**REGULATORY  
REQUIREMENTS**

**REVIEWER CHECKS**  
**December 2018**

Verify that, within three (3) working days of the receipt of a shipment subject to 40 CFR 262, subpart H, the owner or operator of a facility provides a copy of the movement document bearing all required signatures to:

- the foreign exporter
- to the competent authorities of the countries of export and transit that control the shipment as an export and transit of hazardous waste respectively
- to EPA electronically using EPA's Waste Import Export Tracking System (WIETS), or its successor system on or after the electronic import-export reporting compliance date.

Verify that the original copy of the movement document is maintained at the facility for at least 3 yr from the date of signature.

(NOTE: The owner or operator of a facility may satisfy this recordkeeping requirement by retaining electronically submitted documents in the facility's account on EPA's WIETS, or its successor system, provided that copies are readily available for viewing and production if requested by any EPA or authorized state inspector. No owner or operator of a facility may be held liable for the inability to produce the documents for inspection under this section if the owner or operator of a facility can demonstrate that the inability to produce the document is due exclusively to technical difficulty with EPA's WIETS, or its successor system, for which the owner or operator of a facility bears no responsibility.)

(NOTE: A facility must determine whether the consignment state for a shipment regulates any additional wastes (beyond those regulated Federally) as hazardous wastes under its state hazardous waste program. Facilities must also determine whether the consignment state or generator state requires the facility to submit any copies of the manifest to these states.)

(NOTE: Electronic manifests that are obtained, completed, and transmitted in accordance with EPA requirements and used in lieu of the paper manifest form are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in these regulations to obtain, complete, sign, provide, use, or retain a manifest.)

(NOTE: Any requirement for the owner or operator of a facility to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of 40 CFR 262.25.)

(NOTE: Any requirement in these regulations to give, provide, send, forward, or to return to another person a copy of the manifest is satisfied when a copy of an electronic manifest is transmitted to the other person.)

See [www.ecfr.gov](http://www.ecfr.gov) for the most recent, integrated, version of 40 CFR 261.4(a).

## **Appendix 4-1**

### **Hazardous Waste from Nonspecific Sources and from Specific Sources**

**(40 CFR 261.31 and 261.32)**

**[Revised January 2017]**

See [www.ecfr.gov](http://www.ecfr.gov) for the most recent, integrated, version of 40 CFR 261.31 and 261.32.

## **Appendix 4-2**

### **Commercial Chemical Products or Manufacturing Chemical Intermediates Identified as Toxic Wastes**

**(40 CFR 261.33(f))**

**[Revised June 1998; Revised January 2007, Revised July 2010, Revised January 2017]**

The commercial chemical products, manufacturing chemical intermediates, or off-specification commercial chemical products identified in 40 CFR 261.33(f) are identified as “toxic wastes.”

See [www.ecfr.gov](http://www.ecfr.gov) for the most recent, integrated, version of this information.

### Appendix 4-3

#### Toxicity Characteristics Constituents and Regulatory Levels (40 CFR 261.24)

USEPA HW No.	Constituent	CAS No	Regulatory level (mg/L)
D004	Arsenic	7440-38-2	5.0
D005	Barium	7440-39-3	100.0
D018	Benzene	71-43-2	0.5
D006	Cadmium	7440-43-9	1.0
D019	Carbon tetrachloride	56-23-5	0.5
D020	Chlordane	57-74-9	0.03
D021	Chlorobenzene	108-90-7	100.0
D022	Chloroform	67-66-3	6.0
D007	Chromium	7440-47-3	5.0
D023	o-Cresol	95-48-7	200.0 <sup>1</sup>
D024	m-Cresol	108-39-4	200.0 <sup>1</sup>
D025	p-Cresol	106-44-5	200.0 <sup>1</sup>
D026	Cresol		200.0 <sup>1</sup>
D016	2,4-D	94-75-7	10.0
D027	1,4-Dichlorobenzene	106-46-7	7.5
D028	1,2-Dichloroethane	107-06-2	0.5
D029	1,1-Dichloroethylene	75-35-4	0.7
D030	2,4-Dinitrotoluene	121-14-2	0.13 <sup>2</sup>
D012	Endrin	72-20-8	0.02
D031	Heptachlor (and its hydroxide)	76-44-8	0.008
D032	Hexachlorobenzene	118-74-1	0.13 <sup>2</sup>
D033	Hexachloro-1,3-butadiene	87-68	0.50
D034	Hexachloroethane	67-72-1	3.0
D008	Lead	7439-92-1	5.0
D013	Lindane	58-89-9	0.4
D009	Mercury	7439-97-6	0.2
D014	Methoxychlor	72-43-5	10.0
D035	Methyl ethyl ketone	78-93-3	200.0
D036	Nitrobenzene	98-95-3	2.0
D037	Pentachlorophenol	87-86-5	100.0
D038	Pyridine	110-86-1	5.0 <sup>2</sup>
D010	Selenium	7782-49-2	1.0
D011	Silver	7440-22-4	5.0
D039	Tetrachloroethylene	127-18-4	0.7
D015	Toxaphene	8001-35-2	0.5
D040	Trichloroethylene	79-01-6	0.5
D041	2,4,5-Trichlorophenol	95-95-4	400.0
D042	2,4,6-Trichlorophenol	88-06-2	2.0
D017	2,4,5-TP (Silvex)	93-72-1	1.0
D043	Vinyl chloride	75-01-4	0.2

<sup>1</sup> If o-, m-, and p-cresol concentrations cannot be differentiated, the total cresol (D026) concentration is used.

<sup>2</sup> Quantitation limit is greater than the calculated regulatory level. Therefore, the quantitation limit becomes the regulatory level.

#### **Appendix 4-4**

**This Appendix has been deleted.**

## **Appendix 4-5**

### **Commercial Chemical Products or Manufacturing Chemical Intermediates Identified as Acute Hazardous Waste (40 CFR 261.33(a) through 261.33(e)) [Revised January 2007; Revised January 2017]**

The commercial chemical products, manufacturing chemical intermediates, or off-specification commercial chemical products identified in 40 CFR 261.33(a) through 261.33(e) are identified as “acute hazardous wastes.”

See [www.ecfr.gov](http://www.ecfr.gov) for the most recent, integrated, version of this information.

**Appendix 4-6**  
**Hazardous Waste Storage Incompatibility Chart**  
**Substances in bold have detailed example lists on the next page.**

If the material contains:	It may not be stored with any of the following:
<b>Acid</b> (pH below 2.0)	<b>Caustics</b> (pH above 12.5) <b>Reactive Metals</b> Alcohol Water Aldehydes Halogenated, Nitrated, or Unsaturated Hydrocarbons <b>Reactive Organic Compounds and Solvents</b> Spent Cyanide and Sulfide Solutions <b>Oxidizers</b>
<b>Caustic</b> (pH above 12.5)	<b>Acid</b> (pH below 2.0) <b>Reactive Metals</b> Alcohol Water Aldehydes Halogenated, Nitrated, or Unsaturated Hydrocarbons <b>Reactive Organic Compounds and Solvents</b>
<b>Reactive Metals</b>	<b>Caustics</b> <b>Acids</b> Alcohol Aldehydes Halogenated, Nitrated, or Unsaturated Hydrocarbons <b>Reactive Organic Compounds and Solvents</b> <b>Oxidizers</b>
<b>Reactive Organic Compounds and Solvents</b>	<b>Caustics</b> <b>Acids</b> <b>Reactive Metals</b>
<b>Spent Cyanide and Sulfide Solutions</b>	<b>Acids</b>
<b>Oxidizers</b>	Acetic or Other Organic Acids Concentrated Mineral Acids <b>Reactive Metals</b> <b>Reactive Organic Compounds and Solvents</b> <b>Ignitable [Flammable/Combustible] Wastes*</b>

\* "Ignitable" in this context refers to substances with a flashpoint below 140× oF, and includes:  
Combustible substances, with a flashpoint below 140× oF  
Flammable substances, with a flashpoint below 100× oF.

**Some Deadly Combinations**

Acids + Oil or Grease = Fire      Flammable Liquids + Hydrogen Peroxide = Fire/Explosion  
Acids + Caustics = Heat/Spattering    Aluminum Powder + Ammonium Nitrate = Explosion  
Caustics + Epoxies = Extreme Heats      Sodium Cyanide + Sulfuric Acid = Lethal Hydrogen Cyanide  
Chlorine Gas + Acetylene = Explosion      Ammonia + Bleach = Noxious Fumes

In general: **Reactives** must be segregated from **Ignitables**

**Acids** must be segregated from **Caustics**

**Corrosives** should be segregated from **Flammables**

**Oxidizers** should be segregated from **EVERYTHING**

**Many Corrosives** are "Water Reactive"

Most **Organic Reactives** must be segregated from **Inorganic Reactives** (metals)

<b>Ignitables</b> <b>(Flammables/Combustibles)</b>	<b>Corrosives</b> <b>Acids</b>	<b>Caustics</b>

## SECTION 5

### NATURAL RESOURCES MANAGEMENT U.S. TEAM Guide, December 2018

#### A. Applicability

This section integrates the requirements of regulations pertaining to the protection of natural resources and endangered and threatened species into a single document which normally will apply to any facility with land management programs.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

#### B. Federal Regulations

- EPA and Corps of Engineers Legal Memorandum, *Clean Water Act Jurisdiction Following the U.S. Supreme Court's Decision in Rapanos v. United States & Carabell v. United States*. This memorandum, dated 5 June 2007, provides guidance to EPA regions and Corps districts implementing the Supreme Court's decision in the consolidated cases *Rapanos v. United States* and *Carabell v. United States* [**Added July 2007**].
- *The Endangered Species Act* (ESA) of 1973. The purpose of this act (16 USC 1531-1547, et al., last amended in October 1988), is to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions for protection of endangered species (16 USC 1531(b)). Under ESA, the policy of Congress is that all Federal departments and agencies must seek to conserve endangered species and threatened species and must use their authorities in furtherance of the purposes of this act. Further, Federal agencies must cooperate with state and local agencies to resolve water resource issues in concert with conservation of endangered species (16 USC 1531(c)).
- *Sikes Act*. This act (16 USC 670a-670f, last amended in November 1997) authorizes the Secretary of Defense to carry out a program to provide for the conservation and rehabilitation of natural resources on military installations. The Act makes the Secretary of each military department responsible for [**Revised March 1998**]:
  1. determining whether an Integrated Natural Resources Management Plan (INRMP) is appropriate for each installation
  2. preparing the INRMP in cooperation with the Secretary of the Interior, acting through the Director of the US FWS, and the head of each appropriate state fish and wildlife agency
  3. preparing and implementing the INRMP to reflect the mutual agreement of the parties concerning conservation, protection, and management of fish and wildlife resources
  4. ensuring, to the extent feasible, that sufficient number of professionally trained natural resources management personnel and natural resources law enforcement personnel are available and assigned responsibility to carry out all of Title 16 - Conservation, including the preparation and implementation of INRMPs (16 USC 670e-2).
- *Wild and Scenic Rivers Act* of 1986. This act (16 USC 1271-1287, last amended in May 1991) outlines the policy of the United States that certain selected rivers of the nation which, with their immediate environments, possess outstandingly remarkable scenic, recreational, geologic, fish and wildlife, historic, cultural, or other similar values, must be preserved in free-flowing condition, and that they and their immediate environments must be protected for the benefit and enjoyment of present and future generations. The Congress declares that the established national policy of dam and other construction at appropriate sections of the rivers of the United States needs to be complemented by a policy that would preserve other selected rivers or sections thereof in their free-

flowing condition to protect the water quality of such rivers and fulfill other vital national conservation purposes (16 USC 1271). The purpose of this act is to implement the declared policy of Congress by instituting a national wild and scenic rivers system, by designing the initial components of that system, and by prescribing the methods by which and standards to which additional components may be added to the system from time to time (16 USC 1272).

