health Act (OSHA)*. The general purpose of this act is to assure, as much as possible, every individual working in the United States safe and healthful working conditions. The control of medical waste, including infectious and pathological waste, is one aspect of assuring safe and healthy working conditions.
- *The Clean Air Act Amendments* of 1990 (CAAA90). This act, Public Law (PL) 101-549 (42 U.S. Code (USC) 7401-7671q), is currently the Federal legislation regulating the prevention and control of air pollution. As a result of this act, regulations have been promulgated concerning the control, monitoring, and reporting of emissions from municipal solid waste landfills (MSWLFs).
- EO 12088, *Federal Compliance with Pollution Standards*. This EO, dated 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the Agency funds meet applicable Federal, state, and local environmental requirements for correcting

situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget. Sections 1-4, "Pollution Control Plan" was revoked by EO 13148 **[Revised October 2002]**.

### C. State/Local Regulations

For information on regulations in specific states, see the State Supplements to TEAM Guide.

The Federal government set minimum national standards for municipal solid waste disposal in 40 CFR 258, but state and local governments are responsible for implementing and enforcing waste programs. Currently USEPA has delegated its authority to implement various provisions of RCRA to all states, except Alaska, Hawaii, Iowa, and two U.S. territories. States are required to develop their own programs based on the Federal regulations. Most states and municipalities have already developed their own regulations governing the permitting, licensing, and operations of landfills, incinerators, and source separation/recycling programs **[Revised March 2000]**.

States are required to incorporate revised criteria for MSWLFs into their permit programs and gain approval from U.S. Environmental Protection Agency (USEPA). States that apply for and receive USEPA approval of their programs have the opportunity to provide a lot of flexibility in implementing the regulations. This flexibility allows states to take local conditions into account and gives them the authority to alter some of the requirements. Evaluators will need to determine if a state has been granted approval for the 40 CFR 258 program in order to accurately assess compliance with the criteria. Many states have also instigated categories of special wastes that cannot be placed in landfills or dumps, or may only be disposed of under specific circumstances **[Reviewed March 2000]**.

### D. Key Compliance Requirements

- **Storage/Collection** - All solid waste and materials separated for recycling must be stored so that it does not cause a fire, safety, or health hazard. Collection systems are required to be operated in a manner to protect the health and safety of personnel associated with the operation. All collection equipment is required to have a suitable cover to prevent spillage and be constructed, operated, and maintained adequately. Solid wastes or materials separated for recycling are required to be collected according to a certain schedule, and in a safe, efficient manner (40 CFR 243.200-1, 243.201-1, 243.202-1(a) through 243.202-1(c), 243.203-1, and 243.204-1) **[Reviewed March 2000]**.
- **Solid Waste Containers** - Personnel should be periodically informed about materials that are prohibited from disposal in solid waste receptacles (MP).
- **Recycling** - Facilities should participate in any state or local recycling programs and reduce the volume of solid waste materials at the source whenever practical. Businesses and other organizations employing over 100 office workers are required to recover high-grade paper. Residential facilities at which more than 500 families reside are required to recycle newspapers. Any facility generating 10 tons or more of waste corrugated containers per month is required to segregate or collect them separately for recycling (40 CFR 246.200-1 and 246.202-1) **[Reviewed March 2000]**.
- **Open Dumping** - 40 CFR 257 details the criteria for determining whether or not an activity would be considered an open dump for the purposes of state solid waste management planning under RCRA. See Appendix 9-1a for a list of the criteria that a facility or practice must meet in order for it to not be considered an open dump. **[Reviewed March 2000]**.
- **Municipal Solid Waste Landfills (MSWLFs)** - MSWLFs must meet restrictions for location, the types of waste to be placed in them, emissions from the MSWLF, and the types of monitoring required. Limitations, design criteria, and closure requirements vary depending on whether it is a new or existing MSWLF (40 CFR 258 and 40 CFR 60.750 through 60.759) **[Reviewed March 2000]**.

- **Thermal Processing Facilities** - Thermal processing facilities that are designed to process or are processing 50 tons or more per day of municipal solid wastes must be operated in a manner that prevents water and/or air contamination. Additionally, there must be an operating plan that specifies procedures and precautions to be taken if unacceptable wastes are delivered to or left at the thermal processing facility. The residue and solid waste resulting from the thermal processing must be disposed of in a manner that prevents environmental damage (40 CFR 240) **[Reviewed March 2000]**.
- **Medical Waste** - Contaminated reusable sharps and other regulated wastes are required to be placed in puncture resistant, color coded, leakproof containers, as soon as possible after use until properly reprocessed. Specimens of blood or other potentially infectious material are required to be placed in a container that prevents leakage during collection, handling, processing, storage, transport, or shipping and specific labeling and handling requirements are followed (29 CFR 1910.1030(d)).
- **Medical Waste Containers** - All bins, cans, and other receptacles intended for reuse that have the likelihood of becoming contaminated with blood or other potentially infectious materials are required to be inspected and decontaminated on a regularly scheduled basis. Labels affixed to containers of regulated wastes, refrigerators and freezers containing blood, and other containers used to store, transport, or ship blood or other potentially infectious materials must meet specific standards, which include the biohazard symbol, and being colored a fluorescent orange with contrasting-colored lettering and symbols (29 CFR 1910.1030(d)(4)(ii)(c) and 1910.1030(g)(1)(i)).
- The following is a summary of the solid waste-related goals outlined in EO 13423:
  1. **Building Performance:** Construct or renovate buildings in accordance with sustainability strategies, including resource conservation, reduction, and use; siting; and indoor environmental quality.
  2. **Procurement:** Expand purchases of environmentally-sound goods and services, including biobased products.
  3. **Pollution Prevention:** Reduce use of chemicals and toxic materials and purchase lower risk chemicals and toxic materials from top priority list.

## **E. Key Compliance Definitions**

- *Active Collection System* - a gas collection system that uses gas mover equipment (40 CFR 60.751) **[Reviewed March 2000]**.
- *Active Landfill* - a landfill in which solid waste is being placed or a landfill that is planned to accept waste in the future (40 CFR 60.751) **[Reviewed March 2000]**.
- *Active Life* - the period of operation beginning with the initial receipt of solid waste and ending with the completion of closure activities (40 CFR 258.2) **[Reviewed March 2000]**.
- *Active Life* - the period of operation beginning with the initial receipt of solid waste and ending at the final receipt of solid waste (40 CFR 257.5(b)) **[Added April 2004]**.
- *Active Portion* - that part of a facility or unit that has received or is receiving wastes and that has not been closed (40 CFR 258.2) **[Reviewed March 2000]**.
- *Agency* - an executive agency as defined in section 105 of title 5, United States Code, excluding the Government Accountability Office. For the purpose of the E.O., military departments, as defined in 5 U.S.C. 102, are covered under the auspices of DoD (*Instructions for Implementing EO 13423*, Section XIII, Definitions) **[Added July 2007]**.
- *Agricultural Waste* - byproducts generated by the rearing of animals and the production and harvest of crops or trees. Animal waste, a large component of agricultural waste, includes waste (e.g., feed waste, bedding and litter,

and feedlot and paddock runoff) from livestock, dairy, and other animal-related agricultural and farming practices (7 CFR 330.400(b)) **[Added July 2006]**.

- *Airport* - public-use airport open to the public without prior permission and without restrictions within the physical capacities of available facilities (40 CFR 257.3-8(e)) **[Added April 2004]**.
- *Alley Collection* - the collection of solid waste from containers placed adjacent to or in an alley (40 CFR 243.101) **[Added March 2000]**.
- *Agricultural Solid Waste* - the solid waste that is generated by the rearing of animals, and the producing and harvesting of crops or trees (40 CFR 243.101) **[Added March 2000]**.
- *Animal Feed* - any crop grown for consumption by animals, such as pasture crops, forage, and grain (40 CFR 257.3-5(c)) **[Added April 2004]**.
- *Appropriate Facility or Organization* - any Federal facility or organization that is subject to compliance with environmental regulation or conducts activities that can have a significant impact on the environment, either directly or indirectly, individually or cumulatively, due to the operations of that facility's or organization's mission, processes, or functions (*Instructions for Implementing EO 13423*, Section XIII, Definitions) **[Added July 2007]**.
- *Approved Facility* - a facility approved by the Administrator, Animal and Plant Health Inspection Service, upon his determination that it has equipment and uses procedures that are adequate to prevent the dissemination of plant pests and livestock or poultry diseases, and that it is certified by an appropriate Government official as currently complying with the applicable laws for environmental protection (7 CFR 330.400(b)) **[Added July 2006]**.
- *Approved Sewage System* - a sewage system approved by the Administrator, Animal and Plant Health Inspection Service, upon his determination that the system is designed and operated in such a way as to preclude the discharge of sewage effluents onto land surfaces or into lagoons or other stationary waters, and otherwise is adequate to prevent the dissemination of plant pests and livestock or poultry diseases, and that is certified by an appropriate Government official as currently complying with the applicable laws for environmental protection (7 CFR 330.400(b)) **[Added July 2006]**.
- *Aquifer* - a geological formation, group of formations, or a portion of a formation capable of yielding significant quantities of groundwater to wells or springs (40 CFR 257.3-4(c) and 258.2) **[Reviewed March 2000; Revised April 2004]**.
- *Background Soil pH* - the pH of the soil prior to the addition of substances that alter the hydrogen ion concentration (40 CFR 257.3-5(c)) **[Added April 2004]**.
- *Based Flood* - a flood that has a 1 percent or greater chance of recurring in any year or a flood of a magnitude equaled or exceeded once in 100 yr on the average over a significantly long period (40 CFR 257.3-1(b)) **[Added April 2004]**.
- *Biological Product* - a virus, therapeutic serum, toxin, antitoxin, vaccine, blood, blood component or derivative, allergenic product, or analogous product, or arsphenamine or derivative of arsphenamine (or any other trivalent arsenic compound) applicable to the prevention, treatment, or cure of a disease or condition of human beings or animals. A biological product includes a material subject to regulation under 42 U.S.C. 262 or 21 U.S.C. 151-159. Unless otherwise excepted, a biological product known or reasonably expected to contain a pathogen that meets the definition of a Category A or B infectious substance must be assigned the identification number UN 2814, UN 2900, or UN 3373, as appropriate (49 CFR 173.134(a)(2)) **[Added January 2003; Revised July 2006]**.
- *Bioreactor* - a MSW landfill or portion of a MSW landfill where any liquid other than leachate (leachate includes landfill gas condensate) is added in a controlled fashion into the waste mass (often in combination with

recirculating leachate) to reach a minimum average moisture content of at least 40 percent by weight to accelerate or enhance the anaerobic (without oxygen) biodegradation of the waste (40 CFR 63.1990) **[Added April 2003]**.

- *Bird Hazard* - an increase in the likelihood of bird/aircraft collisions that may cause damage to the aircraft or injury to its occupants (40 CFR 257.3-8(e)) **[Added April 2004]**.
- *Blood* - human blood, human blood components, and products made from human blood (29 CFR 1910.1030(a)).
- *Bottom Ash* - the solid material that remains on a hearth or falls off the grate after thermal processing is complete (40 CFR 240.101(b)) **[Reviewed March 2000]**.
- *Bulky Wastes* - large items of solid waste such as household appliances, furniture, large auto parts, trees, branches, stumps, and other oversize wastes, which large size precludes or complicates their handling by normal solid waste collection, processing, or disposal methods (40 CFR 243.101) **[Reviewed March 2000]**.
- *Cargo Residues* - the remnants of any cargo which are not covered by other MARPOL Annexes and which remain on the deck or in holds following loading or unloading, including loading and unloading excess or spillage, whether in wet or dry condition or entrained in wash water, but does not include cargo dust remaining on the deck after sweeping or dust on the external surfaces of the ship (33 CFR 154.05) **[Added October 2013]**.
- *Carrier* - the principal operator of a means of conveyance (7 CFR 330.400(b)) **[Added July 2006]**.
- *Carryout Collection* - collection of solid waste from a storage area proximate to the dwelling unit(s) or establishment (40 CFR 243.101) **[Added March 2000]**.
- *Cation Exchange Capacity* - the sum of exchangeable cations a soil can absorb expressed in milli-equivalents per 100 grams of soil as determined by sampling the soil to the depth of cultivation or solid waste placement, whichever is greater, and analyzing by the summation method for distinctly acid soils or the sodium acetate method for neutral, calcareous or saline soils ("Methods of Soil Analysis, Agronomy Monograph No. 9." C. A. Black, ed., American Society of Agronomy, Madison, Wisconsin. pp 891-901, 1965) (40 CFR 257.3-5(c)) **[Added April 2004]**.
- *Class 7 (Radioactive) Material* - see the definition of Radioactive material
- *Closed Landfill* - a landfill in which solid waste is no longer being placed, and in which no additional solid wastes will be placed without first filing a notification of modification (40 CFR 60.751) **[Reviewed March 2000]**.
- *Closure* - that point in time when a landfill becomes a closed landfill (40 CFR 60.751) **[Reviewed March 2000]**.
- *Collection* - the act of removing solid waste (or materials which have been separated for the purpose of recycling) from a central storage point (40 CFR 243.101) **[Reviewed March 2000]**.
- *Collection Frequency* - the number of times collection is provided in a given period of time (40 CFR 243.101) **[Reviewed March 2000]**.
- *Commercial Solid Waste* - all types of solid waste generated by stores, offices, restaurants, warehouses, and other nonmanufacturing activities, excluding residential and industrial wastes (40 CFR 243.101 and 40 CFR 60.751) **[Reviewed March 2000]**.
- *Compactor Collection Vehicle* - a vehicle with an enclosed body containing mechanical devices that convey solid waste into the main compartment of the body and compress it into a smaller volume of greater density (40 CFR 243.101) **[Added March 2000]**.

- *Construction and Demolition (C&D) Landfill* - a solid waste disposal facility subject to the requirements in 40 CFR 257, subparts A or B that receives construction and demolition waste and does not receive hazardous waste (defined in 40 CFR 261.3) or industrial solid waste (defined in 40 CFR 258.2). Only a C&D landfill that meets the requirements of 40 CFR 257, subpart B may receive very small quantity generator waste (defined in 40 CFR 260.10). A C&D landfill typically receives any one or more of the following types of solid wastes: roadwork material, excavated material, demolition waste, construction/renovation waste, and site clearance waste (40 CFR 257.2 and 258.2) **[Added July 2003; Revised January 2017]**.
- *Construction and Demolition Wastes* - the waste building materials, packaging, and rubble resulting from the construction, renovation, repair, and demolition operation on pavements, houses, commercial buildings, and other structures (40 CFR 243.101) **[Reviewed March 2000]**.
- *Contaminate* - introduce a substance that would cause (40 CFR 257.3-4(c)) **[Added April 2004]**:
  1. the concentration of that substance in the ground water to exceed the maximum contaminant level specified in appendix I, or
  2. an increase in the concentration of that substance in the groundwater where the existing concentration of that substance exceeds the maximum contaminant level specified in appendix I.
- *Contaminated* - the presence or the reasonably anticipated presence of blood or other potentially infectious materials on an item or surface (29 CFR 1910.1030(a)).
- *Contaminated Sharps* - any contaminated object that can penetrate the skin, including but not limited to, needles, scalpels, broken glass, broken capillary tubes, and exposed ends of dental wires (29 CFR 1910.1030(a)).
- *Controlled Landfill* - any landfill at which collection and control systems are required under 40 CFR 60.750 - 759 as a result of the nonmethane organic compounds (NMOC) emission rate. The landfill is considered controlled at the time a collection and control system design plan is submitted (40 CFR 60.751) **[Revised June 1998; Reviewed March 2000]**.
- *Corrugated Container Waste* - discarded corrugated boxes (40 CFR 246.101) **[Reviewed March 2000]**.
- *Crops for Direct Human Consumption* - crops that are consumed by humans without processing to minimize pathogens prior to distribution to the consumer (40 CFR 257.3-6(c)) **[Added April 2004]**.
- *Culture* - an infectious substance containing a pathogen that is intentionally propagated. Culture does not include a human or animal patient specimen (49 CFR 173.134(a)(3)) **[Added January 2003; Revised July 2006]**.
- *Cultures and Stocks* - a material prepared and maintained for growth and storage and containing a Risk Group 2, 3 or 4 infectious substance (49 CFR 171.8 and 173.134(a)(3)) **[Added January 2003]**.
- *Curb Collection* - collection of solid waste placed adjacent to a street (40 CFR 243.101) **[Added March 2000]**.
- *Destruction or Adverse Modification* - a direct or indirect alteration of critical habitat which appreciably diminishes the likelihood of the survival and recovery of threatened or endangered species using that habitat (40 CFR 257.3-2(c)) **[Added April 2004]**.
- *Deviation* - any instance in which an affected source subject to 40 CFR 63, Subpart AAAA, or an owner or operator of such a source (40 CFR 63.1990) **[Added April 2003]**:
  1. Fails to meet any requirement or obligation established by this subpart, including, but not limited to, any emissions limitation (including any operating limit) or work practice standard;
  2. Fails to meet any term or condition that is adopted to implement an applicable requirement in this subpart and that is included in the operating permit for any affected source required to obtain such a permit; or

3. Fails to meet any emission limitation, (including any operating limit), or work practice standard in this subpart during startup, shutdown, and malfunction (SSM), regardless of whether or not such failure is permitted by this subpart.

For the purposes of the landfill monitoring and SSM plan requirements, deviations include the following (40 CFR 63.1965):

1. A deviation occurs when the control device operating parameter boundaries described in 40 CFR 60.758(c)(1) of subpart WWW are exceeded.
  2. A deviation occurs when 1 hour or more of the hours during the 3-h block averaging period does not constitute a valid hour of data. A valid hour of data must have measured values for at least three 15-min monitoring periods within the hour.
  3. A deviation occurs when a SSM plan is not developed, implemented, or maintained on site.
- *Decontamination* - the use of physical or chemical means to remove, inactivate, or destroy bloodborne pathogens on a surface or item to the point where they are no longer capable of transmitting infectious particles and the surface or item is rendered safe for handling, use, or disposal (29 CFR 1910.1030(a)).
  - *Design Capacity* - the weight of solid waste of a specified gross calorific value that a thermal processing facility is designed to process in 24 h of continuous operation (40 CFR 240.101(d)).
  - *Design Capacity* - in relation to air quality restrictions, the maximum amount of solid waste a landfill can accept, as indicated in terms of volume or mass in the most recent permit issued by the State, local, or Tribal agency responsible for regulating the landfill, plus any in-place waste not accounted for in the most recent permit. If the owner or operator chooses to convert the design capacity from volume to mass or from mass to volume to demonstrate its design capacity is less than 2.5 million megagrams or 2.5 million m<sup>3</sup>, the calculation must include a site specific density, which must be recalculated annually (40 CFR 60.751) **[Revised June 1998; Reviewed March 2000]**.
  - *Diagnostic Specimen* - any human or animal material, including excreta, secretions, blood and its components, tissue, and tissue fluids being transported for diagnostic or investigational purposes, but excluding live infected humans or animals. A diagnostic specimen is not assigned a UN identification number unless the source patient or animal has or may have a serious human or animal disease from a Risk Group 4 pathogen, in which case it must be classed as Division 6.2, described as an infectious substance, and assigned to UN 2814 or UN 2900, as appropriate. Assignment to UN 2814 or UN 2900 is based on known medical condition and history of the patient or animal, endemic local conditions, symptoms of the source patient or animal, or professional judgment concerning individual circumstances of the source patient or animal (49 CFR 171.8 and 173.134(a)(4)) **[Added January 2003]**.
  - *Dishwater* - the liquid residue from the manual or automatic washing of dishes and cooking utensils which have been pre-cleaned to the extent that any food particles adhering to them would not normally interfere with the operation of automatic dishwashers (33 CFR 154.05) **[Added October 2013]**.
  - *Discharge* - any release, however caused, from a ship and includes any escape, disposal, spilling, leaking, pumping, emitting or emptying. It does not include (33 CFR 154.05) **[Added October 2013]**:
    1. Dumping within the meaning of the Convention on the Prevention of Marine Pollution by Dumping of Wastes and Other Matter, done at London on 13 November 1972; or
    2. Release of oil or oily mixtures directly arising from the exploration, exploitation and associated off-shore processing of sea-bed mineral resources.
  - *Discharge* - as defined by MARPOL in relation to harmful substances or effluent containing such substances, means any release however caused from a ship, and includes any escape, disposal, spilling, leaking, pumping, emitting or emptying. It does not include (33 CFR 154.05) **[Added October 2013]**:

1. Dumping within the meaning of the Convention on the Prevention of Marine Pollution by Dumping of Wastes and Other Matter, done at London on November 13, 1972; or
  2. The release of harmful substances directly arising from the exploration, exploitation, and associated offshore processing of seabed mineral resources; or
  3. The release of harmful substances for purposes of legitimate scientific research relating to pollution abatement or control.
- *Disease Vector* - rodents, flies, and mosquitoes capable of transmitting disease to humans (40 CFR 257.3-6(c)) **[Added April 2004]**.
  - *Disposal* - the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that such solid waste or hazardous waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including ground waters (40 CFR 257.2) **[Added April 2004]**.
  - *Disposal Facility* - all contiguous land and structures, other appurtenances and improvements on the land used for disposal of solid waste (40 CFR 60.751) **[Reviewed March 2000]**.
  - *Division 6.1 (Poisonous Material)* - a material, other than a gas, which is known to be so toxic to humans as to afford a hazard to health during transportation, or which, in the absence of adequate data on human toxicity (49 CFR 173.132(a)) **[Added January 2003]**:
    1. Is presumed to be toxic to humans because it falls within any one of the following categories when tested on laboratory animals (whenever possible, animal test data that has been reported in the chemical literature should be used):
      - a. Oral Toxicity. A liquid with an LD50 for acute oral toxicity of not more than 500 mg/kg or a solid with an LD50 for acute oral toxicity of not more than 200 mg/kg.
      - b. Dermal Toxicity. A material with an LD50 for acute dermal toxicity of not more than 1000 mg/kg.
      - c. Inhalation Toxicity:
        - i. A dust or mist with an LC50 for acute toxicity on inhalation of not more than 10 mg/L; or
        - ii. A material with a saturated vapor concentration in air at 20 deg. C (68 °F) greater than or equal to one-fifth of the LC50 for acute toxicity on inhalation of vapors and with an LC50 for acute toxicity on inhalation of vapors of not more than 5000 mL/mm<sup>3</sup>; or
    2. Is an irritating material, with properties similar to tear gas, which causes extreme irritation, especially in confined spaces.
  - *Division 6.2 (infectious substance)* - a material known or reasonably expected to contain a pathogen. A pathogen is a microorganism (including bacteria, viruses, rickettsiae, parasites, fungi) or other agent, such as a proteinaceous infectious particle (prion) that can cause disease in humans or animals. An infectious substance must be assigned the identification number UN 2814, UN 2900, UN 3373, or UN 3291 as appropriate, and must be assigned to one of the following categories: (49 CFR 173.134(a)(1)) **[Added January 2003; Revised July 2006]**:
    1. Category A: An infectious substance in a form capable of causing permanent disability or life-threatening or fatal disease in otherwise healthy humans or animals when exposure to it occurs. An exposure occurs when an infectious substance is released outside of its protective packaging, resulting in physical contact with humans or animals. A Category A infectious substance must be assigned to identification number UN 2814 or UN 2900, as appropriate. Assignment to UN 2814 or UN 2900 must be based on the known medical history or symptoms of the source patient or animal, endemic local conditions, or professional judgment concerning the individual circumstances of the source human or animal.
    2. Category B: An infectious substance that is not in a form generally capable of causing permanent disability or life-threatening or fatal disease in otherwise healthy humans or animals when exposure to it occurs. This includes Category B infectious substances transported for diagnostic or investigational purposes. A Category B infectious substance must be described as "Biological substance, Category B" and assigned

identification number UN 3373. This does not include regulated medical waste, which must be assigned identification number UN 3291.

The following are not subject to the requirements of this subchapter as Division 6.2 materials (49 CFR 173.134(b)) **[Added January 2003; Revised July 2006]**:

1. A material that does not contain an infectious substance or that is unlikely to cause disease in humans or animals.
2. Non-infectious biological materials from humans, animals, or plants. Examples include non-infectious cells, tissue cultures, blood or plasma from individuals not suspected of having an infectious disease, DNA, RNA or other non-infectious genetic elements.
3. A material containing micro-organisms that are non-pathogenic to humans or animals.
4. A material containing pathogens that have been neutralized or inactivated such that they no longer pose a health risk.
5. A material with a low probability of containing an infectious substance, or where the concentration of the infectious substance is at a level naturally occurring in the environment so it cannot cause disease when exposure to it occurs. Examples of these materials include: Foodstuffs; environmental samples, such as water or a sample of dust or mold; and substances that have been treated so that the pathogens have been neutralized or deactivated, such as a material treated by steam sterilization, chemical disinfection, or other appropriate method, so it no longer meets the definition of an infectious substance.
6. A biological product, including an experimental or investigational product or component of a product, subject to Federal approval, permit, review, or licensing requirements, such as those required by the Food and Drug Administration of the U.S. Department of Health and Human Services or the U.S. Department of Agriculture.
7. Blood collected for the purpose of blood transfusion or the preparation of blood products; blood products; plasma; plasma derivatives; blood components; tissues or organs intended for use in transplant operations; and human cell, tissues, and cellular and tissue-based products regulated under authority of the Public Health Service Act (42 U.S.C. 264-272) and/or the Food, Drug, and Cosmetic Act (21 U.S.C. 332 et seq.).
8. Blood, blood plasma, and blood components collected for the purpose of blood transfusion or the preparation of blood products and sent for testing as part of the collection process, except where the person collecting the blood has reason to believe it contains an infectious substance, in which case the test sample must be shipped as a Category A or Category B infectious substance in accordance with 49 CFR 173.196 or 49 CFR 173.199, as appropriate.
9. Dried blood spots or specimens for fecal occult blood detection placed on absorbent filter paper or other material.
10. A Division 6.2 material, other than a Category A infectious substance, contained in a patient sample being transported for research, diagnosis, investigational activities, or disease treatment or prevention, or a biological product, when such materials are transported by a private or contract carrier in a motor vehicle used exclusively to transport such materials. Medical or clinical equipment and laboratory products may be transported aboard the same vehicle provided they are properly packaged and secured against exposure or contamination. If the human or animal sample or biological product meets the definition of regulated medical waste in paragraph (a)(5) of this section, it must be offered for transportation and transported in conformance with the appropriate requirements for regulated medical waste.
11. A human or animal sample (including, but not limited to, secretta, excreta, blood and its components, tissue and tissue fluids, and body parts) being transported for routine testing not related to the diagnosis of an infectious disease, such as for drug/alcohol testing, cholesterol testing, blood glucose level testing, prostate specific antibody testing, testing to monitor kidney or liver function, or pregnancy testing, or for tests for diagnosis of non-infectious diseases, such as cancer biopsies, and for which there is a low probability the sample is infectious.
12. Laundry and medical equipment and used health care products, as follows:
  - a. Laundry or medical equipment conforming to the regulations of the Occupational Safety and Health Administration of the Department of Labor in 29 CFR 1910.1030. This exception includes medical equipment intended for use, cleaning, or refurbishment, such as reusable surgical equipment, or equipment used for testing where the components within which the equipment is contained essentially function as packaging. This exception does not apply to medical equipment being transported for disposal.

- b. Used health care products not conforming to the requirements in 29 CFR 1910.1030 and being returned to the manufacturer or the manufacturer's designee are excepted from the requirements of this subchapter when offered for transportation or transported in accordance with this paragraph (b)(12). For purposes of this paragraph, a health care product is used when it has been removed from its original packaging. Used health care products contaminated with or suspected of contamination with a Category A infectious substance may not be transported under the provisions of this paragraph.
    - i. Each used health care product must be drained of free liquid to the extent practicable and placed in a watertight primary container designed and constructed to assure that it remains intact under conditions normally incident to transportation. For a used health care product capable of cutting or penetrating skin or packaging material, the primary container must be capable of retaining the product without puncture of the packaging under normal conditions of transport. Each primary container must be marked with a BIOHAZARD marking conforming to 29 CFR 1910.1030(g)(1)(i).
    - ii. Each primary container must be placed inside a watertight secondary container designed and constructed to assure that it remains intact under conditions normally incident to transportation. The secondary container must be marked with a BIOHAZARD marking conforming to 29 CFR 1910.1030(g)(1)(i).
    - iii. The secondary container must be placed inside an outer packaging with sufficient cushioning material to prevent movement between the secondary container and the outer packaging. An itemized list of the contents of the primary container and information concerning possible contamination with a Division 6.2 material, including its possible location on the product, must be placed between the secondary container and the outside packaging.
    - iv. Each person who offers or transports a used health care product under the provisions of this paragraph must know about the requirements of this paragraph.
  - 13. Any waste or recyclable material, other than regulated medical waste, including--
    - a. Garbage and trash derived from hotels, motels, and households, including but not limited to single and multiple residences;
    - b. Sanitary waste or sewage;
    - c. Sewage sludge or compost;
    - d. Animal waste generated in animal husbandry or food production; or
    - e. Medical waste generated from households and transported in accordance with applicable state, local, or tribal requirements.
  - 14. Corpses, remains, and anatomical parts intended for interment, cremation, or medical research at a college, hospital, or laboratory.
  - 15. Forensic material transported on behalf of a U.S. Government, state, local or Indian tribal government agency, except that--
    - a. Forensic material known or suspected to contain a Category B infectious substance must be shipped in a packaging conforming to the provisions of 49 CFR 173.24.
    - b. Forensic material known or suspected to contain a Category A infectious substance or an infectious substance listed as a select agent in 42 CFR Part 73 must be transported in packaging capable of meeting the test standards in 49 CFR 178.609. The secondary packaging must be marked with a BIOHAZARD symbol conforming to specifications in 29 CFR 1910.1030(g)(1)(i). An itemized list of contents must be enclosed between the secondary packaging and the outer packaging.
  - 16. Agricultural products and food as defined in the Federal Food, Drug, and Cosmetics Act (21 U.S.C. 332 et seq.).
- *Domestic Septage* - either liquid or solid material removed from a septic tank, cesspool, portable toilet, Type III marine sanitation device, or similar treatment works that receives only domestic sewage. Domestic septage does not include liquid or solid material removed from a septic tank, cesspool, or similar treatment works that receives either commercial wastewater or industrial wastewater and does not include grease removed from a grease trap at a restaurant (40 CFR 257.2) [**Added April 2004**].
  - *Domestic Wastes* - all types of wastes generated in the living spaces on board a ship except victual wastes (33 CFR 151.05).

- *Emissions Limitation* - any emission limit, opacity limit, operating limit, or visible emissions limit (40 CFR 63.1990) [**Added April 2003**].
- *Emission Rate Cutoff* - the threshold annual emission rate to which a landfill compares its estimated emission rate to determine if control under the regulation is required (40 CFR 60.751) [**Reviewed March 2000**].
- *Enclosed Combustor* - an enclosed firebox which maintains a relatively constant limited peak temperature generally using a limited supply of combustion air. An enclosed flare is considered an enclosed combustor (40 CFR 60.751) [**Reviewed March 2000**].
- *Endangered or Threatened Species* - any species listed as such pursuant to section 4 of the Endangered Species Act (40 CFR 257.3-2(c)) [**Added April 2004**].
- *EPA Approved State Plan* - a State plan that USEPA has approved based on the requirements in 40 CFR 60, subpart B to implement and enforce 40 CFR 60, Subpart Cc. An approved State plan becomes effective on the date specified in the notice published in the Federal Register announcing USEPA's approval (40 CFR 63.1990) [**Added April 2003**].
- *Existing MSWLF Unit* - any MSWLF unit that is receiving solid waste as of the appropriate dates specified in 40 CFR 258.1(e) (see Appendix 9-1). Waste placement in existing units must be consistent with past operating practices or modified practices to ensure good management (40 CFR 258.2) [**Reviewed March 2000**].
- *Existing Unit* - any non-municipal non-hazardous waste disposal unit that is receiving VSQG hazardous waste as of 1 January 1998 (40 CFR 257.5(b)) [**Added April 2004; Revised January 2017**].
- *Explosive Gas* – methane (40 CFR 257.3-8(e)) [**Added April 2004**].
- *Facility* - any building, installation, structure, land, and other property owned or operated by, or constructed or manufactured and leased to, the Federal Government, as well as any fixture. This term includes a group of facilities at a single or multiple location(s) managed as an integrated operation, as well as government-owned contractor operated facilities. For purposes of energy reporting, “facility” excludes land and sites where the utilities are not paid by the reporting agency (i.e., in cases where no separate periodic invoice for utilities is required to be paid) (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
- *Facility* - all contiguous land and structures, other appurtenances and improvements on the land use for the disposal of solid waste (40 CFR 257.2 and 258.2) [**Reviewed March 2000; Revised April 2004**].
- *Facility Structures* - any buildings and sheds or utility or drainage lines on the facility (40 CFR 257.3-8(e)) [**Added April 2004**].
- *Federal Plan* - the USEPA plan to implement 40 CFR 60, Subpart Cc for existing MSW landfills located in States and Indian country where State plans or tribal plans are not currently in effect. On the effective date of an USEPA approved State or tribal plan, the Federal plan no longer applies. The Federal plan is found at 40 CFR 62, subpart GGG 40 CFR 63.1990) [**Added April 2003**].
- *Flare* - an open combustor without enclosure or shroud (40 CFR 60.751) [**Reviewed March 2000**].
- *Floodplain* - the lowland and relatively flat areas adjoining inland and coastal waters, including flood-prone areas of offshore islands, which are inundated by the base flood (40 CFR 257.3-1(b) and 257.8(b)) [**Added April 2004**].
- *Fly Ash* - suspended particles, charred paper, dust, soot, and other partially oxidized matter carried in the products of combustion (40 CFR 240.101) [**Reviewed March 2000**].

- *Food-chain Crops* - tobacco, crops grown for human consumption, and animal feed for animals whose products are consumed by humans. Incorporated into the soil means the injection of solid waste beneath the surface of the soil or the mixing of solid waste with the surface soil (40 CFR 257.3-5(c)) **[Added April 2004]**.
- *Food Waste* - the organic residues generated by the handling, storage, sale, preparation, cooking, and serving of foods, commonly called garbage (40 CFR 243.101) **[Reviewed March 2000]**.
- *Food Wastes* - any spoiled or unspoiled food substances and includes fruits, vegetables, dairy products, poultry, meat products and food scraps generated aboard ship (33 CFR 154.05) **[Added October 2013]**.
- *Fuel Oil* - any oil used to fuel the propulsion and auxiliary machinery of the ship carrying the fuel. The term “fuel oil” is also known as “oil fuel” (33 CFR 154.05) **[Added October 2013]**.
- *Garbage* - all waste material that is derived in whole or in part from fruits, vegetables, meats, or other plant or animal (including poultry) material, and other refuse of any character whatsoever that has been associated with any such material (7 CFR 330.400(b)) **[Revised July 2006]**.
- *Garbage* - all kinds of food wastes, domestic wastes and operational wastes, all plastics, cargo residues, cooking oil, fishing gear, and animal carcasses generated during the normal operation of the ship and liable to be disposed of continuously or periodically except those substances which are defined or listed in other Annexes to the present Convention. Garbage does not include fresh fish and parts thereof generated as a result of fishing activities undertaken during the voyage, or as a result of aquaculture activities which involve the transport of fish including shellfish for placement in the aquaculture facility and the transport of harvested fish including shellfish from such facilities to shore for processing (33 CFR 151.05) **[Added October 2013]**.
- *Gas Mover Equipment* - the equipment used to transport landfill gas through the header system (40 CFR 60.751) **[Reviewed March 2000]**.
- *Graywater* - drainage from the dishwasher, shower, laundry, bath, and washbasin drains, and does not include drainage from toilets, urinals, hospitals, and cargo spaces (33 CFR 151.05).
- *Ground Water* - water below the land surface in a zone of saturation (40 CFR 258.2) **[Reviewed March 2000]**.
- *Groundwater* - water below the land surface in the zone of saturation. Underground drinking water source means one of the following (40 CFR 257.3-4(c)) **[Added April 2004]**:
  1. an aquifer supplying drinking water for human consumption
  2. an aquifer in which the ground water contains less than 10,000 mg/l total dissolved solids.
- *Harmful Substance* - any substance which, if introduced into the sea, is liable to create hazards to human health, harm living resources and marine life, damage amenities, or interfere with other legitimate uses of the sea, and includes any substance subject to control by MARPOL (33 CFR 154.05) **[Added October 2013]**.
- *Hazardous Waste* - a waste or combination of wastes of a solid, liquid, contained gaseous, or semisolid form which may cause, or contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible illness, taking into account the toxicity of such waste, its persistence and degradability in nature, its potential for accumulation or concentration in tissue, and other factors that may otherwise cause or contribute to adverse acute or chronic effects on the health of persons or other organisms (40 CFR 243.101) **[Reviewed March 2000]**.
- *High-Grade Paper* - letterhead, dry copy papers, miscellaneous business forms, stationary, typing paper, tablet sheets, and computer printout paper and cards, commonly sold as “white ledger”, “computer printout” and “tab card” grade by the wastepaper industry (40 CFR 246.101) **[Reviewed March 2000]**.

- *Household Waste* - any solid waste, (including garbage, trash, and sanitary waste in septic tanks) derived from households (including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day-use-recreation areas) (40 CFR 258.2 and 40 CFR 60.751) **[Reviewed March 2000]**.
- *Incineration* - to reduce garbage to ash by burning (7 CFR 330.400(b)) **[Added July 2006]**.
- *Incorporated Into The Soil* - the injection of solid waste beneath the surface of the soil or the mixing of solid waste with the surface soil (40 CFR 257.3-6(c)) **[Added April 2004]**.
- *Indian Lands of Indian Country* - this means (40 CFR 258.2) **[Reviewed March 2000]**:
  1. all land within the limits of any Indian reservation under the jurisdiction of the U.S. Government, notwithstanding the issuance of any patent, and including rights-of-way running throughout the reservation
  2. all dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of the state
  3. all Indian allotments, the Indian titles to which have not been extinguished, including rights of way running through the same.
- *Indian Tribe* - any Indian tribe, band, nation, or community recognized by the Secretary of the Interior (SOI) and exercising substantial governmental duties and powers on Indian lands (40 CFR 258.2) **[Reviewed March 2000]**.
- *Industrial Solid Waste* - the solid waste generated by industrial processes and manufacturing that is not a hazardous waste (40 CFR 243.101) **[Reviewed March 2000]**.
- *Industrial Solid Waste* - in relation to MSWLF, solid waste generated by manufacturing or industrial processes that is not a hazardous waste regulated under subtitle C of RCRA. Such waste may include, but is not limited to, waste resulting from the following manufacturing processes: electric power generation; fertilizer/agricultural chemicals; food and related products/byproducts; inorganic chemicals; iron and steel manufacturing; leather and leather products; nonferrous metals manufacturing/foundries; organic chemicals; plastics and resins manufacturing; pulp and paper industry; rubber and miscellaneous plastic products; stone, glass, clay, and concrete products; textile manufacturing; transportation equipment; and water treatment. This term does not include mining waste or oil and gas waste (40 CFR 258.2 and 40 CFR 60.751) **[Reviewed March 2000]**.
- *Infectious Waste* - this includes (40 CFR 243.101) **[Revised March 2000]**:
  1. equipment, instruments, utensils, and formites of a disposable nature from the rooms of patients who are suspected to have or have been diagnosed as having a communicable disease and must, therefore, be isolated as required by public health agencies;
  2. laboratory wastes, such as pathological specimens (e.g., all tissues, specimens of blood elements, excreta, and secretions obtained from patients or laboratory animals) and disposable fomites (any substance that may harbor or transmit pathogenic organisms) attendant thereto;
  3. surgical operating room pathologic specimens and disposable fomites attendant thereto, and similar disposable materials from outpatient areas and emergency rooms.
- *Infectious Waste* - this includes (40 CFR 246.101) **[Revised March 2000]**:
  1. equipment, instruments, utensils, and fomites (any substance that may harbor or transmit pathogenic organisms) of a disposable nature from the rooms of patients who are suspected to have or have been diagnosed as having a communicable disease and must, therefore, be isolated as required by public health agencies;
  2. laboratory wastes, such as pathological specimens (e.g. all tissues, specimens of blood elements, excreta, and secretions obtained from patients or laboratory animals) and disposable fomites attendant thereto;
  3. surgical operating room pathologic specimens and disposable fomites attendant thereto and similar disposable materials from outpatient areas and emergency rooms.

- *Institutional Solid Waste* - solid wastes generated by educational, health care, correctional and other institutional facilities (40 CFR 243.101) [**Reviewed March 2000**].
- *Interior Well* - any well or similar collection component located inside the perimeter of the landfill waste. A perimeter well located outside the landfill waste is not an interior well (40 CFR 60.751) [**Revised June 1998; Reviewed March 2000**].
- *Interstate*- from one State into or through any other State (7 CFR 330.400(b)) [**Added July 2006**].
- *Land Application Unit* - an area where wastes are applied onto or incorporated into the soil surface (excluding manure spreading operations) for agricultural purposes or for treatment and disposal (40 CFR 257.2) [**Added April 2004**].
- *Landfill* - an area of land or an excavation in which wastes are placed for permanent disposal, and that is not a land application unit, surface impoundment, injection well, or waste pile as those terms are defined under 40 CFR 257.2 (40 CFR 60.751 and 257.2) [**Added March 2000; Revised April 2004**].
- *Lateral Expansion* - a horizontal expansion of the waste boundaries of an existing municipal solid waste landfill unit (40 CFR 258.2 and 40 CFR 60.751) [**Reviewed March 2000**].
- *Lateral Expansion* - a horizontal expansion of the waste boundaries of an existing non-municipal non-hazardous waste disposal unit (40 CFR 257.5(b)) [**Added April 2004**].
- *Leachate* - in relation to MSWLFs, this is a liquid that has passed through or emerged from solid waste and contains soluble, suspended, or miscible materials removed from such waste (40 CFR 258.2) [**Reviewed March 2000**].
- *Leachate* - liquid that has passed through or emerged from solid waste and contains soluble, suspended or miscible materials removed from such wastes (40 CFR 257.2) [**Added April 2004**].
- *Life Cycle Cost* - the sum of the present values of capital costs, installation costs, operating costs, maintenance costs, and disposal costs over the lifetime of the project, product, or measure (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
- *Life-cycle Cost-Effective* - that the life-cycle costs of a product, project, or measure are estimated to be equal to or less than the base case (i.e., current or standard practice or product) (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
- *Low Specific Activity (LSA) Material* - Class 7 (radioactive) material with limited specific activity which satisfies the descriptions and limits set forth below. Shielding materials surrounding the LSA material may not be considered in determining the estimated average specific activity of the package contents. LSA material must be in one of three groups (49 CFR 173.403) [**Added January 2003**]:
  1. LSA-I.
    - a. Ores containing only naturally occurring radionuclides (e.g., uranium, thorium) and uranium or thorium concentrates of such ores; or
    - b. Solid unirradiated natural uranium or depleted uranium or natural thorium or their solid or liquid compounds or mixtures; or
    - c. Class 7 (radioactive) material, other than fissile material, for which the A2 value is unlimited; or
    - d. Mill tailings, contaminated earth, concrete, rubble, other debris, and activated material in which the Class 7 (radioactive) material is essentially uniformly distributed and the average specific activity does not exceed 10-6A2/g.
  2. LSA-II.
    - a. Water with tritium concentration up to 0.8 TBq/L (20.0 Ci/iter); or

- b. Material in which the Class 7 (radioactive) material is distributed throughout and the average specific activity does not exceed  $10^{-4}$  A2/g for solids and gases, and  $10^{-5}$  A2/g for liquids.
  - 3. LSA-III. Solids (e.g., consolidated wastes, activated materials) that meet the requirements of 49 CFR 173.468 and which:
    - a. The Class 7 (radioactive) material is distributed throughout a solid or a collection of solid objects, or is essentially uniformly distributed in a solid compact binding agent (such as concrete, bitumen, ceramic, etc.); and
    - b. The Class 7 (radioactive) material is relatively insoluble, or it is intrinsically contained in a relatively insoluble material, so that, even under loss of packaging, the loss of Class 7 (radioactive) material per package by leaching when placed in water for seven days would not exceed 0.1 A2; and
    - c. The average specific activity of the solid does not exceed  $2 \times 10^{-3}$  A2/g.
- *Lower Explosive Limit (LEL)* - the lowest percent by volume of a mixture of explosive gases which will propagate a flame in air at 25 degrees C and atmospheric pressure (40 CFR 257.3-8(e)) **[Added April 2004]**.
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *MARPOL 73/78* - the *International Convention for the Prevention of Pollution from Ships*, 1973 as amended by the Protocol of 1978 (33 CFR 151.05).
- *Medical/Pathological Wastes* - any solid waste that is generated in the diagnosis, treatment, or immunization of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals. This does not include hazardous waste or household waste (40 CFR 259.10).
- *Mining Wastes* - residues which result from the extraction of raw materials from the earth (40 CFR 243.101) **[Reviewed March 2000]**.
- *Modification* - an increase in the permitted volume design capacity of the landfill by either horizontal or vertical expansion based on the permitted design capacity as of 30 May 1991 (40 CFR 60.751) **[Added June 1998; Reviewed March 2000]**.
- *Municipal Solid Waste* - residential and commercial solid wastes generated within a community (40 CFR 240.101) **[Reviewed March 2000]**.
- *Municipal Solid Waste Landfill* - an entire disposal facility in a contiguous geographical space, where household waste is placed in or on land. An MSW landfill may also receive other types of RCRA Subtitle D wastes (40 CFR 257.2) such as commercial solid waste, nonhazardous sludge, conditionally exempt small quantity generator waste, and industrial solid waste. Portions of an MSW landfill may be separated by access roads. An MSW landfill may be publicly or privately owned. An MSW landfill may be a new MSW landfill, an existing MSW landfill, or a lateral expansion (40 CFR 60.751) **[Added March 2000]**.
- *Municipal Solid Waste Landfill Emissions* - gas generated by the decomposition of organic waste deposited in an MSWLF or derived from the evolution of organic compounds in the waste (40 CFR 60.751) **[Reviewed March 2000]**.
- *Municipal Solid Waste Landfill or MSW Landfill* - an entire disposal facility in a contiguous geographical space where household waste is placed in or on land. A municipal solid waste landfill may also receive other types of RCRA Subtitle D wastes (see 40 CFR 257.2 of this chapter) such as commercial solid waste, nonhazardous sludge, conditionally exempt small quantity generator waste, and industrial solid waste. Portions of a municipal solid waste landfill may be separated by access roads. A municipal solid waste landfill may be publicly or privately owned. A municipal solid waste landfill may be a new municipal solid waste landfill, an existing municipal solid waste landfill, or a lateral expansion (40 CFR 63.1990) **[Added April 2003]**.

- *Municipal Solid Waste Landfill (MSWLF) Unit* - a discrete area of land or an excavation that receives household waste, and that is not a land application unit, surface impoundment, injection well, or waste pile, as those terms are defined in this section. A MSWLF unit also may receive other types of RCRA Subtitle D wastes, such as commercial solid waste, nonhazardous sludge, and industrial solid waste. Such a landfill may be publicly or privately owned. An MSWLF unit may be a new MSWLF unit, an existing MSWLF unit or a lateral expansion (40 CFR 257.2) **[Added April 2004]**.
- *Municipal Solid Waste Landfill (MSWLF) Unit* - a discrete area of land or an excavation that receives household waste, and that is not a land application unit, surface impoundment, injection well, or waste pile, as those terms are defined under 40 CFR 257.2. A MSWLF unit also may receive other types of RCRA Subtitle D wastes, such as commercial solid waste, nonhazardous sludge, very small quantity generator waste and industrial solid waste. Such a landfill may be publicly or privately owned. A MSWLF unit may be a new MSWLF unit, an existing MSWLF unit or a lateral expansion. A construction and demolition landfill that receives residential lead-based paint waste and does not receive any other household waste is not a MSWLF unit (40 CFR 258.2) **[Reviewed March 2000; Revised July 2003; Revised January 2017]**.
- *New MSWLF Unit* - any MSWLF unit that has not received wastes prior to 9 October 1993, or prior to 9 October 1997 if the MSWLF unit disposes of less than 20 tons of municipal solid waste daily, based on an annual average and the MSWLF unit serves either (40 CFR 258.2) **[Reviewed March 2000]**:
  1. a community that experiences an annual interruption of at least 3 consecutive months of surface transportation that prevents access to a regional waste management facility
  2. a community that has no practicable waste management alternative and the landfill is located in an areas that annually receives less than or equal to 25 in. of precipitation.
- *New Unit* - any non-municipal non-hazardous waste disposal unit that has not received VSQG hazardous waste prior to 1 January 1998 (40 CFR 257.5(b)) **[Added April 2004; Revised January 2017]**.
- *Nondegradable Waste* - any waste that does not decompose through chemical breakdown or microbiological activity. Examples are, but are not limited to, concrete, municipal waste combustor ash, and metal (40 CFR 60.751) **[Reviewed March 2000]**.
- *Open Burning* - the combustion of solid waste without (40 CFR 257.3-7(c)) **[Added April 2004]**:
  1. control of combustion air to maintain adequate temperature for efficient combustion,
  2. containment of the combustion reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion, and
  3. control of the emission of the combustion products.
- *Open Burning* - in relation to MSWLFs, the combustion of solid waste without (40 CFR 258.2) **[Reviewed March 2000]**:
  1. control of combustion air to maintain adequate temperature for efficient combustion
  2. containment of the combustion reaction in an enclosed device to provide sufficient residence time and mixing for complete combustions
  3. control of the emission of the combustion product.
- *Open Burning* - burning of solid wastes in the open, such as in an open dump (40 CFR 240.101(r)) **[Reviewed March 2000]**.
- *Open Dump* - a land disposal site at which solid wastes are disposed of in a manner that does not protect the environment, are susceptible to open burning, and are exposed to the elements, vectors, and scavengers (40 CFR 240.101) **[Reviewed March 2000]**.

- *Open Dump* - a facility for the disposal of solid waste which does not comply with 40 CFR 257 (40 CFR 257.2) **[Added April 2004]**.
- *Operator* - the person(s) responsible for the overall operation of a facility or part of a facility (40 CFR 258.2) **[Added March 2000]**.
- *Owner* - the person(s) who owns a facility or part of a facility (40 CFR 258.2) **[Added March 2000]**.
- *Passive Collection System* - a gas collection system that solely uses positive pressure within the landfill to move the gas rather than using gas mover equipment (40 CFR 60.751) **[Reviewed March 2000]**.
- *Pasture Crops* - crops such as legumes, grasses, grain stubble and stover which are consumed by animals while grazing (40 CFR 257.3-5(c)) **[Added April 2004]**.
- *Patient Specimen* - human or animal material collected directly from humans or animals and transported for research, diagnosis, investigational activities, or disease treatment or prevention. Patient specimen includes excreta, secretions, blood and its components, tissue and tissue swabs, body parts, and specimens in transport media (e.g., transwabs, culture media, and blood culture bottles) (49 CFR 173.134(a)(4)) **[Added July 2006]**:
- *Periodic Application of Cover Material* - the application and compaction of soil or other suitable material over disposed solid waste at the end of each operating day or at such frequencies and in such a manner as to reduce the risk of fire and to impede vectors access to the waste (40 CFR 257.3-6(c) and 257.3-8(e)) **[Added April 2004]**.
- *pH* - the logarithm of the reciprocal of hydrogen ion concentration (40 CFR 257.3-5(c)) **[Added April 2004]**.
- *Practice* - the act of disposal of solid waste (40 CFR 257.2) **[Added April 2004]**.
- *Putrescible Wastes* - solid waste which contains organic matter capable of being decomposed by microorganisms and of such a character and proportion as to be capable of attracting or providing food for birds (40 CFR 257.3-8(e)) **[Added April 2004]**.
- *Radioactive Material* - any material having a specific activity greater than 70 Bq per gram (0.002 microcurie per gram) (see definition of "specific activity") (49 CFR 173.403) **[Added January 2003]**.
- *Recycling* - the series of activities, including collection, separation, and processing, by which products or other materials are recovered from the solid waste stream for use in the form of raw materials in the manufacture of new products other than fuel for producing heat or power by combustion (*Instructions for Implementing EO 13423, Section XIII, Definitions*) **[Added July 2007]**.
- *Regulated Medical Waste* - a waste or reusable material derived from the medical treatment of an animal or human, which includes diagnosis and immunization, or from biomedical research, which includes the production and testing of biological products. Regulated medical waste is assigned to UN 3291, except for regulated medical waste containing a Category A infectious substance, which must be classed as a Division 6.2 material, described as an infectious substance, and assigned to UN 2814 or UN 2900, as appropriate (49 CFR 173.134(a)(5)) **[Added January 2003; Revised July 2003]**.

The following provisions apply to the transportation of regulated medical waste (49 CFR 173.134(c)) **[Added January 2003; Revised July 2006]**:

1. A regulated medical waste transported by a private or contract carrier is excepted from--
  - a. The requirement for an "INFECTIOUS SUBSTANCE" label if the outer packaging is marked with a "BIOHAZARD" marking in accordance with 29 CFR 1910.1030; and
  - b The specific packaging requirements of 49 CFR 173.197, if packaged in a rigid non-bulk packaging conforming to the general packaging requirements of 49 CFR 173.24 and 173.24a and packaging

requirements specified in 29 CFR 1910.1030, provided the material does not include a waste concentrated stock culture of an infectious substance. Sharps containers must be securely closed to prevent leaks or punctures.

2. A waste stock or culture of a Category B infectious substance may be offered for transportation and transported as a regulated medical waste when it is packaged in a rigid non-bulk packaging conforming to the general packaging requirements of 49 CFR 173.24 and 173.24a and packaging requirements specified in 29 CFR 1910.1030 and transported by a private or contract carrier in a vehicle used exclusively to transport regulated medical waste. Medical or clinical equipment and laboratory products may be transported aboard the same vehicle provided they are properly packaged and secured against exposure or contamination. Sharps containers must be securely closed to prevent leaks or punctures.
- *Regulated Wastes* - liquid or semi-liquid blood or other potentially infectious materials, contaminated items that would release blood or other potentially infectious materials in a liquid or semi-liquid state if compressed; items that are caked with dried blood or other potentially infectious materials and are capable of releasing these materials during handling, contaminated sharps, and pathological and microbiological wastes containing blood or other potentially infectious materials (29 CFR 1910.1030(a)).
  - *Residential Lead-based Paint Waste* - waste containing lead-based paint, which is generated as a result of activities such as abatement, rehabilitation, renovation and remodeling in homes and other residences. The term residential lead-based paint waste includes, but is not limited to, lead-based paint debris, chips, dust, and sludges (40 CFR 258.2) [Added July 2003].
  - *Residential Solid Waste* - the wastes generated by the normal activities of households, including, but not limited to, food wastes, rubbish, ashes, and bulky wastes (40 CFR 243.101) [Reviewed March 2000].
  - *Risk Group* - a ranking of a microorganism's ability to cause injury through disease. A risk group is defined by criteria developed by the World Health Organization (WHO) based on the severity of the disease caused by the organism, the mode and relative ease of transmission, the degree of risk to both an individual and a community, and the reversibility of the disease through the availability of known and effective preventative agents and treatment. There is no relationship between a risk group and a packing group. The criteria for each risk group according to the level of risk are as follows (49 CFR 171.8 and 173.134(a)(6)) [Added January 2003]:

Risk Group	Pathogen	Risk to Individuals	Risk to the Community
4	A pathogen that usually causes serious human or animal disease and that can be readily transmitted from one individual to another, directly or indirectly, and for which effective treatments and preventive measures are not usually available.	High	High
3	A pathogen that usually causes serious human or animal disease but does not ordinarily spread from one infected individual to another, and for which effective treatments and preventive measures are available.	High	Low
2	A pathogen that can cause human or animal disease but is unlikely to be a serious hazard, and, while capable of causing serious infection on exposure, for	Moderate	Low

<b>Risk Group</b>	<b>Pathogen</b>	<b>Risk to Individuals</b>	<b>Risk to the Community</b>
	which there are effective treatments and preventive measures available and the risk of spread of infection is limited.		
<b>1</b>	A microorganism that is unlikely to cause human or animal disease. A material containing only such microorganisms is not subject to the requirements of this subchapter.	<b>None or very low</b>	<b>None or very low</b>

- *Root Crops* - plants whose edible parts are grown below the surface of the soil (40 CFR 257.3-5(c)) [**Added April 2004**].
- *Rubbish* - A general term for solid waste, excluding food wastes and ashes, taken from residences, commercial establishments, and institutions (40 CFR 243.101) [**Added March 2000**].
- *Runoff* - in relation to MSWLF, any rainwater, leachate, or other liquid that drains over land from any part of a facility (40 CFR 258.2) [**Reviewed March 2000**].
- *Runon* - any rainwater, leachate, or other liquid that drains over land onto any part of a facility (40 CFR 258.2).
- *Sanitary Landfill* - a land disposal site employing an engineered method of disposing of solid wastes on land in a manner that minimizes environmental hazards by spreading the solid wastes in thin layers, compacting the solid wastes to the smallest practical volume, and applying and compacting cover material at the end of each operating day (40 CFR 240.101) [**Reviewed March 2000**].
- *Sanitary Landfill* - a facility for the disposal of solid waste which complies with 40 CFR 257 (40 CFR 257.2) [**Added April 2004**].
- *Satellite Vehicle*- a small collection vehicle that transfers its load into a larger vehicle operating in conjunction with it (40 CFR 243.101) [**Added March 2000**].
- *Saturated Zone* - that part of the earth's crust in which all voids are filled with water (40 CFR 258.2) [**Added March 2000**].
- *Scavenging* - the uncontrolled and unauthorized removal of materials at any point in the solid waste management system (40 CFR 243.101) [**Added March 2000**].
- *Separate Collection* - collection of recyclable materials which have been separated at the point of generation and keeping those materials separated from other collected solid waste in separate compartments of a single collection vehicle or through the use of separate collection vehicles (40 CFR 246.101) [**Reviewed March 2000**].
- *Sewage Sludge* - solid, semi-solid, or liquid residue generated during the treatment of domestic sewage in a treatment works. Sewage sludge includes, but is not limited to, domestic septage; scum or solids removed in primary, secondary, or advanced wastewater treatment processes; and a material derived from sewage sludge. Sewage sludge does not include ash generated during the firing of sewage sludge in a sewage sludge incinerator or grit and screenings generated during preliminary treatment of domestic sewage in a treatment works (40 CFR 257.2) [**Added April 2004**].

- *Sharps* - any object contaminated with a pathogen or that may become contaminated with a pathogen through handling or during transportation and also capable of cutting or penetrating skin or a packaging material. Sharps includes needles, syringes, scalpels, broken glass, culture slides, culture dishes, broken capillary tubes, broken rigid plastic, and exposed ends of dental wires (49 CFR 171.8 and 173.134(a)(7)) **[Added January 2003]**.
- *Ship* - a vessel of any type whatsoever, operating in the marine environment (33 CFR 151.05).
- *Sludge* - the accumulated semi liquid suspension of settled solids deposited from wastewaters or other fluids in tanks or basins (40 CFR 240.101) **[Reviewed March 2000]**.
- *Sludge* - in relation to MSWLF, any solid, semi-solid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility exclusive of the treated effluent from a wastewater treatment plant (40 CFR 258.2) **[Reviewed March 2000]**.
- *Sludge* - any solid, semisolid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility or any other such waste having similar characteristics and effect (40 CFR 257.2) **[Added April 2004]**.
- *Soil pH* - the value obtained by sampling the soil to the depth of cultivation or solid waste placement, whichever is greater, and analyzing by the electrometric method. ("Methods of Soil Analysis, Agronomy Monograph No. 9," C.A. Black, ed., American Society of Agronomy, Madison, Wisconsin, pp. 914-926, 1965 (40 CFR 257.3-5(c)) **[Added April 2004]**.
- *Solid Waste* - any garbage, refuse, sludge from a waste treatment plant, water supply treatment plant, or air pollution control facility and other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from industrial, commercial, mining, and agricultural operations, and from community activities, but does not include solid or dissolved materials in domestic sewage, or solid or dissolved material in irrigation return flows or industrial discharges which are point sources subject to permits under section 402 of the *Federal Water Pollution Control Act*, as amended (86 Stat. 880), or source, special nuclear, or byproduct material as defined by the *Atomic Energy Act of 1954*, as amended (68 Stat. 923) (40 CFR 257.2) **[Added April 2004]**.
- *Solid Waste* - in relation to MSWLF, any garbage or refuse, sludge from a wastewater treatment plant, water supply treatment plant, or air pollution control facility and other discarded materials, including solid, liquid, semi-solid, or contained gaseous material resulting from industrial, commercial mining and agricultural operations, and from community activities, but does not include solid or dissolved materials in domestic sewage, or solid or dissolved materials in irrigation return flows or industrial discharges that are point sources subject to permit under 33 USC 1342, or source, special nuclear, or byproduct material as defined by the *Atomic Energy Act of 1954*, as amended (68 Statute 932) (40 CFR 258.2) **[Reviewed March 2000]**.
- *Solid Waste* - garbage, refuse, sludge, and other discarded solid materials resulting from industrial and commercial operations and from community activities. It does not include solids or dissolved materials in domestic sewage or other significant pollutants in water resources (40 CFR 240.101) **[Reviewed March 2000]**.
- *Solid Waste* - any garbage, sludge from a wastewater treatment plant, water supply treatment plant, or air pollution control facility and other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from industrial, commercial, mining, and agricultural operations, and from community activities, but does not include solid or dissolved material in domestic sewage, or solid or dissolved materials in irrigation return flows or industrial discharges that are point sources subject to permits under 33 U.S.C. 1342, or source, special nuclear, or by-product material as defined by the *Atomic Energy Act of 1954*, as amended (42 U.S.C 2011 et seq.) (40 CFR 60.751) **[Added March 2000]**.
- *Solid Waste Boundary* - the outermost perimeter of the solid waste (projected in the horizontal plane) as it would exist at completion of the disposal activity (40 CFR 257.3-4(c)) **[Added April 2004]**.

- *Solid Waste Diversion* - non-hazardous solid waste diverted from entering a disposal facility. Waste prevention, reuse, composting, mulching, recycling, and donation are generally accepted waste diversion methods (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
- *Solid Waste Storage Container* - a receptacle used for the temporary storage of solid waste while awaiting collection (40 CFR 243.101) [**Added March 2000**].
- *Source Separation* - the setting aside of recyclable materials at their point of generation by the generator (40 CFR 246.101) [**Reviewed March 2000**].
- *Special Wastes* - nonhazardous solid wastes requiring handling other than that normally used for municipal solid wastes (40 CFR 240.101) [**Reviewed March 2000**].
- *Specific Activity of a Radionuclide* - the activity of the radionuclide per unit mass of that nuclide. The specific activity of a material in which the radionuclide is essentially uniformly distributed is the activity per unit mass of the material (49 CFR 173.403) [**Added January 2003**].
- *State* – any of the several States of the United States, the Commonwealth of the Northern Mariana Islands, the Commonwealth of Puerto Rico, the District of Columbia, Guam, the Virgin Islands of the United States, or any other territory or possession of the United States (7 CFR 330.100) [**Added July 2006**].
- *State* - any of the several states, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands (40 CFR 257.5(b) and 258.2) [**Added March 2000; Revised April 2004**].
- *State Director* - the chief administrative officer of the lead state agency responsible for implementing the state permit program for 40 CFR 257, subpart B and 40 CFR 258 regulated facilities (40 CFR 257.5(b) and 258.2) [**Added March 2000; Revised April 2004**].
- *Stationary Compactor* - a powered machine which is designed to compact solid waste or recyclable materials, and which remains stationary when in operation. (40 CFR 243.101) [**Added March 2000**].
- *Sterilization* - cooking garbage at an internal temperature of 212 °F for 30 min (7 CFR 330.400(b)) [**Added July 2006**].
- *Storage* - the interim containment of solid waste after generation and prior to collection for ultimate recovery or disposal (40 CFR 243.101) [**Added March 2000**].
- *Stores* - the food, supplies, and other provisions carried for the day-to-day operation of a conveyance and the care and feeding of its operators (7 CFR 330.400(b)) [**Added July 2006**].
- *Street Wastes* - materials picked up by manual or mechanical sweepings of alleys, streets, and sidewalks; wastes from public waste receptacles; and material removed from catch basins (40 CFR 243.101) [**Added March 2000**].
- *Sufficient Density* - any number, spacing, and combination of collection system components, including vertical wells, horizontal collectors, and surface collectors, necessary to maintain emission and migration control as determined by measures of performance (40 CFR 60.751) [**Reviewed March 2000**].
- *Sufficient Extraction Rate* - a rate sufficient to maintain a negative pressure at all wellheads in the collection system without causing air infiltration, including any wellheads connected to the system as a result of expansion or excess surface emissions, for the life of the blower (40 CFR 60.751) [**Reviewed March 2000**].
- *Surface Impoundment or Impoundment* - a facility or part of a facility that is a natural topographic depression, human-made excavation, or diked area formed primarily of earthen materials (although it may be lined with

human-made materials), that is designed to hold an accumulation of liquid wastes or wastes containing free liquids and that is not an injection well. Examples of surface impoundments are holding storage, settling, and aeration pits, ponds, and lagoons (40 CFR 257.2) **[Added April 2004]**.

- *Sustainable* - to create and maintain conditions, under which humans and nature can exist in productive harmony, that permit fulfilling the social, economic, and other requirements of present and future generations of Americans (EO 13423, Section 9, paragraph k).
- *Taking* - harassing, harming, pursuing, hunting, wounding, killing, trapping, capturing, or collecting or attempting to engage in such conduct (40 CFR 257.3-2(c)) **[Added April 2004]**.
- *Thermal Processing* - processing of waste material by means of heat (40 CFR 240.101) **[Reviewed March 2000]**.
- *Toxin* - a Division 6.1 material from a plant, animal, or bacterial source. A toxin containing an infectious substance or a toxin contained in an infectious substance must be classed as Division 6.2, described as an infectious substance, and assigned to UN 2814 or UN 2900, as appropriate (49 CFR 171.8 and 173.134(a)(8)) **[Added January 2003]**.
- *Transfer Station* - a station at which solid wastes are concentrated for transport to a processing facility or land disposal site. A transfer station may be fixed or mobile (40 CFR 243.101) **[Reviewed March 2000]**.
- *Trenching or Burial Operation* - the placement of sewage sludge or septic tank pumpings in a trench or other natural or man-made depression and the covering with soil or other suitable material at the end of each operating day such that the wastes do not migrate to the surface (40 CFR 257.3-6(c)) **[Added April 2004]**.
- *Tribal Plan* - a plan submitted by a tribal authority pursuant to 40 CFR 9, 35, 49, 50, and 81 to implement and enforce 40 CFR 60, subpart Cc, 40 CFR 63.1990) **[Added April 2003]**.
- *Universal Precautions* - an approach to infection control. According to the concept of Universal Precautions, all human blood and certain human body fluids are treated as if known to be infectious for HIV, HBV, and other bloodborne pathogens (29 CFR 1910.1030(a)).
- *Uppermost Aquifer* - the geologic formation nearest the natural ground surface that is an aquifer, as well as, lower aquifers that are hydraulically interconnected with this aquifer within the facility's property boundary (40 CFR 257.5(b) and 258.2) **[Reviewed March 2000; Revised April 2004]**.
- *Used Health Care Product* - a medical, diagnostic, or research device or piece of equipment, or a personal care product used by consumers, medical professionals, or pharmaceutical providers that does not meet the definition of a diagnostic specimen, biological product, or regulated medical waste, is contaminated with potentially infectious body fluids or materials, and is not decontaminated or disinfected to remove or mitigate the infectious hazard prior to transportation (49 CFR 173.134(a)(8)) **[Added January 2003]**.
- *Vector* - a carrier, usually an arthropod, that is capable of transmitting a pathogen from one organism to another (40 CFR 240.202) **[Reviewed March 2000]**.
- *Washout* - the carrying away of solid waste by waters of the base flood (40 CFR 257.3-1(b) and 257.8(b)) **[Added April 2004]**.
- *Waste Management Unit Boundary* - a vertical surface located at the hydraulically downgradient limit of the unit. This vertical surface extends down into the uppermost aquifer (40 CFR 257.5(b) and 258.2) **[Reviewed March 2000; Revised April 2004]**.
- *Waste Pile or Pile* - any noncontainerized accumulation of solid, nonflowing waste that is used for treatment or storage (40 CFR 257.2) **[Added April 2004]**.

- *Waste Prevention* - any change in the design, manufacturing, purchase, or use of materials or products, including packaging, to reduce their amount or toxicity before they are discarded. Waste prevention also refers to the reuse of products or materials (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
- *Work Practice Standard* - any design, equipment, work practice, or operational standard, or combination thereof, that is promulgated pursuant to section 112(h) of the Clean Air Act 40 CFR 63.1990) [**Added April 2003**].
- *Yard Waste* - solid waste composed predominantly of grass clippings, leaves, twigs, branches, and other garden refuse (7 CFR 330.400(b)) [**Added July 2006**].

