<p style="text-align: center;"><b>REGULATORY REQUIREMENTS</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS</b>  <b>December 2018</b></p>
<p><b>WA.86.4.US.</b> Facilities discharging wastewater resulting from the cleaning of tanks transporting food grade cargos are required to meet certain discharge requirements (40 CFR 442.1, 442.40 through 442.44) <b>[Added October 2000]</b>.</p>	<p>Verify that new facilities discharging wastewater resulting from the cleaning of tank barges or ocean/sea tankers that have been used to transport chemical or petroleum cargos achieve the NSPS outlined in Appendix 12-4dd.</p> <p>Verify that, except as provided in 40 CFR 403.7 and 403.13, existing facilities discharging wastewater resulting from the cleaning of tank barges or ocean/sea tankers which have been used to transport chemical or petroleum cargos achieve the PSES outlined in Appendix 12-4dd.</p> <p>Verify that, except as provided in 40 CFR 403.7, new facilities discharging wastewater resulting from the cleaning of tank barges or ocean/sea tankers which have been used to transport chemical or petroleum cargos achieve the PSNS outlined in Appendix 12-4dd.</p> <p>(NOTE: This checklist item applies to discharges resulting from cleaning the interior of tanks used to transport chemical, petroleum or food grade cargos. This checklist item does not apply to facilities that clean only the exteriors of transportation equipment. Operations that may be subject to these requirements typically are reported under a wide variety of Standard Industrial Classification (SIC) codes. Several of the most common SIC codes include: SIC 7699, SIC 4741, or SIC 4491 (1987 SIC Manual). These requirements are not applicable to the following discharges:</p> <ul style="list-style-type: none"> <li>– wastewaters associated with tank cleanings operated in conjunction with other industrial, commercial, or POTW operations, provided that the cleaning is limited to tanks that previously contained raw materials, by-products, or finished products that are associated with the facility's onsite processes</li> <li>– wastewaters resulting from cleaning the interiors of drums, intermediate bulk containers, or closed-top hoppers</li> <li>– wastewater from a facility that discharges less than 100,000 gal/yr of transportation equipment cleaning process wastewater.)</li> </ul> <p>(NOTE: This checklist item applies to discharges resulting from the cleaning of tank trucks, intermodal tank containers, rail tank cars, tank barges and ocean/sea tankers which have been used to transport food grade cargos. If wastewater generated from cleaning tanks used to transport food grade cargos is mixed with wastewater resulting from cleaning tanks used to transport chemical or petroleum cargos, then the combined wastewater is subject to the provisions established for the corresponding tanks (i.e., truck, railcar or barge).)</p> <p>Verify that facilities discharging wastewater resulting from the cleaning of tank trucks, intermodal tank containers, rail tank cars, tank barges and ocean/sea tankers which have been used to transport food grade cargos achieve effluent limitations representing the application of BPT or BCT in Appendix 12-4ee.</p>

Washington	Pierce	258,530
	Snohomish	157,218

1 County was previously listed in this appendix; however, population dropped to below 100,000 in the 1990 Census.

## Appendix 12-0a

### Areas Cover By the EPA's Pesticide General Permit (EPA's NPDES Pesticide General Permit, Appendix C) [Added January 2000; Revised April 2012]

#### **EPA Region 1:** Connecticut, Massachusetts, Maine, New Hampshire, Rhode Island, Vermont

Where EPA is Permitting Authority

MAG87####	Massachusetts, including Indian Country lands within Massachusetts
CTG87####E	Indian Country lands within Connecticut
NHG87####	New Hampshire
RIG87####E	Indian Country lands within Rhode Island
VTG87####E	Federal facilities within Vermont

#### **EPA Region 2:** New Jersey, New York, Puerto Rico, United States Virgin Islands

Where EPA is Permitting Authority

NYG87####E	Indian Country lands within New York State
PRG87####	Puerto Rico

#### **EPA Region 3:** Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia

Where EPA is Permitting Authority

DCG87####	The District of Columbia
DEG87####E	Federal facilities within Delaware

#### **EPA Region 4:** Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee

Where EPA is Permitting Authority

ALG87####E	Indian Country lands within Alabama
FLG87####E	Indian Country lands within Florida
MSG87####E	Indian Country lands within Mississippi
NCG87####E	Indian Country lands within North Carolina

#### **EPA Region 5:** Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin

Where EPA is Permitting Authority

MIG87####E	Indian Country lands within Michigan
MNG87####E	Indian Country lands within Minnesota, excluding Sokaogon Chippewa Community
WIG87####E	Indian Country lands within Wisconsin, excluding Lac du Flambeau Band of Lake Superior Chippewa Indians and Fond du Lac Reservation

#### **EPA Region 6:** Arkansas, Louisiana, Oklahoma, Texas, New Mexico (except see Region 9 for Navajo lands, and see Region 8 for Ute Mountain Reservation lands)

Where EPA is Permitting Authority

LAG87###E Indian Country lands within Louisiana  
 NMG87#### New Mexico, including Indian Country lands within New Mexico, except Navajo Reservation Lands (see Region 9) and Ute Mountain Reservation Lands (see Region 8)  
 OKG87#### Oklahoma, including Indian Country lands  
 TXG87###E Discharges in Texas that are not under the authority of the Texas Commission on Environmental Quality (formerly TNRCC), including activities associated with the exploration, development, or production of oil or gas or geothermal resources, including transportation of crude oil or natural gas by pipeline, including Indian Country lands.

**EPA Region 7:** Iowa, Kansas, Missouri, Nebraska (except see Region 8 for Pine Ridge Reservation Lands)

Where EPA is Permitting Authority

IAG87###E Indian Country lands within Iowa  
 KSG87###E Indian Country lands within Kansas  
 NEG87###E Indian Country lands within Nebraska, except Pine Ridge Reservation lands (see Region 8)

**EPA Region 8:** Colorado, Montana, North Dakota, South Dakota, Wyoming, Utah (except see Region 9 for Goshute Reservation and Navajo Reservation Lands), the Ute Mountain Reservation in NM, and the Pine Ridge Reservation in Nebraska

Where EPA is Permitting Authority

COG87###E Federal facilities within Colorado, including those on Indian Country lands within Colorado as well as the portion of the Ute Mountain Reservation located in New Mexico  
 MTG87###E Indian Country lands within Montana  
 NDG87###E Indian Country lands within North Dakota  
 SDG87###E Indian Country lands within South Dakota as well as the portion of the Pine Ridge Reservation located within Nebraska (see Region 7)  
 UTG87###E Indian Country lands within Utah, except Goshute and Navajo Reservation lands (see Region 9)  
 WYG87###E Indian Country lands within Wyoming

**EPA Region 9:** California, Hawaii, Nevada, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, the Goshute Reservation in Utah and Nevada, the Navajo Reservation in Utah, New Mexico, and Arizona, the Duck Valley Reservation in Idaho, and the Fort McDermitt Reservation in Oregon

Where EPA is Permitting Authority

ASG87#### The Island of American Samoa  
 AZG87###E Indian Country lands within Arizona, as well as Navajo Reservation lands within New Mexico (see Region 6) and Utah (See Region 8), excluding for Hualapai Reservation  
 CAG87###E Indian Country lands within California  
 GUG87#### The Island of Guam  
 JAG87#### Johnston Atoll  
 MWG87#### Midway Island, Wake Island, and other unincorporated U.S. possessions  
 NIG87#### Commonwealth of the Northern Mariana Islands  
 NVG87###E Indian Country lands within Nevada, as well as the Duck Valley Reservation within Idaho, the Fort McDermitt Reservation within Oregon (see Region 10) and the Goshute Reservation within Utah (see Region 8)

**EPA Region 10:** Alaska, Washington, Idaho (except see Region 9 for Duck Valley Reservation Lands), and Oregon (except see Region 9 for Fort McDermitt Reservation)

Where EPA is Permitting Authority

AKG87#### Alaska, including Indian Country lands within Alaska  
IDG87#### Idaho, including Indian Country lands within Idaho, except Duck Valley Reservation lands  
(see Region 9), excluding Puyallup Tribe Reservation  
ORG87###E Indian Country lands within Oregon, except Fort McDermitt Reservation lands (see Region  
9)  
WAG87###E Federal Facilities in Washington, including those on Indian Country lands within  
Washington, excluding Puyallup Tribe Reservation

## Appendix 12-0b

### CWT Wastewater Discharges: Metal Treatment and Recovery (40 CFR 437.11 through 437.16) [Added April 2001; Revised April 2004]

<b>BPT Limitations Metal Treatment and Recovery</b>		
<b>Regulated Parameter</b>	<b>Maximum Daily <sup>1</sup></b>	<b>Maximum Monthly Avg. <sup>1</sup></b>

## Appendix 12-0f

### Oily Operations Definitions (Appendix B to Part 438) [Added July 2003]

Note: The definitions in this appendix shall not be used to differentiate between the six ``core" metal finishing operations (i.e., Electroplating, Electroless Plating, Anodizing, Coating (chromating, phosphating, and coloring), Chemical Etching and Milling, and Printed Circuit Board Manufacture) and forty ``ancillary" process operations listed at 40 CFR 433.10(a).

Abrasive Blasting involves removing surface film from a part by using abrasive directed at high velocity against the part. Abrasive blasting includes bead, grit, shot, and sand blasting, and may be performed either dry or with water. The primary applications of wet abrasive blasting include: Removing burrs on precision parts; producing satin or matte finishes; removing fine tool marks; and removing light mill scale, surface oxide, or welding scale. Wet blasting can be used to finish fragile items such as electronic components. Also, some aluminum parts are wet blasted to achieve a fine-grained matte finish for decorative purposes. In abrasive blasting, the water and abrasive typically are reused until the particle size diminishes due to impacting and fracture.

Adhesive Bonding involves joining parts using an adhesive material. Typically, an organic bonding compound is used as the adhesive. This operation usually is dry; however, aqueous solutions may be used as bonding agents or to contain residual organic bonding materials.

Alkaline Cleaning for Oil Removal is a general term for the application of an alkaline cleaning agent to a metal part to remove oil and grease during the manufacture, maintenance, or rebuilding of a metal product. This unit operation does not include washing of the finished products after routine use (as defined in "Washing (Finished Products)" in this appendix), or applying an alkaline cleaning agent to remove non-oily contaminants such as dirt and scale (as defined in "Alkaline Treatment Without Cyanide" in this appendix and "Alkaline Treatment With Cyanide" in appendix C of this part). Wastewater generated includes spent cleaning solutions and rinse waters.

- (1) Alkaline cleaning is performed to remove foreign contaminants from parts. This operation usually is done prior to finishing (e.g., electroplating).
- (2) Emulsion cleaning is an alkaline cleaning operation that uses either complex chemical enzymes or common organic solvents (e.g., kerosene, mineral oil, glycols, and benzene) dispersed in water with the aid of an emulsifying agent. The pH of the solvent usually is between 7 and 9, and, depending on the solvent used, cleaning is performed at temperatures from room temperature to 82 degrees C (180 degrees F). This operation often is used as a replacement for vapor degreasing.

Alkaline Treatment Without Cyanide is a general term used to describe the application of an alkaline solution not containing cyanide to a metal surface to clean the metal surface or prepare the metal surface for further surface finishing.

Aqueous Degreasing involves cleaning metal parts using aqueous-based cleaning chemicals primarily to remove residual oils and greases from the part. Residual oils can be from previous operations (e.g., machine coolants), oil from product use in a dirty environment, or oil coatings used to inhibit corrosion. Wastewater generated by this operation includes spent cleaning solutions and rinse waters.

Assembly/Disassembly involves fitting together previously manufactured or rebuilt parts or components into a complete metal product or machine or taking a complete metal product or machine apart. Assembly/disassembly operations are typically dry; however, special circumstances can require water for cooling or buoyancy. Also, rinsing may be necessary under some conditions.

Burnishing involves finish sizing or smooth finishing a part (previously machined or ground) by displacing, rather than removing, minute surface irregularities with smooth point or line-contact, fixed or rotating tools. Lubricants or soap solutions can be used to cool the tools used in burnishing operations. Wastewaters generated during burnishing include process solutions and rinse water.

Calibration is performed to provide reference points for the use of a product. This unit operation typically is dry, although water may be used in some cases (e.g., pumping water for calibration of a pump). Water used in this unit operation usually does not contain additives.

Corrosion Preventive Coating involves applying removable oily or organic solutions to protect metal surfaces against corrosive environments. Corrosion preventive coatings include, but are not limited to: Petrolatum compounds, oils, hard dry-film compounds, solvent-cutback petroleum-based compounds, emulsions, water-displacing polar compounds, and fingerprint removers and neutralizers. Corrosion preventive coating does not include electroplating, or chemical conversion coating operations. Many corrosion preventive materials also are formulated to function as lubricants or as a base for paint. Typical applications include: Assembled machinery or equipment in standby storage; finished parts in stock or spare parts for replacement; tools such as drills, taps, dies, and gauges; and mill products such as sheet, strip, rod and bar. Wastewater generated during corrosion preventive coating includes spent process solutions and rinses. Process solutions are discharged when they become contaminated with impurities or are depleted of constituents. Corrosion preventive coatings typically do not require an associated rinse, but parts are sometimes rinsed to remove the coating before further processing.

Electrical Discharge Machining involves removing metals by a rapid spark discharge between different polarity electrodes, one the part and the other the tool, separated by a small gap. The gap may be filled with air or a dielectric fluid. This operation is used primarily to cut tool alloys, hard nonferrous alloys, and other hard-to-machine materials. Most electrical discharge machining processes are operated dry; however, in some cases, the process uses water and generates wastewater containing dielectric fluid.

Floor Cleaning (in Process Area) removes dirt, debris, and process solution spills from process area floors. Floors can be cleaned using wet or dry methods, such as vacuuming, mopping, dry sweeping, and hose rinsing. Non-process area floor cleaning in offices and other similar non-process areas is not included in this unit operation.

Grinding involves removing stock from a part by using abrasive grains held by a rigid or semi-rigid binder. Grinding shapes or deburrs the part. The grinding tool usually is a disk (the basic shape of grinding wheels), but can also be a cylinder, ring, cup, stick, strip, or belt. The most commonly used abrasives are aluminum oxide, silicon carbide, and diamond. The process may use a grinding fluid to cool the part and remove debris or metal fines. Wastewater generated during grinding includes spent coolants and rinses. Metal-working fluids become spent for a number of reasons, including increased biological activity (i.e., the fluids become rancid) or decomposition of the coolant additives. Rinse waters typically are assimilated into the working fluid or treated on site.

Heat Treating involves modifying the physical properties of a part by applying controlled heating and cooling cycles. This operation includes tempering, carburizing, cyaniding, nitriding, annealing, aging, normalizing, austenitizing, austempering, siliconizing, martempering, and malleablizing. Parts are heated in furnaces or molten salt baths, and then may be cooled by quenching in aqueous solutions (e.g., brine solutions), neat oils (pure oils with little or no impurities), or oil/water emulsions. Heat treating typically is a dry operation, but is considered a wet operation if aqueous quenching solutions are used. Wastewater includes spent quench water and rinse water.

Impact Deformation involves applying impact force to a part to permanently deform or shape it. Impact deformation may include mechanical processes such as hammer forging, shot peening, peening, coining, high-energy-rate forming, heading, or stamping. Natural and synthetic oils, light greases, and pigmented lubricants are used in impact deformation operations. Pigmented lubricants include whiting, lithapone, mica, zinc oxide, molybdenum disulfide, bentonite, flour, graphite, white lead, and soap-like materials. These operations typically are dry, but wastewater can be generated from lubricant discharge and from rinsing operations associated with the operation.

Iron Phosphate Conversion Coating is the process of applying a protective coating on the surface of a metal using a bath consisting of a phosphoric acid solution containing no metals (e.g., manganese, nickel, or zinc) or a phosphate salt solution (i.e., sodium or potassium salts of phosphoric acid solutions) containing no metals (e.g., manganese, nickel, or zinc) other than sodium or potassium. Any metal concentrations in the bath are from the substrate.

Machining involves removing stock from a part (as chips) by forcing a cutting tool against the part. This includes machining processes such as turning, milling, drilling, boring, tapping, planing, broaching, sawing, shaving,

shearing, threading, reaming, shaping, slotting, hobbing, and chamfering. Machining processes use various types of metal-working fluids, the choice of which depends on the type of machining being performed and the preference of the machine shop. The fluids can be categorized into four groups: Straight oil (neat oils), synthetic, semisynthetic, and water-soluble oil. Machining operations generate wastewater from working fluid or rinse water discharge. Metal-working fluids periodically are discarded because of reduced performance or development of a rancid odor. After machining, parts are sometimes rinsed to remove coolant and metal chips. The coolant reservoir is sometimes rinsed, and the rinse water is added to the working fluid.

Painting-Spray or Brush (Including Water Curtains) involves applying an organic coating to a part. Coatings such as paint, varnish, lacquer, shellac, and plastics are applied by spraying, brushing, roll coating, lithographing, powder coating, and wiping. Water is used in painting operations as a solvent (water-borne formulations) for rinsing, for cleanup, and for water-wash (or curtain) type spray booths. Paint spray booths typically use most of the water in this unit operation. Spray booths capture overspray (i.e., paint that misses the product during application), and control the introduction of pollutants into the workplace and environment.

Polishing involves removing stock from a part using loose or loosely held abrasive grains carried to the part by a flexible support. Usually, the objective is to achieve a desired surface finish or appearance rather than to remove a specified amount of stock. Buffing is included in this unit operation, and usually is performed using a revolving cloth or sisal buffing wheel, which is coated with a suitable compound. Liquid buffing compounds are used extensively for large-volume production on semiautomated or automated buffing equipment. Polishing operations typically are dry, although liquid compounds and associated rinses are used in some polishing processes.

Pressure Deformation involves applying force (other than impact force) to permanently deform or shape a part. Pressure deformation may include rolling, drawing, bending, embossing, sizing, extruding, squeezing, spinning, necking, forming, crimping or flaring. These operations use natural and synthetic oils, light greases, and pigmented lubricants. Pigmented lubricants include whiting, lithapone, mica, zinc oxide, molybdenum disulfide, bentonite, flour, graphite, white lead, and soap-like materials. Pressure deformation typically is dry, but wastewater is sometimes generated from the discharge of lubricants or from rinsing associated with the process.

Solvent Degreasing removes oils and grease from the surface of a part using organic solvents, including aliphatic petroleum (e.g., kerosene, naphtha), aromatics (e.g., benzene, toluene), oxygenated hydrocarbons (e.g., ketones, alcohol, ether), and halogenated hydrocarbons (e.g., 1,1,1-trichloroethane, trichloroethylene, methylene chloride). Solvent cleaning takes place in either the liquid or vapor phase. Solvent vapor degreasing normally is quicker than solvent liquid degreasing. However, ultrasonic vibration is sometimes used with liquid solvents to decrease the required immersion time of complex shapes. Solvent cleaning often is used as a precleaning operation prior to alkaline cleaning, as a final cleaning of precision parts, or as surface preparation for some painting operations. Solvent degreasing operations typically are not followed by rinsing, although rinsing is performed in some cases.

Steam Cleaning removes residual dirt, oil, and grease from parts after processing through other unit operations. Typically, additives are not used in this operation; the hot steam removes the pollutants. Wastewater is generated when the cleaned parts are rinsed.

Testing (e.g., hydrostatic, dye penetrant, ultrasonic, magnetic flux) involves applying thermal, electrical, mechanical, hydraulic, or other energy to determine the suitability or functionality of a part, assembly, or complete unit. Testing also may include applying surface penetrant dyes to detect surface imperfections. Other examples of tests frequently performed include electrical testing, performance testing, and ultrasonic testing; these tests typically are dry but may generate wastewater under certain circumstances. Testing usually is performed to replicate some aspect of the working environment. Wastewater generated during testing includes spent process solutions and rinses.

Thermal Cutting involves cutting, slotting, or piercing a part using an oxy-acetylene oxygen lance, electric arc cutting tool, or laser. Thermal cutting typically is a dry process, except for the use of contact cooling waters and rinses.

Tumbling/Barrel Finishing/Mass Finishing/Vibratory Finishing involves polishing or deburring a part using a rotating or vibrating container and abrasive media or other polishing materials to achieve a desired surface appearance. Parts to be finished are placed in a rotating barrel or vibrating unit with an abrasive media (e.g., ceramic

chips, pebbles), water, and chemical additives (e.g., alkaline detergents). As the barrel rotates, the upper layer of the part slides toward the lower side of the barrel, causing the abrading or polishing. Similar results can be achieved in a vibrating unit, where the entire contents of the container are in constant motion, or in a centrifugal unit, which compacts the load of media and parts as the unit spins and generates up to 50 times the force of gravity. Spindle finishing is a similar process, where parts to be finished are mounted on fixtures and exposed to a rapidly moving abrasive slurry. Wastewater generated during barrel finishing includes spent process solutions and rinses. Following the finishing process, the contents of the barrel are unloaded. Process wastewater is discharged continuously during the process, discharged after finishing, or collected and reused. The parts are sometimes given a final rinse to remove particles of abrasive media.

Washing (Finished Products) involves cleaning finished metal products after use or storage using fresh water or water containing a mild cleaning solution. This unit operation applies only to the finished products that do not require maintenance or rebuilding.

Welding involves joining two or more pieces of material by applying heat, pressure, or both, with or without filler material, to produce a metallurgical bond through fusion or recrystallization across the interface. This includes gas welding, resistance welding, arc welding, cold welding, electron beam welding, and laser beam welding. Welding typically is a dry process, except for the occasional use of contact cooling waters or rinses.

Wet Air Pollution Control for Organic Constituents involves using water to remove organic constituents that are entrained in air streams exhausted from process tanks or production areas. Most frequently, wet air pollution control devices are used with cleaning and coating processes. A common type of wet air pollution control is the wet packed scrubber consisting of a spray chamber that is filled with packing material. Water is continuously sprayed onto the packing and the air stream is pulled through the packing by a fan. Pollutants in the air stream are absorbed by the water droplets and the air is released to the atmosphere. A single scrubber often serves numerous process tanks.

## Appendix 12-0g

### Metal-Bearing Operations Definitions

(Appendix C to 40 CFR 438)

[Added July 2003]

Note: The definitions in this appendix shall not be used to differentiate between the six "core" metal finishing operations (i.e., Electroplating, Electroless Plating, Anodizing, Coating (chromating, phosphating, and coloring), Chemical Etching and Milling, and Printed Circuit Board Manufacture) and forty "ancillary" process operations listed at 40 CFR 433.10(a).

Abrasive Jet Machining includes removing stock material from a part by a high-speed stream of abrasive particles carried by a liquid or gas from a nozzle. Abrasive jet machining is used for deburring, drilling, and cutting thin sections of metal or composite material. Unlike abrasive blasting, this process operates at pressures of thousands of pounds per square inch. The liquid streams typically are alkaline or emulsified oil solutions, although water also can be used.

Acid Pickling Neutralization involves using a dilute alkaline solution to raise the pH of acid pickling rinse water that remains on the part after pickling. The wastewater from this operation is the acid pickling neutralization rinse water.

Acid Treatment With Chromium is a general term used to describe any application of an acid solution containing chromium to a metal surface. Acid cleaning, chemical etching, and pickling are types of acid treatment. Chromic acid is used occasionally to clean cast iron, stainless steel, cadmium and aluminum, and bright dipping of copper and copper alloys. Also, chromic acid solutions can be used for the final step in acid cleaning phosphate conversion coating systems. Chemical conversion coatings formulated with chromic acid are defined as "Chromate Conversion Coating (or Chromating)" in this appendix. Wastewater generated during acid treatment includes spent solutions and rinse waters. Spent solutions typically are batch discharged and treated or disposed of off site. Most acid treatment operations are followed by a water rinse to remove residual acid.

Acid Treatment Without Chromium is a general term used to describe any application of an acid solution not containing chromium to a metal surface. Acid cleaning, chemical etching, and pickling are types of acid treatment. Wastewater generated during acid treatment includes spent solutions and rinse waters. Spent solutions typically are batch discharged and treated or disposed of off site. Most acid treatment operations are followed by a water rinse to remove residual acid.

Alcohol Cleaning involves removing dirt and residue material from a part using alcohol.

Alkaline Cleaning Neutralization involves using a dilute acid solution to lower the pH of alkaline cleaning rinse water that remains on the part after alkaline cleaning. Wastewater from this operation is the alkaline cleaning neutralization rinse water.

Alkaline Treatment With Cyanide is the cleaning of a metal surface with an alkaline solution containing cyanide. Wastewater generated during alkaline treatment includes spent solutions and rinse waters. Alkaline treatment solutions become contaminated from the introduction of soils and dissolution of the base metal. They usually are treated and disposed of on a batch basis. Alkaline treatment typically is followed by a water rinse that is discharged to a treatment system.

Anodizing With Chromium involves producing a protective oxide film on aluminum, magnesium, or other light metal, usually by passing an electric current through an electrolyte bath in which the metal is immersed. Anodizing may be followed by a sealant operation. Chromic acid anodic coatings have a relatively thick boundary layer and are more protective than are sulfuric acid coatings. For these reasons, chromic acid is sometimes used when the part cannot be rinsed completely. These oxide coatings provide corrosion protection, decorative surfaces, a base for painting and other coating processes, and special electrical and mechanical properties. Wastewaters generated during anodizing include spent anodizing solutions, sealants, and rinse waters. Because of the anodic nature of the process, anodizing solutions become contaminated with the base metal being processed. These solutions eventually reach an

intolerable concentration of dissolved metal and require treatment or disposal. Rinse water following anodizing, coloring, and sealing typically is discharged to a treatment system.

Anodizing Without Chromium involves applying a protective oxide film to aluminum, magnesium, or other light metal, usually by passing an electric current through an electrolyte bath in which the metal is immersed. Phosphoric acid, sulfuric acid, and boric acid are used in anodizing. Anodizing also may include sealant baths. These oxide coatings provide corrosion protection, decorative surfaces, a base for painting and other coating processes, and special electrical and mechanical properties. Wastewater generated during anodizing includes spent anodizing solutions, sealants, and rinse waters. Because of the anodic nature of the process, anodizing solutions become contaminated with the base metal being processed. These solutions eventually reach an intolerable concentration of dissolved metal and require treatment or disposal. Rinse water following anodizing, coloring, and sealing steps typically is discharged to a treatment system.

Carbon Black Deposition involves coating the inside of printed circuit board holes by dipping the circuit board into a tank that contains carbon black and potassium hydroxide. After excess solution dips from the circuit boards, they are heated to allow the carbon black to adhere to the board.

Catalyst Acid Pre-Dip uses rinse water to remove residual solution from a part after the part is processed in an acid bath. The wastewater generated in this unit operation is the rinse water.

Chemical Conversion Coating without Chromium is the process of applying a protective coating on the surface of a metal without using chromium. Such coatings are applied through phosphate conversion (except for "Iron Phosphate Conversion Coating," see appendix B of this part), metal coloring, or passivation. Coatings are applied to a base metal or previously deposited metal to increase corrosion protection and lubricity, prepare the surface for additional coatings, or formulate a special surface appearance. This unit process includes sealant operations that use additives other than chromium.

- (1) In phosphate conversion, coatings are applied for one or more of the following reasons: to provide a base for paints and other organic coatings; to condition surfaces for cold forming operations by providing a base for drawing compounds and lubricants; to impart corrosion resistance to the metal surface; or to provide a suitable base for corrosion-resistant oils or waxes. Phosphate conversion coatings are formed by immersing a metal part in a dilute solution of phosphoric acid, phosphate salts, and other reagents.
- (2) Metal coloring by chemical conversion coating produces a large group of decorative finishes. Metal coloring includes the formation of oxide conversion coatings. In this operation, the metal surface is converted into an oxide or similar metallic compound, giving the part the desired color. The most common colored finishes are used on copper, steel, zinc, and cadmium.
- (3) Passivation forms a protective coating on metals, particularly stainless steel, by immersing the part in an acid solution. Stainless steel is passivated to dissolve embedded iron particles and to form a thin oxide film on the surface of the metal. Wastewater generated during chemical conversion coating includes spent solutions and rinses (i.e., both the chemical conversion coating solutions and post-treatment sealant solutions). These solutions commonly are discharged to a treatment system when contaminated with the base metal or other impurities. Rinsing normally follows each process step, except when a sealant dries on the part surface.

Chemical Milling (or Chemical Machining) involves removing metal from a part by controlled chemical attack, or etching, to produce desired shapes and dimensions. In chemical machining, a masking agent typically is applied to cover a portion of the part's surface; the exposed (unmasked) surface is then treated with the chemical machining solution. Wastewater generated during chemical machining includes spent solutions and rinses. Process solutions typically are discharged after becoming contaminated with the base metal. Rinsing normally follows chemical machining.

Chromate Conversion Coating (or Chromating) involves forming a conversion coating (protective coating) on a metal by immersing or spraying the metal with a hexavalent chromium compound solution to produce a hexavalent or trivalent chromium compound coating. This also is known as chromate treatment, and is most often applied to aluminum, zinc, cadmium or magnesium surfaces. Sealant operations using chromium also are included in this unit operation. Chromate solutions include two types: (1) those that deposit substantial chromate films on the substrate metal and are complete treatments themselves, and (2) those that seal or supplement oxide, phosphate, or other types of protective coatings. Wastewater generated during chromate conversion coating includes spent process solutions

(i.e., both the chromate conversion coating solutions and post-treatment sealant solutions) and rinses. These solutions typically are discharged to a treatment system when contaminated with the base metal or other impurities. Also, chromium-based solutions, which are typically formulated with hexavalent chromium, lose operating strength when the hexavalent chromium reduces to trivalent chromium during use. Rinsing normally follows each process step, except for sealants that dry on the surface of the part.

Chromium Drag-out Destruction is a unit operation performed following chromium-bearing operations to reduce hexavalent chromium that is "dragged out" of the process bath. Parts are dipped in a solution of a chromium-reducing chemical (e.g., sodium metabisulfite) to prevent the hexavalent chromium from contaminating subsequent process baths. This operation typically is performed in a stagnant drag-out rinse tank that contains concentrated chromium-bearing wastewater.

Cyanide Drag-out Destruction involves dipping part in a cyanide oxidation solution (e.g., sodium hypochloride) to prevent cyanide that is "dragged out" of a process bath from contaminating subsequent process baths. This operation typically is performed in a stagnant drag-out rinse tank.

Cyaniding Rinse is generated during cyaniding hardening of a part. The part is heated in a molten salt solution containing cyanide. Wastewater is generated when excess cyanide salt solution is removed from the part in rinse water.

Electrochemical Machining is a process in which the part becomes the anode and a shaped cathode is the cutting tool. By pumping electrolyte between the electrodes and applying a current, metal is rapidly but selectively dissolved from the part. Wastewater generated during electrochemical machining includes spent electrolytes and rinses.

Electroless Catalyst Solution involves adding a catalyst just prior to an electroless plating operation to accelerate the plating operation.

Electroless Plating involves applying a metallic coating to a part using a chemical reduction process in the presence of a catalyst. An electric current is not used in this operation. The metal to be plated onto a part typically is held in solution at high concentrations using a chelating agent. This plates all areas of the part to a uniform thickness regardless of the configuration of the part. Also, an electroless-plated surface is dense and virtually nonporous. Copper and nickel electroless plating operations are the most common. Sealant operations (i.e., other than hot water dips) following electroless plating are considered separate unit operations if they include any additives. Wastewater generated during electroless plating includes spent process solutions and rinses. The wastewater contains chelated metals, which require separate preliminary treatment to break the metal chelates prior to conventional chemical precipitation. Rinsing follows most electroless plating processes to remove residual plating solution and prevent contamination of subsequent process baths.

Electrolytic Cleaning involves removing soil, scale, or surface oxides from a part by electrolysis. The part is one of the electrodes and the electrolyte is usually alkaline. Electrolytic alkaline cleaning and electrolytic acid cleaning are the two types of electrolytic cleaning.

- (1) Electrolytic alkaline cleaning produces a cleaner surface than do nonelectrolytic methods of alkaline cleaning. This operation uses strong agitation, gas evolution in the solution, and oxidation-reduction reactions that occur during electrolysis. In addition, dirt particles become electrically charged and are repelled from the part surface.
- (2) Electrolytic acid cleaning sometimes is used as a final cleaning before electroplating. Sulfuric acid is most frequently used as the electrolyte. As with electrolytic alkaline cleaning, the mechanical scrubbing effect from the evolution of gas enhances the effectiveness of the process.

Wastewater generated during electrolytic cleaning includes spent process solutions and rinses. Electrolytic cleaning solutions become contaminated during use due to the dissolution of the base metal and the introduction of pollutants. The solutions typically are batch discharged for treatment or disposal after they weaken. Rinsing following electrolytic cleaning removes residual cleaner to prevent contamination of subsequent process baths.

Electroplating with Chromium involves producing a chromium metal coating on a surface by electrodeposition. Electroplating provides corrosion protection, wear or erosion resistance, lubricity, electrical conductivity, or

decoration. In electroplating, metal ions in acid, alkaline, or neutral solutions are reduced on the cathodic surfaces of the parts being plated. Metal salts or oxides typically are added to replenish the solutions. Chromium trioxide often is added as a source of chromium. In addition to water and the metal being deposited, electroplating solutions often contain agents that form complexes with the metal being deposited, stabilizers to prevent hydrolysis, buffers for pH control, catalysts to assist in deposition, chemical aids to dissolve anodes, and miscellaneous ingredients that modify the process to attain specific properties. Sealant operations performed after this operation are considered separate unit operations if they include any additives (i.e., other than hot water dips). Wastewater generated during electroplating includes spent process solutions and rinses. Electroplating solutions occasionally become contaminated during use due to the base metal dissolving and the introduction of other pollutants, diminishing the effectiveness of the electroplating solutions. Spent concentrated solutions typically are treated to remove pollutants and reused, processed in a wastewater treatment system, or disposed of off site. Rinse waters, including some drag-out rinse tank solutions, typically are treated on site.

Electroplating with Cyanide involves producing metal coatings on a surface by electrodeposition using cyanide. Electroplating provides corrosion protection, wear or erosion resistance, electrical conductivity, or decoration. In electroplating, metal ions in acid, alkaline, or neutral solutions are reduced on the cathodic surfaces of the parts being plated. The metal ions in solution typically are replenished by dissolving metal from anodes contained in inert wire or metal baskets. Sealant operations performed after this operation are considered separate unit operations if they include any additives (i.e., any sealant operations other than hot water dips). In addition to water and the metal being deposited, electroplating solutions often contain agents that form complexes with the metal being deposited, stabilizers to prevent hydrolysis, buffers to control pH, catalysts to assist in deposition, chemical aids to dissolve anodes, and miscellaneous ingredients that modify the process to attain specific properties. Cyanide, usually in the form of sodium or potassium cyanide, frequently is used as a complexing agent for zinc, cadmium, copper, and precious metal baths. Wastewater generated during electroplating includes spent process solutions and rinses. Electroplating solutions occasionally become contaminated during use due to dissolution of the base metal and the introduction of other pollutants, diminishing the performance of the electroplating solutions. Spent concentrated solutions typically are treated to remove pollutants and reused, processed in a wastewater treatment system, or disposed of off site. Rinse waters, including some drag-out rinse tank solutions, typically are treated on site.

Electroplating without Chromium or Cyanide involves the production of metal coatings on a surface by electrodeposition, without using chromium or cyanide. Commonly electroplated metals include nickel, copper, tin/lead, gold, and zinc. Electroplating provides corrosion protection, wear or erosion resistance, lubricity, electrical conductivity, or decoration. In electroplating, metal ions in acid, alkaline, or neutral solutions are reduced on the cathodic surfaces of the parts being plated. The metal ions in solution typically are replenished by dissolving metal from anodes contained in inert wire or metal baskets. Sealant operations performed after this operation are considered separate unit operations if they include any additives (i.e., any sealant operations other than hot water dips). In addition to water and the metal being deposited, electroplating solutions often contain agents that form complexes with the metal being deposited, stabilizers to prevent hydrolysis, buffers to control pH, catalysts to assist in deposition, chemical aids to dissolve anodes, and miscellaneous ingredients that modify the process to attain specific properties. Wastewater generated during electroplating without chromium or cyanide includes spent process solutions and rinses. Electroplating solutions occasionally become contaminated during use due to dissolution of the base metal and the introduction of other pollutants, diminishing the effectiveness of the electroplating solutions. Spent concentrated solutions typically are treated for pollutant removal and reused, processed in a wastewater treatment system, or disposed of off site. Rinse waters, including some drag-out rinse tank solutions, typically are treated on site.

Electropolishing involves producing a highly polished surface on a part using reversed electrodeposition in which the anode (part) releases some metal ions into the electrolyte to reduce surface roughness. When current is applied, a polarized film forms on the metal surface, through which metal ions diffuse. In this operation, areas of surface roughness on parts serve as high-current density areas and are dissolved at rates greater than the rates for smoother portions of the metal surface. Metals are electropolished to improve appearance, reflectivity, and corrosion resistance. Base metals processed by electropolishing include aluminum, copper, zinc, low-alloy steel, and stainless steel. Common electrolytes include sodium hydroxide and combinations of sulfuric acid, phosphoric acid, and chromic acid. Wastewater generated during electropolishing includes spent process solutions and rinses. Eventually, the concentration of dissolved metals increases to the point where the process becomes ineffective. Typically, a

portion of the bath is decanted and either fresh chemicals are added or the entire solution is discharged to treatment and replaced with fresh chemicals. Rinsing can involve several steps and can include hot immersion or spray rinses.

Galvanizing/Hot Dip Coating involves using various processes to coat an iron or steel surface with zinc. In hot dipping, a base metal is coated by dipping it into a tank that contains a molten metal.

Hot Dip Coating involves applying a metal coating (usually zinc) to the surface of a part by dipping the part in a molten metal bath. Wastewater is generated in this operation when residual metal coating solution is removed from the part in rinse water.

Kerfing uses a tool to remove small amounts of metal from a product surface. Water and synthetic coolants may be used to lubricate the area between the tool and the metal, to maintain the temperature of the cutting tool, and to remove metal fines from the surface of the part. This operation generates oily wastewater that contains metal fines and dust.

Laminating involves applying a material to a substrate using heat and pressure.

Mechanical and Vapor Plating involves applying a metallic coating to a part. For mechanical plating, the part is rotated in a drum containing a water-based solution, glass beads, and metal powder. In vapor plating, a metallic coating is applied by atomizing the metal and applying an electric charge to the part, which causes the atomized (vapor phase) metal to adhere to the part. Wastewater generated in this operation includes spent solutions from the process bath and rinse water. Typically, the wastewater contains high concentrations of the applied metal.

Metallic Fiber Cloth Manufacturing involves weaving thin metallic fibers to create a mesh cloth.