- *Withdrawal of Public Lands for Military Purposes.* This act (Public Law (PL) 99-606), dated 6 November 1986, authorized the withdrawal of certain public lands for use by the military. This use includes training activities such as air-to-air combat and bombing and ground maneuvers.
- *Farmland Protection Policy Act of 1981.* The purpose of this act (7 USC 4201-4209, last amended in December 1991), is to minimize the extent to which Federal programs contribute to the unnecessary and irreversible conversion of farmland to nonagricultural uses, and to assure that Federal programs are administered in a manner that, to the extent practicable, will be compatible with state, unit of local government, and private programs and policies to protect farmland (7 USC 4201(b)).
- *The Fish and Wildlife Coordination Act of 1946.* This act (16 USC 666c, last amended in July 1965), is the Federal legislation that coordinates programs and activities regarding the conservation and rehabilitation of fish and wildlife in the United States. Unless provided for otherwise, whenever the waters of any stream or other body of water are proposed or authorized to be impounded, diverted, the channel deepened, or the stream or other body of water otherwise controlled or modified for any purpose whatever, including navigation and drainage, by any department or agency of the United States, or by any public or private agency under Federal permit or license, such department or agency first must consult with the U.S. Fish and Wildlife Service, Department of the Interior (DOI), and the head of the agency exercising administration over the wildlife resources of the particular state where the impoundment, diversion, or other control facility is to be constructed, with a view to the conservation of wildlife resources by preventing loss of and damage to such resources as well as providing for the development and improvement thereof in connection with such water-resource development (16 USC 662(a)).
- *Fish and Wildlife Conservation Act of 1980.* This act (PL 96-366) encourages Federal departments and agencies to utilize their statutory and administrative authority to the maximum extent possible to conserve and protect non-game fish and wildlife and their habitats.
- *Bald Eagle Protection Act.* This act (PL 86-70) establishes penalties for taking, possessing, selling, purchasing, bartering, offering to sell, transporting, exporting, or importing any bald eagle or golden eagles. The prohibitions also apply to any part, nest, or egg.
- *Anadromous Fish Conservation Act.* This act (PL 89-304) was passed to promote the conservation, development, and enhancement within several states the anadromous fishing resources of the Nation.
- *Marine Protection, Research, and Sanctuaries Act of 1972.* This act (16 USC 1401 - 1444) declares that the United States will strictly limit all dumping into the ocean of any material which would adversely affect human health, welfare, or amenities, or the marine environment, ecological systems, or economic potentialities.
- *Marine Mammal Protection Act of 1972.* This act, (16 USC 1362 - 1407) states policy to prevent the extinction or depletion of marine mammals as a result of man's activities. It further encourages the development of international arrangements for research on and conservation of all marine mammals.
- *The Wilderness Act.* This act (16 USC 1133), mandates that each agency administering any area designated as wilderness is responsible for preserving the wilderness character of the area. When the agency uses the area for another purpose, it will do so in a manner that preserves the wilderness character.
- *The National Recreational Trails Act.* This act (16 USC 1261, Section 1301 of *The Surface Transportation Efficiency Act*), outlines the national recreational trails funding program. The money available under this act is allocated to the states for the purpose of providing and maintaining recreational trails.

- *Outleasing for Grazing and Agriculture on Military Lands.* This section (10 USC 2667(d) addresses the taking of fees by Federal agencies for the leasing of Federal lands for grazing and agricultural purposes.
- *Outdoor Recreation on Federal Lands.* This section (16 USC 460l) addresses the development of recreational resources. This includes the development of a nationwide outdoor recreation plan, classification of outdoor resources, and technical assistance from the SOI.
- *Coastal Barrier Resources Act.* This act (PL 97-348) restricts Federal expenditure and financial assistance for the encouragement of development of coastal barriers. The long term goal is to prevent the damage to fish and wildlife and other natural resources associated with the coastal barriers along the Atlantic and Gulf coasts.
- *The Migratory Bird Treaty Act of 1918.* This act (16 USC 703-711, last amended in December 1989), is a Federal law that enforces international conventions for the protection of migratory birds and game animals to which the United States is a party. Unless permitted by regulations, it is unlawful at any time, by any means or in any manner, to pursue, hunt, take, capture, kill, attempt to transport or cause to be transported, carry or cause to be carried, or receive for shipment, transportation, carriage, or export, any migratory bird, any part, nest, or egg of any such bird, or any product, whether or not manufactured, which consists, or is composed in whole or in part, of any such bird or any part, nest, or egg thereof, included in the terms of the conventions for the protection and conservation of migratory birds and game mammals between the United States and the USSR, the United States and Mexico, and the United States and Japan (16 USC 703). It is also unlawful to ship, transport, or carry, by any means whatever, from one state, territory, or district to or through another state, territory, or district, or to or through a foreign country, any bird, or any part, nest, or egg thereof, captured, killed, taken, shipped, transported, or carried at any time contrary to the laws of the state, territory, or district in which it was captured, killed, or taken, or from which it was shipped, transported, or carried (16 USC 705). [NOTE: This law includes essentially all species of birds, not just those typically considered migratory. Only exceptions include Rock Dove (pigeon) and European Starling].
- *Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU).* Signed on August 10, 2005 SAFETEA-LU authorizes the Federal surface transportation programs for highways, highway safety, and transit for the 5-yr period 2005-2009. SAFETEA-LU includes the following [Added October 2005]:
  1. Projects are prohibited on publicly owned parks, recreation areas, wildlife and waterfowl refuges, or historic sites unless there is no feasible and prudent alternative and all possible mitigation is used.
  2. A total of \$370 million is provided through 2009 to continue the program to develop and maintain trails for recreational purposes that include pedestrian, equestrian, bicycling and non-motorized snow activities as well as off-road motorized vehicle activities.
  3. The conduct of an *Wildlife Vehicle Collision Reduction Study* of methods to reduce collisions between motor vehicles and wildlife, and report to Congress within 2 years on causes, impacts, and solutions. A manual of best practices is due 1 year after report to Congress. The Secretary is required to develop a training course for transportation professionals.
- Executive Order (EO) 11514, *Protection and Enhancement of Environmental Quality.* This EO, issued on 5 March 1970 and amended by EO 11990 issued on 24 May 1977, is a Presidential order that implements NEPA. Under this EO, the Federal Government must provide leadership in protecting and enhancing the quality of the nation's environment to sustain and enrich human life. Federal agencies must initiate measures needed to direct their policies, plans and programs so as to meet national environmental goals.
- EO 11988, *Floodplain Management.* This EO, dated 24 May 1977 and amended by EO 12148, 20 July 1979, implements NEPA, the National Flood Insurance Act of 1968, and the Flood Disaster Protection Act of 1973. Each agency must provide leadership and take action to reduce the risk of flood loss, to minimize the impact of floods on human safety, health and welfare, and to restore and preserve the natural and beneficial values served by floodplains. Each agency must evaluate the potential effects of any actions it may take in a floodplain; to ensure that its planning programs and budget requests reflect consideration of flood hazards and floodplain management; and to prescribe procedures to implement the policies and requirements of this order. Each agency must take floodplain management into account when formulating or evaluating any water and land use plans, and

must require land and water resources use appropriate to the degree of hazard involved. Agencies must include adequate provision for the evaluation and consideration of flood hazards in the regulations and operating procedures for the license, permits, loan or grants-in-aid programs that they administer (Section 2(c)).

Those responsible for Federal real property and facilities must take the following additional actions:

1. The regulations and procedures established under Section 2(d) of this order require, at a minimum, the construction of Federal structures and facilities to be consistent with standards, criteria, and the intent of those issued under the National Flood Insurance Program. They may deviate only to the extent that the standards of the Flood Insurance Program are demonstrably inappropriate for a given type of structure or facility.
  2. If, after compliance with the requirements of this order, new construction of structures or facilities is to be located in a floodplain, accepted flood-proofing and other flood protection measures must be applied to new construction or rehabilitation. To achieve flood protection, Services must, wherever practicable, elevate structures above the base flood level rather than filling in land (Section 3(a)(b)).
- EO 11989, *Use of Off-Road Vehicles (ORVs) on The Public Lands*. This EO specifies that ORVs may not be used without special use and location designation.
  - EO 11990, *The Protection of Wetlands*. This EO, dated 24 May 1977 and amended by EO 12608, dated 9 September 1987, implements NEPA. Under this EO each Federal agency must provide leadership and take action to minimize the destruction, loss or degradation of wetlands, and to preserve and enhance the natural and beneficial values of wetlands. Each agency, to the extent permitted by law, must avoid undertaking or providing assistance for new construction located in wetlands unless the head of the agency finds:
    1. that there is no practical alternative to such construction
    2. that the proposed action includes all practical measures to minimize harm to wetlands that may result from such use. In making this finding the head of the agency may take into account economic, environmental and other pertinent factors (Section 2(a)).

Each agency must also provide opportunity for early public review of any plans or proposals for new construction in wetlands (Section 2(b)).