#### **F. Records To Review**

- Record of current nonhazardous solid waste management practices
- Estimated generation rates
- Documentation of locations (map) and descriptions of all nonhazardous waste storage, and disposal sites
- Records of operational history of all active and inactive disposal sites
- State and Federal inspection reports
- Environmental monitoring procedures or plans
- Records of resource recovery practices, including the sale of materials for the purpose of recycling
- Solid waste removal contracts and inspection records
- Operating record for onsite MSWLFs
- Groundwater monitoring well data
- Regional solid waste management plan
- Pollution prevention management plan

#### **G. Physical Features To Inspect**

- Resource recovery facilities
- Incineration and land disposal sites (active and inactive)
- Areas where nonhazardous waste is disposed
- Construction debris areas
- Waste receptacles
- Solid waste vehicle storage and washing areas
- Compost facilities
- Transfer stations
- Recycling centers

## H. Guidance for Solid Waste Management Checklist Users

	<b>REFER TO CHECKLIST ITEMS:</b>
All Facilities	SO.1.1.US.
Missing, Risk Management, and Positive Checklist Items	SO.2.1.US. through SO.2.3.US
Storage/Collection of Solid Waste	SO.10.1.US. through SO.10.6.US.
Recycling	SO.25.1.US. through SO.25.8.US.
Non-MSWLF Sites and Facilities (NOTE: The checklist items previously found in SO.35 and SO.40 were deleted when 40 CFR 241 was deleted by the USEPA as published in the April 26, 1996 Federal Register.)	SO.30.1.US. through SO.30.22.US.
Site Criteria For New Landfills Other Than an MSWLFs (NOTE: The checklist items previously found in SO.45 were deleted when 40 CFR 241 was deleted by the USEPA as published in the April 26, 1996 Federal Register.)	SO.45.1.US. through SO.45.3.US.
MSWLFs	
Location Restrictions	SO.55.1.US. through SO.55.6.US.
Design Criteria	SO.60.1.US. through SO.60.4.US.
Operating Criteria	SO.65.1.US. through SO.65.11.US.
Emissions	SO.67.1.US. through SO.67.12.US.
Groundwater Monitoring Criteria	SO.70.1.US. through SO.70.12.US.
Closure Criteria	SO.75.1.US. through SO.75.5.US.
Postclosure Care Requirements	SO.80.1.US. and SO.80.3.US.
Documentation	SO.85.1.US through SO.85.8.US
Thermal Processing Facilities	SO.90.1.US. through SO.90.16.US.
Resource Recovery Facilities (NOTE: These checklist items have been removed due to the deletion of 40 CFR 245 by the USEPA as published in the 31 December 1996 Federal Register.)	SO.95.1.US. and SO.95.2.US.
Disposal of Refuse From Outside the United States	SO.100.1.US. through SO.100.3.US
Medical Waste	
Containers/Labeling/Storage Areas	SO.110.1.US. through SO.110.6.US.
Transportation	SO.115.1.US through SO.115.4.US
Solid Waste From Ships	SO.130.1.US.
Land Application of Solid Waste	SO.200.1.US

Appendix 9-1, Compliance Dates for MSWLFs and 40 CFR 258

Appendix 9-1a, *Open Dumping*

Appendix 9-2, MSWLF Units Exempt from Compliance With 40 CFR 258

Appendix 9-2a, MSW Landfill Compliance Dates

Appendix 9-3, Design Criteria Concentration Values

Appendix 9-4, Constituents for Detection Monitoring

Appendix 9-5, List of Hazardous Inorganic and Organic Constituents

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions that have been added or revised as a result of this review are identified as being reviewed, revised, or added in March 2000, for example [**Added March 2000**].

<b>COMPLIANCE CATEGORY: SOLID WASTE MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
<p><b>SO.1.</b></p> <p><b>ALL FACILITIES</b></p> <p><b>SO.1.1.US.</b> The current status of any ongoing or unresolved consent orders, compliance agreements, notice of violations (NOVs), inter-agency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, interagency agreements, or equivalent state enforcement actions.</p>

<b>COMPLIANCE CATEGORY: SOLID WASTE MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
<p><b>SO.2.</b></p> <p><b>MISSING, RISK MANAGEMENT AND POSITIVE CHECKLIST ITEMS</b></p> <p><b>SO.2.1.US.</b> Facilities are required to comply with all applicable Federal regulatory requirements not contained in this checklist (a finding under this checklist item will have the citation of the applied regulation as a basis of finding).</p> <p><b>SO.2.2.US.</b> Risk management techniques should be promoted in environmental efforts (MP) [Added April 2002].</p> <p><b>SO.2.3.US.</b> Facilities should go above and beyond statutory and regulatory compliance (MP) [Added April 2002].</p>	<p>Determine if any new regulations have been issued since the finalization of TEAM.</p> <p>Determine if the facility has activities or facilities that are regulated, but not addressed in this checklist.</p> <p>Verify that the facility is in compliance with all applicable and newly issued regulations.</p> <p>Determine if risk management techniques are promoted in environmental efforts.</p> <p>Determine if the facility has gone above and beyond simply complying with environmental requirements.</p>

<b>COMPLIANCE CATEGORY: SOLID WASTE MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
<p><b>SO.10.</b></p> <p><b>STORAGE/ COLLECTION OF SOLID WASTE</b></p> <p><b>SO.10.1.US.</b> All solid wastes and all materials separated for recycling are required to be stored according to specific guidelines (40 CFR 243.100(b), 243.100(i), and 243.200-1) [Revised January 2000; Reviewed March 2000; Revised January 2004].</p>	<p>(NOTE: These requirements apply to the collection of residential, commercial, and institutional solid wastes and street wastes. Excluded from these requirements are mining, agricultural, and industrial solid wastes; hazardous wastes; sludges; construction and demolition wastes; and infectious wastes.)</p> <p>Verify that all solid wastes are stored so as not to cause a fire, health, or safety hazard.</p> <p>Verify that all solid waste containing food wastes are stored in covered or closed containers that are nonabsorbent, leakproof, durable, easily cleaned, and designed for safe handling.</p> <p>Verify that solid waste containers are of an adequate size and number to contain all waste generated between collections.</p> <p>Verify that bulky wastes are stored so as not to create a nuisance and to avoid the accumulation of solid waste and water in and around the bulky items.</p> <p>Verify that reusable containers are capable of being serviced without the collector coming into contact with the waste.</p> <p>Verify that waste containers used for the storage of solid waste (or materials which have been separated for recycling) meet the standards established by ANSI for waste containers as follows:</p> <ul style="list-style-type: none"> <li>– Waste Containers--Safety Requirements, 1994, American National Standards Institute, ANSI Z245.30-1994</li> <li>– Waste Containers--Compatibility Dimensions, 1996, American National Standards Institute, ANSI Z245.60-1996.</li> </ul> <p>(NOTE: Copies may be obtained from American National Standards Institute, 11 W. 42nd Street, New York, NY 10036.)</p> <p>(NOTE: By calling 1-800-CLEAN-UP you can identify where to take paper, metal cans, glass bottles, tires, and other materials to be recycled for any town or city in the United States.)</p> <p>(NOTE: Federal agencies that have decided not to adopt the requirements contained in 40 CFR 243 are required to provide a report of the analysis and rationale used. See 40 CFR 243.100(i) for details on the content of this report.)</p>

<b>COMPLIANCE CATEGORY: SOLID WASTE MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
<p><b>SO.10.2.US.</b> All facilities are required to operate their collection systems in a manner to protect the health and safety of personnel associated with the operation (40 CFR</p>	<p>(NOTE: The following guidelines (NOT requirements) are suggested for container design in 40 CFR 243.200-2:</p> <ul style="list-style-type: none"> <li>– reusable waste containers: <ul style="list-style-type: none"> <li>– should be constructed of corrosion resistant metal or other material which will not absorb water, grease, or oil</li> <li>– should be leakproof, including sides, seams, and bottoms, and be durable enough to withstand anticipated usage without rusting, cracking, or deforming in a manner that would impair serviceability</li> <li>– should have interiors that are smooth without interior projections or rough seams that would make it difficult to clean or interfere with emptying it</li> <li>– should have exteriors that are safe for handling with no cracks, holes, or jagged edges</li> </ul> </li> <li>– store containers on a firm, level, well-drained surface that is large enough to accommodate all of the containers and is maintained in a clean, spillage-free condition</li> <li>– reusable waste containers that are emptied manually have a capacity of no more than 35 gal in volume, unless they are mounted on casters and can be serviced by being rolled to the collection vehicle and tilted for emptying</li> <li>– containers are constructed with rounded edges and tapered sides with the larger diameter at the top of the container to facilitate discharge of the solid waste by gravity</li> <li>– containers have two handles or bails located directly opposite one another on the sides of the container</li> <li>– containers have covers that are tight-fitting to resist the intrusion of water and vectors, and should be equipped with a suitable handle</li> <li>– containers are designed so that they cannot be tipped over easily</li> <li>– reusable waste containers that are emptied mechanically are designed or equipped to prevent spillage or leakage during onsite storage, collection, or transport</li> <li>– container are easily cleanable and designed to allow easy access for depositing the waste and removing it by gravity or by mechanical means</li> <li>– containers are easily accessible to the collection vehicle in an area which can safely accommodate the dimensions and weight of the vehicle</li> <li>– single-use plastic and paper bags meet National Sanitation Foundation Standard No. 31 for polyethylene refuse bags and Standard No. 32 for paper refuse bags, respectively (NOTE: bags do not need to have been certified by the National Sanitation Foundation)</li> <li>– single-use bags containing food wastes are stored within the confines of a building or container between collection periods.)</li> </ul> <p>Verify that the collection system is operated safely.</p> <p>(NOTE: These requirements apply to the collection of residential, commercial, and institutional solid wastes and street wastes. Excluded from these requirements are</p>

## **Appendix 9-1**

### **Compliance Dates for MSWLFs and 40 CFR 258 (40 CFR 258.1(e)) [Reviewed March 2000]**

In general compliance with 40 CFR 258 is required by 9 October 1993. The following is a list of MSWLFs which have had their compliance deadline with 40 CFR 258 extended.

1. 9 April 1994 for existing MSWLF units or a lateral expansion of an existing MSWLF that meets the following conditions:
  - a. the MSWLF unit disposed of 100 tons per day or less of solid waste during a representative period prior to 9 October 1993
  - b. the unit does not dispose of more than an average of 100 TPD of solid waste each month between 9 October 1993 and 9 April 1994
  - c. the MSWLF is located in a state that has submitted an application for permit program approved by the USEPA by 9 October 1993, is located in the State of Iowa, or is located on Indian Lands or Indian Country
  - d. the MSWLF is not on the National Priorities List (NPL).
2. The compliance date has been extended for existing MSWLF unit or lateral expansion if an existing MSWLF units receiving flood-related waste from the Federally-designated areas within the major disasters declared for the states of Iowa, Illinois, Minnesota, Wisconsin, Missouri, Nebraska, Kansas, North Dakota, and South Dakota by the President during the summer of 1993:
  - a. Until 9 April 1994 if the state in which the MSWLF is located has determined that the MSWLF unit is needed to receive flood-related wastes from a Federally designated disaster area.
  - b. Until 9 October 1994 if the MSWLF has an extension and the state in which the MSWLF is located has determined that the MSWLF unit is needed to receive flood-related wastes from a Federally designated disaster area.
3. 9 October 1995 for new MSWLF units, existing MSWLF units, and lateral expansions that dispose of less than 20 tons of municipal solid waste daily, based on an annual average.

**Appendix 9-1a**

**Open Dumping**

**(40 CFR 257.1 through 257.3-8)**

**[Reviewed March 2000; Deleted April 2004]**

## **Appendix 9-2**

### **MSWLF Units Exempt From Compliance With 40 CFR 258 (40 CFR 258.1(c) and 258.1(d)) [Reviewed March 2000]**

1. MSWLFs that did not receive waste after 9 October 1991.
2. Existing MSWLF units or a lateral expansion of an existing MSWLF that received waste after 9 October 1991 but stopped receiving waste before 9 April 1994 that meets the following conditions:
  - a. the MSWLF unit disposed of 100 tons per day or less of solid waste during a representative period prior to 9 October 1993
  - b. the unit does not dispose of more than an average of 100 TPD of solid waste each month between 9 October 1993 and 9 April 1994
  - c. the MSWLF is in a state that has submitted an application for permit program approved by the USEPA by 9 October 1993, is in the State of Iowa, or is on Indian Lands or Indian Country
  - d. the MSWLF is not on the National Priorities List (NPL).

(NOTE: If these units have not installed a final cover according to the standards in 40 CFR 258.60(a) by 9 October 1994, the unit is required to meet all the requirements found in 40 CFR 258.)

3. Existing MSWLF units or lateral expansions if an existing MSWLF unit is receiving flood-related waste from the Federally-designated areas within the major disasters declared for the states of Iowa, Illinois, Minnesota, Wisconsin, Missouri, Nebraska, Kansas, North Dakota, and South Dakota by the President during the summer of 1993 and receive waste after 9 October 1991 but stops receiving waste before the date designated by the state.

(NOTE: If these units have not installed a final cover according to the standards in 40 CFR 258.60(a) within 1 yr of the date designated by the state, the unit is required to meet all the requirements in 40 CFR 258.)

4. New MSWLF units, existing MSWLF units and lateral expansions that dispose of less than 20 tons of municipal solid waste daily, based on an annual average that receive waste after 9 October 1991 but stopped receiving waste before 9 October 1997.

(NOTE: If these units have not installed a final cover according to the standards in 40 CFR 258.60(a) by 9 October 1998, the unit is required to meet all the requirements of 40 CFR 258.)

5. MSWLF units that receive waste after 9 October 1991 but stop receiving wastes before 9 October 1993.

(NOTE: If these units have not installed a final cover according to the standards in 40 CFR 258.60(a) by 9 October 1994, the unit is required to meet all the requirements of 40 CFR 258.)

## Appendix 9-2a

### MSW Landfill Compliance Dates (40 CFR 63.1945, 63.1947, 63.1950, 63.1952) [Added April 2003]

•

Compliance Date for 40 CFR 63.1930 through 63.1990 (SO.67.10.US through SO.67.12.US, SO.85.7.US and SO.85.8.US)	New MSW Landfills
16 January 2003 or at the time operation begins, whichever is last.	A new affected source.
The date the landfill is required to install a collection and control system	A new affected source and is a major source or is collocated with a major source, you must comply with the requirements in 40 CFR 63.1955(b) and 63.1960 through 63.1980
The date the landfill is required to install a collection and control system by 40 CFR 60.752(b)(2) of subpart WWW.	A new affected source and is an area source meeting the criteria in 40 CFR 63.1935(a)(3), you must comply with the requirements of 40 CFR 63.1955(b) and 63.1960 through 63.1980

Compliance Date for 40 CFR 63.1930 through 63.1990 (SO.67.10.US through SO.67.12.US, SO.85.7.US and SO.85.8.US)	Existing MSW Landfills
16 January 2004	An existing affected source
The date the landfill is required to install a collection and control system by 40 CFR 60.752(b)(2) of subpart WWW, the Federal plan, or USEPA approved and effective State or tribal plan that applies to your landfill or by 13 January 2004, whichever occurs later.	An existing affected source and is a major source or is collocated with a major source, you must comply with the requirements in 40 CFR 63.1955(b) and 63.1960 through 63.1980
The date the landfill is required to install a collection and control system by 40 CFR 60.752(b)(2) of subpart WWW, the Federal plan, or USEPA approved and effective State or tribal plan that applies to your landfill or by 16 January 2004, whichever occurs later.	An existing affected source and is an area source meeting the criteria in 40 CFR 63.1935(a)(3), you must comply with the requirements in 40 CFR 63.1955(b) and 63.1960 through 63.1980

<b>MSW Landfill Type</b>	<b>Compliance Date (Applies to owners or operators of a bioreactor located at a landfill that is not permanently closed as of 16 January 2003 with a design capacity equal to or greater than 2.5 million Mg and 2.5 million m3)</b>
A new affected source.	<p>Install the gas collection and control system for the bioreactor before initiating liquids addition.</p> <p>Begin operating the gas collection and control system within 180 days after initiating liquids addition or within 180 days after achieving a moisture content of 40 percent by weight, whichever is later. If you choose to begin gas collection and control system operation 180 days after achieving a 40 percent moisture content instead of 180 days after liquids addition, use the procedures in 40 CFR 63.1980(g) and (h) to determine when the bioreactor moisture content reaches 40 percent.</p>
Existing affected Source	<p>Install and begin operating the gas collection and control system for the bioreactor by 17 January 2006 or by the date the bioreactor is required to install a gas collection and control system under 40 CFR 60, subpart WWW, the Federal plan, or USEPA approved and effective State plan or tribal plan that applies to your landfill, whichever is later.</p>
Existing affected source and which does not initiate liquids addition to the bioreactor until later than 17 January 2006,	<p>Install the gas collection and control system for the bioreactor before initiating liquids addition.</p> <p>Begin operating the gas collection and control system within 180 days after initiating liquids addition or within 180 days after achieving a moisture content of 40 percent by weight, whichever is later. If the facility chooses to begin gas collection and control system operation 180 days after achieving a 40 percent moisture content instead of 180 days after liquids addition, use the procedures in 40 CFR 63.1980(g) and (h) to determine when the bioreactor moisture content reaches 40 percent.</p>

(NOTE: Compliance with 40 CFR 63, Subpart AAAAA is no longer required when the MSW landfill is no longer required to apply controls as specified in 40 CFR 60.752(b)(2)(v) or the Federal plan or USEPA approved and effective State plan or tribal plan that implements 40 CFR 60, subpart Cc, whichever applies to the landfill.)

(NOTE: Compliance with 40 CFR 63, Subpart AAAAA is no longer required for the bioreactor when owning or operating a landfill that includes a bioreactor if either of the following are met:

1. the affected source meets the control system removal criteria in 40 CFR 60.752(b)(2)(v) or the bioreactor meets the criteria for a nonproductive area of the landfill in 40 CFR
2. the bioreactor portion of the landfill is a closed landfill, The addition of liquids to the bioreactor has ceased, and liquids have not been added to the bioreactor for at least 1 year.

(NOTE: Compliance with the bioreactor control removal provisions constitutes compliance with 40 CFR 60, subpart WWW or the Federal plan, whichever applies to the bioreactor.)

(49) 4-Methyl-2-pentanone; Methyl isobutyl isobutyl ketone	108-10-1
(50) Styrene	100-42-5
(51) 1,1,1,2-Tetrachloroethane	630-20-6
(52) 1,1,2,2-Tetrachloroethane	79-34-5
(53) Tetrachloroethylene; Tetrachloroethene; Perchloroethylene	127-18-4
(54) Toluene	108-88-3
(55) 1,1,1-Trichloroethane; Methylchloroform	71-55-6
(56) 1,1,2-Trichloroethane	79-00-5
(57) Trichloroethylene; Trichloroethene	79-01-6
(58) Trichlorofluoromethane; CFC-11	75-69-4
(59) 1,2,3-Trichloropropane	96-18-4
(60) Vinyl acetate	108-05-4
(61) Vinyl chloride	75-01-4
(62) Xylenes	1330-20-7

<sup>1</sup>This list contains 47 volatile organics for which possible analytical procedures provided in USEPA Report SW-846, *Test Methods for Evaluating Solid Waste*, third edition, November 1986, as revised December 1987, includes Method 8260; and 15 metals for which SW-846 provides either Method 6010 or a method from the 7000 series of methods.

<sup>2</sup> Common names are those widely used in government regulations, scientific publications, and commerce; synonyms exist for many chemicals.

<sup>3</sup> Chemical Abstracts Service registry number. Where "Total" is entered, all species in the groundwater that contain this element are included.

## Appendix 9-5

### List of Hazardous Inorganic and Organic Constituents (40 CFR 258, Appendix II) [Revised July 2005]

Common Name <sup>1</sup>	CAS RN <sup>2</sup>	Chemical abstracts service index name <sup>3</sup>
Acenaphthene	83-32-9	Acenaphthylene, 1,2-dihydro-
Acenaphthylene	208-96-8	Acenaphthylene
Acetone	67-64-1	2-Propanone
Acetonitrile; Methyl cyanide	75-05-8	Acetonitrile
Acetophenone	98-86-2	Ethanone, 1-phenyl-
2-Acetylaminofluorene; 2-AAF	53-96-3	Acetamide, N-9H-fluoren-2-yl-
Acrolein	107-02-8	2-Propenal
Acrylonitrile	107-13-1	2-Propenenitrile
Aldrin	309-00-2	1,4:5,8-Dimethanonaphthalene, 1,2,3,4,10,10- hexachloro- 1,4,4a,5,8,8a-hexahydro- (1,4,4a,5,8,8a)
Allyl chloride	107-05-1	1-Propene, 3-chloro-
4-Aminobiphenyl	92-67-1	[1,1'-Biphenyl]- 4-amine
Anthracene	120-12-7	Anthracene
Antimony	(Total)	Antimony
Arsenic	(Total)	Arsenic
Barium	(Total)	Barium
Benzene	71-43-2	Benzene
Benzo[a]anthracene; Benzanthracene	56-55-3	Benz[a]anthracene
Benzo[b]fluoranthene	205-99-2	Benz[e]acephenanthrylene
Benzo[k]fluoranthene	207-08-9	Benzo[k]fluoranthene
Benzo[ghi]perylene	191-24-2	Benzo[ghi]perylene
Benzo[a]pyrene	50-32-8	Benzo[a]pyrene
Benzyl alcohol	100-51-5	Benzenemethanol
Beryllium	(Total)	Beryllium

Common Name <sup>1</sup>	CAS RN <sup>2</sup>	Chemical abstracts service index name <sup>3</sup>
alpha-BHC	319-84-6	Cyclohexane, 1,2,3,4,5,6-hexachloro,(1[alpha],2[alpha],3[beta],4[alpha],5[beta],6[beta])-
beta-BHC	319-85-7	Cyclohexane,1,2,3,4,5,6-hexachloro,(1[alpha],2[beta],3[alpha],4[beta],5[alpha],6[beta])-
delta-BHC	319-86-8	Cyclohexane,1,2,3,4,5,6-hexachloro,(1[alpha],2[alpha],3[alpha],4[beta],5[alpha],6[beta])-
gamma-BHC; Lindane	58-89-9	Cyclohexane,1,2,3,4,5,6-hexachloro,(1[alpha],2[alpha],3[beta],4[alpha],5[alpha],6[beta])-
Bis(2-chloroethoxy)methane	111-91-1	Ethane, 1,1'- [methylenebis(oxy)]bis [2-chloro-
Bis(2-chloroethyl)ether; Dichloroethyl ether	111-44-4	Ethane, 1,1'-oxybis[2-chloro-
Bis-(2-chlor-1-methyl) ether; 2, 2-Dichlorodiisopropyl ether; DCIP, See note 6	108-60-1	Propane, 2,2'-oxybis[1-chloro-
Bis(2-ethylhexyl) phthalate	117-81-7	1,2-Benzenedicarboxylic acid, bis(2-ethylhexyl)ester
Bromochloromethane; Chlorobromomethane	74-97-5	Methane, bromochloro-
Bromodichloromethane; Dibromochloromethane	75-27-4	Methane, bromodichloro-
Bromoform; Tribromomethane	75-25-2	Methane, tribromo-
4-Bromophenyl phenyl ether	101-55-3	Benzene, 1-bromo-4-phenoxy-
Butyl benzyl phthalate; Benzyl butyl phthalate	85-68-7	1,2, Benzenedicarboxylic acid, butyl phenylmethyl ester
Cadmium	(Total)	Cadmium
Carbon disulfide	75-15-0	Carbon Disulfide
Carbon tetrachloride	56-23-5	Methane, tetrachloro-
Chlordane	See NOTE 5	4,7-Methano-1H-indene, 1,2,4,5,6,7,8,8-octachloro-2,3,3a,4,7,7a-hexahydro-
p-Chloroaniline	106-47-8	Benzenamine, 4-chloro-
Chlorobenzene	108-90-7	Benzene, chloro-
Chlorobenzilate	510-15-6	Benzeneacetic acid, 4-chloro-(4-chlorophenyl)- -hydroxy-, ethyl ester.
p-Chloro-m-cresol; 4-Chloro-3-methylphenol	59-50-7	Phenol, 4-chloro-3-Methyl-
Chloroethane; Ethyl chloride	75-00-3	Ethane, chloro-

Common Name <sup>1</sup>	CAS RN <sup>2</sup>	Chemical abstracts service index name <sup>3</sup>
Chloroform; Trichloromethane	67-66-3	Methane, trichloro-
2-Chloronaphthalene	91-58-7	Naphthalene, 2-chloro-
2-Chlorophenol	95-57-8	Phenol, 2-chloro-
4-Chlorophenyl phenyl ether	7005-72-3	Benzene, 1-chloro-4-phenoxy-
Chloroprene	126-99-8	1,3-Butadiene, 2- chloro-
Chromium	(Total)	Chromium
Chrysene	218-01-9	Chrysene
Cobalt	218-01-9	Cobalt
Copper	(Total)	Copper
m-Cresol; 3-methylphenol	108-39-4	Phenol, 3-methyl-
o-Cresol; 2-methylphenol	95-48-7	Phenol, 2-methyl-
p-Cresol; 4-methylphenol	106-44-5	Phenol, 4-methyl-
Cyanide	57-12-5	Cyanide
2,4-D; 2,4-Dichlorophenoxyacetic acid	94-75-7	Acetic acid, (2,4-dichlorophenoxy)-
4,4-DDD	72-54-8	Benzene 1,1'-(2,2-dichloroethylidene) bis[4-chloro-
4,4-DDE	72-55-9	Benzene, 1,1'-(dichloroethenylidene) bis[4-chloro-
4,4-DDT	50-29-3	Benzene, 1,1'-(2,2,2-trichloroethylidene) bis[4-chloro-
Diallate	2303-16-4	Carbamothioic acid, bis(1-methylethyl)-, S- (2,3-dichloro-2-propenyl) ester.
aDibenz[a,h]anthracene	53-70-3	Dibenz[a,h]anthracene
Dibenzofuran	132-64-9	Dibenzofuran
Dibromochloromethane; Chlorodibromomethane	124-48-1	Methane, dibromochloro-
1,2-Dibromo-3-chloropropane; DBCP	96-12-8	Propane, 1,2-dibromo-3-chloro-
1,2-Dibromoethane; Ethylene dibromide; EDB	106-93-4	Ethane, 1,2-dibromo-
Di-n-butyl phthalate	84-74-2	2-Benzenedicarboxylic acid, dibutyl ester
o-Dichlorobenzene; 1,2-Dichlorobenzene	95-50-1	Benzene, 1,2-dichloro-

Common Name <sup>1</sup>	CAS RN <sup>2</sup>	Chemical abstracts service index name <sup>3</sup>
m-Dichlorobenzene; 1,3-Dichlorobenzene	541-73-1	Benzene, 1,3-dichloro-
p-Dichlorobenzene; 1,4-Dichlorobenzene	106-46-7	Benzene, 1,4-dichloro-
3,3-Dichlorobenzidine	91-94-1	[1,1'-Biphenyl]-4,4'-diamine, 3,3'-dichloro-
trans-1,4-Dichloro-2-butene	110-57-6	2-Butene, 1,4-dichloro, (E)-
Dichlorodifluoromethane; CFC 12;	75-71-8	Methane, dichlorodifluoro-
1,1-Dichloroethane chloride	75-34-3	Ethane, 1,1-dichloro-
1,2-Dichloroethane; Ethylene dichloride	107-06-2	Ethane, 1,2-dichloro-
1,1-Dichloroethylene; 1,1-Dichloroethane	75-35-4	Ethene, 1,1-dichloro-
Vinylidene chloride cis-1,2- Dichloroethylene; cis-1,2-Dichloroethene.	156-59-2	Ethene, 1,2-dichloro-(Z)-
trans-1,2-Dichloroethylene trans-1,2-Dichloroethene	156-60-5	Ethene, 1,2-dichloro-, (E)-
2,4-Dichlorophenol	120-83-2	Phenol, 2,4-dichloro-
2,6-Dichlorophenol	87-65-0	Phenol, 2,6-dichloro-
1,2-Dichloropropane; Propylene dichloride	78-87-5	Propane, 1,2-dichloro-
1,3-Dichloropropane; Trimethylene dichloride	142-28-9	Propane, 1,3- Trimethylene dichloro-
2,2-Dichloropropane; Isopropylidene chloride	594-20-7	Propane, 2,2- dichloro-
1,1-Dichloropropene	563-58-6	1-Propene, 1,1-dichloro-
cis-1,3-Dichloropropene	10061-01-5	1-Propene, 1,3-dichloro-, (Z)-
trans-1,3-Dichloropropene	10061-02-6	1-Propene, 1,3-dichloro-, (E)-
Dieldrin	60-57-1	2,7:3,6-Dimethanonaphth [2,3-b]oxirene, 3,4,5,6,9,9-hexachloro-1a,2,2a,3,6,6a,7,7a-octahydro-, (1a[alpha],2[beta],2a[alpha],3[beta],6[beta],6a[alpha],7[beta],7a[alpha])-
Diethyl phthalate	84-66-2	1,2-Benzenedicarboxylic acid, diethyl ester
0,0-Diethyl 0-2-pyrazinyl phosphorothioate; Thionazin	297-97-2	Phosphorothioic acid, O,O-diethyl O-pyrazinyl ester.
Dimethoate	60-51-5	Phosphorodithioic acid, O,O-dimethyl S-[2-(methylamino)-2-oxoethyl] ester
p-(Dimethylamino)azobenzene	60-11-7	Benzenamine, N,N-dimethyl-4-(phenylazo)-

Common Name <sup>1</sup>	CAS RN <sup>2</sup>	Chemical abstracts service index name <sup>3</sup>
7,12-Dimethylbenz[a]anthracene	57-97-6	Benz[a]anthracene,7,12-dimethyl-
3,3-Dimethylbenzidine	119-93-7	[1,1'-Biphenyl]-4,4'-diamine, 3,3'-dimethyl-
alpha, alpha- Dimethylphenethylamine	122-09-8	Benzeneethanamine,[alpha],[alpha]-dimethyl
2,4-Dimethylphenol; m-Xylenol	105-67-9	Phenol, 2,4-dimethyl-
Dimethyl phthalate	131-11-3	1,2-Benzenedicarboxylic acid, dimethyl ester
m-Dinitrobenzene	99-65-0	Benzene, 1,3-dinitro-
4,6-Dinitro-o-cresol 4,6-Dinitro-2-methylphenol	534-52-1	Phenol, 2-methyl-4,6- Dinitro-
2,4-Dinitrophenol	51-28-5	Phenol, 2,4-dinitro-
2,4-Dinitrotoluene	121-14-2	Benzene, 1-methyl-2,4-dinitro-
2,6-Dinitrotoluene	606-20-2	Benzene, 2-methyl-1,3-dinitro-
Dinoseb; DNBP; 2-sec-Butyl-4,6-dinitrophenol	88-85-7	Phenol, 2-(1-methylpropyl)-4,6-dinitro-
Di-n-octyl phthalate	117-84-0	1,2-Benzenedicarboxylic acid, dioctyl ester
Diphenylamine	122-39-4	Benzenamine, N-phenyl-
Disulfoton	298-04-4	Phosphorodithioic acid, O,O-diethyl S- [2- (ethylthio)ethyl] ester
Endosulfan I	959-98-8	6,9-Methano-2,4,3-benzodioxathiepin, 6,7,8,9,10,10 hexachloro- 1,5,5a,6,9,9a-hexahydro-, 3-oxide,
Endosulfan II	33213-65-9	6,9-Methano-2,4,3-benzodioxathiepin, 6,7,8,9,10,10-hexachloro- 1,5,5a,6,9,9a-hexahydro-, 3-oxide, (3[alpha],5a[alpha] 6[beta],9[beta], 9a[alpha])-
Endodulfan sulfate	1031-07-8	6,9-Methano-2,4,3-benzodioxathiepin, 6,7,8,9,10,10-hexachloro- 1,5,5a,6,9,9a-hexahydro-, 3,3-dioxide
Endrin	72-20-8	2,7:3,6-Dimethanonaphth[2,3-b]oxirene,3,4,5,6,9,9-hexachloro- 1a,2,2a,3,6,6a,7,7a-octahydro-, (1a[alpha], 2[beta],2a[beta], 3[alpha],6[alpha], 6a[beta],7[beta],7a [alpha])-
Endrin aldehyde	7421-93-4	1,2,4-Methenocyclopenta[cd]pentalene- 5-

Common Name <sup>1</sup>	CAS RN <sup>2</sup>	Chemical abstracts service index name <sup>3</sup>
		carboxaldehyde,2,2a,3,3,4,7-hexachlorodecahydro-(1[alpha],2[beta],2a[beta],4[beta],4a[beta],5[beta],6a[beta],6b[beta],7R*)-
Ethylbenzene	100-41-4	Benzene, ethyl-
Ethyl methacrylate	97-63-2	2-Propenoic acid, 2-methyl-, ethyl ester
Ethyl methanesulfonate	62-50-0	Methanesulfonic acid, ethyl ester
Famphur	52-85-7	Phosphorothioic acid, O-[4-[(dimethylamino)sulfonyl]phenyl]-O,O-dimethyl ester
Fluoranthene	206-44-0	Fluoranthene
Fluorene	86-73-7	9H-Fluorene
Heptachlor	76-44-8	4,7-Methano-1H-indene,1,4,5,6,7,8,8-heptachloro-
Heptachlor epoxide	1024-57-3	3a,4,7,7a-tetrahydro-2,5-Methano-2H-indeno[1,2-b]oxirene,2,3,4,5,6,7,7-heptachloro-1a,1b,5,5a,6,6a,-hexahydro,(1a[alpha],1b[beta],2[alpha],5[alpha],5a[beta],6[beta],6a[alpha])
Hexachlorobenzene	118-74-1	Benzene, hexachloro-
Hexachlorobutadiene	87-68-3	1,3-Butadiene, 1,1,2,3,4,5, hexachloro
Hexachlorocyclopentadiene	77-47-4	1,3, Cyclopentadiene,1,2,3,4,5,5-hexachloro-
Hexachloroethane	67-72-1	Ethane, hexachloro-
Hexachloropropene	188-71-7	1-Propene, 1,1,2,3,3,3-hexachloro
2-Hexanone; Methyl butyl ketone	591-78-6	2-Hexanone
Indenol(1,2,3-cd)pyrene	193-39-5	Indeno[1,2,3-cd]pyrene
Isobutyl alcohol	78-83-1	1-Propanol, 2-methyl-
Isodrin	465-73-6	1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a hexahydro-(1[alpha],4[alpha],4a[beta],5[beta],8[beta],8a[beta])-
Isophorone	78-59-1	2-Cyclohexen-1-one, 3,5,5-trimethyl-
Isosafrole	120-58-1	1,3-Benzodioxole, 5- (1-propenyl)-

Common Name <sup>1</sup>	CAS RN <sup>2</sup>	Chemical abstracts service index name <sup>3</sup>
Kepone	143-50-0	1,3,4-Metheno-2H-cyclobuta-[cd]pentalen-2-one, 1,1a,3,3a,4,5,5,5a,5b,6-decachlorooctahydro-
Lead	(Total)	Lead
Mercury	(Total)	Mercury
Methacrylonitrile	126-98-7	2-Propenenitrile, 2-methyl-
Methapyrilene	91-80-5	1,2-Ethanediamine, N,N-dimethyl-N'-2-pyridinyl-N'-(2-thienylmethyl)-
Methoxychlor	72-43-5	Benzene, 1,1'-(2,2,2-trichloroethylidene)bis [4-methoxy-
Methyl bromide; Bromomethane	74-83-9	Methane, bromo-
Methyl chloride; Chloromethane	74-87-3	Methane, chloro-
3-Methylcholanthrene	56-49-5	Benz[j]aceanthrylene 1,2-dihydro-3-methyl-
Methyl ethyl ketone; MEK; 2-Butanone	78-93-3	2-Butanone
Methyl iodide; Iodomethane	74-88-4	Methane, iodo-
Methyl methacrylate	80-62-6	2-Propenoic acid, 2-methyl-, methyl ester
Methyl methanesulfonate	66-27-3	Methanesulfonic acid, methyl ester
2-Methylnaphthalene	91-57-6	Naphthalene, 2-methyl-
Methyl parathion; Parathion methyl	298-00-0	Phosphorothioic acid, O,O-dimethyl
4-Methyl-2-pentanone; Methyl isobutyl ketone	108-10-1	2-Pentanone, 4- methyl-
Methylene bromide; Dibromomethane	74-95-3	Methane, dibromo-
Methylene chloride; Dichloromethane	75-09-2	Methane, dichloro-
Naphthalene	91-20-3	Naphthalene
1,4-Naphthoquinone	130-15-4	1,4-Naphthalenedione
1-Naphthylamine	134-32-7	1-Naphthalenamine
2-Naphthylamine	91-59-8	2-Naphthalenamine
Nickel	(Total)	Nickel
o-Nitroaniline; 2-Nitroaniline	88-74-4	Benzenamine, 2-nitro-
m-Nitroaniline; 3-Nitroaniline	99-09-2	Benzenamine, 3-nitro-

Common Name <sup>1</sup>	CAS RN <sup>2</sup>	Chemical abstracts service index name <sup>3</sup>
p-Nitroaniline; 4-Nitroaniline	100-01-6	Benzenamine, 4-nitro-
Nitrobenzene	98-95-3	Benzene, nitro-
o-Nitrophenol; 2-Nitrophenol	88-75-5	Phenol, 2-nitro-
p-Nitrophenol; 4-Nitrophenol	100-02-7	Phenol, 4-nitro-
N-Nitrosodi-n-butylamine	924-16-3	1-Butanamine, N-butyl-N-nitroso-
N-Nitrosodiethylamine	55-18-5	Ethanamine, N-ethyl-N-nitroso-
N-Nitrosodimethylamine	62-75-9	Methanamine, N-methyl-N-nitroso-
N-Nitrosodiphenylamine	86-30-6	Benzenamine, N-nitroso-N-phenyl-
N-Nitrosodipropylamine; dipropylamine;	621-64-7	1-Propanamine, N-nitroso-N-propyl-
N-Nitrosomethylethalamine	10595-95-6	Ethanamine, N-methyl-N-nitroso-
N-Nitrosopiperidine	100-75-4	Piperidine, 1-nitroso-
N-Nitrosopyrrolidine	930-55-2	Pyrrolidine, 1-nitroso-
5-Nitro-o-toluidine	99-55-8	Benzenamine, 2-methyl-5-nitro-
Parathion	56-38-2	Phosphorothioic acid, O,O-diethyl-O- (4-nitrophenyl) ester
Pentachlorobenzene	608-93-5	Benzene, pentachloro-
Pentachloronitrobenzene	82-68-8	Benzene, pentachloronitro-
Pentachlorophenol	87-86-5	Phenol, pentachloro-
Phenacetin	62-44-2	Acetamide, N-(4-ethoxyphenyl)
Phenanthrene	85-01-8	Phenanthrene
Phenol	108-95-2	Phenol
p-Phenylenediamine	106-50-3	1,4-Benzenediamine
Phorate	298-02-2	Phosphorodithioic acid, O,O-diethyl S- [(ethylthio)methyl] ester
Polychlorinated biphenyls (PCBs); Aroclors	see NOTE 6	1'-Biphenyl, chloro derivatives
Pronamide	23950-58-5	Benzamide, 3,5-dichloro-N-(1,1-dimethyl-2-propynyl)-
Propionitrile; Ethyl cyanide	107-12-0	Propanenitrile
Pyrene	129-00-0	Pyrene
Safrole	94-59-7	1,3-Benzodioxole, 5-(2-propenyl)-

Common Name <sup>1</sup>	CAS RN <sup>2</sup>	Chemical abstracts service index name <sup>3</sup>
Selenium	(Total)	Selenium
Silver	(Total)	Silver
Silvex; 2,4,5-TP	93-72-1	Propanoic acid, 2- (2,4,5-trichlorophenoxy)-
Styrene	100-42-5	Benzene, ethenyl-
Sulfide	18496-25-8	Sulfide
2,4,5-T; 2,4,5-Trichlorophenoxyacetic acid	93-76-5	Acetic acid, (2,4,5-trichlorophenoxy)-
2,3,7,8-TCDD; 2,3,7,8- Tetrachlorodibenzo- p-dioxin	1746-01-6	Dibenzo[b,e][1,4]dioxin, 2,3,7,8-tetrachloro-
1,2,4,5-Tetrachlorobenzene	95-94-3	Benzene, 1,2,4,5-tetrachloro-
1,1,1,2-Tetrachloroethane	630-20-6	Ethane, 1,1,1,2-tetrachloro-
1,1,2,2-Tetrachloroethane	79-34-5	Ethane, 1,1,2,2-tetrachloro-
Tetrachloroethylene; Tetrachloroethene; Perchloroethylene	127-18-4	Ethene, tetrachloro-
2,3,4,6-Tetrachlorophenol	58-90-2	Phenol, 2,3,4,6-tetrachloro-
Thallium	(Total)	Thallium
Tin	(Total)	Tin
Toluene	108-88-3	Benzene, methyl-
o-Toluidine	95-53-4	Benzenamine, 2-methyl-
Toxaphene	See NOTE 7	Toxaphene
1,2,4-Trichlorobenzene	120-82-1	Benzene, 1,2,4-trichloro-
1,1,1-Trichloroethane; Methylchloroform	71-55-6	Ethane, 1,1,1- trichloro-
1,1,2-Trichloroethane	79-00-5	Ethane, 1,1,2-trichloro-
Trichloroethylene; Trichloroethene	79-01-6	Ethene, trichloro-
Trichlorofluoromethane; CFC-11	75-69-4	Methane, trichlorofluoro-
2,4,5-Trichlorophenol	95-95-4	Phenol, 2,4,5-trichloro-
2,4,6-Trichlorophenol	88-06-2	Phenol, 2,4,6-trichloro-
1,2,3-Trichloropropane	96-18-4	Propane, 1,2,3-trichloro-
0,0,0-Triethyl phosphorothioate	126-68-1	Phosphorothioic acid, O,O,O-triethyl ester
sym-Trinitrobenzene	99-35-4	Benzene, 1,3,5-trinitro-

Common Name <sup>1</sup>	CAS RN <sup>2</sup>	Chemical abstracts service index name <sup>3</sup>
Vanadium	(Total)	Vanadium
Vinyl acetate	108-05-4	Acetic acid, ethenyl ester
Vinyl chloride; Chloroethene	75-01-4	Ethene, chloro-
Xylene (total)	See NOTE 8	Benzene, dimethyl-
Zinc	(Total)	Zinc

NOTES:

<sup>1</sup>Common names are those widely used in government regulations, scientific publications, and commerce; synonyms exist for many chemicals.

<sup>2</sup>Chemical Abstracts Service registry number. Where “Total” is entered, all species in the ground water that contain this element are included.

<sup>3</sup>CAS index names are those used in the 9th Cumulative Index.

<sup>4</sup>This substance is often called bis(2-chloroisopropyl) ether, the name Chemical Abstracts Service applies to its noncommercial isomer, propane, 2,2”-oxybis[2-chloro-(CAS RN 39638-32-9).

<sup>5</sup>Chlordane: This entry includes alpha-chlordane (CAS RN 5103-71-9), beta-chlordane (CAS RN 5103-74-2), gamma-chlordane (CAS RN 5566-34-7), and constituents of chlordane (CAS RN 57-74-9 and CAS RN 12789-03-6).

<sup>6</sup>Polychlorinated biphenyls (CAS RN 1336-36-3); this category contains congener chemicals, including constituents of Aroclor-1016 (CAS RN 12674-11-2), Aroclor-1221 (CAS RN 11104-28-2), Aroclor-1232 (CAS RN 11141-16-5), Aroclor-1242 (CAS RN 53469-21-9), Aroclor-1248 (CAS RN 12672-29-6), Aroclor-1254 (CAS RN 11097-69-1), and Aroclor-1260 (CAS RN 11096-82-5).

<sup>7</sup>Toxaphene: This entry includes congener chemicals contained in technical toxaphene (CAS RN 8001-35-2), i.e., chlorinated camphene.

<sup>8</sup>Xylene: This entry includes o-xylene (CAS RN 96-47-6), m-xylene (CAS RN 108-38-3), p- xylene CAS RN 106-42-3), and unspecified xylenes (dimethylbenzenes) (CAS RN 1330-20-7).

## SECTION 10

### STORAGE TANK MANAGEMENT U.S. TEAM Guide, December 2018

#### A. Applicability

This section applies to facilities that utilize storage tanks, whether aboveground or underground, for the storage of hazardous materials, petroleum products, or hazardous waste. The section presents review action items for emissions from tanks, structural concerns, monitoring, and recordkeeping requirements.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions which have been added or revised as a result of this review are identified as either being reviewed, revised or added in March 2000, for example **[Added March 2000]**.

#### B. Federal Legislation

- *The Resource Conservation and Recovery Act (RCRA)*, Subtitles I and C. Subtitle I, Public Law (PL) 99-49 (42 U.S. Code (USC) 6991-6991i), established the standards and procedures for underground storage tanks (UST). It required the U.S. Environmental Protection Agency (USEPA) to issue standards on leak detection, record maintenance, release reporting, corrective actions, tank upgrading, and replacement (42 USC 6991b(a)(c)). Subtitle C, PL 98-616 (42 USC 6921-6939b) establishes standards and procedures for the handling, storage, treatment, and disposal of hazardous waste.
- *The Clean Air Act (CAA) Amendments of 1990*. This act, PL 101-549 (42 USC 7401-7671q), is currently the effective, comprehensive Federal legislation that regulates the prevention and control of air pollution. See Section 1 titled Air Emissions Management for further information on the CAA.
- *The Oil Pollution Act of 1990*. This law, PL 301-308 (33 USC 2701-2761, et. al.), as amended, requires the prevention of oil pollution into navigable waters by tank vessels. This includes the preparation of a response plan, construction of oil carriers with double hulls, and inspection of spill response equipment.
- *The Federal Facilities Compliance Act (FFCA) of 1992*. This act provides for a waiver of sovereign immunity with respect to Federal, state, and local procedural and substantive requirements respecting control and abatement of solid or hazardous waste disposal and management. Currently a waiver in the FFCA exempts RCRA, Subtitle I from fines.
- *The Occupational Safety and Health Act (OSHA)*. This act, last amended in November 1990, 29 USC 651-678, is a Federal statute which governs the issues related to occupational safety and health. The purpose and policy of this act are to assure every working man and woman in the nation safe and healthful working condition and to preserve our human resources by, among other things, providing for the development and publication of occupational safety and health standards, providing for an effective enforcement program, and providing for appropriate reporting procedures with respect to occupational safety and health which procedures will help

achieve the objectives of this act and accurately describe the nature of the occupational safety and health (29 USC 651(b)(9)(10)(12)).

- EO 12088, *Federal Compliance with Pollution Standards*. This EO, dated 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the Agency funds meet applicable Federal, state, and local environmental requirements for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget. Sections 1-4, "Pollution Control Plan" was revoked by EO 13148 **[Revised October 2002]**.
- *Grant Guidelines To States For Implementing The Delivery Prohibition Provision Of The Energy Policy Act Of 2005*. This document, dated August 2006, was produced by the EPA Office of Underground Storage Tanks in consultation with states to provide guidance the delivery prohibition provision in Section 9012 of the *Solid Waste Disposal Act (SWDA)*, enacted by the *Underground Storage Tank Compliance Act*, part of the *Energy Policy Act of 2005* signed by President Bush on August 8, 2005. This document is published as EPA document number 510-R-06-003. These guidelines are effective 8 August 2007 **[Added July 2007]**.
- *Grant Guidelines To States For Implementing The Secondary Containment Provision Of The Energy Policy Act Of 2005*. This document, dated November 2006, was produced by the EPA Office of Underground Storage Tanks in consultation with states to provide guidance on UST secondary containment requirements to implement the secondary containment provision in Section 9003(i)(1) of the *Solid Waste Disposal Act (SWDA)*, enacted by the *Underground Storage Tank Compliance Act*, part of the *Energy Policy Act of 2005* signed by President Bush on August 8, 2005. This document is published as EPA document number 510-R-06-001. These guidelines are effective 8 February 2007 **[Added July 2007]**.
- *Grant Guidelines To States For Implementing The Financial Responsibility And Installer Certification Provision Of The Energy Policy Act Of 2005*. This document, dated January 2007, was produced by the EPA Office of Underground Storage Tanks in consultation with states to address the public record provision in Section 9002(d) of the *Solid Waste Disposal Act (SWDA)*, enacted by the *Underground Storage Tank Compliance Act*, part of the *Energy Policy Act of 2005* signed by President Bush on August 8, 2005. These guidelines describe the minimum requirements for public record that a state's underground storage tank program must meet in order for a state to comply with statutory requirements for Subtitle I funding. These guidelines include: developing and updating the public record; making the record available to the public; describing the minimum public record content; ensuring data quality; and demonstrating and ensuring compliance with these guidelines. This document is published as EPA document number 510-R-07-001. These guidelines are effective 1 October 2007 **[Added July 2007]**.
- *Grant Guidelines To States For Implementing The Public Record Provision Of The Energy Policy Act Of 2005*. This document, dated January 2007, was produced by the EPA Office of Underground Storage Tanks in consultation with states the financial responsibility and installer certification provision in Section 9003(i) of the *Solid Waste Disposal Act (SWDA)*, enacted by the *Underground Storage Tank Compliance Act*, part of the *Energy Policy Act of 2005* signed by President Bush on August 8, 2005. This document is published as EPA document number 510-R-07-002. These guidelines are effective 8 February 2007 **[Added July 2007]**.
- *Grant Guidelines To States For Implementing the Provision Of The Energy Policy Act Of 2005 Requiring States To Report on the Compliance of Government Underground Storage Tanks*. This document, dated April 2007, was produced by the EPA Office of Underground Storage Tanks in consultation with states to implement the provision in Section 9003(j)1 of the *Solid Waste Disposal Act (SWDA)*, enacted by the *Underground Storage Tank Compliance Act*, part of the *Energy Policy Act of 2005* signed by President Bush on August 8, 2005. This document is published as EPA document number 510-R-07-003. These guidelines are effective 8 August 2007 **[Added July 2007]**.
- *Grant Guidelines To States For Implementing Inspection Provisions Of The Energy Policy Act Of 2005*. This document, dated April 2007, provides guidance on what inspections of USTs are states expected to perform. This document was produced by the EPA Office of Underground Storage Tanks in consultation with states to provide

guidance on UST inspection requirements to implement Sections 9005(c)(1) and 9005(c)(2) of the *Solid Waste Disposal Act (SWDA)*, enacted by the *Underground Storage Tank Compliance Act*, part of the *Energy Policy Act of 2005* signed by President Bush on August 8, 2005. This document is published as EPA document number 510-R-07-004. These guidelines are effective 8 August 2007 [Added July 2007].

- *Strategy for An EPA/Tribal Partnership To Implement Section 1529 Of The Energy Policy Act Of 2005*. This strategy, dated August 2006, was developed in coordination with Indian tribes, as required by Section 9013 (a) of the *Solid Waste Disposal Act (SWDA)*, and recognizes the number and diversity of tribes and the need for flexibility in implementing the underground storage tank program to address unique tribal issues. This strategy therefore is intended to provide a basic framework that can be used as a foundation for discussing the unique underground storage tank program implementation issues of different tribal governments and provides a consistent method whereby the U.S. EPA and each tribe can continue to cooperatively work on these issues in the future. This document is published as EPA document number 510-R-06-005 [Added July 2007].

### C. State/Local Requirements

For information on regulations in specific states, see the State Supplements to TEAM Guide.

Since the primary mechanisms regulating air pollutant emissions are the state or air quality control region (AQCR) regulations, some states may be regulating emissions from storage vessels.

Aboveground storage tanks (AST) are often regulated in the state or local fire code if they are not addressed in environmental regulations.

EPA and the States have been working together to develop guidelines for the implementation of the *Underground Storage Tank Compliance Act*. These guidelines describe the minimum requirements that a state's UST program must contain in order for a state to comply with statutory requirements for Subtitle I funding. These guidelines include definitions, requirements, and examples. A state may choose to develop more stringent requirements than described in these guidelines [Revised July 2007].

See the *Key Compliance Definitions* section for terms that are defined by the UST Guidelines in addition to definitions found in 40 CFR 280.

States may choose to prohibit delivery, deposit, or acceptance of product to an individual underground storage tank or to every underground storage tank at a facility. The state must develop criteria and time frames for prohibiting the delivery, deposit, and acceptance of product.

### D. Key Compliance Requirements

- **Bulk Gasoline Terminals** - Bulk gasoline terminals with greater than 75,700 L [approx. 19,998 gal] gasoline throughput per day that deliver liquid product into tank trucks, and that started construction or modification after 17 December 1980 are required to ensure that vapor tightness documentation is available for each gasoline tank truck, and that the tank identification number is recorded as each gasoline tank truck is loaded (40 CFR 60.500 through 60.506).
- **Petroleum Storage Vessels** - Storage vessels for petroleum liquids with a storage capacity greater than 151,416 L (40,000 gal) but less than 246,052 L (65,000 gal), that started construction or modification after 8 March 1974 but before 19 May 1978, or with a capacity greater than 246,052 L (65,000 gal) that started construction or modification after 11 June 1973 but before 19 May 1978, are required to meet specific standards for emissions and monitoring. These standards vary depending upon whether the true vapor pressure of the petroleum liquid is greater or less than 11.1 psia. Storage vessels with a storage capacity greater than 151,416 L (40,000 gal) constructed after 18 May 1978 are required to ensure that the vessel has an external floating roof, or a fixed roof with an internal floating type cover, and a vapor recovery system (40 CFR 60.110 through 60.113 and 60.110a through 60.115a).

- Volatile Organic Liquid (VOL) Storage Vessels - Storage vessels for VOLs having a capacity of greater than or equal to 40 m<sup>3</sup> [approx. 10,567 gal] for which construction, reconstruction, or modification started after 23 July 1984 are required to meet specific inspection, documentation, and notification requirement standards. These include ensuring that certain inspections are made, notifying the USEPA in advance of performing gap measurements, and providing it certain records upon request (40 CFR 60.110b through 60.115b).
- Hazardous Waste Storage Tanks - Hazardous waste storage tank requirements are dependent upon the RCRA classification of the facility (e.g., SQG, LQG or TSDF). Refer to the section titled Hazardous Waste Management for more details on the definitions of these classifications. Tanks at all three types of facilities are required to meet basic requirements including (40 CFR 264.190 through 264.200, 40 CFR 265.190 through 265.200, 40 CFR 264.1085, 40 CFR 265.1085):
  1. a hazardous waste may not be placed into a tank if it will cause the tank or its secondary containment system to rupture, leak, corrode, or fail;
  2. special precautions are taken for ignitable, incompatible or reactive wastes;
  3. the tank is operated using appropriate controls and practices to prevent spills and overflows;
  4. periodic inspections are conducted to detect spills, corrosion, leaks, and operator error;
  5. at closure, all hazardous waste and residues must be removed from the tank, peripheral equipment and foundation structure.

Tank systems at LQG facilities and TSDFs that store hazardous waste with a high volatile organic concentration must meet emission standards specified under Subpart CC and BB of 40 CFR 264 and 265. These regulations also require generators to test the waste to determine the concentration of the waste, to satisfy tank and container emissions standards, and to inspect and monitor regulated units **[Revised March 2000]**.

- Flammable Liquid Storage Tanks - Storage tanks are to be built of steel except in certain circumstances. Outside aboveground tanks for flammable liquids are to meet requirements for distance between tanks, firefighting access, and containment. When flammable vapor may be present from storage tanks, heat sources will be kept from the tanks. Tanks are required to have been strength-tested before being used (29 CFR 1910.106(b)) **[Revised April 2012]**.

## E. Key Compliance Definitions

- *Aboveground Release* - any release to the surface of the land or to surface water. This includes, but is not limited to, releases from the aboveground portion of a UST system and aboveground releases associated with overfills and transfer operations as the regulated substance moves to or from a UST system (40 CFR 280.12) **[Reviewed March 2000]**.
- *Aboveground Storage Tank (AST)* - in relation to hazardous waste, a device that meets the definition of tank in 40 CFR 260.10 and that is situated in such a way that the entire surface area of the tank is completely above the plane of the adjacent surrounding surface and the entire surface area of the tank (including the tank bottom) is able to be visually inspected (40 CFR 260.10) **[Reviewed March 2000]**.
- *Aboveground Tank* - a tank used to store or process used oil that is not an underground storage tank as defined in 40 CFR 280.12 (40 CFR 279.1) **[Added March 2000]**.
- *Accidental Release* - any sudden or nonsudden release of petroleum from an underground storage tank that results in a need for corrective action and/or compensation for bodily injury or property damage neither expected nor intended by the tank owner or operator (40 CFR 280.92) **[Added March 2000]**.
- *Airport Hydrant Fuel Distribution System* - (also called airport hydrant system) an UST system which fuels aircraft and operates under high pressure with large diameter piping that typically terminates into one or more hydrants (fill stands). The airport hydrant system begins where fuel enters one or more tanks from an external source such as a pipeline, barge, rail car, or other motor fuel carrier (40 CFR 280.250) **[Added July 2015]**.

- *Ancillary Equipment* - any device including, but not limited to, such devices as pipings, fittings, flanges, valves, and pumps used to distribute, meter, or control the flow of regulated substances to and from the UST (40 CFR 280.12) **[Reviewed March 2000]**.
- *Atmospheric Tank* - a storage tank which has been designed to operate at pressures from atmospheric through 0.5 psig (29 CFR 1910.106(a)(2)).
- *Average Volatile Organic (VO) Concentration* - the mass-weighted average VO concentration of a hazardous waste (40 CFR 265.1081) **[Reviewed March 2000]**.
- *Barge* - any nonself-propelled vessel (46 CFR 90.10-3).
- *Belowground Release* - any release to the subsurface of the land and to groundwater. This includes, but is not limited to, releases from the below ground portion of a UST system and belowground releases associated with overfills and transfer operations as the regulated substance moves to or from an UST (40 CFR 280.12) **[Reviewed March 2000]**.
- *Beneath The Surface of The Ground* - beneath the ground surface or otherwise covered with earthen materials (40 CFR 280.12) **[Added March 2000]**.
- *Bodily Injury* - this shall have the meaning given to this term by applicable state law; however, this term shall not include those liabilities which, consistent with standard insurance industry practices, are excluded from coverage in liability insurance policies for bodily injury (40 CFR 280.92) **[Added March 2000]**.
- *Boiler* - an enclosed combustion device that extracts useful energy in the form of steam and is not an incinerator or a process heater (40 CFR 63.7957) **[Added April 2004]**.
- *Bulk Gasoline Plant* - any gasoline distribution facility that has a throughput less than or equal to 75,000 L [approx. 19,998 gal/day] (40 CFR 60.111b).
- *Bulk Gasoline Plant* - any gasoline storage and distribution facility that receives gasoline by pipeline, ship or barge, or cargo tank and has a gasoline throughput of less than 20,000 gal/day. Gasoline throughput shall be the maximum calculated design throughput as may be limited by compliance with an enforceable condition under Federal, State, or local law and discoverable by the Administrator and any other person (40 CFR 63.11100) **[Added April 2008]**.
- *Bulk Gasoline Terminal* - any gasoline facility which receives gasoline by pipeline, ship or barge, and has a gasoline throughput greater than 75,700 L/day. Gasoline throughput shall be the maximum calculated design throughput as may be limited by compliance with an enforceable condition under Federal, State or local law and discoverable by the Administrator and any other person (40 CFR 60.501 and 63.421) **[Revised April 2004]**.
- *Bulk Gasoline Terminal* - any gasoline storage and distribution facility that receives gasoline by pipeline, ship or barge, or cargo tank and has a gasoline throughput of 20,000 gal/day or greater. Gasoline throughput shall be the maximum calculated design throughput as may be limited by compliance with an enforceable condition under Federal, State, or local law and discoverable by the Administrator and any other person (40 CFR 63.11100) **[Added April 2008]**.
- *Cargo* - on tank vessels this means combustible liquid, flammable liquid, or liquefied flammable gas unless otherwise stated (46 CFR 30.10-5).
- *Cargo Areas* - on tank vessels, that part of a vessel which includes the cargo tanks and other tanks into which cargo or cargo vapors are intentionally introduced; holds containing these tanks; all intervening spaces within, between, below, or outboard of these tanks or holds; and the deck areas over the length and beam of the vessel above these tanks, holds, or spaces (46 CFR 30.10-5a).

- *Cargo Control Stations* - on tank vessels this means a location that is manned during cargo transfer operations for the purpose of directing or controlling the loading or unloading of cargo (46 CFR 30.10-5b).
- *Cathodic Protection* - a technique to prevent corrosion of a metal surface by making that surface the cathode of an electrochemical cell. For example, a tank system can be cathodically protected through the application of either galvanic anodes or impressed current (40 CFR 280.12) **[Reviewed March 2000]**.
- *Cathodic Protection Tester* - a person who can demonstrate understanding of the principles and measurements of all common types of cathodic protection systems as applied to buried or submerged metal piping and tank systems. At a minimum, such persons must have education and experience in soil resistivity, stray current, structure-to-soil potential, and component electrical isolation measurements of buried metal piping and tank systems (40 CFR 280.12) **[Reviewed March 2000]**.
- *Central Accumulation Area* - any on-site hazardous waste accumulation area with hazardous waste accumulating in units subject to either 40 CFR 262.16 (for small quantity generators) or 40 CFR 262.17 (for large quantity generators). A central accumulation area at an eligible academic entity that chooses to operate under 40 CFR part 262 subpart K is also subject to 40 CFR 262.211 when accumulating unwanted material and/or hazardous waste (40 CFR 260.10) **[Added January 2017]**.
- *CERCLA* - *Comprehensive Environmental Response Compensation and Liability Act* of 1980 as amended (40 CFR 280.12) **[Reviewed March 2000]**.
- *Certificated* - for tank vessels, this applies to a vessel covered by a certificate of inspection issued by the Coast Guard; when applied to personnel employed on tank vessels, the term refers to a certificate of ability issued by the Coast Guard (46 CFR 30.10-7).
- *Class A Operator* - the individual who has primary responsibility to operate and maintain the UST system in accordance with applicable requirements established by the implementing agency. The Class A operator typically manages resources and personnel, such as establishing work assignments, to achieve and maintain compliance with regulatory requirements (40 CFR 280.12) **[Added July 2015]**.
- *Class B Operator* - the individual who has day-to-day responsibility for implementing applicable regulatory requirements established by the implementing agency. The Class B operator typically implements in-field aspects of operation, maintenance, and associated recordkeeping for the UST system (40 CFR 280.12) **[Added July 2015]**.
- *Class C Operator* - the individual responsible for initially addressing emergencies presented by a spill or release from an UST system. The Class C operator typically controls or monitors the dispensing or sale of regulated substances (40 CFR 280.12) **[Added July 2015]**.
- *Closure Device* - a cap, hatch, lid, plug, seal, valve, or other type of fitting that blocks an opening in a cover such that when the device is secured in the closed position it prevents or reduces air pollutant emissions to the atmosphere. Closure devices include devices that are detachable from the cover (e.g., a sampling port cap), manually operated (e.g., hinged access lid or hatch), or automatically operated (e.g., a spring loaded pressure relief valve) (40 CFR 265.1081) **[Reviewed March 2000]**.
- *Closed Vent System* - a system that is not open to the atmosphere and is composed of hard-piping, ductwork, connections, and, if necessary, fans, blowers, or other flow-inducing device that conveys gas or vapor from an emissions point to a control device (40 CFR 63.7957) **[Added April 2004]**.
- *Closure Device* - a cap, hatch, lid, plug, seal, valve, or other type of fitting that prevents or reduces air pollutant emissions to the atmosphere by blocking an opening in a cover when the device is secured in the closed position. Closure devices include devices that are detachable from the cover (e.g., a sampling port cap), manually operated (e.g., a hinged access lid or hatch), or automatically operated (e.g., a spring-loaded pressure relief valve) (40 CFR 63.7957) **[Added April 2004]**.

- *Compatible* - the ability of two or more substances to maintain their respective physical and chemical properties upon contact with one another for the design life of the tank system under conditions likely to be encountered in the UST (40 CFR 280.12) **[Reviewed March 2000]**.
- *Condensate* - hydrocarbon liquid separated from natural gas which condenses due to changes in the temperature and/or pressure and remains liquid at standard conditions (40 CFR 60.111(f) **[Added October 2003]**.
- *Connected Piping* - all underground piping including valves, elbows, joints, flanges, and flexible connectors attached to a tank system through which regulated substances flow. For the purpose of determining how much piping is connected to any individual UST system, the piping that joins two UST systems should be allocated equally between them (40 CFR 280.12) **[Reviewed March 2000]**.
- *Consumptive Use* - with respect to heating oil, means consumed on the premises (40 CFR 280.12) **[Reviewed March 2000]**.
- *Container* - a portable unit used to hold material. Examples of containers include, but are not limited to drums, dumpsters, roll-off boxes, bulk cargo containers commonly known as portable tanks or totes, cargo tank trucks, dump trucks, and rail cars. For the purpose of this subpart, a front-end loader, excavator, backhoe, or other type of self-propelled excavation equipment is not a container (40 CFR 63.7957) **[Added April 2004]**.
- *Containment Sump* - a liquid-tight container that protects the environment by containing leaks and spills of regulated substances from piping, dispensers, pumps and related components in the containment area. Containment sumps may be single walled or secondarily contained and located at the top of tank (tank top or submersible turbine pump sump), underneath the dispenser (under-dispenser containment sump), or at other points in the piping run (transition or intermediate sump) (40 CFR 280.12) **[Added July 2015]**.
- *Continuous Record* - documentation of data values measured at least once every 15 min and recorded at the frequency specified in this subpart (40 CFR 63.7957) **[Added April 2004]**.
- *Continuous Recorder* - a data recording device that either records an instantaneous data value at least once every 15 min or records 15-min or more frequent block averages (40 CFR 63.7957) **[Added April 2004]**.
- *Continuous Seal* - a seal that forms a continuous closure that completely covers the space between the edge of the floating roof and the wall of a tank (40 CFR 265.1081) **[Reviewed March 2000]**.
- *Continuous Vapor Processing System* - a vapor processing system that treats total organic compounds vapors collected from gasoline tank trucks on a demand basis without intermediate accumulation in a vapor holder (40 CFR 60.501 **[Added October 2003]**.
- *Control Device* - equipment used recovering, removing, oxidizing, or destroying organic vapors. Examples of such equipment include but are not limited to carbon adsorbers, condensers, vapor incinerators, flares, boilers, and process heaters (40 CFR 63.7957) **[Added April 2004]**.
- *Controlled Loading Rack, For The Purposes of 40 CFR 63.420* - a loading rack equipped with vapor collection and processing systems that reduce displaced vapor emissions to no more than 80 milligrams of total organic compounds per liter of gasoline loaded, as measured using the test methods and procedures in 40 CFR 60.503(a) through 60.503(c) (40 CFR 63.421) **[Added April 2004]**.
- *Corrosion Expert* - a person who, by reason of thorough knowledge of the physical sciences and the principles of engineering and mathematics acquired by a professional education and related practical experience, is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems and metal tanks. Such a person must be accredited or certified as being qualified by the National Association of Corrosion Engineers or be a registered professional engineer who has certification or licensing that includes education and experience in corrosion control of buried or submerged metal piping systems and metal tanks (40 CFR 280.12) **[Reviewed March 2000]**.

- *Cover* - a device that provides a continuous barrier over the hazardous waste managed in a unit to prevent or reduce air pollutant emissions to the atmosphere. A cover may have openings (such as access hatches, sampling ports, gauge wells) that are necessary for operation, inspection, maintenance, and repair of the unit on which the cover is used. A cover may be a separate piece of equipment which can be detached and removed from the unit or a cover may be formed by structural features permanently integrated into the design of the unit (40 CFR 265.1081) **[Reviewed March 2000]**.
- *Cover* - a device that prevents or reduces air pollutant emissions to the atmosphere by forming a continuous barrier over the remediation material managed in a unit. A cover may have openings (such as access hatches, sampling ports, gauge wells) that are necessary for operation, inspection, maintenance, and repair of the unit on which the cover is used. A cover may be a separate piece of equipment which can be detached and removed from the unit (such as a tarp) or a cover may be formed by structural features permanently integrated into the design of the unit (40 CFR 63.7957) **[Added April 2004]**.
- *Custody Transfer* - the transfer of produced petroleum and/or condensate, after processing and/or treating in the producing operations, from storage tanks or automatic transfer facilities to pipelines or any other forms of transportation 40 CFR 60.111(g) **[Added October 2003]**.
- *Delivery Prohibition* - prohibiting the delivery, deposit, or acceptance of product to an underground storage tank that has been determined to be ineligible by EPA or a state implementing agency for such delivery, deposit, or acceptance. (NOTE: The term "state" does not exclude local government implementing agencies.) (*Grant Guidelines To States For Implementing The Delivery Prohibition Provision Of The Energy Policy Act Of 2005*) **[Added July 2007]**.
- *Deviation* - any instance in which an affected source subject to this subpart, or an owner or operator of such a source (40 CFR 63.7957) **[Added April 2004]**:
  1. Fails to meet any requirement or obligation established by this subpart, including but not limited to any emissions limitation (including any operating limit), or work practice standard;
  2. Fails to meet any term or condition that is adopted to implement an applicable requirement in this subpart and that is included in the operating permit for any affected source required to obtain such a permit; or
  3. Fails to meet any emissions limitation, (including any operating limit), or work practice standard in this subpart during startup, shutdown, or malfunction, regardless of whether or not such failure is permitted by this subpart.
- *Dielectric Material* - a material that does not conduct direct electrical current. Dielectric coatings are used to electrically isolate UST systems from the surrounding soils. Dielectric bushings are used to electrically isolate portions of the UST system (e.g., tank from piping) (40 CFR 280.12) **[Reviewed March 2000]**.
- *Director of the Implementing Agency* - the USEPA Regional Administrator, or, in the case of a state with a program approved under section 9004, the Director of the designated state or local agency responsible for carrying out an approved UST program (40 CFR 280.92) **[Added March 2000]**.
- *Dispenser* - equipment located aboveground that dispenses regulated substances from the UST system (40 CFR 280.12) **[Added July 2015]**.
- *Dispenser System* - the dispenser and the equipment necessary to connect the dispenser to the underground storage tank system (40 CFR 280.12) **[Added July 2015]**.
- *Do-It-Yourself (DIY) Used Oil Collection Center* - any site or facility that accepts, aggregates, and stores used oil collected only from household DIYs (40 CFR 279.1) **[Added March 2000]**.
- *Electrical Equipment* - underground equipment that contains dielectric fluid that is necessary for the operation of equipment such as transformers and buried electric cable (40 CFR 280.12) **[Reviewed March 2000]**.