Metal Spraying (Including Water Curtain) involves applying a metallic coating to a part by projecting molten or semimolten metal particles onto a substrate. Coatings can be sprayed from rod or wire stock or from powdered material. The process involves feeding the material (e.g., wire) into a flame where it is melted. The molten stock then is stripped from the end of the wire and atomized by a high-velocity stream of compressed air or other gas that propels the material onto a prepared substrate or part. Metal spraying coatings are used in a wide range of special applications, including: insulating layers in applications such as induction heating coils; electromagnetic interference shielding; thermal barriers for rocket engines; nuclear moderators; films for hot isostatic pressing; and dimensional restoration of worn parts. Metal spraying is sometimes performed in front of a “water curtain” (a circulated water stream used to trap overspray) or a dry filter exhaust hood that captures the overspray and fumes. With water curtain systems, water is recirculated from a sump or tank. Wastewater is generated when the sump or tank is discharged periodically. Metal spraying typically is not followed by rinsing.

Painting-Immersion (Including Electrophoretic, “E-coat”) involves applying an organic coating to a part using processes such as autophoretic and electrophoretic painting.

- (1) Autophoretic Painting involves applying an organic paint film by electrophoresis when a part is immersed in a suitable aqueous bath.
- (2) Electrophoretic Painting is coating a part by making it either anodic or cathodic in a bath that is generally an aqueous emulsion of the organic coating material.
- (3) Other Immersion Painting includes all other types of immersion painting such as dip painting.

Water is used in immersion paint operations as a carrier for paint particles and to rinse the part. Aqueous painting solutions and rinses typically are treated through an ultrafiltration system. The concentrate is returned to the painting solution, and the permeate is reused as rinse water. Sites typically discharge a bleed stream to treatment. The painting solution and rinses are batch discharged periodically to treatment.

Photo Imaging is the process of exposing a photoresist-laden printed wiring board to light to impact the circuitry design to the board. Water is not used in this operation.

Photo Image Developing is an operation in which a water-based solution is used to develop the exposed circuitry in a photoresist-laden printed wiring board. Wastewater generated in this operation includes spent process solution and rinse water.

Photoresist Application is an operation that uses heat and pressure to apply a photoresist coating to a printed wiring board. Water is not used in this operation.

Photoresist Strip involves removing organic photoresist material from a printed wiring board using an acid solution.

Phosphor Deposition is the application of a phosphorescent coating to a part. Wastewater generated in this unit operation includes water used to keep the parts clean and wet while the coating is applied, and rinse water used to remove excess phosphorescent coating from the part.

Physical Vapor Deposition involves physically removing a material from a source through evaporation or sputtering, using the energy of the vapor particles in a vacuum or partial vacuum to transport the removed material, and condensing the removed material as a film onto the surface of a part or other substrate.

Plasma Arc Machining involves removing material or shaping a part by a high-velocity jet of high-temperature, ionized gas. A gas (nitrogen, argon, or hydrogen) is passed through an electric arc, causing the gas to become ionized, and heated to temperatures exceeding 16,650 degrees C (30,000 degrees F). The relatively narrow plasma jet melts and displaces the material in its path. Because plasma arc machining does not depend on a chemical reaction between the gas and the part, and because plasma temperatures are extremely high, the process can be used on almost any metal, including those that are resistant to oxygen-fuel gas cutting. The method is used mainly for profile cutting of stainless steel and aluminum alloys. Although plasma arc machining typically is a dry process, water is used for water injection plasma arc torches. In these cases, a constricted swirling flow of water surrounds the cutting arc. This operation also may be performed immersed in a water bath. In both cases, water is used to stabilize the arc, to cool the part, and to contain smoke and fumes.

Plastic Wire Extrusion involves applying a plastic material to a metal wire through an extrusion process.

Salt Bath Descaling involves removing surface oxides or scale from a part by immersing the part in a molten salt bath or hot salt solution. Salt bath descaling solutions can contain molten salts, caustic soda, sodium hydride, and chemical additives. Molten salt baths are used in a salt bath-water quench-acid dip sequence to remove oxides from stainless steel and other corrosion-resistant alloys. In this process, the part typically is immersed in the molten salt, quenched with water, and then dipped in acid. Oxidizing, reducing, or electrolytic salt baths can be used depending on the oxide to be removed. Wastewater generated during salt bath descaling includes spent process solutions, quenches, and rinses.

Shot Tower--Lead Shot Manufacturing involves dropping molten lead from a platform on the top of a tower through a sieve-like device and into a vat of cold water.

Soldering involves joining metals by inserting a thin (capillary thickness) layer of nonferrous filler metal into the space between them. Bonding results from the intimate contact produced by the metallic bond formed between the substrate metal and the solder alloy. The term soldering is used where the melting temperature of the filler is below 425 degree C (800 degree F). Some soldering operations use a solder flux, which is an aqueous or nonaqueous material used to dissolve, remove, or prevent the formation of surface oxides on the part. Except for the use of aqueous fluxes, soldering typically is a dry operation; however, a quench or rinse sometimes follows soldering to cool the part or remove excess flux or other foreign material from its surface. Recent developments in soldering technology have focused on fluxless solders and fluxes that can be cleaned off with water.

Solder Flux Cleaning involves removing residual solder flux from a printed circuit board using either an alkaline or alcohol cleaning solution.

Solder Fusing involves coating a tin-lead plated circuit board with a solder flux and then passing the board through a hot oil. The hot oil fuses the tin-lead to the board and creates a solder-like finish on the board.

Solder Masking involves applying a resistive coating to certain areas of a circuit board to protect the areas during subsequent processing.

Sputtering is a vacuum evaporation process in which portions of a coating material are physically removed from a substrate and deposited a thin film onto a different substrate.

Stripping (Paint) involves removing a paint (or other organic) coating from a metal basis material. Stripping commonly is performed as part of the manufacturing process to recover parts that have been improperly coated or as part of maintenance and rebuilding to restore parts to a usable condition. Organic coatings (including paint) are stripped using thermal, mechanical, and chemical means. Thermal methods include burn-off ovens, fluidized beds of sand, and molten salt baths. Mechanical methods include scraping and abrasive blasting (as defined in "Abrasive Blasting" in appendix B of this part). Chemical paint strippers include alkali solutions, acid solutions, and solvents (e.g., methylene chloride). Wastewater generated during organic coating stripping includes process solutions (limited mostly to chemical paint strippers and rinses).

Stripping (Metallic Coating) involves removing a metallic coating from a metal basis material. Stripping is commonly part of the manufacturing process to recover parts that have been improperly coated or as part of maintenance and rebuilding to restore parts to a usable condition. Metallic coating stripping most often uses chemical baths, although mechanical means (e.g., grinding, abrasive blasting) also are used. Chemical stripping frequently is performed as an aqueous electrolytic process. Wastewater generated during metallic coating stripping includes process solutions and rinses. Stripping solutions become contaminated from dissolution of the base metal. Typically, the entire solution is discharged to treatment. Rinsing is used to remove the corrosive film remaining on the parts.

Thermal Infusion uses heat to infuse metal powder or dust onto the surface of a part. Typically, thermal infusion is a dry operation. In some cases, however, water may be used to remove excess metal powder, metal dust, or molten metal.

Ultrasonic Machining involves forcing an abrasive liquid between a vibrating tool and a part. Particles in the abrasive liquid strike the part, removing any microscopic flakes on the part.

Vacuum Impregnation is used to reduce the porosity of the part. A filler material (usually organic) is applied to the surface of the part and polymerized under pressure and heat. Wastewater is generated in this unit operation when rinse water is used to remove residual organic coating from the part.

Vacuum Plating involves applying a thin layer of metal oxide onto a part using molten metal in a vacuum chamber.

Water Shedder involves applying a dilute water-based chemical compound to a part to accelerate drying. This operation typically is used to prevent a part from streaking when excess water remains on the part.

Wet Air Pollution Control involves using water to remove chemicals, fumes, or dusts that are entrained in air streams exhausted from process tanks or production areas. Most frequently, wet air pollution control devices are used with electroplating, cleaning, and coating processes. A common type of wet air pollution control is the wet packed scrubber consisting of a spray chamber that is filled with packing material. Water is continuously sprayed onto the packing and the air stream is pulled through the packing by a fan. Pollutants in the air stream are absorbed by the water droplets and the air is released to the atmosphere. A single scrubber often serves numerous process tanks; however, the air streams typically are segregated by source into chromium, cyanide, and acid/alkaline sources. Wet air pollution control can be divided into several suboperations, including:

- (1) Wet Air Pollution Control for Acid Alkaline Baths;
- (2) Wet Air Pollution Control for Cyanide Baths;
- (3) Wet Air Pollution Control for Chromium-Bearing Baths; and
- (4) Wet Air Pollution Control for Fumes and Dusts.

Wire Galvanizing Flux involves using flux to remove rust and oxide from the surface of steel wire prior to galvanizing. This provides

## Appendix 12-0h

### Areas Cover By the EPA's Construction General Permit (EPA's NPDES Construction General Permit, Appendix B) [Added April 2012]

Permit coverage for stormwater discharges from construction activity occurring within the following areas is provided by legally separate and distinctly numbered permits:

#### **EPA Region 1: CT, MA, ME, NH, RI, VT**

US EPA, Region 01  
Office of Ecosystem Protection  
NPDES Stormwater Program  
5 Post Office Square  
Boston, MA 02109-3912

The States of Connecticut, Maine, Rhode Island, and Vermont are the NPDES Permitting Authority for the majority of discharges within their respective states.

Permit No.	Areas of Coverage/Where EPA is Permitting Authority
CTR12000I	Indian country within the State of Connecticut
MAR120000	Commonwealth of Massachusetts (except Indian country)
MAR12000I	Indian country within the State of Massachusetts
NHR120000	State of New Hampshire
RIR12000I	Indian country within the State of Rhode Island
VTR12000F	Areas in the State of Vermont subject to construction by a Federal Operator

#### **EPA Region 2: NJ, NY, PR, VI**

For NJ, NY, and VI:  
US EPA, Region 02  
NPDES Stormwater Program  
290 Broadway, 24th Floor  
New York, NY 10007-1866

For PR:  
US EPA, Region 02  
Caribbean Environmental Protection Division  
NPDES Stormwater Program  
1492 Ponce de Leon Ave  
Central Europa Building, Suite 417  
San Juan, PR 00907-4127

The State of New York is the NPDES Permitting Authority for the majority of discharges within its state.

The State of New Jersey and the Virgin Islands are the NPDES Permitting Authority for all discharges within their respective states.

Permit No.	Areas of Coverage/Where EPA is Permitting Authority
NYR12000I	Indian country within the State of New York
PRR120000	Commonwealth of Puerto Rico

**EPA Region 3: DE, DC, MD, PA, VA, WV**

US EPA, Region 03  
NPDES Stormwater Program  
1650 Arch St  
Philadelphia, PA 19103

The State of Delaware is the NPDES Permitting Authority for the majority of discharges within its state. Maryland, Pennsylvania, Virginia, and West Virginia are the NPDES Permitting Authority for all discharges within their respective states.

Permit No.	Areas of Coverage/Where EPA is Permitting Authority
------------	---

DCR120000	District of Columbia
DER12000F	Areas in the State of Delaware subject to construction by a Federal Operator

**EPA Region 4: AL, FL, GA, KY, MS, NC, SC, TN**

US EPA, Region 04  
Water Protection Division  
NPDES Stormwater Program  
61 Forsyth St SW  
Atlanta, GA 30303-3104

The States of Alabama, Florida, Mississippi, and North Carolina are the NPDES Permitting Authority for the majority of discharges within their respective States. EPA Region 4 is the NPDES Permitting Authority for all Indian country lands within any other Region 4 State except Catawba lands in South Carolina.

Permit No.	Areas of Coverage/Where EPA is Permitting Authority
------------	---

ALR12000I	Indian country within the State of Alabama
FLR12000I	Indian country within the State of Florida
MSR12000I	Indian country within the State of Mississippi
NCR12000I	Indian country within the State of North Carolina
RE412000I	Indian country within any other Region 4 State (except Catawba lands in South Carolina)

**EPA Region 5: IL, IN, MI, MN, OH, WI**

US EPA, Region 05  
NPDES & Technical Support  
NPDES Stormwater Program  
77 W Jackson Blvd  
(WN-16J)  
Chicago, IL 60604-3507

The States of Michigan, Minnesota, and Wisconsin are the NPDES Permitting Authority for the majority of discharges within their respective states. The States of Illinois, Indiana, and Ohio are the NPDES Permitting Authorities for all discharges within their respective states.

Permit No.	Areas of Coverage/Where EPA is Permitting Authority
------------	---

MIR10000I	Indian country within the State of Michigan
-----------	---

MNR10000I	Indian country within the State of Minnesota, except the Fond Du Lac Band and Grand Portage Band of Lake Superior Chippewa
WIR10000I	Indian country within the State of Wisconsin, except the Bad River , Lac Du Flambeau and Sokaogon Chippewa (Mole Lake) Community

**EPA Region 6:** AR, LA, OK, TX, NM (except see Region 9 for Navajo lands, and see Region 8 for Ute Mountain Reservation lands)

US EPA, Region 06  
NPDES Stormwater Program  
1445 Ross Ave, Suite 1200  
Dallas, TX 75202-2733

The States of Louisiana, Oklahoma, and Texas are the NPDES Permitting Authority for the majority of discharges within their respective state. The State of Arkansas is the NPDES Permitting Authority for all discharges within its respective state.

Permit No.	Areas of Coverage/Where EPA is Permitting Authority
LAR12000I	Indian country within the State of Louisiana
NMR120000	State of New Mexico, except Indian country
NMR12000I	Indian country within the State of New Mexico, except Navajo Reservation Lands that are covered under Arizona permit AZR10000I and Ute Mountain Reservation Lands that are covered under Colorado permit COR10000I.
OKR12000I	Indian country within the State of Oklahoma
OKR12000F	Discharges in the State of Oklahoma that are not under the authority of the Oklahoma Department of Environmental Quality, including activities associated with oil and gas exploration, drilling, operations, and pipelines (includes SIC Groups 13 and 46, and SIC codes 492 and 5171), and point source discharges associated with agricultural production, services, and silviculture (includes SIC Groups 01, 02, 07, 08, 09).
TXR12000F	Discharges in the State of Texas that are not under the authority of the Texas Commission on Environmental Quality (formerly TNRCC), including activities associated with the exploration, development, or production of oil or gas or geothermal resources, including transportation of crude oil or natural gas by pipeline.
TXR12000I	Indian country within the State of Texas

**EPA Region 7:** IA, KS, MO, NE (except see Region 8 for Pine Ridge Reservation Lands)

US EPA, Region 07  
NPDES Stormwater Program  
901 N 5th St  
Kansas City, KS 66101

The States of Iowa, Kansas, and Nebraska are the NPDES Permitting Authority for the majority of discharges within their respective states. The State of Missouri is the NPDES Permitting Authority for all discharges within its state.

Permit No.	Areas of Coverage/Where EPA is Permitting Authority
IAR12000I	Indian country within the State of Iowa
KSR12000I	Indian country within the State of Kansas

NER12000I Indian country within the State of Nebraska, except Pine Ridge Reservation lands (see Region 8)

**EPA Region 8:** CO, MT, ND, SD, WY, UT (except see Region 9 for Goshute Reservation and Navajo Reservation Lands), the Ute Mountain Reservation in NM, and the Pine Ridge Reservation in NE.

US EPA, Region 08  
NPDES Stormwater Program  
999 18th St, Suite 300  
(EPR-EP)  
Denver, CO 80202-2466

The States of Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming are the NPDES Permitting Authority for the majority of discharges within their respective states.

Permit No.	Areas of Coverage/Where EPA is Permitting Authority
COR12000F	Areas in the State of Colorado, except those located on Indian country, subject to construction activity by a Federal Operator
COR12000I	Indian country within the State of Colorado, as well as the portion of the Ute Mountain Reservation located in New Mexico
MTR12000I	Indian country within the State of Montana
NDR12000I	Indian country within the State of North Dakota, as well as that portion of the Standing Rock Reservation located in South Dakota (except for the portion of the lands within the former boundaries of the Lake Traverse Reservation which is covered under South Dakota permit SDR10000I listed below)
SDR12000I	Indian country within the State of South Dakota, as well as the portion of the Pine Ridge Reservation located in Nebraska and the portion of the lands within the former boundaries of the Lake Traverse Reservation located in North Dakota (except for the Standing Rock Reservation which is covered under North Dakota permit NDR10000I listed above)
UTR12000I	Indian country within the State of Utah, except Goshute and Navajo Reservation lands (see Region 9)
WYR12000I	Indian country within the State of Wyoming

**EPA Region 9:** CA, HI, NV, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, the Goshute Reservation in UT and NV, the Navajo Reservation in UT, NM, and AZ, the Duck Valley Reservation in ID, and the Fort McDermitt Reservation in OR.

US EPA, Region 09  
NPDES Stormwater Program  
75 Hawthorne St  
San Francisco, CA 94105-3901

The States of Arizona, California and Nevada are the NPDES Permitting Authority for the majority of discharges within their respective states. The State of Hawaii is the NPDES Permitting Authority for all discharges within its state.

Permit No.	Areas of Coverage/Where EPA is Permitting Authority
ASR120000	Island of American Samoa
AZR12000I	Indian country within the State of Arizona, as well as Navajo Reservation lands in New Mexico and Utah
CAR12000I	Indian country within the State of California

GUR120000	Island of Guam
JAR120000	Johnston Atoll
MPR120000	Commonwealth of the Northern Mariana Islands
MWR120000	Midway Island and Wake Island
NVR12000I	Indian country within the State of Nevada, as well as the Duck Valley Reservation in Idaho, the Fort McDermitt Reservation in Oregon and the Goshute Reservation in Utah

**EPA Region 10:** AK, WA, ID (except see Region 9 for Duck Valley Reservation Lands), and OR (except see Region 9 for Fort McDermitt Reservation).

US EPA, Region 10  
NPDES Stormwater Program  
1200 6th Ave (OW-130)  
Seattle, WA 98101-1128  
Phone: (206) 553-6650

The States of Oregon and Washington are the NPDES Permitting Authority for the majority of discharges within their respective states.

Permit No.	Areas of Coverage/Where EPA is Permitting Authority
AKR12000I	Indian country within the State of Alaska
AKR12-000F	Areas in the Denali National Park and Preserve subject to construction by a Federal Operator
IDR120000	State of Idaho, except Indian country
IDR12000I	Indian country within the State of Idaho, except Duck Valley Reservation lands (see Region 9)
ORR12000I	Indian country within the State of Oregon, except Fort McDermitt Reservation lands (see Region 9)
WAR12000F	Areas in the State of Washington, except those located on Indian country, subject to construction activity by a Federal Operator
<b>WAR12000I</b>	<b>Indian country within the State of Washington</b>

## Appendix 12-1

### Steam Electric Power Generating Point Sources (40 CFR 423) [Revised October 2017]

**Table 1**

Pollutant or pollutant property	BPT and NSPS Effluent Limitations	
	Maximum for any 1 day (mg/L)	Maximum average values for 30 consecutive days (mg/L)
TSS	100.0	30.0
Oil and Grease	20.0	15.0
From 40 CFR 423.12(b)(3), 423.12(b)(4), 423.15(c) and 423.15(f)		

**Table 2**

Pollutant or pollutant property	BPT Effluent Limitations	
	Maximum for any 1 day (mg/L)	Maximum average values for 30 consecutive days (mg/L)
TSS	100.0	20.0
Oil and Grease	20.0	15.0
Copper, total	1.0	1.0
Iron, total	1.0	1.0
From 40 CFR 423.12(b)(5) and 423.12(b)(6)		

**Table 3**

Pollutant or pollutant property	BAT and NSPS Effluent Limitations	
	Maximum for any 1 day (mg/L)	Maximum average values for 30 consecutive days (mg/L)
The 126 priority pollutants (see next page) contained in chemicals added for cooling tower maintenance, except	( <sup>1</sup> )	( <sup>1</sup> )
Chromium, total	0.2	0.2
Zinc, total	1.0	1.0

<sup>1</sup> No detectable amount
From 40 CFR 423.13(d)(1) and 423.16(j)(1)

**Table 4**

Pollutant or pollutant property	BAT Effluent Limitations	
	Maximum for any 1 day (mg/L)	Maximum average values for 30 consecutive days (mg/L)
Copper, total	1.0	1.0
Iron, total	1.0	1.0
From 40 CFR 423.13(e)		

**Table 5**

Pollutant or pollutant property	NSPS Effluent Limitations	
	Maximum for any 1 day (mg/L)	Maximum average values for 30 consecutive days (mg/L)
TSS	100.0	30.0
Oil and Grease	20.0	15.0
Copper, total	1.0	1.0
Iron, total	1.0	1.0
From 40 CFR 423.12(b)(3) and 423.12(b)(4)		

**Table 6**

Pollutant or Pollutant Property	PSES Effluent Limitations Maximum for any time (mg/L)
The 126 priority pollutants (see next page) contained in chemicals added for cooling tower maintenance, except:	( <sup>1</sup> )
Chromium, total	0.2
Zinc, total	1.0
<sup>1</sup> No detectable amount	
From 40 CFR 423.16(d)(1)	

Table 7

<b>Pollutant or Pollutant Property</b>	<b>PSES Effluent Limitations Maximum for any time (mg/L)</b>
The 126 priority pollutants (see next page) contained in chemicals added for cooling tower maintenance, except:	( <sup>1</sup> )
Chromium, total	0.2
Zinc, total	1.0
<sup>1</sup> No detectable amount

Mercury, total (ng/L)	1.8	1.3
Selenium, total (µg/L)	453	227
Total dissolved solids (mg/L)	38	22
From 40 CFR 423.16(i)		

The 126 Priority Pollutants
Acenaphthene
Acrolein
Acrylonitrile
Benzene

The 126 Priority Pollutants	
Benzidine	
Carbon tetrachloride (tetrachloromethane)	
Chlorobenzene	
1,2,4-Trichlorobenzene	
Hexachlorobenzene	
1,2-Dichloroethane	
1,1,2-Trichloroethane	
1,1,2,2-Tetrachloroethane	
Chloroethane	
Bis (2-chloroethyl)ether	
2-Chloroethyl vinyl ether (mixed)	
2-Chloronaphthalene	
2,4,6-Trichlorophenol	
Parachlormeta-cresol	
Chloroform (trichloromethane)	
2-Chlorophenol	
1,2-Dichlorobenzene	
1,3-Dichlorobenzene	
1,4-Dichlorobenzene	
3,3-Dichlorobenzidine	
1,1-Dichloroethylene	
1,2-Trans-dichloroethylene	
2,3-Dichlorophenol	
1,2-Dichloropropane	
1,3-Dichloropropylene (1,3-dichloropropene)	
2,4-Dimethylphenol	
2,4-Dinitrotoluene	

The 126 Priority Pollutants	
2,6-Dinitrotoluene	
1,2-Diphenylhydrazine	
Ethylbenzene	
Fluoranthene	
4-Chlorophenyl phenyl ether	
4-Bromophenyl phenyl ether	
Bis (2-chloroisopropyl) ether	
Bis (2-chloroethoxy) methane	
Methylene Chloride (dychloromethane	
Methyl chloride (dichloromethane)	
Methyl bromide (bromomethane)	
Bromoform (tribromomethane)	
Dichlorobromomethane	
Chlorodibromomethane	
Hexachlorobetadiene	
Hexachlorocyclo-entadiene	
Isophorone	
Naphthalene	
Nitrobenzene	
2-Nitrophenol	
4-Nitrophenol	
2,4-Dinitrophenol	
4,6-Dinitro-o-cresol	
N-nitrosodimethylamine	
N-nitrosodiphenylamine	
N-nitrosodi-n-propylamine	
Pentachlorophenol	

The 126 Priority Pollutants
<p>Phenol</p> <p>Bis (2-ethylhexyl) phthalate</p> <p>Butyl benzyl phthalate</p> <p>Di-n-butyl phthalate</p> <p>Di-n-octyl phthalate</p> <p>Diethyl phthalate</p> <p>Dimethyl phthalate</p> <p>1,2-Benzanthracene (benzo(a)anthracene)</p> <p>Benzo(a)pyrene (3,4-benzopyrene)</p> <p>3,4-Benzofluoranthene (benzo(b)fluoranthene)</p> <p>11,12-Benzofluoroanthene (benzo(k)fluoranthene)</p> <p>Chrysens</p> <p>Acenaphthylene</p> <p>Anthracene</p> <p>1,12-Benzoperylene (benzo(gh)perylene)</p> <p>Fluorene</p> <p>Phenanthrene</p> <p>1,2,5,6-Dibenzanthracene (dibenso(a,h)anthracene)</p> <p>Indeno(1,2,3-cd) pyrene (2,3-o-phenylene pyrene)</p> <p>Pyrene</p> <p>Tetrachloroethylene</p> <p>Toluene</p> <p>Trichloroethylene</p> <p>Vinyl chloride (chloroethylene)</p> <p>Aldrin</p> <p>Dieldrin</p> <p>Chlordane (technical mixture and metabolites)</p>

The 126 Priority Pollutants	
4,4-DDT	
4,4-DDE (p,p-DDX)	
4,4-DDD (p,p-TDE)	
Alpha-endosulfa	
Beta-endosulfan	
Endosulfan sulfate	
Endrin	
Endrin aldehyde	
Heptachlor	
Heptachlor epoxide (BHC-hexachloro-cyclohexane)	
Alpha-BHC	
Beta-BHC	
Gamma-BHC	
Delta-BHC	
PCB-polychlorinated biphenyls	
PCB-1242 (arochlor 1242)	
PCB-1254 (Arochlor 1254)	
PCB-1221 (Arochlor 1221)	
PCB-1232 (Arochlor 1232)	
PCB 1248 (Srochlor 1248)	
PCB-1260 (Arochlor 1260)	
PCB-1016 (Arochlor 1016)	
Toxaphene	
Antimony	
Arsenic	
Asbestos	
Beryllium	

The 126 Priority Pollutants	
Cadmium	
Chromium	
Copper	
Cyanide, Total	
Lead	
Mercury	
Nickel	
Selenium	
Silver	
Thallium	
Zinc	
2,3,7,8-Tetrachlorodibenzo-p-dioxin (TCDD)	

## Appendix 12-2

### Operations Excepted from Electroplating Point Source Effluent Limitations (40 CFR 413)

Operations similar to electroplating but which are specifically excepted include:

1. electrowinning and electrorefining conducted as part of nonferrous metal smelting and refining
2. metal surface preparation and conversion coating conducted as part of coil coating
3. metal surface preparation and immersion plating or electroless plating conducted as part of porcelain enameling
4. electrodeposition of active electrode materials, electroimpregnation, and electroforming conducted as a part of battery manufacturing
5. metallic platemaking and gravure cylinder preparation conducted with or for printing and publishing facilities, and continuous strip electroplating conducted within iron and steel manufacturing facilities which introduce pollutants into a publicly owned treatment works.

<b>Table 1</b>		
<b>If the maximum for any one day is</b>	<b>And the 4 day average is</b>	<b>Then the 30 day average is</b>
0.6	0.4	0.3
1.2	.7	.5
1.9	1	.55
4.1	2.6	1.8
4.2	2.6	1.8
4.2	2.6	1.8
4.5	2.7	1.8
5.0	2.7	1.5

## **Appendix 12-4bb**

### **Pollutant Management Plan (40 CFR 442.15(b) and 442.16(b))**

The Pollutant Manager Plan includes:

1. procedures for identifying cargos, the cleaning of which is likely to result in discharges of pollutants that would be incompatible with treatment at the POTW;
2. for cargos identified as being incompatible with treatment at the POTW, the Plan shall provide that heels be fully drained, segregated from other wastewaters, and handled in an appropriate manner;
3. for cargos identified as being incompatible with treatment at the POTW, the Plan shall provide that the tank be prerinsed or presteamed as appropriate and the wastewater segregated from wastewaters to be discharged to the POTW and handled in an appropriate manner, where necessary to ensure that they do not cause or contribute to a discharge that would be incompatible with treatment at the POTW;
4. all spent cleaning solutions, including interior caustic washes, interior presolve washes, interior detergent washes, interior acid washes, and exterior acid brightener washes shall be segregated from other wastewaters and handled in an appropriate manner, where necessary to ensure that they do not cause or contribute to a discharge that would be incompatible with treatment at the POTW;
5. provisions for appropriate recycling or reuse of cleaning agents;
6. provisions for minimizing the use of toxic cleaning agents (solvents, detergents, or other cleaning or brightening solutions);
7. provisions for appropriate recycling or reuse of segregated wastewaters (including heels and prerinse/pre-steam wastes);
8. provisions for off-site treatment or disposal, or effective pre-treatment of segregated wastewaters (including heels, prerinse/pre-steam wastes, spent cleaning solutions);
9. information on the volumes, content, and chemical characteristics of cleaning agents used in cleaning or brightening operations; and
10. provisions for maintaining appropriate records of heel management procedures, prerinse/pre-steam management procedures, cleaning agent management procedures, operator training, and proper operation and maintenance of any pre-treatment system;

For PSNS the Pollutant Management Plan shall include:

1. Procedures for identifying cargos, the cleaning of which is likely to result in discharges of pollutants that would be incompatible with treatment at the POTW;
2. For cargos identified as being incompatible with treatment at the POTW, the Plan shall provide that heels be fully drained, segregated from other wastewaters, and handled in an appropriate manner;
3. For cargos identified as being incompatible with treatment at the POTW, the Plan shall provide that the tank be prerinsed or presteamed as appropriate and the wastewater segregated from wastewaters to be discharged to the POTW and handled in an appropriate manner, where necessary to ensure that they do not cause or contribute to a discharge that would be incompatible with treatment at the POTW;
4. All spent cleaning solutions, including interior caustic washes, interior presolve washes, interior detergent washes, interior acid washes, and exterior acid brightener washes shall be segregated from other wastewaters and handled in an appropriate manner, where necessary to ensure that they do not cause or contribute to a discharge that would be incompatible with treatment at the POTW;
5. Provisions for appropriate recycling or reuse of cleaning agents;
6. Provisions for minimizing the use of toxic cleaning agents (solvents, detergents, or other cleaning or brightening solutions);
7. Provisions for appropriate recycling or reuse of segregated wastewaters (including heels and prerinse/pre-steam wastes);
8. Provisions for off-site treatment or disposal, or effective pre-treatment of segregated wastewaters (including heels, prerinse/pre-steam wastes, spent cleaning solutions);
9. Information on the volumes, content, and chemical characteristics of cleaning agents used in cleaning or brightening operations; and

10. Provisions for maintaining appropriate records of heel management procedures, prerinse/pre-steam management procedures, cleaning agent management procedures, operator training, and proper operation and maintenance of any pre-treatment system.

## SECTION 13

### WATER QUALITY MANAGEMENT U.S. TEAM Guide, December 2018

#### A. Applicability

This section identifies rules, regulations, and requirements for any facility that has jurisdiction over any public water supply system. A public water system is defined as a system for providing piped water to the public for human consumption, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. This term includes:

1. any collection, treatment, storage, and distribution facilities under control of the operator of such system
2. any collection or pretreatment storage facilities not under such control that are used primarily in connection with such system.

A public water system is either a community water system or a noncommunity water system (40 CFR 141.2).

Facilities that meet all the criteria listed below are not required to comply with the requirements of the *Safe Drinking Water Act* (SDWA) since, by definition, they are not public water systems (40 CFR 141.3):

1. system consists only of distribution and storage facilities and does not have any collection and treatment facilities
2. the facility gets all of its water from a public water system that is owned or operated by another party
3. the facility does not sell water to any person
4. is not a carrier which conveys passengers in interstate commerce.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions that have been added or revised as a result of this review are identified as being reviewed, revised or added in March 2000, for example **[Added March 2000]**.

#### B. Federal Legislation

- *The Safe Drinking Water Act* (SDWA). This act, Public Law (PL) 99-339, 42 U.S. Code (USC) 201, 300f--300j-25, 6939b, 6979a, 6979b, 7401--742, etc., is the Federal legislation which regulates the safety of drinking water in the country. Each department, agency, and instrument of the executive, legislative, and judicial branches of the Federal Government having jurisdiction over any potential source of contaminants identified by a state program must be subject to and observe all requirements of the state program applicable to such potential source of contaminants, both substantive and procedural, in the same manner, and to the same extent, as any other person, including payment of reasonable charges and fees (42 USC 300h-7(h)).

If a Federal agency has jurisdiction over any Federally owned or maintained public water system, or is engaged in any activity resulting, or which may result in, underground water injection which endangers drinking water, it is subject to, and must observe, any Federal, state, and local regulations, administrative authorities, and process and sanctions respecting the provision of safe drinking water and respecting any underground injection program in the same manner, and to the same extent as any nongovernmental entity. This requirement applies (42 USC 300j-6(a)):

1. to any rules, substantive or procedural (including any recordkeeping or reporting, permits, and other requirements)
2. to the exercise of any Federal, state, or local authorities
3. to any process or sanction, whether enforced in Federal, state, or local courts or in any other manner.

National primary drinking water regulations apply to each public water system in each state. However, such regulations do not apply to a public water system (42 USC 300g):

1. which consists only of distribution and storage facilities (and does not have any collection and treatment facilities)
2. which obtains all its water from, but is not owned or operated by, a public water system to which such regulations apply
3. which does not sell water to any person
4. which is not a carrier that conveys passengers in interstate commerce.

As a provision of the *Safe Drinking Water Act Amendments of 1996*, states are allowed to grant small systems (serving a population of no more than 10,000) a variance if they cannot afford to comply. The amendments expressly waive sovereign immunity for Federal agencies, including immunity from punitive and coercive fines and penalties relating to the provision of safe drinking water or underground injection. The amendments do not subject any Federal department or agency to criminal sanctions but does subject federal agents and employees to criminal sanctions.

- *Public Health Security and Bioterrorism Preparedness and Response Act of 2002* – Title IV, Section 401, dated 12 June 2002, amends the *Safe Drinking Water Act*. In this amendment, every community water system that serves a population of greater than 3,300 persons is required to **[Added April 2003; Revised April 2009]**:
  1. Conduct a vulnerability assessment;
  2. Certify and submit a copy of the assessment to the USEPA Administrator (see schedule below);
  3. Maintain a copy of the emergency response plan (ERP) for 5 yr;
  4. Prepare or revise an emergency response plan that incorporates the results of the vulnerability assessment; and
  5. Certify to the USEPA Administrator, within 6 months of completing the vulnerability assessment, that the system has completed or updated their emergency response plan.
- EO 12088, *Federal Compliance with Pollution Standards*. This EO, dated 13 October 1978, requires federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the Agency funds meet applicable Federal, state, and local environmental requirements for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget. Sections 1-4, “Pollution Control Plan” was revoked by EO 13148 **[Revised October 2002]**.
- Executive Order (EO) 13423, *Strengthening Federal Environmental, Energy, and Transportation Management*. This EO, dated 24 January 2007, requires Federal agencies to lead by example in advancing the nation’s energy security and environmental performance by achieving goals outlined in the EO. In relation to water, agencies are required reduce water consumption intensity by 2% annually through 2015.

### C. State/Local Regulations **[Revised April 2001]**

- For information on regulations in specific states, see the State Supplements to TEAM Guide.

The SDWA intends USEPA, states and federally-recognized Indian tribes to work as partners to ensure delivery of safe drinking water to the public. Any state or tribe can request responsibility for operation and oversight of the

drinking water program within its borders. In order to receive this responsibility (also called primary enforcement authority or primacy), a state or tribe must adopt regulations that are at least as stringent as federal regulations, demonstrate its capacity to enforce those regulations, and implement other activities necessary to ensure compliance. In the absence of state or tribal primacy, USEPA assumes responsibility for administering the drinking water program including enforcement responsibilities for that area. Of the 56 eligible states (defined to include Commonwealths, Territories, and the District of Columbia), all but Wyoming and the District of Columbia have primacy. USEPA Regional Offices administer the drinking water program within these two jurisdictions and on all tribal lands.

States that have primacy may establish drinking water regulations, monitoring schedules and reporting requirements at least as stringent, or in addition to, those in the federal regulations. Public water systems in these states are required to comply with these additional requirements. Generally speaking, most states that have primacy adopt drinking water regulations that closely reflect the federal requirements. Some states also require the certification of operators of public water systems. Furthermore, some states require operators to receive approval of plans and specifications prior to constructing or modifying a public water system. In addition, all states will need to adopt/implement a certification program by February 2001 to avoid withholding of federal "state revolving fund" (SRF) monies.

States may also have more stringent requirements for drinking water treatment plant operations. Many states have operator licensing and certification programs that require that an operator pass an exam and have a required amount of experience.

As outlined in 40 CFR 145, each State must meet the requirements outlined in 40 CFR 144 in order to obtain primary enforcement authority for the UIC program in that State. The regulations in 40 CFR 144 also constitutes a part of the UIC program for States listed in 40 CFR 147 to be administered directly by USEPA. The SDWA required all States to submit an UIC program within 270 days after 24 July 1980, the effective date of 40 CFR 146, which was the final element of the UIC minimum requirements to be originally promulgated, unless the Administrator grants an extension, which can be for a period not to exceed an additional 270 days. If a State failed to submit an approvable program, USEPA established a program for that State. Once a program is established, SDWA provides that all underground injections in listed States are unlawful and subject to penalties unless authorized by a permit or a rule. 40 CFR 144 sets forth the requirements governing all UIC programs, authorizations by permit or rule and prohibits certain types of injection. The technical regulations governing these authorizations appear in 40 CFR 146 [Added July 2003].

#### **D. Key Compliance Requirements**

- **Recordkeeping Requirements** - any owner or operator of a public water system must retain, on the premises or at a nearby and convenient location, certain records pertaining to system performance. These records include analytical results for bacteriological and chemical analysis, actions taken by the system to correct violations of primary drinking water standards, copies of any written reports, summaries of communications relating to sanitary surveys and records concerning a variance or exemption granted to the system. Each of these different records must be kept for different time periods ranging from 3 to 10 yr. These requirements are found under 40 CFR 141.33.
- **Drinking Water Standards** - USEPA has developed primary and secondary drinking water standards that are contaminant-specific concentration limits that apply to certain types of public water supplies. Primary drinking water standards consist of maximum contaminant level goals (MCLG), which are non-enforceable health-based goals, and maximum contaminant levels (MCLs) which are enforceable limits set as close to MCLGs as possible, considering cost and feasibility of attainment. Drinking water must either meet MCL standards or be treated to meet these standards (see the individual checklist items and appendices in this document for details on the standards). The secondary drinking water regulations cover contaminants that affect the aesthetic quality of drinking water and are intended as guidelines that are not enforceable by USEPA but may be enforced by a state that chooses to enforce some or all of the secondary drinking water regulations. States with primacy, or USEPA where it administers the program, may grant a public water system a variance and exemption from national primary drinking water standards, *provided* that the terms of the variance and exemption adequately protect public health. USEPA regulations pertaining to drinking water standards are found under 40 CFR 141 (40 CFR 141.11(a), 141.11(b), 141.11(d), 141.12, 141.60 through 141.63, and 141.80(c)) [Revised January 2001].