- *The Convention on Wetlands of International Importance Especially as Waterfowl Habitat*. This Convention was created on 2 February 1971, in Ramsar, amended by *Paris Protocol of 3 December 1982*, and entered into force for the United States on 18 December 1986. Each country must promote the conservation of wetlands and waterfowl by establishing nature reserves on wetlands and provide adequately for their wardening (Article 4, para 1). The contracting countries must promote the training of personnel competent in the fields of wetland research, management, and wardening (Article 4, para 4). Those countries that are Contracting Parties to the convention agreed [**Revised October 2002**]:
  1. wetlands constitute a resource of great economic, cultural, scientific and recreational value, the loss of which would be irreparable
  2. the progressive encroachment on and loss of wetlands now and in the future should be stemmed
  3. waterfowl in their seasonal migration should be regarded as an international resource
  4. conservation of wetlands and their flora and fauna can be ensured by combining far-sighted national policies with coordinated international action.
- *The North American Wetland Conservation Act*. This act (PL 101-233), dated 13 December 1989, was promulgated to conserve North American wetland ecosystems and waterfowl and the other migratory birds and fish and wildlife that depend upon such habitat. The act encourages partnership among public agencies and other interested to:
  1. protect, enhance, restore, and manage an appropriate distribution and diversity of wetland ecosystems and other habitats for migratory birds and other fish and wildlife in North America
  2. maintain current or improved distribution of migratory bird populations, and

3. sustain an abundance of waterfowl and other migratory birds consistent with the goals of the North American Waterfowl Management Plan and the international obligations contained in the migratory bird treaties and conventions and other agreements with Canada, Mexico, and other countries.
- EO 12088, *Federal Compliance with Pollution Standards*. This EO, dated 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the Agency funds meet applicable Federal, state, and local environmental requirements for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget. Sections 1-4, "Pollution Control Plan" were revoked by EO 13148 [**Revised October 2002**].
  - EO 12962, *Recreational Fisheries*. This EO, dated 7 June 1995, mandates that Federal agencies, to the extent permitted by law and where practicable, improve the quality, function, and sustainable productivity and distribution of U.S. aquatic resources for increased recreational fishing opportunities. It also established the National Recreational Fisheries Coordination Council.
  - EO 13112, *Invasive Species*. This EO, dated 3 February 1999, addresses the prevention of the introduction of invasive species and provides for their control and minimization of the economic, ecological, and human health impacts the invasive species causes. The EO establishes the Invasive Species Council, which is responsible for the preparation and issuance of the National Invasive Species Management Plan, which details and recommends performance-oriented goals and objectives and specific measures of success for Federal Agencies [**Added April 1999**].
  - EO 13158, *Marine Protected Areas*. This EO, dated 26 May 2000, mandates strengthening the management, protection, and conservation of existing marine protected areas (MPA) and establishment of new or expanded MPAs; the development of a scientifically based, comprehensive national system of MPAs representing diverse U.S. marine ecosystems and the Nation's natural and cultural resources; and the avoiding causing harm to MPAs through federally conducted, approved, or funded activities [**Added July 2000**].
  - EO 13186, *Responsibilities of Federal Agencies To Protect Migratory Birds*. This EO, dated 10 January 2001, directs executive departments and agencies to take certain actions to further implement the Migratory Bird Treaty Act. The EO requires that Each Federal agency taking actions that have, or are likely to have, a measurable negative effect on migratory bird populations is directed to develop and implement, within 2 yr, a Memorandum of Understanding (MOU) with the Fish and Wildlife Service (Service) that shall promote the conservation of migratory bird populations. Under this EO, the SOI will establish the interagency Council for the Conservation of Migratory Birds (Council) to oversee the implementation of the EO [**Added April 2001**].
  - EO 13195, *Trails for America in the 21st Century*. This EO, dated 18 January 2001, mandates that Federal agencies will, to the extent permitted by law and where practicable--and in cooperation with Tribes, States, local governments, and interested citizen groups--protect, connect, promote, and assist trails of all types throughout the United States [**Added April 2001**].
  - EO 13352, *Facilitation of Cooperative Conservation*. This EO, dated 26 August 2004, requires that the Secretaries of the Interior, Agriculture, Commerce, and Defense and the Administrator of the Environmental Protection Agency shall, to the extent permitted by law and subject to the availability of appropriations and in coordination with each other as appropriate:
    1. carry out the programs, projects, and activities of the agency that they respectively head that implement laws relating to the environment and natural resources in a manner that:
      - a. facilitates cooperative conservation;
      - b. takes appropriate account of and respects the interests of persons with ownership or other legally recognized interests in land and other natural resources;
      - c. properly accommodates local participation in Federal decisionmaking; and

- d. provides that the programs, projects, and activities are consistent with protecting public health and safety;
2. report annually to the Chairman of the Council on Environmental Quality (CEQ) on actions taken to implement this order; and
3. provide funding to the Office of Environmental Quality Management Fund (42 U.S.C. 4375) for the Conference for which section 4 of the order provides.

The term “cooperative conservation” means actions that relate to use, enhancement, and enjoyment of natural resources, protection of the environment, or both, and that involve collaborative activity among Federal, State, local, and tribal governments, private for-profit and nonprofit institutions, other nongovernmental entities and individuals [**Added October 2004**].

- EO 13443, *Facilitation of Hunting Heritage and Wildlife Conservation* – The purpose of this EO, dated 16 August 2007, is to direct Federal agencies that have programs and activities that have a measurable effect on public land management, outdoor recreation, and wildlife management, including the Department of the Interior and the Department of Agriculture, to facilitate the expansion and enhancement of hunting opportunities and the management of game species and their habitat [**Added October 2007**].
- *The Coastal Zone Management Act of 1972*. This act (16 USC 1451-1464, last amended in November 1990), is the Federal legislation that governs the preservation and management of coastal waters in the nation. In relation to coastal zones, the national policy is (16 USC 145):
  1. to preserve, protect, develop, and where possible, to restore or enhance, the resources of the Nation’s coastal zone for this and succeeding generations
  2. to encourage and assist the states to exercise effectively their responsibilities in the coastal zone through the development and implementation of management programs to achieve wise use of the land and water resources of the coastal zone, giving full consideration to ecological, cultural, historic, and esthetic values as well as the needs for compatible economic development
  3. to encourage the preparation of special area management plans which provide for increased specificity in protecting significant natural resources, reasonable coastal-dependent economic growth, improved protection of life and property in hazardous areas, including those areas likely to be affected by land subsidence, sea level rise, or fluctuating water levels of the Great Lakes, and improved predictability in governmental decision making
  4. to encourage the participation and cooperation of the public, state and local governments, and interstate and other regional agencies, as well as of the Federal agencies having programs affecting the coastal zone, in carrying out the purposes of this act
  5. to encourage coordination and cooperation with and among the appropriate Federal, state, and local agencies, and international organizations where appropriate, in collection, analysis, synthesis, and dissemination of coastal management information, research results, and technical assistance, to support state and Federal regulation of land use practices affecting the coastal land ocean resources of the United States
  6. to respond to changing circumstances affecting the coastal environment and coastal resource management by encouraging states to consider such issues as ocean uses potentially affecting the coastal zone.
- *Hunting, Fishing, and Trapping on Military Lands*. This law (10 USC 2671, PL 86-337) requires that all hunting, fishing, and trapping be in accordance with the fish and game laws of the state in which it is located, and that appropriate state licenses can be obtained for these activities. State license do not substitute for Federal facility permits that may also be required.
- *Timber Sales on Military Lands*. This law (10 USC 2665, PL 86 -717) requires that projects be developed and maintained to encourage, promote, and assure adequate and dependable future resources, including supplies of forest products. The forest lands will be administered to increase the value of project lands for recreation and wildlife, and to promote ecological conditions by following accepted conservation practices.

- *Clean Water Act (CWA)*. Section 404 of this act (33 USC 1344) requires that all discharges of dredged and fill material in the waters of the United States, including wetlands, meet the requirements of USEPA's 404(b)(1) guidelines (40 CFR 230) and obtain water quality certification from the state (33 USC 1341) unless exempted by Congress through implementation of Section 404(r).
- *The Plant Protection Act (PPA)*. This law (part of Pub.L. 106-224; 7 U.S.C. 7701 *et seq*) addresses plant pests and noxious weeds and was introduced in 2000. It consolidates related responsibilities that were previously spread over various legislative statutes, including the *Plant Quarantine Act*, the *Federal Plant Pest Act* and the *Federal Noxious Weed Act of 1974* [**Added July 2013**].
- *The Marine Mammal Protection Act of 1972 (MMPA)*. This law, last amended in 2007, prohibits the taking of marine mammals, and enacts a moratorium on the import, export, and sale of any marine mammal, along with any marine mammal part or product within the United States [**Added July 2013**].
- EO 13089, *Coral Reef Protection*. This EO, dated 11 June 1998, tasks all Federal agencies whose actions may affect U.S. coral reef ecosystems to: (a) identify their actions that may affect U.S. coral reef ecosystems; (b) utilize their programs and authorities to protect and enhance the conditions of such ecosystems; and (c) to the extent permitted by law, ensure that any actions they authorize, fund, or carry out will not degrade the conditions of such ecosystems [**Added July 2013**].
- EO 13751, *Safeguarding the Nation From the Impacts of Invasive Species*. This EO, dated 5 December 2016, amends EO 13112 and directs Federal Agency actions to continue coordinated Federal prevention and control efforts related to invasive species [**Added January 2017**].

### C. State/Local Regulations

For information on regulations in specific states, see the State Supplements to TEAM Guide.

States develop lists for their local threatened or endangered species in addition to the Federal lists.

States develop regulations and management practices (MPs) for the protection of surface waters, coastal zones, wetlands, and the prevention of nonpoint source pollution.

The *Coastal Zone Management Act* authorizes coastal states to establish a Coastal Zone Management Program (CZMP) to coordinate state, local, and federal programs of the management of coastal areas. Once a state's program is federally approved, the CZMA allows participating states to set goals and procedures that control the use and development of designated Coastal Zones [**Added October 2004**].

States also establish regulations governing hunting and fishing activities.

### D. Key Compliance Requirements

- Land Management - Floodplains and wetlands should be identified and protected. Federal facilities are not allowed to discharge dredge or fill material into the waters of the United States without a permit (MPs and 33 CFR 323.3) [**Revised October 2002**].
- Endangered/Threatened Species - Federal facilities with Federally designated endangered and threatened species are required to carry out programs for their conservation. Surveys will be done to determine the presence of state and Federally listed species, including Federal candidate species if conditions warrant such a survey. All proposed actions and activities must be reviewed to ensure that they are not likely to jeopardize the continued existence of a listed species or to destroy or adversely modify its critical habitat (40 CFR 1500; 50 CFR 402.01(a), 402.10, and 402.12).

- **Migratory Species** - Individuals may not take, possess, import, export, transport, sell, purchase, barter, or offer for sale any migratory bird, or the parts, nests, or eggs without a permit. Exemption from the permit requirement is available (50 CFR 21.11 through 21.50).
- **INRMP** - Based on guidance provided by the Secretary of each military department, some military installations are required to develop INRMPs. The purposes of this program are to provide for: the conservation and rehabilitation of natural resources on military installations; the sustainable multipurpose use of the resources, which includes hunting, fishing, trapping, and nonconsumptive uses; public access to military installations subject to safety requirements and military security (*Sikes Act*, 42 USC 670 et. seq) **[Added March 1998]**.
- **Cooling Water Intake Structures** – These regulations apply to existing power producing facilities that employ a cooling water intake structure and are designed to withdraw 50 million gallons per day (MGD) or more of water from rivers, streams, lakes, reservoirs, estuaries, oceans, or other waters of the United States for cooling purposes. This regulation establishes national requirements, and procedures for implementing those requirements, applicable to the location, design, construction, and capacity of cooling water intake structures at these facilities. Specifically, performance standards are established that are projected to reduce impingement mortality by 80 to 95 percent and, if applicable, entrainment by 60 to 90 percent **[Added October 2004]**.