- *Emissions Limitation* - any emissions limit, opacity limit, operating limit, or visible emissions limit (40 CFR 63.7957) [**Added April 2004**].
- *Emissions Point* - an individual tank, surface impoundment, container, oil-water, organic-water separator, transfer system, vent, or enclosure (40 CFR 63.7957) [**Added April 2004**].
- *Enclosure* - a structure that surrounds a tank or container, captures organic vapors emitted from the tank or container, and vents the captured vapors through a closed-vent system to a control device (40 CFR 63.7957 and 265.1081) [**Reviewed March 2000; Revised April 2004**].
- *Equipment* - each pump, pressure relief device, sampling connection system, valve, and connector used in remediation material service at a facility (40 CFR 63.7957) [**Added April 2004**].
- *Equipment* - each valve, pump, pressure relief device, sampling connection system, open-ended valve or line, and flange or other connector in the gasoline liquid transfer and vapor collection systems. This definition also includes the entire vapor processing system except the exhaust port(s) or stack(s) (40 CFR 63.421 and 63.11100) [**Added April 2004; Revised April 2008**].
- *Excavation Zone* - the volume containing the tank system and backfill material bounded by the ground surface, walls, and floor of the pit and trenches into which the UST system is placed at the time of installation (40 CFR 280.12) [**Reviewed March 2000**].
- *Excluded USTs* - these are USTs which are not required to meet the requirements found in 40 CFR 280 and include (40 CFR 280.10(b)) [**Reviewed March 2000; Revised July 2015**]:
  1. any UST system holding hazardous wastes listed or identified under Subtitle C of the *Solid Waste Disposal Act*, or a mixture of such hazardous waste and other regulated substances
  2. any wastewater treatment tank system that is part of a wastewater treatment facility regulated under Section 402 or 307(b) of the *Clean Water Act* (CWA)
  3. equipment or machinery that contains regulated substances for operational purposes such as hydraulic lift tanks and electrical equipment tanks
  4. any UST system whose capacity is 110 gal or less
  5. any UST system that contains a de minimis concentration of regulated substance
  6. any emergency spill or overflow containment UST system that is expeditiously emptied after use.

(NOTE: See also the definitions for Underground Storage Tank and Partially Excluded USTs.)

- *Exempted Hazardous Waste Management Unit* - in relation to air emissions standards, this is (40 CFR 264.1080(b) and 265.1080(b)) [**Revised December 1997; Revised March 2000**]:
  1. a waste management unit that holds hazardous waste placed in the unit before 6 December 1996, and in which no hazardous waste is added to the unit on or after 6 December 1996
  2. a container that has a design capacity less than or equal to 0.1 m<sup>3</sup>
  3. a tank in which an owner or operator has stopped adding hazardous waste and the owner or operator has begun implementing or completed closure pursuant to an approved closure plan
  4. a surface impoundment in which an owner or operator has stopped adding hazardous waste (except to implement an approved closure plan) and the owner or operator has begun implementing or completed closure pursuant to an approved closure plan
  5. a waste management unit that is used solely for the on-site treatment or storage of hazardous waste that is generated as the result of implementing remedial activities required under corrective action authorities of RCRA sections 3004(u), 3004(v), or 3008(h); CERCLA authorities; or similar federal or state authorities
  6. a waste management unit that is used solely for the management of radioactive mixed waste in accordance with all applicable regulations under the *Atomic Energy Act* and the *Nuclear Waste Policy Act*
  7. a hazardous waste management unit that the owner or operator certifies is equipped with and operating air emissions controls in accordance with regulations promulgated as a result of the CAA

8. a tank that has a process vent as defined in 40 CFR 264.1031.
- *Exempted Hazardous Waste Storage Tanks* - storage tanks are exempt from these air emission requirements if the waste management unit is one of the following (40 CFR 264.1082(c) and 265.1083(c)) [**Revised March 2000**]:
    1. tanks for which all hazardous wastes entering the unit has an average VO concentration at the point of waste origination is less than 500 ppmw. This determination is updated at least every 12 mo.
    2. tanks for which the organic content of all hazardous wastes entering the unit has been reduced by an organic destruction or removal process that achieves any of the following conditions:
      - a. a process that removes or destroys the organics to a level such that the average VO concentration of the hazardous waste at the point of waste treatment is less than the exit concentration limit established for the process
      - b. a process that removes or destroys the organics contained in the hazardous waste to such a level that the organic reduction efficiency for the process is equal to or greater than 95 percent, and the average VO concentration of the hazardous waste at the point of waste treatment is less than 100 ppmw
      - c. a process that removes or destroys the organics contained in the hazardous waste to such a level that the actual organic mass removal rate for the process is equal to or greater than the required organic mass removal rate established for the process
      - d. a biological process that destroys or degrades the organics contained in the hazardous waste such that either of the following is met:
        - i. the organic reduction efficiency for the process is equal to or greater than 95 percent and the organic biodegradation efficiency for the process is equal to or greater than 95 percent
        - ii. the total actual organic mass biodegradation rate for all hazardous waste treated by the process is equal to or greater than the required organic mass removal rate
      - e. a process that removes or destroys the organics contained in the hazardous waste and meets all the following conditions:
        - i. from the point of waste origination through the point where the hazardous waste enters the process, the hazardous waste is continuously managed in waste management units which use air emissions controls as applicable to the waste management unit
        - ii. from the point of waste origination through the point where the hazardous waste enters the process, any transfer of the hazardous waste is accomplished through continuous hard-piping or other closed system transfer that does not allow exposure of the waste to the atmosphere
        - iii. the average VO concentration of the hazardous waste at the point of waste treatment is less than the lowest average VO concentration at the point of waste origination determined for each of the individual hazardous waste streams entering the process or 500 ppmw, whichever value is lower
      - f. a process that removes or destroys the organics contained in the hazardous waste to a level such that the organic reduction efficiency for the process is equal to or greater than 95 percent and the owner or operator certifies that the average VO concentration at the point of waste origination for each of the individual waste streams entering the process is less than 10,000 ppmw
      - g. a hazardous waste incinerator for which the owner or operator has either been issued a final permit under 40 CFR 270 or has certified compliance with the requirements of 40 CFR 265, Subpart O
      - h. a boiler or industrial furnace for which the owner or operator has been issued a final permit under 40 CFR 270 or has certified compliance with the requirements of 40 CFR 266, Subpart H.
    3. a tank used for biological treatment of hazardous waste such that it degrades or destroys the organics contained in the hazardous waste such that either of the following conditions is met:
      - a. organic reduction efficiency for the process is equal to or greater than 95 percent and the organic biodegradation efficiency for the process is equal to or greater than 95 percent
      - b. the total actual organic mass biodegradation rate for all hazardous waste treated by the process is equal to or greater than the required organic mass removal rate
    4. tanks for which all hazardous waste placed in the unit either:
      - a. meets the numerical concentrations limits for organic hazardous constituents as specified in 40 CFR 280 has been treated by the treatment technology established by the USEPA in 40 CFR 268.42 or have been removed or destroyed by an equivalent method of treatment approved by USEPA under 40 CFR 268.42(b).

- *Existing Tank* - in relation to used oil, a tank that is used for the storage or processing of used oil and that is in operation, or for which installation has commenced on or prior to the effective date of the authorized used oil program for the state in which the tank is located. Installation will be considered to have commenced if the owner or operator has obtained all federal, state, and local approvals or permits necessary to begin installation of the tank and if either (1) A continuous on-site installation program has begun, or (2) The owner or operator has entered into contractual obligations (which cannot be canceled or modified without substantial loss) for installation of the tank to be completed within a reasonable time 40 CFR 279.1) [**Revised March 2000**].
- *Existing* – for purposes of the guidelines, existing means that an underground tank, piping, motor fuel dispensing system, facility, community water system, or potable drinking water well is in place when a new installation or replacement of an underground tank, piping, or motor fuel dispensing system begins (*Grant Guidelines To States For Implementing The Secondary Containment Provision Of The Energy Policy Act Of 2005*) [**Added July 2007**].
- *Existing Tank System* - a tank system used to contain an accumulation of regulated substances or for which installation has commenced on or before 22 December 1988. Installation is considered to have commenced if (40 CFR 280.12) [**Reviewed March 2000**]:
  1. the owner or operator has obtained all Federal, state, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system
  2. either a continuous onsite physical construction or installation program has begun, or the owner or operator has entered into any contractual obligations which cannot be canceled or modified without substantial loss for physical construction at the site or installation of the tank system to be completed within a reasonable time.
- *Existing Vapor Processing System* - a vapor processing system [capable of achieving emissions to the atmosphere no greater than 80 milligrams of total organic compounds per liter of gasoline loaded], the construction or refurbishment of which was commenced before 17 December 1980, and which was not constructed or refurbished after that date (40 CFR 60.501) [**Added October 2003**].
- *External Floating Roof* - a pontoon or double-deck type floating roof that rests on the surface of a hazardous waste being managed in a tank that has no fixed roof (40 CFR 265.1081) [**Reviewed March 2000**].
- *External Floating Roof* - a pontoon-type or double-deck type cover that rests on the liquid surface in a tank with no fixed roof (40 CFR 63.7957) [**Added April 2004**].
- *Facility* - all contiguous or adjoining property that is under common control including properties that are separated only by a road or other public right-of-way. Common control includes properties that are owned, leased, or operated by the same entity, parent entity, subsidiary, or any combination thereof. A unit or group of units within a contiguous property that are not under common control (e.g., a wastewater treatment unit located at the facility but is owned by a different company) is a different facility (40 CFR 63.7957) [**Added April 2004**].
- *Farm Tank* - a tank located on a tract of land devoted to the production of crops or raising animals, including fish, and associated residences and improvements. A farm tank must be located on the farm property. Farm includes fish hatcheries, rangeland, and nurseries with growing operations (40 CFR 280.12) [**Reviewed March 2000**].
- *Field-constructed Tank* - a tank constructed in the field. For example, a tank constructed of concrete that is poured in the field, or a steel or fiberglass tank primarily fabricated in the field is considered field-constructed (40 CFR 280.250) [**Added July 2015**].
- *Fixed Roof* - a cover that is mounted on a unit in a stationary position and does not move with fluctuations in the level of the material managed in the unit (40 CFR 63.7957 and 265.1081) [**Reviewed March 2000; Revised April 2004**].
- *Flame Zone* - the portion of the combustion chamber in a boiler or process heater occupied by the flame envelope (40 CFR 63.7957) [**Added April 2004**].

- *Flammable Liquid* - any liquid having a flashpoint at or below 199.4 °F (93 °C). Flammable liquids are divided into four categories as follows (29 CFR 1910.106(a)(19)) **[Revised April 2012]**:
  1. Category 1 shall include liquids having flashpoints below 73.4 °F (23 °C) and having a boiling point at or below 95 °F (35 °C).
  2. Category 2 shall include liquids having flashpoints below 73.4 °F (23 °C) and having a boiling point above 95 °F (35 °C).
  3. Category 3 shall include liquids having flashpoints at or above 73.4 °F (23 °C) and at or below 140 °F (60 °C). When a Category 3 liquid with a flashpoint at or above 100 °F (37.8 °C) is heated for use to within 30 °F (16.7 °C) of its flashpoint, it shall be handled in accordance with the requirements for a Category 3 liquid with a flashpoint below 100 °F (37.8 °C).
  4. Category 4 shall include liquids having flashpoints above 140 °F (60 °C) and at or below 199.4 °F (93 °C). When a Category 4 flammable liquid is heated for use to within 30 °F (16.7 °C) of its flashpoint, it shall be handled in accordance with the requirements for a Category 3 liquid with a flashpoint at or above 100 °F (37.8 °C).
  5. When liquid with a flashpoint greater than 199.4 °F (93 °C) is heated for use to within 30 °F (16.7 °C) of its flashpoint, it shall be handled in accordance with the requirements for a Category 4 flammable liquid.
- *Flare* - a thermal oxidation system using an open (without enclosure) flame (40 CFR 60.501 and 63.11100) **[Added April 2004; Revised April 2008]**.
- *Floating Membrane Cover* - a cover consisting of a synthetic flexible membrane material that rests upon and is supported by the hazardous waste being managed in a surface impoundment (40 CFR 265.1081) **[Reviewed March 2000]**.
- *Floating Roof* - a cover consisting of a double deck, pontoon single deck, or internal floating cover which rests upon and is supported by the material being contained, and is equipped with a continuous seal (40 CFR 63.7957 and 265.1081) **[Reviewed March 2000; Revised April 2004]**.
- *Flow Indicator* - a device that indicates whether gas is flowing, or whether the valve position would allow gas to flow in a bypass line (40 CFR 63.7957) **[Added April 2004]**.
- *Flow-Through Process Tank* - a tank that forms an integral part of a production process through which there is a steady, variable, recurring, or intermittent flow of materials during the operation of the process. Flow-through process tanks do not include tanks used for the storage of material prior to their introduction into the production process or for the storage of finished products or byproducts from the production process (40 CFR 280.12) **[Reviewed March 2000]**.
- *Free-Product* - a regulated substance that is present as a nonaqueous phase liquid (e.g., liquid not dissolved in water) (40 CFR 280.12) **[Reviewed March 2000]**.
- *Gasoline* - any petroleum distillate or petroleum distillate/alcohol blend having a Reid vapor pressure of 27.6 kilopascals or greater which is used as a fuel for internal combustion engines (40 CFR 60.501) **[Added October 2003]**.
- *Gasoline Cargo Tank* - a delivery tank truck or railcar which is loading gasoline or which has loaded gasoline on the immediately previous load (40 CFR 63.421 and 63.11100) **[Added April 2004; Revised April 2008]**.
- *Gasoline Tank Truck* - a delivery tank truck used at bulk gasoline terminals which is loading gasoline or which has loaded gasoline on the immediately previous load (40 CFR 60.501) **[Added October 2003]**.
- *Gathering Lines* - any pipeline, equipment, facility, or building used in the transportation of oil or gas during oil or gas production or gathering operations (40 CFR 280.12) **[Reviewed March 2000; Revised July 2015]**.

- *Generator* - any person, by site, whose act or process produces hazardous waste identified or listed in 40 CFR 261, or whose act first causes a hazardous waste to become subject to regulation (40 CFR 260.10). (NOTE: This typically is used to refer to a facility producing hazardous waste in quantities greater than 1000 kg/mo [approx. 2205 lb/mo]) **[Reviewed March 2000]**.
- *Green Tag* - a document, device, tag, or other item identifying an underground storage tank or underground storage tank facility as eligible to receive product. Such item is generally affixed to the fill pipe or otherwise conspicuously displayed at the underground storage tank facility (*Grant Guidelines To States For Implementing The Delivery Prohibition Provision Of The Energy Policy Act Of 2005*) **[Added July 2007]**.
- *Hard-Piping* - pipe or tubing that is manufactured and properly installed according to relevant standards and good engineering practices (40 CFR 63.7957) **[Added April 2004]**.
- *Hazardous Substance UST System* - any UST system that contains a hazardous substance defined in section 101(14) of the *Comprehensive Environmental Response, Compensation, and Liability Act* of 1980 (but not including any substance regulated as a hazardous waste under subtitle C) or any mixture of such substances and petroleum, and which is not a petroleum UST system (40 CFR 280.12) **[Reviewed March 2000]**.
- *Hazardous Waste* - a solid waste identified as a characteristic or listed hazardous waste in 40 CFR 261.3 (40 CFR 260.10).
- *Heating Oil* - petroleum that is No. 1, No. 2, No. 4--light, No. 4--heavy, No. 5--light, No. 5--heavy, and No. 6 technical grades of fuel oil; other residual fuel oils (including Navy Special Fuel Oil and Bunker C); and other fuels when used as substitutes for one of these fuel oils. Heating oil is typically used in the operation of heating equipment, boilers, or furnaces (40 CFR 280.12) **[Reviewed March 2000; Revised July 2015]**.
- *Household Do-It-Yourselfer Used Oil* - oil that is derived from households, such as used oil generated by individuals who generate used oil through the maintenance of their personal vehicles (40 CFR 279.1) **[Added March 2000]**.
- *Household "Do-It-Yourselfer" Used Oil Generator* - an individual who generates household "do-it-yourselfer" used oil (40 CFR 279.1) **[Added March 2000]**.
- *Hydraulic Lift Tank* - a tank holding hydraulic fluid for a closed-loop mechanical system that uses compressed air or hydraulic fluid to operate lifts, elevators, and other similar devices (40 CFR 280.12) **[Reviewed March 2000]**.
- *Hydrocarbon* - any organic compound consisting predominantly of carbon and hydrogen (40 CFR 60.111(e)) **[Added October 2003]**.
- *IM 101 or 102 Portable Tank* - a portable tank constructed in accordance with 49 CFR 178.270 through 178.272 and approved under 73.32a (46 CFR 98.30-1(a)).
- *Implementing Agency* - USEPA, or, in the case of a state with a program approved under section 9004 (or pursuant to a memorandum of agreement with USEPA), the designated state or local agency responsible for carrying out an approved UST program (40 CFR 280.12) **[Added March 2000]**.
- *In Gasoline Service* - that a piece of equipment is used in a system that transfers gasoline or gasoline vapors. Limitation(s) on potential to emit means limitation(s) limiting a source's potential to emit as defined in 40 CFR 63.2 (40 CFR 63.421) **[Added April 2004]**.
- *In Gasoline Service* - that a piece of equipment is used in a system that transfers gasoline or gasoline vapors (40 CFR 63.11100) **[Added April 2008]**.

- *In-Ground Tank* - a device meeting the definition of tank in 40 CFR 260.10 whereby a portion of the tank is situated to any degree within the ground, thereby preventing visual inspection of the external surface of that tank that is in the ground (40 CFR 260.10) **[Reviewed March 2000]**.
- *Individual Drain System* - a stationary system used to convey wastewater streams or residuals to a remediation material management unit or to discharge or disposal. The term includes hard-piping, all drains and junction boxes, together with their associated sewer lines and other junction boxes (e.g., manholes, sumps, and lift stations) conveying wastewater streams or residuals. For the purpose of this subpart, an individual drain system is not a drain and collection system that is designed and operated for the sole purpose of collecting rainfall runoff (e.g., stormwater sewer system) and is segregated from all other individual drain systems (40 CFR 63.7957) **[Added April 2004]**.
- *Inland Oil Barge* - a tank barge carrying oil in bulk as cargo certificated by the Coast Guard under 46 CFR chapter I, subchapter D for river or canal service or lakes, bays, and sounds service (33 CFR 155.200).
- *Installation Of A New Motor Fuel Dispenser System* – the installation of a new motor fuel dispenser and the equipment necessary to connect the dispenser to the underground storage tank system. It does not mean the installation of a motor fuel dispenser installed separately from the equipment needed to connect the dispenser to the underground storage tank system. For purposes of these guidelines, the equipment necessary to connect the motor fuel dispenser to the underground storage tank system may include check valves, shear valves, unburied risers or flexible connectors, or other transitional components that are beneath the dispenser and connect the dispenser to the underground piping (*Grant Guidelines To States For Implementing The Secondary Containment Provision Of The Energy Policy Act Of 2005*) **[Added July 2007]**.
- *Intermittent Vapor Processing System* - a vapor processing system that employs an intermediate vapor holder to accumulate total organic compounds vapors collected from gasoline tank trucks, and treats the accumulated vapors only during automatically controlled cycles (40 CFR 60.501) **[Added October 2003]**.
- *Internal Floating Roof* - a cover that rests or floats on the material surface (but not necessarily in complete contact within) inside a tank that has a fixed roof (40 CFR 63.7957 and 265.1081) **[Reviewed March 2000; Revised April 2004]**.
- *Keel Laying Date* - the date upon which progressive construction identifiable with a specific vessel begins, including construction of the first module or prefabricated section of the hull that is identifiable with that vessel (46 CFR 30.10-37).
- *Large Quantity Generator* - a generator who generates any of the following amounts in a calendar month (40 CFR 260.10) **[Added January 2017]**:
  1. Greater than or equal to 1,000 kilograms (2200 lbs) of non-acute hazardous waste; or
  2. Greater than 1 kilogram (2.2 lbs) of acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e); or
  3. Greater than 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e).
- *Lightweight* - the displacement of a vessel in metric tons without cargo, oil fuel, lubricating oil, ballast water, fresh water, feedwater in tanks, consumable stores, and persons and their effects (46 CFR 30.10-38).
- *Liquid Trap* - sumps, well cellars, and other traps used in association with oil and gas production, gathering, and extracting operations (including gas production plants), for the purpose of collecting oil, water, and other liquids. These liquid traps may temporarily collect liquids for subsequent disposition or reinjection into a production or pipeline stream, or may collect and separate liquids from a gas stream (40 CFR 280.12) **[Reviewed March 2000]**.
- *Loading Rack* - the loading arms, pumps, meters, shutoff valves, relief valves, and other piping and valves necessary to fill delivery tank trucks (40 CFR 60.501) **[Added October 2003]**.

- *Local Government* - this shall have the meaning given this term by applicable state law and includes Indian tribes. The term is generally intended to include (40 CFR 280.92) **[Added March 2000]**:
  1. counties, municipalities, townships, separately chartered and operated special districts (including local government public transit systems and redevelopment authorities), and independent school districts authorized as governmental bodies by state charter or constitution; and
  2. special districts and independent school districts established by counties, municipalities, townships, and other general purpose governments to provide essential services.
- *Low Pressure Tank* - a storage tank which has been designed to operate at a pressure above 0.5 psig but not more than 15 psig (29 CFR 1910.106(a)(21)).
- *Maintenance* - the normal operational upkeep to prevent a UST system from releasing product (40 CFR 280.12) **[Reviewed March 2000]**.
- *Malfunction* - any sudden, infrequent, and not reasonably preventable failure or air pollution control equipment, process equipment, or a process to operate in a normal or usual manner. Failures that are caused in part by poor maintenance or careless operations are not malfunctions (40 CFR 265.1081) **[Reviewed March 2000]**.
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Marine Portable Tank (MPT)* - a liquid-carrying tank that has a capacity of 110 gal or more, is designed to be carried on a vessel, can be lifted full or empty onto and off a vessel, can be filled and discharged while on a vessel, is not permanently attached to the vessel, and was inspected by the Coast Guard on or before 30 September 1992 (46 CFR 64.5).
- *MARPOL 73/78* - the *International Convention for the Prevention of Pollution from Ships*, 1973 as amended by the Protocol of 1978 (33 CFR 151.05).
- *Maximum HAP Vapor Pressure* - the sum of the individual HAP equilibrium partial pressure exerted by remediation material at the temperature equal to either: the monthly average temperature as reported by the National Weather Service when the remediation material is stored or treated at ambient temperature; or the highest calendar-month average temperature of the remediation material when the remediation material is stored at temperatures above the ambient temperature or when the remediation material is stored or treated at temperatures below the ambient temperature. For the purpose of this subpart, maximum HAP vapor pressure is determined using the procedures specified in CFR 63.7944 (40 CFR 63.7957) **[Added April 2004]**.
- *Maximum Organic Vapor Pressure* - the sum of the individual organic constituent partial pressures exerted by the material contained in a tank, at the maximum vapor pressure causing conditions reasonably expected to occur in the tank (40 CFR 265.1081) **[Reviewed March 2000]**.
- *Maximum True Vapor Pressure* - the equilibrium partial pressure exerted by the volatile organic compounds (as defined in 40 CFR 51.100) in the stored VOL at the temperature equal to the highest calendar-month average of the VOL storage temperature for VOL's stored above or below the ambient temperature or at the local maximum monthly average temperature as reported by the National Weather Service for VOL's stored at the ambient temperature, as determined (40 CFR 60.111b) **[Revised April 2004]**.
- *Metallic Shoe Seal* - a continuous seal that is constructed of metal sheets which are held vertically against the well of the tank by springs, weighted levels, or other mechanisms and is connected to the floating roof by braces or other means. A flexible coated fabric spans the annular space between the metal sheet and the floating roof (40 CFR 265.1081) **[Reviewed March 2000]**.
- *Maximum True Vapor Pressure* - the equilibrium partial pressure exerted by the volatile organic compounds (as defined in 40 CFR 51.100) in the stored VOL at the temperature equal to the highest calendar-month average of

the VOL storage temperature for VOL's stored above or below the ambient temperature or at the local maximum monthly average temperature as reported by the National Weather Service for VOL's stored at the ambient temperature, as determined (40 CFR 60.111b) **[Added January 2004]**.

- *Monthly* - once per calendar month at regular intervals of no less than 28 days and no more than 35 days (40 CFR 63.11100) **[Added April 2008]**.
- *Motor Fuel* – petroleum or a petroleum-based substance that is motor gasoline, aviation gasoline, No. 1 or No. 2 diesel fuel, or any grade of gasohol and is typically used in the operation of a motor engine. (NOTE: This definition applies to blended petroleum motor fuels such as biodiesel and ethanol blends that contain more than a *de minimis* amount of petroleum or petroleum-based substance.) (*Grant Guidelines To States For Implementing The Secondary Containment Provision Of The Energy Policy Act Of 2005*) **[Added July 2007]**.
- *Motor Fuel* - a complex blend of hydrocarbons typically used in the operation of a motor engine, such as motor gasoline, aviation gasoline, No. 1 or No. 2 diesel fuel, or any blend containing one or more of these substances (for example: motor gasoline blended with alcohol). (40 CFR 280.12) **[Reviewed March 2000; Revised July 2015]**.
- *New Tank* - in relation to used oil, a tank that will be used to store or process used oil and for which installation has started after the effective date of the authorized used oil program for the state in which the tank is located (40 CFR 279.1) **[Reviewed March 2000]**.
- *New Tank System* - for USTs, a tank system that will be used to contain an accumulation of regulated substances and for which installation has commenced after 22 December 1988 (40 CFR 280.12) **[Reviewed March 2000]**.
- *New Tank System or New Component System* - in relation to hazardous waste, a tank system or component that will be used for the storage and treatment of hazardous waste and for which installation has commenced after 14 July 1986, except however, for purposes of 40 CFR 264.193(g)(2) and 265.193(g)(2), a new tank system is one for which construction commenced after 14 July 1986 (40 CFR 260.10) **[Reviewed March 2000]**.
- *No Detectable Organic Emissions* - no escape of organics to the atmosphere as determined using the procedure specified in 40 CFR 63.694(k) (40 CFR 63.7957) **[Added April 2004]**.
- *No Detectable Organic Emissions* - no escape of organics to the atmosphere as determined by using the procedures specified in 40 CFR 265.1084(d) (40 CFR 265.1081) **[Reviewed March 2000]**.
- *Non-acute Hazardous Waste* - all hazardous wastes that are not acute hazardous waste, as defined in 40 CFR 260.10 (40 CFR 260.10) **[Added January 2017]**.
- *Noncommercial Purposes with Respect to Motor Fuel* – with respect to motor fuel, means not for resale (40 CFR 280.12) **[Revised March 2000]**.
- *Occurrence* - an accident, including continuous or repeated exposure to conditions, which results in a release from an underground storage tank. NOTE: This definition is intended to assist in the understanding of these regulations and is not intended either to limit the meaning of “occurrence” in a way that conflicts with standard insurance usage or to prevent the use of other standard insurance terms in place of “occurrence” (40 CFR 280.92) **[Added March 2000]**.
- *Offshore Oil Barge* - a tank barge carrying oil in bulk as cargo, including dual-mode integrated tug- barges, certificated by the Coast Guard under 46 CFR chapter I, subchapter D, for navigation in waters outside the Boundary Lines, as defined in 46 CFR 7, in any ocean or the Gulf of Mexico; any tank barge in Great Lakes service; or any foreign flag tank barge (33 CFR 155.200).
- *Oil* - petroleum in any form including crude oil, fuel oil, sludge, oil refuse, and refined products (33 CFR 151.05).

- *Oil Fuel* - oil used as a fuel for machinery in the vessel in which it is carried (46 CFR 30.10-48).
- *Oil Tanker* - a self-propelled vessel carrying oil in bulk as cargo, including integrated tug-barges designed for push-mode operation (33 CFR 155.200).
- *On-Deck Spill* - a discharge of oil on the deck of a vessel during loading, unloading, transfer, or other shipboard operations. An on-deck spill could result from a leaking fitting, an overfill, a bad connection, or similar operational mishap. This is different from spills occurring as a result of a collision or grounding where the hull is punctured and a tank is ruptured, resulting in an uncontrolled discharge of oil into the marine environment (33 CFR 155.200).
- *On the Premises Where Stored* - with respect to heating oil means UST systems located on the same property where the stored heating oil is used (40 CFR 280.12) **[Reviewed March 2000; Revised July 2015]**.
- *Onground Tank* - in relation to hazardous waste, a device meeting the definition of tank in 40 CFR 260.10 and that is situated in such a way that the bottom of the tank is on the same level as the adjacent surrounding surface so that the external tank bottom cannot be visibly inspected (40 CFR 260.10) **[Reviewed March 2000]**.
- *Operational Life* - the period beginning when installation of the tank system has commenced until the time the tank system is properly closed under Subpart G of 40 CFR 280 (40 CFR 280.12) **[Added March 2000]**.
- *Operating Parameter Value* - a value for an operating or emission parameter of the vapor processing system (e.g., temperature) which, if maintained continuously by itself or in combination with one or more other operating parameter values, determines that an owner or operator has complied with the applicable emission standard. The operating parameter value is determined using the procedures outlined in 40 CFR 63.425(b) (40 CFR 63.421) **[Added April 2004]**.
- *Operating Parameter Value* - a value for an operating or emission parameter of the vapor processing system (e.g., temperature) which, if maintained continuously by itself or in combination with one or more other operating parameter values, determines that an owner or operator has complied with the applicable emission standard. The operating parameter value is determined using the procedures specified in 40 CFR 63.11092(b) (40 CFR 63.11100) **[Added April 2008]**.
- *Operating Parameter Value* - a minimum or maximum value established for a control device or treatment process parameter which, if achieved by itself or in combination with one or more other operating parameter values, determines that an owner or operator has complied with an applicable emissions limitation or standard (40 CFR 63.7957) **[Added April 2004]**.
- *Operator* - any person in control of or having responsibility for the daily operation of the UST system (40 CFR 280.12) **[Reviewed March 2000]**.
- *Organic-water separator* - a separator as defined for this subpart that is used to separate organics from water (40 CFR 63.7957) **[Added April 2004]**.
- *Overfill Release* - a release that occurs when a tank is filled beyond its capacity, resulting in a discharge of the regulated substance to the environment (40 CFR 280.12) **[Reviewed March 2000]**.
- *Owner* **[Added March 2000]**.
  1. In the case of an UST system in use on November 8, 1984, or brought into use after that date, any person who owns an UST system used for storage, use, or dispensing of regulated substances; and
  2. In the case of any UST system in use before November 8, 1984, but no longer in use on that date, any person who owned such UST immediately before the discontinuation of its use (40 CFR 280.12).

- *Owner or Operator* - when the owner or operator are separate parties, refers to the party that is obtaining or has obtained financial assurances (40 CFR 280.92) **[Added March 2000]**.
- *Oxygenated Gasoline* - the same as defined in 40 CFR 80.2(rr) (40 CFR 63.421) **[Added April 2004]**.
- *Partially Excluded Underground Storage Tanks (USTs)* – for the purposes of 40 CFR 280, the following USTs are exempt from Subparts B, C, D, E, G, J, and K (40 CFR 280.10(c)) **[Added July 2015]**:
  1. Wastewater treatment tank systems not covered in the definition of *Excluded USTs*;
  2. Aboveground storage tanks associated with:
    - a. Airport hydrant fuel distribution systems regulated under 40 CFR 280, Subpart K; and
    - b. UST systems with field constructed tanks regulated under 40 CFR 280, Subpart K;
  3. Any UST systems containing radioactive material that are regulated under the Atomic Energy Act of 1954 (42 U.S.C. 2011 and following); and
  4. Any UST system that is part of an emergency generator system at nuclear power generation facilities licensed by the Nuclear Regulatory Commission and subject to Nuclear Regulatory Commission requirements regarding design and quality criteria, including but not limited to 10 CFR 50.
- *Person* - an individual, trust, firm, joint stock company, Federal agency, corporation, state, municipality, commission, political subdivision of a state, or any interstate body. Person also includes a consortium, a joint venture, a commercial entity, and the U.S. Government (40 CFR 280.12) **[Reviewed March 2000]**.
- *Petroleum* - the crude oil removed from the earth and the oils derived from tar sands, shale, and coal (40 CFR 60.111(d)) **[Added October 2003]**.
- *Petroleum Liquids* - petroleum, condensate, and any finished or intermediate products manufactured in a petroleum refinery but does not mean Nos. 2 through 6 fuel oils as specified in ASTM D396-78, 89, 90, 92, 96, or 98, gas turbine fuel oils Nos. 2-GT through 4-GT as specified in ASTM D2880-78 or 96, or diesel fuel oils Nos. 2-D and 4-D as specified in ASTM D975-78, 96, or 98a. (These three methods are incorporated by reference—see 40 CFR 60.17.) (40 CFR 60.111(b)) **[Added October 2003]**.
- *Petroleum Marketing Facilities* - this include all facilities at which petroleum is produced or refined and all facilities from which petroleum is sold or transferred to other petroleum marketers or to the public (40 CFR 280.92) **[Added March 2000]**.
- *Petroleum Refinery* - each facility engaged in producing gasoline, kerosene, distillate fuel oils, residual fuel oils, lubricants, or other products through distillation of petroleum or through redistillation, cracking, extracting, or reforming of unfinished petroleum derivatives (40 CFR 60.111(c)) **[Added October 2003]**.
- *Petroleum UST System* - a UST system that contains petroleum or a mixture of petroleum with de minimis quantities of other regulated substances. Such systems include those containing motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils (40 CFR 280.12) **[Reviewed March 2000]**.
- *Pipe or Piping* - a hollow cylinder or tubular conduit that is constructed of nonearthen materials (40 CFR 280.12) **[Reviewed March 2000]**.
- *Piping* – for purposes of the secondary containment guidelines, piping is the hollow cylinder or the tubular conduit constructed of non-earthen materials that routinely contains and conveys regulated substances from the underground tank(s) to the dispenser(s) or other end-use equipment. Such piping includes any elbows, couplings, unions, valves, or other in-line fixtures that contain and convey regulated substances from the underground tank(s) to the dispenser(s). This definition does not include vent, vapor recovery, or fill lines (*Grant Guidelines To States For Implementing The Secondary Containment Provision Of The Energy Policy Act Of 2005*) **[Added July 2007]**.

- *Pipeline Breakout Station* - a facility along a pipeline containing storage vessels used to relieve surges or receive and store gasoline from the pipeline for reinjection and continued transportation by pipeline or to other facilities (40 CFR 63.421 and 63.11100) [**Added April 2004; Revised April 2008**].
- *Pipeline Breakout Station* - a facility along a pipeline containing storage vessels used to relieve surges or receive and store gasoline from the pipeline for re-injection and continued transportation by pipeline or to other facilities (40 CFR 63.11100) [**Added April 2008**].
- *Pipeline Facilities* - (including gathering lines) are new and existing pipe rights-of-way and any associated equipment, facilities, or buildings (40 CFR 280.12) [**Reviewed March 2000**].
- *Pipeline Pumping Station* - a facility along a pipeline containing pumps to maintain the desired pressure and flow of product through the pipeline and not containing storage vessels (40 CFR 63.11100) [**Added April 2008**].
- *Point-of-Extraction* - a point above ground where you can collect samples of a remediation material before or at the first point where organic constituents in the material have the potential to volatilize and be released to the atmosphere and before placing the material in a remediation material management unit or treatment process. For the purpose this subpart, the first point where the organic constituents in the remediation material have the potential to volatilize and be released to the atmosphere is not a fugitive emissions point due to an equipment leak from any of the following equipment components: pumps, compressors, valves, connectors, instrumentation systems, or safety devices (40 CFR 63.7957) [**Added April 2004**].
- *Point of Waste Treatment* - the point where a hazardous waste to be treated exists the treatment process, Any waste determination shall be made before the waste is conveyed, handled, or otherwise managed in a manner that allows the waste to volatilize to the atmosphere (40 CFR 265.1081) [**Reviewed March 2000**].
- *Portable Tank* - a closed container having a liquid capacity over 60 gal and not intended for fixed installation (29 CFR 1910.106(a)(25)).
- *Portable Tank* - see definitions for IM 101 Portable Tank, IM 102 Portable Tank, and Marine Portable Tank.
- *Potable Drinking Water Well* – any hole (dug, driven, drilled, or bored) that extends into the earth until it meets groundwater which (*Grant Guidelines To States For Implementing The Secondary Containment Provision Of The Energy Policy Act Of 2005*) [**Added July 2007**]:
  1. supplies water for a non-community public water system, or
  2. otherwise supplies water for household use (consisting of drinking, bathing, and cooking, or other similar uses).

Such wells may provide water to entities such as a single-family residence, group of residences, businesses, schools, parks, campgrounds, and other permanent or seasonal communities.
- *Pressure Vacuum Relief Valve* - any device or assembly of a mechanical, liquid, weight, or other type used for the automatic regulation of pressure or vacuum in enclosed spaces (46 CFR 30.10-55).
- *Pressure Vessel* - a storage tank or container designed to operate at pressures above 15 psig (29 CFR 1910.106(a)(29)).
- *Process Heater* - an enclosed combustion device that transfers heat released by burning fuel directly to process streams or to heat transfer liquids other than water (40 CFR 63.7957) [**Added April 2004**].
- *Process Tank* - a tank that is used within a process (including a solvent or raw material recovery process) to collect material discharged from a feedstock storage vessel or equipment within the process before the material is transferred to other equipment within the process, to a product or by-product storage vessel, or to a vessel used to store recovered solvent or raw material. In many process tanks, unit operations such as reactions and blending are

conducted. Other process tanks, such as surge control vessels and bottoms receivers, however, may not involve unit operations (40 CFR 60.111b) **[Added January 2004]**.

- *Process Vent* - any open-ended pipe, stack, duct, or other opening intended to allow the passage of gases, vapors, or fumes to the atmosphere and this passage is caused by mechanical means (such as compressors, vacuum-producing systems or fans) or by process-related means (such as volatilization produced by heating). For the purposes of this subpart, a process vent is neither a safety device (as defined in this section) nor a stack, duct or other opening used to exhaust combustion products from a boiler, furnace, heater, incinerator, or other combustion device (40 CFR 63.7957) **[Added April 2004]**.
- *Product Deliverer* - any person who delivers or deposits product into an underground storage tank. This term may include major oil companies, jobbers, petroleum transportation companies, or other product delivery entities. (NOTE: "Person" has the same definition used in 40 CFR 280.12, which includes an individual, trust, firm, joint stock company, consortium, joint venture, commercial entity, United States Government, federal agency, corporation, state, municipality, commission, political subdivision of a state, or any interstate body.) (*Grant Guidelines To States For Implementing The Delivery Prohibition Provision Of The Energy Policy Act Of 2005*) **[Added July 2007]**.
- *Radioactive Mixed Waste* - a material that contains both hazardous waste subject to RCRA and source, special nuclear, or by-product material subject to the Atomic Energy Act of 1954.
- *Red Tag* - a tag, device, or mechanism on the tank's fill pipes that clearly identifies an underground storage tank as ineligible for product delivery. The tag or device is easily visible to the product deliverer and clearly states and conveys that it is unlawful to deliver to, deposit into, or accept product into the ineligible underground storage tank. The tag, device, or mechanism is generally tamper resistant (*Grant Guidelines To States For Implementing The Delivery Prohibition Provision Of The Energy Policy Act Of 2005*) **[Added July 2007]**.
- *Reformulated Gasoline* - the same as defined in 40 CFR 80.2(ee) (40 CFR 63.421) **[Added April 2004]**.
- *Regulated Substance* - this includes (40 CFR 280.12) **[Reviewed March 2000]**:
  1. any substance defined in section 101(14) of the CERCLA of 1980 (but not including any substance regulated as a hazardous waste under subtitle C)
  2. petroleum, including crude oil or any fraction thereof that is liquid at standard conditions of temperature and pressure (60 °F [ approx. 16 °C] and 14.7 lb/psia).(NOTE: The term regulated substance includes, but is not limited to, petroleum and petroleum based substances comprised of a complex blend of hydrocarbons derived from crude oil through processes of separation, conversion, upgrading, and finishing, such as motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils.)
- *Reid Vapor Pressure* - the absolute vapor pressure of volatile crude oil and volatile nonviscous petroleum liquids except liquefied petroleum gases as determined by the ASTM, Part 17, 1973, D- 323-72 (reapproved 1977) (40 CFR 60.111a).
- *Release* - any spilling, leaking, emitting, discharging, escaping, leaching, or disposing from a UST into groundwater, surface water, or subsurface soils (40 CFR 280.12) **[Reviewed March 2000]**.
- *Release Detection* - determining whether a release of a regulated substance has occurred from the UST system into the environment or into the interstitial space between the UST system and its secondary barrier or secondary containment around it (40 CFR 280.12) **[Reviewed March 2000]**.
- *Remediation Material* - Remediation material means a material that contains one or more of the HAP listed in Appendix 10-0c, and this material is one of the following (40 CFR 63.7957) **[Added April 2004]**:

1. A material found in naturally occurring media such as soil, groundwater, surface water, sediments, or a mixture of such materials with liquids, sludges, or solids which is inseparable by simple mechanical removal processes and is made up primarily of media. This material does not include debris as defined in 40 CFR 268.2.
  2. A material found in intact or substantially intact containers, tanks, storage piles, or other storage units that requires clean up because this material poses a reasonable potential threat to contaminating media. Examples of these materials include, but are not limited to, solvents, oils, paints, and other volatile or semi-volatile organic liquids found in buried drums, cans, or other containers; gasoline, fuel oil, or other fuels in leaking underground storage tanks; and solid materials containing volatile or semi-volatile organics in unused or abandoned piles. Remediation material is not a waste or residue generated by routine equipment maintenance activities performed at a facility such as, but not limited to, tank bottoms and sludges removed during tank cleanouts; sludges and sediments removed from active wastewater treatment tanks, surface impoundments, or lagoons; spent catalyst removed from process equipment; residues removed from air pollution control equipment; and debris removed during heat exchanger and pipeline cleanouts.
- *Remediation Material Management Unit* - a tank, container, surface impoundment, oil-water separator, organic-water separator, or transfer system used to remove, destroy, degrade, transform, immobilize, or otherwise manage remediation material (40 CFR 63.7957) **[Added April 2004]**.
  - *Remediation Material Service* - any time when a pump, compressor, agitator, pressure relief device, sampling connection system, open-ended valve or line, valve, connector, or instrumentation system contains or contacts remediation material (40 CFR 63.7957) **[Added April 2004]**.
  - *Repair* - to restore to proper operating condition a tank, pipe, spill prevention equipment, overfill prevention equipment, corrosion protection equipment, release detection equipment or other UST system component that has caused a release of product from the UST system or has failed to function properly (40 CFR 280.12) **[Reviewed March 2000; Revised July 2015]**.
  - *Replace* – this term applies to underground tanks and piping (*Grant Guidelines To States For Implementing The Secondary Containment Provision Of The Energy Policy Act Of 2005*) **[Added July 2007]**:
    1. Underground tank, “replace” means to remove an existing underground tank and install a new underground tank (NOTE: A new underground tank is a tank that meets the new tank standards in 40 CFR 280.20, whether or not the tank was ever used before.)
    2. Piping, “replace” means to remove and put back in an amount of piping connected to a single underground tank defined by the state to be a replacement. States may determine the amount of piping connected to a single underground tank that triggers replacement by piping length, percent of piping replaced, percent of piping replacement cost, or some combination of these. At a minimum, states must consider a piping replacement to have occurred when 100 percent of the piping, excluding connectors (such as flexible connectors), connected to a single underground tank is removed and put back in. States are encouraged to consider variations in underground storage tank system layout, such as those having extensive piping runs, when determining piping replacement criteria.
  - *Replaced* – For a tank, this is to remove a tank and install another tank. For piping, this is to remove 50 percent or more of piping and install other piping, excluding connectors, connected to a single tank. For tanks with multiple piping runs, this definition applies independently to each piping run (40 CFR 280.12) **[Added July 2015]**.
  - *Residential Tank* - a tank located on property used primarily for dwelling purposes (40 CFR 280.12) **[Reviewed March 2000]**.
  - *Responsible Official* - responsible official as defined in 40 CFR 70.2 (40 CFR 63.7957) **[Added April 2004]**.
  - *SARA - Superfund Amendments and Reauthorization Act* (40 CFR 280.12) **[Reviewed March 2000]**.

- *Safety Device* - a closure device such as a pressure relief valve, frangible disc, fusible plug, or any other type of device which functions to prevent physical damage or permanent deformation to equipment by venting gases or vapors during unsafe conditions resulting from an unplanned, accidental, or emergency event. For the purpose of this Subpart, a safety device is not used for routine venting of gases or vapors from the vapor headspace underneath a cover such as during filling of the unit or to adjust the pressure in this vapor headspace in response to normal daily diurnal ambient temperature fluctuations. A safety device is designed to remain in a closed position during normal operations and open only when the internal pressure, or another relevant parameter, exceeds the device threshold setting applicable to the equipment as determined by the owner or operator based on manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, combustible, explosive, reactive, or hazardous materials (40 CFR 63.7957) **[Added April 2004]**.
- *Secondary Containment or Secondarily Contained* - a release prevention and release detection system for a tank or piping. This system has an inner and outer barrier with an interstitial space that is monitored for leaks. This term includes containment sumps when used for interstitial monitoring of piping (40 CFR 280.12) **[Added July 2015]**.
- *Separator* - a remediation material management unit, generally a tank, used to separate oil or organics from water. A separator consists of not only the separation unit but also the forebay and other separator basins, skimmers, weirs, grit chambers, sludge hoppers, and bar screens that are located directly after the individual drain system and prior to any additional treatment units such as an air flotation unit clarifier or biological treatment unit. Examples of a separator include, but are not limited to, an API separator, parallel-plate interceptor, and corrugated-plate interceptor with the associated ancillary equipment (40 CFR 63.7957) **[Added April 2004]**.
- *Septic Tank* - a water-tight covered receptacle designed to receive or process, through liquid separation or biological digestion, the sewage discharged from a building sewer. The effluent from such receptacle is distributed through the soil and settled solids and scum from the tank are pumped out periodically and hauled to a treatment facility (40 CFR 280.12) **[Reviewed March 2000]**.
- *Ship* - a vessel of any type whatsoever, operating in the marine environment (33 CFR 151.05).
- *Single Seal System* - a floating roof having one continuous seal (40 CFR 265.1081) **[Reviewed March 2000]**.
- *Site Remediation* - one or more activities or processes used to remove, destroy, degrade, transform, immobilize, or otherwise manage remediation material. The monitoring or measuring of contamination levels in environmental media using wells or by sampling is not considered to be a site remediation (40 CFR 63.7957) **[Added April 2004]**.
- *Sludge* - sludge as defined in 40 CFR 260.10 of this chapter (40 CFR 63.7957) **[Added April 2004]**.
- *Small Quantity Generator (SQG)* - a generator that generates the following amounts in a calendar month (40 CFR 260.10) **[Revised January 2017]**:
  1. Greater than 100 kilograms (220 lbs) but less than 1,000 kilograms (2200 lbs) of non-acute hazardous waste; and
  2. Less than or equal to 1 kilogram (2.2 lbs) of acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e); and
  3. Less than or equal to 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e).
- *Soil* - unconsolidated earth material composing the superficial geologic strata (material overlying bedrock), consisting of clay, silt, sand, or gravel size particles (sizes as classified by the U.S. Soil Conservation Service), or a mixture of such materials with liquids, sludges, or solids which is inseparable by simple mechanical removal processes and is made up primarily of soil (40 CFR 63.7957) **[Added April 2004]**.

- *Stabilization Process* - any physical or chemical process used to either reduce the mobility of contaminants in media or eliminate free liquids as determined by Test Method 9095--Paint Filter Liquids Test in ``Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication No. SW-846, Third Edition, September 1986, as amended by Update I, November 15, 1992. (As an alternative, you may use any more recent, updated version of Method 9095 approved by the EPA). A stabilization process includes mixing remediation material with binders or other materials, and curing the resulting remediation material and binder mixture. Other synonymous terms used to refer to this process are fixation or solidification. A stabilization process does not include the adding of absorbent materials to the surface of remediation material, without mixing, agitation, or subsequent curing, to absorb free liquid (40 CFR 63.7957) **[Added April 2004]**.
- *Storage Vessel* - any tank, reservoir, or container used for the storage of petroleum liquids, but does not include (40 CFR 60.111(a)) **[Added October 2003]**:
  1. Pressure vessels which are designed to operate in excess of 15 psi gauge without emissions to the atmosphere except under emergency conditions,
  2. Subsurface caverns or porous rock reservoirs, or
  3. Underground tanks if the total volume of petroleum liquids added to and taken from a tank annually does not exceed twice the volume of the tank.
- *Storage Vessel* - each tank, reservoir, or container used for the storage of volatile organic liquids but does not include (40 CFR 60.111b) **[Added January 2004]**:
  1. Frames, housing, auxiliary supports, or other components that are not directly involved in the containment of liquids or vapors;
  2. Subsurface caverns or porous rock reservoirs; or
  3. Process tanks.
- *Stormwater or Wastewater Collection System* - piping, pumps, conduits, and any other equipment necessary to collect and transport the flow of surface water runoff resulting from precipitation, or domestic, commercial, or industrial wastewater to and from retention areas or any areas where treatment is designated to occur. The collection of stormwater and wastewater does not include treatment except where incidental to conveyance (40 CFR 280.12) **[Reviewed March 2000]**.
- *Submerged Filling* - for the purposes of this subpart, the filling of a gasoline cargo tank or a stationary storage tank through a submerged fill pipe whose discharge is no more than the applicable distance specified in 40 CFR 63.11086(a) from the bottom of the tank. Bottom filling of gasoline cargo tanks or storage tanks is included in this definition (40 CFR 63.11100) **[Added April 2008]**.
- *Surface Impoundment* - a natural topographic depression, manmade excavation, or diked area formed primarily of earthen materials (although it may be lined with manmade materials) that is not an injection well (40 CFR 280.12) **[Reviewed March 2000]**.
- *Tank* - a stationary device designed to contain an accumulation of regulated substances and constructed of nonearthen materials (e.g., concrete, steel, plastic) that provide structural support (40 CFR 280.12) **[Reviewed March 2000]**.
- *Tank* - in relation to hazardous waste, a stationary device designed to contain an accumulation of hazardous waste that is constructed primarily of nonearthen materials (e.g., wood, concrete, steel, plastic) which provide structural support (40 CFR 260.10) **[Reviewed March 2000]**.
- *Tank* - in relation to used oil, any stationary device, designed to contain an accumulation of used oil, which is constructed primarily of nonearthen materials, (e.g., wood, concrete, steel, plastic) which provides structural support (40 CFR 279.1). **[Reviewed March 2000]**.

- *Tank* - a stationary unit that is constructed primarily of nonearthen materials (such as wood, concrete, steel, fiberglass, or plastic) which provide structural support and is designed to hold an accumulation of liquids or other materials (40 CFR 63.7957) **[Added April 2004]**.
- *Tank System* - a hazardous waste storage or treatment tank and its associated ancillary equipment and containment system (40 CFR 260.10) **[Reviewed March 2000]**.
- *Temperature Monitoring Device* - a piece of equipment used to monitor temperature and having an accuracy of  $\pm 1$  percent of the temperature being monitored expressed in degrees Celsius ( $^{\circ}\text{C}$ ) or  $\pm 1.2$  degrees  $^{\circ}\text{C}$ , whichever value is greater (40 CFR 63.7957) **[Added April 2004]**.
- *Thermal Oxidation System* - a combustion device used to mix and ignite fuel, air pollutants, and air to provide a flame to heat and oxidize hazardous air pollutants. Auxiliary fuel may be used to heat air pollutants to combustion temperatures (40 CFR 60.501) **[Added April 2004]**.
- *Training Program* - any program that provides information to and evaluates the knowledge of a Class A, Class B, or Class C operator through testing, practical demonstration, or another approach acceptable to the implementing agency regarding requirements for UST systems that meet the requirements of subpart J of 40 CFR 280 (40 CFR 280.12) **[Added July 2015]**.
- *Transfer System* - a stationary system for which the predominant function is to convey liquids or solid materials from one point to another point within waste management operation or recovery operation. For the purpose of this subpart, the conveyance of material using a container (as defined of this subpart) or self-propelled vehicle (e.g., a front-end loader) is not a transfer system. Examples of a transfer system include but are not limited to a pipeline, an individual drain system, a gravity-operated conveyor (such as a chute), and a mechanically-powered conveyor (such as a belt or screw conveyor) (40 CFR 63.7957) **[Added April 2004]**.
- *Treatment Process* - a process in which remediation material is physically, chemically, thermally, or biologically treated to destroy, degrade, or remove hazardous air pollutants contained in the material. A treatment process can be composed of a single unit (e.g., a steam stripper) or a series of units (e.g., a wastewater treatment system). A treatment process can be used to treat one or more remediation material streams at the same time (40 CFR 63.7957) **[Added April 2004]**.
- *True Vapor Pressure* - the equilibrium partial pressure exerted by a petroleum liquid as determined in accordance with methods described in American Petroleum Institute (API) Bulletin 2517, *Evaporation Loss From Floating Roof Plants*, 1962 (40 CFR 60.111a).
- *Uncontrolled Loading Rack* - a loading rack used to load gasoline cargo tanks that is not a controlled loading rack. Vapor-tight gasoline cargo tank means a gasoline cargo tank which has demonstrated within the 12 preceding months that it meets the annual certification test requirements in 40 CFR 63.425(e), and which is subject at all times to the test requirements in 40 CFR 63.425(f), 63.425 (g), and 63.425 (h) (40 CFR 63.421) **[Added April 2004]**.
- *Under-dispenser Containment or UDC* - containment underneath a dispenser system designed to prevent leaks from the dispenser and piping within or above the UDC from reaching soil or groundwater (40 CFR 280.12) **[Added July 2015]**.
- *Underground Area* - an underground room such as a basement, cellar, shaft, or vault, providing enough space for physical inspection of the exterior of the tank situated on or above the surface of the floor (40 CFR 280.12) **[Reviewed March 2000]**.
- *Underground Release* - any below ground release (40 CFR 280.12) **[Reviewed March 2000]**.
- *Underground Storage Tank (UST)* - any one or a combination of tanks (including underground pipes connected thereto) that is used to contain an accumulation of regulated substances, and the volume of which (including the

volume of underground pipes connected thereto) is 10 percent or more beneath the surface of the ground. This term does not include any (40 CFR 280.12) **[Reviewed March 2000; Revised July 2015]**:

1. farm or residential tank of 1100 gal or less capacity used for storing motor fuel for noncommercial purposes
2. tank used for storing heating oil for consumptive use on the premises where stored
3. septic tanks
4. pipeline facility (including gathering lines):
  - a. Which is regulated under 49 U.S.C. chapter 601; or
  - b. Which is an intrastate pipeline facility regulated under state laws as provided in 49 U.S.C. chapter 601, and which is determined by the Secretary of Transportation to be connected to a pipeline, or to be operated or intended to be capable of operating at pipeline pressure or as an integral part of a pipeline;
5. surface impoundment, pit, pond, or lagoon
6. stormwater or waste water collection system
7. flow-through process tank
8. liquid trap or associated gathering lines directly related to oil or gas production and gathering operations
9. storage tank situated in an underground area (such as a basement, cellar, mineworking, drift, shaft, or tunnel) if the storage tank is situated upon or above the surface of the floor

(NOTE: The definition of UST does not include any pipes connected to any tank which is described in para (1) through (9) of this definition.)

(NOTE: See also the definitions for Excluded USTs and Partially Excluded USTs.)

- *Underground Tank* - in relation to hazardous waste, a device meeting the definition of tank in 40 CFR 260.10 whose entire surface area is totally below the surface and covered by the ground (40 CFR 260.10) **[Reviewed March 2000]**.
- *Unfit-for-Use Tank System* - a tank system that has been determined through an integrity assessment or other inspection to be no longer capable of storing or treating hazardous waste without posing a threat of release of hazardous waste to the environment (40 CFR 260.10) **[Reviewed March 2000]**.
- *Upgrade* - the addition or retrofit of some systems such as cathodic protection, lining, or spill and overfill controls to improve the ability of a UST system to prevent the release of product (40 CFR 280.12) **[Reviewed March 2000]**.
- *Used Oil* - any oil that has been refined from crude oil or any synthetic oil that has been used and as a result of such use is contaminated by physical or chemical impurities (40 CFR 279.1) **[Reviewed March 2000]**.
- *Used Oil Aggregation Point* - any site or facility that accepts, aggregates, and/or stores used oil collected only from other used oil generation sites owned or operated by the owner or operator of the aggregation point, from which used oil is transported to the aggregation point in shipments of no more than 55 gal. Used oil aggregation points may also accept used oil from household DIYs (40 CFR 279.1) **[Reviewed March 2000]**.
- *Used Oil Burner* - a facility where used oil not meeting the specification requirements is burned for energy recovery (40 CFR 279.1) **[Reviewed March 2000]**.
- *Used Oil Collection Center* - any site or facility that is registered/licensed/permitted/recognized by a state/county/municipal government to manage used oil and accepts/aggregates and stores used oil collected from used oil generators who bring used oil to the collection centers in shipments of no more than 55 gal. Used oil collection centers may accept used oil from household DIYs (40 CFR 279.1) **[Reviewed March 2000]**.
- *Used Oil Fuel Marketer* - any person who conducts either of the following activities (40 CFR 279.1) **[Reviewed March 2000]**:
  1. directs a shipment of off-specification used oil from their facility to a used oil burner

2. first claims that used oil that is to be burned for energy recovery meets used oil fuel specifications.
- *Used Oil Generator* - any person, by site, whose act or process produces used oil or whose act first causes used oil to become subject to regulation (40 CFR 279.1) [**Reviewed March 2000**].
  - *Used Oil Processor/Re-Refiner* - a facility that processes used oil (40 CFR 279.1) [**Reviewed March 2000**].
  - *Used Oil Transfer Facility* - any transportation-related facility, including loading docks, parking areas, storage areas, and other areas where shipments of used oil are held for more than 24 hours and not longer than 35 days during the normal course of transportation (40 CFR 279.2) [**Revised March 2000**].
  - *Used Oil Transporter* - any person who transports used oil, any persons who collects used oil from more than one generator and transports the collected oil, and owners and operators of used oil transfer facilities. Used oil transporters may consolidate or aggregate loads of used oil for purposes of transportation, but, with the following exception, may not process used oil. Transporters may conduct incidental processing operations that occur in the normal course of used oil transportation (e.g., settling and water separation), but that are not designed to produce or make more amenable for production of used oil derived products or used oil fuel (40 CFR 279.1) [**Reviewed March 2000**].
  - *UST System or Tank System* – an UST, connected underground piping, underground ancillary equipment, and containment system, if any (40 CFR 280.12) [**Reviewed March 2000; Revised July 2015**].
  - *Vapor Collection-Equipped Gasoline Cargo Tank* - a gasoline cargo tank that is outfitted with the equipment necessary to transfer vapors, displaced during the loading of gasoline into the cargo tank, to a vapor processor system (40 CFR 63.11100) [**Added April 2008**].
  - *Vapor Mounted Seal* - a continuous seal that is mounted such that there is a vapor space between the hazardous waste in the unit and the bottom of the seal (40 CFR 265.1081) [**Reviewed March 2000**].
  - *Vapor Recovery System* - a vapor gathering system capable of collecting all hydrocarbon vapors and gases discharged from the storage vessel and a vapor disposal system capable of processing such hydrocarbon vapors and gases so as to prevent their emission to the atmosphere (40 CFR 60.111(k)) [**Added October 2003**].
  - *Vapor-tight Gasoline Cargo Tank* - the same as the definition of the term “vapor-tight gasoline tank truck” in 40 CFR 60.501, except that for this subpart the term “gasoline tank truck” means “gasoline cargo tank,” as defined in this section (40 CFR 63.11100) [**Added April 2008**].
  - *Vessel Carrying Oil as Secondary Cargo* - a vessel carrying oil pursuant to a permit issued under 46 CFR 30.01-1, 46 CFR 70.05-30, or 46 CFR 90.05-35, or pursuant to an International Oil Pollution Prevention (IOPP) or Noxious Liquid Substance (NLS) certificate; or any uninspected vessel that carries oil as bulk cargo (33 CFR 155.200).
  - *Volatile Organic (VO) Concentration* - the fraction by weight of the volatile organic compounds in a hazardous waste expressed in terms of ppmw as determined by direct measurement or by knowledge of the waste in accordance with the requirements of 40 CFR 265.1084 (40 CFR 265.1081) [**Revised March 2000**].
  - *Volatile Organic Hazardous Air Pollutant (VOHAP) Concentration* - the fraction by weight of the HAP listed in Appendix 10-0c that are contained in the remediation material as measured using Method 305, 40 CFR 63, appendix A and expressed in terms of parts per million (ppm). As an alternative to using Method 305, 40 CFR 63, appendix A, you may determine the HAP concentration of the remediation material using any one of the other test methods specified in 40 CFR 63.694(b)(2)(ii). When a test method specified in CFR 63.694(b)(2)(ii) other than Method 305 in 40 CFR 63, appendix A is used to determine the speciated HAP concentration of the contaminated material, the individual compound concentration may be adjusted by the corresponding fm305 listed in Appendix 10-0c to determine a VOHAP concentration (40 CFR 63.7957) [**Added April 2004**].

- *Volatile Organic Liquid (VOL)* - any organic liquid which can emit volatile organic compounds into the atmosphere except those VOLs that emit only those compounds which the administrator has determined do not contribute appreciably to the formation of ozone. These compounds are identified in USEPA statements on ozone abatement policy for state implementation plan (SIP) revisions (40 CFR 60.111b(k)).
- *Volatile Organic Liquid (VOL)* - any organic liquid which can emit volatile organic compounds (as defined in 40 CFR 51.100) into the atmosphere (40 CFR 60.111b) [**Added January 2004**].
- *Volatile Organic Liquid (VOL)* - for the purposes of 40 CFR 63, Subpart R (63.420 through 63.429), gasoline (40 CFR 63.421) [**Added April 2004**].
- *Waste Stabilization Process* - any physical or chemical process used to either reduce the mobility of hazardous constituents in a hazardous waste or eliminate free liquids (40 CFR 265.1081) [**Reviewed March 2000**].
- *Wastewater Treatment Tank* - a tank that is designed to receive and treat influent wastewater through physical, chemical, or biological methods (40 CFR 280.12) [**Reviewed March 2000**].
- *Work Practice Standard* - any design, equipment, work practice, or operational standard, or combination thereof, that is promulgated pursuant to section 112(h) of the CAA (40 CFR 63.7957) [**Added April 2004**].

#### **F. Records To Research [Revised March 2000]**

- UST records regarding leak detection performance and maintenance including:
  - monitoring results over the last 12 mo
  - most recent tank tightness test(s)
  - manual tank gauging records
  - copies of performance claims provided by leak detection equipment manufacturers
  - records of recent maintenance, repair and calibration of on-site leak detection equipment
  - Records of required inspections and test of corrosion protection systems
  - Records of repairs or upgrades to UST systems
  - Site assessment results of closed USTs
  - Spill Prevention Control and Countermeasure (SPCC) Plans
  - Spill Response Plans
  - Results of AST integrity assessments, sampling, monitoring, inspection and repair work
  - Notification forms and registration records for all in-service, temporarily out-of-service, and permanently closed tanks
  - Records of all spills, leaks, and associated site assessment/cleanup activities
  - Official correspondence with state implementing agency
  - Registration records for all in-service, temporarily out-of-service, and permanently closed tanks

#### **G. Physical Features To Inspect [Revised March 2000]**

- Refueling facilities, including:
  - Belowground storage tanks and dikes
  - Venting
  - Fill pipe
  - Gauges
  - Vehicle maintenance areas
- Transfer terminal
- Bulk storage tank farms
- Secondary containment structures
- Tank peripheral piping, manifolds, filling and dispensing areas

- Dispenser pumps and check valves
- Tank sumps, manway areas
- Leak detection equipment
- Overflow alarms or other audible and visual alarms, sight gauges
- Fill ports, catchment basins
- Oil/water separators
- Cleanup equipment (e.g. absorbent materials, fuel recovery pumps, personal protective gear)

## H. Guidance for Storage Tank Management Checklist Users

	<b>REFER TO CHECKLIST ITEMS:</b>
All Facilities	ST.1.1.US.
Missing, Risk Management, and Positive Checklist Items	ST.2.1.US. through ST.2.3.US
Aboveground Storage Tanks (ASTs) (NOTE: Checklist items deleted with revision of 40 CFR 112 July 2002)	ST.5.1.US. through ST.5.5.US.
Emissions From Bulk Gasoline Terminals	ST.10.1.US. through ST.10.17.US
Emissions From POL Storage Vessels	ST.15.1.US. and ST.15.2.US.
Emissions From VOL Storage Vessels	ST.20.1.US. through ST.20.8.US.
Emissions from Remediation Site Tanks	ST.21.1.US through ST.21.8.US
Substandard USTs	ST.25.1.US.
UST Operators	ST.28.1.US
New or Upgraded USTs	ST.35.1.US. through ST.35.8.US.
Metallic USTs (NOTE: Checklist items deleted with revision of 40 CFR 112 July 2002)	ST.40.1.US.
UST Filling	ST.45.1.US. and ST.45.2.US.
UST Corrosion Protection	ST.50.1.US. and ST.50.2.US
UST Repairs	ST.55.1.US
Release Detection for USTs	
General	ST.60.1.US.through ST.60.4.US
Petroleum USTs	ST.65.1.US.
Hazardous Substance USTs	ST.70.1.US. and ST.70.2.US.
USTs Connected to Emergency Generators	ST.75.1.US.
UST Releases	ST.80.1.US. through ST.80.8.US.
Deferred UST Systems	ST.85.1.US.
UST Documentation	ST.90.1.US. and ST.90.2.US.
Change in Service or Closure of USTs	ST.95.1.US. through ST.95.8.US.
Hazardous Waste Storage Tanks	
Small Quantity Generators (SQGs)	ST.100.1.US. through ST.100.3.US.

Hazardous Waste Generators TSDFs	ST.105.1.US. through ST.105.20.US. ST.110.1.US. through ST.110.21.US.
Flammable Combustible Liquid Storage Tanks	ST.120.1.US. through ST.120.5.US.
Used Oil Storage Tanks	ST.125.1.US.
Generators	ST.130.1.US.
Collection Centers and Aggregation Points	ST.135.1.US.
Used Oil Burners	
Marine Portable Tanks	ST.140.1.US. and ST.140.2.US.
Storage Tanks on Cargo and Miscellaneous Vessels	ST.145.1.US.
Storage Tanks on Ships	ST.150.1.US. and ST.150.2.US.

(NOTE: ST.5.1.US through ST.95.7.US are not applicable to storage tanks used to accumulate and/or treat hazardous waste.)

Appendix 10-0, *Calculations for 40 CFR 63, Subpart R Applicability*

Appendix 10-0a, *Compliance Schedule for Site Remediation Emission Limitations*

Appendix 10-0b, *Control Levels for Tanks Managing Remediation Material With a Maximum HAP Vapor Pressure Less Than 76.6 kPa*

Appendix 10-0c, *List of Hazardous Air Pollutants*

Appendix 10-0d, *Applicability Criteria, Emission Limits, and Management Practices for Storage Tanks and Loading Racks*

Appendix 10-1, *Deleted*

Appendix 10-2, *UST Systems With Field-Constructed Tanks and Airport Hydrant Fuel Distribution System: Leak Detection*

Appendix 10-3, *Release Detection Requirements for USTs and Underground Piping*

Appendix 10-3a, *Requirements for UST Operator Training*

Appendix 10-4, *Schedule for Implementation of Air Emission Standards*

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions which have been added or revised as a result of this review are identified as either being reviewed, revised or added in March 2000, for example **[Added March 2000]**.

<b>COMPLIANCE CATEGORY</b> <b>STORAGE TANK MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<b>ST.1</b>  <b>ALL FACILITIES</b>  <b>ST.1.1.US.</b> The current status of any ongoing or unresolved consent orders, compliance agreements, notice of violations (NOVs), inter-agency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).	Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, interagency agreements, or equivalent state enforcement actions.