- **Monitoring** - the monitoring schedule and the type of constituents required to be monitored is based on the type of water supply system, the size of the service population, and the source of the water supply. For example, community water systems and nontransient noncommunity water systems are required to monitor for organic and inorganic contaminants. However, all public water systems are required to conduct monitoring to determine compliance for nitrate and nitrite levels and total coliforms. Monitoring requirements for public water systems are contained in 40 CFR 141.21, 141.24, 141.26 and 141.30. All analysis of samples used to determine compliance with MCLs must be performed in a state-approved laboratory or by a state-approved individual (40 CFR 141.28, 141.30, 141.41, and 141.42)
- **Total Coliform Sampling** - the Total Coliform Rule promulgated by USEPA requires all public water systems to monitor for total coliforms. Their presence in water can indicate a lapse in treatment and potential contamination by pathogens. Total coliform samples are required to be collected at regular intervals throughout the month. The number of samples required is based on the size of the system. When a routine sample is total coliform-positive, the public water system must collect a set of repeat samples within 24 h of being notified of the positive results. In addition, positive results for total coliform must be followed by tests for other microbial pathogens, such as *E. Coli*, that can endanger human health (40 CFR 141.21).
- **Filtration and Disinfection** - all public water systems that get their water from a surface water source or a ground water source that comes into contact with a surface water source must disinfect and filter that water. Compliance with USEPA's Surface Water Treatment Rule (SWTR) indicates that a public water system has taken steps to reduce exposure to microbiological contamination filtration and disinfection, and watershed control. Treatment technique requirements have been established under the SWTR to protect people against viruses and other microbial pathogens that are a threat to human health.

The 1996 amendments to the SDWA required USEPA to issue several new rules to control microbial contaminants and the byproducts of the chemicals used to control them. On December 3, 1998, USEPA issued the first set of the Interim Enhanced Surface Water Treatment Rule (IESWTR) and the Stage 1 Disinfectants/Disinfection Byproduct Rule. Public water systems regulated under 40 CFR 141 Subpart H serving at least 10,000 people must meet the requirements of the IESWTR by January 1, 2002. Community and nontransient noncommunity water systems that perform disinfection are required to meet specific MCLs and MRDLs, and monitor for disinfection byproducts, disinfection byproduct precursors, and disinfection residuals (40 CFR 141.70 through 141.75, 40 CFR 141.30, 141.64 through 141.65, 141.130 through 141.135).

- **Notification and Reporting Requirements** - public water systems are required to report all monitoring results to the primary enforcement authority. States with primacy, or USEPA where it administers the program, analyze the monitoring results determine compliance and report violations to USEPA on a quarterly basis. A public water systems is required under Section 1414(c) of the SDWA to provide notification to its customers whenever: 1) a violation of certain drinking water regulations occurs (including MCLs, treatment technique, and monitoring/reporting requirements); 2) a variance and exception (V&E) is in place or the conditions of the V&E are violated, or; 3) results from unregulated contaminant monitoring required under Section 1445 of the SDWA are received.

The 1996 amendments to the SDWA do not change the basic requirement for public water systems with violations of drinking water standards to give public notification, however the amendments: 1) alter the timing of the notification for certain violations; 2) establish a specific requirement for USEPA consultation with the states in issuing revised regulations; 3) allow the state to prescribe alternative notification requirements by rule with respect to the form and content of the notice, and; 4) add a new requirement for the state to prepare an annual report on violations and for USEPA to prepare a follow-on report summarizing states' reports and public notices submitted by public water systems serving Indian Tribes. In addition to requiring state and national compliance reports, the 1996 amendments include a requirement for public water systems to prepare an annual consumer confidence report that contains information on the source of the water supply, the levels of detected contaminants found in the drinking water, information on the health effects of contaminants found in drinking water, information on the health effects found in violation of national standards, and information on unregulated contaminants (40 CFR 141.31 through 141.32).

- **Lead and Copper in Drinking Water** - all community and nontransient noncommunity (NTNC) water systems must monitor and control the amount of lead and copper delivered to the tap, usually by maintaining a water pH level that will not leach these metals from pipes. In community and NTNC water systems:
  1. the concentration of lead must not exceed 0.015 mg/L in more than 10 percent of tap water samples collected during any monitoring period.
  2. the concentration of copper does not exceed 1.3 mg/L in more than 10 percent of tap water samples collected during any monitoring period.

When a system exceeds the action level for lead, it must distribute public education materials no later than 30 days after the system learns of the tap monitoring results. The amount and location of sampling required after a failure to meet the lead and/or copper action level on the basis of tap samples depends on whether the system is a groundwater or a surface water system. Sampling results will determine the need for corrosion control efforts on the part of the water system. The water systems regulated under these requirements is also required to fulfill specific reporting requirements and retain onsite all the original records of sampling data, analysis, reports, surveys, letters, evaluations, state determinations, and any other pertinent documents for at least 12 yr (40 CFR 141.80 through 141.91) **[Revised January 2008]**.

- **Vulnerability Assessments** – these assessments are required to be done by community water systems serving a population of greater than 3,300 persons. The assessment is done to determine the vulnerability of a system to a terrorist attack or other intentional acts intended to substantially disrupt the ability of the system to provide a safe and reliable supply of drinking water (Public Law 107–188, Section 401) **[Added April 2003]**.
- **The UIC Permit Program** - this program regulates underground injections by five classes of wells. The five classes of wells are set forth in 40 CFR 144.6 (see the Definitions). All owners or operators of these injection wells must be authorized either by permit or rule by the USEPA Director. No injection shall be authorized by permit or rule if it results in the movement of fluid containing any contaminant into Underground Sources of Drinking Water if the presence of that contaminant may cause a violation of any primary drinking water regulation under 40 CFR 141 or may adversely affect the health of persons. Existing Class IV wells that inject hazardous waste directly into an underground source of drinking water are to be eliminated over a period of 6 mo and new Class IV wells are prohibited (40 CFR 144.13). For Class V wells, if remedial action appears necessary, a permit may be required or the Director must require remedial action or closure by order. During UIC program development, the Director may identify aquifers and portions of aquifers that are actual or potential sources of drinking water **[Added July 2003]**.
- **Unregulated Contaminant Monitoring Rule (UCMR)** - The determination of whether a Community water system or a NTNC water system is required to monitor for unregulated contaminants is based on whether the public water system purchases all of its water, as finished water, from another system; and its population served as of 30 June 30, 2005. EPA or the State will specify the month(s) and year(s) in which monitoring must occur. Reporting can be done electronically to the State and EPA using EPA's electronic data reporting system within 120 days from the sample collection date at <http://www.epa.gov/safewater/ucmr/ucmr2/reporting.html>. Persons served by the public water system must be notified of the availability of the results of unregulated contaminant sampling no later than 12 mo after the monitoring results are known. Included in the list of unregulated contaminants are the following: Dimethoate; Terbufos sulfone; 1, 3-dinitrobenzene; and 2, 4, 6-trinitrotoluene (TNT). The UCMR does not apply to transient noncommunity water systems or water systems that purchase all of their finished water from another public water system (40 CFR 141.40) **[Added January 2008; Revised April 2009]**.

#### **D. Key Compliance Definitions**

- *Abandoned Well* - well whose use has been permanently discontinued or which is in a state of disrepair such that it cannot be used for its intended purpose or for observation purposes (40 CFR 146.3) **[Added July 2003]**.
- *Action Level* - the concentration of lead or copper in the water specified in 40 CFR 141.80(c) which determines, in some cases, the treatment requirements that a water system is required to complete (40 CFR 141.2) **[Reviewed March 2000]**.

- *Administrator* - the Administrator of the United States Environmental Protection Agency, or an authorized representative (40 CFR 144.3) **[Added July 2003]**.
- *Application* - the USEPA standard national forms for applying for a permit, including any additions, revisions or modifications to the forms; or forms approved by USEPA for use in approved States, including any approved modifications or revisions (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Appropriate Act and Regulations* - the *Solid Waste Disposal Act*, as amended by the *Resource Conservation and Recovery Act (RCRA)*; or *SDWA*, whichever is applicable; and applicable regulations promulgated under those statutes (40 CFR 144.3) **[Added July 2003]**.
- *Approved State Program* - a UIC program administered by the State or Indian Tribe that has been approved by USEPA according to SDWA sections 1422 and/or 1425 (40 CFR 144.3) **[Added July 2003]**.
- *Aquifer* - a geological “formation,” group of formations, or part of a formation that is capable of yielding a significant amount of water to a well or spring (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Area of Review* - the area surrounding an injection well described according to the criteria set forth in 40 CFR 146.06 or in the case of an area permit, the project area plus a circumscribing area the width of which is either ¼ of a mile or a number calculated according to the criteria set forth in 40 CFR 146.06 (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Bag Filters* - pressure-driven separation devices that remove particulate matter larger than 1 micrometer using an engineered porous filtration media. They are typically constructed of a non-rigid, fabric filtration media housed in a pressure vessel in which the direction of flow is from the inside of the bag to outside (40 CFR 141.2) **[Added April 2006]**.
- *Bank Filtration* - a water treatment process that uses a well to recover surface water that has naturally infiltrated into ground water through a river bed or bank(s). Infiltration is typically enhanced by the hydraulic gradient imposed by a nearby pumping water supply or other well(s) (40 CFR 141.2) **[Added April 2006]**.
- *Best Available Technology (BAT)* - the best technology treatment techniques, or other means which the administrator finds, examined for efficacy under field conditions and not solely under lab conditions that are available (taking cost into consideration). For the purposes of setting MCLs for synthetic organic chemicals, any BAT must be at least as effective as granular activated carbon (40 CFR 141.2) **[Reviewed March 2000]**.
- *Cartridge Filters* - pressure-driven separation devices that remove particulate matter larger than 1 micrometer using an engineered porous filtration media. They are typically constructed as rigid or semi-rigid, self-supporting filter elements housed in pressure vessels in which flow is from the outside of the cartridge to the inside (40 CFR 141.2) **[Added April 2006]**.
- *Casing* - a pipe or tubing of appropriate material, of varying diameter and weight, lowered into a borehole during or after drilling in order to support the sides of the hole and thus prevent the walls from caving, to prevent loss of drilling mud into porous ground, or to prevent water, gas, or other fluid from entering or leaving the hole (40 CFR 146.3) **[Added July 2003]**.
- *Catastrophic Collapse* - the sudden and utter failure of overlying “strata” caused by removal of underlying materials (40 CFR 146.3) **[Added July 2003]**.
- *Cementing* - the operation whereby a cement slurry is pumped into a drilled hole and/or forced behind the casing (40 CFR 146.3) **[Added July 2003]**.
- *Cesspool* - a “drywell” that receives untreated sanitary waste containing human excreta, and which sometimes has an open bottom and/or perforated sides (40 CFR 144.3 and 146.3) **[Added July 2003]**.

- *Class I Injection Well* – this includes (40 CFR 144.6(a), 144.80(a), and 146.5) [**Added July 2003**]:
  1. Wells used by generators of hazardous waste or owners or operators of hazardous waste management facilities to inject hazardous waste beneath the lowermost formation containing, within 1/4 mi of the well bore, an underground source of drinking water (see Appendix 13-15).
  2. Other industrial and municipal disposal wells which inject fluids beneath the lowermost formation containing, within 1/4 mile of the well bore, an underground source of drinking water.
  3. Radioactive waste disposal wells which inject fluids below the lowermost formation containing an underground source of drinking water within 1/4 mi of the well bore.
- *Class II Injection Wells* - wells which inject fluids (40 CFR 144.6(b), 144.80(b), and 146.5) [**Added July 2003**]:
  1. Which are brought to the surface in connection with natural gas storage operations, or conventional oil or natural gas production and may be commingled with wastewaters from gas plants which are an integral part of production operations, unless those waters are classified as a hazardous waste at the time of injection.
  2. For enhanced recovery of oil or natural gas; and
  3. For storage of hydrocarbons which are liquid at standard temperature and pressure.
- *Class III Injection Wells* - wells which inject for extraction of minerals including (40 CFR 144.6(c), 144.80(c), and 146.5) [**Added July 2003**]:
  1. Mining of sulfur by the Frasch process;
  2. In situ production of uranium or other metals; this category includes only in-situ production from ore bodies which have not been conventionally mined. Solution mining of conventional mines such as stopes leaching is included in Class V.
  3. Solution mining of salts or potash.
- *Class IV Injection Wells* – these include (40 CFR 144.6(d), 144.80(d), and 146.5) [**Added July 2003**]:
  1. Wells used by generators of hazardous waste or of radioactive waste, by owners or operators of hazardous waste management facilities, or by owners or operators of radioactive waste disposal sites to dispose of hazardous waste or radioactive waste into a formation which within 1/4 mile of the well contains an underground source of drinking water.
  2. Wells used by generators of hazardous waste or of radioactive waste, by owners or operators of hazardous waste management facilities, or by owners or operators of radioactive waste disposal sites to dispose of hazardous waste or radioactive waste above a formation which within 1/4 mile of the well contains an underground source of drinking water.
  3. Wells used by generators of hazardous waste or owners or operators of hazardous waste management facilities to dispose of hazardous waste, which cannot be classified under the following:
    - a. Wells used by generators of hazardous waste or owners or operators of hazardous waste management facilities to inject hazardous waste beneath the lowermost formation containing, within 1/4 mi of the well bore, an underground source of drinking water.
    - b. Wells used by generators of hazardous waste or of radioactive waste, by owners or operators of hazardous waste management facilities, or by owners or operators of radioactive waste disposal sites to dispose of hazardous waste or radioactive waste into a formation which within one-quarter (1/4) mile of the well contains an underground source of drinking water.
    - c. Wells used by generators of hazardous waste or of radioactive waste, by owners or operators of hazardous waste management facilities, or by owners or operators of radioactive waste disposal sites to dispose of hazardous waste or radioactive waste above a formation which within 1/4 mi of the well contains an underground source of drinking water.
- *Class V Injection Wells* - injection wells not included in Class I, II, III, or IV. Specific types of Class V injection wells are (40 CFR 144.6(e), 144.81, and 146.5) [**Added July 2003**]:

1. Air conditioning return flow wells used to return to the supply aquifer the water used for heating or cooling in a heat pump;
  2. Large capacity cesspools including multiple dwelling, community or regional cesspools, or other devices that receive sanitary wastes, containing human excreta, which have an open bottom and sometimes perforated sides. The UIC requirements do not apply to single family residential cesspools nor to non-residential cesspools which receive solely sanitary waste and have the capacity to serve fewer than 20 persons a day.
  3. Cooling water return flow wells used to inject water previously used for cooling;
  4. Drainage wells used to drain surface fluids, primarily storm runoff, into a subsurface formation;
  5. Dry wells used for the injection of wastes into a subsurface formation;
  6. Recharge wells used to replenish the water in an aquifer;
  7. Salt water intrusion barrier wells used to inject water into a fresh aquifer to prevent the intrusion of salt water into the fresh water;
  8. Sand backfill and other backfill wells used to inject a mixture of water and sand, mill tailings or other solids into mined out portions of subsurface mines whether what is injected is a radioactive waste or not.
  9. Septic system wells used to inject the waste or effluent from a multiple dwelling, business establishment, community or regional business establishment septic tank. The UIC requirements do not apply to single family residential septic system wells, nor to non-residential septic system wells which are used solely for the disposal of sanitary waste and have the capacity to serve fewer than 20 persons a day.
  10. Subsidence control wells (not used for the purpose of oil or natural gas production) used to inject fluids into a non-oil or gas producing zone to reduce or eliminate subsidence associated with the overdraft of fresh water;
  11. Injection wells associated with the recovery of geothermal energy for heating, aquaculture and production of electric power;
  12. Wells used for solution mining of conventional mines such as stopes leaching;
  13. Wells used to inject spent brine into the same formation from which it was withdrawn after extraction of halogens or their salts;
  14. Injection wells used in experimental technologies.
  15. Injection wells used for in situ recovery of lignite, coal, tar sands, and oil shale.
  16. Motor vehicle waste disposal wells that receive or have received fluids from vehicular repair or maintenance activities, such as an auto body repair shop, automotive repair shop, new and used car dealership, specialty repair shop (e.g., transmission and muffler repair shop), or any facility that does any vehicular repair work. Fluids disposed in these wells may contain organic and inorganic chemicals in concentrations that exceed the maximum contaminant levels (MCLs) established by the primary drinking water regulations (see 40 CFR 141). These fluids also may include waste petroleum products and may contain contaminants, such as heavy metals and volatile organic compounds, which pose risks to human health.
- *Clean Compliance History* - for the purposes of 40 CFR 141subpart Y, a record of no MCL violations under 40 CFR 141.63; no monitoring violations under 40 CFR 141.21 or subpart Y; and no coliform treatment technique trigger exceedances or treatment technique violations under subpart Y (40 CFR 141.2) [**Added April 2013**].
  - *Coagulation* - a process using coagulant chemicals and mixing by which colloidal and suspended materials are destabilized and agglomerated into flocs (40 CFR 141.2) [**Reviewed March 2000**].
  - *Combined Distribution System* - the interconnected distribution system consisting of the distribution systems of wholesale systems and of the consecutive systems that receive finished water (40 CFR 141.2) [**Added April 2006**].
  - *Community Water System* - a public water system that serves at least 15 service connections used by year round residents or regularly serves at least 25 yr-round residents (40 CFR 141.2 and 144.86(d)) [**Reviewed March 2000; Revised July 2003**].
  - *Complete Local Source Water Assessment for Ground Water Protection Areas* - when EPA has approved a State's Drinking Water Source Assessment and Protection Program, States will begin to conduct local assessments for

each public water system in their State. For the purposes of this rule, local assessments for community water systems and non-transient non-community systems are complete when four requirements are met: First, a State must delineate the boundaries of the assessment area for community and non-transient non-community water systems. Second, the State must identify significant potential sources of contamination in these delineated areas. Third, the State must “determine the susceptibility of community and non-transient non-community water systems in the delineated area to such contaminants.” Lastly, each State will develop its own plan for making the completed assessments available to the public (40 CFR 144.86(b)) **[Added July 2003]**.

- *Compliance Cycle* - the 9-yr calendar year cycle during which public water systems must monitor. Each compliance cycle consists of three three-year compliance periods. The first calendar year cycle begins 1 January 1993 and ends 31 December 2001; the second begins 1 January 2002 and ends 31 December 2010; the third begins 1 January 2011 and ends 31 December 2019 (40 CFR 141.2) **[Added March 2000]**.
- *Compliance Period* - a 3-yr calendar year period within a compliance cycle. Each compliance cycle has three 3-yr compliance periods. Within the first compliance cycle, the first compliance period runs from 1 January 1993 to 31 December 1995; the second from 1 January 1996 to 31 December 1998; the third from 1 January 1999 to 31 December 2001 (40 CFR 141.2) **[Added March 2000]**.
- *Comprehensive Performance Evaluation (CPE)* - a thorough review and analysis of a treatment plant's performance-based capabilities and associated administrative, operation and maintenance practices. It is conducted to identify factors that may be adversely impacting a plant's capability to achieve compliance and emphasizes approaches that can be implemented without significant capital improvements. For purpose of compliance with subparts P and T of this part, the comprehensive performance evaluation must consist of at least the following components: Assessment of plant performance; evaluation of major unit processes; identification and prioritization of performance limiting factors; assessment of the applicability of comprehensive technical assistance; and preparation of a CPE report. (40 CFR 141.2) **[Reviewed March 2000; Revised April 2002]**.
- *Confluent Growth* - a continuous bacterial growth covering the entire filtration area of a membrane filter, or a portion thereof, in which bacterial colonies are not discrete (40 CFR 141.2) **[Added March 2000]**.
- *Consecutive System* - a public water system that receives some or all of its finished water from one or more wholesale systems. Delivery may be through a direct connection or through the distribution system of one or more consecutive systems (40 CFR 141.2) **[Added April 2006]**.
- *Contaminant* - any physical, chemical, biological, or radiological substance or matter in water (40 CFR 141.2, 144.3, and 146.3) **[Added July 2003]**.
- *Conventional Filtration Treatment* - a series of processes including coagulation, flocculation, sedimentation, and filtration resulting in substantial particulate removal (40 CFR 141.2) **[Reviewed March 2000]**.
- *Corrosion Inhibitor* - a substance capable of reducing the corrosivity of water toward metal plumbing materials, especially lead and copper, by forming a protective film on the interior surface of those materials (40 CFR 141.2) **[Added March 2000]**.
- *Delineation* - once a State's Drinking Water Source Assessment and Protection Program is approved, the States will begin delineating their local assessment areas. Delineation is the first step in the assessment process in which the boundaries of ground water protection areas are identified (40 CFR 144.86(f)) **[Added July 2003]**.
- *Diatomaceous Earth Filtration* - a process resulting in substantial particulate removal in which (40 CFR 141.2) **[Reviewed March 2000]**:
  1. a precoat cake of diatomaceous earth filter media is deposited on a support membrane (septum)
  2. while the water is filtered by passing through the cake on the septum, additional filter media known as body feed is continuously added to the feed water to maintain the permeability of the filter cake.

- *Direct Filtration* - a series of processes including coagulation and filtration but excluding sedimentation resulting in substantial particulate removal (40 CFR 141.2) [**Reviewed March 2000**].
- *Director* - the Regional Administrator, the State director or the Tribal director as the context requires, or an authorized representative. When there is no approved State or Tribal program, and there is an USEPA administered program, “Director” means the Regional Administrator. When there is an approved State or Tribal program, “Director” normally means the State or Tribal director. In some circumstances, however, USEPA retains the authority to take certain actions even when there is an approved State or Tribal program. In such cases, the term “Director” means the Regional Administrator and not the State or Tribal director (40 CFR 144.3 and 146.3) [**Added July 2003**].
- *Disinfectant* - any oxidant, including but not limited to chlorine, chlorine dioxide, chloramines, and ozone added to water in any part of the treatment or distribution process that is intended to kill or inactivate pathogenic microorganisms (40 CFR 141.2) [**Reviewed March 2000**].
- *Disinfection* - a process which inactivates pathogenic organisms in water by chemical oxidants or equivalent agents (40 CFR 141.2) [**Reviewed March 2000**].
- *Disinfection Profile* - a summary of *Giardia lamblia* inactivation through the treatment plant. The procedure for developing a disinfection profile is contained in 40 CFR 141.172 (Disinfection profiling and benchmarking) and 40 CFR 141.530-141.536 (Disinfection profile). (40 CFR 141.2) [**Added January 1999; Reviewed March 2000; Revised April 2002**].
- *Disposal Well* – a well used for the disposal of waste into a subsurface stratum (40 CFR 146.3) [**Added July 2003**].
- *Domestic or Other Non-distribution System Plumbing Problem* - a coliform contamination problem in a public water system with more than one service connection that is limited to the specific service connection from which the coliform-positive sample was taken (40 CFR 141.2) [**Reviewed March 2000**].
- *Dose Equivalent* - the product of the absorbed dose from ionizing radiation and such factors as account for differences in biological effectiveness due to the type of radiation and its distribution in the body as specified by the International Commission on Radiological Units and Measurements (ICRU) (40 CFR 141.2) [**Added March 2000**].
- *Draft Permit* - a document prepared under 40 CFR 124.6 indicating the Director's tentative decision to issue or deny, modify, revoke and reissue, terminate, or reissue a “permit.” A notice of intent to terminate a permit, and a notice of intent to deny a permit, as discussed in 40 CFR 124.5 are types of “draft permits.” A denial of a request for modification, revocation and reissuance, or termination, as discussed in 40 CFR 124.5 is not a “draft permit” (40 CFR 144.3) [**Added July 2003**].
- *Drilling Mud* - a heavy suspension used in drilling an “injection well,” introduced down the drill pipe and through the drill bit (40 CFR 144.3) [**Added July 2003**].
- *Drywell* - a well, other than an improved sinkhole or subsurface fluid distribution system, completed above the water table so that its bottom and sides are typically dry except when receiving fluids (40 CFR 144.3) [**Added July 2003**].
- *Dual Sample Set* - a set of two samples collected at the same time and same location, with one sample analyzed for TTHM and the other sample analyzed for HAA5. Dual sample sets are collected for the purposes of conducting an IDSE and determining compliance with the TTHM and HAA5 MCLs under the Stage 2 disinfection byproducts requirements (40 CFR 141.2) [**Added April 2006**].
- *Effective Corrosion Inhibitor Residual* - for the purpose of Subpart I of 40 CFR 141, means a concentration sufficient to form a passivating film on the interior walls of a pipe (40 CFR 141.2) [**Added March 2000**].

- *Effective Date of a UIC Program* – the date that a State UIC program is approved or established by the Administrator (40 CFR 146.3) [**Added July 2003**].
- *Eligible Indian Tribe* - a Tribe that meets the statutory requirements established at 42 U.S.C. 300j-11(b)(1) (40 CFR 144.3) [**Added July 2003**].
- *Emergency Permit* - a UIC “permit” issued in accordance with 40 CFR 144.34 (40 CFR 144.3) [**Added July 2003**].
- *Enhanced Coagulation* - the addition of sufficient coagulant for improved removal of disinfection byproduct precursors by conventional filtration treatment (40 CFR 141.2) [**Added January 1999; Reviewed March 2000**].
- *Enhanced Softening* - the improved removal of disinfection byproduct precursors by precipitative softening (40 CFR 141.2) [**Reviewed March 2000**].
- *Exempted Aquifer* - an “aquifer” or its portion that meets the criteria in the definition of “underground source of drinking water” but which has been exempted according to the procedures in 40 CFR 144.7 or 144.8(b) (40 CFR 144.3 and 146.3) [**Added July 2003**].

(NOTE: In 40 CFR 146.4, an exempt aquifer must meet the following criteria:

1. It does not currently serve as a source of drinking water; and
  2. It cannot now and will not in the future serve as a source of drinking water because:
    - a. It is mineral, hydrocarbon or geothermal energy producing, or can be demonstrated by a permit applicant as part of a permit application for a Class II or III operation to contain minerals or hydrocarbons that considering their quantity and location are expected to be commercially producible.
    - b. It is situated at a depth or location which makes recovery of water for drinking water purposes economically or technologically impractical;
    - c. It is so contaminated that it would be economically or technologically impractical to render that water fit for human consumption; or
    - d. It is located over a Class III well mining area subject to subsidence or catastrophic collapse; or
  3. The total dissolved solids content of the ground water is more than 3,000 and less than 10,000 mg/l and it is not reasonably expected to supply a public water system.)
- *Exempted Public Water Systems* - a public water system that meets all of the following conditions is not required to meet the standards outlined in 40 CFR 141 (40 CFR 141.3) [**Reviewed March 2000**]:
    1. consists only of distribution and storage facilities and do not have any collection and treatment facilities
    2. obtains all of its water from, but is not owned by or operated by, a public water system to which 40 CFR 141 applies
    3. does not sell water to any person
    4. is not a carrier that conveys passengers in interstate commerce.
  - *Existing Injection Well* - an “injection well” other than a “new injection well” (40 CFR 144.3 and 146.3) [**Added July 2003**].
  - *Experimental Technology* – a technology which has not been proven feasible under the conditions in which it is being tested (40 CFR 146.3) [**Added July 2003**].
  - *Facility or Activity* - any UIC “injection well,” or another facility or activity that is subject to regulation under the UIC program (40 CFR 144.3) [**Added July 2003**].
  - *Fault* – a surface or zone of rock fracture along which there has been displacement (40 CFR 146.3) [**Added July 2003**].

- *Filter Profile* - a graphical representation of individual filter performance, based on continuous turbidity measurements or total particle counts versus time for an entire filter run, from startup to backwash inclusively, that includes an assessment of filter performance while another filter is being backwashed (40 CFR 141.2) **[Added January 1999; Reviewed March 2000]**.
- *Filtration* - a process for removing particulate matter from water by passage through porous media (40 CFR 141.2) **[Reviewed March 2000]**.
- *Finished Water* - water that is introduced into the distribution system of a public water system and is intended for distribution and consumption without further treatment, except as treatment necessary to maintain water quality in the distribution system (e.g., booster disinfection, addition of corrosion control chemicals) (40 CFR 141.2) **[Added April 2006]**.
- *First Draw Sample* - a one-liter sample of tap water, collected in accordance with 40 CFR 141.86(b)(2), that has been standing in plumbing pipes at least 6 h and is collected without flushing the tap (40 CFR 141.2) **[Added March 2000]**.
- *Flocculation* - a process to enhance agglomeration or collection of smaller floc particles into larger, more easily settleable particles through gentle stirring by hydraulic or mechanical means (40 CFR 141.2) **[Reviewed March 2000]**.
- *Flow Rate* - the volume per time unit given to the flow of gases or other fluid substance which emerges from an orifice, pump, turbine or passes along a conduit or channel (40 CFR 146.3) **[Added July 2003]**.
- *Flowing Stream* - a course of running water flowing in a definite channel (40 CFR 141.2) **[Added April 2006]**.
- *Fluid* - any material or substance which flows or moves whether in a semisolid, liquid, sludge, gas, or any other form or state (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Formation* - a body of consolidated or unconsolidated rock characterized by a degree of lithologic homogeneity which is prevailing, but not necessarily, tabular and is mappable on the earth's surface or traceable in the subsurface (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Formation Fluid* - “fluid” present in a “formation” under natural conditions as opposed to introduced fluids, such as “drilling mud” (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *GAC10* - granular activated carbon filter beds with an empty-bed contact time of 10 min based on average daily flow and a carbon reactivation frequency of every 180 days, except that the reactivation frequency for GAC10 used as a best available technology for compliance with Stage 2 disinfection byproduct MCLs under 40 CFR 141.64(b)(2) shall be 120 days (40 CFR 141.2) **[Reviewed March 2000; Revised April 2006]**.
- *GAC20* - granular activated carbon filter beds with an empty-bed contact time of 20 min based on average daily flow and a carbon reactivation frequency of every 240 days (40 CFR 141.2) **[Added April 2006]**.
- *Generator* - any person, by site location, whose act or process produces hazardous waste identified or listed in 40 CFR 261 (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Gross Alpha Particle Activity* - the total radioactivity due to alpha particle emissions as inferred from measurements on a dry sample (40 CFR 141.2) **[Reviewed March 2000]**.
- *Gross Beta Particle Activity* - the total radioactivity due to beta particle emission as inferred from measurements on a dry sample (40 CFR 141.2) **[Added March 2000]**.

- *Ground Water* - water below the land surface in a zone of saturation (40 CFR 144.3 and 146.3) [**Added July 2003**].
- *Ground Water Protection Area* - a ground water protection area is a geographic area near and/or surrounding community and non-transient non-community water systems that use ground water as a source of drinking water. These areas receive priority for the protection of drinking water supplies and States are required to delineate and assess these areas under section 1453 of the *Safe Drinking Water Act*. The additional requirements in 40 CFR 144.88 apply if the Class V motor vehicle waste disposal well is in a ground water protection area for either a community water system or a non-transient non-community water system, in many States, these areas will be the same as Wellhead Protection Areas that have been or will be delineated as defined in section 1428 of the SDWA (40 CFR 144.86(c)) [**Added July 2003**].
- *Groundwater Under the Direct Influence of Surface Water (GWUDI)* - any water beneath the surface of the ground with significant occurrence of insects or other macroorganisms, algae, or large-diameter pathogens such as *Giardia lamblia* or *Cryptosporidium*, or significant and relatively rapid shifts in water characteristics such as turbidity, temperature, conductivity, or pH which closely correlate to climatological or surface water conditions. Direct influence must be determined for individual sources in accordance with criteria established by the state. The state determination of direct influence may be based on site-specific measurements of water quality and/or documentation of well construction characteristics and geology with field evaluation (40 CFR 141.2) [**Revised January 1999; Reviewed March 2000; Revised April 2002**].
- *Haloacetic Acids (Five) (HAA5)* - the sum of the concentrations in milligrams per liter of the haloacetic acid compounds (monochloroacetic acid, dichloroacetic acid, trichloroacetic acid, monobromoacetic acid, and dibromoacetic acid), rounded to two significant figures after addition (40 CFR 141.2) [**Reviewed March 2000**].
- *Halogen* - one of the chemical elements chlorine, bromine, or iodine (40 CFR 141.2) [**Reviewed March 2000**].
- *Hazardous Waste* - a hazardous waste as defined in 40 CFR 261.3 (40 CFR 144.3) [**Added July 2003**].
- *Hazardous Waste Management Facility* (“HWM facility”) - all contiguous land, and structures, other appurtenances, and improvements on the land used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (for example, one or more landfills, surface impoundments, or combination of them) (40 CFR 144.3 and 146.3) [**Added July 2003**].
- *HWM Facility* – “Hazardous Waste Management facility” (40 CFR 144.3) [**Added July 2003**].
- *Improved Sinkhole* - a naturally occurring karst depression or other natural crevice found in volcanic terrain and other geologic settings which have been modified by man for the purpose of directing and emplacing fluids into the subsurface (40 CFR 144.3 and 146.3) [**Added July 2003**].
- *Indian Lands* – “Indian country” as defined in 18 U.S.C. 1151. That section defines Indian country as (40 CFR 144.3) [**Added July 2003**]:
  1. All land within the limits of any Indian reservation under the jurisdiction of the United States government, notwithstanding the issuance of any patent, and, including rights-of-way running through the reservation;
  2. All dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a State; and
  3. All Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same.
- *Indian Tribe* - any Indian Tribe having a Federally recognized governing body carrying out substantial governmental duties and powers over a defined area (40 CFR 144.3) [**Added July 2003**].
- *Initial Compliance Period* - the first full 3-yr compliance period which begins at least 18 mo after promulgation, except for dichloromethane, 1,2,4-trichlorobenzene, 1,1,2-trichloroethane, benzo(a)pyrene, dalapon, Di(2-

ethyhexyl) adipate, Di(2-ethyhexyl) phthalate, dinoseb, diquat, endrin, endothall, glyphosate, hexachlorobenzene, Hexachlorocyclopentadiene, Oxamyl (vydate), picloram, simazine, 2,3,7,8,-TCDD (dioxin), antimony, beryllium, cyanide (as free cyanide), nickel, and thallium, the initial compliance period means the first full 3-yr compliance period after promulgation for systems with 150 or more service connections (January 1993 to December 1995), and first full 3 yr compliance period after the effective date of the regulation (January 1996 to December 1998) for systems having fewer than 150 service connections (40 CFR 141.2) **[Reviewed March 2000]**.

- *Injection Well* - a “well” into which “fluids” are being injected (40 CFR 144.3) **[Added July 2003]**.
- *Injection Zone* - a geological “formation” group of formations, or part of a formation receiving fluids through a “well” (40 CFR 144.3) **[Added July 2003]**.
- *Interstate Agency* - an agency of two or more States established by or under an agreement or compact approved by the Congress, or any other agency of two or more States or Indian Tribes having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator under the “appropriate Act and regulations” (40 CFR 144.3) **[Added July 2003]**.
- *Lake/Reservoir* - a natural or man made basin or hollow on the Earth's surface in which water collects or is stored that may or may not have a current or single direction of flow (40 CFR 141.2) **[Added April 2006]**.
- *Large Water System* - in reference to lead and copper in systems, this refers to a water system that serves more than 50,000 persons (40 CFR 141.2) **[Reviewed March 2000]**.
- *Lead Service Line* - a service line made of lead which connects the water main to the building inlet and any lead pigtail, gooseneck, or other fitting which is connected to such a lead line (40 CFR 141.2) **[Reviewed March 2000]**.
- *Legionella* - a genus of bacteria, some species of which have caused a type of pneumonia called Legionnaires Disease (40 CFR 141.2) **[Reviewed March 2000]**.
- *Level 1 Assessment* - an evaluation to identify the possible presence of sanitary defects, defects in distribution system coliform monitoring practices, and (when possible) the likely reason that the system triggered the assessment. It is conducted by the system operator or owner. Minimum elements include review and identification of atypical events that could affect distributed water quality or indicate that distributed water quality was impaired; changes in distribution system maintenance and operation that could affect distributed water quality (including water storage); source and treatment considerations that bear on distributed water quality, where appropriate (e.g., whether a ground water system is disinfected); existing water quality monitoring data; and inadequacies in sample sites, sampling protocol, and sample processing. The system must conduct the assessment consistent with any State directives that tailor specific assessment elements with respect to the size and type of the system and the size, type, and characteristics of the distribution system (40 CFR 141.2) **[Added April 2013]**.
- *Level 2 Assessment* - an evaluation to identify the possible presence of sanitary defects, defects in distribution system coliform monitoring practices, and (when possible) the likely reason that the system triggered the assessment. A Level 2 assessment provides a more detailed examination of the system (including the system’s monitoring and operational practices) than does a Level 1 assessment through the use of more comprehensive investigation and review of available information, additional internal and external resources, and other relevant practices. It is conducted by an individual approved by the State, which may include the system operator. Minimum elements include review and identification of atypical events that could affect distributed water quality or indicate that distributed water quality was impaired; changes in distribution system maintenance and operation that could affect distributed water quality (including water storage); source and treatment considerations that bear on distributed water quality, where appropriate (e.g., whether a ground water system is disinfected); existing water quality monitoring data; and inadequacies in sample sites, sampling protocol, and sample processing. The system must conduct the assessment consistent with any State directives that tailor specific assessment elements with respect to the size and type of the system and the size, type, and characteristics of the distribution system. The

system must comply with any expedited actions or additional actions required by the State in the case of an *E. coli* MCL violation (40 CFR 141.2) [**Added April 2013**].

- *Lithology* – the description of rocks on the basis of their physical and chemical characteristics (40 CFR 146.3) [**Added July 2003**].
- *Locational Running Annual Average (LRAA)* - the average of sample analytical results for samples taken at a particular monitoring location during the previous four calendar quarters (40 CFR 141.2) [**Added April 2006**].
- *Man-made Beta Particle and Photon Emitters* - all radionuclides emitting beta particles and/or photons listed in Maximum Permissible Body Burdens and Maximum Permissible Concentration of Radionuclides in Air or Water for Occupational Exposure, NBS Handbook 69, except the daughter products of thorium-232, uranium-235 and uranium-238 (40 CFR 141.2) [**Added March 2000**].
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Major Facility* - any UIC “facility or activity” classified as such by the Regional Administrator, or, in the case of approved State programs, the Regional Administrator in conjunction with the State Director (40 CFR 144.3) [**Added July 2003**].
- *Manifest* - the shipping document originated and signed by the “generator” which contains the information required by subpart B of 40 CFR 262 (40 CFR 144.3) [**Added July 2003**].
- *Maximum Contaminant Level (MCL)* - the maximum permissible level of a contaminant in water that is delivered to any user of a public water system (40 CFR 141.2) [**Reviewed March 2000**].
- *Maximum Contaminant Level Goal (MCLG)* - refers to the maximum level of a contaminant in drinking water at which no known or anticipated adverse effect on the health of persons would occur, and which allows an adequate margin of safety. MCLGs are nonenforceable health goals (40 CFR 141.2) [**Reviewed March 2000**].
- *Maximum Residual Disinfectant Level (MRDL)* - a level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap without an unacceptable possibility of adverse health effects. For chlorine and chloramines, a PWS is in compliance with the MRDL when the running annual average of monthly averages of samples taken in the distribution system, computed quarterly, is less than or equal to the MRDL. For chlorine dioxide, a PWS is in compliance with the MRDL when daily samples are taken at the entrance to the distribution system and no two consecutive daily samples exceed the MRDL. MRDLs are enforceable in the same manner as maximum contaminant levels (MCL) under Section 1412 of the *Safe Drinking Water Act*. There is convincing evidence that addition of a disinfectant is necessary for control of waterborne microbial contaminants. Notwithstanding the MRDLs listed in 40 CFR 141.65, operators may increase residual disinfectant levels of chlorine or chloramines (but not chlorine dioxide) in the distribution system to a level and for a time necessary to protect public health to address specific microbiological contamination problems caused by circumstances such as distribution line breaks, storm runoff events, source water contamination, or cross-connections (40 CFR 141.2) [**Reviewed March 2000**].
- *Maximum Residual Disinfectant Level Goal (MRDLG)* - the maximum level of a disinfectant added for water treatment at which no known or anticipated adverse effect on the health of persons would occur, and which allows an adequate margin of safety. MRDLGs are nonenforceable health goals and do not reflect the benefit of the addition of the chemical for control of waterborne microbial contaminants (40 CFR 141.2) [**Added January 1999; Reviewed March 2000**].
- *Maximum Total Trihalomethane Potential* - the maximum concentration of total trihalomethanes produced in a given water containing a disinfectant residual after 7 days at a temperature of 25 °C or above (40 CFR 141.2) [**Reviewed March 2000**].