## E. Key Compliance Definitions

- **Action** - all activities or programs of any kind authorized, funded, or carried out, in whole or in part, by Federal agencies in the United States or upon the high seas. Examples include, but are not limited to (50 CFR 402.02):
  1. actions intended to conserve listed species or their habitat
  2. the promulgation of regulations
  3. the granting of licenses, contracts, leases, easements, rights-of-way, permits, or grants-in-aid
  4. actions directly or indirectly causing modifications to the land, water, or air.
- **Action Area** - all areas to be affected directly or indirectly by the Federal action and not merely the immediate area involved in the action (50 CFR 402.02).
- **Adequately Covered** - with respect to species listed pursuant to section 4 of the ESA, that a proposed conservation plan has satisfied the permit issuance criteria under section 10(a)(2)(B) of the ESA for the species covered by the plan, and, with respect to unlisted species, that a proposed conservation plan has satisfied the permit issuance criteria under section 10(a)(2)(B) of the ESA that would otherwise apply if the unlisted species covered by the plan were actually listed. For the Services to cover a species under a conservation plan, it must be listed on the section 10(a)(1)(B) permit (50 CFR 17.3) **[Added April 2005]**.
- **Adjacent** - means bordering, contiguous, or neighboring [see definition of *Neighboring*] a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States,” including waters separated by constructed dikes or barriers, natural river berms, beach dunes, and the like. For purposes of adjacency, an open water such as a pond or lake includes any wetlands within or abutting its ordinary high water mark. Adjacency is not limited to waters located laterally to a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States.” Adjacent waters also include all waters that connect segments of a water identified in paragraphs (1) through (5) or are located at the head of a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States,” and are bordering, contiguous, or neighboring such water. Waters being used for established normal farming, ranching, and silviculture activities (33 U.S.C. 1344(f)) are not adjacent. This definition is effective 6 February 2020 (33 CFR 328.3(c)(1)) **[Added July 2007; Revised July 2015; Revised April 2018]**.
- **Armed Forces** - the Army, Navy, Air Force, Marine Corps, Coast Guard, and the National Guard of any State (50 CFR 21.3) **[Added April 2007]**.

- *Biological Assessment* - the information prepared by or under the direction of the Federal agency concerning listed and proposed species and designated and proposed critical habitat that may be present in the action area and the evaluation potential effects of the action on such species and habitat (50 CFR 402.02) **[Added April 2013]**.
- *Biological Opinion* - the document that states the opinion of the Service as to whether or not the Federal action is likely to jeopardize the continued existence of listed species or result in the destruction or adverse modification of critical habitat (50 CFR 402.02) **[Added April 2013]**.
- *Bred in Captivity or Captive-Bred* - raptors, including eggs, hatched in captivity from parents that mated or otherwise transferred gametes in captivity (50 CFR 21.3) **[Added July 2004]**.
- *Bred in Captivity or Captive-Bred* - wildlife, including eggs, born or otherwise produced in captivity from parents that mated or otherwise transferred gametes in captivity, if reproduction is sexual, or from parents that were in captivity when development of the progeny began, if development is asexual (50 CFR 17.3) **[Added April 2005]**.
- *Candidate* - any species being considered by the Secretary for listing as an endangered or threatened species, but not yet the subject of a proposed rule (50 CFR 424.02) **[Added April 2016]**.
- *Candidate Species* - any species being considered by the SOI for listing as a threatened or endangered species (50 CFR 404.02).
- *Captivity* - that living wildlife is held in a controlled environment that is intensively manipulated by man for the purpose of producing wildlife of the selected species, and that has boundaries designed to prevent animal, eggs or gametes of the selected species from entering or leaving the controlled environment. General characteristics of captivity may include but are not limited to artificial housing, waste removal, health care, protection from predators, and artificially supplied food (50 CFR 17.3) **[Added April 2005]**.
- *Captivity* - that a live raptor is held in a controlled environment that is intensively manipulated by man for the purpose of producing raptors of selected species, and that has boundaries designed to prevent raptors, eggs or gametes of the selected species from entering or leaving the controlled environment. General characteristics of captivity may include, but are not limited to, artificial housing, waste removal, health care, protection from predators, and artificially supplied food (50 CFR 21.3) **[Added July 2004]**.
- *Changed Circumstances* - changes in circumstances affecting a species or geographic area covered by a conservation plan or agreement that can reasonably be anticipated by plan or agreement developers and the Service and that can be planned for (e.g., the listing of new species, or a fire or other natural catastrophic event in areas prone to such events) (50 CFR 17.3) **[Added April 2005]**.
- *Conference* - a process which involves informal discussions between a Federal agency and the Service under section 7(a)(4) of the Act regarding the impact of an action on proposed species or proposed critical habitat and recommendations to minimize or avoid the adverse effects (50 CFR 402.02) **[Added April 2013]**.
- *Conserve, Conserving, and Conservation* - to use and the use of all methods and procedures that are necessary to bring any endangered or threatened species to the point at which the measures provided pursuant to the Act are no longer necessary, i.e., the species is recovered in accordance with 50 CFR 402.02. Such methods and procedures include, but are not limited to, all activities associated with scientific resources management such as research, census, law enforcement, habitat acquisition and maintenance, propagation, live trapping, and transplantation, and, in the extraordinary case where population pressures within a given ecosystem cannot be otherwise relieved, may include regulated taking (50 CFR 424.02) **[Added April 2016]**.
- *Conservation Measures* - as used in 50 CFR 21.15, means project design or mitigation activities that are reasonable from a scientific, technological, and economic standpoint, and are necessary to avoid, minimize, or mitigate the take of migratory birds or other adverse impacts. Conservation measures should be implemented in a reasonable period of time (50 CFR 21.3) **[Added April 2007]**.

- *Conservation Plan* - the plan required by section 10(a)(2)(A) of the ESA that an applicant must submit when applying for an incidental take permit. Conservation plans also are known as “habitat conservation plans” or “HCPs” (50 CFR 17.3) **[Added April 2005]**.
- *Conserved Habitat Areas* - areas explicitly designated for habitat restoration, acquisition, protection, or other conservation purposes under a conservation plan (50 CFR 17.3) **[Added April 2005]**.
- *Convention* - the *Convention on International Trade in Endangered Species of Wild Fauna and Flora*, TIAS 8249 (50 CFR 17.3) **[Added April 2005]**.
- *Critical Habitat* - specific areas within the geographic area commonly occupied by a species which contain features essential to the conservation of the species and which may require special management considerations or protection. Specific areas outside the currently occupied range of a threatened or endangered species may be determined by the SOI as areas essential for the conservation of the species. Critical habitats are Federally designated (50 CFR 424.02).
- *Destruction or Adverse Modification* - a direct or indirect alteration that appreciably diminishes the value of critical habitat for the conservation of a listed species. Such alterations may include, but are not limited to, those that alter the physical or biological features essential to the conservation of a species or that preclude or significantly delay development of such features (50 CFR 402.02) **[Revised April 2016]**.
- *Discharge of Dredged Material* - any addition of dredged material into, including redeposit of dredged material other than incidental fallback within, the waters of the United States. The term includes, but is not limited to, the following (33 CFR 323.2(d)(1) and 323.2(d)(2)) **[Added July 1999]**:
  1. the addition of dredged material to a specified discharge site located in waters of the United States;
  2. the runoff or overflow from a contained land or water disposal area; and
  3. any addition, including redeposit other than incidental fallback, of dredged material, including excavated material, into waters of the United States which is incidental to any activity, including mechanized landclearing, ditching, channelization, or other excavation.

The term discharge of dredged material does not include the following:

1. discharges of pollutants into waters of the United States resulting from the onshore subsequent processing of dredged material that is extracted for any commercial use (other than fill). These discharges are subject to section 402 of the Clean Water Act even though the extraction and deposit of such material may require a permit from the Corps or applicable State section 404 program.
  2. activities that involve only the cutting or removing of vegetation above the ground (e.g., mowing, rotary cutting, and chainsawing) where the activity neither substantially disturbs the root system nor involves mechanized pushing, dragging, or other similar activities that redeposit excavated soil material.
  3. incidental fallback.
- *Discharge of Fill Material* - the addition of fill material into waters of the United States. The term generally includes, without limitation, the following activities: Placement of fill that is necessary for the construction of any structure or infrastructure in a water of the United States; the building of any structure, infrastructure or impoundment requiring rock, sand, dirt, or other material for its construction; site-development fills for recreational, industrial, commercial, residential, or other uses; causeways or road fills; dams and dikes; artificial islands; property protection and/or reclamation devices such as riprap, groins, seawalls, breakwaters, and revetments; beach nourishment; levees; fill for structures such as sewage treatment facilities, intake and outfall pipes associated with power plants and sub aqueous utility lines; placement of fill material for construction or maintenance of any liner, berm, or other infrastructure associated with solid waste landfills; placement of overburden, slurry, or tailings or similar mining-related materials; and artificial reefs. The term does not include plowing, cultivating, seeding and harvesting for the production of food, fiber, and forest products (See 33 CFR

323.4 for the definition of these terms). See 33 CFR 323.3(c) concerning the regulation of the placement of pilings in waters of the United States (33 CFR 323.2(f)) **[Added July 1999; Revised July 2002]**.

- *Dredged Material* - material that is excavated or dredged from waters of the United States (33 CFR 323.2(c)) **[Added July 1999]**.
- *Endangered* - a species of wildlife listed in 50 CFR 17.11 or a species of plant listed in 50 CFR 17.12 and designated as endangered (50 CFR 17.3) **[Added April 2005]**.
- *Endangered Species* - any species which is in danger of extinction throughout all or a significant portion of its range (other than a species of the Class Insect determined to constitute a pest). Federally listed endangered species are officially designated by the DOI (50 CFR 81.1).

NOTE: As used in this definition, the phrase “significant portion of its range” has been clarified in a policy issued by the U.S. FWS and the National Marine Fisheries Services. According to the policy, “a portion of the range of a species is ‘significant’ if the species is not currently endangered or threatened throughout all of its range, but the portion’s contribution to the viability of the species is so important that, without the members in that portion, the species would be in danger of extinction, or likely to become so in the foreseeable future, throughout all of its range.” (<http://www.regulations.gov/#!documentDetail;D=FWS-R9-ES-2011-0031-0526>) **(Revised July 2014)**.