<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<b>ST.145</b>  <b>STORAGE TANKS ON CARGO AND MISCELLANEOUS VESSELS</b>  <b>ST.145.1.US.</b> Fuel oil tanks with at least one side integral to the vessel's hull and located within the hull are required to undergo inspections (46 CFR 91.43-1) [ <b>Citation Revised July 2014</b> ].	<p>Verify that prior to internal inspection, the tanks are cleaned out and gas-free.</p> <p>Verify that tanks are examined at least every 5 yr.</p> <p>(NOTE: Under the following circumstances, tanks need not be cleaned out and internally inspected:</p> <ul style="list-style-type: none"> <li>– integral nondouble-bottom fuel oil tanks if exterior inspection shows the general condition is satisfactory</li> <li>– double-bottom fuel oil tanks on vessels for less than 10 yr or if external examination shows the general condition is satisfactory</li> <li>– all double-bottom fuel oil tanks on vessels between 10 and 15 yr of age if the marine inspector can determine by internal inspection of at least one forward double-bottom fuel oil tank and external examination of all other double-bottom fuel oil tanks that the general condition is satisfactory</li> <li>– all double-bottom fuel oil tanks on vessels between 15- and 25-yr of age if the marine inspector can determine by internal examination of at least one forward, one amidships, and one aft double-bottom fuel oil tank and by external examination of all other double-bottom fuel oil tanks on the vessel that the general condition is satisfactory</li> <li>– all double-bottom fuel oil tanks on vessels 25-yr of age or older if internal examination of at least one double-bottom fuel oil tank in way of each cargo hold/tank and external examination of all other double-bottom fuel oil tanks shows the general condition is satisfactory.)</li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>STORAGE TANK MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<b>ST.150</b>  <b>STORAGE TANKS ON SHIPS</b>  <b>ST.150.1.US.</b> Ships of 300 gross tons or more that were constructed after 30 June 1974 are required to have a fixed container or enclosed deck area under or around each fuel oil or bulk lubricating oil tank vent, overflow, and fill pipe (33 CFR 155.100, 155.320(a), and 155.320(c))  <b>ST.150.2.US.</b> Ships of 100 gross tons or more constructed before 1 July 1974, and ships of 100 gross tons or more, but less than 300 gross tons constructed after 30 June 1974 are required to meet specific standards for discharge containment (33 CFR 155.100, 155.320(b), and 155.320(c)).	<p>Verify that ships of 300 gross tons or more, but less than 600 gross tons have fixed containers or enclosed decks with a capacity of at least a 1/2 bbl [approx. 21 gal].</p> <p>Verify that ships of 600 gross tons or more have fixed containers or enclosed decks with a capacity of at least 1 bbl [approx. 42 gal].</p> <p>(NOTE: These requirements apply to each ship that is operated under the authority of the United States, however, provisions for exemptions of public vessels exist under certain circumstances.)</p> <p>Verify that one of the following criteria is met:</p> <ul style="list-style-type: none"> <li>– there are fixed containers or enclosed deck areas under or around each issue oil or bulk lubricating oil tank vent, overflow, or fill pipe that has a capacity of at least a 1/2 bbl [approx. 21 gal]</li> <li>– each fuel oil or bulk lubricating oil tank vent, overflow, and fill pipe is equipped during oil transfer operations with a portable container with at least a 5 gal capacity</li> <li>– ships with a fill fitting for which containment is impractical have an automatic back pressure shut-off nozzle.</li> </ul> <p>(NOTE: These requirements apply to each ship that is operated under the authority of the United States, however, provisions for exemption of public vessels exist under certain circumstances.)</p>

## Appendix 10-0

### Calculations for 40 CFR 63, Subpart R Applicability

(40 CFR 63.420(a)(1) and 63.420(b)(1))

[Added April 2004]

#### Bulk Gasoline Terminals

$$ET = CF[0.59(TF)(1-CE) + 0.17(TE) + 0.08(TES) + 0.038(TI) + 8.5 \times 10^{-6}(C) + KQ] + 0.04(OE)$$

where:

ET = emissions screening factor for bulk gasoline terminals;

CF = 0.161 for bulk gasoline terminals and pipeline breakout stations that do not handle any reformulated or oxygenated gasoline containing 7.6 percent by volume or greater methyl tert-butyl ether (MTBE), OR

CF = 1.0 for bulk gasoline terminals and pipeline breakout stations that handle reformulated or oxygenated gasoline containing 7.6 percent by volume or greater MTBE;

CE = control efficiency limitation on potential to emit for the vapor processing system used to control emissions from fixed-roof gasoline storage vessels [value should be added in decimal form (percent divided by 100)];

TF = total number of fixed-roof gasoline storage vessels without an internal floating roof;

TE = total number of external floating roof gasoline storage vessels with only primary seals;

TES = total number of external floating roof gasoline storage vessels with primary and secondary seals;

TI = total number of fixed-roof gasoline storage vessels with an internal floating roof;

C = number of valves, pumps, connectors, loading arm valves, and open-ended lines in gasoline service;

Q = gasoline throughput limitation on potential to emit or gasoline throughput limit in compliance with paragraphs (c), (d), and (f) of this section (liters/day);

K =  $4.52 \times 10^{-6}$  for bulk gasoline terminals with uncontrolled loading racks (no vapor collection and processing systems), OR

K =  $(4.5 \times 10^{-9})(EF + L)$  for bulk gasoline terminals with controlled loading racks (loading racks that have vapor collection and processing systems installed on the emission stream);

EF = emission rate limitation on potential to emit for the gasoline cargo tank loading rack vapor processor outlet emissions (mg of total organic compounds per liter of gasoline loaded);

OE = other HAP emissions screening factor for bulk gasoline terminals or pipeline breakout stations (tons per year). OE equals the total HAP from other emission sources not specified in parameters in the equations for

ET or EP. If the value of  $0.04(OE)$  is greater than 5 percent of either ET or EP, then paragraphs (a)(1) and (b)(1) of this section shall not be used to determine applicability;

L = 13 mg/l for gasoline cargo tanks meeting the requirement to satisfy the test criteria for a vapor-tight gasoline tank truck in 40 CFR 60.501, OR

L = 304 mg/l for gasoline cargo tanks not meeting the requirement to satisfy the test criteria for a vapor-tight gasoline tank truck in 40 CFR 60.501;

#### Pipeline Breakout Station

$$EP = CF [6.7(TF)(1-CE) + 0.21(TE) + 0.093(TES) + 0.1(TI) + 5.31 \times 10^{-6}(C) + 0.04(OE)];$$

where EP = emissions screening factor for pipeline breakout stations, and the definitions for CF, TF, CE, TE, TES, TI, C, and OE are the same as provided in paragraph (a)(1) of this section.

**Appendix 10-0a**  
**Compliance Schedule for Site Remediation Emission Limitations**  
(40 CFR 63.7883)

<b>Facility Type</b>	<b>Requirements</b>	<b>Compliance Date</b>
Existing Affected Source*	Emission limitation, work practice standard, and operation and maintenance requirements.	9 October 2006
New affected sources that manage remediation material other than a radioactive mixed waste with an initial startup date on or before 8 October 2003.	Emission limitation, work Practice standard, and operation and maintenance requirements.	8 October 2003
New affected sources that manages remediation material other than a radioactive mixed waste with an initial startup date after 8 October 2003.	Emission limitation, work practice standard, and operation and maintenance requirements.	Upon Initial Startup
New affected sources that manages remediation material that is a radioactive mixed waste with an initial startup date is on or before 8 October 2003	Emission limitation, work practice standard, and operation and maintenance requirements.	9 October 2006
New affected sources that manages remediation material that is a radioactive mixed waste with an initial startup date after 8 October 2003.	Emission limitation, work practice standard, and operation and maintenance requirements.	Upon Initial Startup
The facility is an area source that increases its emissions or its potential to emit such that it becomes a major source of HAP, for each source at the facility that is a new affected source.	Emission limitation, work practice standard, and operation and maintenance requirements.	Upon Initial Startup
The facility is an area source that increases its emissions or its potential to emit such that it becomes a major source of HAP, for all other affected sources.	Emission limitation, work practice standard, and operation and maintenance requirements.	No later than 3 yr after the facility becomes a major source.

Affected Site Remediation Sources are:

1. Process vents. The affected source is the entire group of process vents associated with the in-situ and ex-situ remediation processes used at your site to remove, destroy, degrade, transform, or immobilize hazardous substances in the remediation material subject to remediation. Examples of such in-situ remediation processes include, but are not limited to, soil vapor extraction and bioremediation processes. Examples of such ex-situ remediation processes include but are not limited to, thermal desorption, bioremediation, and air stripping processes.
2. Remediation material management units. Remediation material management unit means a tank, surface impoundment, container, oil-water separator, organic-water separator, or transfer system, as defined in 40 CFR 63.7957(see definitions) and is used at the site to manage remediation material. The affected source is the entire

group of remediation material management units used for the site remediations at the site. For the purpose of this 40 CFR 63, Subpart GGGGG, a tank or container that is also equipped with a vent that serves as a process vent, as defined in 40 CFR 63.7957, is not a remediation material management unit, but instead this unit is considered to be a process vent affected source under paragraph 1.

3. Equipment leaks. The affected source is the entire group of equipment components (pumps, valves, etc.) used to manage remediation materials and meeting both of the following conditions. If either of these conditions does not apply to an equipment component, then that component is not part of the affected source for equipment leaks.
  - a. The equipment component contains or contacts remediation material having a concentration of total HAP listed in Appendix 1-27 of this 40 CFR 63, Subpart GGGG (Appendix 1-27) equal to or greater than 10 percent by weight.
  - b. The equipment component is intended to operate for 300 h or more during a calendar year in remediation material service, as defined in 40 CFR 63.7957.

## Appendix 10-0b

### Control Levels for Tanks Managing Remediation Material With a Maximum HAP Vapor Pressure Less Than 76.6 kPa

(Table 2 to Subpart GGGGG of Part 63)

[Added April 2004]

If your tank design capacity is...	And the maximum HAP vapor pressure of the remediation material placed in the tank is...	Then your tank must use . . .
1. Less than 38 m3.....	Less than 76.6 kPa.	Tank Level 1 controls under 40 CFR 63.7895(b).
2. At least 38 m3 but less than 151 m3	Less than 13.1 kPa.	Tank Level 1 controls under 40 CFR 63.7895(b).
3. 151 m3 or greater.....	Less than 0.7 kPa.	Tank Level 1 controls under 40 CFR 63.7895(b).
4. at least 38 m <sup>3</sup> but less than 151 m <sup>3</sup> .	13.1 kPa or greater.	Tank Level 2 controls under 40 CFR 63.7895(c).
5. 151 m <sup>3</sup> or greater.....	0.7 kPa or greater..	Tank Level 2 controls under 40 CFR 63.7895(c).

## Appendix 10-0c

### List of Hazardous Air Pollutants (Table 1 to Subpart GGGGG of Part 63) [Added April 2004]

CA NO. <sup>a</sup>	Compound Name	fm305
75070	Acetaldehyde	1.000
75058	Acetonitrile	0.989
98862	Acetophenone	0.314
107028	Acrolein	1.000
107131	Acrylonitrile	0.999
107051	Allyl chloride	1.000
71432	Benzene (includes benzene in gasoline)	1.000
98077	Benzotrichloride (isomers and mixture)	0.958
100447	Benzyl chloride	1.000
92524	Biphenyl	0.864
542881	Bis(chloromethyl)ether <sup>b</sup>	0.999
75252	Bromoform	0.998
106990	1,3-Butadiene	1.000
75150	Carbon disulfide	1.000
56235	Carbon Tetrachloride	1.000
43581	Carbonyl sulfide	1.000
133904	Chloramben	0.633
108907	Chlorobenzene	1.000
67663	Chloroform	1.000
107302	Chloromethyl methyl ether <sup>b</sup>	1.000
126998	Chloroprene	1.000
98828	Cumene	1.000
94757	2,4-D, salts and esters	0.167
334883	Diazomethane <sup>c</sup>	0.999
132649	Dibenzofurans	0.967
96128	1,2-Dibromo-3-chloropropane	1.000
106467	1,4-Dichlorobenzene(p)	1.000
107062	Dichloroethane (Ethylene dichloride)	1.000
111444	Dichloroethyl ether (Bis(2-chloroethyl ether)).	0.757
542756	1,3-Dichloropropene	1.000
79447	Dimethyl carbamoyl chloride	0.150
57147	1,1-Dimethyl hydrazine	
64675	Diethyl sulfate	0.0025
77781	Dimethyl sulfate	0.086
121697	N,N-Dimethylaniline	0.0008
51285	2,4-Dinitrophenol	0.0077
121142	2,4-Dinitrotoluene	0.0848
121142	2,4-Dinitrotoluene	0.0848
123911	1,4-Dioxane (1,4-Diethyleneoxide)	0.869
106898	Epichlorohydrin (1-Chloro-2,3-epoxypropane)	0.939
106887	1,2-Epoxybutane	1.000
140885	Ethyl acrylate	1.000
100414	Ethyl benzene	1.000
75003	Ethyl chloride (Chloroethane)	1.000
106934	Ethylene dibromide (Dibromoethane)	0.999
107062	Ethylene dichloride (1,2-Dichloroethane)	1.000
151564	Ethylene imine (Aziridine)	0.867
75218	Ethylene oxide	1.000

75343	Ethylidene dichloride (1,1-Dichloroethane)	1.000
	Glycol ethers\ d\ that have a Henry's Law (e) constant value equal to or greater than 0.1 Y/X(1.8 x 10 <sup>-6</sup> atm/gm-mole/m <sup>3</sup> ) at 25 C.	
118741	Hexachlorobenzene	0.97
87683	Hexachlorobutadiene	0.88
67721	Hexachloroethane	0.499
110543	Hexane	1.000
78591	Isophorone	0.506
58899	Lindane (all isomers)	1.000
67561	Methanol	0.855
74839	Methyl bromide (Bromomethane)	1.000
74873	Methyl chloride (Chloromethane)	1.000
71556	Methyl chloroform (1,1,1-Trichloroethane)	1.000
78933	Methyl ethyl ketone (2-Butanone)	0.990
74884	Methyl iodide (Iodomethane)	1.000
108101	Methyl isobutyl ketone (Hexone)	0.979
624839	Methyl isocyanate	1.000
80626	Methyl methacrylate	0.999
1634044	Methyl tert butyl ether	1.000
75092	Methylene chloride (Dichloromethane)	1.000
91203	Naphthalene	0.994
98953	Nitrobenzene	0.394
79469	2-Nitropropane	0.989
82688	Pentachloronitrobenzene (Quintobenzene)	0.839
87865	Pentachlorophenol	0.0898
75445	Phosgene\ c\	1.000
123386	Propionaldehyde	0.999
78875	Propylene dichloride (1,2-Dichloropropane)	1.000
75569	Propylene oxide	1.000
75558	1,2-Propylenimine (2-Methyl aziridine)	0.945
100425	Styrene	1.000
96093	Styrene oxide	0.830
79345	1,1,2,2-Tetrachloroethane	0.999
127184	Tetrachloroethylene (Perchloroethylene)	1.000
108883	Toluene	1.000
95534	o-Toluidine	0.152
120821	1,2,4-Trichlorobenzene	1.000
71556	1,1,1-Trichloroethane (Methyl chloroform)	1.000
79005	1,1,2-Trichloroethane (Vinyl trichloride)	1.000
79016	Trichloroethylene	1.000
95954	2,4,5-Trichlorophenol	0.108
88062	2,4,6-Trichlorophenol	0.132
121448	Triethylamine	1.000
540841	2,2,4-Trimethylpentane	1.000
108054	Vinyl acetate	1.000
593602	Vinyl bromide	1.000
75014	Vinyl chloride	1.000
75354	Vinylidene chloride (1,1-Dichloroethylene)	1.000
1330207	Xylenes (isomers and mixture)	1.000
95476	o-Xylenes.	1.000
108383	m-Xylenes	1.000
106423	p-Xylenes	1.000

1. fm305 = Fraction measure factor in Method 305, 40 CFR part 63, appendix A.

- <sup>a</sup> CAS numbers refer to the Chemical Abstracts Services registry number assigned to specific compounds, isomers, or mixtures of compounds.
- <sup>b</sup> Denotes a HAP that hydrolyzes quickly in water, but the hydrolysis products are also HAP chemicals.
- <sup>c</sup> Denotes a HAP that may react violently with water.
- <sup>d</sup> Denotes a HAP that hydrolyzes slowly in water.
- <sup>e</sup> The fm305 factors for some of the more common glycol ethers can be obtained by contacting the Waste and Chemical Processes Group, Office of Air Quality Planning and Standards, Research Triangle Park, NC 27711.

## Appendix 10-0d

### Applicability Criteria, Emission Limits, and Management Practices for Storage Tanks and Loading Racks

(Table 1 and Table 2 to Subpart BBBBBB of 40 CFR 63)

[Added April 2008]

<b>Table 1</b> <b>Applicability Criteria, Emission Limits, and Management Practices for Storage Tanks</b>	
<b>If you own or operate</b>	<b>Then you must</b>
1. A gasoline storage tank with a capacity of less than 75 cubic meters (m <sup>3</sup> ).	Equip each gasoline storage tank with a fixed roof that is mounted to the storage tank in a stationary manner, and maintain all openings in a closed position at all times when not in use.
2. A gasoline storage tank with a capacity of greater than or equal - to 75 m <sup>3</sup> .	(a) Reduce emissions of total organic HAP or TOC by 95 weight percent with a closed vent system and control device as specified in 40 CFR 60.112b(a)(3); or
	(b) Equip each internal floating roof gasoline storage tank according to the requirements in 40 CFR 60.112b(a)(1), except for the secondary seal requirements under 40 CFR 60.112b(a)(1)(ii)(B) and the requirements in 40 CFR 60.112b(a)(1)(iv) through (ix); and
	(c) Equip each external floating roof gasoline storage tank according to the requirements in 40 CFR 60.112b(a)(2), except that the requirements of 40 CFR 60.112b(a)(2)(ii) shall only be required if such storage tank does not currently meet the requirements of 40 CFR 60.112b(a)(2)(i); or
	(d) Equip and operate each internal and external floating roof gasoline storage tank according to the applicable requirements in 40 CFR 63.1063(a)(1) and (b), and equip each external floating roof gasoline storage tank according to the requirements of 40 CFR 63.1063(a)(2) if such storage tank does not currently meet the requirements of 40 CFR 63.1063(a)(1).

<b>Table 2</b> <b>Applicability Criteria, Emission Limits, and Management Practices for Loading Racks</b>	
<b>If you own or operate</b>	<b>Then you must</b>
1. A gasoline loading rack(s) at a bulk gasoline terminal with a gasoline throughput of 250,000 gal/day, or greater.	(a) Equip your loading rack(s) with a vapor collection system designed to collect the TOC vapors displaced from cargo tanks during product loading; and

<b>Table 2</b> <b>Applicability Criteria, Emission Limits, and Management Practices for Loading Racks</b>	
<b>If you own or operate</b>	<b>Then you must</b>
	(b) Reduce emissions of TOC to $\leq 80$ mg/l of gasoline loaded into gasoline cargo tanks at the loading rack; and
	(c) Design and operate the vapor collection system to prevent any TOC vapors collected at one loading rack from passing to another loading rack; and
	(d) Limit the loading of gasoline into gasoline cargo tanks that are vapor tight using the procedures specified in 40 CFR 60.502(e) through (j). For the purposes of this section, the term “tank truck” as used in 40 CFR 60.502(e) through (j) means “cargo tank” as defined in 40 CFR 63.11100.
2. A gasoline loading rack(s) at a bulk gasoline terminal with a gasoline throughput $< 250,000$ gal/day.	(a) Use submerged filling with a submerged fill pipe that is no more than 6 in from the bottom of the cargo tank.
	(b) Make records available within 24 h of a request by the Administrator to document your gasoline throughput.

## **Appendix 10-1**

**Deleted July 2015 with issuance of new UST regulations**

## Appendix 10-2

### UST Systems With Field-Constructed Tanks and Airport Hydrant Fuel Distribution System: Leak Detection (40 CFR 280.252(d)(2)(i)(A) and 280.252(d)(2)(i)(B)) [Revised July 2015]

Maximum Leak Detection Rate Per Test Section Volume		
Test Section Volume (gallons)	Semiannual Test –leak detection rate not to exceed (gal/h)	Annual Test - leak detection rate not to exceed (gal/h)
< 50,000	1.0	0.5
>= 50,000 to < 75,000	1.5	0.75
>= 75,000 to < 100,000	2.0	1.0
>= 100,000	3.0	1.5

Phase In for Piping Segments >= 100,000 Gallons in Volume	
First test	Not later than 13 October 2018 (may use up to 6.0 gph leak rate)
Second test	Between 13 October 2018 and 13 October 2021 (may use up to 6.0 gph leak rate)
Third test	Between 13 October 2021 and 13 October 2022 (must use 3.0 gph for leak rate)
Subsequent tests	After 13 October 2022, begin using semiannual or annual line testing according to the Maximum Leak Detection Rate Per Test Section Volume table above.

## Appendix 10-3

### Release Detection Requirements for USTs and Underground Piping (40 CFR 280. 280.43 and 280.44) [Revised July 2015]

#### UST Release Detection Methods

**A. Inventory Control (40 CFR 280.43(a)):** Product inventory control [or another test of equivalent performance] must be conducted monthly to detect a release of at least 1.0 percent of flow-through plus 130 gal on a monthly basis in the following manner:

1. inventory volume measurements for regulated substance inputs, withdrawals, and the amount still remaining in the tank are recorded each operating day
2. the equipment used is capable of measuring the level of product over the full range of the tanks height to the nearest 1/8 in.
3. the regulated substance inputs are reconciled with delivery receipts by measurements of the tank inventory volume before and after delivery
4. deliveries are made through a drop tube that extends to within 1 ft of the tank bottom
5. product dispensing is metered and recorded within the local standards for meter calibration or an accuracy of 6 in<sup>3</sup> for every 5 gal of product withdrawn, and
6. the measurement of any water level in the bottom of the tank is made to the nearest 1/8 in. at least once a month.

(NOTE: Practices described in the American Petroleum Institute Recommended Practice RP 1621, “Bulk Liquid Stock Control at Retail Outlets” may be used, where applicable, as guidance in meeting the requirements for inventory control.)

**B. Manual Tank Gauging (40 CFR 280.43(b)):** manual tank gauging must meet the following requirements:

1. tank liquid level measurements are taken at the beginning and end of a period using the appropriate minimum duration of test value in the table below during which no liquid is added to or removed from the tank
2. level measurements are based on an average of two consecutive stick readings at both the beginning and ending of the period
3. the equipment used is capable of measuring the level of product over the full range of the tank’s height to the nearest 1/8 in.
4. a release is suspected and subject to the requirements of 40 CFR 280, subpart E if the variation between beginning and ending measurements exceeds the weekly or monthly standards in the table below

(NOTE: Tanks of 550 gal or less nominal capacity and tanks with a nominal capacity of 551 to 1,000 gal that meet the tank diameter criteria in the below table may use manual tank gauging as the sole method of release detection. All other tanks with a nominal capacity of 551 to 2000 gal may use manual tank gauging in place of inventory control. Tanks of greater than 2000 gal nominal capacity may not use manual tank gauging to meet release detection requirements.)

Nominal Tank Capacity	Minimum Duration of Test	Weekly Standard (one test)	Monthly standard (four test average)
550 gal or less	36 hours	10 gal	5 gal
551 – 1,000 gal (when tank diameter is 64 in)	44 hours	9 gal	4 gal
551 – 1,000 gal (when tank diameter is 48 in)	58 hours	12 gal	6 gal
551 – 1,000 gal (also requires periodic tank tightness testing)	36 hours	13 gal	7 gal

1,001 – 2,000 gal (also requires periodic tank tightness testing)	36 hours	26 gal	13 gal
---	----------	--------	--------

**C. Tank Tightness Testing (40 CFR 280.43(c)):** Tank tightness testing (or another test of equivalent performance) must be capable of detecting a 0.1 gal/h leak rate from any portion of the tank that routinely contains product while accounting for the effects of thermal expansion or contraction of the product, vapor pockets, tank deformation, evaporation or condensation, and the location of the water table.

**D. Tank Automatic Gauging (40 CFR 280.43(d)):** Equipment for automatic tank gauging that tests for the loss of product and conducts inventory control; must meet the following requirements:

1. the automatic product level monitor test can detect a 0.2 gal/h leak rate from any portion of the tank that routinely contains product,
2. the automatic tank gauging equipment meets the inventory control (or other test of equivalent performance) requirements outlined above in this Appendix,
3. the test is performed with the system operating in one of the following modes:
  - a. in-tank static testing conducted at least once every 30 days; or
  - b. continuous in-tank leak detection operating on an uninterrupted basis or operating within a process that allows the system to gather incremental measurements to determine the leak status of the tank at least once every 30 days.

**E. Vapor Monitoring (40 CFR 280.43(e)):** Testing or monitoring for vapors within the soil gas of the excavation zone must meet the following requirements:

1. the materials used as backfill are sufficiently porous (e.g., gravel, sand, crushed rock) to easily allow diffusion of vapors from releases into the excavation area
2. the stored regulated substance, or a tracer compound placed in the tank system, is sufficiently volatile (e.g., gasoline) to result in a vapor level that is detectable by the monitoring devices located in the excavation zone in the event of a release from the tank
3. the measurement of vapors by the monitoring device is not rendered inoperative by the ground water, rainfall, or soil moisture or other known interferences so that a release could go undetected for more than 30 days
4. the level of background contamination in the excavation zone will not interfere with the method used to detect releases from the tank
5. the vapor monitors are designed and operated to detect any significant increase in concentration above background of the regulated substance stored in the tank system, a component or components of that substance, or a tracer compound placed in the tank system
6. in the UST excavation zone, the site is assessed to ensure compliance with the requirements of the first four items in this method and to establish the number and positioning of monitoring wells that will detect releases within the excavation zone from any portion of the tank that routinely contains product, and
7. monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

**F. Groundwater Monitoring (40 CFR 280.43(f)):** Testing or monitoring for liquids in the groundwater must meet the following requirements:

1. the regulated substance stored is immiscible in water and has a specific gravity of less than one
2. groundwater is never more than 20 ft from the ground surface and the hydraulic conductivity of the soil(s) between the UST system and the monitoring wells or devices is not less than 0.01 cm/s (e.g., the soil should consist of gravels, coarse to medium sands, coarse silts or other permeable materials)
3. the slotted portion of the monitoring well casing must be designed to prevent migration of natural soils or filter pack into the well and to allow entry of regulated substance on the water table into the well under both high and low ground water conditions
4. monitoring wells will be sealed from the ground surface to the top of the filter pack
5. monitoring wells or devices intercept the excavation zone or are as close to it as is technically feasible

6. the continuous monitoring devices or manual methods used can detect the presence of at least 1/8 in. of free product on top of the ground water in the monitoring wells
7. within and immediately below the UST system excavation zone, the site is assessed to ensure compliance with the requirements of the first 5 items in this method and to establish the number and positioning of monitoring wells or devices that will detect releases from any portion of the tank that routinely contains product, and
8. monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

**G. Interstitial Monitoring (40 CFR 280.43(g)):** Interstitial monitoring between the UST system and a secondary barrier immediately around or beneath it may be used, but only if the system is designed, constructed and installed to detect a leak from any portion of the tank that routinely contains product and also meets one of the following requirements:

1. for double-walled UST systems, the sampling or testing method can detect a leak through the inner wall in any portion of the tank that routinely contains product
2. for UST systems with a secondary barrier within the excavation zone, the sampling or testing method used can detect a leak between the UST system and the secondary barrier, and:
  - a. the secondary barrier around or beneath the UST system consists of artificially constructed material that is sufficiently thick and impermeable (at least  $10^{-6}$  cm/sec for the regulated substance stored) to direct a release to the monitoring point and permit its detection
  - b. the barrier is compatible with the regulated substance stored so that a release from the UST system will not cause a deterioration of the barrier allowing a release to pass through undetected
  - c. for cathodically protected tanks, the secondary barrier is installed so that it does not interfere with the proper operation of the cathodic protection system
  - d. the ground water, soil moisture, or rainfall will not render the testing or sampling method used inoperative so that a release could go undetected for more than 30 days
  - e. the site is assessed to ensure that the secondary barrier is always above the ground water and not in a 25 yr flood plain, unless the barrier and monitoring designs are for use under such conditions, and
  - f. monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.
3. for tanks with an internally fitted liner, an automated device can detect a release between the inner wall of the tank and the liner. The liner is compatible with the substance stored.

**H. Statistical Inventory Reconciliation (40 CFR 280.43(h)):** Release detection methods based on the application of statistical principles to inventory data similar to those described in the paragraph titled "Inventory Control" in this Appendix must meet the following requirements:

1. report a quantitative result with a calculated leak rate
2. be capable of detecting a leak rate of 0.2 gal/h or a release of 150 gal within 30 days, and
3. use a threshold that does not exceed  $\frac{1}{2}$  the minimum detectable leak rate.

**I. Other methods (40 CFR 280.43(i)):** Any other type of release detection method, or combination of methods, can be used if:

1. it can detect a 0.2 gal/h leak rate or a release of 150 gal within a month with a probability of detection of 0.95 and a probability of false alarm of 0.05, or
2. the implementing agency may approve another method, if it can be demonstrated that this method can detect releases as effectively as the methods listed in this appendix.

### **Piping Release Detection Methods**

**A. Automatic Line Leak Detectors (40 CFR 280.44(a)):** Methods which alert the operator to the presence of a leak by restricting or shutting off the flow of regulated substances through piping, or triggering an audible or visual alarm may be used only if they detect leaks of 3 gal/h at 10 lb per square inch line pressure within 1 h. An annual test of the operation of the leak detector must be conducted in accordance with 40 CFR 280.40(a)(3) (see checklist item ST.60.1.US).

**B. Line Tightness Testing (40 CFR 280.44(b)):** A periodic test of piping may be conducted only if it can detect a 0.1 gal/h leak at one and one-half times the operating pressure.

**C. Applicable Tank Methods (40 CFR 280.44(c)):** Except as described in 40 CFR 280.41(a) (see checklist item ST.65.1.US), any of the following methods for tanks may be used if they are designed to detect a release from any portion of the underground piping that routinely contains regulated substances.

- Vapor monitoring
- Groundwater monitoring
- Interstitial monitoring
- Statistical inventory reconciliation
- Other approved methods.

## **Appendix 10-3a**

### **Requirements for UST Operator Training (40 CFR 280.242) [Added July 2015]**

Any training program must meet the minimum requirements outlined in this Appendix and include an evaluation through testing, a practical demonstration, or another approach acceptable to the implementing agency.

A comparable examination must, at a minimum, test the knowledge of the Class A, Class B, or Class C operators in accordance with the requirements outlined in this Appendix.

#### *Class A Operators.*

Each designated Class A operator must either be trained on the following information or pass a comparable examination. At a minimum, the training program for the Class A operator must provide general knowledge of the following requirements.

The purpose, methods, and function of:

- Spill and overfill prevention;
- Release detection;
- Corrosion protection;
- Emergency response;
- Product and equipment compatibility and demonstration;
- Financial responsibility;
- Notification and storage tank registration;
- Temporary and permanent closure;
- Related reporting, recordkeeping, testing, and inspections;
- Environmental and regulatory consequences of releases;
- Training requirements for Class B and Class C operators.

At a minimum, the training program must evaluate Class A operators to determine these individuals have the knowledge and skills to make informed decisions regarding compliance and determine whether appropriate individuals are fulfilling the operation, maintenance, and recordkeeping requirements for UST systems.

#### *Class B Operators.*

Each designated Class B operator must either be trained on the following information or pass a comparable examination.

At a minimum, the training program for the Class B operator must cover either:

- general requirements that encompass all regulatory requirements and typical equipment used at UST facilities; or
- site-specific requirements which address only the regulatory requirements and equipment specific to the facility.

At a minimum, the training program for Class B operators must teach the Class B operator, as applicable, about the purpose, methods, and function of:

- Operation and maintenance;
- Spill and overfill prevention;
- Release detection and related reporting;
- Corrosion protection;
- Emergency response;
- Product and equipment compatibility and demonstration;

- Reporting, recordkeeping, testing, and inspections;
- Environmental and regulatory consequences of releases; and
- Training requirements for Class C operators.

At a minimum, the training program must evaluate Class B operators to determine these individuals have the knowledge and skills to implement applicable UST regulatory requirements in the field on the components of typical UST systems or, as applicable, site-specific equipment used at an UST facility.

#### *Class C Operators*

Each designated Class C operator must either:

- be trained by a Class A or Class B operator on the required information;
- complete a training program, or
- pass a comparable examination.

At a minimum, the training program for the Class C operator must teach the Class C operators to take appropriate actions (including notifying appropriate authorities) in response to emergencies or alarms caused by spills or releases resulting from the operation of the UST system.

At a minimum, the training program must evaluate Class C operators to determine these individuals have the knowledge and skills to take appropriate action (including notifying appropriate authorities) in response to emergencies or alarms caused by spills or releases from an underground storage tank

## **Appendix 10-4**

### **Schedule for Implementation of Air Emissions Standards (40 CFR 265.1082)**

Facilities existing on 6 October 1996, which are required to comply with 40 CFR 265, Subparts I, J, and K, shall:

- install and begin operation of all required control equipment by 6 October 1996. If it cannot be installed and operating by 6 October 1996, the owner and operator shall:
  - install and begin operation as soon as possible but not later than 8 December 1997
  - prepare an implementation schedule which is placed in the operating record by 6 October 1996.

Facilities which are required to comply with 40 CFR 265, Subparts I, J, and K due to a statutory or regulatory amendment shall:

- install and begin operation of all required control equipment by the effective date of the amendment. If it cannot be installed and operating by the effective date of the amendment the owner and operator shall:
  - install and begin operation as soon as possible but not later than 30 mo after the amendment effective date
  - prepare an implementation schedule which is placed in the operating record no later than the effective date of the amendment.

(NOTE: The Regional Administrator may elect to extend the implementation date at a facility on a case- by-case basis.)

## SECTION 11

### TOXIC SUBSTANCES MANAGEMENT U.S. TEAM Guide, December 2018

#### A. Applicability

This section is used to determine the compliance status of the management activities associated with the following:

1. PCBs and in-service and out-of-service PCB items
2. the removal of asbestos from buildings and its ultimate disposal
3. testing for potential radon exposure
4. management of lead based paint.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions that have been added or revised as a result of this review are identified as being reviewed, revised, or added in March 2000, for example [**Added March 2000**].

#### B. Federal Legislation

- *The Toxic Substances Control Act (TSCA)*. This act, as last amended in 1986, 15 U.S. Code (USC) 2601-2671, is the Federal legislation which deals with the control of toxic substances. The act consists of three subchapters, one of which regulates the control of toxic substances, another governs asbestos hazard emergency response, and another subchapter regulates indoor radon abatement. The policy developed in TSCA on chemical substances is as follows (15 USC 2601(b)):
  1. adequate data should be developed with respect to the effect of chemical substances and mixtures on health and the environment and that the development of such data should be the responsibility of those who manufacture and those who process such chemical substances and mixtures
  2. adequate authority should exist to regulate chemical substances and mixtures that present an unreasonable risk of injury to health or the environment, and to take action regarding chemical substances and mixtures
  3. authority over chemical substances and mixtures should be exercised in such a manner as not to impede unduly or create unnecessary economic barriers to technological innovation while fulfilling the primary purpose of this act to assure that such innovation and commerce in such chemical substances and mixtures do not present an unreasonable risk of injury to health or the environment.

Upon request by the U.S. Environmental Protection Agency (USEPA), each Federal Department and Agency is authorized to (15 USC 2625(a)):

1. make its services, personnel, and facilities available (with or without reimbursement) to the USEPA to assist the USEPA in the administration of this act
2. furnish the USEPA with information, data, estimates, and statistics, and allow the USEPA access to all information in its possession as the USEPA may reasonably determine to be necessary for the administration of this act.

The Secretary of Defense, in cooperation with the USEPA, must, to the extent feasible and consistent with the national security, take such action as may be necessary to provide for the identification, inspection, and management (including abatement) of asbestos in any building used by the DOD as an overseas school for dependents of members of the Armed Forces. Such identification, inspection, and management (including abatement) must, subject to the preceding sentence, be carried out in a manner comparable to the manner in which a local educational agency is required to carry out such activities with respect to a school building under this act (15 USC 2643(L)(2)).

Under TSCA the national long-term goal of the United States with respect to radon levels in building is that the air within buildings in the United States should be as free of radon as the ambient air outside of buildings (15 USC 2661). The head of each Federal Department or Agency that owns a Federal building must conduct a study for the purpose of determining the extent of radon contamination in such buildings. Such study must include, in the case of a Federal building using a nonpublic water source (such as a well or other groundwater), radon contamination of the water. Such a study must be based on design criteria specified by the USEPA (15 USC 2669(a)(c)(e)).

An amendment to TSCA requires the creation of regulations governing lead-based paint activities to ensure that individuals engaged in such activities are properly trained; that training programs are accredited; and that contractors engaged in such activities are certified. Within 15 USC 2688 expressly mandates Federal agency compliance with all Federal, state, interstate, and local requirements, both substantive and procedural pertaining to lead-based paint, lead-based paint activities, and lead-based paint hazards. This section also expressly waives any immunity otherwise applicable to the United States, including immunity from penalties and fines levied by the USEPA and state agencies (15 USC 2681 through 2692) **[Revised June 1998]**.

- *The Asbestos Hazard Emergency Response Act (AHERA)* of 1986. This act, last amended in November 1990, 15 USC 2641-2656, et al., and 20 USC 4014, et al., is the Federal legislation governing the control and abatement of asbestos hazard present in school buildings. The purpose of this act is (15 USC 2641(b)):
  1. to provide for the establishment of Federal regulations which require inspection for asbestos-containing material and implementation of appropriate response actions with respect to asbestos-containing material in the nation's schools in a safe and complete manner
  2. to mandate safe and complete periodic reinspection of school buildings following response actions, where appropriate
  3. to require the USEPA to conduct a study to find out the extent of the danger to human health posed by asbestos in public and commercial buildings and the means to respond to any such danger.
- *The Hazardous Materials Transportation Act*. This act was amended in 1978 to regulate the transport of asbestos materials. The regulations are contained in 49 CFR 172-177. In particular 49 CFR 177 requires that asbestos must be loaded, handled, and unloaded in a manner that will minimize occupational exposure to airborne asbestos. Asbestos wastes which are transported for disposal at a landfill or other disposal facility must meet all applicable requirements.
- EO 12088, *Federal Compliance with Pollution Standards*. This EO, dated 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the Agency funds meet applicable Federal, state, and local environmental requirements for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget. Sections 1-4, "Pollution Control Plan" was revoked by EO 13148 **[Revised October 2002]**.

### C. State/Local Regulations **[Revised March 2000]**

For information on regulations in specific states, see the State Supplements to TEAM Guide.

Section 18 of TSCA (15 USC 2617), under most circumstances (the only notable exception being paragraph (2) of Section 18), allows states and smaller governmental entities to establish or continue to enforce their own regulations governing chemical substances, mixtures or articles containing a chemical substance or mixture. However, TSCA is different from other federal statutes and programs (e.g., RCRA) where states are authorized by USEPA to operate a regulatory program in lieu of the federal program after the state demonstrates equivalence. The TSCA PCB program is *not* delegated to the states. In accordance with Section 18 of TSCA, states may develop their own PCB regulations providing they are consistent with the Section 18 preemption provisions.

In some cases, states regulations have been developed which regulate PCBs more stringently than the federal program. State PCB regulations may provide additional regulatory requirements beyond the federal program to address a specific concern or activity sensitive in that state.

Many state and local governments have enacted standards more stringent than the federal requirements concerning certification of asbestos workers, and disposal of asbestos waste. Similarly, states and local jurisdictions may also impose more stringent requirements for the use and removal of lead-based paint. Prior to conducting the audit, auditors should consult the appropriate state and local agencies and determine in what ways the applicable state and local programs and requirements differ from the requirements under TSCA.

#### D. Key Compliance Requirements

- General Management of Polychlorinated Biphenyls (PCBs) - No one can manufacture PCBs for use in the U.S. or manufacture for export from the U.S. without an exemption. Additionally, no one can process or distribute in commerce in the U.S. or for export without an exemption. Personnel disposing of PCB-Articles have to be protected from dermal exposure or inhalation of PCBs. Generators, commercial storers, transporters, and disposers of PCB are required to have a USEPA identification number (40 CFR 761.20, 761.60(b), 761.202 through 761.205) [**Revised March 2000**].
- PCB Equipment Marking - The following equipment is required to be marked indicating that they contain PCBs (40 CFR 761.40 and 761.45) [**Revised March 2000**]:
  - PCB Containers
  - PCB Transformers (500 ppm or >)
  - PCB Large High-Voltage Capacitors
  - equipment containing a PCB Transformer (500 ppm or >) or a PCB Large High-Voltage Capacitor
  - PCB Large Low-Voltage Capacitors at the time of removal from service
  - electric motors using PCB coolants
  - hydraulic systems using PCB hydraulic fluid
  - heat transfer systems (other than PCB Transformers) using PCBs
  - PCB Article Containers containing any of the above
  - each storage area used to store PCBs and PCB Items for disposal
  - transport vehicles loaded with PCB Containers that contain more than 45 kg (99.4 lb) of liquid PCBs with PCBs at concentrations  $\geq 50$  ppm or with one or more PCB Transformers
  - vault doors, machinery room doors, fences, hallways, or means of access, other than a manhole or grate cover, to a PCB Transformer (500 ppm or >).
  - voltage regulators with a PCB concentration of  $\geq 500$  ppm (individually)
  - vault doors, machinery room doors, fences, hallways, or means of access to voltage regulators with a PCB concentration  $\geq 500$  ppm.
- Records for PCBs - Each owner or operator of a facility, other than a commercial storer or a disposer of PCB waste, that uses or stores at any time at least 45 kg (99.4 lb) of PCBs contained in PCB containers, or one or more PCB Transformers, or 50 or more PCB Large, High-, or Low-Voltage Capacitors must develop and maintain at the facility all annual records and a written annual document log of the disposition of PCBs and PCB items. The written annual document log must be prepared by July 1 of each calendar year, covering the previous year. PCB chemical waste landfills, disposers, commercial storers, incinerators, high efficiency boilers, storage and disposal

facilities, importers, and manufacturers are all required to maintain records specific to their operations. Generators are required to maintain manifests and certificates of disposal (COD) for three years. (40 CFR 761.180) [**Revised March 2000**].

- **PCB Transformers** - PCB Transformers with PCBs of 500 ppm or >, that are in use or in storage for reuse, must not pose an exposure risk to food and feed and are subject to registration requirements. Railroad transformers must not contain dielectric fluid with > 1000 ppm PCB and must be serviced according to specific requirements. Combustible materials, including, but not limited to, paints, solvents, plastics, paper, and sawn wood, must not be stored by a PCB Transformer. PCB transformers of concentrations of 500 ppm or > in use in or near commercial buildings are subject to certain requirements. PCB transformers are required to be properly serviced, and inspections must be performed once every 3 mo for all in-service transformers. If the transformer is found to be leaking, it must be repaired or replaced to eliminate the source of the leak. When a PCB transformer is involved in a fire, the incident must be reported immediately to the National Response Center (NRC). Mineral oil transformers which are tested and found to be contaminated with 500 ppm PCBs or > must meet more stringent requirements. (40 CFR 761.30(a), 761.30(b), 761.120(a) through 761.120(c), 761.120(d)(2), and 761.125) [**Revised March 2000**].
- **PCB Spills** - Spills of 10 lb or more of PCBs of concentrations of 50 ppm must be reported to the USEPA regional office. Spills of greater than 1 lb or more by weight must be cleaned up and reported to the NRC. The criteria for cleanup is based on whether the spill is of high or low concentration of PCBs (40 CFR 761.120 and 761.125) [**Revised March 2000**].
- **PCB Items** - The use of PCBs in electromagnetic switches, voltage regulators, capacitors, heat transfer and hydraulic systems, circuit breakers, reclosers, and cable is allowed if applicable restrictions are met and precautions taken (40 CFR 761.30) [**Revised October 1998; Reviewed March 2000**].
- **PCB Storage** - PCBs and PCB Items at concentrations > 50 ppm that are to be stored before disposal must be stored in a facility that meets structural and operational requirements. Storage prior to disposal is not to exceed 1 yr. Nonleaking and structurally undamaged PCB Large, High-Voltage Capacitors and PCB-Contaminated Electric Equipment that have not been drained of freeflowing dielectric fluid may be stored on pallets next to a storage area that complies with the storage area requirements if they are checked weekly. Containers used for the storage of PCBs must comply with the shipping container specification of the Department of Transportation (DOT). Specific requirements must be met for the following: storage of PCB articles for re-use, storage of PCB household waste, storage of PCBs and PCB items in areas not in compliance with the storage area requirements, and storage of bulk PCB remediation waste or PCB bulk product (40 CFR 761.35 and 761.65) [**Revised March 2000**].
- **PCB Transportation** - A generator who offers a PCB Waste for transport to commercial offsite storage or offsite disposal must prepare a manifest. If the generator does not receive a signed copy of the manifest within 35 days from the date the waste was accepted by the initial transporter, the generator must immediately contact the transporter and/or owner or operator of the designated facility to determine the status of the PCB Waste (40 CFR 761.207 through 761.210 and 761.215) [**Revised October 1998; Reviewed March 2000**].
- **PCB Disposal** - PCB Liquids containing concentrations > 500 ppm must be disposed of in a USEPA-approved PCB incinerator. Transformers containing PCBs in concentrations  $\geq$  500 ppm must be disposed of either in an USEPA-approved incinerator or a chemical waste landfill after free liquids are removed and other required procedures are followed. PCB Capacitors must be disposed of in either a solid waste landfill (nonleaking PCB Small Capacitor only) or an approved incinerator. For each shipment of manifested PCB Waste that a disposal facility accepts, the owner or operator of the disposal facility must prepare a certificate of disposal (COD). PCB-contaminated fluids of concentrations  $\geq$  50 ppm, but less than 500 ppm, are required to be disposed of in a USEPA-approved incinerator, or chemical waste landfill, or a high efficiency boiler. PCB hydraulic machines containing PCBs at concentrations  $\geq$  50 ppm may be disposed of as municipal solid waste when drained. PCB-Contaminated Electrical Equipment, except capacitors, shall be disposed of by draining off the free-flowing liquid and then disposing of the drained equipment in: 1) a municipal solid waste unit (except thermal treatment units), 2) an industrial furnace, or 3) any other approved disposal facility. PCB Articles and Containers shall be disposed

of in a USEPA-approved incinerator or chemical waste landfill if all free-flowing liquids have been removed. Scrap metal associated with PCB-contaminated articles may be burned in a scrap metal recovery oven or smelter under 40 CFR 761.72. The following disposal methods are prohibited for PCB disposal: 1) open burning, 2) processing of PCBs into non-liquid forms to circumvent high temperature incineration requirements, and 3) discharging of PCBs into a water treatment works or navigable waters (unless PCB concentration is equal to or less than 3 ppb, or is in accordance with a PCB discharge limit set in a permit). Land disposal of PCBs must be in accordance with specific parameters. When disposing of PCB bulk product using performance-based disposal, PCB bulk product may be disposed of in an approved incinerator or chemical waste landfill, a permitted hazardous waste landfill, or through any other approved alternative method. Otherwise, PCB bulk product must be disposed of in a permitted municipal or non-municipal, non-hazardous waste landfill. PCB household waste must be disposed of in a facility permitted to manage municipal or industrial solid waste, or in any other facility given approval to dispose of PCB bulk product waste (40 CFR 761.50, 761.60, 761.62, 761.63 and 761.218) **[Revised March 2000]**.

- Asbestos in Schools - School buildings are required to be inspected a minimum of every 3 yr for asbestos. An asbestos management plan is required and response action must be done in a timely manner. If there is friable asbestos in the school, there must be an O&M and repair program that limits the asbestos from becoming airborne and risking exposure to building personnel. Warning labels will be attached immediately adjacent to any friable and nonfriable asbestos-containing building material (ACBM) and suspected ACBM assumed to be asbestos-containing material (ACM). Staff at the school must receive training on the hazards involved (40 CFR 763, Subpart E) **[Revised March 2000]**.
- Renovation and Demolition of Asbestos-Containing Structures - Facilities that demolish structures containing asbestos above certain limits, must meet notification requirements, emission control requirements and wetting requirements. This applies to facilities that demolish structures containing at least 80 linear meters (260 linear feet) of regulated asbestos containing material (RACM) on pipes, or at least 15 m<sup>2</sup> (160 ft<sup>2</sup>) of RACM on other components or at least 1 m<sup>3</sup> (35 ft<sup>3</sup>) off facility components, and facilities renovating structures and stripping or removing at least 80 linear meters (260 linear feet) of RACM on pipes, or at least 15 m<sup>2</sup> (160 ft<sup>2</sup>) of friable asbestos on other facility components and at least 1 m<sup>3</sup> (35 ft<sup>3</sup>) off facility components. If the concentration of asbestos is less than this level, then the facility must submit notification of demolition. Facilities being demolished under state or local governmental agency orders shall have the portion of the facility containing friable asbestos adequately wetted during the wrecking operation. When a site is demolished by intentional burning, all RACM must be removed. No RACM shall be stripped, removed, or otherwise handled or distributed unless at least one onsite representative trained in asbestos removal is present. When air cleaning is used as a method of controlling emissions of asbestos to the outside air, the fabric filter collection systems are required to meet specific standards, unless alternative equipment is authorized for use by the USEPA (40 CFR 61.145 and 61.152).
- Asbestos Prohibitions - Manufacturers, processors, importers, and distributors are no longer allowed to deal with the following asbestos containing materials: flooring felt, new uses of asbestos, commercial paper, corrugated paper, rollboard, and specialty paper (40 CFR 763.160 through 763.179) **[Revised March 2000]**.
- Radon - See Component Supplement.
- Disclosure of Lead-Based Paint (LBP) and/or LBP Hazards - When leasing or selling target housing, the facility is required to disclose any knowledge it has of the presence of known LBP and/or LBP hazards (40 CFR 745.100). Work done related to LBP activities must be done by certified individuals and firms according to approved work practices. In addition, a pamphlet with lead hazard information must be provided (40 CFR 745.100 through 745.119) **[Revised March 2000]**.
- Notification of LBP Hazards Prior to Renovation - Renovators are required to notify the owners and occupants of target housing prior to renovation of any LBP hazards (40 CFR 745.81 through 745.86) **[Revised March 2000]**.

- **LBP Training Requirements** - All LBP activities are required to be performed by certified individuals. Certification is available for inspectors, risk assessors, supervisors, project designers, and abatement workers. Training programs must be accredited (40 CFR 745.220 through 40 CFR 745.226) [**Revised March 2000**].
- **LBP Work Practice Standards** - Inspections, lead hazard screening, risk assessments, and LBP abatement is required to be done according to specified methodologies. These methodologies address reporting requirements, sampling methods, plans, and cleanup methodologies. Appendix 11-4 provides information on determining whether or not LBP, a paint-lead hazard, a dust-lead hazard, or a soil-lead hazard is present. (40 CFR 745.227) [**Revised April 2001**].

## E. Key Compliance Definitions

- **Abatement** - any measure or set of measures designed to permanently eliminate LBP hazards. Abatement includes, but is not limited to (40 CFR 745.223) [**Reviewed March 2000; Revised April 2001**]:
  1. the removal of paint and dust, the permanent enclosure or encapsulation of lead-based paint, the replacement of painted surfaces or fixtures, or the removal or permanent covering of soil, when lead-based paint hazards are present in such paint, dust or soil
  2. all preparation, cleanup, disposal, and post-abatement clearance testing activities associated with such measures
  3. specifically, abatement includes, but is not limited to:
    - a. projects for which there is a written contract or other documentation, which provides that an individual or firm will be conducting activities in or to a residential dwelling or child-occupied facilities that:
      - i. shall result in the permanent elimination of LBP hazards; or
      - ii. are designed to permanently eliminate LBP hazards.
    - b. projects resulting in the permanent elimination of LBP hazards, conducted by firms or individuals who are certified, unless such projects are covered by paragraph 4 of this definition
    - c. projects resulting in the permanent elimination of LBP hazards, conducted by firms or individuals who, through their company name or promotional literature, represent, advertising, or hold themselves out to be in the business of performing LBP activities as identified and defined in this regulation, unless such projects are covered by paragraph 4 of this definition
    - d. projects resulting in the permanent elimination of LBP hazards that are conducted in response to state or local abatement orders.
  4. abatement does not include renovation, remodeling, landscaping or other activities, when such activities are not designed to permanently eliminate LBP hazards, but, instead, are designed to repair, restore, or remodel a given structure or dwelling even though these activities may incidentally result in a reduction or elimination of LBP hazards. Furthermore, abatement does not include interim controls, operations, and maintenance activities, or other measures and activities designed to temporarily, but not permanently, reduce LBP hazards.
- **Accessible** - when referring to ACM means that the material is subject to disturbance by school building occupants or custodial or maintenance personnel in the course of their normal activities (40 CFR 763.83) [**Added March 2000**].
- **Accredited or Accreditation** - when referring to a person or laboratory means that such person or laboratory is accredited in accordance with section 206 of Title II of the Act (40 CFR 763.83) [**Added March 2000**].
- **Accredited Training Program** - a training program that has been accredited by USEPA pursuant to 40 CFR 745.225 to provide training for individuals engaged in lead-based paint activities (40 CFR 745.223) [**Reviewed March 2000**].
- **Active Waste Disposal Site** - any disposal site other than an inactive site (40 CFR 61.14).

- *Adequate Quality Control* – a plan or design which ensures the authenticity, integrity, and accuracy of samples, including dust, soil, and paint chip or paint film samples. Adequate quality control also includes provisions for representative sampling (40 CFR 745.223) **[Added October 2001]**.
- *Adequately Wetted* - sufficiently mixed or penetrated with liquid to prevent the release of particulates (40 CFR 61.14).
- *Agent* - any party who enters into a contract with a seller or lessor, including any party who enters into a contract with a representative of the seller or lessor, for the purpose of selling or leasing target housing. This term does not apply to purchasers or any purchaser's representative who receives all compensation from the purchaser (40 CFR 745.103) **[Reviewed March 2000]**.
- *Air Compressor System* - air compressors, piping, receiver tanks, volume tanks and bottles, dryers, airlines, and related appurtenances (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *Air Erosion* - the passage of air over friable ACBM which may result in the release of asbestos fibers (40 CFR 763.83) **[Added March 2000]**.
- *Annual Document Log* - the detailed information maintained at the facility on the PCB waste handling at the facility (40 CFR 761.3) **[Added October 2001]**.
- *Annual Report* - the written document submitted each year by each disposer and commercial storer of PCB waste to the appropriate USEPA Regional Administrator. The annual report is a brief summary of the information included in the annual document log (40 CFR 761.3) **[Added October 2001]**.
- *Arithmetic Mean* - the algebraic sum of data values divided by the number of data values (e.g., the sum of the concentration of lead in several soil samples divided by the number of samples) (40 CFR 745.63) **[Added April 2001]**.
- *Asbestos* - substances comprised of or derived from actinolite, amosite, anthophyllite, chrysotile, crocidolite, or tremolite (40 CFR 61.14).
- *Asbestos-Containing Building Material (ACBM)* - surfacing ACM, thermal system insulation ACM, or miscellaneous ACM that is found in or on interior structural members or other parts of a school building (40 CFR 763.83) **[Added March 2000]**.
- *Asbestos-Containing Material (ACM)* - when referring to school buildings means any material or product which contains more than 1 percent asbestos (40 CFR 763.83) **[Added March 2000]**.
- *Asbestos-Containing Product* - any product to which asbestos is deliberately added in any concentration or which contains more than 1.0 percent asbestos by weight or area (40 CFR 763.163) **[Added March 2000]**.
- *Asbestos-Containing Waste Materials* - means mill tailings or any waste that contains commercial asbestos and is generated by a source subject to the provisions of 40 CFR 141. This term also includes filters from control devices, friable asbestos waste material, and bags or other similar packaging contaminated with commercial asbestos. However, as applied to demolition and renovation operations, this term includes regulated ACM waste and materials contaminated with asbestos including disposable equipment and clothing (40 CFR 61.141).
- *Asbestos Debris* - pieces of ACBM that can be identified by color, texture, or composition, or means dust, if the dust is determined by an accredited inspector to be ACM (40 CFR 763.83) **[Added March 2000]**.
- *Asbestos Material* - asbestos or any material containing asbestos (40 CFR 61.141).

- *Asbestos Waste from Control Devices* - any waste material that contains asbestos and is collected by a pollution control device (40 CFR 61.141).
- *Business Day* - Monday through Friday with the exception of Federal holidays (40 CFR 745.223) [**Added July 2004**].
- *Byproduct* - chemical substance produced without separate commercial intent during the manufacturing or processing of another chemical substance(s) or mixture(s) (40 CFR 761.3) [**Added October 2001**].
- *Capacitor* - a device for accumulating and holding a charge of electricity and consisting of conducting surfaces separated by a dielectric. Types of capacitors are as follows (40 CFR 761.3) [**Reviewed March 2000**]:
  1. Small Capacitor - a capacitor that contains less than 1.36 kg (3 lb) of dielectric fluid.
  2. Large High-Voltage Capacitor - a capacitor that contains 1.36 kg (3 lb) or more of dielectric fluid and which operates at 2000 V (a.c. or d.c.) or above.
  3. Large Low-Voltage Capacitor - a capacitor that contains 1.36 kg (3 lb) or more of dielectric fluid and which operates at 2000 V (a.c. or d.c.).
- *Category I Nonfriable Asbestos-Containing Material (ACM)* - asbestos-containing packing, gaskets, resilient floor covering, and asphalt roofing products containing more than 1 percent asbestos (40 CFR 61.141).
- *Category II Nonfriable ACM* - any material including Category I nonfriable ACM containing more than 1 percent asbestos that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure (40 CFR 61.141).
- *Certified Abatement Worker* - an individual who has been trained by an accredited training program, as defined by this section, and certified by USEPA pursuant to 40 CFR 745.226 to perform abatements (40 CFR 745.223) [**Added October 2001**].
- *Chemical Waste Landfill* - landfill at which protection against risk of injury to health or the environment from mitigation of PCBs to land, water, or the atmosphere is provided from PCBs and PCB Items deposited therein by locating, engineering, and operating the landfill as required (40 CFR 761.3) [**Reviewed March 2000**].
- *Chewable Surface* - an interior or exterior surface painted with lead-based paint that a young child can mouth or chew. A chewable surface is the same as an "accessible surface" as defined in 42 U.S.C. 4851b(2)). Hard metal substrates and other materials that cannot be dented by the bite of a young child are not considered chewable (40 CFR 745.63) [**Added April 2001**].
- *Child-occupied Facility* - a building, or portion of a building, constructed prior to 1978, visited regularly by the same child, under 6 yr of age, on at least two different days within any week (Sunday through Saturday period), provided that each day's visit lasts at least 3 h and the combined weekly visits last at least 6 hours, and the combined annual visits last at least 60 h. Child-occupied facilities may include, but are not limited to, day care centers, preschools and kindergarten classrooms. Child-occupied facilities may be located in target housing or in public or commercial buildings. With respect to common areas in public or commercial buildings that contain child-occupied facilities, the child-occupied facility encompasses only those common areas that are routinely used by children under age 6, such as restrooms and cafeterias. Common areas that children under age 6 only pass through, such as hallways, stairways, and garages are not included. In addition, with respect to exteriors of public or commercial buildings that contain child-occupied facilities, the child-occupied facility encompasses only the exterior sides of the building that are immediately adjacent to the child-occupied facility or the common areas routinely used by children under age 6 (40 CFR 745.83) [**Added July 2008**].
- *Child-Occupied Facility* - a building or a portion of a building constructed prior to 1978, visited regularly by the same child, 6 yr of age or under, on at least 2 different days within any week (Sunday through Saturday period), provided that each day's visit lasts at least 3 h and the combined weekly visit lasts at least 6 h, and the combined annual visits last at least 60 h. Child-occupied facilities may include, but are not limited to, daycare centers, preschools, and kindergarten classrooms (40 CFR 745.223) [**Reviewed March 2000**].

- *Cleaning Verification Card* - a card developed and distributed, or otherwise approved, by EPA for the purpose of determining, through comparison of wet and dry disposable cleaning cloths with the card, whether post-renovation cleaning has been properly completed (40 CFR 745.83) **[Added July 2008]**.
- *Cleanup Site* - the real extent of contamination and all suitable areas in very close proximity to the contamination necessary for implementation of a cleanup of PCB remediation waste, regardless of whether the site was intended for management of waste (40 CFR 761.3) **[Added October 1998]**.
- *Clearance Levels* - values that indicate the maximum amount of lead permitted in dust on a surface following completion of an abatement activity (40 CFR 745.223) **[Reviewed March 2000]**.
- *Commercial Asbestos* - any material containing asbestos that is extracted from ore and has value because of its asbestos content (40 CFR 61.141).
- *Commercial Paper* - an asbestos-containing product which is made of paper intended for use as general insulation paper or muffler paper. Major applications of commercial papers are insulation against fire, heat transfer, and corrosion in circumstances that require a thin, but durable, barrier (40 CFR 763.163) **[Added March 2000]**.
- *Commercial Storer of PCB Waste* - the owner or operator of each facility that is subject to the PCB storage unit standards of 40 CFR 761.65(b)(1) or (c)(7) or meets the alternate storage criteria of 40 CFR 761.65(b)(2), and who engages in storage activities involving either PCB waste generated by others or that was removed while servicing the equipment owned by others and brokered for disposal. The receipt of a fee or any other form of compensation for storage services is not necessary to qualify as a commercial storer of PCB waste. A generator who only stores its own waste is subject to the storage requirements of 40 CFR 761.65, but is not required to obtain approval as a commercial storer. If a facility's storage of PCB waste generated by others at no time exceeds a total of 500 gallons of liquid and/or non-liquid material containing PCBs at regulated levels, the owner or operator is a commercial storer but is not required to seek USEPA approval as a commercial storer of PCB waste. Storage of one company's PCB waste by a related company is not considered commercial storage. A "related company" includes, but is not limited to: a parent company and its subsidiaries; sibling companies owned by the same parent company; companies owned by a common holding company; members of electric cooperatives; entities within the same Executive Agency as defined at 5 U.S.C. 105; and a company having a joint ownership interest in a facility from which PCB waste is generated (such as a jointly owned electric power generating station) where the PCB waste is stored by one of the co-owners of the facility. A "related company" does not include another voluntary member of the same trade association. Change in ownership or title of a generator's facility, where the generator is storing PCB waste, does not make the new owner of the facility a commercial storer of PCB waste (40 CFR 761.3) **[Revised October 1998; Reviewed March 2000]**.
- *Common Area* - a portion of a building generally accessible to all residents/users including, but not limited to, hallways, stairways, laundry and recreational rooms, playgrounds, community centers, and boundary fences (40 CFR 745.103) **[Reviewed March 2000]**.
- *Common Area Group* - a group of common areas that are similar in design, construction, and function. Common area groups include, but are not limited to hallways, stairwells, and laundry rooms (40 CFR 745.63) **[Added April 2001]**.
- *Component or Building Component* - specific design or structural elements or fixtures of a building or residential dwelling that are distinguished from each other by form, function, and location. These include, but are not limited to, interior components such as: Ceilings, crown molding, walls, chair rails, doors, door trim, floors, fireplaces, radiators and other heating units, shelves, shelf supports, stair treads, stair risers, stair stringers, newel posts, railing caps, balustrades, windows and trim (including sashes, window heads, jambs, sills or stools and troughs), built in cabinets, columns, beams, bathroom vanities, counter tops, and air conditioners; and exterior components such as: Painted roofing, chimneys, flashing, gutters and downspouts, ceilings, soffits, fascias, rake boards, cornerboards, bulkheads, doors and door trim, fences, floors, joists, lattice work, railings and railing caps, siding, handrails, stair risers and treads, stair stringers, columns, balustrades, windowsills or stools and troughs, casings, sashes and wells, and air conditioners (40 CFR 745.83) **[Added July 2008]**.

- *Component or Building Component* - specific design or structural elements or fixtures of a building, residential dwelling, or child-occupied facility that are distinguished from each other by form, function, and location. These include, but are not limited to, interior components such as: ceilings, crown molding, walls, chair rails, doors, door trim, floors, fireplaces, radiators and other heating units, shelves, shelf supports, stair treads, stair risers, stair stringers, newel posts, railing caps, balustrades, windows and trim (including sashes, window heads, jambs, sills or stools and troughs), built in cabinets, columns, beams, bathroom vanities, counter tops, and air conditioners; and exterior components such as: painted roofing, chimneys, flashing, gutters and downspouts, ceilings, soffits, fascias, rake boards, cornerboards, bulkheads, doors and door trim, fences, floors, joists, lattice work, railings and railing caps, siding, handrails, stair risers and treads, stair stringers, columns, balustrades, window sills or stools and troughs, casings, sashes and wells, and air conditioners (40 CFR 745.223) **[Added October 2001]**.
- *Containment* - a process to protect workers and the environment by controlling exposures to the lead-contaminated dust and debris created during an abatement (40 CFR 745.223) **[Added October 2001]**.
- *Concentration* - the relative content of a specific substance contained within a larger mass, such as the amount of lead (in micrograms per gram or parts per million by weight) in a sample of dust or soil (40 CFR 745.63) **[Added April 2001]**.
- *Contract for the Purchase and Sale of Residential Real Property* - any contract or agreement in which one party agrees to purchase an interest in real property on which there is situated one or more residential dwellings used or occupied, or intended to be used or occupied, in whole or in part, as the home or residence of one or more persons (40 CFR 745.103) **[Reviewed March 2000]**.
- *Corrugated Paper* - an asbestos-containing product made of corrugated paper, which is often cemented to a flat backing, may be laminated with foils or other materials, and has a corrugated surface. Major applications of asbestos corrugated paper include: thermal insulation for pipe coverings; block insulation; panel insulation in elevators; insulation in appliances; and insulation in low-pressure steam, hot water, and process lines (40 CFR 763.163) **[Added March 2000]**.
- *Cutting* - to penetrate with a sharp-edged instrument and includes sawing, but does not include shearing, slicing, or punching (40 CFR 61.141).
- *Damaged Friable Miscellaneous ACM* - friable miscellaneous ACM which has deteriorated or sustained physical injury such that the internal structure (cohesion) of the material is inadequate or, if applicable, which has delaminated such that its bond to the substrate (adhesion) is inadequate or which for any other reason lacks fiber cohesion or adhesion qualities. Such damage or deterioration may be illustrated by the separation of ACM into layers; separation of ACM from the substrate; flaking, blistering, or crumbling of the ACM surface; water damage; significant or repeated water stains, scrapes, gouges, mars or other signs of physical injury on the ACM. Asbestos debris originating from the ACM in question may also indicate damage (40 CFR 763.83) **[Added March 2000]**.
- *Damaged Friable Surfacing ACM* - friable surfacing ACM which has deteriorated or sustained physical injury such that the internal structure (cohesion) of the material is inadequate or which has delaminated such that its bond to the substrate (adhesion) is inadequate, or which, for any other reason, lacks fiber cohesion or adhesion qualities. Such damage or deterioration may be illustrated by the separation of ACM into layers; separation of ACM from the substrate; flaking, blistering, or crumbling of the ACM surface; water damage; significant or repeated water stains, scrapes, gouges, mars or other signs of physical injury on the ACM. Asbestos debris originating from the ACM in question may also indicate damage (40 CFR 763.83) **[Added March 2000]**.
- *Damaged or Significantly Damaged Thermal System Insulation ACM* - thermal system insulation ACM on pipes, boilers, tanks, ducts, and other thermal system insulation equipment where the insulation has lost its structural integrity, or its covering, in whole or in part, is crushed, water-stained, gouged, punctured, missing, or not intact such that it is not able to contain fibers. Damage may be further illustrated by occasional punctures, gouges or other signs of physical injury to ACM; occasional water damage on the protective coverings/jackets; or exposed

ACM ends or joints. Asbestos debris originating from the ACBM in question may also indicate damage (40 CFR 763.83) **[Added March 2000]**.