- *Medium Size Water System* - in reference to lead and copper in systems (40 CFR, Subpart I), this refers to a water system that serves greater than 3300 and less than or equal to 50,000 persons (40 CFR 141.2) [**Reviewed March 2000**].
- *Membrane Filtration* - a pressure or vacuum driven separation process in which particulate matter larger than 1 micrometer is rejected by an engineered barrier, primarily through a size-exclusion mechanism, and which has a measurable removal efficiency of a target organism that can be verified through the application of a direct integrity test. This definition includes the common membrane technologies of microfiltration, ultrafiltration, nanofiltration, and reverse osmosis (40 CFR 141.2) [**Added April 2006**].
- *Near the First Service Connection* - at one of the 20 percent of all service connections in the entire system that are nearest the water supply treatment facility as measured by water transport time within the distribution system (40 CFR 141.2) [**Reviewed March 2000**].
- *New Injection Wells* - an “injection well” which began injection after a UIC program for the State applicable to the well is approved or prescribed (40 CFR 144.3) [**Added July 2003**].
- *Noncommunity Water System* - a public water system that is not a community water system. A noncommunity water system either a transient noncommunity water system (TWS) or a nontransient noncommunity (NTNC) water system (40 CFR 141.2) [**Reviewed March 2000**].
- *Nontransient, Noncommunity Water System* - a public water system that is not a community water system and that regularly serves at least 25 of the same persons over 6 mo per year (40 CFR 141.2) [**Reviewed March 2000**].
- *Non-transient Non-community Water System* - public water system that is not a community water system and that regularly serves at least 25 of the same people over six months a year. These may include systems that provide water to schools, day care centers, government/military installations, manufacturers, hospitals or nursing homes, office buildings, and other facilities (40 CFR 144.86(e)) [**Added July 2003**].
- *Optimal Corrosion Control Treatment* - for the purpose of Subpart I of 40 CFR 141, means the corrosion control treatment that minimizes the lead and copper concentrations at users' taps while insuring that the treatment does not cause the water system to violate any national primary drinking water regulations (40 CFR 141.2) [**Added March 2000**].
- *Other Sensitive Ground Water Areas* - states may also identify other areas in the State in addition to ground water protection areas that are critical to protecting underground sources of drinking water from contamination. These other sensitive ground water areas may include areas such as areas overlying sole-source aquifers; highly productive aquifers supplying private wells; continuous and highly productive aquifers at points distant from public water supply wells; areas where water supply aquifers are recharged; karst aquifers that discharge to surface reservoirs serving as public water supplies; vulnerable or sensitive hydrogeologic settings, such as glacial outwash deposits, eolian sands, and fractured volcanic rock; and areas of special concern selected based on a combination of factors, such as hydrogeologic sensitivity, depth to ground water, significance as a drinking water source, and prevailing land-use practices (40 CFR 144.86(g)) [**Added July 2003**].
- *Owner or Operator* - the owner or operator of any “facility or activity” subject to regulation under the UIC program (40 CFR 144.3 and 146.3) [**Added July 2003**].
- *Packer* – a device lowered into a well to produce a fluid-tight seal (40 CFR 146.3) [**Added July 2003**].
- *Performance Evaluation Sample* - a reference sample provided to a laboratory for the purpose of demonstrating that the laboratory can successfully analyze the sample within limits of performance specified by the USEPA. The true value of the concentration of the reference material is unknown to the laboratory at the time of the analysis (40 CFR 141.2) [**Added March 2000**].

- *Permit* - an authorization, license, or equivalent control document issued by USEPA or an approved State to implement the requirements of this 40 CFR 144, parts 145, 146 and 124. “Permit” includes an area permit (40 CFR 144.33) and an emergency permit (40 CFR 144.34). Permit does not include UIC authorization by rule (40 CFR 144.21), or any permit which has not yet been the subject of final agency action, such as a “draft permit” (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Person* - an individual, association, partnership, corporation, municipality, State, Federal, or Tribal agency, or an agency or employee thereof (40 CFR 144.3) **[Added July 2003]**.
- *Person* - an individual, corporation, company, association, partnership, municipality, or state, federal, or tribal agency (40 CFR 141.2) **[Reviewed March 2000]**.
- *PicoCurie (pCi)* - quantity of radioactive material producing 2.22 nuclear transformations/min (40 CFR 141.2) **[Reviewed March 2000]**.
- *Plant Intake* - the works or structures at the head of a conduit through which water is diverted from a source (e.g., river or lake) into the treatment plant (40 CFR 141.2) **[Added April 2006]**.
- *Plugging* - the act or process of stopping the flow of water, oil or gas into or out of a formation through a borehole or well penetrating that formation (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Plugging Record* – a systematic listing of permanent or temporary abandonment of water, oil, gas, test, exploration and waste injection wells, and may contain a well log, description of amounts and types of plugging material used, the method employed for plugging, a description of formations which are sealed and a graphic log of the well showing formation location, formation thickness, and location of plugging structures (40 CFR 146.3) **[Added July 2003]**.
- *Point of Disinfectant Application* - the point where the disinfectant is applied and water downstream of that point is not subject to recontamination by surface water runoff (40 CFR 141.2) **[Reviewed March 2000]**.
- *Point-of-Entry Treatment Device* - a treatment device applied to the drinking water entering a house or building for the purpose of reducing contaminants in the drinking water distributed throughout the house or building (40 CFR 141.2) **[Reviewed March 2000]**.
- *Point of Injection* - the last accessible sampling point prior to waste fluids being released into the subsurface environment through a Class V injection well. For example, the point of injection of a Class V septic system might be the distribution box--the last accessible sampling point before the waste fluids drain into the underlying soils. For a dry well, it is likely to be the well bore itself (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Point-of-Use Treatment Device* - a treatment device applied to a single tap used for the purpose of reducing contaminants in drinking water at that one tap (40 CFR 141.2) **[Reviewed March 2000]**.
- *Presedimentation* - a preliminary treatment process used to remove gravel, sand and other particulate material from the source water through settling before the water enters the primary clarification and filtration processes in a treatment plant (40 CFR 141.2) **[Added April 2006]**.
- *Pressure* – the total load or force per unit area acting on a surface (40 CFR 146.3) **[Added July 2003]**.
- *Project* - a group of wells in a single operation (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Public Water System* - a system for the provision to the public of water for human consumption through pipes or, after 5 August 1998, other constructed conveyances, if such system has at least 15 service connections or regularly serves an average of at least twenty-five individuals daily at least 60 days out of the year. Such term includes: any collection, treatment, storage, and distribution facilities under control of the operator of such system and used

primarily in connection with such system; and any collection or pretreatment storage facilities not under such control which are used primarily in connection with such system. Such term does not include any “special irrigation district.” A public water system is either a community water system or a noncommunity water system. (40 CFR 141.2) **[Reviewed March 2000]**.

- *Radioactive Waste* - any waste which contains radioactive material in concentrations which exceed those listed in 10 CFR 20, appendix B, table II, column 2 (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *RCRA* - the *Solid Waste Disposal Act* as amended by the *Resource Conservation and Recovery Act of 1976* (Pub. L. 94-580, as amended by Pub. L. 95-609, Pub. L. 96-510, 42 U.S.C. 6901 et seq.) (40 CFR 144.3) **[Added July 2003]**.
- *Regional Administrator* - the Regional Administrator of the appropriate Regional Office of the Environmental Protection Agency or the authorized representative of the Regional Administrator (40 CFR 144.3) **[Added July 2003]**.
- *Rem* - the unit of dose equivalent from ionizing radiation to the total body or any internal organ or organ system. A millirem (mrem) is 1/1000 of a rem (40 CFR 141.2) **[Reviewed March 2000]**.
- *Repeat Compliance Period* - any subsequent compliance period after the initial compliance period (40 CFR 141.2) **[Added March 2000]**.
- *Residual Disinfectant Concentration* - (“C” in CT calculations) is the concentration of disinfectant measured in mg/L in a representative sample of water (40 CFR 141.2) **[Reviewed March 2000]**.
- *SDWA* - the *Safe Drinking Water Act* (Pub. L. 93-523, as amended; 42 U.S.C. 300f et seq.) (40 CFR 144.3) **[Added July 2003]**.
- *Sanitary Defect* - a defect that could provide a pathway of entry for microbial contamination into the distribution system or that is indicative of a failure or imminent failure in a barrier that is already in place (40 CFR 141.2) **[Added April 2013]**.
- *Sanitary Survey* - an onsite review of the water source, facilities, equipment, operation and maintenance of a public water system for the purpose of evaluating the adequacy of such source, facilities, equipment, operation and maintenance for producing and distributing safe drinking water (40 CFR 141.2) **[Reviewed March 2000]**.
- *Sanitary Waste* - liquid or solid wastes originating solely from humans and human activities, such as wastes collected from toilets, showers, wash basins, sinks used for cleaning domestic areas, sinks used for food preparation, clothes washing operations, and sinks or washing machines where food and beverage serving dishes, glasses, and utensils are cleaned. Sources of these wastes may include single or multiple residences, hotels and motels, restaurants, bunkhouses, schools, ranger stations, crew quarters, guard stations, campgrounds, picnic grounds, day-use recreation areas, other commercial facilities, and industrial facilities provided the waste is not mixed with industrial waste (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Schedule of Compliance* - a schedule of remedial measures included in a “permit,” including an enforceable sequence of interim requirements (for example, actions, operations, or milestone events) leading to compliance with the “appropriate Act and regulations” (40 CFR 144.3) **[Added July 2003]**.
- *Seasonal System* - a non-community water system that is not operated as a public water system on a year-round basis and starts up and shuts down at the beginning and end of each operating season (40 CFR 141.2) **[Added April 2013]**.
- *Sedimentation* - a process for removal of solids before filtration by gravity or separation (40 CFR 141.2) **[Reviewed March 2000]**.

- *Service Connection* - as used in the definition of public water system, does not include a connection to a system that delivers water by a constructed conveyance other than a pipe if (40 CFR 141.2) **[Added March 2000]**:
  1. the water is used exclusively for purposes other than residential uses (consisting of drinking, bathing, and cooking, or other similar uses);
  2. the state determines that alternative water to achieve the equivalent level of public health protection provided by the applicable national primary drinking water regulation is provided for residential or similar uses for drinking and cooking; or
  3. the state determines that the water provided for residential or similar uses for drinking, cooking, and bathing is centrally treated or treated at the point of entry by the provider, a pass-through entity, or the user to achieve the equivalent level of protection provided by the applicable national primary drinking water regulations.
- *Septic System* - a “well” that is used to emplace sanitary waste below the surface and is typically comprised of a septic tank and subsurface fluid distribution system or disposal system (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Service Line Sample* - a one liter sample of water collected in accordance with 40 CFR 141.86(b)(3), that has been standing for at least 6 h in a service line (40 CFR 141.2) **[Added March 2000]**.
- *Single Family Structure* - for the purpose of Subpart I of 40 CFR 141, means a building constructed as a single-family residence that is currently used as either a residence or a place of business (40 CFR 141.2) **[Added March 2000]**.
- *Site* - the land or water area where any “facility or activity” is physically located or conducted, including adjacent land used in connection with the facility or activity (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Slow Sand Filtration* - a process involving passage of raw water through a bed of sand at low velocity (generally less than 0.4 m/h) resulting in substantial particulate removal by physical and biological mechanisms (40 CFR 141.2) **[Reviewed March 2000]**.
- *Small Water System* - for the purpose of Subpart I of 40 CFR 141, means a water system that serves 3,300 persons or fewer (40 CFR 141.2) **[Added March 2000]**.
- *Sole or Principal Source Aquifer* – an aquifer which has been designated by the Administrator pursuant to section 1424 (a) or 1424(e) of the SDWA (40 CFR 146.3) **[Added July 2003]**.
- *Special Irrigation District* - an irrigation district in existence prior to May 18, 1994 that provides primarily agricultural service through a piped water system with only incidental residential or similar use where the system or the residential or similar users of the system comply with the exclusion provisions in section 1401(4)(B)(i)(II) or (III) (40 CFR 141.2) **[Added March 2000]**.
- *Standard Sample* - the aliquot of finished drinking water that is examined for the presence of coliform bacteria (40 CFR 141.2) **[Reviewed March 2000]**.
- *State* - the agency of the state or tribal government that has jurisdiction over public water systems. During any period when a state or tribal government does not have primary enforcement responsibility pursuant to Section 1413 of the SDWA (42 USC 300g-2), the term state means the regional administrator of the USEPA (40 CFR 141.2) **[Reviewed March 2000]**.
- *State* - any of the 50 States, the District of Columbia, Guam, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, the Trust Territory of the Pacific Islands, the Commonwealth of the Northern Mariana Islands, or an Indian Tribe treated as a State (40 CFR 144.3) **[Added July 2003]**.

- *State Director* - the chief administrative officer of any State, interstate, or Tribal agency operating an "approved program," or the delegated representative of the State director. If the responsibility is divided among two or more States, interstate, or Tribal agencies, "State Director" means the chief administrative officer of the State, interstate, or Tribal agency authorized to perform the particular procedure or function to which reference is made (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *State Drinking Water Source Assessment and Protection Program* - this is a new approach to protecting drinking water sources, specified in the 1996 Amendments to the *Safe Drinking Water Act* at Section 1453. States must prepare and submit for USEPA approval a program that sets out how States will conduct local assessments, including: delineating the boundaries of areas providing source waters for public water systems; identifying significant potential sources of contaminants in such areas; and determining the susceptibility of public water systems in the delineated areas to the inventoried sources of contamination (40 CFR 144.86(a)) **[Added July 2003]**.
- *State/EPA Agreement* - an agreement between the Regional Administrator and the State which coordinates USEPA and State activities, responsibilities and programs (40 CFR 144.3) **[Added July 2003]**.
- *Stratum* (plural strata) - a single sedimentary bed or layer, regardless of thickness, that consists of generally the same kind of rock material (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Subpart H Systems* - public water systems using surface water or groundwater under the direct influence of surface water as a source that are subject to the requirements of Subpart H of 40 CFR 141 (40 CFR 141.2) **[Added January 1999; Reviewed March 2000]**.
- *Subsidence* – the lowering of the natural land surface in response to: Earth movements; lowering of fluid pressure; removal of underlying supporting material by mining or solution of solids, either artificially or from natural causes; compaction due to wetting (Hydrocompaction); oxidation of organic matter in soils; or added load on the land surface (40 CFR 146.3) **[Added July 2003]**.
- *Subsurface Fluid Distribution System* - an assemblage of perforated pipes, drain tiles, or other similar mechanisms intended to distribute fluids below the surface of the ground (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Supplier of Water* - any person who owns or operates a public water system (40 CFR 141.2) **[Reviewed March 2000]**.
- *Surface Casing* – the first string of well casing to be installed in the well (40 CFR 146.3) **[Added July 2003]**.
- *Surface Water* - all water that is open to the atmosphere and subject to surface runoff (40 CFR 141.2) **[Reviewed March 2000]**.
- *SUVA* - specific Ultraviolet Absorption at 254 nanometers (nm), an indicator of the humic content of water. It is a calculated parameter obtained by dividing a sample's ultraviolet absorption at a wavelength of 254 nm (UV254) (in m=1) by its concentration of dissolved organic carbon (DOC) (in mg/L) (40 CFR 141.2) **[Added January 1999; Reviewed March 2000]**.
- *System with a Single Service Connection* - a system which supplies drinking water to consumers via a single service line (40 CFR 141.2) **[Reviewed March 2000]**.
- *Tier 1 Public Notice* - required for NPDWR violations and situations with significant potential to have serious adverse effects on human health as a result of short-term exposure (40 CFR 141.201(b), Table 2) **[Added July 2000]**.
- *Tier 2 Public Notice* - required for all other NPDWR violations and situations with potential to have serious adverse effects on human health (40 CFR 141.201(b), Table 2) **[Added July 2000]**.

- *Tier 3 Public Notice* - required for all other NPDWR violations and situations not included in Tier 1 and Tier 2 (40 CFR 141.201(b), Table 2) **[Added July 2000]**.
- *Too Numerous to Count* - that the total number of bacterial colonies exceeds 200 on a 47-mm diameter membrane filter used for coliform detection (40 CFR 141.2) **[Added March 2000]**.
- *Total Dissolved Solids* - the total dissolved (filterable) solids as determined by use of the method specified in 40 CFR 136 (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Total Organic Carbon (TOC)* - total organic carbon in mg/L measured using heat, oxygen, ultraviolet irradiation, chemical oxidants, or combinations of these oxidants that convert organic carbon to carbon dioxide, rounded to two significant figures (40 CFR 141.2) **[Reviewed March 2000]**.
- *Total Trihalomethanes (TTHM)* - the sum of the concentration in mg/L of the trihalomethane compounds rounded to two significant figures (40 CFR 141.2) **[Reviewed March 2000]**.
- *Transient Noncommunity Water System (TWS)* - a noncommunity water system that does not regularly serve at least 25 of the same persons over 6 mo per year (40 CFR 141.2) **[Reviewed March 2000]**.
- *Trihalomethane (THM)* - one of the family of organic compounds, named as derivatives of methane, wherein three of the four hydrogen atoms in methane are each substituted by a halogen atom in the molecular structure (40 CFR 141.2) **[Reviewed March 2000]**.
- *Two-stage Lime Softening* - a process in which chemical addition and hardness precipitation occur in each of two distinct unit clarification processes in series prior to filtration (40 CFR 141.2) **[Added April 2006]**.
- *Uncovered Finished Water Storage Facility* - a tank, reservoir, or other facility used to store water that will undergo no further treatment to reduce microbial pathogens except residual disinfection and is directly open to the atmosphere (40 CFR 141.2) **[Added January 1999; Reviewed March 2000; Revised April 2006]**.
- *Virus* - a virus of fecal origin which is infectious to humans by waterborne transmission (40 CFR 141.2) **[Reviewed March 2000]**.
- *Waterborne Disease Outbreak* - the significant occurrence of acute infectious illness, epidemiologically associated with the ingestion of water from a public water system which is deficient in treatment, as determined by the appropriate local or state agency (40 CFR 141.2) **[Reviewed March 2000]**.
- *Well* - a bored, drilled, or driven shaft whose depth is greater than the largest surface dimension; or, a dug hole whose depth is greater than the largest surface dimension; or, an improved sinkhole; or, a subsurface fluid distribution system (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Well Injection* - the subsurface emplacement of fluids through a well (40 CFR 144.3 and 146.3) **[Added July 2003]**.
- *Well Plug* – a watertight and gastight seal installed in a borehole or well to prevent movement of fluids (40 CFR 146.3) **[Added July 2003]**.
- *Well Stimulation* – several processes used to clean the well bore, enlarge channels, and increase pore space in the interval to be injected thus making it possible for wastewater to move more readily into the formation, and includes (40 CFR 146.3) **[Added July 2003]**:
  1. surging,
  2. jetting,
  3. blasting,

- 4. acidizing,
- 5. hydraulic fracturing.
- *Well Monitoring* – the measurement, by on-site instruments or laboratory methods, of the quality of water in a well (40 CFR 146.3) [**Added July 2003**].
- *Wholesale System* - a public water system that treats source water as necessary to produce finished water and then delivers some or all of that finished water to another public water system. Delivery may be through a direct connection or through the distribution system of one or more consecutive systems (40 CFR 141.2) [**Added April 2006**].

#### **F. Records To Review**

- Bacterial and chemical analyses of drinking water, including sampling dates and locations, dates of analyses, analytical methods used, and results of analyses
- Monthly operating reports (flow, chlorine residual, etc.)
- State and public notification of noncompliance with primary drinking water regulations
- Action taken by the facility to correct violations of primary drinking water regulations
- Sanitary surveys of the water system conducted by the facility itself, a private consultant, or any local, state, or Federal agency
- Public notification of noncompliance with secondary MCL for fluoride
- Waivers from the state
- Potable water wells data
- Permits
- Design plans for potable water treatment plant
- Maps of the distribution system
- Inspection and maintenance records for backflow prevention

#### **G. Physical Features To Inspect**

- Laboratory analysis facilities
- Underground injection well
- Drinking water treatment facility
- Storage facilities (elevated and underground)
- Locations where additional treatment occurs such as rechlorination
- Potable wells

#### **H. Guidance for Water Quality Management Checklist Users**

The SDWA requirements for public water systems are outlined in the auditor checklist contained in this document. A public water system (PWS) is defined as a system that has at least 15 service connections or serves an average of at least 25 people for at least 60 days per year. There are three types of PWSs:

1. **Community systems** serve at least 25 people year-round in their primary residences.
2. **Nontransient Noncommunity systems** serve at least 25 of the same persons for more than six months in a year (e.g., schools or factories that have their own water source).
3. **Transient Noncommunity systems** do not serve at least 25 of the same persons for more than six months in a year (e.g., campgrounds, highway rest stops that have their own water source).

Each of these three types of public water systems is regulated differently. For example, in general, community water systems must comply with all regulations. Transient systems do not have to comply with the regulations for contaminants that cause chronic health effects to occur. However, all three types of public water systems must comply

with the Total Coliform Rule, and requirements for nitrate and nitrite. The following table provides a summary of which drinking water regulations apply to each category of PWS.

<b>Applicability of Current Federal Regulations</b>			
<b>Contaminant/Rule</b>	<b>Community Water Systems</b>	<b>Nontransient Non-community Water Systems</b>	<b>Transient Non-community Water Systems</b>
Organic Contaminants	All	All	Some (only epichlorohydrin and acrylamide)
Total Trihalomethanes (TTHM)	Some (Only systems serving more than 10,000)	None	None
Inorganic Contaminants	All	Some (All except arsenic and fluoride)	None
Nitrate and Nitrite	All	All	All
Radionuclides	All	None	None
Total Coliform	All	All	All
Surface Water Treatment	Some (Only PWSs using surface water sources or ground water sources under the direct influence of surface water)	Some (Only PWSs using surface water sources or ground water sources under the direct influence of surface water)	Some (Only PWSs using surface water sources or ground water sources under the direct influence of surface water)
Lead and Copper	All	All	None

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions that have been added or revised as a result of this review are identified as being reviewed, revised or added in March 2000, for example **[Added March 2000]**.

The following is a chart of the analysis process to use to identify which checklist items are applicable to the facility being audited. This chart refers to Federal requirements; there may be additional state regulations to consider.

NOTE: NTNC = Nontransient, noncommunity

<b>COMPLIANCE CATEGORY</b> <b>WATER QUALITY MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>WQ.1</b></p> <p><b>ALL FACILITIES</b></p> <p><b>WQ.1.1.US.</b> The current status of any ongoing or unresolved consent orders, compliance agreements, notices of violations (NOVs), inter-agency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).</p> <p><b>WQ.1.2.US.</b> Analysis of all samples, except turbidity, free chlorine residual, temperature, and pH, to determine compliance with MCLs must be performed in a state-certified laboratory or by a state-approved individual (40 CFR 141.23(k)(6), 141.24(f)(17), 141.24(h)(19), and 141.28) <b>[Reviewed March 2000; Revised October 2006]</b>.</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, interagency agreements, or equivalent state enforcement actions.</p> <p>Verify that laboratory is certified by reviewing documentation of state certification for laboratory analysis.</p> <p>(NOTE: For the purpose of determining compliance with 40 CFR 141.21 through 141.27, 141.30, 141.40, 141.74, 141.89 and 141.402, samples may be considered only if they have been analyzed by a laboratory certified by the State except that measurements of alkalinity, calcium, conductivity, disinfectant residual, orthophosphate, pH, silica, temperature and turbidity may be performed by any person acceptable to the State.)</p>

<b>COMPLIANCE CATEGORY</b> <b>WATER QUALITY MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>WQ.2</b></p> <p><b>MISSING, RISK MANAGEMENT, AND POSITIVE CHECKLIST ITEMS</b></p> <p><b>WQ.2.1.US.</b> Facilities are required to comply with all applicable federal regulatory requirements not contained in this checklist (a finding under this checklist item will have the citation of the applied regulation as a basis of finding).</p> <p><b>WQ.2.2.US.</b> Risk management techniques should be promoted in environmental efforts (MP) [Added April 2002].</p> <p><b>WQ.2.3.US.</b> Facilities should go above and beyond statutory and regulatory compliance (MP) [Added April 2002].</p>	<p>Determine if any new regulations have been issued since the finalization of TEAM.</p> <p>Determine if the facility has activities or facilities that are regulated, but not addressed in this checklist.</p> <p>Verify that the facility is in compliance with all applicable and newly issued regulations.</p> <p>Determine if risk management techniques are promoted in environmental efforts.</p> <p>Determine if the facility has gone above and beyond simply complying with environmental requirements.</p>

<b>COMPLIANCE CATEGORY</b> <b>WATER QUALITY MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<b>PUBLIC WATER SYSTEMS</b>  <b>WQ.10 General</b>  <b>WQ.10.1.US.</b> Records must be kept of actions taken to correct violations of primary drinking water regulations for at least 3 yr (40 CFR 141.33(b)) [Revised March 2000].  <b>WQ.10.2.US.</b> Public water systems which do not collect 5 or more routine total coliform samples per month are required to undergo an initial sanitary survey according to a specified schedule and maintain records of those reviews (40 CFR 141.21(d), 141.21(h), and 141.33(c)) [Revised March 2000; Revised October 2006; Revised April 2013].	<p>Verify that water system records are maintained for at least 3 yr.</p> <p>Determine if there are recurring work programs, spare parts and supplies list, equipment calibration and maintenance history records.</p> <p>(NOTE: This checklist item applies to public water systems (PWSs). A PWS is defined as a system that has at least 15 service connections or serves an average of at least 25 people for at least 60 days per year.) A PWS includes:</p> <ul style="list-style-type: none"> <li>– any collection, treatment, storage, and distribution facilities under control of the operator of such system and used primarily in connection with such system</li> <li>– any collection or pretreatment storage facilities not under such control that are used primarily in connection with such system.</li> </ul> <p>The term “Public Water System(s)” does not include any “special irrigation district.” A public water system is either a community water system or a noncommunity water system. See Checklist User Guidance to determine which checklist items are applicable to the facility being audited.)</p> <p>(NOTE: This checklist item is applicable until 31 March 2016. After that time, the applicable requirements will be found in 40 CFR 141, Subpart Y [141.851 through 141.861]. See checklist items WQ.10.8.US, WQ.15.14.US, WQ.15.15.US, and WQ.30.15.US for Public Water Systems. See WQ.40.28.US for Community Water Systems. See WQ.65.7.US and WQ.65.8.US for NTNC Water Systems.)</p> <p>Verify that public water systems that do not collect five or more routine samples per month have undergone an initial sanitary survey and then undergo a sanitary survey every 5 yr thereafter.</p> <p>(NOTE: Community water systems were required to have undergone an initial sanitary survey by 29 June 1994. Noncommunity water systems were required to have undergone an initial sanitary survey by 29 June 1999.)</p> <p>(NOTE: Noncommunity water systems using only protected and disinfected groundwater, as defined by the State, are only required to undergo a sanitary survey every 10 yr after the initial survey.)</p> <p>Verify that the public water system ensures that the sanitary surveys are performed by the State or an agent approved by the State.</p> <p>(NOTE: The State is supposed to review the results of each sanitary survey to determine whether the existing monitoring frequency is adequate and what</p>

<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
141.26) [Revised March 2000. Revised January 2001; Revised October 2004].	<p>(NOTE: For the purposes of monitoring for gross alpha particle activity, radium-226, radium-228, uranium, and beta particle and photon radioactivity in drinking water, the “detection limit” is defined as follows:</p> <ul style="list-style-type: none"> <li>– Gross alpha particle activity : 3 pCi/L</li> <li>– Radium 226 : 1 pCi/L</li> <li>– Radium 228: 1 pCi/L</li> <li>– Uranium: 1 microgram/L.</li> </ul> <p>Verify that all existing community water systems using groundwater, surface water or systems using both ground and surface water:</p> <ul style="list-style-type: none"> <li>– samples at every entry point to the distribution system that is representative of all sources being used under normal operating conditions</li> <li>– takes each sample at the same sampling point unless conditions make another sampling point more representative of each source or the State has designated a distribution system location.</li> </ul> <p>Verify that all new community water systems or community water systems that use a new source of water:</p> <ul style="list-style-type: none"> <li>– begin to conduct initial monitoring for the new source within the first quarter after initiating use of the source</li> <li>– conduct more frequent monitoring when ordered by the State in the event of possible contamination or when changes in the distribution system or treatment processes occur which may increase the concentration of radioactivity in finished water.</li> </ul> <p>Verify that community water systems conduct initial monitoring for gross alpha particle activity, radium-226, radium-228, and uranium as follows:</p> <ul style="list-style-type: none"> <li>– systems without acceptable historical data collect four consecutive quarterly samples at all sampling points before 31 December 2007</li> <li>– if the average of the initial monitoring results for a sampling point is above the MCL, the system collects and analyzes quarterly samples at that sampling point until the system has results from four consecutive quarters that are at or below the MCL, unless the system enters into another schedule as part of a formal compliance agreement with the State.</li> </ul> <p>(NOTE: States may allow historical monitoring data collected at a sampling point to satisfy the initial monitoring requirements for that sampling point. For gross alpha particle activity, uranium, radium-226, and radium-228 monitoring, the State may waive the final two quarters of initial monitoring for a sampling point if the results of the samples from the previous two quarters are below the detection limit. States may allow community water systems to reduce the future frequency of</p>

<b>COMPLIANCE CATEGORY</b> <b>WATER QUALITY MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>monitoring from once every three years to once every six or nine years at each sampling point.)</p> <p>(NOTE: To fulfill quarterly monitoring requirements for gross alpha particle activity, radium-226, radium-228, or uranium, a system may composite up to four consecutive quarterly samples from a single entry point if analysis is done within a year of the first sample. States will treat analytical results from the composited as the average analytical result to determine compliance with the MCLs and the future monitoring frequency. )</p> <p>(NOTE: A gross alpha particle activity measurement may be substituted for the required radium-226 measurement provided that the measured gross alpha particle activity does not exceed 5 pCi/l. A gross alpha particle activity measurement may be substituted for the required uranium measurement provided that the measured gross alpha particle activity does not exceed 15 pCi/l. The gross alpha measurement shall have a confidence interval of 95% (1.65, where is the standard deviation of the net counting rate of the sample) for radium-226 and uranium.)</p> <p>Verify that, when a system uses a gross alpha particle activity measurement in lieu of a radium-226 and/or uranium measurement, the gross alpha particle activity analytical result is used to determine the future monitoring frequency for radium-226 and/or uranium.</p> <p>Verify that, if the gross alpha particle activity result is less than detection, <math>\frac{1}{2}</math> the detection limit is used to determine compliance and the future monitoring frequency.</p> <p>Verify that community water systems (both surface and ground water) designated by the State as vulnerable sample for beta particle and photon radioactivity by collecting quarterly samples for beta emitters and annual samples for tritium and strontium-90 at each entry point to the distribution system, beginning within one quarter after being notified by the State.</p> <p>(NOTE: Systems already designated by the State must continue to sample until the State reviews and either reaffirms or removes the designation. If the gross beta particle activity minus the naturally occurring potassium-40 beta particle activity at a sampling point has a running annual average (computed quarterly) less than or equal to 50 pCi/L (screening level), the State may reduce the frequency of monitoring at that sampling point to once every 3 yr.)</p> <p>Verify that community water systems (both surface and ground water) designated by the State as utilizing waters contaminated by effluents from nuclear facilities sample for beta particle and photon radioactivity by:</p> <ul style="list-style-type: none"> <li>– collecting quarterly samples for beta emitters and iodine-131 beginning within one quarter after being notified by the State</li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>WATER QUALITY MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>– collecting annual samples for tritium and strontium-90 at each entry point to the distribution system beginning within one quarter after being notified by the State.</p> <p>(NOTE: Systems already designated by the State as systems using waters contaminated by effluents from nuclear facilities must continue to sample until the State reviews and either reaffirms or removes the designation.)</p> <p>(NOTE: Community water systems may analyze for naturally occurring potassium-40 beta particle activity from the same or equivalent sample used for the gross beta particle activity analysis. Systems are allowed to subtract the potassium-40 beta particle activity value from the total gross beta particle activity value to determine if the screening level is exceeded. The potassium-40 beta particle activity must be calculated by multiplying elemental potassium concentrations (in mg/L) by a factor of 0.82.)</p> <p>Verify that, if the gross beta particle activity minus the naturally occurring potassium-40 beta particle activity exceeds the appropriate screening level, an analysis of the sample is performed to identify the major radioactive constituents present in the sample and the appropriate doses are calculated and summed to determine compliance.</p> <p>Verify that doses are also be calculated and combined for measured levels of tritium and strontium to determine compliance.</p> <p>Verify that community water systems monitor monthly at the sampling point(s) which exceed the MCL in 40 CFR 141.66(d) (see checklist item WQ.35.4.US) beginning the month after the exceedance occurs and continue monthly monitoring until the system has established, by a rolling average of 3 monthly samples, that the MCL is being met.</p> <p>(NOTE: The State may require more frequent monitoring for radionuclides than specified in this checklist item, or may require confirmation samples at its discretion. The results of the initial and confirmation samples will be averaged for use in compliance determinations. Each public water system shall monitor at the time designated by the State during each compliance period.)</p> <p>(NOTE: Compliance with 40 CFR 141.66(b) through 141.66(e) will be determined based on the analytical result(s) obtained at each sampling point. If one sampling point is in violation of an MCL, the system is in violation of the MCL. For systems monitoring more than once per year:</p> <ul style="list-style-type: none"> <li>– compliance with the MCL is determined by a running annual average at each sampling point. If the average of any sampling point is greater than the MCL, then the system is out of compliance with the MCL.</li> <li>– if any sample result will cause the running average to exceed the MCL at any sample point, the system is out of compliance with the MCL immediately.)</li> </ul>

<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>WQ.77.9.US.</b> NTNC water systems that add ozone or chlorine dioxide to the water in any part of the drinking water process are required to meet specific monitoring requirements (40 CFR 141.130(a)(1), 141.130(b)(1), 141.131, 141.132(a), 141.132(b)(2) and 141.132(b)(3)) [Added January 1999; Reviewed March 2000; Revised April 2001; Revised April 2006].</p>	<p>performed by laboratories approved by EPA to perform UCMR analyses and using correctly collected samples collected.)</p> <p>(NOTE: If the NTNC water system serves a population of 10,000 or fewer people, and they are notified that they have been selected for UCMR monitoring, their reporting requirements will be specified within the materials that EPA sends the system, including a request for contact information and a request for information associated with the sampling kit.)</p> <p>Verify that NTNC water systems serving a population of 10,000 or fewer people record all data elements on each sample form and sample bottle provided to the facility by the UCMR Sampling Coordinator.</p> <p>(NOTE: NTNC water systems serving 10,000 or fewer people must send this sample information as specified in the instructions of the sampling kit, which will include the due date and return address.)</p> <p>Verify that NTNC water systems serving 10,000 or fewer people report any changes made in data elements 1 through 9 by mailing or emailing an explanation of the nature and purpose of the proposed change to EPA.</p> <p>(NOTE: This requirement applies to Subpart H systems serving 10,000 or more persons beginning 1 January 2002. Subpart H systems serving fewer than 10,000 persons and systems using only groundwater not under the direct influence of surface water must comply with this section beginning 1 January 2004.)</p> <p>Verify that all samples are taken during normal operating conditions.</p> <p>Verify that sample analysis is done using appropriate methodology and is conducted by laboratories that are certified by the USEPA or the State.</p> <p>(NOTE: Systems may consider multiple wells drawing water from a single aquifer as one treatment plant for determining the minimum number of TTHM and HAA5 samples required, if the state approves.)</p> <p>Verify that NTNC water systems using chlorine dioxide, for disinfection or oxidation, perform the following monitoring for chlorite:</p> <ul style="list-style-type: none"> <li>– daily samples at the entrance to the distribution system plus when the daily sample exceeds the chlorite MCL, additional samples in the distribution system the following day at the entrance to the distribution system, as close to the first customer as possible, in a location representative of average residence time, and as close to the end of the distribution system as possible</li> <li>– a monthly three-sample set in the distribution system near the first customer, at a location representative of average residence time, and at a location reflecting maximum residence time in the distribution system.</li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>WATER QUALITY MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>WQ.77.10.US.</b> NTNC water systems serving at least 10,000 people and using a primary or residual disinfectant other than ultraviolet light or delivering water that has been treated with a primary or residual</p>	<p>Verify that daily chlorite monitoring at the entrance to the distribution system is not reduced.</p> <p>(NOTE: Monthly chlorite monitoring in the distribution system may be reduced to one three-sample set per quarter after 1 yr of monitoring where no individual chlorite sample taken in the distribution system exceeds the chlorite MCL and the system has not been required to conduct additional monitoring in response to a exceedance in the daily samples. The system may remain on the reduced monitoring schedule until either any of the three individual chlorite samples taken quarterly in the distribution system exceeds the chlorite MCL or the system is required to conduct additional monitoring in response to a exceedance in the daily samples.)</p> <p>Verify that systems using ozone, for disinfection or oxidation, take one sample per month for each treatment plant in the system using ozone at the entrance to the distribution system while the ozonation system is operating under normal conditions.</p> <p>(NOTE: Until 31 March 2009, systems required to analyze for bromate may reduce monitoring from monthly to quarterly, if the system's average source water bromide concentration is less than 0.05 mg/L based on representative monthly bromide measurements for one year. The system may remain on reduced bromate monitoring until the running annual average source water bromide concentration, computed quarterly, is equal to or greater than 0.05 mg/L based on representative monthly measurements. If the running annual average source water bromide concentration is greater than or equal to 0.05 mg/L, the system must resume routine monitoring for ozone in the following month. Beginning 1 April 2009, systems may no longer use these provisions to qualify for reduced monitoring. A system required to analyze for bromate may reduce monitoring from monthly to quarterly, if the system's running annual average bromate concentration is less than or equal to 0.0025 mg/L based on monthly bromate measurements for the most recent four quarters, with samples analyzed using Method 317.0 Revision 2.0, 326.0 or 321.8. If a system has qualified for reduced bromate monitoring, that system may remain on reduced monitoring as long as the running annual average of quarterly bromate samples less than or equal to 0.0025 mg/L based on samples analyzed using Method 317.0 Revision 2.0, 326.0, or 321.8. If the running annual average bromate concentration is greater than 0.0025 mg/L, the system must resume routine ozone monitoring.)</p> <p>(NOTE: See checklist item WQ.76.1.US for clarification on NTNC water systems.)</p> <p>(NOTE: Compliance with these requirements is not mandatory if the facility serves fewer than 500 people and the facility has taken TTHM and HAA5 samples under 40 CFR 141, Subpart L unless the State notifies the facility that they must conduct standard monitoring or a system specific study. If the facility has not taken TTHM and HAA5 samples under 40 CFR 141, Subpart L or if the State notifies the facility that they must comply, the facility must conduct standard monitoring or a system specific study.)</p>

<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>Verify that the facility disposes or otherwise manages any soil, gravel, sludge, liquids, or other materials removed from or adjacent to the well in accordance with all applicable Federal, state, and local regulations and requirements, as in 40 CFR 144.82(b) (see checklist item WQ.114.2.US).</p> <p>(NOTE: Closure does not mean a facility needs to cease operations, only that there is a need to close a well. A number of alternatives are available for disposing of waste fluids. Examples of alternatives that may be available to motor vehicle stations include:</p> <ul style="list-style-type: none"> <li>– recycling and reusing wastewater as much as possible; collecting and recycling petroleum-based fluids, coolants, and battery acids drained from vehicles</li> <li>– washing parts in a self-contained, recirculating solvent sink, with spent solvents being recovered and replaced by the supplier</li> <li>– using absorbents to clean up minor leaks and spills, placing the used materials in approved waste containers, and disposing of them properly</li> <li>– using a wet vacuum or mop to pick up accumulated rain or snow melt and, if allowed, connecting floor drains to a municipal sewer system or holding tank and, if allowed, disposing of the holding tank contents through a publicly owned treatment works (POTW).</li> </ul> <p>(NOTE: Check with the POTW to see if they would accept the wastes.)</p> <p>(NOTE: In limited cases, the UIC Director may authorize the conversion [reclassification] of a motor vehicle waste disposal well to another type of Class V well. Motor vehicle wells may be converted only if:</p> <ul style="list-style-type: none"> <li>– all motor vehicle fluids are segregated by physical barriers and are not allowed to enter the well</li> <li>– injection of motor vehicle waste is unlikely based on a facility's compliance history and records showing proper waste disposal.)</li> </ul> <p>(NOTE: The use of a semi-permanent plug as the means to segregate waste is not sufficient to convert a motor vehicle waste disposal well to another type of Class V well.)</p>

## Appendix 13-1

### Primary Drinking Water Standards for Organic Contaminants [Revised January 1999; Reviewed March 2000; Revised April 2001; Revised April 2006]

**Table 1:**  
**Maximum Contaminant Levels Applicable to Community Water Systems (40 CFR 141.12)**

40 CFR 141.12 was removed and reserved in the revisions to 40 CFR 141 published in the January 4, 2006 Federal Register, pages 387 – 493.