- *Enhance the Propagation or Survival* - when used in reference to wildlife in captivity, includes but is not limited to the following activities when it can be shown that such activities would not be detrimental to the survival of wild or captive populations of the affected species (50 CFR 17.3) **[Added April 2005]**:
  1. Provision of health care, management of populations by culling, contraception, euthanasia, grouping or handling of wildlife to control survivorship and reproduction, and similar normal practices of animal husbandry needed to maintain captive populations that are self-sustaining and that possess as much genetic vitality as possible;
  2. Accumulation and holding of living wildlife that is not immediately needed or suitable for propagative or scientific purposes, and the transfer of such wildlife between persons in order to relieve crowding or other problems hindering the propagation or survival of the captive population at the location from which the wildlife would be removed; and
  3. Exhibition of living wildlife in a manner designed to educate the public about the ecological role and conservation needs of the affected species.
- *Essential Experimental Population* - an experimental population whose loss would be likely to appreciably reduce the likelihood of the survival of the species in the wild. All other experimental populations are to be classified as nonessential (50 CFR 222.501(a)) **[Added July 2016]**.
- *Experimental Population* - any introduced and/or designated population (including any off-spring arising solely therefrom) that has been so designated in accordance with the procedures of 50 CFR Subpart E but only when, and at such times as, the population is wholly separate geographically from nonexperimental populations of the same species. Where part of an experimental population overlaps with nonexperimental populations of the same species on a particular occasion, but is wholly separate at other times, specimens of the experimental population will not be recognized as such while in the area of overlap. That is, experimental status will only be recognized outside the areas of overlap. Thus, such a population shall be treated as experimental only when the times of geographic separation are reasonably predictable; e.g., fixed migration patterns, natural or man-made barriers. A population is not treated as experimental if total separation will occur solely as a result of random and unpredictable events (50 CFR 222.501(a)) **[Added July 2016]**.
- *Falconry* - the sport of taking quarry by means of a trained raptor (50 CFR 21.3) **[Added July 2004]**.
- *Fill Material* - material placed in waters of the United States where the material has the effect of:
  1. replacing any portion of a **water** of the United States with dry land; or

2. changing the bottom elevation of any portion of a **water** of the United States.

Examples of such fill material include, but are not limited to: rock, sand, soil, clay, plastics, construction debris, wood chips, overburden from mining or other excavation activities, and materials used to create any structure or infrastructure in the waters of the United States. The term fill material does not include trash or garbage (33 CFR 323.2(e)) [**Added July 1999; Revised July 2002**].

- *Geographical Area Occupied by the Species* - an area that may generally be delineated around species' occurrences, as determined by the Secretary (i.e., range). Such areas may include those areas used throughout all or part of the species' life cycle, even if not used on a regular basis (e.g., migratory corridors, seasonal habitats, and habitats used periodically, but not solely by vagrant individuals) (50 CFR 424.02) [**Added April 2016**].
- *Harass in the definition of “take” in the Act* - an intentional or negligent act or omission which creates the likelihood of injury to wildlife by annoying it to such an extent as to significantly disrupt normal behavioral patterns which include, but are not limited to, breeding, feeding, or sheltering. This definition, when applied to captive wildlife, does not include generally accepted (50 CFR 17.3) [**Added April 2005**]:
  1. Animal husbandry practices that meet or exceed the minimum standards for facilities and care under the *Animal Welfare Act*,
  2. Breeding procedures, or
  3. Provisions of veterinary care for confining, tranquilizing, or anesthetizing, when such practices, procedures, or provisions are not likely to result in injury to the wildlife.
- *Hard Part* - any bone, tooth, baleen, treated pelt, or other part of a marine mammal that is relatively solid or durable (50 CFR 216.3) [**Added July 2013**].
- *Harm in the definition of “take” in the Act* - an act which actually kills or injures wildlife. Such act may include significant habitat modification or degradation where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding or sheltering (50 CFR 17.3) [**Added April 2005**].
- *High Tide Line* - the line of intersection of the land with the water's surface at the maximum height reached by a rising tide. The high tide line may be determined, in the absence of actual data, by a line of oil or scum along shore objects, a more or less continuous deposit of fine shell or debris on the foreshore or berm, other physical markings or characteristics, vegetation lines, tidal gages, or other suitable means that delineate the general height reached by a rising tide. The line encompasses spring high tides and other high tides that occur with periodic frequency but does not include storm surges in which there is a departure from the normal or predicted reach of the tide due to the piling up of water against a coast by strong winds such as those accompanying a hurricane or other intense storm. This definition is effective 6 February 2020 (33 CFR 328.3(c)(7)) [**Added July 2007; Revised July 2015; Revised April 2018**].
- *Incidental Taking* - any taking otherwise prohibited, if such taking is incidental to, and not the purpose of, the carrying out of an otherwise lawful activity (50 CFR 17.3) [**Added April 2005**].
- *Industry or trade in the definition of “commercial activity” in the Act* - the actual or intended transfer of wildlife or plants from one person to another person in the pursuit of gain or profit (50 CFR 17.3) [**Added April 2005**].
- *Jeopardize the Continued Existence of* - to engage in an action that reasonably would be expected, directly or indirectly, to reduce appreciably the likelihood of both the survival and recovery of a listed species in the wild by reducing the reproduction, numbers, or distribution of that species (50 CFR 402.02).
- *List or Lists* - the Lists of Endangered and Threatened Wildlife and Plants found at 50 CFR 17.11(h) or 17.12(h) (50 CFR 424.02) [**Added April 2016**].
- *Listed Species* - any species of fish, wildlife, or plant which has been determined to be endangered or threatened under section 4 of the Act. Listed species are found in 50 CFR 17.11-17.12 (50 CFR 402.02) [**Added April 2013**].

- *Major Construction Activity* - a construction project (or other undertaking having similar physical impacts) which is a major Federal action significantly affecting the quality of the human environment as referred to in the National Environmental Policy Act [NEPA, 42 U.S.C. 4332(2)(C)] (50 CFR 402.02) [**Added April 2013**].
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Marine Environment* - the oceans and the seas, including estuarine and brackish waters (50 CFR 216.3) [**Added July 2013**].
- *Marine Mammal* - those specimens of the following orders, which are morphologically adapted to the marine environment, and whether alive or dead, and any part thereof, including but not limited to, any raw, dressed or dyed fur or skin: Cetacea (whales, dolphins, and porpoises) and Pinnipedia, other than walrus (seals and sea lions) (50 CFR 216.3) [**Added July 2013**].
- *Military Installation* - as used in the Sikes Act, this term [**Added March 1998**]:
  1. means any land or interest in a land owned by the United States and administered by the Secretary of Defense or the Secretary of a military department, except land under jurisdiction of the Assistant Secretary of the Army having responsibility for civil works
  2. includes all public lands withdrawn from all forms of appropriation under public land laws and reserved for use by the Secretary of Defense or the Secretary of a military department
  3. does not include any land described in (a) or (b) that is subject to an approved recommendation for closure under the Defense Base Closure and Realignment Act of 1990 (part A of title XXIX of Public Law 101-510; 10 USC 2667 note).
- *Military Readiness Activity* - as defined in Pub. L. 107-314, Sec. 315(f), 116 Stat. 2458 (Dec. 2, 2002) [Pub. L. Sec. 319(c)(1)], includes all training and operations of the Armed Forces that relate to combat, and the adequate and realistic testing of military equipment, vehicles, weapons, and sensors for proper operation and suitability for combat use. It does not include (50 CFR 21.3) [**Added April 2007**]:
  1. routine operation of installation operating support functions, such as: administrative offices; military exchanges; commissaries; water treatment facilities; storage facilities; schools; housing; motor pools; laundries; morale, welfare, and recreation activities; shops; and mess halls,
  2. operation of industrial activities, or construction or demolition of facilities listed above.
- *Neighboring* - this definition is effective 6 February 2020. This term means (33 CFR 328.3(c)(2)) [**Added July 2015; Revised April 2018**]:
  1. all waters located within 100 ft of the ordinary high water mark of a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States.” The entire water is neighboring if a portion is located within 100 ft of the ordinary high water mark;
  2. All waters located within the 100-year floodplain of a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States” and not more than 1,500 ft from the ordinary high water mark of such water. The entire water is neighboring if a portion is located within 1,500 feet of the ordinary high water mark and within the 100-year floodplain;
  3. All waters located within 1,500 ft of the high tide line of a water identified in paragraphs (1) or (3) of the definition for “Waters of the United States,” and all waters within 1,500 ft of the ordinary high water mark of the Great Lakes. The entire water is neighboring if a portion is located within 1,500 ft of the high tide line or within 1,500 ft of the ordinary high water mark of the Great Lakes.

- *Operating Conservation Program* - those conservation management activities which are expressly agreed upon and described in a conservation plan or its Implementing Agreement, if any, and which are to be undertaken for the affected species when implementing an approved conservation plan, including measures to respond to changed circumstances (50 CFR 17.3) **[Added April 2005]**.
- *Ordinary High Water Mark* - that line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas. This definition is effective 6 February 2020 (33 CFR 328.3(c)(6)) **[Added July 2007; Revised July 2015; Revised April 2018]**.
- *Physical or Biological Features* - the features that support the life-history needs of the species, including but not limited to, water characteristics, soil type, geological features, sites, prey, vegetation, symbiotic species, or other features. A feature may be a single habitat characteristic, or a more complex combination of habitat characteristics. Features may include habitat characteristics that support ephemeral or dynamic habitat conditions. Features may also be expressed in terms relating to principles of conservation biology, such as patch size, distribution distances, and connectivity (50 CFR 424.02) **[Added April 2016]**.
- *Population* - a group of fish or wildlife in the same taxon below the subspecific level, in common spatial arrangement that interbreed when mature (50 CFR 17.3) **[Added April 2005]**.
- *Population* - as used in 50 CFR 21.15, means a group of distinct, coexisting, conspecific individuals, whose breeding site fidelity, migration routes, and wintering areas are temporally and spatially stable, sufficiently distinct geographically (at some time of the year), and adequately described so that the population can be effectively monitored to discern changes in its status (50 CFR 21.3) **[Added April 2007]**.
- *Public Hearing* - an informal hearing to provide the public with the opportunity to give comments and to permit an exchange of information and opinion on a proposed rule (50 CFR 424.02) **[Added April 2016]**.
- *Raptor* - a live migratory bird of the Order Falconiformes or the Order Strigiformes, other than a bald eagle (*Haliaeetus leucocephalus*) or a golden eagle (*Aquila chrysaetos*) (50 CFR 21.3) **[Added July 2004]**.
- *Recovery* - improvement in the status of listed species to the point at which listing is no longer appropriate under the criteria set out in section 4(a)(1) of the Act (50 CFR 402.02) **[Added April 2013]**.
- *Resident Canada Geese* - Canada geese that nest within the conterminous United States and/or Canada geese which reside within the conterminous United States during the months of June, July, or August (50 CFR 21.3) **[Added July 2004]**.
- *Secretary of Defense* - the Secretary of Defense or any other national defense official who has been nominated by the President and confirmed by the Senate (50 CFR 21.3) **[Added April 2007]**.
- *Significant Adverse Effect on a Population* - as used in 50 CFR 21.15, means an effect that could, within a reasonable period of time, diminish the capacity of a population of migratory bird species to sustain itself at a biologically viable level. A population is "biologically viable" when its ability to maintain its genetic diversity, to reproduce, and to function effectively in its native ecosystem is not significantly harmed. This effect may be characterized by increased risk to the population from actions that cause direct mortality or a reduction in fecundity. Assessment of impacts should take into account yearly variations and migratory movements of the impacted species. Due to the significant variability in potential military readiness activities and the species that may be impacted, determinations of significant measurable decline will be made on a case-by-case basis (50 CFR 21.3) **[Added April 2007]**.