- *Demolition* - the wrecking or taking out of any load-supporting structural member of a facility together with any related handling operations or the intentional burning of a facility (40 CFR 61.141).
- *Deteriorated Paint* - paint that is cracking, flaking, chipping, peeling, or otherwise separating from the substrate of a building component (40 CFR 745.223) **[Reviewed March 2000]**.
- *Deteriorated Paint* - any interior or exterior paint or other coating that is peeling, chipping, chalking or cracking, or any paint or coating located on an interior or exterior surface or fixture that is otherwise damaged or separated from the substrate (40 CFR 745.63) **[Added April 2001]**.
- *Disposal* - intentionally or accidentally to discard, throw away, or otherwise complete or terminate the useful life of PCBs and PCB Items (40 CFR 761.3) **[Reviewed March 2000]**.
- *Distinct Painting History* - the application history, as indicated by its visual appearance or a record of application, over time, of paint or other surface coatings to a component or room (40 CFR 745.223) **[Reviewed March 2000]**.
- *Documented Methodologies* - methods or protocols used to sample for the presence of lead in paint, dust, and soil (40 CFR 745.223) **[Reviewed March 2000]**.
- *Double Wash/Rinse* - a minimum requirement to cleanse solid surfaces (both impervious and nonimpervious) two times with an appropriate solvent or other material in which PCBs are at least 5 percent soluble (by weight) (40 CFR 761.123) **[Reviewed March 2000]**.
- *Dripline* - the area within 3 feet surrounding the perimeter of a building **[Added April 2001]**.
- *Dry Disposable Cleaning Cloth* - a commercially available dry, electrostatically charged, white disposable cloth designed to be used for cleaning hard surfaces such as uncarpeted floors or counter tops (40 CFR 745.83) **[Added July 2008]**.
- *Dry Weight* - the weight of the sample, excluding the weight of the water in the sample. Prior to chemical analysis, the water may be removed by any reproducible method that is applicable to measuring PCBs in the sample matrix at the concentration of concern, such as air drying at ambient temperature, filtration, decantation, heating at low temperature followed by cooling in the presence of a desiccant, or other processes or combinations of processes which would remove water but not remove PCBs from the sample. Analytical procedures which calculate the dry weight concentration by adjusting for moisture content may also be used (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *Elevated Blood Level (EBL)* - an excessive absorption of lead that is a confirmed concentration of lead in whole blood of 20 micrograms/deciliter (dl) for a single venous test or of 15 - 19 micrograms/dl in two consecutive tests taken 3 to 4 mo apart (40 CFR 745.223) **[Reviewed March 2000]**.
- *Emergency Renovation Operation* - a renovation operation that was not planned but results from a sudden, unexpected event that, if not immediately attended to, presents a safety or public health hazard, is necessary to protect equipment from damage or is necessary to avoid imposing an unreasonable financial burden. This term includes operations necessitated by nonroutine failures of equipment (40 CFR 61.141).
- *Emergency Situations* - for continuing use of a PCB transformer exists when (40 CFR 761.3) **[Reviewed March 2000]**:
  1. neither a non-PCB transformer nor a non-PCB-contaminated transformer is currently in storage for reuse or readily available within 24 h for installation

2. immediate replacement is necessary to continue service for power users.
- *Encapsulant* - a substance that forms a barrier between lead-based paint and the environment using a liquid-applied coating (with or without reinforcement materials) or an adhesively bonded covering material (40 CFR 745.223) [**Added October 2001**].
  - *Encapsulation* - the application of an encapsulant (40 CFR 745.223) [**Added October 2001**].
  - *Encapsulation When Referring to Asbestos* - the treatment of ACM with a material that surrounds or embeds asbestos fibers in an adhesive matrix to prevent the release of fibers, as the encapsulant creates a membrane over the surface (bridging encapsulant) or penetrates the material and binds its components together (penetrating encapsulant) (40 CFR 763.83) [**Added March 2000**].
  - *Enclosure* - the use of rigid, durable construction materials that are mechanically fastened to the substrate in order to act as a barrier between lead-based paint and the environment (40 CFR 745.223) [**Added October 2001**].
  - *Enclosure When Referring to Asbestos* - an airtight, impermeable, permanent barrier around ACM to prevent the release of asbestos fibers into the air (40 CFR 763.83) [**Added March 2000**].
  - *Evaluation* - for LBP this means a risk assessment and/or inspection (40 CFR 745.103) [**Reviewed March 2000**].
  - *Excluded PCB Products* - PCB materials which appear at concentrations less than 50 ppm, including but not limited to (40 CFR 761.3) [**Added October 2001**]:
    1. Non-Aroclor inadvertently generated PCBs as a byproduct or impurity resulting from a chemical manufacturing process.
    2. Products contaminated with Aroclor or other PCB materials from historic PCB uses (investment casting waxes are one example).
    3. Recycled fluids and/or equipment contaminated during use involving the products described in paragraphs (a) and (b) of this definition (heat transfer and hydraulic fluids and equipment and other electrical equipment components and fluids are examples).
    4. Used oils, provided that in the cases of paragraphs (1) through (4) of this definition:
      - a. The products or source of the products containing < 50 ppm concentration PCBs were legally manufactured, processed, distributed in commerce, or used before October 1, 1984.
      - b. The products or source of the products containing < 50 ppm concentrations PCBs were legally manufactured, processed, distributed in commerce, or used, i.e., pursuant to authority granted by USEPA regulation, by exemption petition, by settlement agreement, or pursuant to other Agency-approved programs;
      - c. The resulting PCB concentration (i.e. below 50 ppm) is not a result of dilution, or leaks and spills of PCBs in concentrations over 50 ppm.
  - *Facility Component* - any part of any facility, including equipment (40 CFR 61.141).
  - *Fiber Release Episode* - any uncontrolled or unintentional disturbance of ACM resulting in visible emission (40 CFR 763.83) [**Added March 2000**].
  - *Firm* - a company, partnership, corporation, sole proprietorship or individual doing business, association, or other business entity; a Federal, State, Tribal, or local government agency; or a nonprofit organization (40 CFR 745.83) [**Added July 2008**].
  - *Fluorescent Light Ballast* - a device that electrically controls fluorescent light fixtures and that includes a capacitor containing 0.1 kg or less of dielectric (40 CFR 761.3) [**Added October 2001**].
  - *Friable* - when referring to material in a school building means that the material, when dry, may be crumbled, pulverized, or reduced to powder by hand pressure, and includes previously nonfriable material after such

previously nonfriable material becomes damaged to the extent that when dry it may be crumbled, pulverized, or reduced to powder by hand pressure (40 CFR 763.83) [**Added March 2000**].

- *Friable Asbestos Material* - any material that contains more than 1 percent asbestos and can be crumbled, pulverized, or reduced to powder, when dry, by hand pressure (40 CFR 61.141).
- *Friction Surface* - an interior or exterior surface that is subject to abrasion or friction, including, but not limited to, certain window, floor, and stair surfaces (40 CFR 745.63) [**Added April 2001**].
- *Fugitive Source* - any source of emissions not controlled by an air pollution control device (40 CFR 61.141).
- *Functional Space* - a room, group of rooms, or homogeneous area (including crawl spaces or the space between a dropped ceiling and the floor or roof deck above), such as classroom(s), a cafeteria, gymnasium, hallway(s), designated by a person accredited to prepare management plans, design abatement projects, or conduct response actions (40 CFR 763.83) [**Added March 2000**].
- *Generator of PCB Waste* - any person whose act or process produces PCBs that are regulated for disposal under Subpart D of 40 CFR 761, or whose act first causes PCBs or PCB Items to become subject to the disposal requirements of Subpart D of 40 CFR 761, or who has physical control over the PCBs when a decision is made that the use of the PCBs has been terminated and therefore is subject to the disposal requirements of Subpart D of 40 CFR 761. Unless another provision of 40 CFR 761 specifically requires a site-specific meaning, “generator of PCB waste” includes all of the sites of PCB waste generation owned or operated by the person who generates PCB waste (40 CFR 761.3) [**Added October 2001**].
- *Glove Bag* - a sealed compartment with attached inner gloves used for the handling of ACM (40 CFR 61.141).
- *HEPA Vacuum* - a vacuum cleaner which has been designed with a high-efficiency particulate air (HEPA) filter as the last filtration stage. A HEPA filter is a filter that is capable of capturing particulates of 0.3 microns with 99.97% efficiency. The vacuum cleaner must be designed so that all the air drawn into the machine is expelled through the HEPA filter with none of the air leaking past it. HEPA vacuums must be operated and maintained in accordance with the manufacturer's instructions (40 CFR 745.83) [**Revised October 2011**].
- *Hands-On Skills Assessment* - an evaluation which tests the trainees' ability to satisfactorily perform the work practices and procedures identified in 40 CFR 745.225(d), as well as any other skill taught in a training course (40 CFR 745.223) [**Added October 2001**].
- *High Concentration PCBs* - PCBs that contain 500 ppm or greater PCBs, or those materials which the USEPA requires to be assumed to contain 500 ppm or greater PCBs in the absence of testing (40 CFR 761.123) [**Reviewed March 2000**].
- *High-Efficiency Particulate Air (HEPA) Filter* - a filtering system capable of trapping and retaining at least 99.97 percent of all monodispersed particles 0.3µm in diameter or larger (40 CFR 763.83) [**Added March 2000**].
- *High Occupancy Area* - any area where PCB remediation waste has been disposed of onsite and where occupancy for any individual not wearing dermal and respiratory protection for a calendar year is: 840 h or more (an average of 16.8 h or more per week) for non-porous surfaces and 335 h or more (an average of 6.7 h or more per week) for bulk PCB remediation waste. Examples could include a residence, school, day care center, sleeping quarters, a single or multiple occupancy 40 h per week workstation, a school class room, a cafeteria in an industrial facility, a control room, and a work station at an assembly line (40 CFR 761.3) [**Added October 1998**].
- *Homogeneous Area* - an area of surfacing material, thermal system insulation material, or miscellaneous material that is uniform in color and texture (40 CFR 763.83) [**Added March 2000**].

- *Housing for the Elderly* - retirement communities or similar types of housing reserved for households composed of one or more persons 62 years of age or more at the time of initial occupancy (40 CFR 745.103) **[Added October 2001]**.
- *Impact Surface* - an interior or exterior surface that is subject to damage by repeated sudden force such as certain parts of door frames (40 CFR 745.63) **[Added April 2001]**.
- *Impervious Solid Surfaces* - solid surfaces which are nonporous and thus unlikely to absorb spilled PCBs within the short period of time required for cleanup of spills under this policy. Impervious solid surfaces include, but are not limited to, metals, glass, aluminum siding, and enameled or laminated surfaces (40 CFR 761.123) **[Added October 2001]**.
- *In or Near Commercial Buildings* - within the interior of, on the roof of, attached to the exterior wall of, in the parking area serving, or within 30 m [approx. 98 ft] of a nonindustrial, nonsubstation building (40 CFR 761.3) **[Reviewed March 2000]**.
- *In Poor Condition* - the binding of the material is losing its integrity as indicated by peeling, cracking, or crumbling of the material (40 CFR 61.141).
- *In-service* - the transformer is used electrically under loaded conditions that raise the temperature of the dielectric fluid to at least 50 degrees Centigrade (40 CFR 761.30(a)(2)(v)) **[Added October 2001]**.
- *Inactive Waste Disposal Site* - any disposal site or portion of it where additional asbestos-containing waste material will not be deposited and where the surface is not disturbed by vehicular traffic (40 CFR 61.141).
- *Industrial Building* - a building directly used in manufacturing or technically productive enterprises (40 CFR 761.3) **[Reviewed March 2000]**.
- *Inspection* - for LBP this means (40 CFR 745.103) **[Reviewed March 2000]**:
  1. a surface by surface investigation to determine the presence of LBP as provided in section 302(c) of the *Lead Based Paint Poisoning and Prevention Act* (42 USC 4822)
  2. the provision of a report explaining the results of the investigation.
- *Interim Certification* - the status of an individual who has successfully completed the appropriate training course in a discipline from an accredited training program, as defined by this section, but has not yet received formal certification in that discipline from USEPA pursuant to 40 CFR 745.226. Interim certifications expire 6 mo after the completion of the training course, and is equivalent to a certificate for the 6-month period (40 CFR 745.223) **[Added October 2001]**.
- *Interim Controls* - a set of measures designed to temporarily reduce human exposure or likely exposure to lead-based paint hazards, including specialized cleaning, repairs, maintenance, painting, temporary containment, ongoing monitoring of lead-based paint hazards or potential hazards, and the establishment and operation of management and resident education programs (40 CFR 745.83) **[Added July 2008]**.
- *Interim Controls* - a set of measures designed to temporarily reduce human exposure or likely exposure to lead-based paint hazards, including specialized cleaning, repairs, maintenance, painting, temporary containment, ongoing monitoring of lead-based paint hazards or potential hazards, and the establishment and operation of management and resident education programs (40 CFR 745.223) **[Added October 2001]**.
- *Interior Window Sill* - the portion of the horizontal window ledge that protrudes into the interior of the room (40 CFR 745.63) **[Added April 2001]**.

- *Lead-Based Paint (LBP)* - paint or other surface coatings that contain lead equal to or in excess of 1.0 mg/cm<sup>2</sup> or 0.5 percent by weight (40 CFR 745.103 and 40 CFR 745.223) [**Reviewed March 2000**].
- *Lead Based Paint Activities* - in the case of target housing and child-occupied facilities, inspection, risk assessment, and abatement (40 CFR 745.223) [**Reviewed March 2000**].
- *Lead-based Paint Activities Courses* - initial and refresher training courses (worker, supervisor, inspector, risk assessor, project designer) provided by accredited training programs (40 CFR 745.223) [**Added July 2004**].
- *Lead-Based Paint Free Housing* - target housing that has been found to be free of paint or other surface coatings that contain lead equal to or in excess of 1.0 mg/cm<sup>2</sup> or 0.5 percent by weight (40 CFR 745.103) [**Reviewed March 2000**].
- *Lead-Based Paint Hazard* - any condition that causes exposure to lead from lead-contaminated dust, lead contaminated soil, or lead-contaminated paint that is deteriorated or present in accessible surfaces, friction surfaces, or impact surfaces that would result in adverse human health effects as established by the appropriate Federal agency (40 CFR 745.103 and 745.223) [**Reviewed March 2000**].
- *Lead-based Paint Hazard* - hazardous lead-based paint, dust-lead hazard or soil-lead hazard defined as follows: (40 CFR 745.63 and 745.65) [**Added April 2001**]:
  1. A paint-lead hazard is any of the following:
    - a. Any lead-based paint on a friction surface that is subject to abrasion and where the lead dust levels on the nearest horizontal surface underneath the friction surface (e.g., the window sill, or floor) are equal to or greater than the dust-lead hazard levels
    - b. Any damaged or otherwise deteriorated lead-based paint on an impact surface that is caused by impact from a related building component (such as a door knob that knocks into a wall or a door that knocks against its door frame.
    - c. Any chewable lead-based painted surface on which there is evidence of teeth marks.
    - d. Any other deteriorated lead-based paint in any residential building or child-occupied facility or on the exterior of any residential building or child-occupied facility.
  2. A dust-lead hazard is surface dust in a residential dwelling or child-occupied facility that contains a mass-per-area concentration of lead equal to or exceeding 40 micrograms/ft<sup>2</sup> on floors or 250 micrograms/ft<sup>2</sup> on interior window sills based on wipe samples.
  3. A soil-lead hazard is bare soil on residential real property or on the property of a child-occupied facility that contains total lead equal to or exceeding 400 ppm (g/g) in a play area or average of 1,200 ppm of bare soil in the rest of the yard based on soil samples.
- *Lead Contaminated Dust* - surface dust in residential dwellings, or child-occupied facilities that contains an area or mass concentration of lead at or in excess of levels identified by the USEPA or authorized regulatory agency pursuant to TSCA section 403 (40 CFR 745.223) [**Added October 2001**].
- *Lead Contaminated Soil* - bare soil on residential real property and on the property of a child-occupied facility that contains lead at or in excess of levels identified by the Administrator pursuant to TSCA section 403 (40 CFR 745.223) [**Reviewed March 2000**].
- *Lead-Hazard Screen* - a limited risk assessment activity that involves limited paint and dust sampling as described in 40 CFR 745.227(c) (40 CFR 745.223) [**Added October 2001**].
- *Leak or Leaking* - any instance in which a PCB article, PCB container, or PCB equipment has any PCBs on any portion of its external surface (40 CFR 761.3) [**Reviewed March 2000**].
- *Lessee* - any entity that enters into agreement to lease, rent, or sublease target housing, including but not limited to individuals, partnerships, corporations, trusts, government agencies, housing agencies, Indian tribes, and nonprofit organizations (40 CFR 745.103) [**Reviewed March 2000**].

- *Lessor* - any entity that offers target housing for lease, rent, or sublease, including but not limited to individuals, partnerships, corporations, trusts, government agencies, housing agencies, Indian tribes, and nonprofit organizations (40 CFR 745.103) [**Reviewed March 2000**].
- *Liquid PCBs* - a homogenous flowable material containing PCBs and no more than 0.5 percent by weight non-dissolved material (40 CFR 761.3) [**Added October 1998**].
- *Living Area* - any area of a residential dwelling used by one or more children age 6 and under, including, but not limited to, living rooms, kitchen areas, dens, play rooms, and children's bedrooms (40 CFR 745.223) [**Added October 2001**].
- *Loading* - the quantity of a specific substance present per unit of surface area, such as the amount of lead in micrograms contained in the dust collected from a certain surface area divided by the surface area in square feet or square meters (40 CFR 745.63) [**Added April 2001**].
- *Low Concentration PCBs* - PCBs that are tested and found to contain less than 500 ppm PCBs or those PCB-containing materials which USEPA requires to be assumed to be at concentrations below 500 ppm (i.e., untested mineral oil dielectric fluid) (40 CFR 761.123) [**Reviewed March 2000**].
- *Low Occupancy Area* - any area where PCB remediation waste has been disposed of onsite and where occupancy for any individual not wearing dermal and respiratory protection for a calendar year is: less than 840 h (an average of 16.8 h/week) for non-porous surfaces and less than 335 h (an average of 6.7 h/week) for bulk PCB remediation waste. Examples could include an electrical substation or a location in an industrial facility where a worker spends small amounts of time per week (such as an unoccupied area outside a building, an electrical equipment vault, or in the non-office space in a warehouse where occupancy is transitory) (40 CFR 761.3) [**Added October 1998; Reviewed March 2000**].
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Mark* - the descriptive name, instructions, cautions, or other information applied to PCBs and PCB items, or other objects subject to these regulations (40 CFR 761.3) [**Reviewed March 2000**].
- *Marking* - the marking of PCB items and PCB storage areas and transport vehicles by means of applying a legible mark by painting, fixation of an adhesive label, or by any other method that meets the requirements of these regulations (40 CFR 761.3) [**Reviewed March 2000**].
- *Mid-yard* - an area of a residential yard approximately midway between the dripline of a residential building and the nearest property boundary or between the driplines of a residential building and another building on the same property (40 CFR 745.63) [**Added April 2001**].
- *Mineral Oil PCB Transformers* - any transformer originally designed to contain mineral oil as the dielectric fluid and which has been tested and found to contain 500 ppm or greater PCBs (40 CFR 761.3) [**Reviewed March 2000**].
- *Minor Repair and Maintenance Activities* - activities, including minor heating, ventilation or air conditioning work, electrical work, and plumbing, that disrupt 6 square feet or less of painted surface per room for interior activities or 20 square feet or less of painted surface for exterior activities where none of the work practices prohibited or restricted by 40 CFR 745.85(a)(3) are used and where the work does not involve window replacement or demolition of painted surface areas. When removing painted components, or portions of painted components, the entire surface area removed is the amount of painted surface disturbed. Jobs, other than emergency renovations, performed in the same room within the same 30 days must be considered the same job for the purpose of determining whether the job is a minor repair and maintenance activity (40 CFR 745.83) [**Added July 2008**].

- *Miscellaneous ACM* - miscellaneous material that is ACM in a school building (40 CFR 763.83) [**Added March 2000**].
- *Miscellaneous Material* - interior building material on structural components, structural members or fixtures, such as floor and ceiling tiles, and does not include surfacing material or thermal system insulation (40 CFR 763.83) [**Added March 2000**].
- *Mixture* - any combination of two or more chemical substances if the combination does not occur in nature and is not, in whole or in part, the result of a chemical reaction; except that such term does include any combination which occurs, in whole or in part, as a result of a chemical reaction if none of the chemical substances comprising the combination is a new chemical substance and if the combination could have been manufactured for commercial purposes without a chemical reaction at the time the chemical substances comprising the combination were combined (40 CFR 761.3) [**Added October 2001**].
- *Multi-Family Dwelling* - a structure that contains more than one separate residential dwelling unit, which is used or occupied, or intended to be used or occupied, in whole or in part as the home or residence of one or more persons (40 CFR 745.223) [**Reviewed March 2000**].
- *Municipal Solid Wastes* - garbage, refuse, sludges, wastes, and other discarded materials resulting from residential and non-industrial operations and activities, such as household activities, office functions, and commercial housekeeping wastes (40 CFR 761.3) [**Added October 2001**].
- *Natural Gas Pipeline System* - natural gas gathering facilities, natural gas pipe, natural gas compressors, natural gas storage facilities, and natural gas pipeline appurtenances (including instrumentation and vessels directly in contact with transported natural gas such as valves, regulators, drips, filter separators, etc., but not including air compressors) (40 CFR 761.3) [**Added October 2001**].
- *Nonfriable* - material in a school building which when dry may not be crumbled, pulverized, or reduced to powder by hand pressure (40 CFR 763.83) [**Added March 2000**].
- *Non-Imperious Solid Surfaces* - solid surfaces which are porous and are more likely to absorb spilled PCBs prior to completion of the cleanup requirements prescribed in this policy. Non-imperious solid surfaces include, but are not limited to, wood, concrete, asphalt, and plasterboard (40 CFR 761.123) [**Added October 2001**].
- *Non-Liquid PCBs* - materials containing PCBs that, by visual inspection, do not flow at room temperature (25 oC or 77 oF) or from which no liquid passes when a 100 g or 100 mL representative sample is placed in a mesh number 60 +/- 5 percent paint filter and allowed to drain at room temperature for 5 min (40 CFR 761.3) [**Added October 1998; Reviewed March 2000**].
- *Non-PCB Transformers* - any transformer that contains less than 50 ppm PCB except any transformer that has been converted from a PCB Transformer or a PCB-Contaminated Transformer cannot be classified as a non-PCB Transformer until reclassification has occurred in accordance with the requirements of 40 CFR 761.30(a)(2)(v) (40 CFR 761.3) [**Reviewed March 2000**].
- *Non-Porous Surface* - a smooth, unpainted solid surface that limits penetration of liquid containing PCBs beyond the immediate surface. Examples are: smooth uncorroded metal; natural gas pipe with a thin porous coating originally applied to inhibit corrosion; smooth glass; smooth glazed ceramics; impermeable polished building stone such as marble or granite; and high density plastics, such as polycarbonates and melamines, that do not absorb organic solvents (40 CFR 761.3) [**Added October 1998; Reviewed March 2000**].
- *Non-Scheduled Renovation* - a renovation operation necessitated by the routine failure of equipment, which is expected to occur within a given period based on past operating experience, but for which an exact date cannot be predicted (40 CFR 61.141).

- *Nonrestricted Access Areas* - any area other than restricted access, outdoor electrical substations, and other restricted access locations, as defined in this section. In addition to residential/commercial areas, these areas include unrestricted access rural areas (areas of low density development and population where access is uncontrolled by either man-made barriers or naturally occurring barriers, such as rough terrain, mountains, or cliffs) (40 CFR 761.123) **[Added October 2001]**.
- *Open Burning* - the combustion of any PCB regulated for disposal, in a manner not approved or otherwise allowed under subpart D of this part, and without any of the following **[Added October 1998; Reviewed March 2000]**:
  1. control of combustion air to maintain adequate temperature for efficient combustion
  2. containment of the combustion reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion
  3. control of emission of the gaseous combustion products (40 CFR 761.3).
- *Operations and Maintenance Program* - a program of work practices to maintain friable ACBM in good condition, ensure clean up of asbestos fibers previously released, and prevent further release by minimizing and controlling friable ACBM disturbance or damage (40 CFR 763.83) **[Added March 2000]**.
- *Other Restricted Access (Nonsubstation) Locations* - areas other than electrical substations that are at least 0.1 kilometer (km) from a residential/commercial area and limited by man-made barriers (e.g., fences and walls) to substantially limited by naturally occurring barriers such as mountains, cliffs, or rough terrain. These areas generally include industrial facilities and extremely remote rural locations. (Areas where access is restricted but are less than 0.1 km from a residential/commercial area are considered to be residential/commercial areas.) (40 CFR 761.123) **[Added October 2001]**.
- *Outdoor Electrical Substations* - outdoor, fenced-off, and restricted access areas used in the transmission and/or distribution of electrical power. Outdoor electrical substations restrict public access by being fenced or walled off as defined under 40 CFR 761.30(l)(1)(ii). For purposes of this TSCA policy, outdoor electrical substations are defined as being located at least 0.1 km from a residential/commercial area. Outdoor fenced-off and restricted access areas used in the transmission and/or distribution of electrical power which are located less than 0.1 km from a residential/commercial area are considered to be residential/commercial areas. (40 CFR 761.123) **[Added October 2001]**.
- *Outside Air* - the air outside buildings and structures, including but not limited to, air under a bridge or an open ferry dock (40 CFR 61.141).
- *Owner* - any entity that has legal title to target housing, including but not limited to individuals, partnerships, corporations, trusts, government agencies, housing agencies, Indian tribes, and nonprofit organizations except where a mortgage holds legal title to property serving as collateral for a mortgage loan, in which case the owner would be the mortgagor (40 CFR 745.103) **[Reviewed March 2000]**.
- *PCB or PCBs* - a chemical substance that is limited to the biphenyl molecule that has been chlorinated to varying degrees or any combination of substances which contains such substance (40 CFR 761.3) **[Reviewed March 2000]**.
- *PCB Article* - any manufactured article, other than a PCB container, that contains PCBs and whose surface(s) has been in direct contact with PCBs. This includes capacitors, transformers, electric motors, pumps, and pipes (40 CFR 761.3) **[Reviewed March 2000]**.
- *PCB Article Container* - any package, can, bottle, bag, barrel, drum, tank, or other device used to contain PCB articles or PCB equipment, and whose surface(s) has not been in direct contact with PCBs (40 CFR 761.3) **[Reviewed March 2000]**.
- *PCB Bulk Product Waste* - waste derived from manufactured products containing PCBs in a non-liquid state, at any concentration where the concentration at the time of designation for disposal was  $\geq 50$  ppm PCBs. PCB

bulk product waste does not include PCBs or PCB Items regulated for disposal under 40 CFR 761.60(a) through 761.60(c), 761.61, 761.63, or 761.64. PCB bulk product waste includes, but is not limited to **[Added October 1998; Reviewed March 2000; Revised July 2013]**:

1. non-liquid bulk wastes or debris from the demolition of buildings and other man-made structures manufactured, coated, or serviced with PCBs. PCB bulk product waste does not include debris from the demolition of buildings or other man-made structures that is contaminated by spills from regulated PCBs which have not been disposed of, decontaminated, or otherwise cleaned up in accordance with subpart D of this part.
2. PCB-containing wastes from the shredding of automobiles, household appliances, or industrial appliances.
3. plastics (such as plastic insulation from wire or cable; radio, television and computer casings; vehicle parts; or furniture laminates); preformed or molded rubber parts and components; applied dried paints, varnishes, waxes, or other similar coatings or sealants; caulking; adhesives; paper; Galbestos; sound deadening or other types of insulation; and felt or fabric products such as gaskets.
4. fluorescent light ballasts containing PCBs in the potting material (40 CFR 761.3).

(NOTE: The EPA Memorandum, *PCB Bulk Waste Reinterpretation*, dated 24 October 2012, “allows building material ‘coated or serviced’ with PCB bulk product waste [e.g., caulk, paint, mastics, sealants] at the time of designation for disposal as a PCB bulk product waste.”)

- *PCB Capacitor* - any capacitor that contains  $\geq 500$  ppm PCB. Concentration assumptions applicable to capacitors appear under 40 CFR 761.2 (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *PCB Concentration Assumptions* - the following assumption may be made in relation to PCB concentrations (40 CFR 761.1(b)(2), 761.1(b)(3), and 761.2(a)) **[Revised October 1999; Reviewed March 2000]**:
  1. transformers with  $< 3$  lb (1.36 kg) of fluid, circuit breakers, reclosers, oil-filled cable, and rectifiers whose PCB concentration is not established contain PCBs at  $< 50$  ppm
  2. mineral oil-filled electrical equipment that was manufactured before 2 July 1979, and whose PCB concentration is not established, is PCB-Contaminated Electrical Equipment (i.e., contains  $\geq 50$  PCB, but  $< 500$  ppm PCB)
  3. all pole-top and pad-mounted distribution transformers manufactured before 2 July 1979 are assumed to be mineral-oil filled
  4. electrical equipment manufactured after 2 July 1979 is non-PCB (i.e.,  $< 50$  ppm PCBs). If the date of manufacture of mineral oil-filled electrical equipment is unknown, assume it to be PCB-Contaminated.
  5. transformers manufactured prior to 2 July 1979, that contain 1.36 kg (3 lb) or more of fluid other than mineral oil, and whose PCB concentration is not established, are PCB Transformers (i.e.,  $\geq 500$  ppm). If the date of manufacture and the type of dielectric fluid are unknown, assume the transformer to be a PCB Transformer.
  6. a capacitor manufactured prior to 2 July 1979, whose PCB concentration is not established contains  $\geq 500$  ppm PCBs
  7. a capacitor manufactured after 2 July 1979 is non-PCB (i.e.,  $< 50$  ppm PCBs). If the date of manufacture is unknown, assume the capacitor contains  $\geq 500$  ppm PCBs
  8. a capacitor marked at the time of manufacture with the statement “No PCBs” in accordance with 40 CFR 761.40(g) is non-PCB
  9. provisions that apply to PCBs at concentrations of  $< 50$  ppm apply also to contaminated surfaces at PCB concentrations of  $\leq 10$  micrograms/100 cm<sup>2</sup>
  10. provisions that apply to PCBs at concentrations of  $\geq 50$  to  $< 500$  ppm apply also to contaminated surfaces at PCB concentrations of  $> 10$  micrograms/100 cm<sup>2</sup> to  $< 100$  micrograms/100 cm<sup>2</sup>
  11. provisions that apply to PCBs at concentrations of  $\geq 500$  ppm apply also to contaminated surfaces at PCB concentrations of  $\geq 100$  micrograms/100 cm<sup>2</sup>.

Unless otherwise noted, PCB concentrations shall be determined on a weight-per-weight basis, or for liquids on a weight-per-volume basis if the density of the liquid is also reported. Unless otherwise provided, PCBs are quantified based on the formulation of PCBs present in the material analyzed.

- *PCB Container* - any package, can, bottle, bag, barrel, drum, tank, or other device that contains PCBs or PCB Articles and whose surface(s) has been in direct contact with PCBs (40 CFR 761.3) **[Added October 2001]**.
- *PCB Container* - any package, can, bottle, bag, barrel, drum, tank, or other device that contains PCBs or PCB Articles and whose surface(s) has been in direct contact with PCBs (40 CFR 761.3) **[Added October 2001]**.
- *PCB-Contaminated* - a non-liquid material containing PCBs at concentrations  $\geq 50$  ppm but  $< 500$  ppm; a liquid material containing PCBs at concentrations  $\geq 50$  ppm but  $< 500$  ppm or where insufficient liquid material is available for analysis, a non-porous surface having a surface concentration  $> 10 \mu\text{g}/100 \text{ cm}^2$  but  $< 100 \mu\text{g}/100 \text{ cm}^2$ , measured by a standard wipe test as defined in 40 CFR 761.123 (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *PCB-Contaminated Electrical Equipment* - any electrical equipment including, but not limited to, transformers (including those used in railway locomotives and self-propelled cars), capacitors, circuit breakers, reclosers, voltage regulators, switches (including sectionalizers and motor starters), electromagnets, and cable, that contains PCBs at concentrations of  $\geq 50$  ppm and  $< 500$  ppm in the contaminating fluid. In the absence of liquids, electrical equipment is PCB-Contaminated if it has PCBs at  $> 10 \mu\text{g}/100 \text{ cm}^2$  and  $< 100 \mu\text{g}/100 \text{ cm}^2$  as measured by a standard wipe test (as defined in 40 CFR 761.123) of a non-porous surface (40 CFR 761.3) **[Revised October 1998; Reviewed March 2000]**.
- *PCB Equipment* - any manufactured item, other than a PCB container or a PCB article container, which contains a PCB article or other PCB equipment, and includes microwave ovens, electronic equipment, and fluorescent light ballasts and fixtures (40 CFR 761.3) **[Reviewed March 2000]**.
- *PCB Field Screening Test* - a portable analytical device or kit which measures PCBs. PCB field screening tests usually report less than or greater than a specific numerical PCB concentration. These tests normally build in a safety factor which increases the probability of a false positive report and decreases the probability of a false negative report. PCB field screening tests do not usually provide: an identity record generated by an instrument; a quantitative comparison record from calibration standards; any identification of PCBs; and/or any indication or identification of interferences with the measurement of the PCBs. PCB field screening test technologies include, but are not limited to, total chlorine colorimetric tests, total chlorine x-ray fluorescence tests, total chlorine microcoulometric tests, and rapid immunoassay tests (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *PCB Household Waste* - PCB waste that is generated by residents on the premises of a temporary or permanent residence for individuals (including individually owned or rented units of a multi-unit construction), and that is composed primarily of materials found in wastes generated by consumers in their homes. PCB household waste includes unwanted or discarded non-commercial vehicles (prior to shredding), household items, and appliances or appliance parts and wastes generated on the premises of a residence for individuals as a result of routine household maintenance by or on behalf of the resident. Bulk or commingled liquid PCB wastes at concentrations of  $\geq 50$  ppm, demolition and renovation wastes, and industrial or heavy-duty equipment with PCBs are not household wastes (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *PCB Item* - any PCB Article, PCB Article Container, PCB Container, PCB Equipment, or anything that deliberately or unintentionally contains or has as a part of it any PCB or PCBs (40 CFR 761.3) **[Revised October 1998; Reviewed March 2000]**.
- *PCB/Radioactive Waste* - PCBs regulated for disposal under subpart D of this part that also contain source, special nuclear, or byproduct material subject to regulation under the *Atomic Energy Act of 1954*, as amended, or naturally-occurring or accelerator-produced radioactive material (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *PCB Remediation Waste* - waste containing PCBs as a result of a spill, release, or other unauthorized disposal, at the following concentrations: Materials disposed of prior to 18 April 1978, that are currently at concentrations  $\geq 50$  ppm PCBs, regardless of the concentration of the original spill; materials which are currently at any volume

or concentration where the original source was  $\geq$  500 ppm PCB beginning on 18 April 1978, or  $\geq$  50 ppm PCB beginning on 2 July 1979; and materials which are currently at any concentration if the PCBs are spilled or released from a source not authorized for use under 40 CFR 761. PCB remediation waste means soil, rags, and other debris generated as a result of any PCB spill cleanup, including, but not limited to (40 CFR 761.3) **[Revised October 1999; Reviewed March 2000]**.

1. environmental media containing PCBs, such as soil and gravel; dredged materials, such as sediments, settled sediment fines, and aqueous decantate from sediment.
  2. sewage sludge containing  $<50$  ppm PCBs and not in use according to 40 CFR 761.20(a)(4); PCB sewage sludge; commercial or industrial sludge contaminated as the result of a spill of PCBs including sludges located in or removed from any pollution control device; aqueous decantate from an industrial sludge.
  3. buildings and other manmade structures (such as concrete floors, wood floors, or walls contaminated from a leaking PCB or PCB-Contaminated transformer), porous surfaces, and non-porous surfaces.
- *PCB Sewage Sludge* - sewage sludge as defined in 40 CFR 503.9(w) which contains  $\geq$  50 ppm PCBs, as measured on a dry weight basis (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
  - *PCB Transformer* - any transformer that contains  $\geq$  500 ppm PCBs. For PCB concentration assumptions applicable to transformers containing 1.36 kg (3 lb) or more of fluid other than mineral oil, see 40 CFR 761.2. For provisions permitting reclassification of electrical equipment, including PCB Transformers, containing  $\geq$  500 ppm PCBs to PCB-Contaminated Electrical Equipment, see 40 CFR 761.30(a) and (h) (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
  - *PCB Waste* - those PCBs and PCB Items that are subject to the disposal requirements of Subpart D of 40 CFR 761 (40 CFR 761.3) **[Reviewed March 2000]**.
  - *Paint in Poor Condition* - more than 10 ft<sup>2</sup> of deteriorated paint or exterior components with large surface areas; or more than 2 ft<sup>2</sup> of deteriorated paint on interior components with large surface areas (e.g., walls, ceilings, floors, doors); or more than 10 percent of the total surface area of the component is deteriorated on interior or exterior components with small surface areas (window sills, baseboards, soffits, trim) (40 CFR 745.223) **[Reviewed March 2000]**.
  - *Painted Surface* - a component surface covered in whole or in part with paint or other surface coatings (40 CFR 745.83) **[Added October 2011]**.
  - *Pamphlet* - the EPA pamphlet titled Renovate Right: Important Lead Hazard Information for Families, Child Care Providers and Schools developed under section 406(a) of TSCA for use in complying with section 406(b) of TSCA, or any State or Tribal pamphlet approved by EPA pursuant to 40 CFR 745.326 that is developed for the same purpose. This includes reproductions of the pamphlet when copied in full and without revision or deletion of material from the pamphlet (except for the addition or revision of State or local sources of information). Before December 22, 2008, the term "pamphlet" also means any pamphlet developed by EPA under section 406(a) of TSCA or any State or Tribal pamphlet approved by EPA pursuant to 40 CFR 745.326 (40 CFR 745.83) **[Added June 1998; Reviewed March 2000; Revised July 2008]**.
  - *Particulate Asbestos Material* - finely divided particles of asbestos or material containing asbestos (40 CFR 61.141).
  - *Permanently Covered Soil* - soil which has been separated from human contact by the placement of a barrier consisting of solid, relatively impermeable materials, such as pavement or concrete. Grass, mulch, and other landscaping materials are not considered permanent covering (40 CFR 745.223) **[Reviewed March 2000]**.
  - *Person* - any natural or judicial person including any individual, corporation, partnership, or association; any Indian tribe, state, or political subdivision thereof; any interstate body; and any department, agency, or instrumentality of the Federal Government (40 CFR 745.83) **[Added June 1998; Reviewed March 2000]**.

- *Planned Renovation Operations* - a renovation operation, or a number of such operations, in which the amount of friable asbestos material that will be removed or stripped within a given period of time can be predicted. Individual nonscheduled operations are included if a number of such operations can be predicted to occur during a given period of time based on operating experience (40 CFR 61.141).
- *Play Area* - an area of frequent soil contact by children of less than 6 yr of age as indicated by, but not limited to, such factors including the following: the presence of play equipment (e.g., sandboxes, swing sets, and sliding boards), toys, or other children's possessions, observations of play patterns, or information provided by parents, residents, care givers, or property owners (40 CFR 745.63) **[Added April 2001]**.
- *Porous Surface* - any surface that allows PCBs to penetrate or pass into itself including, but not limited to, paint or coating on metal; corroded metal; fibrous glass or glass wool; unglazed ceramics; ceramics with a porous glaze; porous building stone such as sandstone, travertine, limestone, or coral rock; low-density plastics such as styrofoam and low-density polyethylene; coated (varnished or painted) or uncoated wood; concrete or cement; plaster; plasterboard; wallboard; rubber; fiberboard; chipboard; asphalt; or tar paper. For purposes of cleaning and disposing of PCB remediation waste, porous surfaces have different requirements than non-porous surfaces (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *Posing an Exposure Risk to Food or Feed* - being in any location where human food or animal feed products could be exposed to PCBs released from a PCB Item (40 CFR 761.3) **[Reviewed March 2000]**.
- *Potential Damage* - circumstances in which (40 CFR 763.83) **[Added March 2000]**:
  1. Friable ACBM is in an area regularly used by building occupants, including maintenance personnel, in the course of their normal activities.
  2. There are indications that there is a reasonable likelihood that the material or its covering will become damaged, deteriorated, or delaminated due to factors such as changes in building use, changes in operations and maintenance practices, changes in occupancy, or recurrent damage.
- *Potential Significant Damage* - circumstances in which (40 CFR 763.83) **[Added March 2000]**:
  1. Friable ACBM is in an area regularly used by building occupants, including maintenance personnel, in the course of their normal activities.
  2. There are indications that there is a reasonable likelihood that the material or its covering will become significantly damaged, deteriorated, or delaminated due to factors such as changes in building use, changes in operations and maintenance practices, changes in occupancy, or recurrent damage.
  3. The material is subject to major or continuing disturbance, due to factors including, but not limited to, accessibility or, under certain circumstances, vibration or air erosion.
- *Preventive Measures* - actions taken to reduce disturbance of ACBM or otherwise eliminate the reasonable likelihood of the material's becoming damaged or significantly damaged (40 CFR 763.83) **[Added March 2000]**.
- *Purchaser* - an entity that enters into an agreement to purchase an interest in target housing, including but not limited to individuals, partnerships, corporations, trusts, government agencies, housing agencies, Indian tribes, and nonprofit organizations (40 CFR 745.103) **[Reviewed March 2000]**.
- *Radon-222* - a naturally occurring, inert, radioactive gas that is formed from the radioactive decay of uranium.
- *Recognized Test Kit* - a commercially available kit recognized by EPA under 40 CFR 745.88 as being capable of allowing a user to determine the presence of lead at levels equal to or in excess of 1.0 milligrams per square centimeter, or more than 0.5% lead by weight, in a paint chip, paint powder, or painted surface (40 CFR 745.83) **[Added July 2008]**.

- *Recycled PCBs* - those PCBs which appear in the processing of paper products or asphalt roofing materials from PCB-contaminated raw materials. Processes which recycle PCBs must meet the following requirements (40 CFR 761.3) [**Added October 2001**].
  1. There are no detectable concentrations of PCBs in asphalt roofing material products leaving the processing site.
  2. The concentration of PCBs in paper products leaving any manufacturing site processing paper products, or in paper products imported into the United States, must have an annual average of less than 25 ppm with a 50 ppm maximum.
  3. The release of PCBs at the point at which emissions are vented to ambient air must be less than 10 ppm.
  4. The amount of Aroclor PCBs added to water discharged from an asphalt roofing processing site must at all times be less than 3 µg/L for total Aroclors (roughly 3 ppb). Water discharges from the processing of paper products must at all times be less than 3 µg/L for total Aroclors (roughly 3 ppb), or comply with the equivalent mass-based limitation.
  5. Disposal of any other process wastes at concentrations of 50 ppm or greater must be in accordance with Subpart D of 40 CFR 761.
- *Reduction* - measures designed to reduce or eliminate human exposure to lead-based paint hazards through methods including interim controls and abatement (40 CFR 745.103) [**Reviewed March 2000**].
- *Regulated Asbestos-Containing Material (RACM)* - includes friable asbestos material; Category I nonfriable ACM that has become friable; Category I nonfriable ACM that has been subjected to grinding, casting, cutting, or abrading; and Category II nonfriable ACM that has a high probability of becoming crumbled, crushed, or pulverized (40 CFR 61.141).
- *Removal* - the taking out or the stripping of substantially all ACBM from a damaged area, a functional space, or a homogeneous area in a school building (40 CFR 763.83) [**Added March 2000**].
- *Remove* - to take out RACM from any structure (40 CFR 61.141).
- *Renovation* - altering in any way one or more structure components. Operations in which load-supporting structural members are wrecked or taken out are excluded (40 CFR 61.141).
- *Renovation* - the modification of any existing structure, or portion thereof, that results in the disturbance of painted surfaces, unless that activity is performed as part of an abatement as defined by 40 CFR 745.223. The term renovation includes (but is not limited to): The removal, modification or repair of painted surfaces or painted components (e.g., modification of painted doors, surface restoration, window repair, surface preparation activity (such as sanding, scraping, or other such activities that may generate paint dust)); the removal of building components (e.g., walls, ceilings, plumbing, windows); weatherization projects (e.g., cutting holes in painted surfaces to install blown-in insulation or to gain access to attics, planing thresholds to install weather-stripping), and interim controls that disturb painted surfaces. A renovation performed for the purpose of converting a building, or part of a building, into target housing or a child-occupied facility is a renovation under this subpart. The term renovation does not include minor repair and maintenance activities (40 CFR 745.83) [**Added June 1998; Reviewed March 2000; Revised July 2008**].
- *Renovator* - an individual who either performs or directs workers who perform renovations. A certified renovator is a renovator who has successfully completed a renovator course accredited by EPA or an EPA-authorized State or Tribal program (40 CFR 745.83) [**Added June 1998; Reviewed March 2000; Revised July 2008**].
- *Repair* - returning damaged ACBM to an undamaged condition or to an intact state so as to prevent fiber release (40 CFR 763.83) [**Added March 2000**].
- *Research and Development (R&D) for PCB Disposal* - demonstrations for commercial PCB disposal approvals, pre-demonstration tests, tests of major modifications to previously approved PCB disposal technologies, treatability studies for PCB disposal technologies which have not been approved, development of new disposal

technologies, and research on chemical transformation processes including, but not limited to, biodegradation (40 CFR 761.3) [**Added October 1998; Reviewed March 2000**].

- *Residential Building* - a building containing one or more residential dwellings (40 CFR 745.63) [**Added April 2001**].
- *Residential/Commercial Areas* - those areas where people live or reside, or where people work in other than manufacturing or farming industries. Residential areas include housing and the property on which housing is located, as well as playgrounds, roadways, sidewalks, parks, and other similar areas within a residential community. Commercial areas are typically accessible to both members of the general public and employees and include public assembly properties, institutional properties, stores, office buildings, and transportation centers (40 CFR 761.123) [**Added October 2001**].
- *Residential Dwelling* - for LBP this means (40 CFR 745.103) [**Reviewed March 2000**]:
  1. a single family dwelling, including attached structures such as porches and stoops, or
  2. a single family dwelling unit in a structure that contains more than one separate residential dwelling unit, and in which such unit is used or occupied, in whole or in part, as the residence of one or more persons.
- *Response Action* - a method, including removal, encapsulation, enclosure, repair, operations and maintenance, that protects human health and the environment from friable ACBM (40 CFR 763.83) [**Added March 2000**].
- *Responsible Party* - the owner of the PCB equipment, facility, or other source of PCBs or his/her designated agent (e.g., a facility manager or foreman). (40 CFR 761.123) [**Added October 2001**].
- *Retrofill* - to remove PCB or PCB-contaminated dielectric fluid and replace it with either PCB, PCB-contaminated, or non-PCB dielectric fluid (40 CFR 761.3) [**Reviewed March 2000**].
- *Risk Assessment* - an onsite investigation to determine and report the existence, nature, severity, and location of LBP hazards in residential dwellings, including (40 CFR 745.103) [**Reviewed March 2000**]:
  1. information gathering regarding the age and history of the housing and occupancy by children under the age of 6
  2. visual inspections
  3. limited wipe sampling or other environmental sampling techniques
  4. other activity as may be appropriate
  5. provision of a report explaining the results of the investigation.
- *Room* - a separate part of the inside of a building, such as a bedroom, living room, dining room, kitchen, bathroom, laundry room, or utility room. To be considered a separate room, the room must be separated from adjoining rooms by built-in walls or archways that extend at least 6 inches from an intersecting wall. Half walls or bookcases count as room separators if built-in. Movable or collapsible partitions or partitions consisting solely of shelves or cabinets are not considered built-in walls. A screened in porch that is used as a living area is a room (40 CFR 745.63) [**Added April 2001**].
- *Routine Maintenance Area* - an area, such as a boiler room or mechanical room, that is not normally frequented by students and in which maintenance employees or contract workers regularly conduct maintenance activities (40 CFR 763.83) [**Added March 2000**].
- *Rupture of a PCB Transformer* - a violent or nonviolent break in the integrity of a PCB Transformer caused by an overtemperature and/or overpressure condition that results in the release of PCBs (40 CFR 761.3) [**Reviewed March 2000**].
- *School* - any elementary or secondary school as defined in section 8801 of Title 20 (TSCA Section 202(12)) [**Added March 2000**].

- *School Building* (40 CFR 763.83) **[Added March 2000]**:
  1. Any structure suitable for use as a classroom, including a school facility such as a laboratory, library, school eating facility, or facility used for the preparation of food.
  2. Any gymnasium or other facility which is specially designed for athletic or recreational activities for an academic course in physical education.
  3. Any other facility used for the instruction or housing of students or for the administration of educational or research programs.
  4. Any maintenance, storage, or utility facility, including any hallway, essential to the operation of any facility described in this definition of “school building” under paragraphs (1), (2), or (3).
  5. Any portico or covered exterior hallway or walkway.
  6. Any exterior portion of a mechanical system used to condition interior space.
- *Seller* - any entity that transfers legal title to target housing, in whole or in part, in return for consideration, including but not limited to individuals, partnerships, corporations, trusts, government agencies, housing agencies, Indian Tribes, and nonprofit organizations. The term seller also includes (40 CFR 745.103) **[Reviewed March 2000]**:
  1. an entity that transfers shares in a cooperatively owned project, in return for consideration
  2. an entity that transfers its interest in a leasehold, in jurisdictions or circumstances where it is legally permissible to separate the fee title from the title to the improvement, in return for consideration.
- *Sewage Sludge* - sewage sludge as defined in 40 CFR 503.9(w) that contains < 50 ppm (on a dry weight basis) PCBs (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *Significantly Damaged Friable Miscellaneous ACM* - damaged friable miscellaneous ACM where the damage is extensive and severe (40 CFR 763.83) **[Reviewed March 2000]**.
- *Significantly Damaged Friable Surfacing ACM* - damaged friable surfacing ACM in a functional space where the damage is extensive and severe (40 CFR 763.83) **[Reviewed March 2000]**.
- *Small Quantities* - for research and development, any quantity of PCBs (a) that is originally packaged in one or more hermetically sealed containers of a volume of no more than five (5.0) milliliters, and (b) that is used only for purposes of scientific experimentation or analysis, or chemical research on, or analysis of, PCBs, but not for research or analysis for the development of a PCB product (40 CFR 761.3) **[Added October 2001]**.
- *Soil Sample* - a sample collected in a representative location using ASTM E1727, “Standard Practice for Field Collection of Soil Samples for Lead Determination by Atomic Spectrometry Techniques,” or equivalent method (40 CFR 745.63) **[Added April 2001]**.
- *Soil Washing* - the extraction of PCBs from soil using a solvent, recovering the solvent from the soil, separating the PCBs from the recovered solvent for disposal, and then disposal or reuse of the solvent (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *Spill* - both intentional and unintentional spills, leaks, and other uncontrolled discharges where the release results in any quantity of PCBs running off or about to run off the external surface of the equipment or other PCB source, as well as the contamination resulting from those releases. This policy applies to spills of 50 ppm or greater PCBs. The concentration of PCBs spilled is determined by the PCB concentration in the material spilled as opposed to the concentration of PCBs in the material onto which the PCBs were spilled. Where a spill of untested mineral oil occurs, the oil is presumed to contain greater than 50 ppm, but less than 500 ppm PCBs and is subject to the relevant requirements of this policy (40 CFR 761.123) **[Added October 2001]**.
- *Spill Area* - the area of soil on which visible traces of the spill can be observed plus a buffer zone of 1 foot beyond the visible traces. Any surface or object (e.g., concrete sidewalk or automobile) within the visible traces area or on which visible traces of the spilled material are observed is included in the spill area. This area represents the

minimum area assumed to be contaminated by PCBs in the absence of precleanup sampling data and is thus the minimum area which must be cleaned (40 CFR 761.123) [**Added October 2001**].

- *Spill Boundaries* - the actual area of contamination as determined by postcleanup verification sampling or by precleanup sampling to determine actual spill boundaries. USEPA can require additional cleanup when necessary to decontaminate all areas within the spill boundaries to the levels required in this policy (e.g., additional cleanup will be required if postcleanup sampling indicates that the area decontaminated by the responsible party, such as the spill area as defined in this section, did not encompass the actual boundaries of PCB contamination) (40 CFR 761.123) [**Added October 2001**].
- *Standard Wipe Sample* - a sample collected for chemical extraction and analysis using the standard wipe test as defined in 40 CFR 761.123. Except as designated elsewhere in part 761, the minimum surface area to be sampled shall be 100 cm<sup>2</sup> (40 CFR 761.3) [**Added October 1998; Reviewed March 2000**].
- *Standard Wipe Test* - for spills of high-concentration PCBs on solid surfaces, a cleanup to numerical surface standards and sampling by a standard wipe test to verify that the numerical standards have been met. This definition constitutes the minimum requirements for an appropriate wipe testing protocol. A standard-size template (10 centimeters (cm) x 10 cm) will be used to delineate the area of cleanup; the wiping medium will be a gauze pad or glass wool of known size which has been saturated with hexane. It is important that the wipe be performed very quickly after the hexane is exposed to air. USEPA strongly recommends that the gauze (or glass wool) be prepared with hexane in the laboratory and that the wiping medium be stored in sealed glass vials until it is used for the wipe test. Further, USEPA requires the collection and testing of field blanks and replicates (40 CFR 761.123) [**Added October 2001**].
- *Start Date* - the first day of any lead-based paint activities training course or lead-based paint abatement activity (40 CFR 745.223) [**Added July 2004**].
- *Start Date Provided to EPA* - the start date included in the original notification or the most recent start date provided to EPA in an updated notification (40 CFR 745.223) [**Added July 2004**].
- *Storage for Disposal* - temporary storage of PCBs that have been designated for disposal (40 CFR 761.3) [**Added October 2001**].
- *Strip* - to take off RACM from any part of a facility (40 CFR 61.141).
- *Structural Member* - any load-supporting member of a structure, such as beams and load-supporting walls; or any nonload-supporting member, such as ceilings and nonload-supporting walls (40 CFR 61.141).
- *Surfacing ACM* - surfacing material that is ACM (40 CFR 763.83) [**Added October 2001**].
- *Surfacing Material* - material in a school building that is sprayed-on, troweled-on, or otherwise applied to surfaces, such as acoustical plaster on ceilings and fireproofing materials on structural members, or other materials on surfaces for acoustical, fireproofing, or other purposes (40 CFR 763.83) [**Added October 2001**].
- *SW-846* - the document having the title "SW-846, Test Methods for Evaluating Solid Waste," which is available from either the National Technical Information Service (NTIS, U.S. Department of Commerce, 5285 Port Royal Rd., Springfield, VA 22161, telephone: (703) 487-4650 or the U.S. Government Printing Office (U.S. GPO, 710 North Capitol St., NW., Washington, DC 20401, telephone: (202) 783-3238 (40 CFR 761.3) [**Added October 1998**].
- *Target Housing* - any housing constructed prior to 1978, except housing for the elderly or persons with disabilities (unless any child who is less than 6 yr of age resides or is expected to reside in such housing) or any zero-bedroom dwelling (40 CFR 745.103 and 745.223) [**Reviewed March 2000**].

- *Thermal System Insulation* - material in a school building applied to pipes, fittings, boilers, breeching, tanks, ducts, or other interior structural components to prevent heat loss or gain, or water condensation, or for other purposes (40 CFR 763.83) **[Added October 2001]**.
- *Thermal System Insulation ACM* - thermal system insulation that is ACM (40 CFR 763.83) **[Added October 2001]**.
- *Totally Enclosed Manner* - any manner that will ensure no exposure of human beings or the environment to any concentration of PCBs (40 CFR 761.3) **[Added October 2001]**.
- *Training Hour* - at least 50 min of actual learning, including, but not limited to, time devoted to lecture, learning activities, small group activities, demonstrations, evaluations, and hands-on experience (40 CFR 745.83) **[Added July 2008]**.
- *Training Provider* - any organization or entity accredited under 40 CFR 745.225 to offer lead-based paint activities courses (40 CFR 745.223) **[Added July 2004]**.
- *Transfer Facility* - any transportation-related facility including loading docks, parking areas, and other similar areas where shipments of PCB waste are held during the normal course of transportation. Transport vehicles are not transfer facilities under this definition, unless they are used for the storage of PCB waste, rather than for actual transport activities. Storage areas for PCB waste at transfer facilities are subject to the storage facility standards of 40 CFR 761.65, but such storage areas are exempt from the approval requirements of 40 CFR 761.65(d) and the recordkeeping requirements of 40 CFR 761.180, unless the same PCB waste is stored there for a period of more than 10 consecutive days between destinations (40 CFR 761.3) **[Added October 2001]**.
- *TSCA PCB Coordinated Approval* - the process used to recognize other Federal or state waste management documents governing the storage, cleanup, treatment, and disposal of PCB wastes. It is the mechanism under TSCA for accomplishing review, coordination, and approval of PCB waste management activities which are conducted outside of the TSCA PCB approval process, but require approval under the TSCA PCB regulations at 40 CFR part 761 (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *Unit* - a particular building, structure, or cell used to manage PCB waste (including, but not limited to, a building used for PCB waste storage, a landfill, an industrial boiler, or an incinerator) (40 CFR 761.3) **[Added October 1998; Reviewed March 2000]**.
- *Vertical Containment* - a vertical barrier consisting of plastic sheeting or other impermeable material over scaffolding or a rigid frame, or an equivalent system of containing the work area. Vertical containment is required for some exterior renovations but it may be used on any renovation (40 CFR 745.83) **[Added October 2011]**.
- *Vibration* - the periodic motion of friable ACBM which may result in the release of asbestos fibers (40 CFR 763.83) **[Added October 2001]**.
- *Visible Emissions* - any emissions which are visually detectable without the aid of instruments, coming from RACM or asbestos-containing waste material, or from any asbestos milling, manufacturing, or fabricating operation. This does not include condensed water vapor (40 CFR 61.141).
- *Waste Oil* - used products primarily derived from petroleum, which include, but are not limited to, fuel oils, motor oils, gear oils, cutting oils, transmission fluids, hydraulic fluids, and dielectric fluids (40 CFR 761.3) **[Added October 2001]**.
- *Weighted Arithmetic Mean* - the arithmetic mean of sample results weighted by the number of subsamples in each sample. Its purpose is to give influence to a sample relative to the surface area it represents. A single surface sample is comprised of a single subsample. A composite sample may contain from two to four subsamples of the same area as each other and of each single surface sample in the composite. The weighted arithmetic mean is obtained by summing, for all samples, the product of the sample's result multiplied by the number of subsamples

in the sample, and dividing the sum by the total number of subsamples contained in all samples. For example, the weighted arithmetic mean of a single surface sample containing 60 micrograms/ft<sup>2</sup>, a composite sample (three subsamples) containing 100 micrograms/ft<sup>2</sup>, and a composite sample (4 subsamples) containing 110 micrograms/ft<sup>2</sup> is 100 micrograms/ft<sup>2</sup>. This result is based on the equation  $[60+(3*100)+(4*110)]/(1+3+4)$  (40 CFR 745.63) [Added April 2001].

- *Wet Disposable Cleaning Cloth* - a commercially available, pre-moistened white disposable cloth designed to be used for cleaning hard surfaces such as uncarpeted floors or counter tops (40 CFR 745.83) [Added July 2008].
- *Wet Mopping System* - a device with the following characteristics: A long handle, a mop head designed to be used with disposable absorbent cleaning pads, a reservoir for cleaning solution, and a built-in mechanism for distributing or spraying the cleaning solution onto a floor, or a method of equivalent efficacy (40 CFR 745.83) [Added July 2008].
- *Wet Weight* - reporting chemical analysis results by including either the weight, or the volume and density, of all liquids (40 CFR 761.3) [Added October 1998; Reviewed March 2000].
- *Window Trough* -, for a typical double-hung window, the portion of the exterior windowsill between the interior window sill (or stool) and the frame of the storm window. If there is no storm window, the window trough is the area that receives both the upper and lower window sashes when they are both lowered. The window trough is sometimes referred to as the window “well” (40 CFR 745.63) [Added April 2001].
- *Wipe Sample* - a sample collected by wiping a representative surface of known area, as determined by ASTM E1728, “Standard Practice for Field Collection of Settled Dust Samples Using Wipe Sampling Methods for Lead Determination by Atomic Spectrometry Techniques,” or equivalent method, with an acceptable wipe material as defined in ASTM E 1792, “Standard Specification for Wipe Sampling Materials for Lead in Surface Dust” (40 CFR 745.63) [Added April 2001].
- *Work Area* - the area that the certified renovator establishes to contain the dust and debris generated by a renovation (40 CFR 745.83) [Added July 2008].
- *Zero-Bedroom Dwelling* - any residential dwelling in which the living area is not separated from the sleeping area. The term includes efficiencies, studio apartments, dormitory housing, military barracks, and rentals of individual rooms in residential dwellings (40 CFR 745.103) [Reviewed March 2000].

## F. Records To Review

- Inspection, storage, maintenance, and disposal records for PCBs/PCB Items
- PCB Equipment inventory and sampling results
- Manifests and CODs
- Correspondence with regulatory agencies concerning noncompliance situations
- Annual reports
- Asbestos management plan and operating plan
- Notification to regulators concerning asbestos disposal
- Records of onsite disposal and transportation and offsite disposal of asbestos
- Regulatory inspection reports
- Documentation of asbestos sampling and analytical results
- Documentation of preventive measures or action
- Results of air sampling at the conclusion of response action
- Records of asbestos training program
- List of buildings insulated with asbestos or housing ACM
- Record of demolition or renovation projects in the past 5 yr that involved friable asbestos
- Decision documents/records of decision

- Administrative record
- Federal facility Master Plan Document
- Spill Prevention Control and Countermeasure (SPCC) Plan

**G. Physical Features To Inspect**

- PCB storage areas
- Equipment, fluids, and other items used or stored at the facility containing PCBs
- Pipe, spray-on, duct, and troweled cementitious insulation and boiler lagging
- Ceiling and floor tiles

## H. Guidance for Toxic Substances Management Checklist Users

	REFER TO CHECKLIST ITEMS:
PCB Management	
All Facilities	T1.1.1.US. and T1.1.2.US.
Missing, Risk Management, and Positive Checklist Items	T1.2.1.US. through T1.2.3.US
PCBs General	T1.10.1.US. through T1.10.3.US.
PCB Records	T1.15.1.US. through T1.15.6.US.
PCB Transformers	T1.20.1.US. through T1.20.10.US.
PCB Spills	T1.25.1.US. through T1.25.7US.
PCB Items	T1.30.1.US. through T1.30.9US.
PCBs in Research	T1.35.1.US. and T1.35.2.US
PCB Storage	T1.40.1.US. through T1.40.9.US.
PCB Transportation	T1.45.1.US. and T1.45.2.US.
PCB Disposal	T1.50.1.US. through T1.50.17US.
PCB Decontamination	T1.53.1.US through T1.53.6.US
PCB Import/Export	T1.55.1.US. through T1.55.7.US.
Asbestos Management	
All Facilities	T2.1.1.US. and T2.1.2.US
Missing, Risk Management, and Positive Checklist Items	T2.2.1.US. through T2.2.3.US
Renovation and Demolition of Asbestos Containing Structures	T2.5.1.US. through T2.5.9.US.
Asbestos Personnel Training	T2.10.1.US.
Asbestos Disposal	T2.15.1.US. through T2.15.4.US.
Asbestos in Schools	T2.20.1.US. through T2.20.12.US.
Radon Management	
All Facilities	T3.1.1.US.
Missing, Risk Management, and Positive Checklist Items	T3.2.1.US. through T3.2.3.US
Lead-Based Paint (LBP) Management	
All Facilities	T4.1.1.US.
Missing, Risk Management, and Positive Checklist Items	T4.2.1.US. through T4.2.3.US
Notifications	T4.10.1.US. through T4.10.5.US.
Training Requirements	T4.15.1.US. and T4.15.2.US.
Work Practice Standards	T4.20.1.US. through T4.20.8.US.