**Table 2:**  
**Maximum Contaminant Levels Applicable to Community and  
Nontransient, Noncommunity Water Systems (40 CFR 141.61(a))**

Contaminant	mg/L
1,1-Dichloroethylene	0.007
1,1,1-Trichloroethane	0.20
1,2-Dichloroethane	0.005
1,2-Dichloropropane	0.005
Benzene	0.005
Carbon Tetra chloride	0.005
cis-1, 2-Dichloroethylene	0.07
Ethylbenzene	0.7
Monochlorobenzene	0.1
0-Dichlorobenzene	0.6
para-Dichlorobenzene	0.075
Styrene	0.1
Tetrachloroethylene	0.005
Toluene	1.0
trans-1, 2-Dichloroethylene	0.1
Trichloroethylene	0.005
Vinyl chloride	0.002
Xylenes (total)	10.0
Dichloromethane	0.005
1,2,4-Trichlorobenzene	0.07
1,1,2-Trichloroethane	0.005

**Table 3:**  
**Maximum Contaminant Levels For Synthetic Organic Contaminants Applicable to Community Water Systems and Nontransient, Noncommunity Water Systems (40 CFR 141.61(c))**

Contaminant	mg/L
Alachlor	0.002
Aldicarb	0.003
Aldicarb sulfoxide	0.004
Aldicarb sulfone	0.002
Atrazine	0.003
Carbofuran	0.04
Chlordane	0.002
Dibromochloropropane	0.0002
2,4-D	0.07
Ethylene dibromide	0.00005
Heptachlor	0.0004
Heptachlor epoxide	0.0002
Lindane	0.0002
Methoxychlor	0.04
Pentachlorophenol	0.001
Polychlorinated biphenyls	0.0005
Toxaphene	0.003
2,4,5-TP	0.05
Benzo(a)pyrene	0.0002
Delapon	0.2
Di(2-ethyhexyl) adipate	0.4
Di(2-ethyhexyl) phthalate	0.006
Dinoseb	0.007
Diquat	0.02
Endothall	0.1
Endrin	0.002
Glyphosate	0.7
Hexachlorobenzene	0.001
Hexachlorocyclopentadiene	0.05
Oxamyl (Vydate)	0.2
Picloram	0.5
Simazin	0.004
2,3,7,8,-TCDD (Dioxin)	3. x 10 <sup>-8</sup>

## Appendix 13-2

### Primary Drinking Water Standards for Inorganic Contaminants [Reviewed March 2000; Revised April 2003; Revised July 2003; Revised April 2005]

**Table 1:**  
**Community Water System MCLs**  
**(40 CFR 141.11 and 141.62(b))**

Contaminant	mg/L
Antimony	0.006 <sup>c</sup>
Asbestos	7 million fibers/L <sup>c</sup> (longer than 10 micrometers)
Arsenic (40 CFR 141.11(a) and 141.11(b))	0.05 <sup>a</sup>
Arsenic (40 CFR 141.62(b)(16))	0.010 <sup>b c</sup>
Barium	2.0 <sup>c</sup>
Beryllium	0.004 <sup>c</sup>
Cadmium	0.005 <sup>c</sup>
Chromium	0.1 <sup>c</sup>
Cyanide (as free Cyanide)	0.2 <sup>c</sup>
Fluoride (40 CFR 141.62(b)(1))	4.0 <sup>c</sup>
Mercury	0.002 <sup>c</sup>
Nitrate (as N)	10.0 <sup>c</sup>
Nitrite (as N)	1.0 <sup>c</sup>
Selenium	0.05 <sup>c</sup>
Thallium	0.002 <sup>c</sup>
Total Nitrate and Nitrite (as N)	10.0 <sup>c</sup>

<sup>a</sup> The value for arsenic is effective until 23 January 2006.

<sup>b</sup> Table 4 at the end of this Appendix identifies the affordable technology, treatment technique, or other means available to systems serving 10,000 persons or fewer for achieving the compliance MCL listed for arsenic at 40 CFR 141.62(b)(16)).

<sup>c</sup> See Table 5 at the end of this Appendix for information on the best technology, treatment technique, or other means available to achieving compliance with the MCL for inorganic contaminants identified in 40 CFR 141.62(b) except for fluoride.

(NOTE: 40 CFR 141.12 concerning the MCL for total trihalomethanes at Community Water Systems expired 31 December 2003.)

**Table 2:**

**Nontransient, Noncommunity Water System MCLs  
(40 CFR 141.62(b)(2) through 141.62(b)(16))<sup>a</sup>**

Contaminant	mg/L
Antimony	0.006
Arsenic	0.010 <sup>b</sup>
Asbestos	7 million fibers/L (longer than 10 micrometers)
Barium	2.0
Beryllium	0.004
Cadmium	0.005
Chromium	0.1
Cyanide (as free Cyanide)	0.2
Mercury	0.002
Nitrate (as N)	10.0
Nitrite (as N)	1.0
Selenium	0.05
Thallium	0.002
Total Nitrate and Nitrite (as N)	10.0

<sup>a</sup> Table 4 at the end of this Appendix identifies the affordable technology, treatment technique, or other means available to systems serving 10,000 persons or fewer for achieving the compliance MCL listed for arsenic at 40 CFR 141.62(b)(16)).

<sup>b</sup> See Table 5 at the end of this Appendix for information on the best technology, treatment technique, or other means available to achieving compliance with the MCL for inorganic contaminants identified in 40 CFR 141.62(b) except for fluoride.

**Table 3**

**Transient Noncommunity Water System MCLs<sup>a</sup>  
(40 CFR 141.62(b)(7) through 141.62(b)(9))**

Contaminant	mg/L
Nitrate (as N)	10.0
Nitrite (as N)	1.0
Total Nitrate and Nitrite (as N)	10.0

<sup>a</sup> See Table 5 at the end of this Appendix for information on the best technology, treatment technique, or other means available to achieving compliance with the listed MCLs.

**Table 4**

**Small System Compliance Technologies (SSCTs)<sup>a</sup> for Arsenic<sup>b</sup>  
(40 CFR 141.62(b)(d))**

The following table identifies the affordable technology, treatment technique, or other means available to systems serving 10,000 persons or fewer for achieving compliance with the MCL for arsenic as published in 40 CFR 141.62(b)(16).

<b>Small system compliance technology</b>	<b>Affordable for listed small system categories<sup>c</sup></b>
Activated Alumina (centralized).	All size categories
Activated Alumina (Point-of-Use) <sup>d</sup>	All size categories
Coagulation/Filtration <sup>e</sup>	501-3,300, 3,301-10,000
Coagulation-assisted Microfiltration	501-3,300, 3,301-10,000
Electrodialysis reversal <sup>f</sup>	501-3,300, 3,301-10,000
Enhanced coagulation/filtration	All size categories
Enhanced lime softening (pH 10.5)	All size categories
Ion Exchange	All size categories
Lime Softening <sup>e</sup>	501-3,300, 3,301-10,000
Oxidation/Filtration <sup>g</sup>	All size categories
Reverse Osmosis (centralized) <sup>f</sup>	501-3,300, 3,301-10,000
Reverse Osmosis (Point-of-Use) <sup>d</sup>	All size categories

<sup>a</sup> Section 1412(b)(4)(E)(ii) of SDWA specifies that SSCTs must be affordable and technically feasible for small systems.

<sup>b</sup> SSCTs for Arsenic V. Pre-oxidation may be required to convert Arsenic III to Arsenic V.

<sup>c</sup> The Act (ibid.) specifies three categories of small systems: (i) those serving 25 or more, but fewer than 501, (ii) those serving more than 500, but fewer than 3,301, and (iii) those serving more than 3,300, but fewer than 10,001.

<sup>d</sup> When POU or POE devices are used for compliance, programs to ensure proper long-term operation, maintenance, and monitoring must be provided by the water system to ensure adequate performance.

<sup>e</sup> Unlikely to be installed solely for arsenic removal. May require pH adjustment to optimal range if high removals are needed.

<sup>f</sup> Technologies reject a large volume of water--may not be appropriate for areas where water quantity may be an issue.

<sup>g</sup> To obtain high removals, iron to arsenic ratio must be at least 20:1.

**Table 5**

**BAT for Inorganic Compounds Listed in Section 141.62(b)  
(40 CFR 141.62(c))**

The following are the best technology, treatment technique, or other means available for achieving compliance with the MCLs for inorganic contaminants identified in 40 CFR 141.62(b), except fluoride.

<b>Chemical Name</b>	<b>BAT(s)</b>
Antimony	2, 7
Arsenic <sup>d</sup>	1, 2, 5, 6, 7, 9, 12 <sup>e</sup>
Asbestos	2, 3, 8
Barium	5, 6, 7, 9
Beryllium	1, 2, 5, 6, 7
Cadmium	2,5,6,7
Chromium	2, 5, 6 <sup>b</sup> , 7
Cyanide	5, 7, 10
Mercury	2 <sup>a</sup> , 4, 6 <sup>a</sup> , 7 <sup>a</sup>
Nickel	5, 6, 7
Nitrate	5, 7, 9
Nitrite	5, 7
Selenium	1, 2 <sup>c</sup> , 6, 7, 9
Thallium	1,5

<sup>a</sup> BAT only if influent Hg concentrations  $\leq 10 \mu\text{g/l}$ .

<sup>b</sup> BAT for Chromium III only.

<sup>c</sup> BAT for Selenium IV only.

<sup>d</sup> BATs for Arsenic V. Pre-oxidation may be required to convert Arsenic III to Arsenic V.

<sup>e</sup> To obtain high removals, iron to arsenic ratio must be at least 20:1.

Key to BATs in Table

- 1 = Activated Alumina
- 2 = Coagulation/Filtration (not BAT for systems < 500 service connections)
- 2 = Coagulation/Filtration
- 3 = Direct and Diatomite Filtration
- 4 = Granular Activated Carbon
- 5 = Ion Exchange
- 6 = Lime Softening (not BAT for systems < 500 service connections)
- 7 = Reverse Osmosis
- 8 = Corrosion Control
- 9 = Electrodialysis
- 10 = Chlorine
- 11= Ultraviolet
- 12 = Oxidation/Filtration

### Appendix 13-3

#### Detection Limitations for Inorganic Contaminants

(40 CFR 141.23(a))

[Reviewed March 2000; Revised January 2003; Revised April 2003]

Contaminant	MCL (mg/L)	Analytical Method	Detection Limit (mg/L)
Antimony	0.006	Atomic Absorption Furnace	0.003
		Atomic Absorption: Platform	0.0008 <sup>5</sup>
		ICP Mass spectrometry	0.0004
		Hydride Atomic Absorption	0.001
Asbestos	7 MFL <sup>1</sup>	Transmission Electron Microscopy	0.01 million fibers/L
Arsenic	0.0106	Atomic Absorption; Furnace	0.001
		Atomic Absorption; Platform-- Stabilized Temperature	0.00057
		Atomic Absorption; Gaseous Hydride	0.001
		ICP-Mass Spectrometry	0.00148
Barium	2.0	Atomic Absorption; furnace technique	0.002
		Atomic Absorption; direct aspiration	0.1
		Inductively Coupled Plasma	0.002(0.001)
Beryllium	0.004	Atomic Absorption, Furnace	0.0002
		Atomic Absorption: Platform	0.000025
		Inductively Coupled Plasma <sup>3</sup>	0.0003
		ICP Mass Spectrometry	0.0003
Cadmium	0.005	Atomic Absorption; furnace technique	0.0001
		Inductively Coupled Plasma <sup>2</sup>	0.001
Chromium	0.1	Atomic Absorption; furnace technique	0.001
		Inductively Coupled Plasma	0.007 (0.001)
Cyanide	0.2	Distillation, Spectrophotometric <sup>3</sup>	0.02
		Distillation, Automated, Spectrophotometric <sup>3</sup>	0.005
		Distillation, Selective Electrode <sup>3</sup>	0.05
		UV Distillation, Spectrophotometric	0.0005
		Distillation, Spectrophotometric	0.0006
Mercury	0.002	Manual Cold Vapor Technique	0.0002
		Automated Cold Vapor Technique	0.0002
Nickel	0.1	Atomic Absorption, Furnace	0.001
		Atomic Absorption: Platform	0.0006 <sup>5</sup>
		Inductively Coupled Plasma <sup>3</sup>	0.005
		ICP Mass Spectrometry	0.0005
Nitrate	10 as N	Manual Cadmium Reduction	0.01
		Automated Hydrazine Reduction	0.01
		Automated Cadmium Reduction	0.05
		Ion Selective Electrode	1.0
		Ion Chromatography	0.01

Contaminant	MCL (mg/L)	Analytical Method	Detection Limit (mg/L)
Nitrite	1 as N	Spectrophotometric	0.01
		Automated Cadmium Reduction	0.05
		Manual Cadmium Reduction	0.01
		Ion Chromatography	0.004
Selenium	0.05	Atomic Absorption; furnace	0.002
		Atomic Absorption; gaseous hydride	0.002
Thallium	0.002	Atomic Absorption Furnace	0.001
		Atomic Absorption: Platform	0.0007 <sup>5</sup>
		ICP-Mass Spectrometry	0.0003

<sup>1</sup> MFL = million fibers per liter > 10 ppm.

<sup>2</sup> Using a 2x preconcentration step as noted in Method 200.7. Lower MDLs may be achieved by using a 4x preconcentration.

<sup>3</sup> Screening method for total cyanides.

<sup>4</sup> Measures “free” cyanides.

<sup>5</sup> Lower MDLs are reported using stabilized temperature graphite furnace atomic absorption.

<sup>6</sup> The value for arsenic is effective January 23, 2006. Until then, the MCL is 0.05 mg/L.

<sup>7</sup> The MDL reported for USEPA Method 200.9 (Atomic Absorption; Platform--Stabilized Temperature) was determined using a 2x concentration step during sample digestion. The MDL determined for samples analyzed using direct analyses (i.e., no sample digestion) will be higher. Using multiple depositions, USEPA 200.9 is capable of obtaining MDL of 0.0001 mg/L.

<sup>8</sup> Using selective ion monitoring, USEPA Method 200.8 (ICP-MS) is capable of obtaining a MDL of 0.0001 mg/L.

## Appendix 13-4

### Detection Limitations (40 CFR 141.24(h)(18)) [Reviewed March 2000]

Contaminant	Detection Limit
Alachlor	0.0002
Aldicarb	0.0005
Aldicarb sulfoxide	0.0005
Aldicarb sulfone	0.0008
Atrazine	0.0001
Benzo[a]pyrene	0.00002
Carbofuran	0.0009
Chlordane	0.0002
Dalapon	0.001
1,2- Dibromo-3-chloro propane (DBCP)	0.00002
Di (2-ethylhexyl) adipate	0.0006
Di (2-ethylhexyl) phthalate	0.0006
Dinoseb	0.0002
Diquat	0.0004
2,4-D	0.0001
Endothall	0.009
Endrin	0.00001
Ethylene dibromide (EDB)	0.00001
Glyphosate	0.006
Heptachlor	0.00004
Heptachlor epoxide	0.00002
Hexachlorobenzene	0.0001
Hexachlorocyclopentadiene	0.0001

Contaminant	Detection Limit
Lindane	0.00002
Methoxychlor	0.0001
Oxamyl	0.002
Picloram	0.0001
Pentachlorophenol	0.00004
Polychlorinated biphenyls	0.0001
Simazine	0.00007
Toxaphene	0.001
2,3,7,8-TCDD (Dioxin)	0.000000005
2,4,5-TP (Silvex)	0.0002

## Appendix 13-5

### Unregulated Contaminant Monitoring (40 CFR 141.40(a)(3), Table 1)

[Revised October 1999; Revised April 2000; Revised April 2001; Revised July 2001;  
Revised April 2007; Revised July 2012; Revised January 2017]

Table 1—UCMR Contaminant List

<b>List 2: Screening Survey</b>					
Reserved	Reserved	Reserved	Reserved	Reserved	Reserved
<b>List 3: Pre-Screen Testing</b>					
Reserved	Reserved	Reserved	Reserved	Reserved	Reserved

Column headings are:

- 1-- Contaminant: The name of the contaminants to be analyzed.
- 2--CAS (Chemical Abstract Service Number) Registry No. or Identification Number: A unique number identifying the chemical contaminants.
- 3--Analytical Methods: Method numbers identifying the methods that must be used to test the contaminants.
- 4--Minimum Reporting Level: The value and unit of measure at or above which the concentration of the contaminant must be measured using the approved analytical methods. If EPA determines, after the first 6 mo of monitoring, that the specified MRLs result in excessive resampling, EPA will establish alternate MRLs and will notify affected PWSs and laboratories of the new MRLs.

5--Sampling Location: The locations within a PWS at which samples must be collected.

6--Period During Which Monitoring to be Completed: The time period during which the sampling and testing will occur for the indicated contaminant.

<sup>a</sup> The analytical procedures shall be performed in accordance with the documents associated with each method.

<sup>b</sup> The minimum reporting level (MRL) is the minimum concentration of each analyte that must be reported to EPA.

<sup>c</sup> With the exception of HAA monitoring, sampling must occur at entry points to the distribution system (EPTDSs), after treatment is applied, that represent each non-emergency water source in routine use over the 12-month period of monitoring. Systems that purchase water with multiple connections from the same wholesaler may select one representative connection from that wholesaler. This EPTDS sampling location must be representative of the highest annual volume connections. If the connection selected as the representative EPTDS is not available for sampling, an alternate highest volume representative connection must be sampled. See 40 CFR 141.35(c)(3) for an explanation of the requirements related to the use of representative GW EPTDSs. Sampling for UCMR 4 HAA groups must be conducted at the Disinfectants and Disinfection Byproduct Rule (D/DBPR) sampling locations (40 CFR 141.622).

<sup>d</sup> HAA monitoring applies only to those PWSs that are subject to D/DBPR HAA5 monitoring requirements.

<sup>e</sup> PWSs that purchase 100 percent of their water ("consecutive systems") are not required to collect UCMR 4 source water samples for TOC or bromide analyses. Sampling for TOC and bromide must otherwise occur at source water influent locations representing untreated water entering the water treatment plant (i.e., a location prior to any treatment). SW and GWUDI systems subject to the D/DBPR TOC monitoring must use their D/DBPR TOC source water sampling site(s) from 40 CFR 141.132 for UCMR 4 TOC and bromide samples. SW and GWUDI systems that are not subject to D/DBPR TOC monitoring will use their Long Term 2 Enhance Surface Water Treatment Rule (LT2) source water sampling site(s) (40 CFR 141.703) for UCMR 4 TOC and bromide samples. Ground water systems that are subject to the D/DBPRs, and therefore subject to UCMR 4 HAA monitoring, will take TOC and bromide samples at their influents entering their treatment train. TOC and bromide must be collected at the same time as HAA samples. These indicator samples must be collected at a single source water influent using methods already approved for compliance monitoring. TOC methods include: SM 5310 B, SM 5310 C, SM 5310 D (21st edition), or SM 5310 B-00, SM 5310 C-00, SM 5310 D-00 (SM Online), EPA Method 415.3 (Rev. 1.1 or 1.2). Bromide methods include: EPA Methods 300.0 (Rev. 2.1), 300.1 (Rev. 1.0), 317.0 (Rev. 2.0), 326.0 (Rev. 1.0) or ASTM D 6581-12.

## Appendix 13-6

### Coliform Bacteria Sampling Frequency (40 CFR 141.21(a)(2), 141.21(h), and 141.857(b)) [Reviewed March 2000; Revised April 2013]

Table 1

NOTE: This Table is applicable until 31 March 2016

Population Served	Minimum Number of Samples Per Month
<sup>1</sup> 25 to 1000	1
1001 to 2500	2
2501 to 3300	3
3301 to 4100	4
4101 to 4900	5
4901 to 5800	6
5801 to 6700	7
6701 to 7600	8
7601 to 8500	9
8501 to 12,900	10
12,901 to 17,200	15
17,201 to 21,500	20
21,501 to 25,000	25
25,001 to 33,000	30
33,001 to 41,000	40
41,001 to 50,000	50
50,001 to 59,000	60
59,001 to 70,000	70
70,001 to 83,000	80
83,001 to 96,000	90
96,001 to 130,000	100

Population Served	Minimum Number of Samples Per Month
130,001 to 220,000	120
220,001 to 320,000	150
320,001 to 450,000	180
450,001 to 600,000	210
600,001 to 780,000	240
780,001 to 970,000	270
970,001 to 1,230,000	300
1,230,001 to 1,520,000	330
1,520,001 to 1,850,000	360
1,850,001 to 2,270,000	390
2,270,001 to 3,020,000	420
3,020,001 to 3,960,000	450
3,960,001 or more	480

<sup>1</sup> Includes public water systems that have at least 15 service connections, but serve fewer than 25 persons.

**Table 1**

**NOTE: This Table is applicable beginning 1 April 2016**

Population Served	Minimum Number of Samples Per Month
1001 to 2500	2
2501 to 3300	3
3301 to 4100	4
4101 to 4900	5
4901 to 5800	6

3,960,001 or more	480

## Appendix 13-6a

### Consumer Confidence Report Contents (40 CFR 141.153 and 141.154)

[Revised January 1999; Reviewed March 2000; Revised July 2000; Revised April 2001; Revised July 2001; Revised April 2002; Revised April 2003; Revised April 2006; Revised January 2007; Revised October 2007; Revised January 2008; Revised April 2013]

- a. Each community water system must provide to its customers an annual report that contains the information specified below in items “a” through “h” and the required additional health information listed on pages H4 through H5.” The full text of the regulations regarding Consumer Confidence Report contents can be found in 40 CFR 141.153 and 141.154.
- b. Each report must identify the source(s) of the water delivered by the community water system by providing information on:
  1. The type of the water: e.g., surface water, groundwater; and
  2. The commonly used name (if any) and location of the body (or bodies) of water.

If a source water assessment has been completed, the report must notify consumers of the availability of this information and the means to obtain it. In addition, systems are encouraged to highlight in the report significant sources of contamination in the source water area if they have readily available information. Where a system has received a source water assessment from the primacy agency, the report must include a brief summary of the system's susceptibility to potential sources of contamination, using language provided by the primacy agency or written by the operator.

- c. Each report must include the following definitions:

*Maximum Contaminant Level Goal or MCLG:* The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

*Maximum Contaminant Level or MCL:* The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

A report for a community water system operating under a variance or an exemption issued under Sections 1415 or 1416 of the SDWA must include the following definition:

- *Variances and Exemptions:* state or U.S. EPA permission not to meet an MCL or a treatment technique under certain conditions.

A report that contains data on contaminants that EPA regulates using any of the following terms must include the applicable definitions:

- *Treatment Technique:* A required process intended to reduce the level of a contaminant in drinking water.
- *Action Level:* The concentration of a contaminant that, if exceeded, triggers treatment or other requirements that a water system must follow.
- *Maximum residual disinfectant level goal or MRDLG:* The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- *Maximum residual disinfectant level or MRDL:* The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

A report that contains information regarding a Level 1 or Level 2 Assessment required under 40 CFR 141, Subpart Y must include the applicable definitions:

- *Level 1 Assessment:* A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.
- *Level 2 Assessment:* A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an *E. coli* MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

d. Information on Detected Contaminants. This subsection specifies the requirements for information to be included in each report for contaminants subject to mandatory monitoring (except *Cryptosporidium*). It applies to:

1. Contaminants subject to an MCL, action level, maximum residual disinfectant level, or treatment technique (regulated contaminants)
2. Contaminants for which monitoring is required by 40 CFR 141.40 (unregulated contaminants); and
3. Disinfection by-products or microbial contaminants for which monitoring is required by 40 CFR 141.142 and 141.143, except as provided under paragraph (e)(1) of this section, and which are detected in the finished water.

The data relating to these contaminants must be displayed in one table or in several adjacent tables. Any additional monitoring results that a community water system chooses to include in its report must be displayed separately.

The data must be derived from data collected to comply with U.S. EPA and state monitoring and analytical requirements during calendar year 1998 for the first report and subsequent calendar years thereafter except that:

1. Where a system is allowed to monitor for regulated contaminants less often than once a year, the table(s) must include the date and results of the most recent sampling and the report must include a brief statement indicating that the data presented in the report are from the most recent testing done in accordance with the regulations. No data older than 5 years need be included.
2. Results of monitoring in compliance with 40 CFR 141.142 and 141.143 need only be included for 5 years from the date of last sample or until any of the detected contaminants becomes regulated and subject to routine monitoring requirements, whichever comes first.

For detected regulated contaminants (listed in Appendix A to 40 CFR 141, Subpart O), the table(s) must contain:

1. The MCL for that contaminant expressed as a number equal to or greater than 1.0 (as provided in Appendix A to 40 CFR 141, Subpart O);
2. The MCLG for that contaminant expressed in the same units as the MCL;
3. If there is no MCL for a detected contaminant, the table must indicate that there is a treatment technique, or specify the action level, applicable to that contaminant, and the report must include the definitions for treatment technique and/or action level, as appropriate, specified in paragraph(c)(3) of 40 CFR 141.153;
4. For contaminants subject to an MCL, except turbidity and total coliform, fecal coliform, and *E. coli*, the highest contaminant level used to determine compliance with an NPDWR and the range of detected levels, as follows:
  - i. When compliance with the MCL is determined annually or less frequently: The highest detected level at any sampling point and the range of detected levels expressed in the same units as the MCL.
  - ii. When compliance with the MCL is determined by calculating a running annual average of all samples taken at a monitoring location: the highest average of any of the monitoring locations and the range of all monitoring locations expressed in the same units as the MCL. For the MCLs for TTHM and HAA5 in 40 CFR 141.64(b)(2), systems must include the highest locational running annual average for TTHM and HAA5 and the range of individual sample results for all

- monitoring locations expressed in the same units as the MCL. If more than one location exceeds the TTHM or HAA5 MCL, the system must include the locational running annual averages for all locations that exceed the MCL.
- iii. When compliance with the MCL is determined on a system-wide basis by calculating a running annual average of all samples at all monitoring locations: the average and range of detection expressed in the same units as the MCL. The system is required to include individual sample results for the IDSE conducted under 40 CFR 141, Subpart U when determining the range of TTHM and HAA5 results to be reported in the annual consumer confidence report for the calendar year that the IDSE samples were taken.
5. For turbidity.
    - i. When it is reported pursuant to 40 CFR 141.13: The highest average monthly value.
    - ii. When it is reported pursuant to the requirements of 40 CFR 141.71: the highest monthly value. The report should include an explanation of the reasons for measuring turbidity.
    - iii. When it is reported pursuant to 40 CFR 141.73, 141.173, or 141.551: The highest single measurement and the lowest monthly percentage of samples meeting the turbidity limits specified in 40 CFR 141.73, 141.173, or 141.551 for the filtration technology being used. The report should include an explanation of the reasons for measuring turbidity;
  6. For lead and copper: the 90th percentile value of the most recent round of sampling and the number of sampling sites exceeding the action level;
  7. For total coliform analytical results until 31 March 2016:
    - i. The highest monthly number of positive samples for systems collecting fewer than 40 samples per month; or
    - ii. The highest monthly percentage of positive samples for systems collecting at least 40 samples per month;
  8. For fecal coliform and *E. coli* until 31 March 2016: The total number of positive samples; and
  9. The likely source(s) of detected contaminants to the best of the operator's knowledge. Specific information regarding contaminants may be available in sanitary surveys and source water assessments, and should be used when available to the operator. If the operator lacks specific information on the likely source, the report must include one or more of the typical sources for that contaminant listed in appendix A to this subpart that is most applicable to the system.
  10. For *E. coli* analytical results under 40 CFR 141, Subpart Y: The total number of positive results.

If a community water system distributes water to its customers from multiple hydraulically independent distribution systems that are fed by different raw water sources, the table should contain a separate column for each service area, and the report should identify each separate distribution system. Alternatively, systems could produce separate reports tailored to include data for each service area.

The table(s) must clearly identify any data indicating violations of MCLs, MRDLs, or treatment techniques, and the report must contain a clear and readily understandable explanation of the violation including: the length of the violation, the potential adverse health effects, and actions taken by the system to address the violation. To describe the potential health effects, the system must use the relevant language of Appendix A to Subpart O of 40 CFR 141.

For detected unregulated contaminants for which monitoring is required (except *Cryptosporidium*), the table(s) must contain the average and range at which the contaminant was detected. The report may include a brief explanation of the reasons for monitoring for unregulated contaminants.

e. Information on *Cryptosporidium*, radon, and other contaminants:

If the system has performed any monitoring for *Cryptosporidium*, including monitoring performed to satisfy the requirements of 40 CFR 141.143, which indicates that *Cryptosporidium* may be present in the source water or the finished water, the report must include:

1. A summary of the results of the monitoring; and
2. An explanation of the significance of the results.

If the system has performed any monitoring for radon that indicates that radon may be present in the finished water, the report must include:

1. The results of the monitoring; and
2. An explanation of the significance of the results.

If the system has performed additional monitoring that indicates the presence of other contaminants in the finished water, U.S. EPA strongly encourages systems to report any results that may indicate a health concern. To determine if results may indicate a health concern, U.S. EPA recommends that systems find out if U.S. EPA has proposed an NPDWR or issued a health advisory for that contaminant by calling the Safe Drinking Water Hotline (800-426-4791). U.S. EPA considers detects above a proposed MCL or health advisory level to indicate possible health concerns. For such contaminants, U.S. EPA recommends that the report include:

1. The results of the monitoring; and
2. An explanation of the significance of the results noting the existence of a health advisory or a proposed regulation.

f. Compliance with NPDWR. In addition to the requirements of 40 CFR 141.153(d)(6), the report must note any violation that occurred during the year covered by the report of a requirement listed below, and include a clear and readily understandable explanation of the violation, any potential adverse health effects, and the steps the system has taken to correct the violation.

1. Monitoring and reporting of compliance data;
2. Filtration and disinfection prescribed by Subpart H of 40 CFR 141. For systems that have failed to install adequate filtration or disinfection equipment or processes, or have had a failure of such equipment or processes which constitutes a violation, the report must include the following language as part of the explanation of potential adverse health effects: Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.
3. Lead and copper control requirements prescribed by Subpart I of 40 CFR 141. For systems that fail to take one or more actions prescribed by 40 CFR 141.80(d), 141.81, 141.82, 141.83, or 141.84, the report must include the applicable language of Appendix A to Subpart O of 40 CFR 141 for lead, copper, or both.
4. Treatment techniques for Acrylamide and Epichlorohydrin prescribed by 40 CFR 141, Subpart K. For systems that violate the requirements of 40 CFR 141, Subpart K, the report must include the relevant language from Appendix A to Subpart O of 40 CFR 141.
5. Recordkeeping of compliance data.
6. Special monitoring requirements prescribed by 40 CFR 141.40 and 141.41; and
7. Violation of the terms of a variance, an exemption, or an administrative or judicial order.

g. Variances and Exemptions. If a system is operating under the terms of a variance or an exemption issued under Sections 1415 or 1416 of the SDWA, the report must contain:

1. An explanation of the reasons for the variance or exemption;
2. The date on which the variance or exemption was issued;
3. A brief status report on the steps the system is taking to install treatment, find alternative sources of water, or otherwise comply with the terms and schedules of the variance or exemption; and
4. A notice of any opportunity for public input in the review, or renewal, of the variance or exemption.

h. Additional information:

The report must contain a brief explanation regarding contaminants that may reasonably be expected to be found in drinking water including bottled water. This explanation may include the language of items h(1) through h(3) listed below or systems may use their own comparable language. The report must also include the language of item h(4) below.

1. The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.
2. Contaminants that may be present in source water include:

- i. Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
  - ii. Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
  - iii. Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
  - iv. Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
  - v. Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.
3. To ensure that tap water is safe to drink, U.S. EPA prescribes regulations to limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.
  4. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (800-426-4791).

The report must include the telephone number of the owner, operator, or designee of the community water system as a source of additional information concerning the report.

In communities with a large proportion of non-English speaking residents, as determined by the Primacy Agency, the report must contain information in the appropriate language(s) regarding the importance of the report or contain a telephone number or address where such residents may contact the system to obtain a translated copy of the report or assistance in the appropriate language.

The report must include information (e.g., time and place of regularly scheduled board meetings) about opportunities for public participation in decisions that may affect the quality of the water.

The systems may include such additional information as they deem necessary for public education consistent with, and not detracting from, the purpose of the report.

For systems required to comply with subpart S:

1. Any ground water system that receives notice from the State of a significant deficiency or notice from a laboratory of a fecal indicator-positive ground water source sample that is not invalidated by the State under 40 CFR 141.402(d) must inform its customers of any significant deficiency that is uncorrected at the time of the next report or of any fecal indicator-positive ground water source sample in the next report. The system must continue to inform the public annually until the State determines that particular significant deficiency is corrected or the fecal contamination in the ground water source is addressed under 40 CFR 141.403(a). Each report must include the following elements.
  - i. The nature of the particular significant deficiency or the source of the fecal contamination (if the source is known) and the date the significant deficiency was identified by the State or the dates of the fecal indicator-positive ground water source samples;
  - ii. If the fecal contamination in the ground water source has been addressed under 40 CFR 141.403(a) and the date of such action;
  - iii. For each significant deficiency or fecal contamination in the ground water source that has not been addressed under 40 CFR 141.403(a), the State-approved plan and schedule for correction, including interim measures, progress to date, and any interim measures completed; and
  - iv. If the system receives notice of a fecal indicator-positive ground water source sample that is not invalidated by the State under 40 CFR 141.402(d), the potential health effects using the health effects language of Appendix A of subpart O.
2. If directed by the State, a system with significant deficiencies that have been corrected before the next report is issued must inform its customers of the significant deficiency, how the deficiency was corrected, and the date of correction under paragraph (h)(6)(i) of this section.

Any system required to comply with the Level 1 assessment requirement or a Level 2 assessment requirement that is not due to an *E. coli* MCL violation must include in the report the text found in 40 CFR 141.153(h)(7)(i)(A) and 40 CFR 141.153(h)(7)(i)(B) and (C) of this section as appropriate, filling in the blanks accordingly and the text found in paragraphs 40 CFR 141.153(h)(7)(i)(D)(1) and (2) if appropriate.

**Required Additional Health Information. (40 CFR 141.154)**

- a. All reports must prominently display the following language: Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their healthcare providers. U.S. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).
- b. Ending in the report due by 1 July 2001, a system which detects arsenic at levels above 0.025 mg/L, but below the 0.05 mg/L, and beginning in the report due by 1 July 2002, a system that detects arsenic above 0.005 mg/L and up to and including 0.010 mg/L:
  1. Must include in its report a short informational statement about arsenic, using language such as: U.S. EPA is reviewing the drinking water standard for arsenic because of special concerns that it may not be stringent enough. Arsenic is a naturally occurring mineral known to cause cancer in humans at high concentrations.
  2. May write its own educational statement, but only in consultation with the Primacy Agency.
- c. A system that detects nitrate at levels above 5 mg/L, but below the MCL:
  1. Must include a short informational statement about the impacts of nitrate on children using language such as: Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than 6 mo of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, you should ask advice from your health care provider.
  2. May write its own educational statement, but only in consultation with the Primacy Agency.
- d. Every report must include the following lead-specific information:
  1. A short informational statement about lead in drinking water and its effects on children. The statement must include the following information:

“If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. [NAME OF UTILITY] is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 sec to 2 min before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.”
  2. A system may write its own educational statement, but only in consultation with the State.

**Community water systems that detect TTHM above 0.080 mg/l, but below the MCL in 40 CFR 141.12, as an annual average, monitored and calculated under the provisions of 40 CFR 141.30, must include health effects language for TTHMs prescribed by Appendix A.**

## Appendix 13-6b

### Coliform Treatment Technique Triggers and Assessment Requirements (40 CFR 141.859(a) and 141.859(b)) [Added April 2013]

(NOTE: This Appendix is not effective until 1 April 2016.)

#### Treatment Technique Triggers

Systems must conduct assessments after exceeding treatment technique triggers

Level 1 treatment technique triggers.

1. For systems taking 40 or more samples per month, the system exceeds 5.0% total coliform-positive samples for the month.
2. For systems taking fewer than 40 samples per month, the system has two or more total coliform-positive samples in the same month.
3. The system fails to take every required repeat sample after any single total coliform-positive sample.

Level 2 treatment technique triggers.