- *Significant Nexus* - this definition is effective 6 February 2020. That a water, including wetlands, either alone or in combination with other similarly situated waters in the region, significantly affects the chemical, physical, or biological integrity of a water identified in paragraphs (1) through (3) of the definition for “Waters of the United States.” The term “in the region” means the watershed that drains to the nearest water identified in paragraphs (1) through (3) of the definition for “Waters of the United States.”. For an effect to be significant, it must be more than speculative or insubstantial. Waters are similarly situated when they function alike and are sufficiently close to function together in affecting downstream waters. For purposes of determining whether or not a water has a significant nexus, the water’s effect on downstream (1) through (3) waters shall be assessed by evaluating the aquatic functions identified in paragraphs (1) through (9) of this definition below. A water has a significant nexus when any single function or combination of functions performed by the water, alone or together with similarly situated waters in the region, contributes significantly to the chemical, physical, or biological integrity of the nearest water identified in paragraphs (1) through (3) of the definition for “Waters of the United States.” Functions relevant to the significant nexus evaluation are the following (33 CFR 328.3(c)(5)) **[Added July 2015; Revised April 2018]**:
  1. Sediment trapping,
  2. Nutrient recycling,
  3. Pollutant trapping, transformation, filtering, and transport,
  4. Retention and attenuation of flood waters,
  5. Runoff storage,
  6. Contribution of flow,
  7. Export of organic matter,
  8. Export of food resources, and
  9. Provision of life cycle dependent aquatic habitat (such as foraging, feeding, nesting, breeding, spawning, or use as a nursery area) for species located in a water identified in paragraphs (1) through (3) of the definition for “Waters of the United States.”
- *Special Aquatic Sites* – those sites identified in 40 CFR 230, Subpart E. They are geographic areas, large or small, possessing special ecological characteristics of productivity, habitat, wildlife protection, or other important and easily disrupted ecological values. These areas are generally recognized as significantly influencing or positively contributing to the general overall environmental health or vitality of the entire ecosystem of a region (40 CFR 230.3(q-1)) **[Added April 2013]**.
- *Special Management Considerations or Protection* - methods or procedures useful in protecting the physical or biological features essential to the conservation of listed species (50 CFR 424.02) **[Added April 2016]**.
- *Species* - includes any species or subspecies of fish, wildlife, or plant, and any distinct population segment of any vertebrate species that interbreeds when mature. Excluded is any species of the Class Insecta determined by the Secretary to constitute a pest whose protection under the provisions of the Act would present an overwhelming and overriding risk to man (50 CFR 424.02) **[Added April 2016]**.
- *Specimen* - any animal or plant, or any part, product, egg, seed or root of any animal or plant (50 CFR 17.3) **[Added April 2005]**.
- *Take* – as defined in relation to the *Marine Mammal Protection Act* (MMPA), this term means to harass, hunt, capture, collect, or kill, or attempt to harass, hunt, capture, collect, or kill any marine mammal. This includes, without limitation, any of the following: The collection of dead animals, or parts thereof; the restraint or detention of a marine mammal, no matter how temporary; tagging a marine mammal; the negligent or intentional operation of an aircraft or vessel, or the doing of any other negligent or intentional act which results in disturbing or molesting a marine mammal; and feeding or attempting to feed a marine mammal in the wild (50 CFR 216.3) **[Added July 2013]**.
- *Threatened* - a species of wildlife listed in 50 CFR 17.11 or plant listed in 50 CFR 17.12 and designated as threatened (50 CFR 17.3) **[Added April 2005]**.

- *Threatened Species* - any species which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. Federally listed threatened species are officially designated by the DOI (50 CFR 81.21).

NOTE: As used in this definition, the phrase “significant portion of its range” has been clarified in a policy issued by the U.S. FWS and the National Marine Fisheries Services. According to the policy, “a portion of the range of a species is ‘significant’ if the species is not currently endangered or threatened throughout all of its range, but the portion’s contribution to the viability of the species is so important that, without the members in that portion, the species would be in danger of extinction, or likely to become so in the foreseeable future, throughout all of its range.” (<http://www.regulations.gov/#!documentDetail;D=FWS-R9-ES-2011-0031-0526>) (**Revised July 2014**).

- *Tidal Waters* - those waters that rise and fall in a predictable and measurable rhythm or cycle due to the gravitational pulls of the moon and sun. Tidal waters end where the rise and fall of the water surface can no longer be practically measured in a predictable rhythm due to masking by hydrologic, wind, or other effects (33 CFR 328.3(f)) [**Added July 2007**].
- *Tributary and Tributaries* - a water that contributes flow, either directly or through another water (including an impoundment identified in paragraph (4) of the definition for “Waters of the United States”), to a water identified in paragraphs (1) through (3) of the definition for “Waters of the United States” that is characterized by the presence of the physical indicators of a bed and banks and an ordinary high water mark. These physical indicators demonstrate there is volume, frequency, and duration of flow sufficient to create a bed and banks and an ordinary high water mark, and thus to qualify as a tributary. A tributary can be a natural, man-altered, or man-made water and includes waters such as rivers, streams, canals, and ditches not excluded in the definition of “Waters of the United States.” A water that otherwise qualifies as a tributary under this definition does not lose its status as a tributary if, for any length, there are one or more constructed breaks (such as bridges, culverts, pipes, or dams), or one or more natural breaks (such as wetlands along the run of a stream, debris piles, boulder fields, or a stream that flows underground) so long as a bed and banks and an ordinary high water mark can be identified upstream of the break. A water that otherwise qualifies as a tributary under this definition does not lose its status as a tributary if it contributes flow through a water of the United States that does not meet the definition of tributary or through a non-jurisdictional water to a water identified in paragraphs (1) through (3) of the definition for “Waters of the United States.” This definition is effective 6 February 2020 (33 CFR 328.3(c)(3)) [**Added July 2015; Revised April 2018**].
- *Unforeseen Circumstances* - changes in circumstances affecting a species or geographic area covered by a conservation plan or agreement that could not reasonably have been anticipated by plan or agreement developers and the Service at the time of the conservation plan’s or agreement’s negotiation and development, and that result in a substantial and adverse change in the status of the covered species (50 CFR 17.3) [**Added April 2005**].
- *Wasteful Manner* - any taking or method of taking which is likely to result in the killing or injury of endangered or threatened wildlife beyond those needed for subsistence purposes, or which results in the waste of a substantial portion of the wildlife, and includes without limitation the employment of a method of taking which is not likely to assure the capture or killing of the wildlife, or which is not immediately followed by a reasonable effort to retrieve the wildlife (50 CFR 17.3) [**Added April 2005**].
- *Waters of the United States* – this definition is effective 6 February 2020. This phrase includes the following (33 CFR 328.3(a) and 328.3(b)) [**Added July 2007; Revised July 2015; Revised April 2018**]:
  1. All waters which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
  2. All interstate waters, including interstate wetlands [see definition of *Wetlands*];
  3. The territorial seas;
  4. All impoundments of waters otherwise identified as waters of the United States under 40 CFR 110.1;
  5. All tributaries, [see definition of *Tributary*], of waters identified in paragraphs (1) through (3);
  6. All waters adjacent [see definition of *Adjacent*] to a water identified in paragraphs (1) through (5) of this definition, including wetlands, ponds, lakes, oxbows, impoundments, and similar waters;

7. All waters in paragraphs (a) through (e) of this paragraph (7) where they are determined, on a case-specific basis, to have a significant nexus to a water identified in paragraphs (1) through (3) of this definition. The waters identified in each of paragraphs (a) through (e) of this paragraph (7) are similarly situated and shall be combined, for purposes of a significant nexus analysis, in the watershed that drains to the nearest water identified in paragraphs (1) through (3) of this definition. Waters identified in this paragraph (7) shall not be combined with waters identified in paragraph (6) when performing a significant nexus analysis. If waters identified in this paragraph are also an adjacent water under paragraph (6), they are an adjacent water and no case-specific significant nexus analysis is required.
  - a. *Prairie* potholes. *Prairie* potholes are a complex of glacially formed wetlands, usually occurring in depressions that lack permanent natural outlets, located in the upper Midwest.
  - b. *Carolina bays* and *Delmarva bays*. *Carolina bays* and *Delmarva bays* are ponded, depressional wetlands that occur along the Atlantic coastal plain.
  - c. *Pocosins*. *Pocosins* are evergreen shrub and tree dominated wetlands found predominantly along the Central Atlantic coastal plain.
  - d. *Western vernal pools*. *Western vernal pools* are seasonal wetlands located in parts of California and associated with topographic depression, soils with poor drainage, mild, wet winters and hot, dry summers.
  - e. *Texas coastal prairie wetlands*. *Texas coastal prairie wetlands* are freshwater wetlands that occur as a mosaic of depressions, ridges, intermound flats, and mima mound wetlands located along the Texas Gulf Coast.
8. All waters located within the 100-year floodplain of a water identified in paragraphs (1) through (3) of this definition and all waters located within 4,000 feet of the high tide line or ordinary high water mark [see definition of *High Tide Line* and *Ordinary High Water Mark*] of a water identified in paragraphs ((1) through (5) of this definition where they are determined on a case-specific basis to have a significant nexus to a water identified in paragraphs ((1) through (3) of this definition. For waters determined to have a significant nexus, the entire water is a water of the United States if a portion is located within the 100-year floodplain of a water identified in paragraphs (1) through (3) of this definition or within 4,000 feet of the high tide line or ordinary high water mark. Waters identified in this paragraph (8) shall not be combined with waters identified in paragraph (6) of this definition when performing a significant nexus analysis. If waters identified in this paragraph (8) are also an adjacent water under paragraph (6), they are an adjacent water and no case-specific significant nexus analysis is required.

The following are not “waters of the United States” even where they otherwise meet the terms of paragraphs (4) through (8) above in this definition.