<b>COMPLIANCE CATEGORY:</b> <b>TOXIC SUBSTANCES MANAGEMENT</b> <b>U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS:</b> <b>December 2018</b>
<b>PCB MANAGEMENT</b>  <b>T1.1</b> <b>All Facilities</b>  <b>T1.1.1.US.</b> The current status of any ongoing or unresolved consent orders, compliance agreements, notice of violations (NOVs), inter-agency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).  <b>T1.1.2.US.</b> PCB Concentrations must be established by certain methods (40 CFR 761.1(b)(4) and 761.2(b)). [Added October 1998; Revised October 2001].	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, interagency agreements, or equivalent state enforcement actions.</p> <p>Verify that PCB concentrations have been established one of the following ways:</p> <ul style="list-style-type: none"> <li>– testing the equipment</li> <li>– permanent label, mark, or other documentation from the manufacturer of the equipment indicating its PCB concentration at the time of manufacture</li> <li>– service records or other documentation indicating the PCB concentration of all fluids used in servicing the equipment since it was first manufactured.</li> </ul> <p>(NOTE: See the definition of PCB Concentration Assumptions for further clarification.)</p> <p>Verify that any person determining PCB concentrations for non-liquid PCBs does so on a dry weight basis.</p> <p>Verify that any person determining PCB concentrations for liquid PCBs does so on a wet weight basis and liquid PCBs containing more than 0.5 percent by weight non-dissolved material are analyzed as multi-phasic non-liquid/liquid mixtures.</p> <p>Verify that any person determining the PCB concentration of samples containing PCBs and non-dissolved non-liquid materials <math>\geq</math> 0.5 percent, separates the non-dissolved materials into non-liquid PCBs and liquid PCBs.</p> <p>Verify that, for multi-phasic non-liquid/liquid or liquid/liquid mixtures, the phases are separated before chemical analysis.</p>

<b>COMPLIANCE CATEGORY:</b> <b>TOXIC SUBSTANCES MANAGEMENT</b> <b>U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS:</b> <b>December 2018</b>
	<p>Verify that, following phase separation, the PCB concentration in each non-liquid phase is determined on a dry weight basis and the PCB concentration in each liquid phase are determined separately on a wet weight basis.</p> <p>Verify that any person disposing of multi-phasic non-liquid/liquid or liquid/liquid mixtures use the PCB disposal requirements that apply to the individual phase with the highest PCB concentration except where otherwise noted.</p> <p>(NOTE: Phases may be separated and disposed of using the PCB disposal requirements that apply to each separated, single-phase material.)</p>

<b>COMPLIANCE CATEGORY: TOXIC SUBSTANCES MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
<b>PCB MANAGEMENT</b>  <b>T1.2</b> <b>Missing, Risk Management,</b> <b>and Positive Checklist Items</b>  <b>T1.2.1.US.</b> Facilities are required to comply with all applicable Federal regulatory requirements not contained in this checklist (a finding under this checklist item will have the citation of the applied regulation as a basis of finding).  <b>T1.2.2.US.</b> Risk management techniques should be promoted in environmental efforts (MP) [Added April 2002].  <b>T1.2.3.US.</b> Facilities should go above and beyond statutory and regulatory compliance (MP) [Added April 2002].	<p>Determine if any new regulations have been issued since the finalization of TEAM.</p> <p>Determine if the facility has activities or facilities that are regulated, but not addressed in this checklist.</p> <p>Verify that the facility is in compliance with all applicable and newly issued regulations.</p> <p>Determine if risk management techniques are promoted in environmental efforts.</p> <p>Determine if the facility has gone above and beyond simply complying with environmental requirements.</p>

<b>COMPLIANCE CATEGORY: TOXIC SUBSTANCES MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
<p><b>PCBs</b></p> <p><b>T1.10 General</b></p> <p><b>T1.10.1.US.</b> Checklist item deleted <b>[Deleted October 2001]</b>.</p> <p><b>T1.10.2.US.</b> Storage rooms and certain equipment that contains PCBs must be marked with an ML marking (40 CFR 761.40 and 761.45). <b>[Revised October 1999; Revised October 2001]</b>.</p>	<p>The contents of this checklist item have been incorporated into T1.15.1.US.</p> <p>(NOTE: 40 CFR 761 applies to all persons who manufacture, process, distribute in commerce, use, or dispose of PCBs or PCB Items. Substances that are regulated include, but are not limited to: dielectric fluids; solvents; oils; waste oils; heat transfer fluids; hydraulic fluids; paints or coatings; sludges; slurries; sediments; dredge spoils; soils; materials containing PCBs as a result of spills; and other chemical substances or combinations of substances, including impurities and byproducts and any byproduct, intermediate, or impurity manufactured at any point in a process. Requirements applicable to PCBs at concentrations &lt; 50 ppm also apply to contaminated surfaces at PCB concentrations <math>\leq 10</math> micrograms/100 cm<sup>2</sup>. Requirements applicable to PCBs at concentrations <math>\geq 50</math> ppm to &lt; 500 ppm also apply to contaminated surfaces at PCB concentrations <math>&gt; 10</math> micrograms/100 cm<sup>2</sup> to &lt; 100 micrograms/100 cm<sup>2</sup>. Requirements applicable to PCBs at concentrations <math>\geq 500</math> ppm also apply to contaminated surfaces at PCB concentrations <math>\geq 100</math> micrograms/100 cm<sup>2</sup>. See also the definition for PCB Concentration Assumptions (40 CFR 761.1(b)(1), 761.1(b)(3) and 761.2).)</p> <p>(NOTE: Marking Format is Large PCB Mark (ML) letters and striping, on a white or yellow background, sufficiently durable to equal or exceed the life of the PCB Article. The size shall be 15.25 cm (6 in.) on each side. If the article is too small to accommodate this size, a smaller label (Ms) may be used.)</p> <p>Verify that the following equipment is marked with an ML marking that can be easily read by any person inspecting or servicing the equipment (see Appendix 11-1 for a sample of the marking):</p> <ul style="list-style-type: none"> <li>– PCB Containers with PCBs in concentrations of 50 ppm to 500 ppm at the time of manufacture, at the time of distribution in commerce if not already marked, and at the time of removal from use if not already marked</li> <li>– PCB Transformers (500 ppm or greater)</li> <li>– PCB Large High-Voltage Capacitors at the time of manufacture, at the time of distribution in commerce if not already marked, and at the time of removal from use if not already marked</li> <li>– equipment containing a PCB Transformer (500 ppm or greater) or a PCB Large High-Voltage Capacitor at the time of manufacture, at the time of distribution in commerce if not already marked, and at the time of removal from use if not already marked</li> <li>– PCB Large Low-Voltage Capacitors at the time of removal from service</li> </ul>

<b>COMPLIANCE CATEGORY: TOXIC SUBSTANCES MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
	<ul style="list-style-type: none"> <li>– electric motors using PCB coolants with a concentration 50 ppm to 500 ppm</li> <li>– hydraulic systems using PCB hydraulic fluid with concentrations 50 ppm to 500 ppm</li> <li>– heat transfer systems (other than PCB Transformers) using PCB concentrations 50 ppm to 500 ppm</li> <li>– PCB Article Containers containing any of the above</li> <li>– each storage area used to store PCBs and PCB Items for disposal</li> <li>– transport vehicles loaded with PCB Containers that contain &gt; 45 kg (99.4 lb) of liquid PCBs with PCBs at concentrations <math>\geq</math> 50 ppm or with one or more PCB Transformers with PCB concentrations of &gt; 500 ppm are marked on each end and side</li> <li>– vault doors, machinery room doors, fences, hallways, or means of access, other than a manhole or grate cover, to a PCB Transformer (500 ppm or greater)</li> <li>– voltage regulators which contain 1.36 kg (3 lb) or more of dielectric fluid with a PCB concentration of <math>\geq</math> 500 ppm (individually)</li> <li>– vault doors, machinery room doors, fences, hallways, or means of access, other than grates or manhole covers, to voltage regulators which contain 1.36 kg (3 lb) or more of dielectric fluid with a PCB concentration of <math>\geq</math> 500 ppm.</li> </ul> <p>Verify that, if one or more PCB Large High-Voltage Capacitors is installed in a protected location such as a pole, structure, or behind a fence, then the pole, structure, or fence is marked and a record or procedure identifying the PCB Capacitor is maintained.</p> <p>Verify that all PCB Equipment containing a PCB Small Capacitor is marked at the time of manufacture with the statement “This equipment contains PCB Capacitor(s)”.</p> <p>(NOTE: Marking requirements for small capacitors apply to equipment manufactured as of 1 January 1979.)</p> <p>Verify that each Large Low Voltage Capacitor, each Small Voltage Capacitor normally used in an alternating current circuit, and each fluorescent light ballast built between 1 July 1978 and 1 July 1998 that does not contain PCBs were marked at the time of manufacture with the statement “No PCBs”.</p> <p>Verify that all marks are placed in a position on the exterior of the PCB Items, storage units, or transport vehicles so that any person inspecting or servicing the marked PCB Items, storage units, or transport vehicles can easily read the marks.</p> <p>(NOTE: Marking of PCB-Contaminated Electrical Equipment (50 to 500 ppm) is not required.)</p> <p>Verify that, after 26 April 1999, all PCB Large Low Voltage Capacitors not previously marked, are marked individually.</p>

<b>COMPLIANCE CATEGORY: TOXIC SUBSTANCES MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
<p><b>T1.10.3.US.</b> Generators, commercial storers, transporters, and disposers of PCB waste are required to have a USEPA identification number (40 CFR 761.202 through 761.205) <b>[Revised]</b></p>	<p>(NOTE: Inaccessible capacitors may be marked on the outside of the equipment instead of on each individual capacitor if one or more such Capacitors in a protected location such as on a power pole, or in a structure, or behind a fence, the pole, fence, or structure is marked.)</p> <p>Verify that any containers of chemical substances or mixtures that is manufactured and that contains &lt; 500 ppm PCB (0.05% on a dry weight basis), including PCB that is a byproduct or impurity, is marked according to any permit requirements contained in the USEPA exemption to manufacture.</p> <p>Verify that a record is maintained after 26 April 1999 of those PCB Large Low Voltage Capacitors in a protected location.</p> <p>Verify that, after 26 April 1999, all equipment containing a PCB Transformer or a PCB Large, High, or Low Voltage Capacitor is marked.</p> <p>Verify that the vault door, machinery room door, fence, hallway, or means of access, other than grates and manhole covers, to a PCB Transformer are marked with the ML mark.</p> <p>(NOTE: A mark other than the ML mark may be used if:</p> <ul style="list-style-type: none"> <li>– the program using an alternative mark was started prior to 15 August, 1985 and can be substantiated with documentation</li> <li>– prior to 15 August 1985, coordination between the transformer owner and primary fire department occurred, and the primary fire department knows, accepts, and recognizes what the alternative marks mean and this can be substantiated with documentation</li> <li>– the USEPA Regional Administrator was informed in writing of the use of the alternative mark by 3 October 1988</li> <li>– the USEPA Regional Administrator approved the use of an alternative mark.</li> </ul> <p>(NOTE: Appendix 11-2 contains a list of manufacturers that produced PCB-Contaminated dielectric fluid.)</p> <p>(NOTE: The annual document log/inventory should contain a list of all PCB equipment at the site.)</p> <p>(NOTE: See the first NOTE in T1.10.2.US for information on who and what this checklist item applies to.)</p> <p>(NOTE: Some facilities are exempt from the notification requirement if they do not have a specified PCB storage area as regulated by 40 CFR 761.65 and just temporarily store before they transport for disposal.)</p>

<b>COMPLIANCE CATEGORY: TOXIC SUBSTANCES MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
<b>October 1998; Revised October 2001].</b>	<p>Determine if the facility is a generator, commercial storer, transporter, or disposer of PCB waste.</p> <p>Verify that generators of PCB waste have a USEPA identification number before processing, storing, disposing of, transporting, or offering for transport PCB waste.</p> <p>Verify that transporters, disposers, or commercial storers of PCB waste have a USEPA identification number.</p> <p>(NOTE: A generator of PCB waste who is exempted from notification, or who notified the USEPA in a timely manner, but has not yet received a unique identification number shall be regarded as having received the identification number “40 CFR 761”.)</p> <p>(NOTE: A disposer of PCB waste who owns more than one disposal facility or mobile treatment unit shall accept waste unless the disposer has received an USEPA identification number for each facility or mobile unit.)</p> <p>Verify that, if required, Form 7710-53, Notification of PCB Waste Activity, was filed with USEPA by April 4, 1990, or prior to engaging in PCB waste handling activities and a USEPA identification number was obtained.</p> <p>(NOTE: When a facility has previously notified USEPA of its PCB waste handling activities using USEPA Form 7710-53 and those activities change, the facility must resubmit USEPA Form 7710-53 to reflect those changes no later than 30 days from when a change is made. Examples of when a PCB waste handler must renotify USEPA include, but are not limited to, the following: the company changes location of the facility; or the company had notified solely as engaging in a certain type of PCB waste handling activity and now wishes to engage in another PCB waste activity [e.g., previously only commercially stored PCB waste and now wishes to transport PCB waste].)</p>

<b>COMPLIANCE CATEGORY: TOXIC SUBSTANCES MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
<p><b>T1.15</b></p> <p><b>PCB RECORDS</b></p> <p><b>T1.15.1.US.</b> A written annual document log must be prepared by 1 July of each calendar year, covering the previous year when at least 45 kg (99.4 lb) of PCBs contained in PCB Containers or one or more PCB Transformers (500 ppm or greater), or 50 or more PCB Large, High- or Low-Voltage Capacitors is used or stored at any time (40 CFR 761.180(a)) <b>[Revised October 1998; Revised October 2001; Revised October 2012].</b></p>	<p>(NOTE: See the first NOTE in T1.10.2.US for information on whom and what this checklist item applies to.)</p> <p>(NOTE: This requirement does not apply to a commercial storer or disposer of PCB waste.)</p> <p>Verify that the annual document log and annual records manifests, records of inspections and cleanups, certificates of disposal) are kept for at least 3 yr after PCBs and PCB items are no longer used or stored in the listed quantities.</p> <p>Verify the written annual document log includes the following:</p> <ul style="list-style-type: none"> <li>– the name, address, and USEPA identification number of the facility covered by the annual document log and the calendar year covered by the annual document log</li> <li>– the unique manifest number of every manifest generated by the facility during the calendar year</li> <li>– from each manifest and for unmanifested waste that may be stored at the facility, the following information <ul style="list-style-type: none"> <li>– for bulk PCB waste (e.g., in a tanker or truck), its weight in kilograms, the first date it was removed from service for disposal, the date it was placed in transport for offsite storage or disposal, and the date of disposal, if known</li> <li>– the serial number (if available) or other means of identifying each PCB Article (e.g., transformer or capacitor), the weight in kilograms of the PCB waste in each transformer or capacitor, the date it was removed from service for disposal, the date it was placed in transport for offsite storage or disposal, and the date of disposal, if known</li> <li>– a unique number identifying each PCB Container, a description of the contents of each PCB Container, such as liquid, soil, cleanup debris, etc., including the total weight of the material in kilograms in each PCB Container, the first date material placed in each PCB Container was removed from service for disposal, and the date each PCB Container was placed in transport for offsite storage or disposal, and the date of disposal (if known)</li> <li>– a unique number identifying each PCB Article Container, a description of the contents of each PCB Article Container, such as pipes, capacitors, electric motors, pumps, etc., including the total weight in kilograms of the content of each PCB Article Container, the first date a PCB Article placed in each PCB Article Container was removed from service for disposal, and the date the PCB Article Container was placed in transport for offsite storage or disposal, and the date of disposal (if known)</li> </ul> </li> </ul>

<b>COMPLIANCE CATEGORY: TOXIC SUBSTANCES MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>

<p style="text-align: center;"><b>REGULATORY REQUIREMENTS:</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS:</b>  <b>December 2018</b></p>
<p><b>T1.45</b></p> <p><b>PCB TRANSPORTATION</b></p> <p><b>T1.45.1.US.</b> A generator who relinquishes control over PCB wastes by offering for transport by his own vehicle or by a vehicle owned by another person, PCB waste for commercial offsite storage or offsite disposal must prepare a manifest (40 CFR 761.207, 761.208(a), 761.209, 761.210, and 761.214(a)(1)). [Revised October 1998; Revised October 2001; Revised October 2012; Revised July 2015].</p>	<p>(NOTE: This checklist item applies only to PCB wastes as defined in 40 CFR 761.3 (see <i>Definitions</i>). This includes PCB wastes with PCB concentrations below 50 ppm where the PCB concentration below 50 ppm was the result of dilution; these PCB wastes are required under 40 CFR 761.1(b) to be managed as if they contained PCB concentrations of 50 ppm and above. An example of such a PCB waste is spill cleanup material containing &lt; 50 ppm PCBs when the spill involved material containing PCBs at a concentration of <math>\geq</math> 50 ppm. However, there is no manifest requirement for material currently below 50 ppm which derives from pre-18 April 1978, spills of any concentration, pre- 2July 1979, spills of &lt; 500 ppm PCBs, or materials decontaminated in accordance with 40 CFR 761.79..</p> <p>(NOTE: The requirements of this checklist item do not apply to the transport of PCB wastes on a public or private right-of-way within or along the border of contiguous property under the control of the same person, even if such contiguous property is divided by a public or private right-of-way.)</p> <p>Verify that a generator who transports, or offers for transport PCB waste for commercial off-site storage or off-site disposal, and commercial storage or disposal facility who offers for transport a rejected load of PCB waste, prepares a manifest on EPA Form 8700-22, and, if necessary, a continuation sheet, according to the instructions included in the appendix of 40 CFR 262.</p> <p>Verify that the generator specifies:</p> <ul style="list-style-type: none"> <li>– for each bulk load of PCBs, the identity of the PCB waste, the earliest date of removal from service for disposal, and the weight in kilograms of the PCB waste (Item 14--Special Handling Instructions box)</li> <li>– for each PCB Article Container or PCB Container, the unique identifying number, type of PCB waste ( e.g., soil, debris, small capacitors), earliest date of removal from service for disposal, and weight in kilograms of the PCB waste contained (Item 14--Special Handling Instructions box)</li> <li>– for each PCB Article not in a PCB Container or PCB Article Container, the serial number if available, or other identification if there is no serial number, the date of removal from service for disposal, and weight in kilograms of the PCB waste in each PCB Article (Item 14--Special Handling Instructions box)</li> </ul> <p>(NOTE: EPA Form 8700-22A is not required as the PCB manifest continuation sheet. In practice, form 8700-22A does not have adequate space to list required PCB-specific information for several PCB articles. However, if form 8700-22A fits the needs of the user community, the form is permissible.)</p> <p>(NOTE: PCB waste handlers should use the Part 262 appendix instructions as a guide, but should defer to the Part 761 manifest regulations whenever there is any</p>

<b>COMPLIANCE CATEGORY: TOXIC SUBSTANCES MANAGEMENT U.S. TEAM GUIDE</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
	<p>difference between the Part 761 requirements and the instructions in the appendix to Part 262.)</p> <p>(NOTE: PCBs are not regulated under RCRA, thus do not have a RCRA waste code. EPA does not require boxes 13 and 31 on forms 8700-22 and 8700-22A (if used), respectively, to be completed for shipments only containing PCB waste. However, some States track PCB wastes as State-regulated hazardous wastes, and assign State hazardous waste codes to these wastes. In such a case, the user should follow the State instructions for completing the waste code fields.)</p> <p>Verify that the generator designates on the manifest one facility which is approved to handle the PCB waste described on the manifest.</p> <p>(NOTE: A generator may also designate on the manifest one alternate facility which is approved to handle his PCB waste in the event an emergency prevents delivery of the waste to the primary designated facility.)</p> <p>Verify that, if the transporter is unable to deliver the PCB waste to the designated facility or the alternate facility, the generator either designates another facility or instructs the transporter to return the PCB waste.</p> <p>(NOTE: A generator may use manifests printed by any source so long as the source of the printed form has received approval from EPA to print the manifest. A registered source may be one of the following:</p> <ul style="list-style-type: none"> <li>– State agency</li> <li>– Commercial printer</li> <li>– PCB waste generator, transporter or, designated facility</li> <li>– PCB waste broker or other preparer who prepares or arranges shipments of PCB waste for transportation.</li> </ul> <p>Verify that the generator determines whether the generator state or the consignment state for a shipment regulates PCB waste as a State-regulated hazardous waste and whether the consignment state or generator state requires the generator to submit any copies of the manifest to these states.</p> <p>(NOTE: In cases where the generator must supply copies to either the generator's state or the consignment state, the generator is responsible for supplying legible photocopies of the manifest to these states.)</p> <p>Verify that the manifest consists of at least the number of copies which will provide the generator, each transporter, and the owner or operator of the designated facility with one copy each for their records and another copy to be returned to the generator.</p> <p>Verify that the generator:</p> <ul style="list-style-type: none"> <li>– signs the manifest certification by hand</li> </ul>

## Appendix 11-2

### Dielectric Fluid Trade Names and Manufacturers

#### 1. U.S. Manufactured Dielectrics:

<b>Name</b>	<b>Manufacturer</b>
Aroclor	Monsanto
Aroclor B	Mallory
Sbestol	American Corporation
Askarel Hevi-Duty	Hevi-Duty Corporation
Askarel *	Ferranti-Packard, Ltd.
Askarel	Universal Mfg. Co.
Chlorextol	Allis-Chalmers
Chlorinol	Sparagoe Electric
Chlorphen	Jard Company
Diaclor	Sangamo Electric
Dykanol	Cornell Dubilier
Elemex	McGraw Edison
Eucarel	Electric Utilities Co.
Hyvol	Aerovox
Inerteen	Westinghouse Electric
No-Flamol	Wagner Electric
Pyranol	General Electric
Saf-T-Kuhl	Kuhlman Electric

\* Generic name used for insulating liquids in capacitors and transformers.

2. Foreign Manufactured Dielectrics:

<b>Name</b>	<b>Manufacturer</b>
Clophen	Bayer (Germany)
Fenclo	Caffaro (Italy)
Kennechlor	Mitsubishi (Japan)
Phenoclor	Prodelec (France)
DK	Caffaro (Italy)
Pyralene	Prodelec (France)
Solvol	USSR
Santotherm	Mitsubishi (Japan)

3. Transformers that list other dielectrics or do not bear a manufacturer's identification or service plate on the transformer: if the transformer contains any of the dielectrics (commonly referred to as askarels), it is to be certified as a PCB Transformer containing in excess of 500 ppm PCB and no laboratory testing is necessary.

## Appendix 11-2a

### PCBs Reclassification (40 CFR 761.30(b)(2)(v)(A) and 761.3(h)(2)(v)(A)) [Added July 2001]

**Table 1: Transformers**

If test results show the PCB concentration (ppm) in the transformer prior to retrofit is...	And you retrofit the transformer with dielectric fluid containing ...	And you ....	And test results show the PCB concentration (ppm) after refill is ...	Then the transformer's reclassified status is...
1,000 (or untested)	<50 ppm PCBs	operate the transformer electrically under loaded conditions for at least 90-continuous days after retrofit, then test the fluid for PCBs	50 but < 500	PCB-contaminated
	<50 ppm PCBs	operate the transformer electrically under loaded conditions for at least 90-continuous days after retrofit, then test the fluid for PCBs	< 50	non-PCB
500 but <1,000	<50 ppm PCBs	test the fluid for PCBs at least 90 days after retrofit	>= 50 but < 500	PCB-contaminated
	<50 ppm PCBs	test the fluid for PCBs at least 90 days after retrofit	< 50	non-PCB
50 but <500	>= 2 but < 50 ppm PCBs	Test the fluid for PCBs at least 90 days after retrofit	< 50	Non-PCB
	< 2 ppm PCBs	No need to test	Not applicable	Non-PCB

**Table 2: Reclassification of Electromagnets, Switches, or Voltage Regulators**

<b>If test results show the PCB concentration (ppm) in the equipment prior to retrofill is...</b>	<b>And you retrofill the equipment with dielectric fluid containing ...</b>	<b>And you ....</b>	<b>And test results show the PCB concentration (ppm) after refill is ...</b>	<b>Then the electromagnet, switch, or voltage regulator's reclassified status is...</b>
1,000 (or untested)	<50 ppm PCBs	operate the equipment electrically under loaded conditions for at least 90-continuous days after retrofill, then test the fluid for PCBs	50 but < 500	PCB-contaminated
	<50 ppm PCBs	operate the equipment electrically under loaded conditions for at least 90-continuous days after retrofill, then test the fluid for PCBs	< 50	non-PCB
500 but <1,000	<50 ppm PCBs	test the fluid for PCBs at least 90 days after retrofill	>= 50 but < 500	PCB-contaminated
	<50 ppm PCBs	test the fluid for PCBs at least 90 days after retrofill	< 50	non-PCB
50 but <500	>= 2 but < 50 ppm PCBs	Test the fluid for PCBs at least 90 days after retrofill	< 50	Non-PCB
	< 2 ppm PCBs	No need to test	Not applicable	Non-PCB

## Appendix 11-2b

### **Self-implementing On-site Cleanup and Disposal of Polychlorinated Biphenyl (PCB) Remediation Waste: Cleanup Levels and Site Cleanup (40 CFR 761.61(a)(4) and 761.61(a)(5)) [Added October 2001]**

#### Cleanup Levels

Cleanup levels are based on the kind of material and the potential exposure to PCBs left after cleanup is completed.

Bulk PCB remediation waste includes, but is not limited to, the following non-liquid PCB remediation waste: soil, sediments, dredged materials, muds, PCB sewage sludge, and industrial sludge.

- The cleanup level for bulk PCB remediation waste in high occupancy areas is  $\leq 1$  ppm without further conditions. High occupancy areas where bulk PCB remediation waste remains at concentrations  $>1$  ppm and  $\leq 10$  ppm shall be covered with a cap meeting the requirements of 40 CFR 761.61(a)(7) and 761.61(a)(8).
- The cleanup level for bulk PCB remediation waste in low occupancy areas is  $\leq 25$  ppm unless otherwise specified.
- Bulk PCB remediation wastes may remain at a cleanup site at concentrations  $>25$  ppm and  $\leq 50$  ppm if the site is secured by a fence and marked with a sign including the ML mark
- Bulk PCB remediation wastes may remain at a cleanup site at concentrations  $>25$  ppm and  $\leq 100$  ppm if the site is covered with a cap meeting the requirements of 40 CFR 761.61(a)(7) and 761.61(a)(8).

Non-porous surfaces.

- In high occupancy areas, the surface PCB cleanup standard is  $\leq 10$   $\mu\text{g}/100$   $\text{cm}^2$  of surface area.
- In low occupancy areas, the surface cleanup standard is  $100$   $\mu\text{g}/100$   $\text{cm}^2$  of surface area. Select sampling locations in accordance with Subpart P of 40 CFR 761 or an approved sampling plan.

Porous surfaces.

- In both high and low occupancy areas, any person disposing of porous surfaces must do so based on the levels for Bulk PCB Remediation Waste.

Liquids.

- In both high and low occupancy areas, cleanup levels are the concentrations specified in 40 CFR 761.79(b)(1) and (b)(2). The decontamination standard for water containing PCBs is:
  - less than  $200$   $\mu\text{g}/\text{L}$  (i.e.,  $200$  ppb PCBs) for non-contact use in a closed system where there are no releases;
  - For water discharged to a treatment works or to navigable waters,  $<3$   $\mu\text{g}/\text{L}$  (approximately  $<3$  ppb) or a PCB discharge limit included in a permit issued under section 307(b) or 402 of the Clean Water Act; or
  - $\leq 0.5$   $\mu\text{g}/\text{L}$  (i.e., approximately  $\leq 0.5$  ppb PCBs) for unrestricted use.
- The decontamination standard for organic liquids and non-aqueous inorganic liquids containing PCBs is  $< 2$   $\text{mg}/\text{kg}$  (i.e.,  $2$  ppm PCBs).

Change in the land use for a cleanup site.

- Where there is an actual or proposed change in use of an area cleaned up to the levels of a low occupancy area, and the exposure of people or animal life in or at that area could reasonably be expected to increase, resulting in a change in status from a low occupancy area to a high occupancy area, the owner of the area shall clean up the area in accordance with the high occupancy area cleanup levels

## Cleanup Processes

### Bulk PCB Remediation Waste:

Any person cleaning up bulk PCB remediation waste onsite using a soil washing process may do so without USEPA approval, if:

- A non-chlorinated solvent is used.
- The process occurs at ambient temperature.
- The process is not exothermic.
- The process uses no external heat.
- The process has secondary containment to prevent any solvent from being released to the underlying or surrounding soils or surface waters.
- Solvent disposal, recovery, and/or reuse is in accordance with relevant provisions of issued approvals.

Bulk PCB remediation waste may be sent offsite for decontamination or disposal provided the waste is either dewatered onsite or transported offsite in containers meeting the requirements of the DOT Hazardous Materials Regulations (HMR) at 49 CFR 171 through 180.

Removed water shall be disposed of as PCB liquid.

Offsite disposal of dewatered bulk PCB remediation waste shall be done as follows:

- Unless sampled and analyzed for disposal, the bulk PCB remediation waste shall be assumed to contain  $\geq 50$  ppm PCBs.
- Bulk PCB remediation wastes with a PCB concentration of  $< 50$  ppm shall be disposed of in a facility permitted, licensed, or registered by a state to manage municipal solid waste
- Bulk PCB remediation wastes with a PCB concentration  $\geq 50$  ppm shall be disposed of in a hazardous waste landfill permitted by USEPA under section 3004 of RCRA, or by a state authorized under section 3006 of RCRA, or a PCB disposal facility approved under 40 CFR 761.
- Provide written notice, including the quantity to be shipped and highest concentration of PCBs (using extraction USEPA Method 3500B/3540C or Method 3500B/3550B followed by chemical analysis using USEPA Method 8082 in SW-846 or methods validated under Subpart Q of 40 CFR 761) at least 15 days before the first shipment of bulk PCB remediation waste from each cleanup site by the generator, to each offsite facility where the waste is destined for an area not subject to a TSCA PCB Disposal Approval.

Non-porous surfaces.

PCB remediation waste non-porous surfaces shall be cleaned onsite or offsite for disposal onsite, disposal offsite, or use, as follows:

- For onsite disposal, non-porous surfaces shall be cleaned onsite or offsite to the levels required under 40 CFR 761.61(a)(4)(ii) using:
- Procedures approved under 40 CFR 761.79
- Technologies approved under 40 CFR 761.60(e)
- Procedures or technologies approved under 40 CFR 761.61(c) disposal approval

For offsite disposal, non-porous surfaces:

- Having surface concentrations  $< 100$  micrograms/100 cm<sup>2</sup> shall be disposed of in accordance with 761.61(a)(5)(i)(B)(2)(ii). Metal surfaces may be thermally decontaminated in accordance with 40 CFR 761.79(c)(6)(i).
- Having surface concentrations  $\geq 100$  micrograms/100 cm<sup>2</sup> shall be disposed of in a hazardous waste landfill permitted by USEPA under section 3004 of RCRA, by a state authorized under section 3006 of RCRA, or a PCB disposal facility approved under 40 CFR 761. Metal surfaces may be thermally decontaminated in accordance with 40 CFR 761.79(c)(6)(ii).

For use, non-porous surfaces shall be decontaminated onsite or offsite to the standards specified in 40 CFR 761.79(b)(3) or in accordance with 40 CFR 761.79(c).

Porous surfaces.

Porous surfaces shall be disposed onsite or offsite as bulk PCB remediation waste according to 40 CFR 761.61(a)(5)(i) or decontaminated for use according to 40 CFR 761.79(b)(4) as applicable.

Liquids.

Any person disposing of liquid PCB remediation waste shall either:

- Decontaminate the waste to the levels specified in 40 CFR 761.79(b)(1) or 761.79(b)(2)
- Dispose of the waste in accordance with paragraph (b) of 40 CFR 761.61 or an approval issued under paragraph (c) of 40 CFR 761.61.

Cleanup wastes.

Any person generating the following wastes during and from the cleanup of PCB remediation waste shall dispose of or reuse them using one of the following methods:

- Non-liquid cleaning materials and personal protective equipment waste at any concentration, including non-porous surfaces and other non-liquid materials such as rags, gloves, booties, other disposable personal protective equipment, and similar materials resulting from cleanup activities shall either be decontaminated in accordance with 40 CFR 761.79(b) or 761.79(c) or be disposed of in: a facility permitted, licensed, or registered by a state to manage municipal solid waste subject to 40 CFR 258; or a facility permitted, licensed, or registered by a state to manage non-municipal non-hazardous waste subject to 40 CFR 257.5 through 257.30; a hazardous waste landfill permitted by USEPA or a state under section 3006 of RCRA to accept PCB waste; or a PCB disposal facility approved under 40 CFR 761.

Cleaning solvents, abrasives, and equipment may be reused after decontamination in accordance with 40 CFR 761.79.

### Appendix 11-3

**PCB Wastes Disposal Guidance**  
**(40 CFR 761.50(b))**  
**[Added October 1998; Revised October 2001]**

Waste	Applicable Standard	Checklist Item number
PCB liquids	Disposal - 40 CFR 761.60(a)  Decontamination - 40 CFR 761.79	T1.50.2.US. through T1.50.5.US.  T1.53.1.US through T1.53.6.US
PCB Item containing an intact and non-leaking PCB Article	Disposal - 40 CFR 761.60(b)  Decontamination - 40 CFR 761.79	T1.50.6.US. through T1.50.10.US.  T1.53.1.US through T1.53.6.US
PCB Item containing a PCB Article which is not intact and non-leaking	Disposal - 40 CFR 761.62(a) or 761.62(c)	T1.50.14.US.
Fluorescent light ballasts containing PCBs only in an intact and non-leaking PCB Small Capacitor	Disposal - 40 CFR 761.60(b)(2)(ii)	T1.50.7.US and T1.50.9.US
Fluorescent light ballasts containing PCBs in the potting material	Disposal - 40 CFR 761.62	T1.50.14.US. and T1.50.15.US.
PCB Remediation Waste, including PCB sewage sludge	Cleanup and Disposal - 40 CFR 761.61	T1.25.5.US, T1.25.6.US, Appendix 11-2b
PCB Bulk Product Waste	Disposal - 40 CFR 761.62	T1.50.14.US. and T1.50.15.US.
PCB Household Waste	Disposal - 40 CFR 761.63	T1.50.16.US.
PCB R&D Waste	Disposal - 40 CFR 761.64	
PCB/Radioactive Waste	Disposal must be done taking into account both its PCB concentration and radioactive properties	

<b>Waste</b>	<b>Applicable Standard</b>	<b>Checklist Item number</b>
Porous Surfaces on which PCBs have been spilled and meeting the definition of remediation waste.	Disposal - 40 CFR 761.61(a)(5)(iii)	Appendix 11-2b
Porous surfaces which are part of manufactured non-liquid products containing PCBs and meeting the definition of PCB bulk product waste	Disposal - 40 CFR 761.62	T1.50.14.US. and T1.50.15.US.
Concrete surfaces on which PCBs have been spilled	Decontamination - 40 CFR 761.79(b)(4) is started within 72 h of the initial spill	T1.53.1.US
Porous non-liquid PCBs in contact with non-porous surfaces, such as underground metal fuel tanks coated with fire retardant resin or pitch.	Decontaminate - 40 CFR 761.79(b)(3) for purposes of unrestricted use or disposal in a smelter.	T1.53.1.US

## **Appendix 11-4**

### **LBP Determinations (40 CFR 745.277(h)) [Added April 2001]**

Lead-based paint is present:

- On any surface that is tested and found to contain lead equal to or in excess of 1.0 milligrams per square centimeter or equal to or in excess of 0.5% by weight; and
- On any surface like a surface tested in the same room equivalent that has a similar painting history and that is found to be lead-based paint.

A paint-lead hazard is present:

- On any friction surface that is subject to abrasion and where the lead dust levels on the nearest horizontal surface underneath the friction surface (e.g., the window sill or floor) are equal to or greater than the dust hazard levels identified in Sec. 745.227(b);
- On any chewable lead-based paint surface on which there is evidence of teeth marks;
- Where there is any damaged or otherwise deteriorated lead-based paint on an impact surface that is caused by impact from a related building component (such as a door knob that knocks into a wall or a door that knocks against its door frame; and
- If there is any other deteriorated lead-based paint in any residential building or child-occupied facility or on the exterior of any residential building or child-occupied facility.

A dust-lead hazard is present in a residential dwelling or child occupied facility:

- In a residential dwelling on floors and interior window sills when the weighted arithmetic mean lead loading for all single surface or composite samples of floors and interior window sills are equal to or greater than 40 micrograms/ft<sup>2</sup> for floors and 250 micrograms/ft<sup>2</sup> for interior window sills, respectively;
- On floors or interior window sills in an unsampled residential dwelling in a multi-family dwelling, if a dust-lead hazard is present on floors or interior window sills, respectively, in at least one sampled residential unit on the property; and
- On floors or interior windowsills in an unsampled common area in a multi-family dwelling, if a dust-lead hazard is present on floors or interior windowsills, respectively, in at least one sampled common area in the same common area group on the property.

A soil-lead hazard is present:

- In a play area when the soil-lead concentration from a composite play area sample of bare soil is equal to or greater than 400 ppm; or
- In the rest of the yard when the arithmetic mean lead concentration from a composite sample (or arithmetic mean of composite samples) of bare soil from the rest of the yard (i.e., non-play areas) for each residential building on a property is equal to or greater than 1,200 ppm.

## SECTION 12

### WASTEWATER MANAGEMENT U.S. TEAM Guide, December 2018

#### A. Applicability

This section includes regulations, responsibilities, and compliance requirements associated with wastewater discharge. Wastewater discharge can include any of the following:

1. sanitary or industrial wastewater discharge directly to a receiving stream
2. sanitary or industrial wastewater discharge to a publicly owned treatment works (POTW)
3. sanitary or industrial wastewater discharge to a Federally owned treatment works (FOTW) or other non-Agency treatment facility
4. stormwater runoff from operational areas to a receiving stream or water body
5. industrial wastewater or stormwater drained to an industrial waste reservoir.

Most facilities have wastewater discharge of one kind or another, and therefore this section will be applicable. Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations (CFR). Portions that have been added or revised as a result of this review are identified as being reviewed, revised, or added in October 2001, for example **[Added October 2001]**.

#### B. Federal Legislation

- *The Federal Water Pollution Control Act*. This act, commonly known as the Clean Water Act (CWA), as amended February 4, 1987, 33 U.S. Code (USC) 1251-1387, Public Law (PL) 100-4, governs the control of water pollution in the nation. The act's primary objective is to restore and maintain the chemical, physical, and biological integrity of the nation's surface waters. The CWA regulates "priority" pollutants, including various toxic pollutants; "conventional" pollutants, such as biochemical oxygen demand, total suspended solids, fecal coliform, oil and grease, and pH; and "non-conventional" pollutants, including any pollutant not identified as either conventional or priority **[Revised October 2001]**.
- *The Federal Facility Compliance Act (FFCA)*. This act, dated 6 October 1992, amends the *Solid Waste Disposal Act* (SWDA) and addresses requirements for Federally owned treatment works (FOTW) under 42 USC 6939(e) (PL 102-386). The FFCA establishes a conditional domestic sewage exclusion for industrial discharges to an FOTW. This allows an FOTW to accept hazardous wastes, provided that certain conditions are met and the wastes are not acutely hazardous.
- EO 12088, *Federal Compliance with Pollution Standards*. This EO, dated 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the Agency funds meet applicable Federal, state, and local environmental requirements for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget. Sections 1-4, "Pollution Control Plan" was revoked by EO 13148 **[Revised October 2002]**.

### C. State/Local Regulations

- For information on regulations in specific states, see the State Supplements to TEAM Guide.

States normally have wastewater discharge legislation and regulations that require permitting similar to the National Pollutant Discharge Elimination System (NPDES) program. The state is often delegated authority to administer the NPDES permits for discharges within their state. These permits are often joint permits issued pursuant to both Federal and state legislation. In some cases, the state will not administer the NPDES program and will issue a state permit even though the U.S. Environmental Protection Agency (USEPA) has issued an NPDES permit. The states and the USEPA normally cooperate in the permit issuance process to insure that the two permits are consistent, but there may be differences in monitoring requirements and the number of pollutants limited. These requirements normally do not conflict, but may require additional sampling and dual reporting.

States also have more stringent requirements for wastewater treatment plant operations. Many states have wastewater treatment plant (WWTP) operator licensing and certification programs that require that an operator pass an exam and have a required amount of experience.

Local entities (counties, cities) may also have enforceable wastewater discharge limitations that regulate discharges to a POTW. Local limitations often include pH, temperature, and concentrations of various organic and inorganic compounds. Major industrial operations which discharge to an offsite POTW will be subjected to pretreatment permits issued by the POTW, state, or USEPA as appropriate.

### D. Key Compliance Requirements

- NPDES Permits – The CWA regulates both direct and indirect discharges. The NPDES program (CWA Section 402) controls direct discharges into navigable waters. Direct discharges or "point source" discharges are from such sources as pipes and sewers. These include discharges of municipal wastewater, as well as storm water conveyed through a municipal separate storm water system. A municipality may have several different types of sources whose discharges are controlled by its NPDES permit including a wastewater treatment plant, combined sewer overflow, municipal storm water discharge, and an emerging area, sanitary sewer overflow.

NPDES permits, issued by either USEPA or an authorized state (USEPA has authorized 43 states and the U.S. Virgin Islands to administer the NPDES program), contain technology-based and/or water quality-based limits and establish pollutant monitoring requirements. Each municipality that intends to discharge into the nation's waters must obtain a permit prior to initiating its discharge. A permit applicant must provide quantitative analytical data identifying the types of pollutants present in the facility's effluent. The permit then sets the conditions and effluent limitations on the facility discharges.

An NPDES permit may also include discharge limits based on federal or state water quality criteria or standards that were designed to protect designated uses of surface waters, such as supporting aquatic life or recreation. These standards, unlike the technological standards, generally do not take into account technological feasibility or costs. Water quality criteria and standards vary from state to state and from site to site, depending on the use classification of the receiving water body. Most states follow USEPA guidelines, which propose aquatic life and human health criteria for many of the 126 priority pollutants.

Local governments that own and operate wastewater treatment plants are required to apply for and obtain an NPDES permit. Permittees are required to manage and maintain their operations according to the parameters of the permit. This management includes: taking sample and measurements, maintaining records of results and data submitted to the permitting authority, and reporting noncompliance (40 CFR 122) **[Revised October 2001]**.

- Centralized Waste Treatment (CWT) Facilities – CWTs are required to meet the requirements of 40 CFR Part 403 if discharging to another POTW. They are also required to monitor wastewater discharges and meet contaminant parameters from (40 CFR 437) **[Added April 2001]**:

treatment and recovery of hazardous or non-hazardous industrial metal-bearing wastes, oily wastes and organic-bearing wastes received from off-site

the treatment of CWT wastewater.

- Combined Sewer Systems - USEPA's 1994 *Combined Sewer Overflow (CSO) Control Policy* provides recommended NPDES permit conditions for municipalities with combined sewer systems. These provisions, which are typically implemented by the permitting authority, include requirements for meeting the nine minimum controls to reduce the frequency and water quality impacts of CSO events and to establish a long-term control plan to address capital improvements to the system. Local governments that operate and maintain a combined collection system must abide by these requirements, which are included as part of the NPDES permit **[Added October 2001]**.
- Sanitary Sewer Overflows - sanitary sewer overflows (SSOs) are discharges of untreated sewage from a separate sanitary sewer collection system prior to the headworks of a sewage treatment plant. These systems are designed to collect and convey sewage from households and businesses and wastewater from industries to sewage treatment plants, for treatment in accordance with CWA requirements prior to discharge to waters of the United States. SSO discharges to water of the United States are prohibited by the CWA unless authorized by a NPDES permit **[Added October 2001]**.
- Stormwater Discharges - in 1987, Congress amended the CWA and required USEPA to establish a program to address storm water discharges. In response, USEPA promulgated the NPDES storm water regulations. Implemented in two phases, the first phase requires local governments that operate large (serving a population greater than 250,000) or medium (serving a population from 100,000 to 250,000) municipal separate storm water systems to apply for and obtain an NPDES storm water permit. During the second phase, local governments operating regulated small municipal separate storm water systems are required to submit to USEPA a Notice of Intent (NOI) to be covered under a national general storm water permit **[Added October 2001; Revised April 2009]**.

In addition to requiring storm water permits for collection systems, the CWA may also require local government operations to obtain or be covered by storm water permits. Such operations may include construction activities (e.g., roads, buildings) or storage of chemicals or hazardous materials.

All stormwater discharges associated with industrial and construction activities that discharge to Municipal Separate Storm Sewer Systems (MS4s), or directly into waters of the United States are required to obtain either:

1. individual NPDES storm water permit coverage, or
2. coverage under the state or EPA's general permit

Specifically, a facility must obtain permit coverage for industrial activities if the activity falls under:

1. one of the 11 categories of Industrial Storm Water Activities, including construction, that result in storm water discharge to Municipal Separate Storm Sewer Systems (MS4s), or directly to waters of the United States, or
2. one of the 30 Industrial Sectors listed for the Multi-Sector General Permit.

These industrial activities are defined by either the facilities certain Standard Industrialization Classification, or a general description of the facilities industrial activities.

Construction activities (including other land-disturbing activities) that disturb one to five acres are regulated under the NPDES storm water program Phase II requirements. Activities that disturb more than 5 acres are regulated by Phase I requirements. The Phase II requirements also include smaller sites that are part of a larger common plan of development or sale. Sites less than 1 acre, if determined by local authorities to pose a significant risk to local watersheds, can also be required to get an NPDES permit.

- Pretreatment Program - the pretreatment program controls the indirect discharge of pollutants to POTWs by "industrial users," and prohibits the discharge of certain types of pollutants to a POTW. The goals are to protect municipal wastewater treatment plants from damage that may occur when hazardous, toxic, or other wastes are discharged into a sewer system and to protect the quality of sludge generated by these plants. For example, any

pollutant that would cause pass through or interference must not be discharged into a treatment works, either POTW or FOTW. No pollutants shall be introduced into a treatment works that create a fire or explosion hazard, cause corrosive structural damage, have a pH below 5.0, or are solid or viscous enough to cause obstructions. Treatment works must be notified immediately of any discharge, including any slug loadings that could cause problems to the treatment works (40 CFR 403.5).

Although discharges to a POTW are regulated primarily by the POTW itself, rather than the state or USEPA, USEPA has developed technology-based standards, known as “categorical pretreatment standards,” for certain industrial users of POTWs. Different standards apply to existing and new sources within each industry category.

Local governments that own and operate POTWs must meet the requirements for a pretreatment program under the CWA. In addition to the categorical standards mentioned above, a POTW develops another kind of pretreatment standard, “local limits,” to assist the POTW in achieving the effluent limitations in its NPDES permit. The program may include requirements for industrial users to treat waste prior to its discharge to the sanitary sewer and/or to develop a slug plan. The POTW’s pretreatment program must be approved by the Approval Authority (state or USEPA). In association with the pretreatment program, POTWs are required to develop and implement an enforcement response plan and maintain a list of significant industrial users (40 CFR 403.12(f)) **[Revised October 2001]**.

- Operation and Maintenance of an FOTW/POTW - Treatment plant supervisors are required to maintain operating logs and records that are posted daily and are neat and legible. Treatment plants are required to be operated in accordance with all design parameters (40 CFR 403.12(f)).
- Effluent Limitations for Steam Electric Power Generating Sources - Steam electric power generating sources must meet point source effluent limitations. Of special concern is the discharge of free available chlorine and total residual chlorine. Additionally there must be no discharge of polychlorinated biphenyls (PCB). There are additional standards depending on if the source is a new or an existing source (40 CFR 423).
- Effluent Limits for Electroplating Point Sources - Existing electroplating operations that introduce pollutants into a POTW resulting from the electroplating of common metals are subject to pretreatment standards that vary depending upon the level of discharge and the nature of the metals used (40 CFR 413).
- Effluent Limitation for Metal Finishing Point Sources - Shops performing electroplating, electroless plating, anodizing, coating, chemical etching and milling, and printed circuit board manufacturing are subject to certain best available technology (BAT) point source effluent limitations, which include the self-monitoring of cyanide. Existing metal finishing point sources introducing pollutants into POTWs are subject to certain pretreatment standards. New metal finishing point sources introducing pollutants into POTWs are subject to certain performance and pretreatment standards (40 CFR 433).
- Effluent Limitations for Transportation Cleaning Equipment – This regulation sets standards for discharges resulting from cleaning the interior of tanks used to transport chemical, petroleum or food grade cargos. These requirements do not apply to facilities that clean only the exteriors of transportation equipment. Operations that may be subject to these requirements typically are reported under a wide variety of Standard Industrial Classification (SIC) codes. Several of the most common SIC codes include: SIC 7699, SIC 4741, or SIC 4491 (1987 SIC Manual). These requirements are not applicable to the following discharges:
  1. wastewaters associated with tank cleanings operated in conjunction with other industrial, commercial, or POTW operations, provided that the cleaning is limited to tanks that previously contained raw materials, by-products, or finished products that are associated with the facility's onsite processes
  2. wastewaters resulting from cleaning the interiors of drums, intermediate bulk containers, or closed-top hoppers
  3. wastewater from a facility that discharges less than 100,000 gal/yr of transportation equipment cleaning process wastewater (40 CFR 442).
- Discharge Limits for Hospitals - Hospital are required to limit the quantity and quality of their discharges. The following are restricted: BOD<sub>5</sub>, TSS, and pH (40 CFR 460).

- Discharge Limits for Photo Labs - Photo labs that process more than 150 m<sup>2</sup> per day of film must limit their discharges for silver, CN, and pH (40 CFR 459).
- Discharges from Armed Forces Vessels. Numerous types of discharges incidental to the normal operation of Armed Forces vessels must have a marine pollution control device (MPCD) to mitigate adverse impacts on the marine environment. This requirement applies to the owners and operators of Armed Forces vessels, except where the Secretary of Defense finds that compliance with this part is not in the interest of the national security of the United States. This requirement does not apply to vessels while they are under construction, vessels in drydock, amphibious vehicles, or vessels under the jurisdiction of the Department of Transportation other than those of the Coast Guard. These requirements are not applicable beyond the contiguous zone (40 CFR 1700.1 through 1700.5).
- Sewage Sludge Management - the CWA and associated regulations govern land application and land disposal of sludge generated from municipal wastewater treatment. The Section 503 regulations establish provisions for sludge quality, application rates, and environmental conditions under which land application is permitted. The regulations also specify management methods, monitoring, and recordkeeping for both disposal and land application facilities. Local governments that produce sludge from their wastewater treatment operations are subject to the Section 503 regulations [**Revised October 2001**].
- Land Application of Sewage Sludge - sludge that is generated during the treatment of domestic sludge in a POTW is required to be managed according to certain parameters for pathogen control and vector attraction reduction (40 CFR 503.30 through 503.33), pollutant concentrations, pollutant loading rates, ceiling concentrations, and annual pollutant loading rates for the following situations [**Revised October 2001**]:
  1. bulk sewage sludge or sewage sludge sold or given away in a bag or other container,
  2. the application of bulk sewage sludge to agricultural land, forest, a public contact site, or a reclamation site,
  3. the application of bulk sewage sludge to a lawn or home garden,
  4. the application of domestic septage to agricultural land, forest, or a reclamation site, or
  5. the application of sewage sludge to an active sewage sludge unit.

These regulations implement requirements for both the preparation and the application of the sewage sludge and requirements for monitoring, reporting, and recordkeeping (40 CFR 503.10 through 503.18).
- Surface Disposal of Sewage Sludge - active sewage sludge units are subject to operational requirements based on their location and design. Operational requirements include monitoring the sludge for specific pollutants, runoff management, leachate management, covering the sludge, and meeting pathogen and vector attraction reduction requirements (40 CFR 503.30 through 503.33). Records are required to be kept on how all of these requirements are met and the results of sampling for 5 yr (40 CFR 503.20 through 503.28) [**Revised October 2001**].
- Incineration of Sewage Sludge - sewage sludge incinerators are required to meet emissions limitations for beryllium, mercury, hydrocarbons. The sludge being fed to the incinerator is required to meet specific limitation for arsenic, cadmium, chromium, and nickel. Detailed operational records are required to be kept for 5 yr. Types of information to be maintained include: the stack emissions, the constituents of the sludge being fed to the incinerator, combustion temperatures, air pollution control device operating parameters, sewage sludge feed rate, the stack height, the dispersion factor for the site, and calibration and maintenance logs (40 CFR 503.40 through 503.48) [**Revised October 2001**].

## E. Key Compliance Definitions

- *Active Sewage Sludge Unit* - a sewage sludge unit that has not closed (40 CFR 503.21(a)) [**Reviewed October 2001**].
- *Adjacent* - means bordering, contiguous, or neighboring [see definition of *Neighboring*] a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States,” including waters separated by constructed dikes or barriers, natural river berms, beach dunes, and the like. For purposes of adjacency, an open

water such as a pond or lake includes any wetlands within or abutting its ordinary high water mark. Adjacency is not limited to waters located laterally to a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States.” Adjacent waters also include all waters that connect segments of a water identified in paragraphs (1) through (5) or are located at the head of a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States,” and are bordering, contiguous, or neighboring such water. Waters being used for established normal farming, ranching, and silviculture activities. This definition is effective 6 February 2020 (33 U.S.C. 1344(f)) are not adjacent (40 CFR 122.2 and 401.11(l)(3)(i)) **[Added July 2015; Revised April 2018]**.

- *Aerobic Digestion* - the biochemical decomposition of organic matter in sewage sludge into CO<sub>2</sub> and water by microorganisms in the presence of air (40 CFR 503.31(a)) **[Reviewed October 2001]**.
- *Agricultural Land* - land on which a food crop, a feed crop, or a fiber crop is grown. This includes range land and land used as pasture (40 CFR 503.11(a)) **[Reviewed October 2001]**.
- *Agronomic Rate* - the whole sludge application rate (dry weight basis) designed (40 CFR 503.11(b)) **[Reviewed October 2001]**:
  1. To provide the amount of nitrogen needed by the food crop, feed crop, fiber crop, cover crop, or vegetation grown on the land.
  2. To minimize the amount of nitrogen in the sewage sludge that passes below the root zone of the crop or vegetation grown on the land to the groundwater.
- *Air Pollution Control Device* - one or more processes used to treat the exit gas from a sewage sludge incinerator stack (40 CFR 503.41) **[Added October 2001]**.
- *Alternative Effluent Limitations or Pretreatment Standards* - effluent limitations determined on a case-by-case basis under section 402(a)(1) of the CWA or pretreatment standards developed as local limits by the control authority under 40 CFR 403.6(c) that apply to the discharge of wastewater subject to this provision. The permit writer (or control authority) will calculate these limitations or standards using a “building block” approach or the “combined waste stream formula.” Under this approach, the permit writer (or control authority) will develop flow-weighted effluent limitations or standards for the treated combined waste stream by applying the limitations or standards in 40 CFR subchapter N that would otherwise apply to a particular waste stream received from off-site if the waste stream were treated and discharged from the facility at which it was generated (40 CFR 437.2) **[Added April 2001]**.
- *Amalgam Process Wastewater* - any wastewater generated and discharged by a dental discharger through the practice of dentistry that may contain dental amalgam (40 CFR 441.20) **[Added July 2017]**.
- *Amalgam Separator* - a collection device designed to capture and remove dental amalgam from the amalgam process wastewater of a dental facility (40 CFR 441.20) **[Added July 2017]**.
- *Anaerobic Digestion* - the biochemical decomposition of organic matter in sewage sludge into methane gas and CO<sub>2</sub> by microorganisms in the absence of air (40 CFR 503.31(b)) **[Reviewed October 2001]**.
- *Analytical Methods* - the parameters that are regulated or referenced in this part and listed with approved methods of analysis in Table 1B at 40 CFR 136.3 are defined as follows (40 CFR 412.2(j)) **[Added July 2005]**:
  1. Ammonia (as N) means ammonia reported as nitrogen.
  2. BOD<sub>5</sub> means 5-day biochemical oxygen demand.
  3. Nitrate (as N) means nitrate reported as nitrogen.
  4. Total dissolved solids means nonfilterable residue.
- *Animal Feeding Operation* - a lot or facility (other than an aquatic animal production facility) where the following conditions are met (40 CFR 122.23(b)(1) and 122.23(b)(2)) **[Added October 2001]**:

1. animals (other than aquatic animals) have been, are, or will be stabled or confined and fed or maintained for a total of 45 days or more in any 12-mo period, and
  2. crops, vegetation forage growth, or post-harvest residues are not sustained in the normal growing season over any portion of the lot or facility.
  3. Two or more animal feeding operations under common ownership are considered, for the purposes of NPDES regulations, to be a single animal feeding operation if they adjoin each other or if they use a common area or system for the disposal of wastes.
- *Annual Pollutant Loading Rate* - the maximum amount of a pollutant that can be applied to a unit area of land during a 365 day period (40 CFR 503.11(c)) **[Reviewed October 2001]**.
  - *Annual Whole Sludge Application Rate* - the maximum amount of sewage sludge (dry weight basis) that can be applied to a unit area of land during a 365 day period (40 CFR 503.11(d)) **[Reviewed October 2001]**.
  - *Apply Sewage Sludge or Sewage Sludge Applied to the Land* - means land application of sewage sludge (40 CFR 503.9(a)) **[Reviewed October 2001]**.
  - *Approval Authority* - the Director in an NPDES state with an approved state pretreatment program and the appropriate Regional Administrator in a non-NPDES state or NPDES state without an approved state pretreatment program (40 CFR 403.3(c)) **[Added October 2001]**.
  - *Approved Dosage* - the dose of a drug that has been found to be safe and effective under the conditions of a new animal drug application (40 CFR 451.2) **[Added October 2004]**.
  - *Approved POTW Pretreatment Program or Program or POTW Pretreatment Program* - a program administered by a POTW that meets the criteria established in this regulation (40 CFR 403.8 and 403.9) and which has been approved by the USEPA or authorized regulatory agency in accordance with 40 CFR 403.11 of this regulation (40 CFR 403.3(d)) **[Added October 2001]**.
  - *Approved Program or Approved State* - a state or interstate program which has been approved or authorized by USEPA under 40 CFR 123 (40 CFR 122.2) **[Added October 2001]**.
  - *Aquatic Animal Containment System* - a culture or rearing unit such as a raceway, pond, tank, net or other structure used to contain, hold or produce aquatic animals. The containment system includes structures designed to hold sediments and other materials that are part of a wastewater treatment system (40 CFR 451.2) **[Added October 2004]**.
  - *Aquifer* - a geologic formation, group of geologic formations, or a portion of a geologic formation capable of yielding groundwater to wells or springs (40 CFR 503.21(b)) **[Reviewed October 2001]**.
  - *Armed Forces Vessel* - a vessel owned or operated by the DOD or the United States Coast Guard, other than vessels that are time or voyage chartered by the Armed Forces, vessels of the U.S. Army Corps of Engineers, or vessels that are memorials or museums (40 CFR 1700.3) **[Added July 1999]**.
  - *Auxiliary Fuel* - fuel used to augment the fuel value of sewage sludge. This includes, but is not limited to, natural gas, fuel oil, coal, gas generated during anaerobic digestion of sewage sludge, and municipal solid waste (not to exceed 30 percent of the dry weight of sewage sludge and auxiliary fuel together). Hazardous wastes are not auxiliary fuel (40 CFR 503.41) **[Added October 2001]**.
  - *Average Daily Concentration* - the arithmetic mean of the concentration of a pollutant in milligrams per kilogram of sewage sludge (dry weight basis) in the samples collected and analyzed in a month (40 CFR 503.41) **[Added October 2001]**.

- *Average Monthly Discharge Limitation* - the highest allowable average of “daily discharges” over a calendar month, calculated as the sum of all “daily discharges” measured during a calendar month divided by the number of “daily discharges” measured during that month (40 CFR 122.2) [**Added October 2001**].
- *Average Weekly Discharge Limitation* - the highest allowable average of “daily discharges” over a calendar week, calculated as the sum of all “daily discharges” measured during a calendar week divided by the number of “daily discharges” measured during that week (40 CFR 122.2) [**Added October 2001**].
- *Base Flood* - a flood that has a one percent chance of occurring in any given year (i.e., a flood with a magnitude equaled once in 100 yr) (40 CFR 503.9(b)) [**Reviewed October 2001**].
- *Best Management Practices (“BMPs”)* - schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of “waters of the United States.” BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage (40 CFR 122.2) [**Added October 2001**].
- *Best Management Practices (BMPs)* - schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to implement the prohibitions listed in 40 CFR 403.5(a)(1) and (b). BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw materials storage (40 CFR 403.3(e)) [**Added January 2006**].
- *Bioaccumulative* - the opposite of not bioaccumulative (40 CFR 1700.3) [**Added April 2017**].
- *Biodegradable* - the following for purposes of the standards (40 CFR 1700.3) [**Added April 2017**]:
  1. Regarding environmentally acceptable lubricants and greases, biodegradable means lubricant formulations that contain at least 90% (weight in weight concentration or w/w) or grease formulations that contain at least 75% (w/w) of a constituent substance or constituent substances (only stated substances present above 0.10% must be assessed) that each demonstrate either the removal of at least 70% of dissolved organic carbon, production of at least 60% of the theoretical carbon dioxide, or consumption of at least 60% of the theoretical oxygen demand within 28 days. Test methods include: Organization for Economic Co-operation and Development Test Guidelines 301 A-F, 306, and 310, ASTM 5864, ASTM D-7373, OCSPP Harmonized Guideline 835.3110, and International Organization for Standardization 14593:1999. For lubricant formulations, the 10% (w/w) of the formulation that need not meet the above biodegradability requirements, up to 5% (w/w) may be non-biodegradable, but not bioaccumulative, while the remaining 5-10% must be inherently biodegradable. For grease formulations, the 25% (w/w) of the formulation that need not meet the above biodegradability requirement, the constituent substances may be either inherently biodegradable or non-biodegradable, but may not be bioaccumulative. Test methods to demonstrate inherent biodegradability include: OECD Test Guidelines 302C (>70% biodegradation after 28 days) or OECD Test Guidelines 301 A-F (>20% but <60% biodegradation after 28 days).
  2. Regarding cleaning products, biodegradable means products that demonstrate either the removal of at least 70% of dissolved organic carbon, production of at least 60% of the theoretical carbon dioxide, or consumption of at least 60% of the theoretical oxygen demand within 28 days. Test methods include: Organization for Economic Cooperation and Development Test Guidelines 301 A-F, 306, and 310, and International Organization for Standardization 14593:1999.
  3. Regarding biocidal substances, biodegradable means a compound or mixture that yields 60% of theoretical maximum carbon dioxide and demonstrate a removal of at least 70% of dissolved organic carbon within 28 days as described in EPA 712-C-98-075 (OPPTS 835.3100 Aerobic Aquatic Biodegradation).
- *Blowdown* - the minimum discharge of recirculating water for the purpose of discharging materials contained in the water, the further buildup of which would cause concentrations in amounts exceeding limits established by best engineering practice (40 CFR 401.11(p) and 40 CFR 423.11(j)).

- *Bottom Ash* - means the ash, including boiler slag, which settles in the furnace or is dislodged from furnace walls. Economizer ash is included in this definition when it is collected with bottom ash (40 CFR 423.11(f)) **[Added October 2003; Revised October 2017]**.
- *Bulk Sewage Sludge* - sewage sludge that is not sold or given away in a bag or other container for application to the land (40 CFR 503.11(e)) **[Reviewed October 2001]**.
- *Bypass* - the intentional diversion of waste streams from any portion of a treatment facility (40 CFR 122.41(m)(1)(i) and 40 CFR 403.17) **[Added October 2001]**.
- *Centralized Waste Treatment (CWT) Facility* - any facility that treats (for disposal, recycling or recovery of material) any hazardous or non-hazardous industrial wastes, hazardous or non-hazardous industrial wastewater, and/or used material received from off-site. "CWT facility" includes both a facility that treats waste received exclusively from off-site and a facility that treats wastes generated on-site as well as waste received from off-site. For example, an organic chemical manufacturing plant may, in certain circumstances, be a CWT facility if it treats industrial wastes received from offsite as well as industrial waste generated at the organic chemical manufacturing plant. CWT facilities may also include re-refiners and may be owned by the federal government (40 CFR 437.2) **[Added April 2001]**.
- *Centralized Waste Treatment Wastewater* - any wastewater generated as a result of CWT activities. CWT wastewater sources may include, but are not limited to: liquid waste receipts, solubilization water, used oil emulsion-breaking wastewater, tanker truck/drum/roll-off box washes, equipment washes, air pollution control scrubber blow-down, laboratory-derived wastewater, on-site landfill wastewaters, and contaminated stormwater (40 CFR 437.2) **[Added April 2001]**.
- *Chemical Cargos* – these include, but are not limited to, the following: latex, rubber, plastics, plasticizers, resins, soaps, detergents, surfactants, agricultural chemicals and pesticides, hazardous waste, organic chemicals including: alcohols, aldehydes, formaldehydes, phenols, peroxides, organic salts, amines, amides, other nitrogen compounds, other aromatic compounds, aliphatic organic chemicals, glycols, glycerines, and organic polymers; refractory organic compounds including: ketones, nitriles, organo-metallic compounds containing chromium, cadmium, mercury, copper, zinc; and inorganic chemicals including: aluminum sulfate, ammonia, ammonium nitrate, ammonium sulfate, and bleach. Cargos that are not considered to be food grade or petroleum cargos are considered to be chemical cargos (40 CFR 442.2) **[Added October 2000]**.
- *Chemical Metal Cleaning Waste* - any wastewater resulting from the cleaning of any metal process equipment with chemical compounds, including, but not limited to, boiler tube cleaning (40 CFR 423.11(c)).
- *Class I Sludge Management Facility* - any POTW identified under 40 CFR 403.8(a) as being required to have an approved pretreatment program (including such POTWs located in a state that has elected to assume local program responsibilities pursuant to 40 CFR 403.10(e)) and any other treatment works treating domestic sewage classified as a Class I sludge management facility by the USEPA or authorized regulatory agency, in the case of approved state programs, because of the potential for its sludge use or disposal practices to adversely affect public health and the environment (40 CFR 122.2)**[Reviewed October 2001]**.
- *Class I Sludge Management Facility* - any publicly owned treatment works (POTW), as defined in 40 CFR 501.2, required to have an approved pretreatment program under 40 CFR 403.8(a) (including any POTW located in a State that has elected to assume local program responsibilities pursuant to 40 CFR 403.10(e)) and any treatment works treating domestic sewage, as defined in 40 CFR 122.2, classified as a Class I sludge management facility by the USEPA Regional Administrator, or, in the case of approved State programs, the Regional Administrator in conjunction with the State Director, because of the potential for its sewage sludge use or disposal practice to affect public health and the environment adversely (40 CFR 503.9(c)) **[Reviewed October 2001]**.
- *Class A Sewage Sludge* - when one of the following methods is used, sludge is considered Class A with respect to pathogens (40 CFR 503.32(a)(3)) **[Reviewed October 2001]**:

1. Alternative 1: Either the density of fecal coliform in the sewage sludge shall be less than 1000 most probable number/gram (MPN/g) of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

The temperature of the sewage sludge that is used or disposed shall be maintained at a specific value for a period of time. When the percent solids of the sewage sludge is 7 percent or higher, the temperature of the sewage sludge shall be 50 degrees C or higher; the time period shall be 20 min or longer; and the temperature and time period shall be determined using the following equation, except when small particles of sewage sludge are heated by either warmed gases or an immiscible liquid.

$$D = \frac{131,700,000}{10^{0.1400t}} \text{ Eq (2)}$$

Where, D = time in days and t = temperature in °C.

When the percent solids of the sewage sludge is 7 percent or higher and small particles of sewage sludge are heated by either warmed gases or an immiscible liquid, the temperature of the sewage sludge shall be 50 degrees C or higher; the time period shall be 15 s or longer; and the temperature and time period shall be determined using the above equation.

When the percent solids of the sewage sludge is less than 7 percent and the time period is at least 15 s, but less than 30 min, the temperature and time period shall be determined using the above equation.

When the percent solids of the sewage sludge is less than 7 percent; the temperature of the sewage sludge is 50 degrees C or higher; and the time period is 30 min or longer, the temperature and time period shall be determined using the below equation.

$$D = \frac{50,070,000}{10^{0.1400t}} \text{ Eq(3)}$$

Where, D = time in days and t = temperature in °C.

2. Alternative 2: Either the density of fecal coliform in the sewage sludge is less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

The pH of the sewage sludge that is used or disposed shall be raised to above 12 and shall remain above 12 for 72 h.

The temperature of the sewage sludge shall be above 52 degrees C for 12 h or longer during the period that the pH of the sewage sludge is above 12.

At the end of the 72 h period during which the pH of the sewage sludge is above 12, the sewage sludge shall be air dried to achieve a percent solids in the sewage sludge greater than 50 percent.

3. Alternative 3: Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

The sewage sludge shall be analyzed prior to pathogen treatment to determine whether the sewage sludge contains enteric viruses.

When the density of enteric viruses in the sewage sludge prior to pathogen treatment is less than one plaque-forming unit per 4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to enteric viruses until the next monitoring episode for the sewage sludge.

When the density of enteric viruses in the sewage sludge prior to pathogen treatment is equal to or greater than one plaque-forming unit per 4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to enteric viruses when the density of enteric viruses in the sewage sludge after pathogen treatment is less than one plaque-forming unit per 4g of total solids (dry weight basis) and when the values or ranges of values for

the operating parameters for the pathogen treatment process that produces the sewage sludge that meets the enteric virus density requirement are documented.

After the enteric virus reduction is demonstrated for the pathogen treatment process, the sewage sludge continues to be Class A with respect to enteric viruses when the values for the pathogen treatment process operating parameters are consistent with the values or ranges of values documented.

The sewage sludge shall be analyzed prior to pathogen treatment to determine whether the sewage sludge contains viable helminth ova.

When the density of viable helminth ova in the sewage sludge prior to pathogen treatment is less than 1 per 4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to viable helminth ova until the next monitoring episode for the sewage sludge.

When the density of viable helminth ova in the sewage sludge prior to pathogen treatment is equal to or greater than 1 per 4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to viable helminth ova when the density of viable helminth ova in the sewage sludge after pathogen treatment is less than 1 per 4 g of total solids (dry weight basis) and when the values or ranges of values for the operating parameters for the pathogen treatment process that produces the sewage sludge that meets the viable helminth ova density requirement are documented.

After the viable helminth ova reduction is demonstrated for the pathogen treatment process, the sewage sludge continues to be Class A with respect to viable helminth ova when the values for the pathogen treatment process operating parameters are consistent with the values or ranges of values documented.

4. Alternative 4: Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

The density of enteric viruses in the sewage sludge shall be less than 1 plaque-forming unit per 4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f), unless otherwise specified by the permitting authority.

The density of viable helminth ova in the sewage sludge shall be less than 1 per 4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f), unless otherwise specified by the permitting authority.

5. Alternative 5: Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or given away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

Sewage sludge that is used or disposed shall be treated in one of the Processes to Further Reduce Pathogens described in appendix B of 40 CFR 503.

6. Alternative 6: Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or given away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

Sewage sludge that is used or disposed shall be treated in a process that is equivalent to a Process to Further Reduce Pathogens, as determined by the permitting authority.

- *Class B Sewage Sludge* - when one of the following methods is used, it is considered Class B with respect to pathogens (40 CFR 503.32(b)(2)) [**Reviewed October 2001**].

1. Alternative 1: Seven samples of the sewage sludge that is used or disposed shall be collected. The geometric mean of the density of fecal coliform in the samples must be less than either 2 million MPN/g of total solids (dry weight basis) or 2 million colony forming units/g (CFU/g) of total solids (dry weight basis).
  2. Alternative 2: Sewage sludge that is used or disposed shall be treated in one of the processes to significantly reduce pathogens described in appendix B of 40 CFR 503.
  3. Alternative 3: Sewage sludge that is used or disposed is to be treated in a process that is equivalent to a process to significantly reduce pathogens, as determined by the permitting authority.
- *Closed-top Hopper* - a completely enclosed storage vessel used to transport dry bulk cargos, either by truck, rail, or barge. Closed-top hoppers are not designed or constructed to carry liquid cargos and are typically used to transport grain, soybeans, soy meal, soda ash, lime, fertilizer, plastic pellets, flour, sugar, and similar commodities or cargos. The cargos transported come in direct contact with the hopper interior. Closed-top hoppers are also commonly referred to as dry bulk hoppers (40 CFR 442.2) **[Added October 2000]**.
  - *CN,A* - cyanide amenable to chlorination (40 CFR 413.02).
  - *CN,T* - cyanide, total (40 CFR 413.02).
  - *Co-permittee* - a permittee to a NPDES permit that is only responsible for permit conditions relating to the discharge for which it is operator (40 CFR 122.26(b)(1)) **[Added January 2000; Reviewed October 2001]**.
  - *Coal Pile Runoff* - the rainfall runoff from or through any coal storage pile (40 CFR 423.11(m)) **[Added October 2003]**.
  - *Concentrated Animal Feeding Operation* - an animal feeding operation which meets the criteria in appendix B of 40 CFR 122, or which the Director designates as such (40 CFR 122.23(b)(3)) **[Added October 2001]**.
  - *Concentrated Aquatic Animal Production Facility* - a hatchery, fish farm, or other facility which meets the criteria 40 CFR 122 Appendix C, or which the Director designates (40 CFR 122.24(b) and 451.2) **[Added October 2001; Revised October 2004]**.
  - *Contaminate an Aquifer* - to introduce a substance that causes the maximum contaminant level for nitrate in 40 CFR 141.62(b) to be exceeded in the ground water or that causes the existing concentration of nitrate in ground water to increase when the existing concentration of nitrate in the ground water exceeds the maximum contaminant level for nitrate in 40 CFR 141.62(b) (40 CFR 503.21) **[Revised October 1999]**.
  - *Contaminated Groundwater* - water below the land surface in the zone of saturation which has been contaminated by activities associated with waste disposal (40 CFR 445.2(a)) **[Added April 2000]**.
  - *Contaminated Stormwater* - stormwater which comes in direct contact with landfill wastes, the waste handling and treatment areas, or landfill wastewater. Some specific areas of a landfill that may produce contaminated stormwater include (but are not limited to): the open face of an active landfill with exposed waste (no cover added); the areas around wastewater treatment operations; trucks, equipment, or machinery that has been in direct contact with the waste; and waste dumping areas (40 CFR 445.2(b)) **[Added April 2000]**.
  - *Contaminated Stormwater* - stormwater which comes in direct contact with CWT wastes, the waste handling and treatment areas, or other centralized waste treatment wastewater (40 CFR 437.2) **[Added April 2001]**.
  - *Contiguous Zone* - the entire zone established by the United States under Article 24 of the Convention on the Territorial Sea and the Contiguous Zone (40 CFR 122.2) **[Added October 2001]**.
  - *Continuous Discharge* - a discharge which occurs without interruption throughout the operating hours of the facility, except for infrequent shutdowns for maintenance, process changes, or other similar activities (40 CFR 122.2) **[Reviewed October 2001; Citation Revised April 2012]**.