1. An E. coli MCL violation, as follows:
  - The system has an E. coli-positive repeat sample following a total coliform-positive routine sample.
  - The system has a total coliform-positive repeat sample following an E. coli-positive routine sample.
  - The system fails to take all required repeat samples following an E. coli-positive routine sample.
  - The system fails to test for E. coli when any repeat sample tests positive for total coliform.
2. A second Level 1 trigger as defined above, within a rolling 12-m period, unless the State has determined a likely reason that the samples that caused the first Level 1 treatment technique trigger were total coliform-positive and has established that the system has corrected the problem.
3. For systems with approved annual monitoring, a Level 1 trigger in two consecutive years.

#### Requirements for Assessments.

Systems must ensure that Level 1 and 2 assessments are conducted in order to identify the possible presence of sanitary defects and defects in distribution system coliform monitoring practices.

Level 2 assessments must be conducted by parties approved by the State.

When conducting assessments, systems must ensure that the assessor evaluates minimum elements that include review and identification of inadequacies in sample sites; sampling protocol; sample processing; atypical events that could affect distributed water quality or indicate that distributed water quality was impaired; changes in distribution system maintenance and operation that could affect distributed water quality (including water storage); source and treatment considerations that bear on distributed water quality, where appropriate (e.g., small ground water systems); and existing water quality monitoring data. The system must conduct the assessment consistent with any State directives that tailor specific assessment elements with respect to the size and type of the system and the size, type, and characteristics of the distribution system.

Level 1 Assessments.

- Conduct a Level 1 assessment consistent with State requirements if the system exceeds one of the Level 1 treatment technique triggers.
- Complete a Level 1 assessment as soon as practical after any trigger.

- In the completed assessment form, describe sanitary defects detected, corrective actions completed, and a proposed timetable for any corrective actions not already completed.
- The assessment form may also note that no sanitary defects were identified.
- Submit the completed Level 1 assessment form to the State within 30 days after the system learns that it has exceeded a trigger.

(NOTE: If the State reviews the completed Level 1 assessment and determines that the assessment is not sufficient (including any proposed timetable for any corrective actions not already completed), the State must consult with the system. If the State requires revisions after consultation, the system must submit a revised assessment form to the State on an agreed-upon schedule not to exceed 30 days from the date of the consultation.)

(NOTE: Upon completion and submission of the assessment form by the system, the State must determine if the system has identified a likely cause for the Level 1 trigger and, if so, establish that the system has corrected the problem, or has included a schedule acceptable to the State for correcting the problem.)

#### Level 2 Assessments.

- Ensure that a Level 2 assessment consistent with State requirements is conducted if the system exceeds one of the Level 2 treatment technique triggers.
- Comply with any expedited actions or additional actions required by the State in the case of an *E. coli* MCL violation.
- Ensure that a Level 2 assessment is completed by the State or by a party approved by the State as soon as practical after any trigger.
- Submit a completed Level 2 assessment form to the State within 30 days after the system learns that it has exceeded a trigger.
- In the completed assessment form, describe sanitary defects detected, corrective actions completed, and a proposed timetable for any corrective actions not already completed.
- The assessment form may also note that no sanitary defects were identified.

(NOTE: The system may conduct Level 2 assessments if the system has staff or management with the certification or qualifications specified by the State unless otherwise directed by the State.)

(NOTE: If the State reviews the completed Level 2 assessment and determines that the assessment is not sufficient (including any proposed timetable for any corrective actions not already completed), the State must consult with the system. If the State requires revisions after consultation, the system must submit a revised assessment form to the State on an agreed-upon schedule not to exceed 30 days.)

(NOTE: Upon completion and submission of the assessment form by the system, the State must determine if the system has identified a likely cause for the Level 2 trigger and determine whether the system has corrected the problem, or has included a schedule acceptable to the State for correcting the problem.)

## Appendix 13-7

### Monitoring and Sampling Parameters for Lead and Copper in Drinking Water (40 CFR 141.86(c)(5) and 141.86(d)(1)) [Revised April 2000]

#### *Number of Sampling Sites Required*

Water systems shall collect at least one sample during each specified monitoring period from the number of sites listed in the first column (“standard monitoring”) of the table. A system conducting reduced monitoring shall collect at least one sample from the number of sites specified in the second column (“reduced monitoring”) of the table during each specified monitoring period. Reduced monitoring sites shall be representative of the sites required for standard monitoring. States may specify sampling locations when a system is conducting reduced monitoring.

System Size (people served)	Number of sites (standard monitoring)	Number of sites (reduced monitoring)
> 100,000	100	50
10,001 - 100,000	60	30
3301 - 10,000	40	20
501 - 3300	20	10
101 - 500	10	5
<=100	5	5

#### *Initial Tap Sampling*

The first 6-mo monitoring period for small, medium, and large systems begin on the following dates:

System Size (people served)	First 6-mo monitoring period begins on:
> 50,000	1 Jan 1992
3301 - 50,000	1 Jul 1992
3300	1 Jul 1993

## **Appendix 13-7a**

### **Public Education Materials For Lead and Copper Exceedances at Community Water Systems and NTNC Water Systems (40 CFR 141.85) [Added January 2008]**

#### **“IMPORTANT INFORMATION ABOUT LEAD IN YOUR DRINKING WATER.**

[INSERT NAME OF WATER SYSTEM] found elevated levels of lead in drinking water in some homes/buildings. Lead can cause serious health problems, especially for pregnant women and young children. Please read this information closely to see what you can do to reduce lead in your drinking water.

Health effects of lead. Lead can cause serious health problems if too much enters your body from drinking water or other sources. It can cause damage to the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of your body. The greatest risk of lead exposure is to infants, young children, and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children. Adults with kidney problems and high blood pressure can be affected by low levels of lead more than healthy adults. Lead is stored in the bones, and it can be released later in life. During pregnancy, the child receives lead from the mother's bones, which may affect brain development.”

Additionally, include information about:

#### **Sources of Lead.**

- Explain what lead is.
- Explain possible sources of lead in drinking water and how lead enters drinking water. Include information on home/building plumbing materials and service lines that may contain lead.
- Discuss other important sources of lead exposure in addition to drinking water (e.g., paint).

Discuss the steps the consumer can take to reduce their exposure to lead in drinking water.

- Encourage running the water to flush out the lead.
- Explain concerns with using hot water from the tap and specifically caution against the use of hot water for preparing baby formula.
- Explain that boiling water does not reduce lead levels.
- Discuss other options consumers can take to reduce exposure to lead in drinking water, such as alternative sources or treatment of water.
- Suggest that parents have their child's blood tested for lead.

Explain why there are elevated levels of lead in the system's drinking water (if known) and what the water system is doing to reduce the lead levels in homes/buildings in this area.

“For more information, call us at [INSERT YOUR NUMBER] [(IF APPLICABLE), or visit our Web site at [INSERT YOUR WEB SITE HERE]]. For more information on reducing lead exposure around your home/building and the health effects of lead, visit EPA's Web site at <http://www.epa.gov/lead> or contact your health care provider.”

#### **Community Water System-Specific Content Requirements**

Tell consumers how to get their water tested.

Discuss lead in plumbing components and the difference between low lead and lead free.

## Appendix 13-8

### Summary of Monitoring Requirements for Water Quality Parameters<sup>1</sup> (40 CFR 141.87)

[Revised April 2000; Revised October 2007; Revised January 2008]

Monitoring Period	Parameters <sup>2</sup>	Location	Frequency
Initial Sampling	pH, alkalinity, orthophosphate or silica <sup>3</sup> , calcium, conductivity, temperature	Taps and at entry points to distribution system	Every 6 mo for large, small and medium-sized water systems
After Installation of Corrosion Control	pH, alkalinity, orthophosphate or silica <sup>3</sup> , calcium <sup>4</sup>	Taps	Every 6 mo for large, small and medium-sized water systems
	pH, alkalinity dosage rate and concentration (if alkalinity adjusted as a part of corrosion control), inhibitor dosage rate and inhibitor residual <sup>5</sup>	Entry points to distribution system <sup>6</sup>	No less frequently than every 2 weeks for large, small and medium-sized water systems
After State Specifies Parameter Values for Optimal Corrosion Control	pH, alkalinity, orthophosphate or silica <sup>3</sup> , calcium <sup>4</sup>	Taps	Every 6 mo with the first 6-mo period to begin on either January 1 or July 1, whichever comes first, after the State specifies the optimal values
	pH, alkalinity dosage rate and concentration (if alkalinity adjusted as a part of corrosion control), inhibitor dosage rate and inhibitor residual <sup>5</sup>	Entry points to distribution system <sup>6</sup>	No less frequently than every 2 weeks
Reduced Monitoring	pH, alkalinity, orthophosphate or silica <sup>3</sup> , calcium <sup>4</sup> ,	Taps	Every 6 mo, annually <sup>7</sup> or every 3 yr <sup>8</sup> ; reduced number of sites
	pH, alkalinity dosage rate and concentration (if alkalinity adjusted as a part of corrosion control), inhibitor dosage rate and inhibitor residual <sup>5</sup>	Entry points to distribution system <sup>6</sup>	No less frequently than every 2 weeks

<sup>1</sup> Table is for illustrative purposes; consult the text of this section for precise regulatory requirements.

<sup>2</sup> Small and medium-size systems have to monitor for water quality parameters only during monitoring periods in which the system exceeds the lead or copper action level.

- <sup>3</sup> Orthophosphate must be measured only when an inhibitor containing a phosphate compound is used. Silica must be measured only when an inhibitor containing silicate compound is used.
- <sup>4</sup> Calcium must be measured only when calcium carbonate stabilization is used as part of corrosion control.
- <sup>5</sup> Inhibitor dosage rates and inhibitor residual concentrations (orthophosphate or silica) must be measured only when an inhibitor is used.
- <sup>6</sup> Groundwater systems may limit monitoring to representative locations throughout the system.
- <sup>7</sup> Water systems may reduce frequency of monitoring for water quality parameters at the tap from every 6 mo to annually if they have maintained the range of values for water quality parameters reflecting optimal corrosion control during 3 consecutive years of monitoring.
- <sup>8</sup> Any water system that maintains the range of values for the water quality parameters reflecting optimal corrosion control treatment specified by the State during three consecutive years of monitoring may reduce the frequency with which it collects the number of tap samples for applicable water quality parameters from every 6 mo to annually. This sampling begins during the calendar year immediately following the end of the monitoring period in which the third consecutive year of 6-mo monitoring occurs. Any water system that maintains the range of values for the water quality parameters reflecting optimal corrosion control treatment specified by the State during three consecutive years of annual monitoring may reduce the frequency with which it collects the number of tap samples for applicable water quality parameters from annually to every 3 yr. This sampling begins no later than the third calendar year following the end of the monitoring period in which the third consecutive year of monitoring occurs.

## Appendix 13-9

**MCL and MRDL Requirements Related to Disinfection**  
**(40 CFR 141.64 and 141.65)**  
**[Added January 1999; Reviewed March 2000; Revised April 2006]**

**The MCLs for disinfection byproducts are as follows:**

<b>Disinfection byproduct</b>	<b>MCL (mg/L)</b>
Total trihalomethanes (TTHM)	0.080
Haloacetic acids (five) (HAA5)	0.060
Bromate	0.010
Chlorite	1.0

**Maximum residual disinfectant levels (MRDLs) are as follows:**

<b>Disinfection residual</b>	<b>MRDL (mg/L)</b>
Chlorine	4.0 (as Cl <sub>2</sub> ).
Chloramines	4.0 (as Cl <sub>2</sub> ).
Chlorine dioxide	0.8 (as ClO <sub>2</sub> ).

**Appendix 13-9a**

**Excepted Radionuclides  
(40 CFR 141.66, Table A)  
[Added January 2001]**

**Average Annual Concentrations Assumed To Produce a Total Body or Organ Dose of 4 mrem/yr**

<b>Radionuclide</b>	<b>Critical Organ</b>	<b>PCi per liter</b>
<b>Tritium</b>	<b>Total Body</b>	<b>20,000</b>
<b>Strontium-90</b>	<b>Bone Marrow</b>	<b>8</b>

## Appendix 13-9b

### Monitoring for TTHM and HAA5 at Community Water Systems and Nontransient Noncommunity Water Systems (40 CFR 141.600(c), 141.601(b)(1), 141.602(a)(1)(i)(B), and 141.605(b)) [Added April 2006, Revised July 2009]

(NOTE: This Appendix applies to:

- community water systems that use a primary or residual disinfectant other than ultraviolet light or deliver water that has been treated with a primary or residual disinfectant other than ultraviolet light
- nontransient noncommunity water systems that serves at least 10,000 people and use a primary or residual disinfectant other than ultraviolet light or delivers water that has been treated with a primary or residual disinfectant other than ultraviolet light.)

**Table 1: Schedule for Monitoring Plans and Studies**

If you serve this population	You must submit your standard monitoring plan or system specific study plan <sup>1</sup> or 40/30 certification <sup>2</sup> to the State by or receive very small system waiver from State	You must complete your standard monitoring or system specific study by	You must submit your IDSE report to the State by <sup>3</sup>
<b>Systems that are not part of a combined distribution system and systems that serve the largest population in the combined distribution system</b>			
Greater than or equal to 100,000	October 1, 2006	September 30, 2008	January 1, 2009
50,000 – 99,999	April 1, 2007	March 31, 2009	July 1, 2009
10,000 – 49,999	October 1, 2007	September 30, 2009	January 1, 2010
Less than 10,000 (CWS only)	April 1, 2008	March 31, 2010	July 1, 2010
<b>Other systems that are part of a combined distribution system</b>			
Wholesale system or consecutive system.	at the same time as the system with the earliest compliance date in the combined distribution system.	at the same time as the system with the earliest compliance date in the combined distribution system.	at the same time as the system with the earliest compliance date in the combined distribution system.

If, within 12 mo after the date identified in this column, the State does not approve the plan or notify the facility that it has not yet completed its review, the facility may consider the plan they submitted as approved. The facility must implement that plan and complete standard monitoring or a system specific study no later than the date identified in the third column.

Submit the facility's 40/30 certification under 40 CFR 141.603 by the date indicated.

If, within 3 mo after the date identified in this column (9 mo after the date identified in this column if the facility must comply on the schedule for the population of 10,000 – 49,999), the State does not approve the facility's IDSE report or notify the facility that it has not yet completed its review, the facility may consider the report they submitted as approved and the facility must implement the recommended Stage 2 disinfection byproducts monitoring as required.

**Table 2: Monitoring Schedule**

Source water type	Population size category	Monitoring periods and frequency of sampling	Distribution system monitoring locations <sup>1</sup>				
			Total per Monitoring Period	Near Entry Points	Average Residence Time	High TTHM Locations	High HAA5 Locations
<b>Subpart H</b>	< 500 consecutive systems	One during peak historical month <sup>2</sup>	2	1	-----	1	
	< 500 non-consecutive systems	-----	2	-----	-----	1	1
	500-3,300 consecutive systems	four (every 90 days)	-----	2	1	-----	1
	500-3,300 non-consecutive systems	----- -	2	-----	-----	1	1
	3,301-9,999	-----	4	-----	1	2	1
	10,000-49,999	six (every 60 days)	8	1	2	3	2
	50,000-249,999	-----	16	3	4	5	4
	250,000-999,999	-----	24	4	6	8	6
	1,000,000-4,999,999	-----	32	6	8	10	8
	>= 5,000,000	-----	40	8	10	12	10
<b>Ground Water</b>	< 500 consecutive systems	one (during peak)	2	1	-----	1	

Source water type	Population size category	Monitoring periods and frequency of sampling	Distribution system monitoring locations1				
			Total per Monitoring Period	Near Entry Points	Average Residence Time	High TTHM Locations	High HAA5 Locations
		historical month)2					
	< 500 non-consecutive systems	-----	2	-----	-----	1	1
	500-9,999	four (every 90 days)..	2	-----	-----	1	1
	10,000-99,999	-----	6	1	1	2	2
	100,000-499,999	-----	8	1	1	3	3
	>= 500,000	-----	12	2	2	4	4

1 A dual sample set (i.e., a TTHM and an HAA5 sample) must be taken at each monitoring location during each monitoring period.

2 The peak historical month is the month with the highest TTHM or HAA5 levels or the warmest water temperature.

**Table 3: Monitoring Locations and Frequencies**

System Type	Population Size Category	Number of monitoring locations	Number of Samples	
			TTHM	HAA5
Subpart H	< 500	3	3	3
	500 – 3,300	3	9	9
	3,301 – 9,999	6	36	36
	10,000 – 49,999	12	72	72
	50,000 – 249,999	24	144	144
	250,000 – 999,999	36	216	216

	1,000,000 – 4,999,999	48	288	288
	>= 5,000,000	60	360	360
Ground Water	< 500	3	3	3
	500 – 9,999	3	9	9
	10,000 – 99,999	12	48	48
	100,000 – 499,999	18	72	72
	>= 500,000	24	96	96

**Table 4: Monitoring Locations and Frequency for IDSE Report**

Source Water Type	Population Size Category	Monitoring Frequency <sup>1</sup>	Distribution system monitoring location			
			Total per monitoring period <sup>2</sup>	Highest TTHM Locations	Highest HAA% Locations	Existing Subpart L Compliance Locations
Subpart H	< 500	Per year	2	1	1	-----
	500 – 3,300	Per quarter	2	1	1	
	3,301 – 9,999	Per quarter	2	1	1	-----
	10,000 – 49,999	Per quarter	4	2	1	1
	50,000 – 249,999	Per quarter	8	3	3	2
	250,000 – 999,999	Per quarter	12	5	4	3
	1,000,000 – 4,999,999	Per quarter	16	6	6	4
	Greater than or equal to 5,000,000	Per quarter	20	8	7	5
Groundwater	< 500	Per year	2	1	1	
	500 – 9,999	Per year	2	1	1	
	10,000 – 99,999	Per quarter	4	2	1	1
	100,000 – 49,999	Per quarter	6	3	2	1
	Greater than or equal to 500,000	Per quarter	8	3	3	2

1 All systems must monitor during month of highest DBP concentrations.

2 Systems on quarterly monitoring must take dual sample sets every 90 days at each monitoring location, except for subpart H systems serving 500-3,300. Ground water systems serving 500-9,999 on annual monitoring must take dual sample sets at each monitoring location. All other systems on annual monitoring and subpart H systems serving 500-3,300 are required to take individual TTHM and HAA5 samples (instead of a dual sample set) at the locations with the highest TTHM and HAA5 concentrations, respectively. For systems serving fewer than 500 people, only one location with a dual sample set per monitoring period is needed if the highest TTHM and HAA5 concentrations occur at the same location and month.

## Appendix 13-9c

### Stage 2 Disinfection Byproducts Requirements (40 CFR 141.620(b), 141.621(a)(2), and 141.623(a)) [Added April 2006, Revised July 2009]

(NOTE: This appendix applies to a system that is a community water system or a nontransient noncommunity water system that uses a primary or residual disinfectant other than ultraviolet light or delivers water that has been treated with a primary or residual disinfectant other than ultraviolet light.)

**Table 1: Routine Monitoring**

Source Water Type	Population Size Category	Monitoring Frequency <sup>1</sup>	Distribution system monitoring location total per monitoring period <sup>2</sup>
<b>Subpart H</b>	<b>Less than 500</b>	<b>Per year</b>	<b>2</b>
	<b>500 – 3,300</b>	<b>Per quarter</b>	<b>2</b>
	<b>3,301 – 9,999</b>	<b>Per quarter</b>	<b>2</b>
	<b>10,000 – 49,999</b>	<b>Per quarter</b>	<b>4</b>
	<b>50,000 – 249,999</b>	<b>Per quarter</b>	<b>8</b>
	<b>250,000 – 999,999</b>	<b>Per quarter</b>	<b>12</b>
	<b>1,000,000 – 4,999,999</b>	<b>Per quarter</b>	<b>16</b>
	<b>Greater than or equal to 5,000,000</b>	<b>Per quarter</b>	<b>20</b>
<b>Ground Water</b>	<b>Less than 500</b>	<b>Per year</b>	<b>2</b>
	<b>500 – 9,999</b>	<b>Per year</b>	<b>2</b>
	<b>10,000 – 99,999</b>	<b>Per quarter</b>	<b>4</b>
	<b>100,000 – 499,999</b>	<b>Per quarter</b>	<b>6</b>
	<b>Greater than or equal to 500,000</b>	<b>Per quarter</b>	<b>8</b>

<sup>1</sup> All systems must monitor during month of highest DBP concentrations.

2. Systems on quarterly monitoring must take dual sample sets every 90 days at each monitoring location, except for subpart H systems serving 500-3,300. Ground water systems serving 500-9,999 on annual monitoring must take dual sample sets at each monitoring location. All other systems on annual monitoring and subpart H systems serving 500-3,300 are required to take individual TTHM and HAA5 samples (instead of a dual sample set) at the locations with the highest TTHM and HAA5 concentrations, respectively. For systems serving fewer than 500 people, only one location with a dual sample set per monitoring period is needed if the highest TTHM and HAA5 concentrations occur at the same location and month.

**Table 2: Reduced Monitoring Schedule**

Source Water Type	Population Size Category	Monitoring Frequency <sup>1</sup>	Distribution system monitoring location per monitoring period
<b>Subpart H</b>	<b>Less than 500</b>	<b>-----</b>	<b>Monitoring may not be reduced.</b>
	<b>500 – 3,300</b>	<b>Per year</b>	<b>1 TTHM and 1 HAA5 sample: one at the location and during the quarter with the highest</b>

Source Water Type	Population Size Category	Monitoring Frequency <sup>1</sup>	Distribution system monitoring location per monitoring period
			TTHM single measurement, one at the location and during the quarter with the highest HAA5 single measurement; 1 dual sample set per year if the highest TTHM and HAA5 measurements occurred at the same location and quarter.
	3,301-9,999	Per year	2 dual sample sets: one at the location and during the quarter with the highest TTHM single measurement, one at the location and during the quarter with the highest HAA5 single measurement.
	10,000 – 49,999	Per quarter	2 dual sample sets at the locations with the highest TTHM and highest HAA5 LRAAs.
	50,000 – 249,999	Per quarter	4 dual sample sets--at the locations with the two highest TTHM and two highest HAA5 LRAAs.
	250,000-999,99	Per quarter	6 dual sample sets--at the locations with the three highest TTHM and three highest HAA5 LRAAs.
	1,000,000 – 4,999,999	Per quarter	8 dual sample sets--at the locations with the four highest TTHM and four highest HAA5 LRAAs.
	Greater than or equal to 5,000,000	Per quarter	10 dual sample sets--at the locations with the five highest TTHM and five highest HAA5 LRAAs.
Ground Water	Less than 500	Every third year	1 TTHM and 1 HAA5 sample: one at the location and during the quarter with the highest TTHM single measurement, one at the location and during the quarter with the highest HAA5 single measurement; 1 dual sample set per year if the highest TTHM and HAA5 measurements occurred at the same location and quarter.
	500 – 9,999	Per year	1 TTHM and 1 HAA5 sample: one at the location and during the quarter with the highest TTHM single measurement, one at the location and during the quarter with the highest HAA5 single measurement; 1 dual sample set per year if the highest TTHM and HAA5 measurements occurred at the same location and quarter.
	10,000 – 99,999	Per year	2 dual sample sets: one at the location and during the quarter with the highest TTHM single measurement, one at the location and during the quarter with the highest HAA5 single measurement.

Source Water Type	Population Size Category	Monitoring Frequency <sup>1</sup>	Distribution system monitoring location per monitoring period
	100,000 – 499,999	Per quarter	2 dual sample sets; at the locations with the highest TTHM and highest HAA5 LRAAs.
	Greater than or equal to 500,000	Per quarter	4 dual sample sets at the locations with the two highest TTHM and two highest HAA5 LRAAs.

<sup>1</sup> Systems on quarterly monitoring must take dual sample sets every 90 days.

## Appendix 13-9d

### Source Water Monitoring Start Dates (40 CFR 141.701(c) and 141.711(a)) [Added April 2006]

Table 1: Source Water Monitoring Starting Dates

Systems that serve . . .	Must begin the first round of source water monitoring no later than the month beginning . . .	And must begin the second round of source water monitoring no later than the month beginning.....
At least 100,000 people	1 October 2006	1 April 2015
From 50,000 to 99,999 people	1 April 2007	1 October 2015
From 10,000 to 49,999 people	1 April 2008	1 October 2016
Fewer than 10,000 and monitor for E. coli <sup>a</sup>	1 October 2008	1 October 2017
Fewer than 10,000 and monitor for Cryptosporidium <sup>b</sup>	1 April 2010	1 April 2019

<sup>a</sup> Applies only to filtered systems.

<sup>b</sup> Applies to filtered systems that meet the conditions of paragraph (a)(4) of this section and unfiltered systems.

Table 2, Additional Treatment for Cryptosporidium Based on Bin Classification

If the system bin classification is:	And the system uses the following filtration treatment in full compliance with 40 CFR 141, Subparts H, P, and T (as applicable), then the additional Cryptosporidium treatment requirements are:			
	Conventional filtration treatment (including softening)	Direct Filtration	Slow sand or diatomaceous earth filtration	Alternative filtration technologies
Bin 1	No additional treatment	No additional treatment	No additional treatment	No additional treatment
Bin 2	1-log treatment.....	1.5-log treatment....	1-log treatment.....	(1)
Bin 3	2-log treatment.....	2.5-log treatment.....	2-log treatment.....	(2)
Bin 4	2.5-log treatment....	3-log treatment.....	2.5-log treatment...	(3)

1 As determined by the State such that the total Cryptosporidium removal and inactivation is at least 4.0-log.

2 As determined by the State such that the total Cryptosporidium removal and inactivation is at least 5.0-log.

3 As determined by the State such that the total Cryptosporidium removal and inactivation is at least 5.5-log.

## Appendix 13-10

### Monitoring Frequency for TTHM and HAA5 (40 CFR 141.132(b))

[Added January 1999; Reviewed March 2000; Revised April 2001; Revised April 2006]

**Table 1: Routine Monitoring Frequency for TTHM and HAA5**

Type of system	Minimum monitoring frequency	Sample location in the distribution system
Subpart H system serving at least 10,000 persons.	Four water samples per quarter per treatment plant.	At least 25% of all samples collected each quarter at locations representing maximum residence time. Remaining samples taken at locations representative of at least average residence time in the distribution system and representing the entire distribution system, taking into account number of persons served, different sources of water, and different treatment methods. <sup>1</sup>
Subpart H system serving from 500 to 9,999 persons.	One water sample per quarter per treatment plant.	Locations representing maximum residence time. <sup>1</sup>
Subpart H system serving < 500 persons.	One sample per year per treatment plant during month of warmest water temperature.	Locations representing maximum residence time. <sup>1</sup> If the sample (or average of annual samples, if more than one sample is taken) exceeds the MCL, the system must increase monitoring to one sample per treatment plant per quarter, taken at a point reflecting the maximum residence time in the distribution system, until the system meets reduced monitoring criteria (see 40 CFR 141.132(c))
System using only groundwater not under direct influence of surface water using chemical disinfectant and serving at least 10,000 persons.	One water sample per quarter per treatment plant <sup>2</sup> .	Locations representing maximum residence time. <sup>1</sup>
System using only groundwater not under direct influence of surface water using chemical disinfectant and serving < 10,000 persons.	One sample per year per treatment plant <sup>2</sup> during month of warmest water temperature.	Locations representing maximum residence time. <sup>1</sup> If the sample (or average of annual samples, if more than one sample is taken) exceeds the MCL, the system must increase monitoring to one sample per treatment plant per quarter, taken at a point reflecting the maximum residence time in the distribution system, until system meets criteria for reduced monitoring (see 40 CFR 141.132(c))

<sup>1</sup> If a system elects to sample more frequently than the minimum required, at least 25% of all samples collected each quarter (including those taken in excess of the required frequency) must be taken at locations that represent the maximum residence time of the water in the distribution system. The remaining samples must be taken at locations representative of at least average residence time in the distribution system.

<sup>2</sup> Multiple wells drawing water from a single aquifer may be considered one treatment plant for determining the minimum number of samples required, with state approval in accordance with criteria developed under 40 CFR 142.16(h)(5).

**Table 2: Reduced Monitoring Frequency for TTHM and HAA5**

<b>If you are a:</b>	<b>You may reduce monitoring if you have monitored at least one year and your ...</b>	<b>To this level</b>
Subpart H system serving at least 10,000 persons that has a source water annual average TOC level before any treatment, $\leq 4.0$ mg/L.	TTHM annual average $\leq 0.040$ mg/L and HAA5 annual average $\leq 0.030$ mg/L.	One sample per treatment plant per quarter at distribution system location reflecting maximum residence time.
Subpart H system serving from 500 to 999 persons which has a source water annual average TOC level before any treatment, $\leq 4.0$ mg/L.	TTHM annual average $\leq 0.040$ mg/L and HAA5 annual average $\leq 0.030$ mg/L.	One sample per treatment plant per year at distribution system location reflecting maximum residence time during month of warmest water temperature. NOTE: Any Subpart H system serving fewer than 500 persons may not reduce its monitoring to < one sample per treatment plant per year.
System using only groundwater not under direct influence of surface water using chemical disinfectant and serving at least 10,000 persons.	TTHM annual average $\leq 0.040$ mg/L and HAA5 annual average $\leq 0.030$ mg/L.	One sample per treatment plant per year at distribution system location reflecting maximum residence time during month of warmest water temperature.
System using only groundwater not under direct influence of surface water using chemical disinfectant and serving fewer than 10,000 persons.	TTHM annual average $\leq 0.040$ mg/L and HAA5 annual average $\leq 0.030$ mg/L for two consecutive years or TTHM annual average $\leq 0.020$ mg/L and HAA5 annual average $\leq 0.015$ mg/L for 1 yr.	One sample per treatment plant per 3 yr monitoring cycle at distribution system location reflecting maximum residence time during month of warmest water temperature with the 3-yr cycle beginning on January 1 following quarter in which system qualifies for reduced monitoring.

## Appendix 13-11

### Reporting Requirements (40 CFR 141.134(b)) [Revised April 2001]

**Disinfection Byproducts, systems must report the information specified in the following table:**

If you are a...	You must report...1
System monitoring for TTHM and HAA5 under the requirements of 40 CFR 141.132(b) on a quarterly or more frequent basis.	<ul style="list-style-type: none"> <li>(1) The number of samples taken during the last quarter.</li> <li>(2) The location, date, and result of each sample taken during the last quarter.</li> <li>(3) The arithmetic average of all samples taken in the last quarter.</li> <li>(4) The annual arithmetic average of the quarterly arithmetic averages of this section for the last four quarters.</li> <li>(5) Whether the MCL was violated.</li> </ul>
System monitoring for TTHMs and HAA5 under the requirements of 40 CFR 141.132(b) less frequently than quarterly (but at least annually).	<ul style="list-style-type: none"> <li>(1) The number of samples taken during the last year</li> <li>(2) The location, date, and result of each sample taken during the last monitoring period.</li> <li>(3) The arithmetic average of all samples taken over the last year.</li> <li>(4) Whether the MCL was violated.</li> </ul>
<p>System monitoring for TTHMs and HAA5 under the requirements of 40 CFR 141.132(b) less frequently than annually.</p> <p>System monitoring for chlorite under the requirements of 40 CFR 141.132(b).</p>	<ul style="list-style-type: none"> <li>(1) The location, date, and result of the last sample taken.</li> <li>(2) Whether the MCL was violated.</li> </ul> <ul style="list-style-type: none"> <li>(1) The number of entry point samples taken each month for the last 3 mo.</li> <li>(2) The location, date, and result of each sample (both entry point and distribution system) taken during the last quarter.</li> <li>(3) For each month in the reporting period, the arithmetic average of all samples taken in each three samples set taken in the distribution system.</li> <li>(4) Whether the MCL was violated, and how many times it was violated in each month.</li> </ul>
System monitoring for bromate under the requirements of 40 CFR 141.132(b).	<ul style="list-style-type: none"> <li>(1) The number of samples taken during the last quarter</li> <li>(2) The location, date, and result of each sample taken during the last quarter.</li> <li>(3) The arithmetic average of the monthly arithmetic averages of all samples in the last year.</li> <li>(4) Whether the MCL was violated.</li> </ul>

**Disinfectants, systems must report the information specified in the following table:**

<b>If you are a...</b>	<b>You must report...<sup>1</sup></b>
System monitoring for chlorine or chloramines under the requirements of 40 CFR 141.132(c).	<ul style="list-style-type: none"> <li>(1) The number of samples taken during each month of the last quarter.</li> <li>(2) The monthly arithmetic average of all samples taken in each month for the last 12 mo.</li> <li>(3) The arithmetic average of all monthly averages for the last 12 mo.</li> <li>(4) Whether the MRDL was violated.</li> </ul>
System monitoring for chlorine dioxide under the requirements of 40 CFR 141.132(c).	<ul style="list-style-type: none"> <li>(1) The dates, results, and locations of samples taken during the last quarter.</li> <li>(2) Whether the MRDL was violated.</li> <li>(3) Whether the MRDL was exceeded in any two consecutive daily samples and whether the resulting violation was acute/nonacute.</li> </ul>

<sup>1</sup> The state may choose to perform calculations and determine whether the MRDL was exceeded, in lieu of having the system report that information.

**Disinfection Byproduct Precursors and Enhanced Coagulation or Enhanced Softening, systems must report the information specified in the following table:**

<b>If you are a . . .</b>	<b>You must report . . .<sup>1</sup></b>
System monitoring monthly or quarterly for TOC under the requirements of 40 CFR 141.132(d) and required to meet the enhanced coagulation or enhanced softening requirements in 40 CFR 141.135(b)(2) or 141.135(b)(3).	<ul style="list-style-type: none"> <li>(1) The number of paired (source water and treated water) samples taken during the last quarter.</li> <li>(2) The location, date, and result of each paired sample and associated alkalinity taken during the last quarter.</li> <li>(3) For each month in the reporting period that paired samples were taken, the arithmetic average of the percent reduction of TOC for each paired sample and the required TOC percent removal.</li> <li>(4) Calculations for determining compliance with the TOC percent removal requirements, as provided in 40 CFR 141.135(c)(1).</li> <li>(5) Whether the system is in compliance with the enhanced coagulation or enhanced softening percent removal requirements in 40 CFR 141.135(b) for the last four quarters.</li> </ul>
System monitoring monthly or quarterly for TOC under the requirements of 40 CFR 141.132(d) and meeting one or more of the alternative compliance criteria in 40 CFR 141.135(a)(2) or 141.135(a)(3).	<ul style="list-style-type: none"> <li>(1) The alternative compliance criterion that the system is using.</li> <li>(2) The number of paired samples taken during the last quarter.</li> <li>(3) The location, date, and result of each paired sample and associated alkalinity taken during the last quarter.</li> <li>(4) The running annual arithmetic average based on monthly averages (or quarterly samples) of source water TOC for systems meeting a criterion in 40 CFR 141.135(a)(2)(i) or 141.135(a)(2)(iii) or of treated</li> </ul>

**Disinfection Byproduct Precursors and Enhanced Coagulation or Enhanced Softening, systems must report the information specified in the following table:**

If you are a . . .	You must report . . . <sup>1</sup>
	<p>water TOC for systems meeting the criterion in 40 CFR 141.135(a)(2)(ii).</p> <p>(5) The running annual arithmetic average based on monthly averages (or samples) of source water SUVA for systems meeting criterion in 40 CFR 141.135(a)(2)(v) or of treated water SUVA for systems meeting the criterion in 40 CFR 141.135(a)(2)(vi).</p> <p>(6) The running annual average of source water alkalinity for systems meeting the criterion in 40 CFR 141.135(a)(2)(iii) and of treated water alkalinity for systems meeting the criterion in 40 CFR 141.135(a)(3)(i).</p> <p>(7) The running annual average for both TTHM and HAA5 for systems meeting the criterion in 40 CFR 141.135(a)(2)(iii) or 141.135(a)(2)(iv).</p> <p>(8) The running annual average of the amount of magnesium hardness removal (as CaCO<sub>3</sub>, in mg/L) for systems meeting the criterion in 40 CFR 141.135(a)(3)(ii).</p> <p>(9) Whether the system is compliance with the particular alternative criterion in 40 CFR 141.135(a)(2) or (3).</p>

<sup>1</sup> The state may choose to perform calculations and determine whether the treatment technique was met, in lieu of having the system report that information.

## Appendix 13-12

### NPDWR Violations and Other Situations Requiring Public Notice

(40 CFR 141, Subpart Q [40 CFR 141.201 through 141.210], Appendix A)

[Added July 2000; Revised July 2001; Revised April 2002; Revised October 2004; Revised April 2006;

D. Waterborne disease outbreak	1	141.2, 141.71 (c)(2)(ii)	N/A	N/A
E. Other waterborne emergency <sup>16</sup>	1	N/A	N/A	N/A
F. Source Water Sample Positive for GWR Fecal indicators: <i>E. coli</i> , enterococci, or coliphage.	1	141.402(g)	N/A	N/A
G. Other situations as determined by primacy agency	171, 2, 3	N/A	N/A	N/A

\* Until 31 March 2016

\*\*Beginning 1 April 2016

- Violations and other situations not listed in this table (e.g., failure to prepare Consumer Confidence Reports), do not require notice, unless otherwise determined by the primacy agency. Primacy agencies may, at their option, also require a more stringent public notice tier (e.g., Tier 1 instead of Tier 2 or Tier 2 instead of Tier 3) for specific violations and situations listed in this Appendix, as authorized under 40 CFR 141.202(a) and 40 CFR 141.203(a).
- MCL—Maximum contaminant level, MRDL—Maximum residual disinfectant level, TT—Treatment technique
- The term Violations of National Primary Drinking Water Regulations (NPDWR) is used here to include violations of MCL, MRDL, treatment technique, monitoring, and testing procedure requirements.
- Failure to test for fecal coliform or *E. coli* is a Tier 1 violation if testing is not done after any repeat sample tests positive for coliform. All other total coliform monitoring and testing procedure violations are Tier 3.
- Systems that violate the turbidity MCL of 5 NTU based on an average of measurements over two consecutive days must consult with the primacy agency within 24 h after learning of the violation. Based on this consultation, the primacy agency may subsequently decide to elevate the violation to Tier 1. If a system is unable to make contact with the primacy agency in the 24-h period, the violation is automatically elevated to Tier 1.
- Systems with treatment technique violations involving a single exceedance of a maximum turbidity limit under the SWAT, the IIESWTR, or the LTIESWTR are required to consult with the primacy agency within 24 h after learning of the violation. Based on this consultation, the primacy agency may subsequently decide to elevate the violation to Tier 1. If a system is unable to make contact with the primacy agency in the 24-h period, the violation is automatically elevated to Tier 1.
- Most of the requirements of the Interim Enhanced Surface Water Treatment Rule (63 FR 69477) (40 CFR 141.170-141.171, 141.173-141.174) become effective 1 January 2002 for Subpart H systems (surface water systems and ground water systems under the direct influence of surface water) serving at least 10,000 persons. However, 40 CFR 141.172 has some requirements that become effective as early as 16 April 1999. The Surface Water Treatment Rule remains in effect for systems serving at least 10,000 persons even after 2002; the Interim Enhanced Surface Water Treatment Rule adds additional requirements and does not in many cases supersede the SWTR.