1. Waste treatment systems (other than cooling ponds meeting the criteria of this paragraph)
2. Prior converted cropland. Notwithstanding the determination of an area’s status as prior converted cropland by any other Federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with EPA.
3. The following ditches:
  - a. Ditches with ephemeral flow that are not a relocated tributary or excavated in a tributary.
  - b. Ditches with intermittent flow that are not a relocated tributary, excavated in a tributary, or drain wetlands
  - c. Ditches that do not flow, either directly or through another water, into a water identified in paragraphs (1) through (3) of the above definition of waters which are “waters of the United States”.
4. The following features:
  - a. Artificially irrigated areas that would revert to dry land should application of water to that area cease;
  - b. Artificial, constructed lakes and ponds created in dry land such as farm and stock watering ponds, irrigation ponds, settling basins, fields flooded for rice growing, log cleaning ponds, or cooling ponds;
  - c. Artificial reflecting pools or swimming pools created in dry land;
  - d. Small ornamental waters created in dry land;
  - e. Water-filled depressions created in dry land incidental to mining or construction activity, including pits excavated for obtaining fill, sand, or gravel that fill with water;
  - f. Erosional features, including gullies, rills, and other ephemeral features that do not meet the definition of tributary, non-wetland swales, and lawfully constructed grassed waterways; and
  - g. Puddles.

5. Groundwater, including groundwater drained through subsurface drainage systems.
6. Stormwater control features constructed to convey, treat, or store stormwater that are created in dry land.
7. Wastewater recycling structures constructed in dry land; detention and retention basins built for wastewater recycling; groundwater recharge basins; percolation ponds built for wastewater recycling; and water distributary structures built for wastewater recycling.

- *Wetlands* - those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. This definition is effective 6 February 2020 (33 CFR 328.3(c)(4)) [**Added July 2007; Revised July 2015; Revised April 2018**].
- *Wetlands* - those areas that are inundated or saturated by surface or groundwater at a frequency or duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include playa lakes, swamps, marshes, bogs, and similar areas such as sloughs, prairie potholes, wet meadows, prairie river overflows, mudflats, and natural ponds (40 CFR 110.2).
- *Wildlife or Fish and Wildlife* - any member of the animal kingdom, including without limitation, any vertebrate, mollusk, crustacean, arthropod, or other invertebrate, and includes any part, product, egg, or offspring thereof, or the dead body or parts thereof (50 CFR 424.02) [**Added April 2016**].

#### **F. Records To Review**

- Environmental Impact Statement/Assessments
- Master Plans
- Land Management Plan
- Fish and Wildlife Cooperative Agreement
- Outdoor Recreation Cooperative Agreement
- Forest Management Plan
- Grounds Maintenance Contracts
- Agricultural and Grazing Lease Contracts
- Threatened and Endangered Species Survey
- Environmental Protection Technical Specifications
- MOA or MOUs with other agencies
- Pesticide Management Plans
- All natural resource related permits

#### **G. Physical Features To Inspect**

- Construction sites (erosion control, runoff, sedimentation, and landscaping)
- Facilities constructed in the past 2 yr (erosion and landscaping)
- Wildlife containment areas (condition and management)
- Wildlife habitat and land and water resources (condition and management) including urban wildlife programs and wildlife programs in undeveloped land
- Equipment, such as tanks, which could damage wildlife, its habitat, or land and water resources (use and control)
- Grounds maintenance areas (beautification and condition) such as excessively large areas maintained in an improved condition
- Forest management areas (condition and management)
- Agricultural and grazing lease areas (condition and management)
- Stormwater drainage areas and improvements (condition)
- Erosion sites (condition and erosion)
- Shorelines

- Wetlands
- Gas/mineral lease areas
- Fire management areas
- Biodiversity areas
- Permitted natural resources related projects
- Areas with exotic species
- Training areas (coordination and management)

## H. Guidance for Natural Resources Management Checklist Users

	<b>REFER TO CHECKLIST ITEMS:</b>
All Facilities	NR.1.1.US. and NR.1.2.US.
Missing, Risk Management, and Positive Checklist Items	NR.2.1.US. through NR.2.3.US
Dredging	NR.5.1.US.
Land Management	NR.10.1.US. through NR.10.3.US.
Water Resources Management	NR.15.1.US through NR.15.8.US
Wildlife	NR.20.1.US. through NR.20.7.US.
Appendix 5-1, <i>Noxious Weeds</i> Appendix 5-2, <i>Withdrawn Lands</i>	

<p style="text-align: center;"><b>COMPLIANCE CATEGORY:</b>  <b>NATURAL RESOURCES MANAGEMENT</b>  <b>U.S. TEAM Guide</b></p>	
<p style="text-align: center;"><b>REGULATORY REQUIREMENTS:</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS:</b>  <b>December 2018</b></p>
<p><b>NR.1</b></p> <p><b>ALL FACILITIES</b></p> <p><b>NR.1.1.US.</b> The current status of any ongoing or unresolved consent orders, ESA biological opinions, Section 404 CWA permits, compliance agreements, notices of violation (NOVs), interagency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).</p> <p><b>NR.1.2.US.</b> When military installations are required to prepare an INRMP, the INRMP must meet certain standards (<i>Sikes Act</i>, 16 USC 670 et. seq) [<b>Added March 1998; Citation Revised July 2010; Revised July 2013</b>].</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, ESA biological opinions, Section 404 CWA permits, compliance agreements, NOVs, interagency agreements, NEPA documentation, litigation settlement agreements, court imposed injunctions, or equivalent state enforcement actions.</p> <p>(NOTE: The Secretary of Defense is responsible for carrying out a program to provide for the conservation and rehabilitation of natural resources on military installations. The Secretary of each military department is responsible for preparing and implementing an INRMP for each military installation, unless the Secretary determines that the absence of significant natural resources on a particular installation makes preparation of such a plan inappropriate.)</p> <p>(NOTE: See component-specific Supplements for additional DOD, Air Force, and Army requirements pertaining to the INRMP. Additional requirements include definition of types of installations requiring an INRMP and expanded content requirements.)</p> <p>Verify that the INRMP, to the extent appropriate and applicable, provides for:</p> <ul style="list-style-type: none"> <li>– fish and wildlife management, land management, forest management, and fish and wildlife oriented recreation</li> <li>– fish and wildlife habitat enhancement or modifications</li> <li>– wetland protection, enhancement, and restoration, where necessary for support of fish, wildlife, or plants</li> <li>– integration of, and consistency among, the various activities conducted under the plan</li> <li>– establishment of specific natural resource management goals and objectives and time frames for proposed action</li> <li>– sustainable use by the public of natural resources to the extent that the use is not inconsistent with the needs of fish and wildlife resources</li> </ul>

<p align="center"><b>COMPLIANCE CATEGORY:</b>  <b>NATURAL RESOURCES MANAGEMENT</b>  <b>U.S. TEAM Guide</b></p>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS:</b> <b>December 2018</b>
	<ul style="list-style-type: none"> <li>– public access to the military installation that is necessary or appropriate for the sustainable use by the public described above, subject to requirements necessary to ensure safety and military security</li> <li>– enforcement of applicable natural resource laws (including regulations)</li> <li>– no net loss in the capability of military installation lands to support the military mission of the installation</li> <li>– such other activities as the Secretary of the military department determines appropriate.</li> </ul> <p>Verify that the INRMP is prepared in coordination with Fish and Wildlife Service authorities.</p> <p>Verify that the INRMP is reviewed as to operation and effect on a regular basis, but not less often than every 5 yr.</p> <p>Verify that, once an INRMP is agreed to, no land covered by the plan is sold or leased unless the effects of the sale or leasing are compatible with the plan.</p> <p>(NOTE: The purposes of this program are to provide for:</p> <ul style="list-style-type: none"> <li>– the conservation and rehabilitation of natural resources on military installations</li> <li>– the sustainable multipurpose use of the resources, including hunting, fishing, trapping, and nonconsumptive uses</li> <li>– public access to military installations subject to safety requirements and military security.)</li> </ul> <p>(NOTE: The INRMP may provide for the issuance of special state hunting and fishing permits to individuals. Nominal fees may be required for these permits. The fees must be used for the protection, conservation, and management of fish and wildlife, including habitat improvement and related activities. The INRMP may provide for the CO of the installation or his designee to act as an agent for the state in enforcing the permit program and collecting, spending, administering, and accounting for the fees. The fees must be used with respect to the military installation on which collected. If the installation is subsequently closed, then the fees may be transferred to another installation, but must still be used for the same purposes.)</p> <p>(NOTE: The <i>National Defense Authorization Act for FY 2012</i> [P.L. 112-81], enacted on 31 December 2011, required INRMPs for state-owned lands supporting Army National Guard facilities.)</p> <p>(NOTE: USACE Civil Works Projects are not required to have INRMPs.)</p>

### OTHER ENVIRONMENTAL ISSUES U.S. TEAM Guide, December 2018

#### A. Applicability

This section addresses the following issues:

1. the National Environmental Policy Act (NEPA) process
2. environmental noise
3. the Installation Restoration Program (IRP)
4. pollution prevention
5. program management
6. waste military munitions.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

#### B. Federal Regulations

*All*

- EO 12088, *Federal Compliance with Pollution Standards*. This EO, dated 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the Agency funds meet applicable Federal, state, and local environmental requirements for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget. Sections 1-4, "Pollution Control Plan" was revoked by EO 13148 **[Revised October 2002]**.
- EO 13327, *Federal Real Property Asset Management*. This EO, dated 4 February 2004, establishes the Federal Real Property Council (Council) to develop guidance for, and facilitate the success of, each agency's asset management plan. The Council is to be composed exclusively of all agency Senior Real Property Officers, the Controller of the Office of Management and Budget, the Administrator of General Services, and any other full-time or permanent part-time Federal officials or employees as deemed necessary by the Chairman of the Council. The Senior Real Property Officer is designated by the head a department of agency. The Senior Real Property Officer is required to develop and implement an agency asset management planning process that meets the form, content, and other requirements established by the Federal Real Property Council. In developing this plan, the Senior Real Property Officer shall:
  1. identify and categorize all real property owned, leased, or otherwise managed by the agency, including, where applicable, those properties outside the United States in which the lease agreements and arrangements reflect the host country currency or involve alternative lease plans or rental agreements;
  2. prioritize actions to be taken to improve the operational and financial management of the agency's real property inventory;
  3. make life-cycle cost estimations associated with the prioritized actions;
  4. identify legislative authorities that are required to address these priorities;
  5. identify and pursue goals, with appropriate deadlines, consistent with and supportive of the agency's asset management plan and measure progress against such goals;
  6. incorporate planning and management requirements for historic property under Executive Order 13287 of March 3, 2003, and for environmental management under Executive Order 13148 of April 21, 2000; and

7. identify any other information and pursue any other actions necessary to the appropriate development and implementation of the agency asset management plan.