- *Control Authority* - refers to (40 CFR 403.3(f) and 441.20) **[Revised July 2017]**:
  1. The POTW if the POTW's Pretreatment Program Submission has been approved in accordance with the requirements of 40 CFR 403.11; or
  2. The Approval Authority if the Submission has not been approved.
- *Control Efficiency* - the mass of a pollutant in the sewage sludge fed to an incinerator minus the mass of that pollutant in the exit gas from the incinerator stack divided by the mass of the pollutant in the sewage sludge fed to the incinerator (40 CFR 503.41) **[Added October 2001]**.
- *Conventional Pollutants* - the following comprise the list of conventional pollutants designated pursuant to section 304(a)(4) of the Act (40 CFR 401.16) **[Added October 2001]**:
 

Biochemical oxygen demand (BOD)  
 Total suspended solids (nonfilterable) (TSS)  
 pH  
 Fecal coliform  
 Oil and grease
- *Corrosion Preventive Coating* - the application of removable oily or organic solutions to protect metal surfaces against corrosive environments. Corrosion preventive coatings include, but are not limited to: petrolatum compounds, oils, hard dry-film compounds, solvent-cutback petroleum-based compounds, emulsions, water-displacing polar compounds, and fingerprint removers and neutralizers. Corrosion preventive coating does not include electroplating, or chemical conversion coating operations (40 CFR 438.2) **[Added July 2003]**.
- *Cover* - soil or other material used to cover sewage sludge placed on an active sewage sludge unit (40 CFR 503.21(d)) **[Reviewed October 2001]**.
- *Cover Crop* - a small grain crop, such as oats, wheat, or barley, not grown for harvest (40 CFR 503.9(d)) **[Reviewed October 2001]**.
- *Cumulative Pollutant Loading Rate* - the maximum amount of an inorganic pollutant that can be applied to an area of land (40 CFR 503.11(f)) **[Reviewed October 2001]**.
- *Daily Discharge* - the discharge of a pollutant measured during a calendar day or any 24-h period that reasonably represents the calendar day for purposes of sampling (40 CFR 122.2) **[Reviewed October 2001]**.
- *Density of Microorganisms* - the number of microorganisms per unit mass of total solids (dry weight) in the sewage sludge (40 CFR 503.31(c)) **[Reviewed October 2001]**.
- *Dental Amalgam* - an alloy of elemental mercury and other metal(s) that is used in the practice of dentistry (40 CFR 441.20) **[Added July 2017]**.
- *Dental Discharger* - a facility where the practice of dentistry is performed, including, but not limited to, institutions, permanent or temporary offices, clinics, home offices, and facilities owned and operated by Federal, state or local governments, that discharges wastewater to a publicly owned treatment works (POTW) (40 CFR 441.20) **[Added July 2017]**.
- *Designated Project Area* - the portions of the waters of the United States within which the permittee or permit applicant plans to confine the cultivated species, using a method or plan or operation (including, but not limited to, physical confinement) which, on the basis of reliable scientific evidence, is expected to ensure that specific individual organisms comprising an aquaculture crop will enjoy increased growth attributable to the discharge of pollutants, and be harvested within a defined geographic area (40 CFR 122.25(b)(2)) **[Added October 2001]**.
- *Direct Discharge* - the discharge of a pollutant (40 CFR 122.2) **[Reviewed October 2001]**.

- *Discharge* - when used without qualification means the “discharge of a pollutant” (40 CFR 122.2) **[Added April 2012]**.
- *Discharge*- includes, but is not limited to, any spilling, leaking, pouring, pumping, emitting, emptying, or dumping (33 CFR 159.3) **[Added January 2012]**.
- *Discharge Incidental to the Normal Operation of a Vessel* - a discharge, including, but not limited to: graywater, bilgewater, cooling water, weather deck runoff, ballast water, oil water separator effluent, and any other pollutant discharge from the operation of a marine propulsion system, shipboard maneuvering system, crew habitability system, or installed major equipment, such as an aircraft carrier elevator or a catapult, or from a protective, preservative, or absorptive application to the hull of a vessel; and a discharge in connection with the testing, maintenance, and repair of any of the aforementioned systems whenever the vessel is waterborne, including pierside. A discharge incidental to normal operation does not include (40 CFR 1700.3) **[Added July 1999]**:
  1. sewage
  2. a discharge of rubbish, trash, or garbage
  3. a discharge of air emissions resulting from the operation of a vessel propulsion system, motor driven equipment, or incinerator
  4. a discharge that requires a National Pollutant Discharge Elimination System (NPDES) permit under the *Clean Water Act*; or
  5. a discharge containing source, special nuclear, or byproduct materials regulated by the *Atomic Energy Act*.
- *Discharge Monitoring Report (“DMR”)* - the USEPA uniform national form, including any subsequent additions, revisions, or modifications for the reporting of self-monitoring results by permittees. DMRs must be used by “approved states” as well as by USEPA. USEPA will supply DMRs to any approved state upon request. The USEPA national forms may be modified to substitute the state Agency name, address, logo, and other similar information, as appropriate, in place of USEPA’s (40 CFR 122.2) **[Added October 2001]**.
- *Discharge of a Pollutant* - this means (40 CFR 122.2) **[Added October 2001]**:
  1. any addition of any “pollutant” or combination of pollutants to “waters of the United States” from any “point source,” or
  2. any addition of any pollutant or combination of pollutants to the waters of the “contiguous zone” or the ocean from any point source other than a vessel or other floating craft which is being used as a means of transportation.

This definition includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a state, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works. This term does not include an addition of pollutants by any “indirect discharger.”
- *Discharge of Pollutant* - the addition of any pollutant to navigable waters from any point source and any addition of any pollutant to the waters of the contiguous zone or the ocean zone or the ocean from any point source, other than from a vessel or other floating craft (40 CFR 401.11(h)) **[Reviewed October 2001]**.
- *Discharger* - a facility that discharges wastewater directly to waters of the United States or introduces wastewater to a publicly-owned treatment works (40 CFR 437.2) **[Added April 2001]**.
- *Dispersion Factor* - the ratio of the increase in the ground level ambient air concentration for a pollutant at or beyond the property line of the site where the sewage sludge incinerator is located to the mass emission rate for the pollutant from the incinerator stack (40 CFR 503.41) **[Added October 2001]**.
- *Displacement* - the relative movement of any two sides of a fault measured in any direction (40 CFR 503.21(e)) **[Reviewed October 2001]**.

- *Domestic Septage* - either liquid or solid material removed from a septic tank, cesspool, portable toilet, Type III marine sanitation device, or similar treatment works that receives only domestic sewage. Domestic septage does not include liquid or solid material removed from a septic tank, cesspool, or similar treatment works that receive either commercial wastewater or industrial wastewater and does not include grease removed from a grease trap at a restaurant (40 CFR 257.2).
- *Domestic Sewage* - waste and wastewater from humans or household operations that is discharged to or otherwise enters a treatment works (40 CFR 503.9(g)) **[Reviewed October 2001]**.
- *Drug* - any substance defined as a drug in section 201(g)(1) of the *Federal Food, Drug and Cosmetic Act* (21 U.S.C. 321) (40 CFR 451.2) **[Added October 2004]**.
- *Drums* - metal or plastic cylindrical containers with either an open-head or a tight-head (also known as bung-type top) used to hold liquid, solid, or gaseous commodities or cargos which are in direct contact with the container interior. Drums typically range in capacity from 30 to 55 gal (40 CFR 442.2) **[Added October 2000]**.
- *Dry* - not producing a wastewater (40 CFR 437.2) **[Added April 2001]**.
- *Dry Lot* - a facility for growing ducks in confinement with a dry litter floor cover and no access to swimming areas (40 CFR 412.21(a)) **[Added July 2005]**.
- *Effluent Limitation* - any restriction imposed by the Director on quantities, discharge rates, and concentrations of “pollutants” which are “discharged” from “point source” into “waters of the United States,” the waters of the “contiguous zone,” or the ocean (40 CFR 122.2) **[Added October 2001]**.
- *Effluent Limitations* - any restriction established by the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources, other than new sources, into navigable waters, the waters of the contiguous zone, or the ocean (40 CFR 401.11(i)).
- *Environmentally Acceptable Lubricants* - lubricants that are biodegradable, minimally-toxic, and not bioaccumulative as defined in this subpart. The following labeling programs and organizations meet the definition of being environmentally acceptable lubricants: Blue Angel, European Ecolabel, Nordic Swan, the Swedish Standards SS 155434 and 155470, Safer Choice, and the Convention for the Protection of the Marine Environment of the North-East Atlantic (OSPAR) requirements (40 CFR 1700.3) **[Added April 2017]**.
- *Environmentally Sensitive Area* - an area of environmental importance which is in or adjacent to navigable waters (49 CFR 194.5).
- *Equivalent System* - a wastewater treatment system that is demonstrated in literature, treatability tests or self-monitoring data to remove a similar level of pesticide active ingredient (PAI) or priority pollutants as the applicable appropriate pollution control technology listed in Table 10 to 40 CFR 455 (40 CFR 455.10) **[Added October 2001]**.
- *Equivalent Treatment* - a wastewater treatment system that achieves comparable pollutant removals to the applicable treatment technology selected as the basis for the limitations and pretreatment standards. Comparable removals may be demonstrated through literature, treatability tests, or self-monitoring data (40 CFR 437.2) **[Added April 2001]**.
- *Excluded CWTs* – The requirements in 40 CFR Part 437 do not apply to the following discharges of wastewater from a CWT facility (40 CFR 437.1(b) through 40 CFR 437.1(d)) **[Added April 2001]**:
  1. wastewater from the treatment of wastes that are generated on-site when the wastes generated on-site are otherwise subject to another part of subchapter N

2. wastewater from the treatment of wastes that are generated off-site if the discharger demonstrates one of the following:
  - a. that the off-site wastes are generated at a facility that is subject to the same provisions in 40 CFR subchapter N as non-CWT wastes generated at the CWT facility
  - b. that the off-site wastes are of similar nature and the treatment of such wastes are compatible with the treatment of non-CWT wastes generated and treated at the CWT
3. wastewater from the treatment of wastes received from off-site via conduit (e.g., pipelines, channels, ditches, trenches, etc.) from the facility that generates the wastes unless the resulting wastewaters are commingled with other wastewaters subject to this provision. A facility that acts as a waste collection or consolidation center is not a facility that generates wastes
4. wastewater from product stewardship activities, the treatment of sanitary wastes and wastes of domestic origin including chemical toilet wastes, septage, and restaurant wastes or thermal drying of POTW biosolids. Product stewardship activities for purposes of this provision are limited to the following activities at a manufacturing facility: acceptance for treatment or recovery of its unused products, shipping and storage containers with product residues and off-spec products
5. wastewater from solids recovery operations so long as the wastes recovered are from non-industrial sources, and recovery of the wastes does not generate a wastewater or leach appreciable metal or organic chemicals or petroleum-based oil and grease into the water. Examples of solids recovery operations to which this subpart would not apply include, but are not limited to, the recycling of aluminum cans, glass and plastic bottles
6. wastewater from scrap metal processing or auto salvage operations
7. wastewater from transfer stations or municipal recycling centers
8. wastewater from the treatment of, or recovery of material from, animal or vegetable fats/oils from grease traps or interceptors generated by facilities engaged in food service activities
9. wastewater from the treatment of, or recovery of material from, off-site wastes generated by facilities engaged only in food processing
10. wastewater from facilities that are subject to 40 CFR 442. Wastewater resulting from the treatment of off-site wastewater generated in cleaning transportation equipment (or on-site wastewater generated in cleaning equipment) along with other off-site wastes (subject to this part) not generated in cleaning transportation equipment is, however, subject to 40 CFR 437
11. wastewater resulting from solvent recovery operations if the solvent recovery operations involve the separation of solvent mixtures by distillation
12. wastewater from facilities that are engaged exclusively in centralized silver recovery from used photographic or x-ray materials activities. The discharge resulting from centralized silver recovery from used photographic or x-ray materials that is treated at a CWT facility along with other off-site waste streams (subject to 40 CFR 437) is subject to 40 CFR 437
13. Wastewater from facilities that accept off-site wastes only for treatability studies, research and development, or chemical or physical analysis. The wastewater resulting from treatability studies, research and development, or chemical or physical analysis that is treated at a CWT facility along with other off-site waste streams.

The following activities are also excluded from the requirements of 40 CFR 437:

1. “Dry” fuel blending operations, “dry” waste solidification/stabilization operations, “dry” used oil filter or oily absorbents recycling operations, or “dry” high temperature metals recovery operations. However, this part does apply to wastewater discharges from a CWT resulting from any of these operations that do produce wastewater
2. the discharge of marine generated wastes including wash water from equipment and tank cleaning, ballast water, bilge water, and other wastes generated (while operating on inland, coastal, or open waters or while berthed) as part of routine ship maintenance and operation as long as they are treated and discharged at the ship servicing facility where it is off-loaded. The discharges resulting from the treatment of marine generated wastes that are off-loaded and subsequently sent to a centralized waste treatment facility at a separate location are, however, subject to 40 CFR 437
3. discharge of wastewater from land treatment units or land application operations
4. discharge of wastewater from facilities that are engaged exclusively in landfilling activities and/or the treatment of landfill wastewaters (whether generated on or off-site). The discharge resulting from the

treatment of landfill wastewater, whether generated on-site or off-site, treated at CWT facilities along with other off-site waste is, however, subject to 40 CFR 437

5. discharge of wastewater from facilities that are engaged exclusively in incineration activities. The discharge resulting from the treatment of off-site wastewater generated in the incineration of industrial waste that is treated at a CWT facility along with other off-site waste streams (subject to 40 CFR 437) is subject to 40 CFR 437.

The provisions 40 CFR 437 are not applicable to any metals treatment and recovery wastewater discharges which are subject to the secondary metals provisions of 40 CFR 421, the Nonferrous Metals Manufacturing Point Source Category. These secondary metals subcategories are Subpart C (Secondary Aluminum Smelting Subcategory), Subpart F (Secondary Copper Subcategory), Subpart L (Secondary Silver Subcategory), Subpart M (Secondary Lead Subcategory), Subpart P (Primary and Secondary Germanium and Gallium Subcategory), Subpart Q (Secondary Indium Subcategory), Subpart R (Secondary Mercury Subcategory), Subpart T (Secondary Molybdenum and Vanadium Subcategory), Subpart V (Secondary Nickel Subcategory), Subpart X (Secondary Precious Metals Subcategory), Subpart Z (Secondary Tantalum Subcategory), Subpart AA (Secondary Tin Subcategory), Subpart AB (Primary and Secondary Titanium Subcategory), Subpart AC (Secondary Tungsten and Cobalt Subcategory), and Subpart AD (secondary Uranium Subcategory).

- *Excursion* - an unintentional and temporary incident in which the pH value of discharge wastewater exceeds the range set forth in the applicable effluent limitations guidelines (40 CFR 401.17(c)) **[Added October 2001]**.
- *Excluded Sludge* - The following are types of sludge and activities which are exempted from meeting the requirements outlined in 40 CFR 503**[Reviewed October 2001]**:
  1. processes used to treat domestic sewage or processes used to treat sewage sludge prior to final use except for the standards on pathogen and vector reduction in 40 CFR 503.32 and 503.33
  2. sewage sludge co-fired in an incinerator with other wastes or for the incinerator in which sewage sludge and other wastes are co-fired
  3. sludge generated at an industrial facility during the treatment of industrial wastewater, including sewage sludge generated during the treatment of industrial wastewater combined with domestic sewage
  4. sewage sludge determined to be hazardous
  5. sewage sludge with a concentration of PCBs equal to greater than 50 mg/kg of total solids (dry weight basis)
  6. ash generated during the firing of sewage sludge in a sewage sludge incinerator
  7. grit (i.e., sand, gravel, cinders, or other material with high specific gravity) or screenings (e.g., relatively large materials such as rags) generated during preliminary treatment of domestic sewage in a treatment works
  8. sludge generated during the treatment of either surface water or groundwater used for drinking water
  9. commercial septage, industrial septage, a mixture of domestic septage and commercial septage, or a mixture of domestic septage and industrial septage (40 CFR 503.6).
- *Existing Source* - any source which is not a new source or a new discharger (40 CFR 122.29(a)(3)) **[Added October 2001]**.
- *Existing Vessel* - includes any vessel, the construction of which was initiated before 30 January 1975 (33 CFR 159.3) **[Added January 2012]**.
- *Extralabel Drug Use* - a drug approved under the Federal Food, Drug and Cosmetic Act that is not used in accordance with the approved label directions, see 21 CFR 530 (40 CFR 451.2) **[Added October 2004]**.
- *Facilities or Equipment* - buildings, structures, process or production equipment or machinery which form a permanent part of the new source and which will be used in its operation, if these facilities or equipment are of such value as to represent a substantial commitment to construct. It excludes facilities or equipment used in connection with feasibility, engineering, and design studies regarding the source or water pollution treatment for the source (40 CFR 122.29(a)(5)) **[Added October 2001]**.

- *Facility* - all contiguous property owned, operated, leased, or under the control of the same person or entity (40 CFR 445.2(d)) **[Added April 2000]**.
- *Facility or Activity* - any NPDES “point source” or any other facility or activity (including land or appurtenances thereto) that is subject to regulation under the NPDES program (40 CFR 122.2) **[Added October 2001]**.
- *Fault* - a fracture or zone of fractures in any materials along which strata on one side are displaced with respect to strata on the other side (40 CFR 503.21(f)) **[Reviewed October 2001]**.
- *Fecal Coliform* - the bacterial count (Parameter 1) at 40 CFR 136.3 in Table 1A, which also cites the approved methods of analysis (40 CFR 412.2(c)) **[Added July 2005]**.
- *Federally Owned Treatment Work (FOTW)* - a facility that is owned and operated by a department, agency, or instrumentality of the Federal Government treating wastewater, a majority of which is domestic sewage, prior to discharge in accordance with a permit issued under section 402 of the *Federal Water Pollution Control Act* (42 USC 6939e(d)).
- *Federally-protected Waters* - waters within 12 mi of the United States that are also part of any of the following (40 CFR 1700.3) **[Added April 2017]**:
  1. Marine sanctuaries designated under the National Marine Sanctuaries Act (16 U.S.C. 1431 et seq.) or Marine National Monuments designated under the Antiquities Act of 1906;
  2. A unit of the National Wildlife Refuge System, including Wetland Management Districts, Waterfowl Production Areas, National Game Preserves, Wildlife Management Areas, and National Fish and Wildlife Refuges;
  3. National Wilderness Areas; and
  4. Any component designated under the National Wild and Scenic Rivers System.
- *Feed Crops* - crops produced primarily for consumption by animals (40 CFR 503.9(j)) **[Reviewed October 2001]**.
- *Fiber Crops* - crops such as flax and cotton (40 CFR 503.9(k)) **[Reviewed October 2001]**.
- *Final Cover* - the last layer of soil or other material placed on a sewage sludge unit at closure (40 CFR 503.21(g)) **[Reviewed October 2001]**.
- *Flow-through System* - a system designed to provide a continuous water flow to waters of the United States through chambers used to produce aquatic animals. Flow-through systems typically use rearing units that are either raceways or tank systems. Rearing units referred to as raceways are typically long, rectangular chambers at or below grade, constructed of earth, concrete, plastic, or metal to which water is supplied by nearby rivers or springs. Rearing units comprised of tank systems use circular or rectangular tanks and are similarly supplied with water to raise aquatic animals. The term does not include net pens (40 CFR 451.2) **[Added October 2004]**.
- *Fluidized Bed Incinerator* - an enclosed device in which organic matter and inorganic matter in sewage sludge are combusted in a bed of particles suspended in the combustion chamber gas (40 CFR 503.41) **[Added October 2001]**.
- *Fly Ash* - the ash that is carried out of the furnace by a gas stream and collected by a capture device such as a mechanical precipitator, electrostatic precipitator, or fabric filter. Economizer ash is included in this definition when it is collected with fly ash. Ash is not included in this definition when it is collected in wet scrubber air pollution control systems whose primary purpose is particulate removal (40 CFR 423.11(e)) **[Added October 2003; Revised October 2017]**.
- *Food Grade Cargos* - edible and non-edible food products. Specific examples of food grade cargos include, but are not limited to, the following: alcoholic beverages, animal by-products, animal fats, animal oils, caramel,

caramel coloring, chocolate, corn syrup and other corn products, dairy products, dietary supplements, eggs, flavorings, food preservatives, food products that are not suitable for human consumption, fruit juices, honey, lard, molasses, non-alcoholic beverages, sweeteners, tallow, vegetable oils, and vinegar (40 CFR 442.2) **[Added October 2000]**.

- *Forest* - a tract of land thick with trees and underbrush (40 CFR 503.11(g)) **[Reviewed October 2001]**.
- *Fuel Blending* - the process of combining waste, wastewater, or used material for the purpose of regenerating a fuel for reuse. However, fuel blending may be loosely applied to any process where recovered hydrocarbons are combined as a fuel product where some pretreatment operations generate wastewater (40 CFR 437.2) **[Added April 2001]**.
- *General Permit* - an NPDES “permit” issued under 40 CFR 122.28 authorizing a category of discharges under the CWA within a geographical area (40 CFR 122.2) **[Added October 2001]**.
- *Hazardous Material* - any hazardous material as defined in 49 CFR 171.8 (40 CFR 1700.3) **[Added April 2017]**.
- *Heel* - any material remaining in a tank following unloading, delivery, or discharge of the transported cargo. Heels may also be referred to as container residue, residual materials or residuals (40 CFR 442.2) **[Added October 2000]**.
- *High Temperature Metals Recovery* - a metals recovery process in which solid forms of metal-containing materials are processed with a heat-based pyrometallurgical technology to produce a metal product (40 CFR 437.2) **[Added April 2001]**.
- *High Tide Line* - the line of intersection of the land with the water's surface at the maximum height reached by a rising tide. The high tide line may be determined, in the absence of actual data, by a line of oil or scum along shore objects, a more or less continuous deposit of fine shell or debris on the foreshore or berm, other physical markings or characteristics, vegetation lines, tidal gages, or other suitable means that delineate the general height reached by a rising tide. The line encompasses spring high tides and other high tides that occur with periodic frequency but does not include storm surges in which there is a departure from the normal or predicted reach of the tide due to the piling up of water against a coast by strong winds such as those accompanying a hurricane or other intense storm. This definition is effective 6 February 2020 (33 CFR 40 CFR 122.2(c)(7) and 401.11(l)(3)(vii)) **[Added July 2015; Revised April 2018]**.
- *Holocene Time* - the most recent epoch of the Quaternary period, extending from the end of the Pleistocene epoch to the present (40 CFR 503.21(h)) **[Reviewed October 2001]**.
- *Hourly Average* - the arithmetic mean of all measurements taken during an hour. At least two measurements must be taken during the hour (40 CFR 503.41) **[Added October 2001]**.
- *Illicit Discharge* - any discharge to a municipal separate storm sewer that is not composed entirely of storm water except discharges pursuant to a NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer) and discharges resulting from fire fighting activities (40 CFR 122.26(b)(2)) **[Added January 2000; Reviewed October 2001]**.
- *Incineration* - the combustion of organic matter and inorganic matter in sewage sludge by high temperatures in an enclosed device (40 CFR 503.41) **[Added October 2001]**.
- *Incinerator Operating Combustion Temperature* - the arithmetic mean of the temperature readings in the hottest zone of the furnace recorded in a day (24 h) when the temperature is averaged and recorded at least hourly during the hours the incinerator operates in a day (40 CFR 503.41) **[Added October 2001]**.

- *Incorporated Place* - the District of Columbia, or a city, town, township, or village that is incorporated under the laws of the state in which it is located (40 CFR 122.26(b)(3)) [**Added January 2000; Reviewed October 2001**].
- *Indirect Discharge* - the introduction of pollutants into a POTW from any nondomestic source regulated under section 307(b), (c), or (d) of the act (40 CFR 403.3(i)) [**Reviewed October 2001; Citation Revised January 2006**].
- *Indirect Discharger* - a nondomestic discharger introducing “pollutants” to a “publicly owned treatment works” (40 CFR 122.2) [**Added October 2001**].
- *Industrial Activities* - in relation to stormwater runoff, the following activities are considered to be engaging in “industrial activity” (40 CFR 122.26(b)(14)(i) through 122.26(b)(14)(xi)) [**Revised January 2000, Revised January 2010; Revised April 2012; Revised January 2013**]:
  1. facilities subject to stormwater effluent limitations guidelines, new source performance standards under 40 CFR subchapter N;
  2. facilities classified as the following Standard Industrial Classification (SIC)
    - a. SIC 24: Lumber and Wood Products, Industry Group 241 that are rock crushing, gravel washing, log sorting, or log storage facilities operated in connection with silvicultural activities defined in 40 CFR 122.27(b)(2) – (3) and Industry groups 242 through 2439
    - b. SIC 26: Manufacturing of Paper and Allied Products (except 265 [Paperboard Containers and Boxes] and 267 [Converted Paper And Paperboard Products] ),
    - c. SIC 28: Manufacturing of Chemicals and Allied Products (except 283 [Drugs]),
    - d. SIC 29: Petroleum Refining and Related Industries
    - e. SIC 311: Leather Tanning and Finishing
    - f. SIC 32: Manufacturing of Stone, Clay, Glass, and Concrete Products (except 323 [Glass Products Made of Purchased Glass]),
    - g. SIC 33: Primary Metal Industries
    - h. SIC 3441: Fabricated Structural Metal
    - i. SIC 373: Ship and Boat Building And Repairing
 (not included are all other types of silviculture facilities)
  3. facilities classified as SICs 10 through 14 (mineral industry) including active or inactive mining operations and oil and gas explorations, production, processing, or treatment operations, or transmission facilities that discharge storm water contaminated by contact with or that has come into contact with, any overburden, raw material, intermediate product, finished products, by-products or waste products located on the site of such operations:
    - a. SIC 10: Metal Mining
    - b. SIC 11: (not identified)
    - c. SIC 12: Coal Mining
    - d. SIC 13: Oil and Gas Extraction
    - e. SIC 14: Mining And Quarrying Of Nonmetallic Minerals, Except Fuels
  4. hazardous waste treatment, storage, or disposal facilities (TSDFs), including those that are operating under interim status or a permit under Resource Conservation and Recovery Act (RCRA), Subpart C;
  5. landfills, land application sites, and open dumps that receive or have received industrial wastes, including those sites that are subject to Federal regulation;
  6. facilities involved in the recycling of materials, including metal scrapyards, battery reclaimers, salvage yards, and automobile junkyards, including but not limited to those classified as:
    - a. SIC 5015: Wholesale Trade of Used Motor Vehicle Parts
    - b. SIC 5093: Establishments primarily engaged in assembling, breaking up, sorting, and wholesale distribution of scrap and waste materials.
  7. steam electric power generating facilities, including coal handling sites;
  8. transportation facilities classified as the following SICs 40, 41, 42 (except 4221-25, 43, 44, 45, and 5171) that have vehicle maintenance shops, equipment cleaning operations, or airport de-icing operations:
    - a. SIC 40: Railroad Transportation
    - b. SIC 41: Local And Suburban Transit And Interurban Highway Passenger Transportation

- c. SIC 42: Motor Freight Transportation And Warehousing (except 4221-25)
  - d. SIC 43: United States Postal Service
  - e. SIC 44: Water Transportation
  - f. SIC 45: Transportation By Air
  - g. SIC 5171: Establishments primarily engaged in the wholesale distribution of crude petroleum and petroleum products, including liquefied petroleum gas, from bulk liquid storage facilities.
9. treatment works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludges that are located within the confines of the facility with a design flow of 1.0 mgd or more, or required to have an approved pretreatment program. Not included are farmlands, domestic gardens, or lands used for sludge management where sludge is beneficially reused and which are not physically located in the confines of the facility, or areas that are in compliance with section 405 of the CWA;
10. construction activity including clearing, grading and excavation, except operations that result in the disturbance of less than 5 acres of total land area. Construction activity also includes the disturbance of less than 5 acres of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb 5 acres or more;
11. facilities under the following SICs:
- a. SIC 20: Manufacturing Food and Kindred Products
  - b. SIC 21: Manufacturing Tobacco Products
  - c. SIC 22: Manufacturing Textile Mill Products
  - d. SIC 23: Manufacturing Apparel And Other Finished Products Made From Fabrics And Similar Materials
  - e. SIC 2434: Manufacturing Wood Kitchen Cabinets
  - f. SIC 25: Manufacturing Furniture and Fixtures
  - g. SIC 265: Manufacturing Paperboard Containers And Boxes
  - h. SIC 267: Manufacturing Converted Paper And Paperboard Products,
  - i. SIC 27: Printing, Publishing, And Allied Industries
  - j. SIC 283: Manufacturing Drugs
  - k. SIC 285: Manufacturing Paints, Varnishes, Lacquers, Enamels
  - l. SIC 30: Manufacturing Rubber And Miscellaneous Plastics Products
  - m. SIC 31: Manufacturing Leather and Leather Products (except 311 [Leather Tanning and Finishing]),
  - n. SIC 323: Manufacturing Glass Products Made of Purchased Glass
  - o. SIC 34: Manufacturing Fabricated Metal Products, Except Machinery And Transportation Equipment (except 3441 [Fabricated Structural Metal]),
  - p. SIC 35: Manufacturing Industrial And Commercial Machinery And Computer Equipment
  - q. SIC 36: Manufacturing Electronic And Other Electrical Equipment And Components, Except Computer Equipment
  - r. SIC 37: Manufacturing Transportation Equipment (except 373 [Ship And Boat Building And Repairing]),
  - s. SIC 38: Manufacturing Measuring, Analyzing, And Controlling Instruments; Photographic, Medical And Optical Goods; Watches And Clocks
  - t. SIC 39: Miscellaneous Manufacturing Industries
  - u. SIC 4221-25 (related to warehousing and storage).

NOTE: See [http://www.osha.gov/pls/imis/sic\\_manual.html](http://www.osha.gov/pls/imis/sic_manual.html) for additional information on SIC codes.

- *Industrial User* - a source of indirect discharge (40 CFR 403.3(j)) [**Reviewed October 2001; Citation Revised January 2006**].
- *Industrial Wastewater* - wastewater generated in a commercial or industrial process (40 CFR 503.9(n)) [**Reviewed October 2001**].
- *Infeasible* – not technologically possible, or not economically practicable and achievable in light of best industry practices (40 CFR 450.11(b)) [**Added April 2014**].

- *Integrated Facility* - a facility that performs electroplating as only one of several operations necessary for manufacture of a product at a single physical location and has significant quantities of process wastewater from nonelectroplating sources (40 CFR 413.02).
- *Interference* - a discharge which, alone or in conjunction with one or more discharges from other sources inhibits or disrupts the POTW and causes a violation of any requirement of the POTW's NPDES permit (40 CFR 403.3(k)) **[Reviewed October 2001; Citation Revised January 2006]**.
- *Intermediate Bulk Container ("IBC" or "Tote")* - a completely enclosed storage vessel used to hold liquid, solid, or gaseous commodities or cargos which are in direct contact with the container interior. IBCs may be loaded onto flat beds for either truck or rail transport, or onto ship decks for water transport. IBCs are portable containers with 450 L (119 gal) to 3000 L (793 gal) capacity. IBCs are also commonly referred to as totes or tote bins (40 CFR 442.2) **[Added October 2000]**.
- *Intermodal Tank Container* - a completely enclosed storage vessel used to hold liquid, solid, or gaseous commodities or cargos which come in direct contact with the tank interior. Intermodal tank containers may be loaded onto flat beds for either truck or rail transport, or onto ship decks for water transport. Containers larger than 3000 L capacity are considered intermodal tank containers. Containers smaller than 3000 liters capacity are considered IBCs (40 CFR 442.2) **[Added October 2000]**.
- *Investigational New Animal drug (INAD)* - a drug for which there is a valid exemption in effect under section 512(j) of the *Federal Food, Drug, and Cosmetic Act*, 21 U.S.C. 360b(j), to conduct experiments (40 CFR 451.2) **[Added October 2004]**.
- *Job Shop* - a facility which owns not more than 50 percent (annual area basis) of the materials undergoing metal finishing (40 CFR 433.11).
- *Land Application* - the spraying or spreading of sewage sludge onto the land surface; the injection of sewage sludge below the land surface; or the incorporation of sewage sludge into the soil so that the sewage sludge can either condition the soil or fertilize crops or vegetation grown in the soil (40 CFR 503.11(h)) **[Reviewed October 2001]**.
- *Land Application Area* - land under the control of an CAFO owner or operator, whether it is owned, rented, or leased, to which manure, litter, or process wastewater from the production area is or may be applied (40 CFR 412.2(e)) **[Added July 2005]**.
- *Land With a High Potential for Public Exposure* - land that the public uses frequently. This includes, but is not limited to, a public contact site and a reclamation site located in a populated area (e.g., a construction site located in a city) (40 CFR 503.31(d)) **[Reviewed October 2001]**.
- *Land With a Low Potential for Public Exposure* - land the public uses infrequently. This includes, but is not limited to, agricultural land, forest, and a reclamation site located in an unpopulated area (e.g., a strip mine located in a rural area) (40 CFR 503.31(e)) **[Reviewed October 2001]**.
- *Landfill Directly Associated With An Industrial or Commercial Operation* - this means (40 CFR 445.2(c)) **[Added April 2000]**:
  1. A landfill located on the same site as industrial or commercial operations; and
  2. A landfill not located on the same site as the industrial or commercial operations (offsite), but "wholly-owned" by the industrial or commercial facility and primarily dedicated to receiving waste from the related industrial or commercial facility.
- *Landfill Unit* - an area of land or an excavation in which wastes are placed for permanent disposal, that is not a land application or land treatment unit, surface impoundment, underground injection well, waste pile, salt dome

formation, a salt bed formation, an underground mine, or a cave as these terms are defined in 40 CFR 257.2, 258.2 and 264.10 (40 CFR 445.2(e)) **[Added April 2000]**.

- *Landfill Wastewater* - all wastewater associated with, or produced by, landfilling activities except for sanitary wastewater, non-contaminated storm water, contaminated groundwater, and wastewater from recovery pumping wells. Landfill wastewater includes, but is not limited to, leachate, gas collection condensate, drained free liquids, laboratory derived wastewater, contaminated stormwater and contact washwater from washing truck, equipment, and railcar exteriors and surface areas which have come in direct contact with solid waste at the landfill facility (40 CFR 445.2(f)) **[Added April 2000]**.
- *Large Municipal Separate Storm Sewer System* - all municipal separate storm sewers that are either (40 CFR 122.26(b)(4)) **[Added January 2000]**:
  1. Located in an incorporated place with a population of 250,000 or more as determined by the 1990 Decennial Census by the Bureau of Census (Table 1 of Appendix 12-0); or
  2. Located in the counties listed in Table 3 of Appendix 12-0, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or
  3. Owned or operated by a municipality other than those described in paragraph 1 or 2 of this definition and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph 1 or 2 of this definition. In making this determination, the Director may consider the following factors:
    - a. Physical interconnections between the municipal separate storm sewers;
    - b. The location of discharges from the designated municipal separate storm sewer relative to discharges from municipal separate storm sewers described in paragraph 1 of this definition;
    - c. The quantity and nature of pollutants discharged to waters of the United States;
    - d. The nature of the receiving waters; and
    - e. Other relevant factors; or
  4. The Director may, upon petition, designate as a large municipal separate storm sewer system, municipal separate storm sewers located within the boundaries of a region defined by a stormwater management regional authority based on a jurisdictional, watershed, or other appropriate basis that includes one or more of the systems described in paragraphs 1, 2, or 3 of this definition.
- *Leachate Collection System* - a system or device installed immediately above a liner that is designed, constructed, maintained, and operated to collect and remove leachate from a sewage sludge unit (40 CFR 503.21(i)) **[Reviewed October 2001]**.
- *Liner* - soil or synthetic material that has a hydraulic conductivity of  $1 \times 10^{-7}$  cm/s [ $3 \times 10^{-8}$  in./s] or less (40 CFR 503.21(j)) **[Reviewed October 2001]**.
- *Low Volume Waste Sources* – taken collectively as if from one source, wastewater from all sources except those for which specific limitations or standards are otherwise established in this part. Low volume waste sources include, but are not limited to, the following: Wastewaters from ion exchange water treatment systems, water treatment evaporator blowdown, laboratory and sampling streams, boiler blowdown, floor drains, cooling tower basin cleaning wastes, recirculating house service water systems, and wet scrubber air pollution control systems whose primary purpose is particulate removal. Sanitary wastes, air conditioning wastes, and wastewater from carbon capture or sequestration systems are not included in this definition (40 CFR 423.11(b)) **[Added October 2003; Revised October 2017]**.
- *Lower Explosive Limit for Methane Gas* - the lowest percentage of methane gas in air, by volume, that propagates a flame at 25 degrees C [77 degrees F] and atmospheric pressure (40 CFR 503.21(k)) **[Reviewed October 2001]**.
- *Major Municipal Separate Storm Sewer Outfall* - a municipal separate storm sewer outfall that discharges from a single pipe with an inside diameter of 36 in. or more or its equivalent (discharge from a single conveyance other than circular pipe which is associated with a drainage area of more than 50 acres); or for municipal separate storm

sewers that receive storm water from lands zoned for industrial activity (based on comprehensive zoning plans or the equivalent), an outfall that discharges from a single pipe with an inside diameter of 12 in. or more or from its equivalent (discharge from other than a circular pipe associated with a drainage area of 2 acres or more). (40 CFR 122.26(b)(5)) [Added January 2000; Reviewed October 2001].

- *Major Facility* - any NPDES “facility or activity” classified as such by the USEPA, or, in the case of “approved state programs,” the USEPA in conjunction with the state authorized regulatory agency (40 CFR 122.2) [Added October 2001].
- *Major Outfall* - a major municipal separate storm sewer outfall (40 CFR 122.26(b)(6)) [Added January 2000; Reviewed October 2001].
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Marine Generated Waste* - any waste, wastewater, and/or used material generated as part of the normal maintenance and operation of a ship, boat, or barge operating on inland, coastal, or open waters, or while berthed (40 CFR 437.2) [Added April 2001].
- *Marine Pollution Control Device (MPCD)* - any equipment or management practice installed or used on an Armed Forces vessel that is designed to receive, retain, treat, control, or discharge a discharge incidental to the normal operation of a vessel, and that is determined by the Administrator and Secretary to be the most effective equipment or management practice to reduce the environmental impacts of the discharge consistent with the considerations in CWA section 312(n)(2)(B) (40 CFR 1700.3) [Added July 1999].
- *Marine Sanitation Device and Device* - includes any equipment for installation on board a vessel which is designed to receive, retain, treat, or discharge sewage, and any process to treat such sewage (33 CFR 159.3) [Added January 2012].
- *Maximum Daily Discharge Limitation* - the highest allowable “daily discharge” (40 CFR 122.2) [Added October 2001].
- *Medium Municipal Separate Storm Sewer System* - all municipal separate storm sewers that are either (40 CFR 122.26(b)(7)) [Added January 2000; Revised July 2000]:
  1. Located in an incorporated place with a population of 100,000 or more but less than 250,000, as determined by the 1990 Decennial Census by the Bureau of Census (see Table 2 of Appendix 12-0)); or
  2. Located in the counties listed in Table 4 of Appendix 12-0, except municipal separate storm sewers that are located in the incorporated places, townships, or towns within such counties; or
  3. Owned or operated by a municipality other than those described in paragraphs 1 or 2 and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraphs 1 or 2. In making this determination the Director may consider the following factors:
    - a. Physical interconnections between the municipal separate storm sewers;
    - b. The location of discharges from the designated municipal separate storm sewer relative to discharges from municipal separate storm sewers described in paragraph 1 of this definition;
    - c. The quantity and nature of pollutants discharged to waters of the United States;
    - d. The nature of the receiving waters;
    - e. Other relevant factors; or
  4. The Director may, upon petition, designate as a medium municipal separate storm sewer system, municipal separate storm sewers located within the boundaries of a region defined by a storm water management regional authority based on a jurisdictional, watershed, or other appropriate basis that includes one or more of the systems described in paragraphs 1, 2, or 3 of this definition.

- *Metal-Bearing Operations* - one or more of the following: abrasive jet machining; acid pickling neutralization; acid treatment with chromium; acid treatment without chromium; alcohol cleaning; alkaline cleaning neutralization; alkaline treatment with cyanide; anodizing with chromium; anodizing without chromium; carbon black deposition; catalyst acid pre-dip; chemical conversion coating without chromium; chemical milling (or chemical machining); chromate conversion coating (or chromating); chromium drag-out destruction; cyanide drag-out destruction; cyaniding rinse; electrochemical machining; electroless catalyst solution; electroless plating; electrolytic cleaning; electroplating with chromium; electroplating with cyanide; electroplating without chromium or cyanide; electropolishing; galvanizing/hot dip coating; hot dip coating; kerfing; laminating; mechanical and vapor plating; metallic fiber cloth manufacturing; metal spraying (including water curtain); painting-immersion (including electrophoretic, ``E-coat"); photo imaging; photo image developing; photoresist application; photoresist strip; phosphor deposition; physical vapor deposition; plasma arc machining; plastic wire extrusion; salt bath descaling; shot tower--lead shot manufacturing; soldering; solder flux cleaning; solder fusing; solder masking; sputtering; stripping (paint); stripping (metallic coating); thermal infusion; ultrasonic machining; vacuum impregnation; vacuum plating; water shedder; wet air pollution control; wire galvanizing flux; and numerous sub-operations within those listed in this paragraph. In addition, process wastewater also results from associated rinses that remove materials that the preceding processes deposit on the surface of the workpiece. These metal-bearing operations are defined in appendix C of 40 CFR 438 (40 CFR 438.2(d)) [Added July 2003].
- *Metal-bearing Wastes* - wastes and/or used materials from manufacturing or processing facilities or other commercial operations that contain significant quantities of metal pollutants, but not significant quantities of oil and grease (generally less than 100 mg/L). Examples of these wastes are spent electroplating baths and sludges, metal-finishing rinse water and sludges, chromate wastes, blow-down water and sludges from air pollution control, spent anodizing solutions, incineration air pollution control wastewaters, waste liquid mercury, cyanide containing wastes greater than 136 mg/L, and waste acids and bases with or without metals (40 CFR 437.2) [Added April 2001].
- *Metal Cleaning Wastes* - any wastewater resulting from cleaning (with or without chemical cleaning compounds) any metal process equipment including, but not limited to, boiler tube cleaning, boiler fireside cleaning, and air preheater cleaning (40 CFR 423.11(d)).
- *Minimally-toxic* - a substance must pass either OECD 201, 202, and 203 for acute toxicity testing, or OECD 210 and 211 for chronic toxicity testing. For purposes of the standards, equivalent toxicity data for marine species, including methods ISO/DIS 10253 for algae, ISO TC147/SC5/W62 for crustacean, and OSPAR 2005 for fish, may be substituted for OECD 201, 202, and 203. If a substance is evaluated for the formulation and main constituents, the LC50 of fluids must be at least 100 mg/L and the LC50 of greases, two-stroke oils, and all other total loss lubricants must be at least 1000 mg/L. If a substance is evaluated for each constituent substance, rather than the complete formulation and main compounds, then constituents comprising less than 20% of fluids can have an LC50 between 10-100 mg/L or a no-observed-effect concentration (NOEC) between 1-10 mg/L, constituents comprising less than 5% of fluids can have an LC50 between 1-10 mg/L or a NOEC between 0.1-1 mg/L, and constituents comprising less than 1% of fluids, can have an LC50 less than 1 mg/L or a NOEC between 0-0.1 mg/L (40 CFR 1700.3) [Added April 2017].
- *Mobile Unit* - a specialized mobile self-contained van, trailer, or equipment used in providing dentistry services at multiple locations (40 CFR 441.20) [Added July 2017].
- *Multi-year Phosphorus Application* - phosphorus applied to a field in excess of the crop needs for that year. In multi-year phosphorus applications, no additional manure, litter, or process wastewater is applied to the same land in subsequent years until the applied phosphorus has been removed from the field via harvest and crop removal (40 CFR 412.4(b)(3)) [Added July 2005].
- *Multiple Waste Stream CWT Facility* - a CWT facility which accepts waste in more than one CWT subcategory (metals, oils, or organics) and combines any portion of these different subcategory wastes at any point prior to the compliance discharge sampling location (40 CFR 437.2) [Added April 2001].

- *Municipal Separate Storm Sewer* - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains) (40 CFR 122.26(b)(8)) **[Added January 2000]**:
  1. Owned or operated by a state, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to state law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under state law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States;
  2. Designed or used for collecting or conveying stormwater;
  3. Which is not a combined sewer; and
  4. Which is not part of a POTW as defined at 40 CFR 122.2.
- *Municipal Separate Storm Sewer System (MS4)* – all separate storm sewers that are defined as “large,” or “medium,” or “small” municipal separate storm sewer systems as defined or as designated by the Administrator. See also the definitions for “large municipal separate storm sewer,” “major municipal separate storm sewer,” “medium municipal separate storm sewer,” and “small municipal separate storm sewer” (40 CFR 122.26(b)(18) and 122.26(b)(19)) **[Added April 2012]**.
- *Municipality* - a city, town, borough, county, parish, district, association, or other public body created by or under state law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of CWA (40 CFR 122.2) **[Added October 2001]**.
- *Municipality* - a city, town, borough, county, parish, district, association, or other public body (including an intermunicipal agency of two or more of the foregoing entities: created by or under state law; an Indian tribe or an authorized Indian tribal organization having jurisdiction over sewage sludge management; or a designated and approved management agency under section 208 of the CWA, as amended. The definition includes a special district created under state law, such as a water district, sewer district, sanitary district, utility district, drainage district, or similar entity, or an integrated waste management facility as defined in section 201(e) of the CWA, as amended, that has as one of its principal responsibilities the treatment, transport, use, or disposal of sewage sludge (40 CFR 503.9(o)) **[Reviewed October 2001]**.
- *NPDES Permit* - a permit granted by USEPA to a direct discharger which permits wastewater discharge to a watercourse in accordance with the conditions of the permit (40 CFR 403.3(n)) **[Reviewed October 2001; Citation Revised January 2006]**.
- *NPDES Permit Exclusions* - the following discharges do not require a NPDES permit (40 CFR 122.3) **[Revised January 2007; Revised July 2008]**:
  1. any discharge of sewage from vessels, effluent from properly functioning marine engines, laundry, shower, and galley sink wastes, or any other discharge incidental to the normal operation of a vessel. This exclusion does not apply to rubbish, trash, garbage, or other such materials discharged overboard; nor to other discharges when the vessel is operating in a capacity other than as a means of transportation such as when used as an energy or mining facility, a storage facility or a seafood processing facility, or when secured to a storage facility or a seafood processing facility, or when secured to the bed of the ocean, contiguous zone or waters of the United States for the purpose of mineral or oil exploration or development
  2. discharges of dredged or fill material into waters of the United States which are regulated under section 404 of CWA
  3. the introduction of sewage, industrial wastes or other pollutants into POTW by indirect dischargers. Plans or agreements to switch to this method of disposal in the future do not relieve dischargers of the obligation to have and comply with permits until all discharges of pollutants to waters of the United States are eliminated. This exclusion does not apply to the introduction of pollutants to privately owned

- treatment works or to other discharges through pipes, sewers, or other conveyances owned by a state, municipality, or other party not leading to treatment works
4. any discharge in compliance with the instructions of an On-Scene Coordinator pursuant to 40 CFR 300 (The National Oil and Hazardous Substances Pollution Contingency Plan) or 33 CFR 153.10(e) (Pollution by Oil and Hazardous Substances)
  5. any introduction of pollutants from non point-source agricultural and silvicultural activities, including storm water runoff from orchards, cultivated crops, pastures, range lands, and forest lands, but not discharges from concentrated animal feeding operations, discharges from concentrated aquatic animal production facilities, discharges to aquaculture projects, and discharges from silvicultural point sources
  6. return flows from irrigated agriculture
  7. discharges into a privately owned treatment works, except as the Director may otherwise require under 40 CFR 122.44(m)
  8. The application of pesticides consistent with all relevant requirements under FIFRA (i.e., those relevant to protecting water quality), in the following two circumstances:
    - a. The application of pesticides directly to waters of the United States in order to control pests. Examples of such applications include applications to control mosquito larvae, aquatic weeds, or other pests that are present in waters of the United States.
    - b. The application of pesticides to control pests that are present over waters of the United States, including near such waters, where a portion of the pesticides will unavoidably be deposited to waters of the United States in order to target the pests effectively; for example, when insecticides are aerially applied to a forest canopy where waters of the United States may be present below the canopy or when pesticides are applied over or near water for control of adult mosquitoes or other pests.
  9. Discharges from a water transfer. Water transfer means an activity that conveys or connects waters of the United States without subjecting the transferred water to intervening industrial, municipal, or commercial use. This exclusion does not apply to pollutants introduced by the water transfer activity itself to the water being transferred.
- *National Pollutant Discharge Elimination System (NPDES)* - the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under sections 307, 402, 318, and 405 of CWA. The term includes an “approved program” (40 CFR 122.2) [**Added October 2001**].
  - *National Pretreatment Standard* - any regulation containing pollutant discharge limits promulgated by the USEPA (40 CFR 403.3(l)) [**Reviewed October 2001; Citation Revised January 2006**].
  - *Navigable Waters* - waters of the United States, including the territorial seas. This definition is effective 6 February 2020 (40 CFR 401.11(l)) [**Revised July 2015; Revised April 2018**]
  - *Neighboring* - this term means (40 CFR 122.2 and 401.11(l)(3)(ii)) [**Added July 2015**]:
    1. all waters located within 100 ft of the ordinary high water mark of a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States.” The entire water is neighboring if a portion is located within 100 ft of the ordinary high water mark;
    2. All waters located within the 100-year floodplain of a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States” and not more than 1,500 ft from the ordinary high water mark of such water. The entire water is neighboring if a portion is located within 1,500 feet of the ordinary high water mark and within the 100-year floodplain;
    3. All waters located within 1,500 ft of the high tide line of a water identified in paragraphs (1) or (3) of the definition for “Waters of the United States,” and all waters within 1,500 ft of the ordinary high water mark of the Great Lakes. The entire water is neighboring if a portion is located within 1,500 ft of the high tide line or within 1,500 ft of the ordinary high water mark of the Great Lakes.
  - *Net Pen System* - a stationary, suspended or floating system of nets, screens, or cages in open waters of the United States. Net pen systems typically are located along a shore or pier or may be anchored and floating offshore. Net

pens and submerged cages rely on tides and currents to provide a continual supply of high-quality water to the animals in production (40 CFR 451.2) [**Added October 2004**].

- *New Animal Drug Application* – this is defined in 512(b)(1) of the *Federal Food, Drug, and Cosmetic Act* (21 U.S.C 360b(b)(1)) (40 CFR 451.2) [**Added October 2004**].
- *New Discharger* - any building, structure, facility, or installation (40 CFR 122.2) [**Added October 2001**]:
  1. from which there is or may be a “discharge of pollutants;”
  2. that did not commence the “discharge of pollutants” at a particular “site” prior to 13 August 1979;
  3. which is not a “new source;” and
  4. which has never received a finally effective NDPEs permit for discharges at that “site.”

This definition includes an “indirect discharger” which commences discharging into “waters of the United States” after 13 August 1979. It also includes any existing mobile point source (other than an offshore or coastal oil and gas exploratory drilling rig or a coastal oil and gas developmental drilling rig) such as a seafood processing rig, seafood processing vessel, or aggregate plant, that begins discharging at a “site” for which it does not have a permit; and any offshore or coastal mobile oil and gas exploratory drilling rig or coastal mobile oil and gas developmental drilling rig that commences the discharge of pollutants after 13 August 1979, at a “site” under USEPA’s permitting jurisdiction for which it is not covered by an individual or general permit and which is located in an area determined by the USEPA or authorized regulatory agency in the issuance of a final permit to be an area of biological concern. In determining whether an area is an area of biological concern, the USEPA or authorized regulatory agency shall consider the factors specified in 40 CFR 125.122(a)(1) through 122.25(a)(10). An offshore or coastal mobile exploratory drilling rig or coastal mobile developmental drilling rig will be considered a “new discharger” only for the duration of its discharge in an area of biological concern.

- *New Source* – any building, structure, facility, or installation from which there is or may be a “discharge of pollutants,” the construction of which is commenced (40 CFR 122.2) [**Added April 2012**].
  1. after promulgation of standards of performance under section 306 of CWA which are applicable to such source, or
  2. after proposal of standards of performance in accordance with section 306 of CWA which are applicable to such source, but only if the standards are promulgated in accordance with section 306 within 120 days of their proposal.
- *New Source* - any building, structure, facility or installation from which there is or may be a discharge of pollutants, the construction of which commenced after the publication of proposed Pretreatment Standards under section 307(c) of the Act which will be applicable to such source if such Standards are thereafter promulgated in accordance with that section, provided that (40 CFR 403.3(m)) [**Added October 2001; Revised January 2006**]:
  1. The building, structure, facility or installation is constructed at a site at which no other source is located; or
  2. The building, structure, facility or installation totally replaces the process or production equipment that causes the discharge of pollutants at an existing source; or
  3. The production or wastewater generating processes of the building, structure, facility or installation are substantially independent of an existing source at the same site. In determining whether these are substantially independent, factors such as the extent to which the new facility is integrated with the existing plant, and the extent to which the new facility is engaged in the same general type of activity, as the existing source should be considered.

Construction on a site at which an existing source is located results in a modification rather than a New Source if the construction does not create a new building, structure, facility or installation meeting the criteria of paragraphs 2 or 3 above, but otherwise alters, replaces, or adds to existing process or production equipment.

Construction of a new source has commenced if the owner or operator has:

1. begun, or caused to begin as part of a continuous onsite construction program:

- a. any placement, assembly, or installation of facilities or equipment; or
    - b. significant site preparation work including clearing, excavation, or removal of existing buildings, structures, or facilities which is necessary for the placement, assembly, or installation of new source facilities or equipment; or
  - 2. entered into a binding contractual obligation for the purchase of facilities or equipment that is intended to be used in its operation within a reasonable time. Options to purchase or contracts which can be terminated or modified without substantial loss, and contracts for feasibility, engineering, and design studies do not constitute a contractual obligation.
- *New Source* - any building, structure, facility, or installation from where there is or may be the discharge of pollutants, the construction of which is commenced after the publication of proposed regulations prescribing a standards of performance under section 306 of the CWA, which will be applicable to such source as such standards is thereafter promulgated in accordance with section 306 of the act (40 CFR 401.11(e)) **[Reviewed October 2001]**.
  - *New Source* - any building, structure, facility or installation from which there is or may be a discharge of pollutants, the construction of which commenced after the publication of proposed Pretreatment Standards under section 307(c) of the Act which will be applicable to such source if such Standards are thereafter promulgated in accordance with that section, provided that (40 CFR 403.3(m)) **[Added October 2001]**:
    - 1. The building, structure, facility or installation is constructed at a site at which no other source is located; or
    - 2. The building, structure, facility or installation totally replaces the process or production equipment that causes the discharge of pollutants at an existing source; or
    - 3. The production or wastewater generating processes of the building, structure, facility or installation are substantially independent of an existing source at the same site. In determining whether these are substantially independent, factors such as the extent to which the new facility is integrated with the existing plant, and the extent to which the new facility is engaged in the same general type of activity, as the existing source should be considered.

Construction on a site at which an existing source is located results in a modification rather than a new source if the construction does not create a new building, structure, facility or installation meeting the criteria of paragraphs b or c but otherwise alters, replaces, or adds to existing process or production equipment.

Construction of a new source has commenced if the owner or operator has:

    - 1. begun, or caused to begin as part of a continuous onsite construction program:
      - a. any placement, assembly, or installation of facilities or equipment; or
      - b. significant site preparation work including clearing, excavation, or removal of existing buildings, structures, or facilities which is necessary for the placement, assembly, or installation of new source facilities or equipment; or
    - 2. entered into a binding contractual obligation for the purchase of facilities or equipment that are intended to be used in its operation within a reasonable time. Options to purchase or contracts which can be terminated or modified without substantial loss, and contracts for feasibility, engineering, and design studies do not constitute a contractual obligation.
  - *New Source* – as related to concentrated animal feeding operations (CAFOs), this is defined at 40 CFR 122.2. New source criteria are defined at 40 CFR 122.29(b). (40 CFR 412.2(f)) **[Added July 2005]**.
  - *New Vessel* - includes any vessel, the construction of which is initiated on or after 30 January 1975 (33 CFR 159.3) **[Added January 2012]**.
  - *No Exposure* - all industrial materials and activities are protected by a storm resistant shelter to prevent exposure to rain, snow, snowmelt, and/or runoff. Industrial materials or activities include, but are not limited to, material handling equipment or activities, industrial machinery, raw materials, intermediate products, by-products, final products, or waste products. Material handling activities include the storage, loading and unloading,

transportation, or conveyance of any raw material, intermediate product, final product or waste product (40 CFR 122.26(g)) [Added January 2000; Reviewed October 2001].

- *No-discharge Zone* - an area of specified waters established pursuant to 40 CFR 1700.1 through 40 CFR 1700.14 into which one or more specified discharges incidental to the normal operation of Armed Forces vessels, whether treated or untreated, are prohibited (40 CFR 1700.3) [Added July 1999].
- *Noncontact Cooling Water* - the water that is contained in a leak-free system, i.e., no contact with any gas, liquid, or solid other than the container for transport; the water shall have no net poundage addition of any pollutant over intake water levels (40 CFR 401.44(o)) [Reviewed October 2001].
- *Non-contaminated Stormwater* - stormwater which does not come in direct contact with CWT wastes, the waste handling and treatment areas, or other CWT wastewater (40 CFR 437.2) [Added April 2001].
- *Non-contaminated Stormwater* - stormwater which does not come in direct contact with landfill wastes, the waste handling and treatment areas, or landfill wastewater. Non-contaminated stormwater includes storm water which flows off the cap, cover, intermediate cover, daily cover, and/or final cover of the landfill (40 CFR 445.2(g)) [Added April 2000].
- *Non-Conventional Pollutants* - parameters that are neither conventional pollutants as defined in 40 CFR 401.16, nor toxic pollutants as defined in 40 CFR 401.15 (see Appendix A of this document) (40 CFR 439.1(k)) [Added October 2001].
- *Non-process Wastewater* - sanitary wastewater, non-contact cooling water, water from laundering, and non-contact storm water. Non-process wastewater for this part also includes wastewater discharges from non-industrial sources such as residential housing, schools, churches, recreational parks, shopping centers as well as wastewater discharges from gas stations, utility plants, and hospitals (40 CFR 438.2(e)) [Added July 2003].
- *Not Bioaccumulative* - any of the following: The partition coefficient in the marine environment is  $\log K_{ow} < 3$  or  $> 7$  using test methods OECD 117 and 107; molecular mass  $> 800$  Daltons; molecular diameter  $> 1.5$  nanometer; bioconcentration factor (BCF) or bioaccumulation factor (BAF) is  $< 100$  L/kg, using OECD 305, OCSPP 850.1710 or OCSPP 850.1730, or a field-measured BAF; or polymer with molecular weight (MW) fraction below 1,000 g/mol is  $< 1\%$  (40 CFR 1700.3) [Added April 2017].
- *O&G (as HEM)* - total recoverable oil and grease measured as n-hexane extractable material (40 CFR 438.2) [Added July 2003].
- *Ocean/Sea Tanker* - a self or non-self-propelled vessel constructed or adapted to transport liquid, solid or gaseous commodities or cargos in bulk in cargo spaces (or tanks) through oceans and seas, where the commodity or cargo carried comes in direct contact with the tank interior. There are no maximum or minimum vessel or tank volumes (40 CFR 442.2) [Added October 2000].
- *Offsite* - outside the boundaries of a facility (40 CFR 445.2(h)) [Added April 2000].
- *Off-site* - outside the boundaries of a facility (40 CFR 437.2) [Added April 2001].
- *Oily Absorbent Recycling* - the process of recycling oil-soaked or contaminated disposable rags, paper, or pads for the purpose of regenerating a fuel for reuse (40 CFR 437.2) [Added April 2001].
- *Oily Operations* - one or more of the following: abrasive blasting; adhesive bonding; alkaline cleaning for oil removal; alkaline treatment without cyanide; aqueous degreasing; assembly/disassembly; burnishing; calibration; corrosion preventive coating; electrical discharge machining; floor cleaning (in process area); grinding; heat treating; impact deformation; iron phosphate conversion coating; machining; painting-spray or brush (including water curtains); polishing; pressure deformation; solvent degreasing; steam cleaning; testing (e.g., hydrostatic,

dye penetrant, ultrasonic, magnetic flux); thermal cutting; tumbling/barrel finishing/mass finishing/vibratory finishing; washing (finished products); welding; wet air pollution control for organic constituents; and numerous sub-operations within those listed in this paragraph. In addition, process wastewater also results from associated rinses that remove materials that the preceding processes deposit on the surface of the workpiece. These oily operations are defined in appendix B (40 CFR 438.2(f)) **[Added July 2003]**.

- *Oily Wastes* - wastes and/or used materials that contain oil and grease (generally at or in excess of 100 mg/L) from manufacturing or processing facilities or other commercial operations. Examples of these wastes are used oils, oil-water emulsions or mixtures, lubricants, coolants, contaminated groundwater clean-up from petroleum sources, used petroleum products, oil spill clean-up, bilge water, rinse/wash waters from petroleum sources, interceptor wastes, off-specification fuels, underground storage tank remediation waste, and tank clean out from petroleum or oily sources (40 CFR 437.2) **[Added April 2001]**.
- *Once Through Cooling Water* - water passed through the main cooling condensers in one or two passes for the purpose of removing waste heat (40 CFR 423.11(g)) **[Added October 2003]**.
- *On-site* - within the boundaries of a facility. A facility may encompass land areas that are bisected by public thoroughfares but are under the control of a common owner (40 CFR 437.2) **[Added April 2001]**.
- *Onsite* - within the boundaries of a facility (40 CFR 445.2(i)) **[Added April 2000]**.
- *Onsite* - within the contiguous and non-contiguous established boundaries of a facility (40 CFR 442.2) **[Added October 2000]**.
- *Ordinary High Water Mark* - that line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas. This definition is effective 6 February 2020 (40 CFR 122.2 and 401.11(l)(3)(vi)) **[Added July 2015; Revised April 2018]**.
- *Organic Wastes* - wastes and/or used materials that contain organic pollutants, but not a significant quantity of oil and grease (generally less than 100 mg/L) from manufacturing or processing facilities or other commercial operations. Examples of these wastes are landfill leachate, contaminated groundwater clean-up from non-petroleum sources, solvent-bearing wastes, off-specification organic product, still bottoms, byproduct glycols, wastewater from paint washes, wastewater from adhesives and/or epoxies, wastewater from chemical product operations, and tank clean-out from organic, non-petroleum sources (40 CFR 437.2) **[Added April 2001]**.
- *Other Container* - either an open or closed receptacle. This includes, but is not limited to, a bucket, a box, a carton, and a vehicle or trailer with a load capacity of 1 metric ton (1.1 short tons) or less (40 CFR 503.11(j)) **[Reviewed October 2001]**.
- *Outfall* - a point source as defined by 40 CFR 122.2 at the point where a municipal separate storm sewer discharges to waters of the United States and does not include open conveyances connecting two municipal separate storm sewers, or pipes, tunnels or other conveyances which connect segments of the same stream or other waters of the United States and are used to convey waters of the United States (40 CFR 122.26(b)(9)) **[Added January 2000; Reviewed October 2001]**.
- *Overburden* - any material of any nature, consolidated or unconsolidated, that overlies a mineral deposit, excluding topsoil or similar naturally-occurring surface materials that are not disturbed by mining operations (40 CFR 122.26(b)(10)) **[Added January 2000; Reviewed October 2001]**.
- *Overflow* - the discharge of manure or process wastewater resulting from the filling of wastewater or manure storage structures beyond the point at which no more manure, process wastewater, or storm water can be contained by the structure (40 CFR 412.2(g)) **[Added July 2005]**.

- *Owner or Operator* - the owner or operator of any “facility or activity” subject to regulation under the NPDES program (40 CFR 122.2) **[Added October 2001]**.
- *pH* - the logarithm of the reciprocal of the hydrogen ion concentration (40 CFR 503.31(g)) **[Reviewed October 2001]**.
- *Pass Through* - a discharge which exits the POTW into waters in quantities or concentrations which, alone or in conjunction with one or more discharges from other sources, is a cause of a violation of any requirement of the POTW’s NPDES permit (40 CFR 403.3(p)) **[Reviewed October 2001; Citation Revised January 2006]**.
- *Pasture* - land on which animals feed directly on feed crops such as legumes, grasses, grain stubble, or stover (40 CFR 503.11(k)) **[Reviewed October 2001]**.
- *Pathogenic Organisms* - disease-causing organisms. These include, but are not limited to, certain bacteria, protozoa, viruses, and viable helminth ova (40 CFR 503.31(f)) **[Reviewed October 2001]**.
- *Performance Test Combustion Temperature* - the arithmetic mean of the average combustion temperature in the hottest zone of the furnace for each of the runs in a performance test (40 CFR 503.41) **[Added October 2001]**.
- *Permit* - an authorization, license, or equivalent control document issued by USEPA or an “approved state” to implement the requirements of this 40 CFR 122 and 40 CFR 123 and 124. “Permit” includes an NPDES “general permit” (40 CFR 122.28). Permit does not include any permit which has not yet been the subject of final agency action, such as a “draft permit” or a “proposed permit” (40 CFR 122.2) **[Added October 2001]**.
- *Permitting Authority* - either USEPA or a state with an USEPA-approved sludge management program (40 CFR 503.9(p)) **[Added October 2001]**.
- *Person* - an individual, association, partnership, corporation, municipality, state or Federal agency, or an agent or employee thereof (40 CFR 122.2 and 503.9(q)) **[Reviewed October 2001]**.
- *Person In Charge (PIC)* - the single individual named master of the vessel or placed in charge of the vessel, by the U.S. Department of Defense or by the Department in which the U.S. Coast Guard is operating, as appropriate, and who is responsible for the operation, manning, victualing, and supplying of the vessel of the Armed Forces. Examples of a PIC include, but are not limited to (40 CFR 1700.3) **[Added April 2017]**:
  1. A Commanding Officer, Officer in Charge, or senior commissioned officer on board the vessel;
  2. A civilian, military, or U.S. Coast Guard person assigned to a shore command or activity that has been designated as the PIC for one or more vessels, such as a group of boats or craft;
  3. A Tugmaster, Craftmaster, Coxswain, or other senior enlisted person onboard the vessel;
  4. A licensed civilian mariner onboard a Military Sealift Command vessel; or
  5. A contracted commercial person at a shore installation that is not part of the Armed Forces but as identified by the U.S. Department of Defense or the Department in which the U.S. Coast Guard is operating.
- *Person Who Prepares Sewage Sludge* - either the person who generates sewage sludge during the treatment of domestic sewage in a treatment works or the person who derives a material from sewage sludge (40 CFR 503.9(r)) **[Reviewed October 2001]**.
- *Petroleum Cargos* - products of the fractionation or straight distillation of crude oil, redistillation of unfinished petroleum derivatives, cracking, or other refining processes. For purposes of this rule, petroleum cargos also include products obtained from the refining or processing of natural gas and coal. For purposes of this rule, specific examples of petroleum products include but are not limited to: asphalt; benzene; coal tar; crude oil; cutting oil; ethyl benzene; diesel fuel; fuel additives; fuel oils; gasoline; greases; heavy, medium, and light oils; hydraulic fluids, jet fuel; kerosene; liquid petroleum gases (LPG) including butane and propane; lubrication oils; mineral spirits; naphtha; olefin, paraffin, and other waxes; tall oil; tar; toluene; xylene; and waste oil (40 CFR 442.2) **[Added October 2000]**.

- *Pipeline* - an open or closed conduit used for the conveyance of material. A pipeline includes a channel, pipe, tube, trench, or ditch, or fixed delivery system (40 CFR 437.2) [**Added April 2001**].
- *Place Sewage Sludge or Sewage Sludge Placed* - means disposal of sewage sludge on a surface disposal site (40 CFR 503.9(s)) [**Reviewed October 2001**].
- *Point Source* – any discernible, confined, and discrete conveyance, including but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, landfill leachate collection system, vessel or other floating craft from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture or agricultural stormwater runoff (40 CFR 122.2) [**Added April 2012**].
- *Point Source* - any discernible confined and discrete conveyance including but not limited to a pipe, ditch, channel, or conduit from which pollutants are or may be discharged (40 CFR 401.11(d)).
- *Pollutant* - dredged spoil, solid waste, incinerator residue, filter backwash, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials (except those regulated under the Atomic Energy Act of 1954, as amended (42 U.S.C. 2011 et seq.)), heat, wrecked or discarded equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. It does not mean:
  1. sewage from vessels; or
  2. water, gas, or other material which is injected into a well to facilitate production of oil or gas, or water derived in association with oil and gas production and disposed of in a well, if the well used either to facilitate production or for disposal purposes is approved by authority of the state in which the well is located, and if the state determines that the injection or disposal will not result in the degradation of ground or surface water resources.

Note: Radioactive materials covered by the Atomic Energy Act are those encompassed in its definition of source, byproduct, or special nuclear materials. Examples of materials not covered include radium and accelerator-produced isotopes. See *Train v. Colorado Public Interest Research Group, Inc.*, 426 U.S. 1 (1976) (40 CFR 122.2) [**Added October 2001**].
- *Pollutant* - dredged spoil, solid waste, incinerator residue, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. It does not mean (40 CFR 401.11(f)) [**Added October 2001**]:
  1. sewage from vessels; or
  2. water, gas, or other material which is injected into a well to facilitate production of oil or gas, or water derived in association with oil and gas production and disposed of in a well, if the well, used either to facilitate production or for disposal purposes is approved by authority of the state in which the well is located, and if such state determines that such injection or disposal will not result in the degradation of ground or surface water resources.
- *Pollutant* - an organic substance, an inorganic substance, a combination of organic and inorganic substances, or a pathogenic organism that, after discharge and upon exposure, ingestion, inhalation, or assimilation into an organism either directly from the environment or indirectly by ingestion through the food chain, could, on the basis of information available to the Administrator of USEPA, cause death, disease, behavioral abnormalities, cancer, genetic mutations, physiological malfunctions (including malfunction in reproduction), or physical deformations in either organisms or offspring of the organisms (40 CFR 503.9(t)) [**Added October 2001**].
- *Pollutant Limit* - a numerical value that describes the amount of a pollutant allowed per unit amount of sewage sludge (e.g., milligrams per kilogram of total solids); the amount of a pollutant that can be applied to a unit area of land (e.g., kilograms per hectare); or the volume of a material that can be applied to a unit area of land (e.g., gallons per acre) (40 CFR 503.9(u)) [**Added October 2001**].