8. The arsenic MCL citations are effective 23 January 2006. Until then, the citations are 40 CFR 141.11(b) and 40 CFR 141.23(n).
9. The uranium MCL Tier 2 violation citations are effective 8 December 2003 for all community water systems.
10. The uranium Tier 3 violation citations are effective 8 December 2000 for all community water systems.
11. The arsenic Tier 3 violation MCL citations are effective 23 January 2006. Until then, the citations are Sec. 141.23(a), (l).
12. Failure to take a confirmation sample within 24 h for nitrate or nitrite after an initial sample exceeds the MCL is a Tier 1 violation. Other monitoring violations for nitrate are Tier 3.
13. Subpart H community and non-transient non-community systems serving  $\geq 10,000$  must comply with new DBP MCLs, disinfectant MRDLs, and related monitoring requirements beginning 1 January 2002. All other community and non-transient non-community systems must meet the MCLs and MRDLs beginning January 1, 2004. Subpart H transient non-community systems serving 10,000 or more persons and using chlorine dioxide as a disinfectant or oxidant must comply with the chlorine dioxide MRDL beginning 1 January 2002. Subpart H transient non-community systems serving fewer than 10,000 persons and using only ground water not under the direct influence of surface water and using chlorine dioxide as a disinfectant or oxidant must comply with the chlorine dioxide MRDL beginning 1 January 2004.
14. 40 CFR 141.12 will no longer apply after 1 January 2004.
15. Failure to monitor for chlorine dioxide at the entrance to the distribution system the day after exceeding the MRDL at the entrance to the distribution system is a Tier 2 violation.
16. If any daily sample taken at the entrance to the distribution system exceeds the MRDL for chlorine dioxide and one or more samples taken in the distribution system the next day exceed the MRDL, Tier 1 notification is required. Failure to take the required samples in the distribution system after the MRDL is exceeded at the entry point also triggers Tier 1 notification.
17. Some water systems must monitor for certain unregulated contaminants listed in 40 CFR 141.40.
18. This citation refers to Sections 1415 and 1416 of the Safe Drinking Water Act. Sections 1415 and 1416 require that “a schedule prescribed. . . for a public water system granted a variance [or exemption] shall require compliance by the system. . .”
19. In addition to Sections 1415 and 1416 of the Safe Drinking Water Act, 40 CFR 142.307 specifies the items and schedule milestones that must be included in a variance for small systems.
20. Other waterborne emergencies require a Tier 1 public notice under 40 CFR 141.202(a) for situations that do not meet the definition of a waterborne disease outbreak given in 40 CFR 141.2 but that still have the potential to have serious adverse effects on health as a result of short-term exposure. These could include outbreaks not related to treatment deficiencies, as well as situations that have the potential to cause outbreaks, such as failures or significant interruption in water treatment processes, natural disasters that disrupt the water supply or distribution system, chemical spills, or unexpected loading of possible pathogens into the source water.
21. Primacy agencies may place other situations in any tier they believe appropriate, based on threat to public health.
- 22 Failure to collect three or more samples for *Cryptosporidium* analysis is a Tier 2 violation requiring special notice as specified in 40 CFR 141.211. All other monitoring and testing procedure violations are Tier 3.

## Appendix 13-13

### Standard Health Effects Language for Public Notification

(40 CFR 141, Subpart Q [40 CFR 141.201 through 141.210], Appendix B)

[Added July 2000; Revised July 2001; Revised April 2002; Revised April 2003; Revised October 2004;  
Revised April 2006; Revised January 2007; Revised April 2013]

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
<b>A. Microbiological Contaminants</b>			
1a. Total Coliform*	Zero	See footnote <sup>3</sup>	Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially-harmful, bacteria may be present. Coliforms were found in more samples than allowed and this was a warning of potential problems.
1b. Fecal Coliform/ <i>E. coli</i> *	Zero	Zero	Fecal coliforms and <i>E. coli</i> are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Microbes in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a special health risk for infants, young children, some of the elderly, and people with severely compromised immune systems.
1c. Fecal indicators (GWR): i. <i>E. coli</i> ii. enterococci iii. coliphage	Zero	TT	Microbes whose presence indicates that the water may be contaminated with human or animal wastes. Microbes in these wastes can cause short-term health effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a special health risk for infants, young children, some of the elderly, and people with severely compromised immune systems.
	None	TT	
	None	TT	
1d. Ground Water Rule (GWR) Violations	None	TT	Inadequately treated or inadequately protected water may contain disease-causing organisms. These organisms can cause symptoms such as diarrhea, nausea, cramps, and associated headaches.
1e. Subpart Y Coliform Assessment and/or Corrective Action Violations**	N/A	TT	Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, waterborne pathogens may be

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
			<p>present or that a potential pathway exists through which contamination may enter the drinking water distribution system. We found coliforms indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct assessments to identify problems and to correct any problems that are found. [THE SYSTEM MUST USE THE FOLLOWING APPLICABLE SENTENCES.]</p> <p>We failed to conduct the required assessment.</p> <p>We failed to correct all identified sanitary defects that were found during the assessment(s).</p>
1f. Subpart Y <i>E. coli</i> Assessment and/or Corrective Action Violations**	N/A	TT	<p><i>E. coli</i> are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Human pathogens in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a greater health risk for infants, young children, the elderly, and people with severely compromised immune systems. We violated the standard for <i>E. coli</i>, indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct a detailed assessment to identify problems and to correct any problems that are found. [THE SYSTEM MUST USE THE FOLLOWING APPLICABLE SENTENCES.]</p> <p>We failed to conduct the required assessment.</p> <p>We failed to correct all identified sanitary defects that were found during the assessment that we conducted</p>
1g. <i>E. coli</i> **	Zero	In compliance unless one of the following conditions occurs: 1. The system has an <i>E. coli</i> -positive repeat sample	<p><i>E. coli</i> are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Human pathogens in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a greater health risk for infants, young children, the</p>

		<p>following a total coliform-positive routine sample</p> <p>2. The system has a total coliform-positive repeat sample following an <i>E. coli</i>-positive routine sample.</p> <p>3. The system fails to take all required repeat samples following an <i>E. coli</i>-positive routine sample.</p> <p>4. The system fails to test for <i>E. coli</i> when any repeat sample tests positive for total coliform.</p>	elderly, and people with severely compromised immune systems.
1h. Subpart Y Seasonal System TT Violations**	N/A	TT	<p>When this violation includes the failure to monitor for total coliforms or <i>E. coli</i> prior to serving water to the public, the mandatory language found at 40 CFR 141.205(d)(2) must be used.</p> <p>When this violation includes failure to complete other actions, the appropriate elements found in 40 CFR 141.205(a) to describe the violation must be used.</p>
2a. Turbidity (MCL)4	None	1 NTU <sup>5</sup> /5 NTU	Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.
2b. Turbidity (SWTR TT)6	None	TT <sup>7</sup>	Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include bacteria,

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
2c. Turbidity (IESWTR TT and LTIESWTR TT) <sup>8</sup>			viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.
	None	TT	Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.
<b>B. Surface Water Treatment Rule (SWTR), Interim Enhanced Surface Water Treatment Rule (IESWTR), and Long Term I Enhanced Surface Water Treatment Rule (LTIESWTR) and the Filter Backwash Recycling Rule Violations</b>			
3. Giardia lamblia (SWTR/IESWTR/LTIESWTR)	Zero	TT <sup>10</sup>	Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches
4. Viruses (SWTR/IESWTR/LTIESWTR)			
5. Heterotrophic plate count (HPC) bacteria <sup>9</sup> (SWTR/IESWTR/LTIESWTR)			
6. Legionella (SWTR/IESWTR/LTIESWTR)			
7. Cryptosporidium (IESWTR/FBRR/LTIESWTR)			
<b>C. Inorganic Chemicals</b>			
8. Antimony	0.006	0.006	Some people who drink water containing antimony well in excess of the MCL over many years could experience increases in blood cholesterol and decreases in blood sugar.
9. Arsenic <sup>11</sup>	0	0.010	Some people who drink water containing arsenic in excess of the MCL over many years could experience skin damage or problems with their circulatory system, and may have an increased risk of getting cancer.
10. Asbestos (10 µm)	7 MFL <sup>11</sup>	7 MFL	Some people who drink water containing asbestos in excess of the MCL over many

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
11. Barium	2	2	years may have an increased risk of developing benign intestinal polyps. Some people who drink water containing barium in excess of the MCL over many years could experience an increase in their blood pressure.
12. Beryllium	0.004	0.004	Some people who drink water containing beryllium well in excess of the MCL over many years could develop intestinal lesions.
13. Cadmium	0.005	0.005	Some people who drink water containing cadmium in excess of the MCL over many years could experience kidney damage.
14. Chromium (total)	0.1	0.1	Some people who use water containing chromium well in excess of the MCL over many years could experience allergic dermatitis.
15. Cyanide	0.2	0.2	Some people who drink water containing cyanide well in excess of the MCL over many years could experience nerve damage or problems with their thyroid.
16. Fluoride	4.0	4.0	Some people who drink water containing fluoride in excess of the MCL over many years could get bone disease, including pain and tenderness of the bones. Fluoride in drinking water at half the MCL or more may cause mottling of children's teeth, usually in children less than nine years old. Mottling, also known as dental fluorosis, may include brown staining and/or pitting of the teeth, and occurs only in developing teeth before they erupt from the gums.
17. Mercury (inorganic)	0.002	0.002	Some people who drink water containing inorganic mercury well in excess of the MCL over many years could experience kidney damage.
18. Nitrate	10	10	Infants below the age of six months who drink water containing nitrate in excess of the MCL could become seriously ill and, if untreated, may die. Symptoms include shortness of breath and blue baby syndrome.
19. Nitrite	1	1	Infants below the age of six months who drink water containing nitrite in excess of the MCL could become seriously ill and, if untreated, may die. Symptoms include shortness of breath and blue baby syndrome.
20. Total Nitrate and Nitrite	10	10	Infants below the age of six months who drink water containing nitrate and nitrite in

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
21. Selenium			excess of the MCL could become seriously ill and, if untreated, may die. Symptoms include shortness of breath and blue baby syndrome.
	0.05	0.05	Selenium is an essential nutrient. However, some people who drink water containing selenium in excess of the MCL over many years could experience hair or fingernail losses, numbness in fingers or toes, or problems with their circulation.
22. Thallium	0.0005	0.002	Some people who drink water containing thallium in excess of the MCL over many years could experience hair loss, changes in their blood, or problems with their kidneys, intestines, or liver.
<b>D. Lead and Copper Rule</b>			
23. Lead	Zero	TT <sup>12</sup>	Infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure.
24. Copper	1.3	TT <sup>13</sup>	Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time could experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years could suffer liver or kidney damage. People with Wilson's Disease should consult their personal doctor.
<b>E. Synthetic Organic Chemicals (SOCs)</b>			
25. 2,4-D	0.07	0.07	Some people who drink water containing the weed killer 2,4-D well in excess of the MCL over many years could experience problems with their kidneys, liver, or adrenal glands.
26. 2,4,5-TP (Silvex)	0.05	0.05	Some people who drink water containing silvex in excess of the MCL over many years could experience liver problems.
27. Alachlor	Zero	0.002	Some people who drink water containing alachlor in excess of the MCL over many years could have problems with their eyes,

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
28. Atrazine	0.003	0.003	liver, kidneys, or spleen, or experience anemia, and may have an increased risk of getting cancer. Some people who drink water containing atrazine well in excess of the MCL over many years could experience problems with their cardiovascular system or reproductive difficulties.
29. Benzo(a)pyrene (PAHs)	Zero	0.0002	Some people who drink water containing benzo(a)pyrene in excess of the MCL over many years may experience reproductive difficulties and may have an increased risk of getting cancer.
30. Carbofuran	0.04	0.04	Some people who drink water containing carbofuran in excess of the MCL over many years could experience problems with their blood, or nervous or reproductive systems.
31. Chlordane	Zero	0.002	Some people who drink water containing chlordane in excess of the MCL over many years could experience problems with their liver or nervous system, and may have an increased risk of getting cancer.
32. Dalapon	0.2	0.2	Some people who drink water containing dalapon well in excess of the MCL over many years could experience minor kidney changes.
33. Di (2-ethylhexyl) adipate	0.4	0.4	Some people who drink water containing di (2-ethylhexyl) adipate well in excess of the MCL over many years could experience general toxic effects or reproductive difficulties.
34. Di (2-ethylhexyl) phthalate	Zero	0.006	Some people who drink water containing di (2-ethylhexyl) phthalate in excess of the MCL over many years may have problems with their liver, or experience reproductive difficulties, and may have an increased risk of getting cancer.
35. Dibromochloropropane (DBCP).	Zero	0.0002	Some people who drink water containing DBCP in excess of the MCL over many years could experience reproductive difficulties and may have an increased risk of getting cancer.
36. Dinoseb	0.007	0.007	Some people who drink water containing dinoseb well in excess of the MCL over many years could experience reproductive difficulties.
37. Dioxin (2,3,7,8-TCDD)	Zero	3 x 10 <sup>-8</sup>	Some people who drink water containing dioxin in excess of the MCL over many years could experience reproductive

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
38. Diquat  39. Endothall  40. Endrin  41. Ethylene dibromide  42. Glyphosate			difficulties and may have an increased risk of getting cancer.
	0.02	0.02	Some people who drink water containing diquat in excess of the MCL over many years could get cataracts.
	0.1	0.1	Some people who drink water containing endothall in excess of the MCL over many years could experience problems with their stomach or intestines.
	0.002	0.002	Some people who drink water containing endrin in excess of the MCL over many years could experience liver problems.
	Zero	0.00005	Some people who drink water containing ethylene dibromide in excess of the MCL over many years could experience problems with their liver, stomach, reproductive system, or kidneys, and may have an increased risk of getting cancer.
43. Heptachlor  44. Heptachlor epoxide  45. Hexachlorobenzene  46. Hexachlorocyclo-pentadiene  47. Lindane  48. Methoxychlor	0.7	0.7	Some people who drink water containing glyphosate in excess of the MCL over many years could experience problems with their kidneys or reproductive difficulties.
	Zero	0.0004	Some people who drink water containing heptachlor in excess of the MCL over many years could experience liver damage and may have an increased risk of getting cancer.
	Zero	0.0002	Some people who drink water containing heptachlor epoxide in excess of the MCL over many years could experience liver damage, and may have an increased risk of getting cancer.
	Zero	0.001	Some people who drink water containing hexachlorobenzene in excess of the MCL over many years could experience problems with their liver or kidneys, or adverse reproductive effects, and may have an increased risk of getting cancer.
	0.05	0.05	Some people who drink water containing hexachlorocyclopentadiene well in excess of the MCL over many years could experience problems with their kidneys or stomach.
	0.0002	0.0002	Some people who drink water containing lindane in excess of the MCL over many years could experience problems with their kidneys or liver.
	0.04	0.04	Some people who drink water containing methoxychlor in excess of the MCL over

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
49. Oxamyl (Vydate)			many years could experience reproductive difficulties.
	0.2	0.2	Some people who drink water containing oxamyl in excess of the MCL over many years could experience slight nervous system effects.
50. Pentachlorophenol	Zero	0.001	Some people who drink water containing pentachlorophenol in excess of the MCL over many years could experience problems with their liver or kidneys, and may have an increased risk of getting cancer.
51. Picloram	0.5	0.5	Some people who drink water containing picloram in excess of the MCL over many years could experience problems with their liver.
52. Polychlorinated biphenyls (PCBs)	Zero	0.0005	Some people who drink water containing PCBs in excess of the MCL over many years could experience changes in their skin, problems with their thymus gland, immune deficiencies, or reproductive or nervous system difficulties, and may have an increased risk of getting cancer.
53. Simazine	0.004	0.004	Some people who drink water containing simazine in excess of the MCL over many years could experience problems with their blood.
54. Toxaphene	Zero	0.003	Some people who drink water containing toxaphene in excess of the MCL over many years could have problems with their kidneys, liver, or thyroid, and may have an increased risk of getting cancer.
<b>F. Volatile Organic Chemicals (VOCs)</b>			
55. Benzene	Zero	0.005	Some people who drink water containing benzene in excess of the MCL over many years could experience anemia or a decrease in blood platelets, and may have an increased risk of getting cancer.
56. Carbon tetrachloride	Zero	0.005	Some people who drink water containing carbon tetrachloride in excess of the MCL over many years could experience problems with their liver and may have an increased risk of getting cancer.
57. Chlorobenzene (monochlorobenzene)	0.1	0.1	Some people who drink water containing chlorobenzene in excess of the MCL over many years could experience problems with their liver or kidneys.

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
58. o-Dichlorobenzene	0.6	0.6	Some people who drink water containing o-dichlorobenzene well in excess of the MCL over many years could experience problems with their liver, kidneys, or circulatory systems.
59. p-Dichlorobenzene	0.075	0.075	Some people who drink water containing p-dichlorobenzene in excess of the MCL over many years could experience anemia, damage to their liver, kidneys, or spleen, or changes in their blood.
60. 1,2-Dichloroethane	Zero	0.005	Some people who drink water containing 1,2-dichloroethane in excess of the MCL over many years may have an increased risk of getting cancer.
61. 1,1-Dichloroethylene	0.007	0.007	Some people who drink water containing 1,1-dichloroethylene in excess of the MCL over many years could experience problems with their liver.
62. cis-1, 2-Dichloroethylene	0.07	0.07	Some people who drink water containing cis-1, 2-dichloroethylene in excess of the MCL over many years could experience problems with their liver.
63. trans-1, 2-Dichloroethylene	0.1	0.1	Some people who drink water containing trans-1, 2-dichloroethylene well in excess of the MCL over many years could experience problems with their liver.
64. Dichloromethane	Zero	0.005	Some people who drink water containing dichloromethane in excess of the MCL over many years could have liver problems and may have an increased risk of getting cancer.
65. 1,2-Dichloropropane	Zero	0.005	Some people who drink water containing 1,2-dichloropropane in excess of the MCL over many years may have an increased risk of getting cancer.
66. Ethylbenzene	0.7	0.7	Some people who drink water containing ethylbenzene well in excess of the MCL over many years could experience problems with their liver or kidneys.
67. Styrene	0.1	0.1	Some people who drink water containing styrene well in excess of the MCL over many years could have problems with their liver, kidneys, or circulatory system.
68. Tetrachloroethylene	Zero	0.005	Some people who drink water containing tetrachloroethylene in excess of the MCL over many years could have problems with their liver, and may have an increased risk of getting cancer.
69. Toluene	1	1	Some people who drink water containing toluene well in excess of the MCL over

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
70. 1,2,4-Trichlorobenzene	0.07	0.07	many years could have problems with their nervous system, kidneys, or liver. Some people who drink water containing 1,2,4-trichlorobenzene well in excess of the MCL over many years could experience changes in their adrenal glands.
71. 1,1,1-Trichloroethane	0.2	0.2	Some people who drink water containing 1,1,1-trichloroethane in excess of the MCL over many years could experience problems with their liver, nervous system, or circulatory system.
72. 1,1,2-Trichloroethane	0.003	0.005	Some people who drink water containing 1,1,2-trichloroethane well in excess of the MCL over many years could have problems with their liver, kidneys, or immune systems.
73. Trichloroethylene	Zero	0.005	Some people who drink water containing trichloroethylene in excess of the MCL over many years could experience problems with their liver and may have an increased risk of getting cancer.
74. Vinyl chloride	Zero	0.002	Some people who drink water containing vinyl chloride in excess of the MCL over many years may have an increased risk of getting cancer.
75. Xylenes (total)	10	10	Some people who drink water containing xylenes in excess of the MCL over many years could experience damage to their nervous system.
<b>G. Radioactive Contaminants</b>			
76. Beta/photon emitters	Zero	4 mrem/yr <sup>14</sup>	Certain minerals are radioactive and may emit forms of radiation known as photons and beta radiation. Some people who drink water containing beta and photon emitters in excess of the MCL over many years may have an increased risk of getting cancer.
77. Alpha emitters	Zero	15 pCi/L <sup>16</sup>	Certain minerals are radioactive and may emit a form of radiation known as alpha radiation. Some people who drink water containing alpha emitters in excess of the MCL over many years may have an increased risk of getting cancer.
78. Combined radium (226 & 228).	Zero	5 pCi/L	Some people who drink water containing radium 226 or 228 in excess of the MCL over many years may have an increased risk of getting cancer.

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
79. Uranium 16	Zero	30 micrograms/L	Some people who drink water containing uranium in excess of the MCL over many years may have an increased risk of getting cancer and kidney toxicity.
<b>H. Disinfection Byproducts (DBPs), Byproduct Precursors, and Disinfectant Residuals:</b> Where disinfection is used in the treatment of drinking water, disinfectants combine with organic and inorganic matter present in water to form chemicals called disinfection byproducts (DBPs). EPA sets standards for controlling the levels of disinfectants and DBPs in drinking water, including trihalomethanes (THMs) and haloacetic acids (HAAs) <sup>17</sup>			
80. Total trihalomethanes (TTHMs)	N/A	0.080 <sup>19 20</sup>	Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.
81. Haloacetic Acids (HAA)	N/A	0.060 <sup>21</sup>	Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.
82. Bromate	Zero	0.010	Some people who drink water containing bromate in excess of the MCL over many years may have an increased risk of getting cancer.
83. Chlorite	0.08	1.0	Some infants and young children who drink water containing chlorite in excess of the MCL could experience nervous system effects. Similar effects may occur in fetuses of pregnant women who drink water containing chlorite in excess of the MCL. Some people may experience anemia.
84. Chlorine	4 (MRDLG) <sup>2</sup>	4.0 (MRDL) <sup>23</sup>	Some people who use water containing chlorine well in excess of the MRDL could experience irritating effects to their eyes and nose. Some people who drink water containing chlorine well in excess of the MRDL could experience stomach discomfort.
85. Chloramines	4 (MRDLG)	4.0 (MRDL)	Some people who use water containing chloramines well in excess of the MRDL could experience irritating effects to their eyes and nose. Some people who drink water containing chloramines well in excess of the MRDL could experience stomach discomfort or anemia.
85a. Chlorine dioxide, where any 2 consecutive daily samples	0.8 (MRDL)	0.8 (MRDL)	Some infants and young children who drink water containing chlorine dioxide in

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
taken at the entrance to the distribution system are above the MRDL.			excess of the MRDL could experience nervous system effects. Similar effects may occur in fetuses of pregnant women who drink water containing chlorine dioxide in excess of the MRDL. Some people may experience anemia. Add for public notification only: The chlorine dioxide violations reported today are the result of exceedances at the treatment facility only, not within the distribution system which delivers water to consumers. Continued compliance with chlorine dioxide levels within the distribution system minimizes the potential risk of these violations to consumers.
85b. Chlorine dioxide, where one or more distribution system samples are above the MRDL.	0.8 (MRDLG)	0.8 (MRDL)	Some infants and young children who drink water containing chlorine dioxide in excess of the MRDL could experience nervous system effects. Similar effects may occur in fetuses of pregnant women who drink water containing chlorine dioxide in excess of the MRDL. Some people may experience anemia. Add for public notification only: The chlorine dioxide violations reported today include exceedances of the EPA standard within the distribution system that delivers water to consumers. Violations of the chlorine dioxide standard within the distribution system may harm human health based on short-term exposures. Certain groups, including fetuses, infants, and young children, may be especially susceptible to nervous system effects from excessive chlorine dioxide exposure.
86. Control of DBP precursors (TOC).	None	TT	Total organic carbon (TOC) has no health effects. However, total organic carbon provides a medium for the formation of disinfection byproducts. These byproducts include trihalomethanes (THMs) and haloacetic acids (HAAs). Drinking water containing these byproducts in excess of the MCL may lead to adverse health effects, liver or kidney problems, or nervous system effects, and may lead to an increased risk of getting cancer.
<b>I. Other Treatment Techniques</b>			

National Primary Drinking Water Regulations (NPDWR)			
Contaminant	MCLG <sup>1</sup> mg/L	MCL <sup>2</sup> mg/L	Standard Health Effects Language for Public Notification.
87. Acrylamide	Zero	TT	Some people who drink water containing high levels of acrylamide over a long period of time could have problems with their nervous system or blood, and may have an increased risk of getting cancer.
88. Epichlorohydrin	Zero	TT	Some people who drink water containing high levels of epichlorohydrin over a long period of time could experience stomach problems, and may have an increased risk of getting cancer.

\*Until 31 March 2016

\*\*Beginning 1 April 2016

1. MCLG--Maximum contaminant level goal.
2. MCL--Maximum contaminant level.
3. For water systems analyzing at least 40 samples per month, no more than 5.0 percent of the monthly samples may be positive for total coliforms. For systems analyzing fewer than 40 samples per month, no more than one sample per month may be positive for total coliforms.
4. There are various regulations that set turbidity standards for different types of systems, including 40 CFR 141.13, and the 1989 Surface Water Treatment Rule, the 1998 Interim Enhanced Surface Water Treatment Rule and the 2002 Long Term 1 Enhanced Surface Water Treatment Rule. The MCL for the monthly turbidity average is 1 NTU; the MCL for the 2-day average is 5 NTU for systems that are required to filter but have not yet installed filtration (40 CFR 141.13).
5. NTU--Nephelometric turbidity unit
6. There are various regulations that set turbidity standards for different types of systems, including 40 CFR 141.13, and the 1989 Surface Water Treatment Rule, the 1998 Interim Enhanced Surface Water Treatment Rule and the 2001 Long Term 1 Enhanced Surface Water Treatment Rule. Systems subject to the Surface Water Treatment Rule (both filtered and unfiltered) may not exceed 5 NTU. In addition, in filtered systems, 95 percent of samples each month must not exceed 0.5 NTU in systems using conventional or direct filtration and must not exceed 1 NTU in systems using slow sand or diatomaceous earth filtration or other filtration technologies approved by the primacy agency.
7. TT--Treatment technique
8. There are various regulations that set turbidity standards for different types of systems, including 40 CFR 141.13, the 1989 Surface Water Treatment Rule (SWTR), the 1998 Interim Enhanced Surface Water Treatment Rule (IESWTR) and the 2002 Long Term 1 Enhanced Surface Water Treatment Rule (LT1ESWTR). For systems subject to the IESWTR (systems serving at least 10,000 people, using surface water or ground water under the direct influence of surface water), that use conventional filtration or direct filtration, after 1 January 2002, the turbidity level of a system's combined filter effluent may not exceed 0.3 NTU in at least 95 percent of monthly measurements, and the turbidity level of a system's combined filter effluent must not exceed 1 NTU at any time. Systems subject to the IESWTR using technologies other than conventional, direct, slow sand, or diatomaceous earth filtration must meet turbidity limits set by the primacy agency. For systems subject to the LT1ESWTR (systems serving fewer than 10,000 people, using surface water or ground water under the direct influence of surface water) that use conventional filtration or direct filtration, after 1 January 2005, the turbidity level of a system's combined filter effluent may not exceed 0.3 NTU in at least 95 percent of monthly measurements, and

the turbidity level of a system's combined filter effluent must not exceed 1 NTU at any time. Systems subject to the LT1ESWTR using technologies other than conventional, direct, slow sand, or diatomaceous earth filtration must meet turbidity limits set by the primacy agency.

9. The bacteria detected by heterotrophic plate count (HPC) are not necessarily harmful. HPC is simply an alternative method of determining disinfectant residual levels. The number of such bacteria is an indicator of whether there is enough disinfectant in the distribution system.
10. SWTR, IESWTR, and LT1ESWTR treatment technique violations that involve turbidity exceedances may use the health effects language for turbidity instead.
11. These arsenic values are effective 23 January 2006. Until then, the MCL is 0.05 mg/L and there is no MCLG.
12. Millions fibers per liter.
13. Action Level = 0.015 mg/L
14. Action Level = 1.3 mg/L
15. Millirems per years
16. Picocuries per liter
17. Surface water systems and ground water systems under the direct influence of surface water are regulated under Subpart H of 40 CFR 141. Subpart H community and non-transient non-community systems serving [ge] 10,000 must comply with DBP MCLs and disinfectant maximum residual disinfectant levels (MRDLs) beginning 1 January 2002. All other community and non-transient non-community systems must meet the MCLs and MRDLs beginning 1 January 2004. Subpart H transient non-community systems serving 10,000 or more persons and using chlorine dioxide as a disinfectant or oxidant must comply with the chlorine dioxide MRDL beginning 1 January 2002. Subpart H transient non-community systems serving fewer than 10,000 persons and systems using only ground water not under the direct influence of surface water and using chlorine dioxide as a disinfectant or oxidant must comply with the chlorine dioxide MRDL beginning 1 January 2004.
18. Surface water systems and ground water systems under the direct influence of surface water are regulated under subpart H of 40 CFR 141. Subpart H community and non-transient non-community systems serving greater than or equal to 10,000 must comply with 40 CFR 141, Subpart L (40 CFR 141.130 through 141.135) DBP MCLs and disinfectant maximum residual disinfectant levels (MRDLs) beginning 1 January 2002. All other community and non-transient non-community systems must comply with subpart L DBP MCLs and disinfectant MRDLs beginning January 1, 2004. Subpart H transient non-community systems serving greater than or equal to 10,000 that use chlorine dioxide as a disinfectant or oxidant must comply with the chlorine dioxide MRDL beginning January 1, 2002. All other transient non-community systems that use chlorine dioxide as a disinfectant or oxidant must comply with the chlorine dioxide MRDL beginning 1 January 2004.
19. Community and non-transient non-community systems must comply with Stage 2 disinfection byproducts TTHM and HAA5 MCLs of 0.080 mg/L and 0.060 mg/L, respectively (with compliance calculated as a locational running annual average) on the schedule in 40 CFR 141.620.
20. The MCL for haloacetic acids is the sum of the concentrations of the individual haloacetic acids.
21. MRDLG--Maximum residual disinfectant level goal.
22. MRDL--Maximum residual disinfectant level.

## Appendix 13-14

### Enhanced Filtration and Disinfection Reporting Requirements for Systems Serving Fewer Than 10,000 People (40 CFR 141.570) [Revised October 2004]

Corresponding Requirements	Information to Report	Frequency
Combined Filter Effluent Requirements (40 CFR 141.550 through 141.553 (see checklist items WQ.20.15.US))	<ol style="list-style-type: none"> <li>1. The total number of filtered water turbidity measurements taken during the month.</li> <li>2. The number and percentage of filtered water turbidity measurements taken during the month which are less than or equal to the system's required 95th percentile limit.</li> <li>3. The date and value of any turbidity measurements taken during the month which exceed the maximum turbidity value for the filtration system.</li> </ol>	By the 10th of the following month
Individual Filter turbidity Requirements (40 CFR 141.560 through 141.564 (see checklist item WQ.15.4.US))	<ol style="list-style-type: none"> <li>1. The system conducted individual filter turbidity monitoring during the month</li> <li>2. The filter number(s), corresponding date(s), and the turbidity value(s) which exceeded 1.0 NTU during the month, and the cause (if known) for the exceedance(s), but only if 2 consecutive measurements exceeded 1.0 NTU.</li> <li>3. If a self-assessment is required, the date that it was triggered and the date that it was completed.</li> <li>4. If a CPE is required, that the CPE is required and the date that it was triggered.</li> <li>5. Copy of completed CPE report.</li> </ol>	<ol style="list-style-type: none"> <li>1. By the 10th of the following month</li> <li>2. By the 10th of the following month</li> <li>3. By the 10th of the following month (or 14 days after the self-assessment was triggered only if the self-assessment was triggered during the last four days of the month)</li> <li>4. By the 10th of the following month</li> <li>5. Within 120m days after the CPE was triggered.</li> </ol>
Disinfection Profiling (40 CFR 141.530 through 141.536 (see checklist items WQ.35.4.US and WQ.76.3.US))	Results of optional monitoring which show TTHM levels 0.054 mg/l and HAA5 levels 0.048 mg/l (only if the system wishes to forgo profiling) or that the system has begun disinfection profiling.	<ul style="list-style-type: none"> <li>• For systems serving 500 – 9,999 by 1 July 2003</li> <li>• For systems serving fewer than 500 by 1 January 2004/</li> </ul>
Disinfection Benchmarking (40 CFR 141.540 through 141.546 (see checklist item WQ.20.14.US))	A description of the proposed change in disinfection, the system's disinfection profile for Giardia lamblia (and, if necessary, viruses) and disinfection benchmark, and an analysis of how the proposed	Anytime the system is considering a significant change to its disinfection practices.

Corresponding Requirements	Information to Report	Frequency
	change will affect the current levels of disinfection.	

## Appendix 13-15

### Hazardous Waste Injection Restrictions (40 CFR 148.1(c), 148.1(d), 148.10 through 148.18) [Added July 2003]

(NOTE: Wastes otherwise prohibited from injection may continue to be injected:

- If an extension from the effective date of a prohibition has been granted pursuant to 40 CFR 148.4 with respect to such wastes; or
- If an exemption from a prohibition has been granted in response to a petition filed under 40 CFR 148.20 to allow injection of restricted wastes with respect to those wastes and wells covered by the exemption; or
- If the waste is generated by a conditionally exempt small quantity generator, as defined in 40 CFR 261.5.)

(NOTE: Wastes that are hazardous only because they exhibit a hazardous characteristic, and which are otherwise prohibited under 40 CFR 148, or 40 CFR 268, are not prohibited if the wastes:

- Are disposed into a nonhazardous or hazardous injection well as defined under 40 CFR 146.6(a); and
- Do not exhibit any prohibited characteristic of hazardous waste identified in 40 CFR 261, subpart C at the point of injection.)

Waste-Specific Prohibitions	Prohibition Date
Solvent Wastes	
EPA Hazardous Waste Nos. F001, F002, F003, F004, and F005 are prohibited from underground injection unless the solvent waste is a solvent-water mixture or solvent-containing sludge containing less than 1 percent total F001-F005 solvent constituents listed in Table A below. (NOTE: This does not apply: <ul style="list-style-type: none"> <li>– if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or</li> <li>– if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or</li> <li>– during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)</li> </ul>	8 August 1988
All spent F001-F005 solvent wastes containing less than 1 percent total F001-F005 solvent constituents listed in Table A below are prohibited from injection. (NOTE: This does not apply: <ul style="list-style-type: none"> <li>– if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or</li> <li>– if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or</li> <li>– during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)</li> </ul>	8 August 1990
All spent F002 and F005 wastes containing solvent constituents listed in Table B below are prohibited from underground injection at offsite injection facilities.	8 August 1990
All spent F002 and F005 wastes containing solvent constituents listed in Table B below are prohibited from underground injection at onsite injection facilities.	8 November 1990

Waste-Specific Prohibitions	Prohibition Date
Dioxin Wastes	
<p>The dioxin-containing wastes specified in 40 CFR 261.31 as EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, F027, and F028, and prohibited from underground injection.</p> <p>(NOTE: This does not apply:</p> <ul style="list-style-type: none"> <li>– if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or</li> <li>– if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or</li> <li>– during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)</li> </ul>	8 August 1988
California-list Wastes	
<p>The hazardous wastes listed in 40 CFR 268.32 containing polychlorinated biphenyls at concentrations greater than or equal to 50 ppm or halogenated organic compounds at concentrations greater than or equal to 10,000 mg/kg are prohibited from underground injection.</p> <p>(NOTE: This does not apply:</p> <ul style="list-style-type: none"> <li>– if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or</li> <li>– if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or</li> <li>– during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)</li> </ul>	8 August 1988
<p>Liquid hazardous wastes, including free liquids associated with any solid or sludge, containing free cyanides at concentrations greater than or equal to 1,000 mg/L.</p> <p>(NOTE: This does not apply:</p> <ul style="list-style-type: none"> <li>– if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or</li> <li>– if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or</li> <li>– during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)</li> </ul>	8 August 1990
<p>Liquid hazardous wastes, including free liquids associated with any solid or sludge, containing the following metals (or elements) or compounds of these metals (or elements) at concentrations greater than or equal to those specified below:</p> <ul style="list-style-type: none"> <li>• Arsenic and/or compounds (as As) 500 mg/L;</li> <li>• Cadmium and/or compounds (as Cd) 100 mg/L;</li> <li>• Chromium (VI) and/or compounds (as Cr VI) 500 mg/L;</li> <li>• Lead and/or compounds (as Pb) 500 mg/L;</li> <li>• Mercury and/or compounds (as Hg) 20 mg/L;</li> <li>• Nickel and/or compounds (as Ni) 134 mg/L;</li> <li>• Selenium and/or compounds (as Se) 100 mg/L; and</li> </ul>	8 August 1990

Waste-Specific Prohibitions	Prohibition Date
<ul style="list-style-type: none"> <li>Thallium and/or compounds (as Tl) 130 mg/L.</li> </ul> <p>(NOTE: This does not apply:</p> <ul style="list-style-type: none"> <li>– if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or</li> <li>– if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or</li> <li>– during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)</li> </ul>	
<p>Liquid hazardous waste having a pH less than or equal to 2.0.</p> <p>(NOTE: This does not apply:</p> <ul style="list-style-type: none"> <li>– if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or</li> <li>– if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or</li> <li>– during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)</li> </ul>	8 August 1990
<p>Hazardous wastes containing halogenated organic compounds in total concentration less than 10,000 mg/kg but greater than or equal to 1,000 mg/kg.</p> <p>(NOTE: This does not apply:</p> <ul style="list-style-type: none"> <li>– if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or</li> <li>– if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or</li> <li>– during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)</li> </ul>	8 August 1990
<p>First Third Wastes</p> <p>(NOTE: This does not apply:</p> <ul style="list-style-type: none"> <li>– if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or</li> <li>– if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or</li> <li>– during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)</li> </ul>	
<p>The wastes specified in 40 CFR 261.31 as EPA Hazardous Waste numbers F006 (nonwastewaters) and the wastes specified in 40 CFR 261.32 as EPA Hazardous Waste numbers K001, K015 (wastewaters), K016 (at concentrations greater than or equal to 1%), K018, K019, K020, K021 (nonwastewaters generated by the process described in the waste listing description and disposed after 17 August 1988, and not generated in the course of treating wastewater forms of these wastes), K022 (nonwastewaters), K024, K030, K036 (nonwastewaters generated by the process described in the waste listing description and disposed after 17 August 1988, and not generated in the course of treating wastewater forms of these wastes), K037, K044, K045, nonexplosive K046 (nonwastewaters), K047, K048, K060 (nonwastewaters generated by the process described in the waste listing description and disposed after 17 August 1988, and not generated in the course of treating wastewater forms of these wastes), K061</p>	7 June 1989

Waste-Specific Prohibitions	Prohibition Date
(nonwastewaters), noncalcium sulfate K069 (nonwastewaters generated by the process described in the waste listing description and disposed after 17 August 1988, and not generated in the course of treating wastewater forms of these wastes), K086 solvent washes, K087, K099, K101 (all wastewaters and less than 1% total arsenic nonwastewaters), K102 (all wastewaters and less than 1% total arsenic nonwastewaters), and K103 are prohibited from underground injection.	
The waste specified in 40 CFR 261.32 as EPA Hazardous Waste number K036 (wastewaters); and the wastes specified in 40 CFR 261.33 as P030, P039, P041, P063, P071, P089, P094, P097, U221, and U223 are prohibited from underground injection.	8 June 1989
The wastes specified in 40 CFR 261.31 as EPA Hazardous Waste numbers F008 and F009 are prohibited from underground injection.	8 July 1989
The wastes specified in 40 CFR 261.31 as EPA Hazardous Waste Number F006 (wastewaters) and F019; the wastes specified in 40 CFR 261.32 as EPA Hazardous Waste Numbers K004, K008, K015 (nonwastewaters), K017, K021 (wastewaters), K022 (wastewaters), K031, K035, K046 (reactive nonwastewaters and all wastewaters), K060 (wastewaters), K061 (wastewaters), K069 (calcium sulfate nonwastewaters and all wastewaters), K073, K083, K084, K085, K086 (all but solvent washes), K101 (high arsenic nonwastewaters), K102 (high arsenic nonwastewaters), and K106; and the wastes specified in 40 CFR 261.33 as EPA Hazardous Waste Numbers P001, P004, P005, P010, P011, P012, P015, P016, P018, P020, P036, P037, P048, P050, P058, P059, P068, P069, P070, P081, P082, P084, P087, P092, P102, P105, P108, P110, P115, P120, P122, P123, U007, U009, U010, U012, U016, U018, U019, U022, U029, U031, U036, U037, U041, U043, U044, U046, U050, U051, U053, U061, U063, U064, U066, U067, U074, U077, U078, U086, U089, U103, U105, U108, U115, U122, U124, U129, U130, U133, U134, U137, U151, U154, U155, U157, U158, U159, U171, U177, U180, U185, U188, U192, U200, U209, U210, U211, U219, U220, U226, U227, U228, U237, U238, U248, and U249 are prohibited from underground injection at offsite injection facilities.	8 August 1990
The wastes specified in 40 CFR 261.32 as EPA Hazardous Waste numbers K049, K050, K051, K052, K062, K071, and K104 are prohibited from underground injection.	8 August 1990
The wastes specified in 40 CFR 261.31 as EPA Hazardous Waste Number F006 (wastewaters) and F019; the wastes specified in 40 CFR 261.32 as EPA Hazardous Waste Numbers K004, K008, K015 (nonwastewaters), K017, K021 (wastewaters), K022 (wastewaters), K031, K035, K046 (reactive nonwastewaters and all wastewaters), K060 (wastewaters), K061 (wastewaters), K069 (calcium sulfate nonwastewaters and all wastewaters), K073, K083, K084, K085, K086 (all but solvent washes), K101 (high arsenic nonwastewaters), K102 (high arsenic nonwastewaters), and K106; and the wastes specified in 40 CFR 261.33 as EPA Hazardous Waste Numbers P001, P004, P005, P010, P011, P012, P015, P016, P018, P020, P036, P037, P048, P050, P058, P059, P068, P069, P070, P081, P082, P084, P087, P092, P102, P105, P108, P110, P115, P120, P122, P123, U007, U009, U010, U012, U016, U018, U019, U022, U029, U031, U036, U037, U041,	8 November 1990

Waste-Specific Prohibitions	Prohibition Date
U043, U044, U046, U050, U051, U053, U061, U063, U064, U066, U067, U074, U077, U078, U086, U089, U103, U105, U108, U115, U122, U124, U129, U130, U133, U134, U137, U151, U154, U155, U157, U158, U159, U171, U177, U180, U185, U188, U192, U200, U209, U210, U211, U219, U220, U226, U227, U228, U237, U238, U248, and U249 are prohibited from underground injection at onsite injection facilities.	
The wastes specified in 40 CFR 261.32 as EPA Hazardous Waste numbers K016 (at concentrations less than 1%) are prohibited from underground injection.	7 June 1991
The waste specified in 40 CFR 261.31 as EPA Hazardous Waste number F007; and the wastes specified in 40 CFR 261.32 as K011 (nonwastewaters) and K013 (nonwastewaters) are prohibited from underground injection.	8 June 1991
The wastes specified in 40 CFR 261.32 and 261.33 as EPA Hazardous Waste Numbers K011 (wastewaters), K013 (wastewaters), and K014 are prohibited from underground injection.	8 May 1992
<p>Second Third Wastes (NOTE: This does not apply:</p> <ul style="list-style-type: none"> <li>– if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or</li> <li>– if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or</li> <li>– during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)</li> </ul>	
The wastes specified in 40 CFR 261.32 as EPA Hazardous Waste numbers K025 (nonwastewaters generated by the process described in the waste listing description and disposed after 17 August 1988, and not generated in the course of treating wastewater forms of these wastes) are prohibited from underground injection.	7 June 1989
The wastes specified in 40 CFR 261.31 as EPA Hazardous Waste numbers F010, F024; the wastes specified in 40 CFR 261.32 as K009 (nonwastewaters), K010, K027, K028, K029 (nonwastewaters), K038, K039, K040, K043, K095 (nonwastewaters), K096 (nonwastewaters), K113, K114, K115, K116; and wastes specified in 40 CFR 261.33 as P029, P040, P043, P044, P062, P074, P085, P098, P104, P106, P111, U028, U058, U107, and U235 are prohibited from underground injection.	8 June 1989
The wastes specified in 40 CFR 261.32 as EPA Hazardous Waste Number K025 (wastewaters), K029 (wastewaters), K041, K042, K095 (wastewaters), K096 (wastewaters), K097, K098, and K105; and the wastes specified in 40 CFR 261.33 as P002, P003, P007, P008, P014, P026, P027, P049, P054, P057, P060, P066, P067, P072, P107, P112, P113, P114, U002, U003, U005, U008, U011, U014, U015, U020, U021, U023, U025, U026, U032, U035, U047, U049, U057, U059, U060, U062, U070, U073, U080, U083, U092, U093, U094, U095, U097, U098, U099, U101, U106, U109, U110, U111, U114, U116, U119, U127, U128, U131, U135, U138, U140, U142, U143, U144, U146, U147, U149, U150, U161, U162, U163, U164, U165, U168, U169, U170, U172, U173, U174, U176, U178, U179, U189,	8 August 1990

Waste-Specific Prohibitions	Prohibition Date
U193, U196, U203, U205, U206, U208, U213, U214, U215, U216, U217, U218, U239, and U244 are prohibited from underground injection at off-site injection facilities.	
The waste specified in 40 CFR 261.32 as EPA Hazardous Waste number K009 (wastewaters) is prohibited from underground injection.	8 June 1991
The wastes specified in 40 CFR 261.32 as EPA Hazardous Waste Number K025 (wastewaters), K029 (wastewaters), K041, K042, K095 (wastewaters), K096 (wastewaters), K097, K098, and K105; and the wastes specified in 40 CFR 261.33 as P002, P003, P007, P008, P014, P026, P027, P049, P054, P057, P060, P066, P067, P072, P107, P112, P113, P114, U002, U003, U005, U008, U011, U014, U015, U020, U021, U023, U025, U026, U032, U035, U047, U049, U057, U059, U060, U062, U070, U073, U080, U083, U092, U093, U094, U095, U097, U098, U099, U101, U106, U109, U110, U111, U114, U116, U119, U127, U128, U131, U135, U138, U140, U142, U143, U144, U146, U147, U149, U150, U161, U162, U163, U164, U165, U168, U169, U170, U172, U173, U174, U176, U178, U179, U189, U193, U196, U203, U205, U206, U208, U213, U214, U215, U216, U217, U218, U239, and U244 are prohibited from underground injection at onsite injection facilities.	8 November 1990
<p>Third Third Wastes (NOTE: This does not apply:</p> <ul style="list-style-type: none"> <li>– if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or</li> <li>– if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or</li> <li>– during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)</li> </ul>	
The wastes specified in 40 CFR 261.32 as EPA Hazardous Waste numbers K100 (nonwastewaters generated by the process described in the waste listing description and disposed after 17 August 1988, and not generated in the course of treating wastewater forms of these wastes) are prohibited from underground injection.	7 June 1989
The wastes specified in 40 CFR 261.32 as EPA Hazardous Waste numbers K005 (nonwastewaters), K007 (nonwastewaters), K023, K093, K094; and the wastes specified in 40 CFR 261.33 as P013, P021, P099, P109, P121, U069, U087, U088, U102, and U190 are prohibited from underground injection.	8 June 1989
The wastes identified in 40 CFR 261.31 as EPA Hazardous Waste Number F039 (nonwastewaters); the wastes specified in 40 CFR 261.32 as EPA Hazardous Waste Numbers K002, K003, K005 (wastewaters), K006, K007 (wastewaters), K026, K032, K033, K034, and K100 (wastewaters); the wastes specified in 40 CFR 261.33 as P006, P009, P017, P022, P023, P024, P028, P031, P033, P034, P038, P042, P045, P046, P047, P051, P056, P064, P065, P073, P075, P076, P077, P078, P088, P093, P095, P096, P101, P103, P116, P118, P119, U001, U004, U006, U017, U024, U027, U030, U033, U034, U038, U039, U042, U045, U048, U052, U055, U056, U068, U071, U072, U075, U076, U079, U081, U082, U084, U085, U090, U091, U096,	8 August 1990

Waste-Specific Prohibitions	Prohibition Date
<p>U112, U113, U117, U118, U120, U121, U123, U125, U126, U132, U136, U141, U145, U148, U152, U153, U156, U160, U166, U167, U181, U182, U183, U184, U186, U187, U191, U194, U197, U201, U202, U204, U207, U222, U225, U234, U236, U240, U243, U246, and U247; and the wastes identified in 40 CFR 261.21, 261.23 or 261.24 as hazardous based on a characteristic alone, designated as D001, D004, D005, D006, D008, D009 (wastewaters), D010, D011, D012, D013, D014, D015, D016, D017, and newly listed waste F025 are prohibited from underground injection at off-site injection facilities.</p>	
<p>The wastes identified in 40 CFR 261.31 as EPA Hazardous Waste Number F039 (nonwastewaters); the wastes specified in 40 CFR 261.32 as EPA Hazardous Waste Numbers K002, K003, K005 (wastewaters), K006, K007 (wastewaters), K026, K032, K033, K034, and K100 (wastewaters); the wastes specified in 40 CFR 261.33 as P006, P009, P017, P022, P023, P024, P028, P031, P033, P034, P038, P042, P045, P046, P047, P051, P056, P064, P065, P073, P075, P076, P077, P078, P088, P093, P095, P096, P101, P103, P116, P118, P119, U001, U004, U006, U017, U024, U027, U030, U033, U034, U038, U039, U042, U045, U048, U052, U055, U056, U068, U071, U072, U075, U076, U079, U081, U082, U084, U085, U090, U091, U096, U112, U113, U117, U118, U120, U121, U123, U125, U126, U132, U136, U141, U145, U148, U152, U153, U156, U160, U166, U167, U181, U182, U183, U184, U186, U187, U191, U194, U197, U201, U202, U204, U207, U222, U225, U234, U236, U240, U243, U246, and U247; and the wastes identified in 40 CFR 261.21, 261.23 or 261.24 as hazardous based on a characteristic alone, designated as D001, D004, D005, D006, D008, D009 (wastewaters), D010, D011, D012, D013, D014, D015, D016, D017, and newly listed waste F025 are prohibited from underground injection at off-site injection facilities.</p>	8 August 1990
<p>The wastes identified in 40 CFR 261.31 as EPA Hazardous Waste Number F039 (nonwastewaters); the wastes specified in 40 CFR 261.32 as EPA Hazardous Waste Numbers K002, K003, K005 (wastewaters), K006, K007 (wastewaters), K026, K032, K033, K034, and K100 (wastewaters); the wastes specified in 40 CFR 261.33 as P006, P009, P017, P022, P023, P024, P028, P031, P033, P034, P038, P042, P045, P046, P047, P051, P056, P064, P065, P073, P075, P076, P077, P078, P088, P093, P095, P096, P101, P103, P116, P118, P119, U001, U004, U006, U017, U024, U027, U030, U033, U034, U038, U039, U042, U045, U048, U052, U055, U056, U068, U071, U072, U075, U076, U079, U081, U082, U084, U085, U090, U091, U096, U112, U113, U117, U118, U120, U121, U123, U125, U126, U132, U136, U141, U145, U148, U152, U153, U156, U160, U166, U167, U181, U182, U183, U184, U186, U187, U191, U194, U197, U201, U202, U204, U207, U222, U225, U234, U236, U240, U243, U246, and U247; and the wastes identified in 40 CFR 261.21, 261.23 or 261.24 as hazardous based on a characteristic alone, designated as D001, D004, D005, D006, D008, D009 (wastewaters), D010, D011, D012, D013, D014, D015, D016, D017, and newly listed waste F025 are prohibited from underground injection at onsite injection facilities.</p>	8 November 1990
<p>The waste identified in 40 CFR 261.31 as EPA Hazardous Waste Number F039 (wastewaters); the wastes identified in 40 CFR 261.22, 261.23 or 261.24 as hazardous based on a characteristic alone, designated as D002 (wastewaters and nonwastewaters), D003 (wastewaters and</p>	8 May 1992

Waste-Specific Prohibitions	Prohibition Date
nonwastewaters), D007 (wastewaters and nonwastewaters), and D009 (nonwastewaters) are prohibited from underground injection. These effective dates do not apply to the wastes listed in 40 CFR 148.12(b) which are prohibited from underground injection on 8 August 1990.	
Newly Listed Wastes	
The wastes specified in 40 CFR 261 as EPA hazardous waste numbers F037, F038, K107, K108, K109, K110, K111, K112, K117, K118, K123, K124, K125, K126, K131, K136, U328, U353, and U359 are prohibited from underground injection.  (NOTE: This does not apply: – if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or – if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or – during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)	9 November 1992
The wastes specified in 40 CFR 261.32 as EPA Hazardous waste numbers K141, K142, K143, K144, K145, K147, K148, K149, K150, and K151, are prohibited from underground injection.  (NOTE: This does not apply: – if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or – if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or – during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)	19 December 1994
The wastes specified in 40 CFR 261 as EPA Hazardous waste numbers K117, K118, K131, and K132 are prohibited from underground injection.	30 June 1995
Newly Listed and Identified Wastes (NOTE: This does not apply: – if the wastes meet or are treated to meet the applicable standards specified in subpart D of 40 CFR 268; or – if an exemption from a prohibition has been granted in response to a petition under 40 CFR 148, subpart C; or – during the period of extension of the applicable effective date, if an extension has been granted under 40 CFR 148.4.)	
All newly identified D004-D011 wastes and characteristic mineral processing wastes.	24 August 1998
Characteristic hazardous wastes from titanium dioxide mineral processing, and radioactive wastes mixed with newly identified D004-D011 or mixed with newly identified characteristic mineral processing wastes, are prohibited from underground injection.	26 May 2000

Waste-Specific Prohibitions	Prohibition Date
The wastes specified in 40 CFR 261 as EPA Hazardous waste numbers F032, F034, F035 are prohibited from underground injection.	11 August 1997
The wastes specified in 40 CFR 261 as EPA Hazardous waste numbers F032, F034, F035 that are mixed with radioactive wastes are prohibited from underground injection.	12 May 1999
The wastes specified in 40 CFR 261.32 as EPA Hazardous waste numbers K156-K161, P127, P128, P185, P188-P192, P194, P196-P199, P201-P205, U271, U277-U280, U364-U367, U372, U373, U375-U379, U381-387, U389-U396, U400-U404, U407, and U409-U411 are prohibited from underground injection.	8 July 1996
The wastes specified in 40 CFR 261.32 as EPA Hazardous waste number K088 is prohibited from underground injection.	8 January 1997
The wastes specified in 40 CFR 261 as EPA Hazardous waste numbers D018-043, and Mixed TC/Radioactive wastes, are prohibited from underground injection.	8 April 1998
The wastes specified in 40 CFR 261.32 as EPA Hazardous Waste Numbers K169, K170, K171, and K172 are prohibited from underground injection.	8 February 1999
The wastes specified in 40 CFR 261.32 as EPA Hazardous Waste Numbers K174 and K175 are prohibited from underground injection.	8 May 2001
The wastes specified in 40 CFR 261.32 as EPA Hazardous Waste Numbers K176, K177, and K178 are prohibited from underground injection.	20 May 2002

**Table A**

- Acetone
- n-Butyl alcohol
- Carbon disulfide
- Carbon tetrachloride
- Chlorobenzene
- Cresols and cresylic acid
- Cyclohexanone
- 1,2-dichlorobenzene
- Ethyl acetate
- Ethyl benzene
- Ethyl ether
- Isobutanol
- Methanol
- Methylene chloride
- Methylene chloride (from the pharmaceutical industry)
- Methyl ethyl ketone
- Methyl isobutyl ketone
- Nitrobenzene
- Pyridine

- Tetrachloroethylene
- Toulene
- 1,1,1-Trichloroethane
- 1,2,2-Trichloro-1,2,2-trifluoroethane
- Trichloroethylene
- Trichlorofluoromethane
- Xylene

**Table B**

- Benzene
- 2-Ethoxyethanol
- 2-Nitropropane
- 1,1,2-Trichloroethane

## Appendix 13-16

### Class V Wells Notification Requirements (40 CFR 144.83) [Added July 2003]

If your well is . . .	And you're in one of these locations ("Primacy" States, where the State runs the Class V UIC Program): Alabama, Arkansas, Commonwealth of Northern Mariana Islands, Connecticut, Delaware, Florida, Georgia, Guam, Idaho, Illinois, Kansas, Louisiana, Maine, Maryland, Massachusetts, Mississippi, Missouri, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Puerto Rico, Rhode Island, South Carolina, Texas, Utah, Vermont, Washington, West Virginia, Wisconsin, or Wyoming	Or you're in one of these locations ("Direct Implementation" or DI Programs, where EPA runs the Class V UIC Program): Alaska, American Samoa, Arizona, California, Colorado, Hawaii, Indiana, Iowa, Kentucky, Michigan, Minnesota, Montana, New York, Pennsylvania, South Dakota, Tennessee, Virginia, Virgin Islands, Washington, DC, or any Indian Country.
<ul style="list-style-type: none"> <li>• <b>New (prior to consturction of the well)...</b></li> </ul>	...contact the State UIC Program to determine what to submit and when.	... then submit the inventory information prior to well construction.
<ul style="list-style-type: none"> <li>• <b>Existing (construction underway or completed.</b></li> </ul>	...contact the State UIC Program to determine what to submit and when.	... cease the injection and submit the inventory information. Injection may be resumed 90 days after submitting the information unless the UIC Program Director notifies the facility that injection may not resume or may not resume sooner.

If the facility is in one of the DI Programs listed in the table above, the UIC Program Director may require the submission of other information believed necessary to protect underground sources of drinking water. Such information requirements may include, but are not limited to:

1. Perform ground water monitoring and periodically submit monitoring results;
2. Analyze the fluids injected and periodically submit the results analyses;
3. Describe the geologic layers through which and into which the facility is injecting; and
4. Conduct other analyses and submit other information, if needed to protect underground sources of drinking water.

## SECTION 14

### ENVIRONMENTAL MANAGEMENT SYSTEMS

U.S. TEAM Guide, December 2018

[Added July 2007; Revised July 2017]

#### A. Applicability

The checklist for EMS primarily consists of management practices (MP). These MPs are drawn from ISO 14001, ISO 14004, and guidance documents provided by the EPA. This checklist is also targeted at facility-level (i.e., installation, project, refuge, laboratory, center, park) EMS, not at Departmental, Bureau, Agency, or Regional EMS.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment. While this checklist presents the principles of EMS, it does not specifically describe how an individual Department, Agency, Bureau, or facility implements their EMS. To accurately assess EMS conformance the assessor must use the pertinent Department, Agency, Bureau, or facility policy, guidance, or SOPs.

#### B. Federal Regulations

- International Organization for Standardization (ISO) 14001, Environmental Management Systems – Specification with Guidance for Use. The purpose of this standard, revised 15 September 2015, is to provide organizations with a framework to protect the environment and respond to changing environmental conditions in balance with socio-economic needs. It specifies requirements that enable an organization to achieve the intended outcomes it sets for its environmental management system. The basis for the approach underlying an environmental management system is founded on the concept of Plan-Do-Check-Act (PDCA). ISO 14001 is not a regulation [Revised October 2016].
- International Organization for Standardization (ISO) 14004, *Environmental Management Systems — General Guidelines on Principles, Systems and Support Techniques*. This standard, revised 15 November 2004, provides assistance to organizations that wish to implement or improve an environmental management system and thereby improve their environmental performance. This International Standard is consistent with the concept of sustainable development and compatible with diverse cultural, social and organizational frameworks and systems of management.
- Executive Order (EO) 13693, *Planning for Federal Sustainability in the Next Decade*. This EO, signed 19 March 2015, encourages the continued implementation of formal Environmental Management Systems (EMS) where those systems have proven effective and deployment of new EMSs where appropriate (Section 7, para (i)) [Added October 2016].
- *Implementing Instruction For Executive Order (EO) 13693, Planning for Federal Sustainability in the Next Decade*. These instructions, dated 10 June 2015, provide Federal Executive departments and agencies with clarifying instructions for implementing EO 13693. According to these instructions, E.O. 13693 charges the Principal agency Chief Sustainability Officer (CSO) with considering the impact of government leases and contracts on the agency's ability to comply with the goals of the E.O. and supporting continual improvement through appropriate implementation of formal environmental managements systems where those systems have proven effective.

#### C. State/Local Regulations

For information on regulations in specific states, see the State Supplements to TEAM Guide.

## E. Key Compliance Definitions

- *Agency* - an executive agency as defined in section 105 of title 5, United States Code, excluding the Government Accountability Office (EO 13693, Section 19, para b).
- *Audit* - systematic, independent and documented process for obtaining audit evidence and evaluating it objectively to determine the extent to which the audit criteria are fulfilled. Note 1 to entry: An internal audit is conducted by the organization itself, or by an external party on its behalf. Note 2 to entry: An audit can be a combined audit (combining two or more disciplines). Note 3 to entry: Independence can be demonstrated by the freedom from responsibility for the activity being audited or freedom from bias and conflict of interest. Note 4 to entry: “Audit evidence” consists of records, statements of fact or other information which are relevant to the audit criteria and are verifiable; and “audit criteria” are the set of policies, procedures or requirements used as a reference against which audit evidence is compared, as defined in ISO 19011:2011, 3.3 and 3.2 respectively (ISO 14001:2015(E), para 3.4.1).
- *Competence* - ability to apply knowledge and skills to achieve intended results (ISO 14001:2015(E), para 3.3.1).
- *Compliance Obligations* - (preferred term) legal requirements and other requirements (admitted term) legal requirements that an organization has to comply with and other requirements that an organization has to or chooses to comply with. Note 1 to entry: Compliance obligations are related to the environmental management system. Note 2 to entry: Compliance obligations can arise from mandatory requirements, such as applicable laws and regulations, or voluntary commitments, such as organizational and industry standards, contractual relationships, codes of practice and agreements with community groups or non-governmental organizations (ISO 14001:2015(E), para 3.2.9).
- *Conformity* - fulfilment of a requirement (ISO 14001:2015(E), para 3.4.2).
- *Continual Improvement* - recurring activity to enhance performance. Note 1 to entry: Enhancing performance relates to the use of the environmental management system to enhance environmental performance consistent with the organization’s environmental policy. Note 2 to entry: The activity need not take place in all areas simultaneously, or without interruption (ISO 14001:2015(E), para 3.4.5).
- *Corrective Action* - action to eliminate the cause of a nonconformity (3.4.3) and to prevent recurrence. Note 1 to entry: There can be more than one cause for a nonconformity (ISO 14001:2015(E), para 3.4.4).
- *Documented Information* - information required to be controlled and maintained by an organization and the medium on which it is contained. Note 1 to entry: Documented information can be in any format and media, and from any source. Note 2 to entry: Documented information can refer to (ISO 14001:2015(E), para 3.3.2).
  1. the environmental management system, including related processes;
  2. information created in order for the organization to operate (can be referred to as documentation);
  3. evidence of results achieved (can be referred to as records).
- *Effectiveness* - extent to which planned activities are realized and planned results achieved (ISO 14001:2015(E), para 3.4.6).
- *Environment* - surroundings in which an organization operates, including air, water, land, natural resources, flora, fauna, humans and their interrelationships. Note 1 to entry: Surroundings can extend from within an organization to the local, regional and global system. Note 2 to entry: Surroundings can be described in terms of biodiversity, ecosystems, climate or other characteristics (ISO 14001:2015(E), para 3.2.1).
- *Environmental Aspect* - element of an organization’s activities or products or services that interacts or can interact with the environment. Note 1 to entry: An environmental aspect can cause (an) environmental impact(s). A significant environmental aspect is one that has or can have one or more significant environmental impact(s).

Note 2 to entry: Significant environmental aspects are determined by the organization applying one or more criteria (ISO 14001:2015(E), para 3.2.2).

- *Environmental Condition* - state or characteristic of the environment as determined at a certain point in time (ISO 14001:2015(E), para 3.2.3).
- *Environmental Impact* - change to the environment, whether adverse or beneficial, wholly or partially resulting from an organization's environmental aspects (ISO 14001:2015(E), para 3.2.4).
- *Environmental Management System* - part of the management system used to manage environmental aspects, fulfil compliance obligations, and address risks and opportunities (ISO 14001:2015(E), para 3.1.2).
- *Environmental Objective* - objective set by the organization consistent with its environmental policy (ISO 14001:2015(E), para 3.2.6).
- *Environmental Performance* - performance related to the management of environmental aspects. Note 1 to entry: For an environmental management system, results can be measured against the organization's environmental policy, environmental objectives or other criteria, using indicators (ISO 14001:2015(E), para 3.4.11).
- *Environmental Policy* - intentions and direction of an organization related to environmental performance, as formally expressed by its top management (ISO 14001:2015(E), para 3.1.3).
- *Federal Facility* - any building or collection of buildings, grounds, or structures, as well as any fixture or part thereof, which is owned by the United States or any Federal agency or that is held by the United States or any Federal agency under a lease-acquisition agreement under which the United States or a Federal agency will receive fee simple title under the terms of such agreement without further negotiation (EO 13693, Section 19, para 1).
- *Indicator* - measurable representation of the condition or status of operations, management or conditions (ISO 14001:2015(E), para 3.4.7).
- *Interested Party* - person or organization that can affect, be affected by, or perceive itself to be affected by a decision or activity. EXAMPLE Customers, communities, suppliers, regulators, non-governmental organizations, investors and employees. Note 1 to entry: To "perceive itself to be affected" means the perception has been made known to the organization (ISO 14001:2015(E), para 3.1.6).
- *Life Cycle* - consecutive and interlinked stages of a product (or service) system, from raw material acquisition or generation from natural resources to final disposal. Note 1 to entry: The life cycle stages include acquisition of raw materials, design, production, transportation/delivery, use, end-of-life treatment and final disposal (ISO 14001:2015(E), para 3.3.3).
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Management System* - set of interrelated or interacting elements of an organization to establish policies and objectives and processes to achieve those objectives. Note 1 to entry: A management system can address a single discipline or several disciplines (e.g. quality, environment, occupational health and safety, energy, financial management). Note 2 to entry: The system elements include the organization's structure, roles and responsibilities, planning and operation, performance evaluation and improvement. Note 3 to entry: The scope of a management system can include the whole of the organization, specific and identified functions of the organization, specific and identified sections of the organization, or one or more functions across a group of organizations (ISO 14001:2015(E), para 3.1.1).
- *Measurement* - process to determine a value (ISO 14001:2015(E), para 3.4.9).

- *Monitoring* - determining the status of a system, a process or an activity. Note 1 to entry: To determine the status, there might be a need to check, supervise or critically observe (ISO 14001:2015(E), para 3.4.8).
- *Nonconformity* - non-fulfilment of a requirement. Note 1 to entry: Nonconformity relates to requirements in this International Standard and additional environmental management system requirements that an organization establishes for itself (ISO 14001:2015(E), para 3.4.3).
- *Objective* - result to be achieved. Note 1 to entry: An objective can be strategic, tactical, or operational. Note 2 to entry: Objectives can relate to different disciplines (such as financial, health and safety, and environmental goals) and can apply at different levels (such as strategic, organization-wide, project, product, service and process). Note 3 to entry: An objective can be expressed in other ways, e.g. as an intended outcome, a purpose, an operational criterion, as an environmental objective, or by the use of other words with similar meaning (e.g. aim, goal, or target) (ISO 14001:2015(E), para 3.2.5).
- *Organization* - person or group of people that has its own functions with responsibilities, authorities and relationships to achieve its objectives. Note 1 to entry: The concept of organization includes, but is not limited to sole-trader, company, corporation, firm, enterprise, authority, partnership, charity or institution, or part or combination thereof, whether incorporated or not, public or private (ISO 14001:2015(E), para 3.1.4).
- *Outsource* (verb) - make an arrangement where an external *organization* performs part of an organization's function or *process*. Note 1 to entry: An external organization is outside the scope of the *management system*, although the outsourced function or process is within the scope (ISO 14001:2015(E), para 3.3.4).
- *Performance* - measurable result. Note 1 to entry: Performance can relate either to quantitative or qualitative findings. Note 2 to entry: Performance can relate to the management of activities, processes, products (including services), systems or organizations (ISO 14001:2015(E), para 3.4.10).
- *Prevention of Pollution* - use of processes, practices, techniques, materials, products, services or energy to avoid, reduce or control (separately or in combination) the creation, emission or discharge of any type of pollutant or waste, in order to reduce adverse environmental impacts. Note 1 to entry: Prevention of pollution can include source reduction or elimination; process, product or service changes; efficient use of resources; material and energy substitution; reuse; recovery; recycling, reclamation; or treatment (ISO 14001:2015(E), para 3.2.7).
- *Process* - set of interrelated or interacting activities which transforms inputs into outputs. Note 1 to entry: A process can be documented or not (ISO 14001:2015(E), para 3.3.5).
- *Requirement* - need or expectation that is stated, generally implied or obligatory. Note 1 to entry: "Generally implied" means that it is custom or common practice for the organization and interested parties that the need or expectation under consideration is implied. Note 2 to entry: A specified requirement is one that is stated, for example in documented information. Note 3 to entry: Requirements other than legal requirements become obligatory when the organization decides to comply with them (ISO 14001:2015(E), para 3.2.8).
- *Risk* - effect of uncertainty. Note 1 to entry: An effect is a deviation from the expected — positive or negative. Note 2 to entry: Uncertainty is the state, even partial, of deficiency of information related to, understanding or knowledge of, an event, its consequence, or likelihood. Note 3 to entry: Risk is often characterized by reference to potential "events" (as defined in ISO Guide 73:2009, 3.5.1.3) and "consequences" (as defined in ISO Guide 73:2009, 3.6.1.3), or a combination of these. Note 4 to entry: Risk is often expressed in terms of a combination of the consequences of an event (including changes in circumstances) and the associated "likelihood" (as defined in ISO Guide 73:2009, 3.6.1.1) of occurrence (ISO 14001:2015(E), para 3.2.10).
- *Risks and Opportunities* - potential adverse effects (threats) and potential beneficial effects (opportunities) (ISO 14001:2015(E), para 3.2.11).
- *Top Management* - person or group of people who directs and controls an *organization* at the highest level. Note 1 to entry: Top management has the power to delegate authority and provide resources within the organization.

Note 2 to entry: If the scope of the *management system* covers only part of an organization, then top management refers to those who direct and control that part of the organization (ISO 14001:2015(E), para 3.1.5)

#### **F. Records To Review**

- EMS manual and the procedures applicable to the area being audited
- Regulatory documents and specifications that typically apply in the area being audited
- The findings of the last audit of the area and any available audit checklists relating to that area
- Any records of corrective action analysis relating to that area

#### **G. Physical Features To Inspect**

- None

#### **H. Guidance for EMS Checklist Users**

	<b>REFER TO CHECKLIST ITEMS:</b>
All Facilities (includes 4)	EM.1.1.US. through EM.1.3.US
Missing, Risk Management, and Positive Checklist Items	EM.2.1.US. through EM.2.3.US
Leadership	EM.11.1.US through EM.11.3.US
Planning	EM.20.1.US. through EM.20.7.US.
Support	EM.31.1.US through EM.31.5.US
Operation	EM.41.1.US and EM.41.2.US
Performance Evaluation	EM.51.1.US through EM.51.4.US
Improvement	EM.60.1.US through EM.60.3.US

<p style="text-align: center;"><b>REGULATORY REQUIREMENTS:</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS:</b>  <b>December 2018</b></p>
<p><b>EMS</b></p> <p><b>EM.21 Planning</b></p> <p><b>EM.21.1.US.</b> The organization should establish, implement, and maintain the processes needed for EMS planning (MP – ISO 14001:2015, para 6.1.1) [Added July 2017].</p> <p><b>EM.21.2.US.</b> Organizations should develop and implement a procedure to identify environmental aspects and their impacts (MP - ISO 14001:2015, para 6.1.2 and 6.1.4) [Moved July 2017].</p>	<p>Verify that the organization establishes, implements and maintains the process(es) needed to meet the requirements in ISO 14001:2105 para 6.1.1 to 6.1.4 (see checklist items EM.21.2.US through EM.21.4.US).</p> <p>Verify that, when planning for the EMS, the organization considers:</p> <ul style="list-style-type: none"> <li>– the issues referred to in 4.1 (see checklist item ??)</li> <li>– the requirements referred to in 4.2 (see checklist item ??)</li> <li>– the scope of its EMS; and determine the risks and opportunities, related to its environmental aspects (see 6.1.2 [see checklist item ??]), compliance obligations (see 6.1.3 [see checklist item ??]) and other issues and requirements, identified in 4.1 and 4.2 (see checklist item ???), that need to be addressed to: <ul style="list-style-type: none"> <li>– give assurance that the environmental management system can achieve its intended outcomes;</li> <li>– prevent or reduce undesired effects, including the potential for external environmental conditions</li> <li>– to affect the organization;</li> <li>– achieve continual improvement.</li> </ul> </li> </ul> <p>Verify that, within the scope of the EMS, the organization determines potential emergency situations, including those that can have an environmental impact.</p> <p>Verify that the organization maintains documented information of its:</p> <ul style="list-style-type: none"> <li>– risks and opportunities that need to be addressed;</li> <li>– process(es) needed in 6.1.1 to 6.1.4 (see checklist items ???), to the extent necessary to have confidence they are carried out as planned.</li> </ul> <p>(NOTE: This was previously checklist item EM.20.1.US.)</p> <p>Verify that, within the defined scope of the EMS, the organization determines the environmental aspects of its activities, products and services that it can control and those that it can influence, and their associated environmental impacts, considering a life cycle perspective.</p> <p>Verify that, when determining environmental aspects, the organization takes into account the following:</p> <ul style="list-style-type: none"> <li>– change, including planned or new developments, and new or modified activities, products and services</li> </ul>

<b>COMPLIANCE CATEGORY:</b> <b>ENVIRONMENTAL MANAGEMENT SYSTEMS</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS:</b> <b>December 2018</b>
	<p>– abnormal conditions and reasonably foreseeable emergency situations.</p> <p>Verify that the organization determines those aspects that have or can have a significant environmental impact (i.e. significant environmental aspects), by using established criteria.</p> <p>Verify that the organization communicates its significant environmental aspects among the various levels and functions of the organization, as appropriate.</p> <p>Verify that the organization maintains documented information of its:</p> <ul style="list-style-type: none"> <li>– environmental aspects and associated environmental impacts</li> <li>– criteria used to determine its significant environmental aspects</li> <li>– significant environmental aspects.</li> </ul> <p>(NOTE: Significant environmental aspects can result in risks and opportunities associated with either adverse environmental impacts (threats) or beneficial environmental impacts (opportunities)).</p> <p>Verify that the organization plans to take actions to address its environmental aspects and impacts.</p> <p>Verify that the organization plans how to:</p> <ul style="list-style-type: none"> <li>– integrate and implement the actions into its environmental management system processes, or other business processes</li> <li>– evaluate the effectiveness of these actions.</li> </ul> <p>Verify that, when planning these actions to address its aspects and impacts, the organization considers its technological options and its financial, operational and business requirements.</p> <p>(NOTE: Per Annex A of ISO 14001:2015, para A.6.1.2: When determining environmental aspects, the organization considers a life cycle perspective. This does not require a detailed life cycle assessment; thinking carefully about the life cycle stages that can be controlled or influenced by the organization is sufficient. Typical stages of a product (or service) life cycle include raw material acquisition, design, production, transportation/delivery, use, end-of-life treatment and final disposal. The life cycle stages that are applicable will vary depending on the activity, product or service. An organization needs to determine the environmental aspects within the scope of its EMS. It takes into account the inputs and outputs (both intended and unintended) that are associated with its current and relevant past activities, products and services; planned or new developments; and new or modified activities, products and services. The method used should consider normal and abnormal operating conditions, shut-down and start-up conditions, as well as the reasonably foreseeable emergency situations. Attention should be paid to prior occurrences of emergency situations. An organization does not have to consider each product,</p>

<b>COMPLIANCE CATEGORY:</b> <b>ENVIRONMENTAL MANAGEMENT SYSTEMS</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS:</b> <b>December 2018</b>
	<p>component or raw material individually to determine and evaluate their environmental aspects; it may group or categorize activities, products and services when they have common characteristics. When determining its environmental aspects, the organization can consider:</p> <ul style="list-style-type: none"> <li>– emissions to air</li> <li>– releases to water</li> <li>– releases to land</li> <li>– use of raw materials and natural resources</li> <li>– use of energy</li> <li>– energy emitted (e.g. heat, radiation, vibration (noise), light)</li> <li>– generation of waste and/or by-products</li> <li>– use of space.)</li> </ul> <p>(NOTE: Per Annex A of ISO 14001:2015, para A.6.1.2: In addition to the environmental aspects that it can control directly, an organization determines whether there are environmental aspects that it can influence. These can be related to products and services used by the organization which are provided by others, as well as products and services that it provides to others, including those associated with (an) outsourced process(es). With respect to those an organization provides to others, it can have limited influence on the use and end-of-life treatment of the products and services. In all circumstances, however, it is the organization that determines the extent of control it is able to exercise, the environmental aspects it can influence, and the extent to which it chooses to exercise such influence. Consideration should be given to environmental aspects related to the organization's activities, products and services, such as:</p> <ul style="list-style-type: none"> <li>– design and development of its facilities, processes, products and services</li> <li>– acquisition of raw materials, including extraction</li> <li>– operational or manufacturing processes, including warehousing</li> <li>– operation and maintenance of facilities, organizational assets and infrastructure</li> <li>– environmental performance and practices of external providers</li> <li>– product transportation and service delivery, including packaging</li> <li>– storage, use and end-of-life treatment of products</li> <li>– waste management, including reuse, refurbishing, recycling and disposal.)</li> </ul> <p>(NOTE: Per Annex A of ISO 14001:2015, para A.6.1.2: There is no single method for determining significant environmental aspects, however, the method and criteria used should provide consistent results. The organization sets the criteria for determining its significant environmental aspects. Environmental criteria are the primary and minimum criteria for assessing environmental aspects. Criteria can relate to the environmental aspect (e.g. type, size, frequency) or the environmental impact (e.g. scale, severity, duration, exposure). Other criteria may also be used. An environmental aspect might not be significant when only considering environmental criteria. It can, however, reach or exceed the threshold for determining significance when other criteria are considered. These other criteria can include organizational issues, such as legal requirements or interested party</p>