- *Pollution Prevention Allowable Discharge* - the quantity of/concentrations of pollutants in wastewaters being discharged to publicly owned treatment works after a facility has demonstrated compliance with the Pollutant Management Plan provisions in 40 CFR 442.15(b), 442.16(b), 442.25(b), or 442.26(b) (40 CFR 442.2) [**Added October 2000**].
- *Prerinse/Presteam* - a rinse, typically with hot or cold water, performed at the beginning of the cleaning sequence to remove residual material from the tank interior (40 CFR 442.2) [**Added October 2000**].
- *Presolve Wash* - the use of diesel, kerosene, gasoline, or any other type of fuel or solvent as a tank interior cleaning solution (40 CFR 442.2) [**Added October 2000**].
- *Pretreatment* - the reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater prior to or in lieu of discharging or otherwise introducing such pollutants into a POTW (40 CFR 403.3(s)) [**Reviewed October 2001; Citation Revised January 2006**].
- *Primary Industry Category* - any industry category listed in the NRDC settlement agreement (Natural Resources Defense Council et al. v. Train, 8 E.R.C. 2120 (D.D.C. 1976), modified 12 E.R.C. 1833 (D.D.C. 1979)); also listed in appendix A of 40 CFR 122 (see Appendix B of this document) (40 CFR 122.2) [**Added October 2001**].
- *Privately Owned Treatment Works* - any device or system which is used to treat wastes from any facility whose operator is not the operator of the treatment works, and not a "POTW" (40 CFR 122.2) [**Added October 2001**].
- *Process Wastewater* - any water which, during manufacturing or processing, comes into direct contact with or results from the production or use of any raw material, intermediate product, finished product, byproduct, or waste product (40 CFR 122.2) [**Added April 2012**].
- *Process Wastewater* - wastewater as defined at 40 CFR parts 122 and 401, and includes wastewater from air pollution control devices (40 CFR 438.2(g)) [**Added July 2003**].
- *Process Wastewater* - any water which during manufacturing or processing, comes into direct contact with or results from the production or use of any raw material, intermediate product, finished product, or waste product (40 CFR 401.44(q)).

NOTE: Process wastewater also results from associated rinses that remove materials that the preceding processes deposit on the surface of the workpiece.

- *Process Wastewater* - water directly or indirectly used in the operation of the CAFO for any or all of the following: spillage or overflow from animal or poultry watering systems; washing, cleaning, or flushing pens, barns, manure pits, or other CAFO facilities; direct contact swimming, washing, or spray cooling of animals; or dust control. Process wastewater also includes any water which comes into contact with any raw materials, products, or byproducts including manure, litter, feed, milk, eggs, or bedding (40 CFR 412.2(d)) [**Added July 2005**].
- *Product Stewardship* - a manufacturer's treatment or recovery of its own unused products, shipping and storage containers with product residues, off-specification products, and does not include spent or used materials from use of its products (40 CFR 437.2) [**Added April 2001**].
- *Production Area* - that part of an AFO that includes the animal confinement area, the manure storage area, the raw materials storage area, and the waste containment areas. The animal confinement area includes but is not limited to open lots, housed lots, feedlots, confinement houses, stall barns, free stall barns, milkrooms, milking centers, cowyards, barnyards, medication pens, walkers, animal walkways, and stables. The manure storage area includes but is not limited to lagoons, runoff ponds, storage sheds, stockpiles, under house or pit storages, liquid impoundments, static piles, and composting piles. The raw materials storage area includes but is not limited to feed silos, silage bunkers, and bedding materials. The waste containment area includes but is not limited to settling basins, and areas within berms and diversions which separate uncontaminated storm water. Also included in the

definition of production area is any egg washing or egg processing facility, and any area used in the storage, handling, treatment, or disposal of mortalities (40 CFR 412.2(h)) **[Added July 2005]**.

- *Public Contact Site* - land with a high potential for contact by the public. This includes, but is not limited to, public parks, ball fields, cemeteries, plant nurseries, turf farms, and golf courses (40 CFR 503.11(l)) **[Reviewed October 2001]**.
- *Public Service* - the provision of landfill waste disposal services to individual members of the general public, publicly owned organizations (schools, universities, government agencies, municipalities) and not-for-profit organizations for which the landfill does not receive a fee or other remuneration (40 CFR 445.2(j)) **[Added April 2000]**:
  1. A landfill located on the same site as industrial or commercial operations; and
  2. A landfill not located on the same site as the industrial or commercial operations (offsite), but “wholly-owned” by the industrial or commercial facility and primarily dedicated to receiving waste from the related industrial or commercial facility.
- *Publicly Owned Treatment Works (POTW)* - a treatment works which is owned by the state or a municipality. This includes any devices and systems used in the storage, treatment, recycling, and reclamation of municipal sewage or industrial wastes of a liquid nature. It also includes sewers, pipes, and other conveyances only if they convey waste to a POTW (40 CFR 403.3(q)) **[Reviewed October 2001; Citation Revised January 2006]**.
- *Qualified Groundwater Scientist* - an individual with a baccalaureate or postgraduate degree in the natural sciences or engineering who has sufficient training and experience in groundwater hydrology and related fields, as may be demonstrated by state registration, professional certification, or completion of accredited university programs, to make sound professional judgments regarding groundwater monitoring, pollutant fate and transport, and corrective action (40 CFR 503.21(l)) **[Reviewed October 2001]**.
- *Rail Tank Car* - a completely enclosed storage vessel pulled by a locomotive that is used to transport liquid, solid, or gaseous commodities or cargos over railway access lines. A rail tank car storage vessel may have one or more storage compartments and the stored commodities or cargos come in direct contact with the tank interior. There are no maximum or minimum vessel or tank volumes (40 CFR 442.2) **[Added October 2000]**.
- *Railroad Line Maintenance Facilities* - facilities specified at 40 CFR 438.1 that only perform routine cleaning and light maintenance on railroad engines, cars, car-wheel trucks, or similar parts or machines, and discharge wastewater exclusively from oily operations. These facilities only perform one or more of the following operations: assembly/disassembly, floor cleaning, maintenance machining (wheel truing), touch-up painting, and washing (40 CFR 438.2(h)) **[Added July 2003]**.
- *Railroad Overhaul or Heavy Maintenance Facilities* - facilities engaged in the manufacture, overhaul, or heavy maintenance of railroad engines, cars, car-wheel trucks, or similar parts or machines. These facilities typically perform one or more of the operations at railroad line maintenance facilities and one or more of the following operations: abrasive blasting, alkaline cleaning, aqueous degreasing, corrosion preventive coating, electrical discharge machining, grinding, heat treating, impact deformation, painting, plasma arc machining, polishing, pressure deformation, soldering/brazing, stripping (paint), testing, thermal cutting, and welding (40 CFR 438.2(i)) **[Added July 2003]**.
- *Range Land* - open land with indigenous vegetation (40 CFR 503.11(m)) **[Reviewed October 2001]**.
- *Real-time Feed Monitoring* - a system designed to track the rate of feed consumption and to detect uneaten feed passing through the nets at a net pen facility. These systems may rely on a combination of visual observation and hardware, including, but not limited to, devices such as video cameras, digital scanning sonar, or upweller systems that allow facilities to determine when to cease feeding the aquatic animals. Visual observation alone from above the pens does not constitute real-time monitoring (40 CFR 451.2) **[Added October 2004]**.

- *Recirculated Cooling Water* - water which is passed through the main condensers for the purpose of removing waste heat, passed through a cooling device for the purpose of removing such heat from the water and then passed again, except for blowdown, through the main condenser (40 CFR 423.11(h)) **[Added October 2003]**.
- *Recirculating System* - a system that filters and reuses water in which the aquatic animals are produced prior to discharge. Recirculating systems typically use tanks, biological or mechanical filtration, and mechanical support equipment to maintain high quality water to produce aquatic animals (40 CFR 451.2) **[Added October 2004]**.
- *Reclamation Site* - drastically disturbed land that is reclaimed using sewage sludge. This includes, but is not limited to, strip mines and construction sites (40 CFR 503.11(n)) **[Reviewed October 2001]**.
- *Recovery* - the recycling or processing of a waste, wastewater or used material such that the material, or a portion thereof, may be reused or converted to a raw material, intermediate, or product. Recovery does not include the re-use of treated or untreated wastewater in place of potable or pure water in industrial processes such as the use of secondary POTW effluents as non-contact cooling water, storm water in place of process water, or the re-use of spent chemicals in place of virgin treatment chemicals (40 CFR 437.2) **[Added April 2001]**.
- *Regulated Parameters* - for 40 CFR 445, numbered (P) and listed with approved methods of analysis in Table 1B at 40 CFR 136.3, these are defined as follows (40 CFR 445.2(k)) **[Added April 2000]**:
  1. Ammonia (as N) means ammonia reported as nitrogen. P4
  2. BOD<sub>5</sub> means 5-day biochemical oxygen demand. P9
  3. Arsenic means total arsenic. P6
  4. Chromium means total chromium. P19
  5. Zinc means total zinc. P75.
- *Regulated Parameters* - for 40 CFR 445, numbered (P) and listed with approved methods of analysis in Table 1C at 40 CFR 136.3, are as follows (40 CFR 445.2(l)) **[Added April 2000]**:
  1. Naphthalene. P68
  2. Phenol. P85.
- *Regulated Parameters* - for 40 CFR 445 listed with approved methods of analysis in the attachments to Methods 625 and 1625B in Appendix A at 40 CFR 136 are as follows (40 CFR 445.2(m)) **[Added April 2000]**:
  1. Aniline.
  2. Benzoic acid.
  3. p-Cresol.
  4. Pyridine.
  5. a-Terpineol.
- *Re-refining* - the processing of used oil using distillation, hydrotreating, and/or other treatment employing acid, caustic, solvent, clay and/or chemicals in order to produce high quality base stock for lubricants or other petroleum products (40 CFR 437.2) **[Added April 2001]**.
- *Risk Specific Concentration* - the allowable increase in the average daily ground level ambient air concentration for a pollutant from the incineration of sewage sludge at or beyond the property line of the site where the sewage sludge incinerator is located (40 CFR 503.41) **[Added October 2001]**.
- *Runoff* - rainwater, leachate, or other liquid that drains overland on any part of a land surface and runs off of the land surface (40 CFR 503.9(v)) **[Reviewed October 2001]**.
- *Runoff Coefficient* - the fraction of total rainfall that will appear at a conveyance as runoff (40 CFR 122.26(b)(11)) **[Added January 2000]**.

- *Schedule of Compliance* - a schedule of remedial measures included in a “permit,” including an enforceable sequence of interim requirements (for example, actions, operations, or milestone events) leading to compliance with the CWA and regulations (40 CFR 122.2) **[Added October 2001]**.
- *Secondary Industry Category* - any industry category which is not a “primary industry category” (40 CFR 122.2) **[Added October 2001]**.
- *Secretary* - the Secretary of the DoD or that person's authorized representative (40 CFR 1700.3) **[Added July 1999]**.
- *Seismic Impact Zone* - an area that has a 10 percent or greater probability that the horizontal ground level acceleration of the rock in the area exceeds 0.10 gravity once in 250 yr (40 CFR 503.21(m)) **[Reviewed October 2001]**.
- *Septage* - the liquid and solid material pumped from a septic tank, cesspool, or similar domestic sewage treatment system, or a holding tank when the system is cleaned or maintained (40 CFR 122.2) **[Added October 2001]**.
- *Setback* - a specified distance from surface waters or potential conduits to surface waters where manure, litter, and process wastewater may not be land applied. Examples of conduits to surface waters include but are not limited to: open tile line intake structures, sinkholes, and agricultural well heads (40 CFR 412.4(b)(1)) **[Added July 2005]**.
- *Severe Property Damage* - substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production (40 CFR 122.41(m)(1)(ii) and 403.17(a)(2)) **[Added October 2001]**.
- *Sewage* - human body wastes and the wastes from toilets and other receptacles intended to receive or retain body waste (33 CFR 159.3) **[Added January 2012]**.
- *Sewage From Vessels* - human body wastes and the wastes from toilets and other receptacles intended to receive or retain body wastes that are discharged from vessels and regulated under section 312 of CWA, except that with respect to commercial vessels on the Great Lakes this term includes graywater. For the purposes of this definition, “graywater” means galley, bath, and shower water (40 CFR 122.2) **[Added October 2001]**.
- *Sewage Sludge* - any solid, semi-solid, or liquid residue removed during the treatment of municipal wastewater or domestic sewage. Sewage sludge includes, but is not limited to, solids removed during primary, secondary, or advanced wastewater treatment, scum, septage, portable toilet pumpings, type III marine sanitation device pumpings (33 CFR 159), and sewage sludge products. Sewage sludge does not include grit or screenings, or ash generated during the incineration of sewage sludge (40 CFR 122.2) **[Added October 2001]**.
- *Sewage Sludge* - solid, semi-solid, or liquid residue generated during the treatment of domestic sewage in a treatment works. Sewage sludge includes, but is not limited to, domestic septage; scum or solids removed in primary, secondary, or advanced wastewater treatment processes; and a material derived from sewage sludge. Sewage sludge does not include ash generated during the firing of sewage sludge in a sewage sludge incinerator or grit and screenings generated during preliminary treatment of domestic sewage in a treatment works (40 CFR 503.9(w)) **[Added October 2001]**.
- *Sewage Sludge* - solid, semi-solid, or liquid residue generated during the treatment of domestic sewage in a treatment works. Sewage sludge includes, but is not limited to, domestic septage, scum or solids removed in primary, secondary, or advanced wastewater treatment processes; and a material derived from sewage sludge. Sewage sludge does not include ash generated during the firing of sewage sludges in a sewage sludge incinerator or grit and screenings generated during preliminary treatment of domestic sewerage in a treatment works (40 CFR 257.2).

- *Sewage Sludge Feed Rate* - either the average daily amount of sewage sludge fired in all sewage sludge incinerators within the property line of the site where the sewage sludge incinerators are located for the number of days in a 365 day period that each sewage sludge incinerator operates, or the average daily design capacity for all sewage sludge incinerators within the property line of the site where the sewage sludge incinerators are located (40 CFR 503.41) [**Added October 2001**].
- *Sewage Sludge Incinerator* - an enclosed device in which only sewage sludge and auxiliary fuel are fired (40 CFR 503.41) [**Added October 2001**].
- *Sewage Sludge Unit* - land on which only sewage sludge is placed for final disposal. This does not include land on which sewage sludge is either stored or treated. Land does not include waters of the United States, as defined in 40 CFR 122.2 (40 CFR 503.21(n)) [**Reviewed October 2001**].
- *Sewage Sludge Unit Boundary* - the outermost perimeter of an active sewage sludge unit (40 CFR 503.21(o)) [**Reviewed October 2001**].
- *Sewage Sludge Use or Disposal Practice* - the collection, storage, treatment, transportation, processing, monitoring, use, or disposal of sewage sludge (40 CFR 122.2) [**Added October 2001**].
- *Significant Industrial User* - except as provided in paragraphs (3) and (4), the term Significant Industrial User means (40 CFR 403.3(v)) [**Added October 2001; Revised January 2006**]:
  1. All Industrial Users subject to Categorical Pretreatment Standards under 40 CFR 403.6 and 40 CFR chapter I, subchapter N; and
  2. Any other Industrial User that: discharges an average of 25,000 gal/day or more of process wastewater to the POTW (excluding sanitary, noncontact cooling and boiler blowdown wastewater); contributes a process waste stream which makes up 5 percent or more of the average dry weather hydraulic or organic capacity of the POTW Treatment plant; or is designated as such by the Control Authority on the basis that the Industrial User has a reasonable potential for adversely affecting the POTW's operation or for violating any Pretreatment Standard or requirement (in accordance with 40 CFR 403.8(f)(6)).
  3. The Control Authority may determine that an Industrial User subject to categorical Pretreatment Standards under 40 CFR 403.6 and 40 CFR chapter I, subchapter N is a Non-Significant Categorical Industrial User rather than a Significant Industrial User on a finding that the Industrial User never discharges more than 100 gallons per day (gpd) of total categorical wastewater (excluding sanitary, non-contact cooling and boiler blowdown wastewater, unless specifically included in the Pretreatment Standard) and the following conditions are met:
    - a. The Industrial User, prior to the Control Authority's finding, has consistently complied with all applicable categorical Pretreatment Standards and Requirements;
    - b. The Industrial User annually submits the certification statement required in 40 CFR 403.12(q) together with any additional information necessary to support the certification statement; and
    - c. The Industrial User never discharges any untreated concentrated wastewater.
  4. Upon a finding that an Industrial User meeting the criteria in paragraph 2 has no reasonable potential for adversely affecting the POTW's operation or for violating any Pretreatment Standards or requirement, the Control Authority may at any time, on its own initiative or in response to a petition received from an Industrial User or POTW, and in accordance with 40 CFR 403.8(f)(6), determine that such Industrial User is not a Significant Industrial User.
- *Significant Materials* - this includes, but is not limited to: raw materials; fuels; materials such as solvents, detergents, and plastic pellets; finished materials such as metallic products; raw materials used in food processing or production; hazardous substances designated under section 101(14) of CERCLA; any chemical the facility is required to report pursuant to section 313 of title III of SARA; fertilizers; pesticides; and waste products such as ashes, slag, and sludge that have the potential to be released with storm water discharges(40 CFR 122.26(b)(12)) [**Added January 2000; Reviewed October 2001**].

- *Significant Nexus* - this definition is effective 6 February 2020. That a water, including wetlands, either alone or in combination with other similarly situated waters in the region, significantly affects the chemical, physical, or biological integrity of a water identified in paragraphs (1) through (3) of the definition for “Waters of the United States.” The term “in the region” means the watershed that drains to the nearest water identified in paragraphs (1) through (3) of the definition for “Waters of the United States.” For an effect to be significant, it must be more than speculative or insubstantial. Waters are similarly situated when they function alike and are sufficiently close to function together in affecting downstream waters. For purposes of determining whether or not a water has a significant nexus, the water’s effect on downstream (1) through (3) waters shall be assessed by evaluating the aquatic functions identified in paragraphs (1) through (9) of this definition below. A water has a significant nexus when any single function or combination of functions performed by the water, alone or together with similarly situated waters in the region, contributes significantly to the chemical, physical, or biological integrity of the nearest water identified in paragraphs (1) through (3) of the definition for “Waters of the United States.” Functions relevant to the significant nexus evaluation are the following (40 CFR 122.2 and 401.11(l)(3)(v)) **[Added July 2015]**:
  1. Sediment trapping,
  2. Nutrient recycling,
  3. Pollutant trapping, transformation, filtering, and transport,
  4. Retention and attenuation of flood waters,
  5. Runoff storage,
  6. Contribution of flow,
  7. Export of organic matter,
  8. Export of food resources, and
  9. Provision of life cycle dependent aquatic habitat (such as foraging, feeding, nesting, breeding, spawning, or use as a nursery area) for species located in a water identified in paragraphs (1) through (3) of the definition for “Waters of the United States.”
- *Silvicultural Point Source* - any discernible, confined and discrete conveyance related to rock crushing, gravel washing, log sorting, or log storage facilities which are operated in connection with silvicultural activities and from which pollutants are discharged into waters of the United States. The term does not include nonpoint source silvicultural activities such as nursery operations, site preparation, reforestation and subsequent cultural treatment, thinning, prescribed burning, pest and fire control, harvesting operations, surface drainage, or road construction and maintenance from which there is natural runoff. However, some of these activities (such as stream crossing for roads) may involve point source discharges of dredged or fill material which may require a CWA section 404 permit (See 33 CFR 209.120 and 33 CFR 233) (40 CFR 122.27(b)(1)) **[Added October 2001]**.
- *Site* - the land or water area where any “facility or activity” is physically located or conducted, including adjacent land used in connection with the facility or activity (40 CFR 122.2) **[Added October 2001]**.
- *Sludge-Only Facility* - any “treatment works treating domestic sewage” whose methods of sewage sludge use or disposal are subject to regulations promulgated pursuant to section 405(d) of the CWA and is required to obtain a permit under Sec. 122.1(b)(2) (40 CFR 122.2) **[Added July 2000]**.
- *Small Municipal Separate Storm Sewer System (MS4)* - all separate storm sewers that are (40 CFR 122.26(b)(16) and 122.26(b)(17)) **[Added January 2000; Citation Revised April 2012]**:
  1. owned or operated by the United States, a state, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to state law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States
  2. not defined as “large” or “medium” municipal separate storm sewer systems

3. this term includes systems similar to separate storm sewer systems in municipalities, such as systems at military bases, large hospital or prison complexes, and highways and other thoroughfares. The term does not include separate storm sewers in very discrete areas, such as individual buildings.

A small MS4 is regulated under the NPDES storm water program when it is (40 CFR 122.32(a)):

1. operated by Federal, state, tribal, and local governments, including state departments of transportation; and;
2. located in an urbanized area as determined by the latest Decennial Census by the Bureau of the Census. (If the small MS4 is not located entirely within an urbanized area, only the portion that is within the urbanized area is regulated); or
3. designated by the NPDES permitting authority or is based upon a petition.

A small MS4 may receive a waiver of permit coverage if it serves a population of less than 1,000 within the urbanized area and the following criteria are met (40 CFR 122.32(d)):

1. the system is not contributing substantially to the pollutant loadings of a physically interconnected MS4 that is regulated by the NPDES stormwater program; and
2. for discharges of any pollutants that have been identified as a cause of impairment of any water body to which the system discharges, storm water controls are not needed based on wasteload allocations that are part of a USEPA-approved or established TMDL that addresses the pollutants of concern.

A small MS4 may receive a waiver of permit coverage if it serves a population of less than 10,000 and the following criteria are met (40 CFR 122.32(e)):

1. the permitting authority has evaluated all waters of the United States, including small streams, tributaries, lakes, and ponds, that receive a discharge from the MS4;
  2. for all such waters, the permitting authority has determined that stormwater controls are not needed based on wasteload allocations that are part of a USEPA approved or established TMDL that addresses the pollutants of concern or, if a TMDL has not been developed or approved, an equivalent analysis that determines sources and allocations for the pollutants of concern (NOTE: The pollutants of concern include BOD, sediment or a parameter that addresses sediment (such as total suspended solids, turbidity or siltation), pathogens, oil and grease, and any pollutant that has been identified as a cause of impairment of any water body that will receive a discharge from the MS4.); and
  3. the permitting authority has determined that future discharges from the MS4 do not have the potential to result in exceedances of water quality standards, including impairment of designated uses, or other significant water quality impacts, including habitat and biological impacts.
- *Solidification* - the addition of sorbents to convert liquid or semi-liquid waste to a solid by means of adsorption, absorption or both. The process is usually accompanied by stabilization (40 CFR 437.2) **[Added April 2001]**.
  - *Solvent Recovery* - includes fuel blending operations and the recycling of spent solvents through separation of solvent mixtures in distillation columns. Solvent recovery may require an additional, pretreatment step prior to distillation (40 CFR 437.2) **[Added April 2001]**.
  - *Source* - any building, structure, facility, or installation from which there is or may be a discharge of pollutants (40 CFR 122.29(a)(2)) **[Added October 2001]**.
  - *Specific Oxygen Uptake Rate (SOUR)* - the mass of oxygen consumed per unit time per unit mass of total solids (dry weight basis) in the sewage sludge (40 CFR 503.31(h)) **[Reviewed October 2001]**.
  - *Stabilization* - a waste process that decreases the mobility of waste constituents by means of a chemical reaction. For the purpose of this rule, chemical precipitation is not a technique for stabilization (40 CFR 437.2) **[Added April 2001]**.

- *Stack Height* - the difference between the elevation of the top of a sewage sludge incinerator stack and the elevation of the ground at the base of the stack when the difference is equal to or less than 65 m. When the difference is greater than 65 m, stack height is the creditable stack height determined in accordance with 40 CFR 51.100 (ii) (40 CFR 503.41) **[Added October 2001]**.
- *Standard of Performance* - any restriction established by the Administrator pursuant to section 306 of the Act on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are or may be discharged from new sources into navigable waters, the waters of the contiguous zone or the ocean (40 CFR 401.11) **[Added October 2001]**.
- *Standards for Sewage Sludge Use or Disposal* - the regulations promulgated pursuant to section 405(d) of the CWA which govern minimum requirements for sludge quality, management practices, and monitoring and reporting applicable to sewage sludge or the use or disposal of sewage sludge by any person (40 CFR 122.2) **[Added October 2001]**.
- *Store or Storage of Sewage Sludge* - the placement of sewage sludge on land on which the sewage sludge remains for 2 yr or less. This does not include the placement of sewage sludge on land for treatment (40 CFR 503.9(y)) **[Reviewed October 2001]**.
- *Stormwater* - stormwater runoff, snow melt runoff, and surface runoff and drainage (40 CFR 122.26(b)(13)) **[Added January 2000; Citation Revised April 2012]**.
- *Stormwater Discharge Associated With an Industrial Activity* -the discharge from any conveyance that is used for collecting and conveying stormwater and that is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. The term does not include discharges from facilities or activities excluded from the NPDES program under this 40 CFR 122. For the categories of industries identified in 40 CFR 122.26, the term includes, but is not limited to, stormwater discharges from industrial plant yards; immediate access roads and rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or by-products used or created by the facility; material handling sites; refuse sites; sites used for the application or disposal of process wastewaters (as defined at 40 CFR 40); sites used for the storage and maintenance of material handling equipment; sites used for residual treatment, storage, or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials, and intermediate and final products; and areas where industrial activity has taken place in the past and significant materials remain and are exposed to stormwater. For the purposes of this definition, material handling activities include storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product, by-product or waste product. The term excludes areas located on plant lands separate from the plant's industrial activities, such as office buildings and accompanying parking lots as long as the drainage from the excluded areas is not mixed with stormwater drained from the above described areas. Industrial facilities (including industrial facilities that are federally, state, or municipally owned or operated that meet the description of the facilities listed in the definition of *Industrial Activities*) include those facilities designated under the provisions of 40 CFR 122.26(a)(1)(v) (40 CFR 122.26(b)(14)) **[Revised January 2000]**.
- *Stormwater Discharge Associated With Small Construction Activity* - the discharge of stormwater from (40 CFR 122.26(b)(15)) **[Added January 2000]**:
  1. construction activities including clearing, grading, and excavating that result in land disturbance of equal to or greater than 1 acre and less than 5 acres. Small construction activity also includes the disturbance of less than 1 acre of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb equal to or greater than 1 and less than 5 acres. Small construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of the facility. The Director may waive the otherwise applicable requirements in a general permit for a stormwater discharge from construction activities that disturb less than 5 acres where:
    - a. the value of the rainfall erosivity factor ("R" in the Revised Universal Soil Loss Equation) is less than five during the period of construction activity. The rainfall erosivity factor is determined in accordance with Chapter 2 of Agriculture Handbook Number 703, Predicting Soil Erosion by

Water: A Guide to Conservation Planning With the Revised Universal Soil Loss Equation (RUSLE), pages 21-64, dated January 1997. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C 552(a) and 1 CFR part 51. Copies may be obtained from USEPA's Water Resource Center, Mail Code RC4100, 401 M St. S.W., Washington, DC 20460. A copy is also available for inspection at the USEPA Water Docket, 401 M Street S.W., Washington, DC 20460, or the Office of the Federal Register, 800 N. Capitol Street N.W. Suite 700, Washington, DC. An operator must certify to the Director that the construction activity will take place during a period when the value of the rainfall erosivity factor is less than five; or

- b. stormwater controls are not needed based on a total maximum daily load (TMDL) approved or established by USEPA that addresses the pollutants of concern or, for non-impaired waters that do not require TMDLs, an equivalent analysis that determines allocations for small construction sites for the pollutants of concern or that determines that such allocations are not needed to protect water quality based on consideration of existing in-stream concentrations, expected growth in pollutant contributions from all sources, and a margin of safety. The pollutants of concern include sediment or a parameter that addresses sediment (such as total suspended solids, turbidity or siltation) and any other pollutant that has been identified as a cause of impairment of any water body that will receive a discharge from the construction activity. The operator must certify to the Director that the construction activity will take place, and storm water discharges will occur, within the drainage area addressed by the TMDL or equivalent analysis.
2. any other construction activity designated by the Director or, in states with approved NPDES programs, either the Director or the USEPA Regional Administrator, based on the potential for contribution to a violation of a water quality standard or for significant contribution of pollutants to waters of the United States.
- *Strong Chelating Agents* - all compounds which, by virtue of their chemical structure and amount present, form soluble metal complexes which are not removed by subsequent metals control techniques such as pH adjustment followed by clarification or filtration (40 CFR 413.02).
  - *Surface Disposal Site* - an area of land that contains one or more active sewage sludge units (40 CFR 503.21(p)) **[Reviewed October 2001]**.
  - *Tank Barge* - a non-self-propelled vessel constructed or adapted primarily to carry liquid, solid or gaseous commodities or cargos in bulk in cargo spaces (or tanks) through rivers and inland waterways, and may occasionally carry commodities or cargos through oceans and seas when in transit from one inland waterway to another. The commodities or cargos transported are in direct contact with the tank interior. There are no maximum or minimum vessel or tank volumes (40 CFR 442.2) **[Added October 2000]**.
  - *Tank Truck* - a motor-driven vehicle with a completely enclosed storage vessel used to transport liquid, solid or gaseous materials over roads and highways. The storage vessel or tank may be detachable, as with tank trailers, or permanently attached. The commodities or cargos transported come in direct contact with the tank interior. A tank truck may have one or more storage compartments. There are no maximum or minimum vessel or tank volumes. Tank trucks are also commonly referred to as cargo tanks or tankers (40 CFR 442.2) **[Added October 2000]**.
  - *10 Year, 24/hour Rainfall Event* - a rainfall event with a probable recurrence interval of once in ten years as defined by the National Weather Service in Technical Paper No. 40. Rainfall Frequency Atlas of the United States, May 1961 or equivalent regional rainfall probability information developed therefrom (40 CFR 423.11(i)) **[Added October 2003]**.
  - *Ten (10)-Year, 24-Hour Rainfall Event, 25-Year, 24-Hour Rainfall Event, and 100-Year, 24-hour Rainfall Event* - precipitation events with a probable recurrence interval of once in ten years, or twenty five years, or one hundred years, respectively, as defined by the National Weather Service in Technical Paper No. 40, "Rainfall Frequency Atlas of the United States" May, 1961, or equivalent regional or State rainfall probability information developed from this source (40 CFR 412.2(i)) **[Added July 2005]**.

- *TTO* - total toxic organics (40 CFR 413.02).
- *Total Dissolved Solids* – the total dissolved (filterable) solids as determined by use of the method specified in 40 CFR 136 (40 CFR 122.2) [**Added April 2012**].
- *Total Hydrocarbons* - the organic compounds in the exit gas from a sewage sludge incinerator stack measured using a flame ionization detection instrument referenced to propane (40 CFR 503.41(m)) [**Reviewed October 2001**].
- *Total Metal* - the sum of the concentrations of mass of copper, nickel, chromium, and zinc (40 CFR 413.02).
- *Total Residual Chlorine* (or total residual oxidants for intake water with bromides) - the value obtained using any of the “chlorine—total residual” methods in Table IB in 40 CFR 136.3(a), or other methods approved by the permitting authority (40 CFR 423.11(a)) [**Added October 2003; Revised October 2017**].
- *Total Solids* - the materials in sewage sludge that remain as residue when the sewage sludge is dried at 103 to 105 degrees C [217.4 to 221 degrees F] (40 CFR 503.31(i)).
- *Toxic Materials* - any toxic pollutant identified in 40 CFR 401.15 (40 CFR 1700.3) [**Added April 2017**].
- *Toxic Pollutant* – any pollutant listed as toxic under section 307(a)(1) or, in the case of “sludge use or disposal practices,” any pollutant identified in regulations implementing section 405(d) of the CWA (40 CFR 122.2) [**Added April 2012**].
- *Transportation Equipment Cleaning (TEC) Process Wastewater* - all wastewaters associated with cleaning the interiors of tanks including: tank trucks; rail tank cars; intermodal tank containers; tank barges; and ocean/sea tankers used to transport commodities or cargos that come into direct contact with the interior of the tank or container. At those facilities that clean tank interiors, TEC process wastewater also includes wastewater generated from washing vehicle exteriors, equipment and floor washings, TEC-contaminated stormwater, wastewater pre-rinse cleaning solutions, chemical cleaning solutions, and final rinse solutions. TEC process wastewater is defined to include only wastewater generated from a regulated TEC subcategory. Therefore, TEC process wastewater does not include wastewater generated from cleaning hopper cars, or from food grade facilities discharging to a POTW. Wastewater generated from cleaning tank interiors for purposes of shipping products (i.e., cleaned for purposes other than maintenance and repair) is considered TEC process wastewater. Wastewater generated from cleaning tank interiors for the purposes of maintenance and repair on the tank is not considered TEC process wastewater. Facilities that clean tank interiors solely for the purposes of repair and maintenance are not regulated under 40 CFR 442 (40 CFR 442.2) [**Added October 2000**].
- *Treat or Treatment of Sewage Sludge* - the preparation of sewage sludge for final use or disposal. This includes, but is not limited to, thickening, stabilization, and dewatering of sewage sludge. This does not include storage of sewage sludge (40 CFR 503.9(z)) [**Reviewed October 2001**].
- *Treatment* - any method, technique, or process designed to change the physical, chemical or biological character or composition of any metal-bearing, oily, or organic wastes to neutralize such wastes; to render such wastes amenable to discharge; or to recover energy or recover metal, oil, or organic content from the wastes. Treatment does not include (a) the re-use of treated or untreated wastewater in place of potable or pure water in industrial processes such as the use of secondary POTW effluents as non-contact cooling water or storm water in place of process water or (b) the re-use of treated or untreated spent chemicals (such as pickle liquor) as treatment chemicals (40 CFR 437.2) [**Added April 2001**].
- *Treatment Works* - either a Federally owned, publicly owned, or privately owned device or system used to treat (including recycle and reclaim) either domestic sewage or a combination of domestic sewage and industrial waste of a liquid nature (40 CFR 503.9(aa)) [**Reviewed October 2001**].

- *Treatment Works Treating Domestic Sewage (TWTDS)* - a POTW or any other sewage sludge or wastewater treatment devices or systems, regardless of ownership (including federal facilities), used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated for the disposal of sewage sludge. This definition does not include septic tanks or similar devices. For purposes of this definition, “domestic sewage” includes waste and wastewater from humans or household operations that are discharged to or otherwise enter a treatment works. In states where there is no approved state sludge management program under section 405(f) of the CWA, the USEPA or authorized regulatory agency may designate any person subject to the standards for sewage sludge use and disposal in 40 CFR 503 as a “treatment works treating domestic sewage,” where he or she finds that there is a potential for adverse effects on public health and the environment from poor sludge quality or poor sludge handling, use or disposal practices, or where he or she finds that such designation is necessary to ensure that such person is in compliance with 40 CFR 503 (40 CFR 122.2) **[Added October 2001]**.
- *Tributary and Tributaries* - a water that contributes flow, either directly or through another water (including an impoundment identified in paragraph (4) of the definition for “Waters of the United States”), to a water identified in paragraphs ((1) through (3) of the definition for “Waters of the United States” that is characterized by the presence of the physical indicators of a bed and banks and an ordinary high water mark. These physical indicators demonstrate there is volume, frequency, and duration of flow sufficient to create a bed and banks and an ordinary high water mark, and thus to qualify as a tributary. A tributary can be a natural, man-altered, or man-made water and includes waters such as rivers, streams, canals, and ditches not excluded in the definition of “Waters of the United States.” A water that otherwise qualifies as a tributary under this definition does not lose its status as a tributary if, for any length, there are one or more constructed breaks (such as bridges, culverts, pipes, or dams), or one or more natural breaks (such as wetlands along the run of a stream, debris piles, boulder fields, or a stream that flows underground) so long as a bed and banks and an ordinary high water mark can be identified upstream of the break. A water that otherwise qualifies as a tributary under this definition does not lose its status as a tributary if it contributes flow through a water of the United States that does not meet the definition of tributary or through a non-jurisdictional water to a water identified in paragraphs (1) through (3) of the definition for “Waters of the United States.” This definition is effective 6 February 2020 (40 CFR 122.2 and 401.11(l)(3)(iii)) **[Added July 2015; Revised April 2018]**.
- *Type I Marine Sanitation Device* - a device that, under the test conditions described in 33 CFR 159.123 and 159.125, produces an effluent having a fecal coliform bacteria count not greater than 1,000 per 100 milliliters and no visible floating solids (33 CFR 159.3) **[Added January 2012]**.
- *Type II Marine Sanitation Device* - a device that, under the test conditions described in 33 CFR 159.126 and 159.126a, produces an effluent having a fecal coliform bacteria count not greater than 200 per 100 milliliters and suspended solids not greater than 150 milligrams per liter (33 CFR 159.3) **[Added January 2012]**.
- *Type III Marine Sanitation Device* - a device that is designed to prevent the overboard discharge of treated or untreated sewage or any waste derived from sewage (33 CFR 159.3) **[Added January 2012]**.
- *Uncontrolled Sanitary Landfill* - a landfill or open dump, whether in operation or closed, that does not meet the requirements for runoff or runoff controls established pursuant to subtitle D of the Solid Waste Disposal Act (40 CFR 122.26(b)(20)) **[Added January 2000]**.
- *United States* - includes the States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Canal Zone, and the Trust Territory of the Pacific Islands (40 CFR 1700.3) **[Added July 1999]**.
- *Unstabilized Solids* - organic materials in sewage sludge that have not been treated in either an aerobic or anaerobic treatment process (40 CFR 503.31(j)) **[Reviewed October 2001]**.
- *Unstable Area* - land subject to natural or human-induced forces that may damage the structural components of an active sewage sludge unit. This includes, but is not limited to, land on which the soils are subject to mass movement (40 CFR 503.21(q)) **[Reviewed October 2001]**.

- *Upset* - an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation (40 CFR 122.41(n)(1)) **[Added October 2001]**.
- *Upset* - an exceptional incident in which there is unintentional and temporary noncompliance with categorical Pretreatment Standards because of factors beyond the reasonable control of the Industrial User. An Upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation (40 CFR 403.16(a)) **[Added October 2001]**.
- *Used Oil Filter Recycling* - crushing and draining of used oil filters of entrained oil and/or shredding and separation of used oil filters (40 CFR 437.2) **[Added April 2001]**.
- *Variance* - any mechanism or provision under section 301 or 316 of CWA or under 40 CFR 125, or in the applicable “effluent limitations guidelines” which allows modification to or waiver of the generally applicable effluent limitation requirements or time deadlines of CWA. This includes provisions which allow the establishment of alternative limitations based on fundamentally different factors or on sections 301(c), 301(g), 301(h), 301(i), or 316(a) of CWA (40 CFR 122.2) **[Added October 2001]**.
- *Vector Attraction* - the characteristic of sewage sludge that attracts rodents, flies, mosquitoes, or other organisms capable of transporting infectious agents (40 CFR 503.31(k)) **[Reviewed October 2001]**.
- *Vector Attraction Reduction Options* - the following are vector attraction reduction options (40 CFR 503.33(b)) **[Revised October 1999; Reviewed October 2001]**:
  1. The mass of volatile solids in the sewage sludge shall be reduced by a minimum of 38 percent (see calculation procedures in “Environmental Regulations and Technology--Control of Pathogens and Vector Attraction in Sewage Sludge”, USEPA-625/R-92/013, 1992, U.S. Environmental Protection Agency, Cincinnati, Ohio 45268)
  2. When the 38 percent volatile solids reduction requirement in paragraph 1 cannot be met for an anaerobically digested sewage sludge, vector attraction reduction can be demonstrated by digesting a portion of the previously digested sewage sludge anaerobically in the laboratory in a bench-scale unit for 40 additional days at a temperature between 30 and 37 degrees C. When at the end of the 40 days, the volatile solids in the sewage sludge at the beginning of that period is reduced by less than 17 percent, vector attraction reduction is achieved
  3. When the 38 percent volatile solids reduction requirement in paragraph 1 cannot be met for an aerobically digested sewage sludge, vector attraction reduction can be demonstrated by digesting a portion of the previously digested sewage sludge that has a percent solids of two percent or less aerobically in the laboratory in a bench-scale unit for 30 additional days at 20 degrees C. When at the end of the 30 days, the volatile solids in the sewage sludge at the beginning of that period is reduced by less than 15 percent, vector attraction reduction is achieved
  4. The specific oxygen uptake rate (SOUR) for sewage sludge treated in an aerobic process shall be equal to or less than 1.5 mg of oxygen per hour per gram of total solids (dry weight basis) at a temperature of 20 degrees C
  5. Sewage sludge shall be treated in an aerobic process for 14 days or longer. During that time, the temperature of the sewage sludge shall be higher than 40 degrees C and the average temperature of the sewage sludge shall be higher than 45 degrees C
  6. The pH of sewage sludge shall be raised to 12 or higher by alkali addition and, without the addition of more alkali, shall remain at 12 or higher for 2 h and then at 11.5 or higher for an additional 22 h
  7. The percent solids of sewage sludge that does not contain unstabilized solids generated in a primary wastewater treatment process shall be equal to or greater than 75 percent based on the moisture content and total solids prior to mixing with other materials

8. The percent solids of sewage sludge that contains unstabilized solids generated in a primary wastewater treatment process shall be equal to or greater than 90 percent based on the moisture content and total solids prior to mixing with other materials
  9. Sewage sludge shall be injected below the surface of the land. No significant amount of the sewage sludge shall be present on the land surface within 1 h after the sewage sludge is injected. When the sewage sludge that is injected below the surface of the land is Class A with respect to pathogens, the sewage sludge shall be injected below the land surface within 8 h after being discharged from the pathogen treatment process
  10. Sewage sludge applied to the land surface or placed on an active sewage sludge unit shall be incorporated into the soil within 6 h after application to or placement on the land, unless otherwise specified by the permitting authority
  11. When sewage sludge that is incorporated into the soil is Class A with respect to pathogens, the sewage sludge shall be applied to or placed on the land within 8 h after being discharged from the pathogen treatment process
  12. Sewage sludge placed on an active sewage sludge unit shall be covered with soil or other material at the end of each operating day
  13. The pH of domestic septage shall be raised to 12 or higher by alkali addition and, without the addition of more alkali, shall remain at 12 or higher for 30 min.
- *Vegetated Buffer* - a narrow, permanent strip of dense perennial vegetation established parallel to the contours of and perpendicular to the dominant slope of the field for the purposes of slowing water runoff, enhancing water infiltration, and minimizing the risk of any potential nutrients or pollutants from leaving the field and reaching surface waters (40 CFR 412.4(b)(2)) [**Added July 2005**].
  - *Vessel* - includes every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation on the waters of the United States (33 CFR 159.3) [**Added January 2012**].
  - *Volatile Solids* - the amount of the total solids in sewage sludge lost when the sewage sludge is combusted at 550 °C [1022 °F] in the presence of excess air (40 CFR 503.31(l)) [**Reviewed October 2001**].
  - *Waste* - includes aqueous, non-aqueous, and solid waste, wastewater, and/or used material (40 CFR 437.2) [**Added April 2001**].
  - *Waters of the United States* – this definition is effective 6 February 2020. This phrase includes the following (40 CFR 122.2 and 401.11(l)(1), and 401.1(l)(2) [**Added October 2001; Revised April 2012; Revised July 2015; Revised April 2018**])
    1. All waters which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
    2. All interstate waters, including interstate wetlands [see definition of *Wetlands*];
    3. The territorial seas;
    4. All impoundments of waters otherwise identified as waters of the United States under 40 CFR 110.1;
    5. All tributaries, [see definition of *Tributary*], of waters identified in paragraphs (1) through (3);
    6. All waters adjacent [see definition of *Adjacent*] to a water identified in paragraphs (1) through (5) of this definition, including wetlands, ponds, lakes, oxbows, impoundments, and similar waters;
    7. All waters in paragraphs (a) through (e) of this paragraph (7) where they are determined, on a case-specific basis, to have a significant nexus to a water identified in paragraphs (1) through (3) of this definition. The waters identified in each of paragraphs (a) through (e) of this paragraph (7) are similarly situated and shall be combined, for purposes of a significant nexus analysis, in the watershed that drains to the nearest water identified in paragraphs (1) through (3) of this definition. Waters identified in this paragraph (7) shall not be combined with waters identified in paragraph (6) when performing a significant nexus analysis. If waters identified in this paragraph are also an adjacent water under paragraph (6), they are an adjacent water and no case-specific significant nexus analysis is required.
      - a. *Prairie potholes*. Prairie potholes are a complex of glacially formed wetlands, usually occurring in depressions that lack permanent natural outlets, located in the upper Midwest.
      - b. *Carolina bays and Delmarva bays*. Carolina bays and Delmarva bays are ponded, depressional wetlands that occur along the Atlantic coastal plain.

- c. *Pocosins*. Pocosins are evergreen shrub and tree dominated wetlands found predominantly along the Central Atlantic coastal plain.
  - d. *Western vernal pools*. Western vernal pools are seasonal wetlands located in parts of California and associated with topographic depression, soils with poor drainage, mild, wet winters and hot, dry summers.
  - e. *Texas coastal prairie wetlands*. Texas coastal prairie wetlands are freshwater wetlands that occur as a mosaic of depressions, ridges, intermound flats, and mima mound wetlands located along the Texas Gulf Coast.
8. All waters located within the 100-year floodplain of a water identified in paragraphs (1) through (3) of this definition and all waters located within 4,000 feet of the high tide line or ordinary high water mark [see definition of *High Tide Line* and *Ordinary High Water Mark*] of a water identified in paragraphs ((1) through (5) of this definition where they are determined on a case-specific basis to have a significant nexus to a water identified in paragraphs ((1) through (3) of this definition. For waters determined to have a significant nexus, the entire water is a water of the United States if a portion is located within the 100-year floodplain of a water identified in paragraphs (1) through (3) of this definition or within 4,000 feet of the high tide line or ordinary high water mark. Waters identified in this paragraph (8) shall not be combined with waters identified in paragraph (6) of this definition when performing a significant nexus analysis. If waters identified in this paragraph (8) are also an adjacent water under paragraph (6), they are an adjacent water and no case-specific significant nexus analysis is required.

The following are not “waters of the United States” even where they otherwise meet the terms of paragraphs (4) through (8) above in this definition.

1. Waste treatment systems (other than cooling ponds meeting the criteria of this paragraph)
  2. Prior converted cropland. Notwithstanding the determination of an area’s status as prior converted cropland by any other Federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with EPA.
  3. The following ditches:
    - a. Ditches with ephemeral flow that are not a relocated tributary or excavated in a tributary.
    - b. Ditches with intermittent flow that are not a relocated tributary, excavated in a tributary, or drain wetlands
    - c. Ditches that do not flow, either directly or through another water, into a water identified in paragraphs (1) through (3) of the above definition of waters which are “waters of the United States”.
  4. The following features:
    - a. Artificially irrigated areas that would revert to dry land should application of water to that area cease;
    - b. Artificial, constructed lakes and ponds created in dry land such as farm and stock watering ponds, irrigation ponds, settling basins, fields flooded for rice growing, log cleaning ponds, or cooling ponds;
    - c. Artificial reflecting pools or swimming pools created in dry land;
    - d. Small ornamental waters created in dry land;
    - e. Water-filled depressions created in dry land incidental to mining or construction activity, including pits excavated for obtaining fill, sand, or gravel that fill with water;
    - f. Erosional features, including gullies, rills, and other ephemeral features that do not meet the definition of tributary, non-wetland swales, and lawfully constructed grassed waterways; and
    - g. Puddles.
  5. Groundwater, including groundwater drained through subsurface drainage systems.
  6. Stormwater control features constructed to convey, treat, or store stormwater that are created in dry land.
  7. Wastewater recycling structures constructed in dry land; detention and retention basins built for wastewater recycling; groundwater recharge basins; percolation ponds built for wastewater recycling; and water distributary structures built for wastewater recycling.
- *Waters Subject to UNDS* - the navigable waters of the United States, including the territorial seas and the waters of the contiguous zone, as these terms are defined in the Clean Water Act (33 U.S.C. 1362) (40 CFR 1700.3) [Added April 2017].
  - *Wet Electrostatic Precipitator* - an air pollution control device that uses both electrical forces and water to remove pollutants in the exit gas from a sewage sludge incinerator stack (40 CFR 503.41) [Added October 2001].

- *Wet Lot* - a confinement facility for raising ducks which is open to the environment, has a small number of sheltered areas, and with open water runs and swimming areas to which ducks have free access (40 CFR 412.21(b)) [**Added July 2005**].
- *Wet Scrubber* - an air pollution control device that uses water to remove pollutants in the exit gas from a sewage sludge incinerator stack (40 CFR 503.41) [**Added October 2001**].
- *Wetlands* - those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas (40 CFR 122.2 and 401.11(l)(3)(iv)) [**Revised July 2015**].
- *Whole Effluent Toxicity* - the aggregate toxic effect of an effluent measured directly by a toxicity test (40 CFR 122.2) [**Added April 2009**].

#### **F. Records To Review**

- NPDES Permits
- NPDES Permit applications (new or RENEWAL)
- Discharge monitoring reports for the past year
- Laboratory records and procedures and USEPA QA results
- Monthly operating reports for wastewater treatment facilities
- Flow monitoring calibration certification and supporting records
- Ash pond volume certification and supporting records
- Special reports, certifications, etc., required by NPDES permit
- Spill Prevention Control and Countermeasure (SPCC) Plan
- All records required by SPCC Plan
- All enforcement actions
- NPDES state or Federal inspection reports
- Sewage treatment plant operator certification
- Administrative orders
- Sewer and storm drain layout
- Local sewer use ordinance
- Local service use permit
- Sewer system bypass records
- Sanitary sewer overflow records.
- Notification to local POTW
- Septage haul records
- Old spill reports
- Repair/Maintenance records for the wastewater treatment system
- As built drawings
- Federal facility compliance agreements
- Contracts/other instruments that describe the relationship between a POTW and a Federal facility
- Stormwater pollution prevention plan
- Pretreatment permits
- Design plans for wastewater and industrial waste treatment plants, including treatment basins
- Utility and general site maps, diagrams - plumbing (maintenance shops)
- Pollution Prevention Plan

#### **G. Physical Features To Inspect**

- Discharge outfall pipes (maintenance shops, hardstands, and parking lots)

- Wastewater treatment facilities
- Industrial treatment facilities
- Floor and sink drains (especially in industrial areas)
- Oil storage tanks
- Oil/water separators and other pretreatment devices such as sand and grit traps, grease traps, and sand interceptors
- Wastewater generation points
- Discharge to POTW/FOTW
- Stormwater ditches around motor pools
- Streams, rivers, open waterways
- Stormwater collection points (especially in industrial and maintenance areas)
- Fire training pit
- Nonpoint source discharge areas
- Motor pools and vehicle maintenance stands, plumbing, drains, and discharges (end of pipe)
- Wash racks (centralized facilities, individual and areas in vicinity of maintenance shop)
- Catch basins, drop inlets, holding/retention ponds
- Electrical grease racks and inspection racks
- Waste and sump collection points
- Detention ponds from vehicle washing operations (especially I.D. POL products)
- Vehicle maintenance inspection pits and ramps
- Sludge disposal areas (especially from vehicle wash racks and central facilities)
- Battery and radiator repair operations
- Ash disposal areas from incinerators (i.e., pathological)
- Sewage sludge land application sites
- Construction sites
- Landfills

## H. Guidance for Wastewater Management Checklist Users

	REFER TO CHECKLIST ITEMS:
All Facilities	WA.1.1.US.
Missing, Risk Management, and Positive Checklist Items	WA.2.1.US. through WA.2.3.US
NPDES Permits	WA.10.1.US. through WA.10.16.US.
Treatment Works	WA.20.1.US through WA.20.10.US
Centralized Waste Treatment Facilities	WA.23.1.US through WA.23.6.US
Discharges to POTWs/FOTWs	WA.25.1.US. through WA.25.10.US.
Miscellaneous Effluent Limitations	WA.41.1.US
Construction and Development Point Sources	WA.43.1.US through WA.43.3.US
Effluent Limitations for Steam Electric Power Generating Sources General New Sources Existing Sources	WA.45.1.US. through WA.45.7.US. WA.50.1.US. through WA.50.5.US. WA.55.1.US.
Effluent Limitations for Electroplating Point Sources	WA.60.1.US. through WA.60.7.US.
Effluent Limitations for Metal Finishing Point Sources General Existing Sources New Sources	WA.65.1.US. through WA.65.3.US. WA.70.1.US. WA.75.1.US. and WA.75.2.US.
Effluent Limitations for Hospitals	WA.80.1.US.
Effluent Limitations for Dental Clinics	WA.81.1.US through WA.81.4.US
Discharges from Landfills	WA.83.1.US. through WA.83.3.US.
Effluent Limitations for Photo Labs	WA.85.1.US.
Effluent Limitations for Transportation Cleaning Equipment	WA.86.1.US through WA.86.4.US
Other Discharges and Dischargers: Armed Forces Vessels Aquatic Animal Production Concentrated Animal Feeding Operations	WA.95.1.US. WA.95.2.US through WA.95.4.US WA.95.5.US through WA.95.11.US

Individual Sewage Systems	WA.100.1.US
Land Application of Sludge	
General	WA.105.1.US. through WA.105.8.US.
Vectors and Pathogens	WA.110.1.US. through WA.110.5.US.
Notifications	WA.115.1.US. through WA.115.5.US.
Monitoring	WA.120.1.US. and WA.120.2.US.
Recordkeeping and Reporting	WA.125.1.US. through WA.125.8.US.
Surface Disposal of Sludge	
General	WA.135.1.US. through WA.135.8.US.
Monitoring and Documentation	WA.140.1.US. through WA.140.6.US.

<p style="text-align: center;"><b>REGULATORY REQUIREMENTS</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS</b>  <b>December 2018</b></p>
<p><b>WA.10.15.US.</b> Facilities with stormwater discharges associated with industrial activities (see <i>Definitions</i>) are required to comply with the NPDES Multi-Sector General Permit (MSGP) unless individually permitted or subject to State General Permit requirements (40 CFR 122.22(b), 122.28, and the <i>Multi-Sector General Permit</i>) [Added April 2012].</p>	<ul style="list-style-type: none"> <li>– the support activity does not continue to operate beyond the completion of the construction activity at the project it supports</li> <li>– stormwater controls are implemented in accordance with Part 2 and, if applicable, Part 3, for discharges from the support activity areas</li> <li>– the following non-stormwater discharges from the construction activity, provided that, with the exception of water used to control dust and to irrigate areas to be vegetatively stabilized, these discharges are not routed to areas of exposed soil on the site and the site is in compliance with any applicable requirements for these discharges in Part 2 of the permit: <ul style="list-style-type: none"> <li>– discharges from emergency fire-fighting activities</li> <li>– fire hydrant flushings</li> <li>– landscape irrigation</li> <li>– water used to wash vehicles and equipment, provided that there is no discharge of soaps, solvents, or detergents used for such purposes</li> <li>– water used to control dust</li> <li>– potable water including uncontaminated water line flushings</li> <li>– routine external building washdown that does not use detergents</li> <li>– pavement wash waters provided spills or leaks of toxic or hazardous materials have not occurred (unless all spill material has been removed) and where detergents are not used. You are prohibited from directing pavement wash waters directly into any surface water, storm drain inlet, or stormwater conveyance, unless the conveyance is connected to a sediment basin, sediment trap, or similarly effective control</li> <li>– uncontaminated air conditioning or compressor condensate</li> <li>– uncontaminated, non-turbid discharges of ground water or spring water</li> <li>– foundation or footing drains where flows are not contaminated with process materials such as solvents or contaminated ground water</li> <li>– construction dewatering water that has been treated by an appropriate control under Part 2.1.3.4 of the permit</li> </ul> </li> <li>– approved discharges of stormwater or authorized non-stormwater discharges commingled with a discharge authorized by a different NPDES permit and/or a discharge that does not require NPDES permit authorization.)</li> </ul> <p>(NOTE: On 29 September 2008 EPA Regions 1, 2, 3, 5, 6, 9, and 10 finalized EPA's NPDES general permit for stormwater discharges from industrial activity, also referred to as the Multi-Sector General Permit (MSGP). This permit replaces the existing permits that expired on 30 October 2005. This permit authorizes the discharge of stormwater associated with industrial activities in accordance with the terms and conditions described in the MSGP. An individual permit may be necessary if the discharger cannot meet the terms and conditions or eligibility requirements in the MSGP.)</p> <p>(NOTE: EPA's MSGP is only applicable in locations where EPA is the permitting authority; otherwise the State MSGP will apply. See the following website <a href="http://cfpub.epa.gov/npdes/stormwater/authorizationstatus.cfm">http://cfpub.epa.gov/npdes/stormwater/authorizationstatus.cfm</a> for information on who has what permitting authority.)</p>

<p style="text-align: center;"><b>COMPLIANCE CATEGORY</b>  <b>WASTEWATER MANAGEMENT</b>  <b>U.S. TEAM Guide</b></p>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>(NOTE: See checklist item WA.10.2.US for requirements applicable to industrial activities seeking stormwater discharge coverage under an individual permit.)</p> <p>Verify that facilities with stormwater discharges associated with industrial activity covered by the MSGP have submitted a Notice of Intent a minimum of 60 days prior to commencing discharge, or a minimum of 30 days if the SWPPP is posted on the Internet during this period.</p> <p>(NOTE: The phrase “Stormwater associated with an industrial activity” is defined in 40 CFR 122.26(b)(14). See the <i>Definitions</i> section of this manual and/or the following associated EPA website on stormwater associated with industrial activity for further information on which industrial activities are addressed <a href="http://cfpub.epa.gov/npdes/stormwater/indust.cfm?program_id=6">http://cfpub.epa.gov/npdes/stormwater/indust.cfm?program_id=6</a>. For example, “industrial activities” include the following:</p> <ul style="list-style-type: none"> <li>– steam electric power generating facilities, including coal handling sites</li> <li>– transportation facilities classified as Standard Industrial Classifications 40, 41, 42 (except 4221–25), 43, 44, 45, and 5171 which have vehicle maintenance shops, equipment cleaning operations, or airport deicing operations</li> <li>– treatment works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility, with a design flow of 1.0 mgd or more, or required to have an approved pretreatment program under 40 CFR 403</li> <li>– construction activity including clearing, grading and excavation if the disturbance of land is 5 acres or greater (see also checklist item WA.10.14.US)</li> <li>– construction activity including the disturbance of less than 5 acres of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb 5 acres or more (see also checklist item WA.10.14.US).)</li> </ul> <p>Verify that the facility complies with all conditions of the MSGP, including:</p> <ul style="list-style-type: none"> <li>– development and implementation of a Stormwater Pollution Prevention Plan</li> <li>– effluent limitations</li> <li>– inspections</li> <li>– visual assessments</li> <li>– comprehensive site assessments</li> <li>– monitoring</li> <li>– corrective actions</li> <li>– reporting</li> <li>– recordkeeping.</li> </ul> <p>Verify that, for a Federal agency, reports required by a permit and other information requested by the regulator is signed by one of the following:</p> <ul style="list-style-type: none"> <li>– the chief executive officer of the agency</li> </ul>

<p style="text-align: center;"><b>COMPLIANCE CATEGORY</b>  <b>WASTEWATER MANAGEMENT</b>  <b>U.S. TEAM Guide</b></p>	
<p style="text-align: center;"><b>REGULATORY REQUIREMENTS</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS</b>  <b>December 2018</b></p>
<p><b>WA.10.16.US.</b> Certain small vessels (less than 79 ft) subject to the EPA’s NPDES Small Vessel General Permit (sVGP) are required to follow specific standards as of 19 December 2014 (40 CFR 122.22(b), 122.28 and the <i>NPDES Small Vessel General Permit for Discharges Incidental to the Operation of Vessels</i>) [Added October 2014].</p>	<ul style="list-style-type: none"> <li>– a senior executive officer having responsibility over the overall operations of a principal geographic unit of the agency (i.e., Regional Administrators of EPA)</li> <li>– a duly authorized representative.</li> </ul> <p>(NOTE: A person is a duly authorized representative only if:</p> <ul style="list-style-type: none"> <li>– the authorization is made in writing by the chief executive officer of the agency or a senior executive officer having responsibility over the overall operations of a principal geographic unit of the agency</li> <li>– the authorization specifies either an individual or a position having responsibilities for the overall operation of the regulated facility or activity such as the position of plant manager, operator of a well or well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters</li> <li>– the written authorization is submitted to the Director.)</li> </ul> <p>(NOTE: EPA may require a facility to apply for and/or obtain authorization to discharge under either an individual NPDES permit or an alternative NPDES general permit. If EPA requires a facility to apply for an individual NPDES permit, EPA will notify the facility in writing that a permit application is required.)</p> <p>(NOTE: Recreational vessels or vessels of the U.S. Armed Forces are not eligible for coverage under the sVGP. The sVGP applies to discharges incidental to the normal operation of all other vessels of less than 79 ft which discharge in waters of the United States.)</p> <p>(NOTE: A “recreational vessel” means any “vessel” that is either (1) manufactured or used primarily for pleasure or (2) leased, rented, or chartered to a person for the pleasure of that person. The term does not include a vessel that is both subject to Coast Guard inspection and either (1) engaged in commercial use or (2) carries paying passengers [33 U.S.C. 1362(25)]. According to the <i>Final 2014 sVGP Fact Sheet</i>, utility vessels used by the Army Corps of Engineers or a state or federal wildlife agency for public resource management purpose such as hydrographic surveys, wildlife management, buoy marker setting, water patrol, inspections, etc., for which the same model is manufactured and utilized for recreational purposes are considered recreational vessels within the meaning of the Clean Water Act. )</p> <p>(NOTE: A “vessel of the Armed Forces” means:</p> <ul style="list-style-type: none"> <li>– any vessel owned or operated by the DoD, other than a time or voyage chartered vessel</li> <li>– any vessel owned or operated by the DOT that is designated by the Secretary of the department in which the Coast Guard is operating as a vessel equivalent to a vessel described in the above list.)</li> </ul> <p>Verify that the vessel minimizes the potential for pollutants to accidentally enter the effluent, including spills.</p>

<b>COMPLIANCE CATEGORY</b> <b>WASTEWATER MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>Verify that the vessel minimizes the discharge of constituents of concern or pollutants, such as foam or floating solids.</p> <p>(NOTE: As used in the sVGP, the term “minimize” means reduce and/or eliminate to the extent achievable using control measures (including BMPs) that are technologically available and economically practicable and achievable in light of best marine practice.)</p> <p>Verify that the vessel does not use any dispersants, cleaners, chemicals, or other materials or emulsifiers that would remove the appearance of a visible sheen in the discharge.</p> <p>Verify that the vessel does not discharge:</p> <ul style="list-style-type: none"> <li>– garbage in the effluent</li> <li>– oil, including any oily mixture, in quantities that may be harmful or cause a visible sheen</li> <li>– antifreeze with toxic or known carcinogenic additives, such as ethylene glycol and methanol and minimizes the discharge of all other antifreeze, such as antifreeze containing propylene glycol.</li> </ul> <p>(NOTE: For vessel engines that have been winterized, minimizing the discharge includes capturing antifreeze drained from the engine.)</p> <p>Verify that, when feasible, major cleaning, maintenance, and repair jobs are performed while the vessel is out of the water or in drydock.</p> <p>Verify that the vessel uses only minimally-toxic, phosphate-free, and biodegradable soaps, detergents, or cleaners.</p> <p>(NOTE: Phosphate-free soap contains by weight 0.5 percent or less of phosphates or derivatives of phosphates.)</p> <p>Verify that the vessel does not add any pollutant that is not incidental to the normal operation of a vessel to any discharge.</p> <p>Verify that, while the vessel engine is operating, personnel frequently check the area around and behind the vessel to ensure that no visible sheen, dust, chemicals, or discoloration are originating from the vessel.</p> <p>Verify that all components of the sVGP are being met, including the following:</p> <ul style="list-style-type: none"> <li>– fuel management</li> <li>– engine and oil control</li> <li>– solid and liquid waste management</li> <li>– deck washdown and runoff and above water line hull cleaning</li> <li>– vessel hull maintenance</li> </ul>

<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>WA.81.2.US.</b> New dental dischargers are required to meet certain pretreatment standards no later than 14 July 2017 (40 CFR 441.10 and 441.40) [Added July 2017].</p>	<p>manual, at which the amalgam separator can perform to the specified efficiency, whichever comes first</p> <ul style="list-style-type: none"> <li>– the demonstration of the device(s) is documented in the One-Time Compliance Report.</li> </ul> <p>Verify that dental dischargers implement the following best management practices (BMPs):</p> <ul style="list-style-type: none"> <li>– waste amalgam including, but not limited to, dental amalgam from chair-side traps, screens, vacuum pump filters, dental tools, cuspidors, or collection devices, is not be discharged to a POTW</li> <li>– dental unit water lines, chair-side traps, and vacuum lines that discharge amalgam process wastewater to a POTW are not cleaned with oxidizing or acidic cleaners, including but not limited to bleach, chlorine, iodine and peroxide that have a pH lower than 6 or greater than 8.</li> </ul> <p>(NOTE: Unless otherwise designated by the Control Authority, dental dischargers subject to 40 CFR 441 are not Significant Industrial Users as defined in 40 CFR 403, and are not “Categorical Industrial Users” or “industrial users subject to categorical pretreatment standards” as those terms and variations are used in 40 CFR 403.)</p> <p>(NOTE: This checklist item does not apply to:</p> <ul style="list-style-type: none"> <li>– dental dischargers that exclusively practice one or more of the following dental specialties: oral pathology, oral and maxillofacial radiology, oral and maxillofacial surgery, orthodontics, periodontics, or prosthodontics</li> <li>– wastewater discharges from a mobile unit operated by a dental discharger</li> <li>– dental dischargers that do not discharge any amalgam process wastewater to a POTW, such as dental dischargers that collect all dental amalgam process wastewater for transfer to a Centralized Waste Treatment facility as defined in 40 CFR 437.)</li> </ul> <p>(NOTE: Dental dischargers that do not place dental amalgam, and do not remove amalgam except in limited emergency or unplanned, unanticipated circumstances, and that certify such to the Control Authority as required in are exempt from any further requirements of this checklist item.)</p> <p>(NOTE: Dental dischargers are defined as a facility where the practice of dentistry is performed, including, but not limited to, institutions, permanent or temporary offices, clinics, home offices, and facilities owned and operated by Federal, state or local governments, that discharges wastewater to a publicly owned treatment works (POTW).)</p> <p>(NOTE: An new source is one which first discharges to a POTW after 14 July 2017.)</p>

<b>COMPLIANCE CATEGORY</b> <b>WASTEWATER MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>Verify that dental amalgam solids are removed from all amalgam process wastewater by one of the following methods:</p> <ul style="list-style-type: none"> <li>– an amalgam separator</li> <li>– an amalgam removal device other than a separator.</li> </ul> <p>Verify that, if an amalgam separator is used, it is installed, operated and maintained as follows:</p> <ul style="list-style-type: none"> <li>– compliant with either the American National Standards Institute (ANSI) American National Standard/American Dental Association (ADA) Specification 108 for Amalgam Separators (2009) with Technical Addendum (2011) or the International Organization for Standardization (ISO) 11143 Standard (2008) or subsequent versions so long as that version requires amalgam separators to achieve at least a 95% removal efficiency as assessed by an accredited testing laboratory under ANSI's accreditation program for product certification or a testing laboratory that is a signatory to the International Laboratory Accreditation Cooperation's Mutual Recognition Arrangement. The testing laboratory's scope of accreditation must include ANSI/ADA108-2009 or ISO 11143</li> <li>– the amalgam separator(s) are sized to accommodate the maximum discharge rate of amalgam process wastewater</li> <li>– the amalgam separator(s) are inspected in accordance with the manufacturer's operating manual to ensure proper operation and maintenance of the separator(s) and to confirm that all amalgam process wastewater is flowing through the amalgam retaining portion of the amalgam separator(s)</li> <li>– in the event that an amalgam separator is not functioning properly, the amalgam separator is repaired consistent with manufacturer instructions or replaced with a unit that meets the requirements as soon as possible, but no later than 10 business days after the malfunction is discovered by the dental discharger, or an agent or representative of the dental discharger</li> <li>– the amalgam retaining units are replaced in accordance with the manufacturer's schedule as specified in the manufacturer's operating manual or when the amalgam retaining unit has reached the maximum level, as specified by the manufacturer in the operating manual, at which the amalgam separator can perform to the specified efficiency, whichever comes first.</li> </ul> <p>Verify that, if an amalgam removal device(s) other than an amalgam separator is used, it is installed, operated and maintained according to the following requirements:</p> <ul style="list-style-type: none"> <li>– it has a removal efficiency of at least 95 percent of the mass of solids from all amalgam process wastewater where the removal efficiency is calculated in grams recorded to three decimal places, on a dry weight basis and is demonstrated at the maximum water flow rate through the device as established by the device manufacturer's instructions for use</li> </ul>