Under EO 13327, para 2(a) “federal real property” is defined as any real property owned, leased, or otherwise managed by the Federal Government, both within and outside the United States, and improvements on Federal lands. For the purpose of this order, Federal real property shall exclude: interests in real property assets that have been disposed of for public benefit purposes pursuant to section 484 of title 40, United States Code, and are now held in private ownership; land easements or rights-of-way held by the Federal Government; public domain land (including lands withdrawn for military purposes) or land reserved or dedicated for national forest, national park, or national wildlife refuge purposes except for improvements on those lands; land held in trust or restricted fee status for individual Indians or Indian tribes; and land and interests in land that are withheld from the scope of this order by agency heads for reasons of national security, foreign policy, or public safety **[Added April 2004]**.

- Executive Order (EO) 13423, *Strengthening Federal Environmental, Energy, and Transportation Management*. This EO, dated 24 January 2007, requires Federal agencies to lead by example in advancing the nation’s energy security and environmental performance by achieving goals outlined in the EO. This EO revokes the following EOs **[Added January 2007]**:
  1. Executive Order 13101, Greening the Government Through Waste Prevention, Recycling, and Federal Acquisition of September 14, 1998;
  2. Executive Order 13123, Greening the Government Through Efficient Energy Management of June 3, 1999;
  3. Executive Order 13134, *Developing and Promoting Biobased Products and Bioenergy* of August 12, 1999, as amended;
  4. Executive Order 13148, Greening the Government through Leadership in Environmental Management of April 21, 2000; and
  5. Executive Order 13149, Greening the Government Through Federal Fleet and Transportation Efficiency of April 21, 2000.

## NEPA

- NEPA. The purpose of this act, 42 U.S. Code (USC) 4321-4370c, as last amended in November 1990, was to declare a national policy which will encourage productive and enjoyable harmony between man and his environment. Additionally, it provides for the promotion of efforts that will prevent or eliminate damage to the environment and biosphere and stimulate the health and welfare of man (42 USC 4321). Under NEPA, the continuing policy of the Federal government is to use all practicable means and measures in a manner calculated to foster and promote the general welfare, and to create and maintain conditions under which man and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations of Americans (42 USC 4331(a)). It is the continuing responsibility of the Federal government to use practicable means and resources to the end that the Nation may preserve important historic, cultural, and natural aspects of our national heritage (42 USC 4331(b)(4)).
- *Aligning National Environmental Policy Act Processes with Environmental Management Systems: A Guide for NEPA and EMS Practitioners* – This document, dated April 2007, introduces issues and provides information on how NEPA and EMS can be aligned. This guide does not establish new requirements, does not constitute formal CEQ guidance, and its recommendations should not be considered legally binding. See Appendix 6-0 for a table outlining the complementary elements of EMS and NEPA **[Added July 2007]**.
- Council on Environmental Quality (CEQ), Memorandum for Heads of Federal Departments and Agencies. This memo, titled “*Appropriate Use of Mitigation and Monitoring and Clarifying the Appropriate Use of Mitigated Findings of No Significant Impact*” was issued 14 January 2011. This guidance is for Federal departments and agencies on establishing, implementing, and monitoring mitigation commitments identified in analyzed in Environmental Assessments (EAs), Environmental Impact Statements (EIS), and adopted in the final decision documents. This guidance also clarifies the appropriate use of mitigated “Findings of No Significant Impact” under NEPA. The guidance explains the requirements of NEPA and the CEQ regulations, describes CEQ policies, and recommends procedures for agencies to use to help them comply with the requirements of NEPA and the

CEQ regulations when they establish mitigation planning and implementation procedures. A copy of this memo can be found at <http://www.whitehouse.gov/administration/eop/ceq/initiatives/nepa> [Added April 2011].

- Council on Environmental Quality (CEQ), Memorandum for Heads of Federal Departments and Agencies. This memo, titled “*Establishing, Applying, and Revising Categorical Exclusions under the National Environmental Policy Act*” was issued 23 November 2010. This guidance explains the requirements of NEPA and the CEQ regulations, describes CEQ policies, and recommends procedures for agencies to use to ensure that their use of categorical exclusions is consistent with applicable law and regulations. A copy of this memo can be found at <http://www.whitehouse.gov/administration/eop/ceq/initiatives/nepa> [Added April 2011].

#### *CERCLA Cleanup Sites*

- *Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)* of 1980. This act was amended by the *Superfund Amendments and Reauthorization Act (SARA)* of 1986, 42 USC 9601-11050, 10 USC 2701-2810 et. al. This act has four basic elements. The first element is the establishment of an information gathering and analysis system for the characterization of contaminated sites. This information is used in the development of the USEPA’s National Priorities List (NPL). The second element is the establishment of Federal authority to respond to hazardous substance emergencies and cleanup leaking sites. The third element is the creation of a trust fund to pay for removal and remedial actions. The fourth element makes persons who are responsible for hazardous substance releases liable for cleanup and restitution costs.
- *Community Environmental Response Facilitation Act*. This act, PL 102-426, amends CERCLA. It requires that, prior to the termination of Federal activities on any real property owned by the Federal Government, agencies must identify real property where no hazardous substance was stored, released, or disposed of. The purpose is to identify property that offers the greatest opportunity for reuse and redevelopment.
- EO 12580, *Superfund Implementation*. This EO, dated 23 January 1987, mandates the development of the National Response Team (NRT) and redelegates authority for various functions related to Superfund from the President to other Federal agencies.

#### *Environmental Noise*

- *The Noise Control Act* of 1972. This act, Public Law (PL) 92-574 (42 USC 4901-4918), as amended:
  1. establishes a means for effective coordination of Federal research and activities in noise control
  2. authorizes the establishment of Federal noise emission standards for products distributed in commerce
  3. provides information to the public respecting the noise emission and noise reduction characteristics of such products.

The following categories of products, which produce noise, are covered by this act:

1. construction equipment
2. transportation equipment (including recreational vehicles and related equipment)
3. any motor or engine (including any equipment of which an engine or motor is an integral part)
4. electrical or electronic equipment.

The following articles are not covered by the act (42 USC 4902(3):

1. any aircraft, aircraft engine, propeller, or appliance
2. any military weapons or equipment designed for combat use
3. any rockets or equipment designed for research, experimental, or developmental work to be performed by the National Aeronautics and Space Administration
4. any other machinery or equipment designed for use in experimental work done by or for the Federal Government.

- *Aviation Safety and Noise Abatement Act of 1979*. This act, PL 96-193 (49 USC Appendix 2103, 2104), as amended, relates to airport noise. Any airport operator may submit to the Secretary of Transportation a noise exposure map. Such a map shall set forth the noncompatible uses in each area of the map, a description of the projected aircraft operations at such an airport, and the ways in which such operations will affect such a map (49 USC 2103). Any airport operator, who has submitted a noise exposure map and the related information, may submit to the Secretary of Transportation a noise compatibility program. This program shall include measures which the operator has taken or proposes for the reduction of existing noncompatible uses and the prevention of the introduction of noncompatible uses within the area covered by the noise exposure map submitted (49 USC Appendix 2104).

#### *Pollution Prevention*

- *The Pollution Prevention Act of 1990*. This act encourages looking at waste more broadly with a view towards reducing pollution. All pollutants are to be minimized and waste creation is to be controlled, not just during the production process, but also in the design of products that will have less impact on the environment while in use and after disposal.
- EO 12844, *Federal Use of Alternative Fueled Vehicles*. This EO, dated 21 April 1993, directs each agency to adopt aggressive plans to substantially exceed the alternative fueled vehicles purchase requirements established by the *Energy Policy Act of 1992*. The head of each agency reports annually to the Secretary of Energy on actions and progress under this order.
- EO 12898, *Federal Actions to Address Environmental Justice in Minority Populations and Low Income Populations*. This EO, dated 11 February 1994, directs each Federal agency to make achieving environmental justice part of its mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority populations and low income populations in the United States and its territories and possessions, the District of Columbia, the Commonwealth of Puerto Rico, and the Commonwealth of the Mariana Islands.
- EO 12902, *Energy Efficiency and Water Conservation at Federal Facilities*. This EO, dated 8 March 1994, addresses agency goals and reporting requirements for energy and water efficiency at Federal facilities as well as suggestions on how to achieve those goals.
- EO 13221, *Energy Efficient Standby Power Devices*. This EO, dated 31 July 2001, mandates the purchase of energy efficient standby power devices [**Added October 2006**].
- Office of the Press Secretary; Memorandum for the Heads of Executive Departments and Agencies, September 26, 2005: *Energy and Fuel Conservation by Federal Agencies*. This Memorandum directs heads of executive departments and agencies (agencies) to take appropriate actions to conserve natural gas, electricity, gasoline, and diesel fuel to the maximum extent consistent with the effective discharge of public responsibilities. All agencies should conserve fuel so we can reduce overall demand and allow extra supplies to be directed towards the hurricane relief effort [**Added December 2005**].

#### *Waste Munitions*

- *Federal Facilities Compliance Act (FFCA)*. Section 107 of the FFCA of 1992 amended the Resource Conservation and Recovery Act (RCRA) by adding a new section 3004(y) that requires the USEPA to propose, after consulting with the Department of Defense (DoD) and appropriate State officials, and then to finalize regulations that identify when conventional and chemical military munitions become hazardous waste subject to Subtitle C of RCRA, and that provide for the safe storage and transportation of such waste. Such regulations are to assure the protection of human health and the environment [**Added April 2003**].
- DoD 6055.9-STD, *Ammunition and Explosives Safety Standards*. This standard, dated 29 February 2008, is implemented by 40 CFR 266.205(a)(1)(iii). It is issued under the authority of DoD Directive 6055.9E, *Explosives Safety Management and DoD Explosives Safety Board*, 19 August 2005. These Standards are designed to manage

risks associated with DoD-titled ammunition and explosives (AE) by providing protection criteria to minimize serious injury, loss of life, and damage to property. It is DoD policy to comply with the applicable Federal and State laws and regulations. Where the Standard conflicts with such laws and regulations, DoD components shall ensure the safety of DoD personnel and the public while complying and notify the Chairman, DDESB, through its Board Member, of the conflict. These Standards are not intended to be so rigid as to prevent the DoD Components from accomplishing their assigned missions [Added April 2003, Revised April 2009].

- DoD Directive 6055.9E, Explosives Safety Management and DoD Explosives Safety Board. This directive, dated 19 August 2005, updates policies, authorities, and responsibilities for DoD Explosives Safety Management (ESM) and continues to operate the DoD Explosives Safety Board (DDESB) as a standing joint board [Added April 2009].

### C. State/Local Regulations

For information on regulations in specific states, see the State Supplements to TEAM Guide.

#### *Environmental Noise*

State, regional, and local governmental agencies may develop zoning and planning ordinances that have the potential to affect facilities and their operations. As a general rule, states tend to treat environmental noise as a source-specific pollutant whose emissions will be controlled by the locally affected community.

#### *Waste Munitions*

Under RCRA, USEPA may authorize a State or Territory, instead of the Federal government, to administer and enforce the RCRA hazardous waste program. While the regulations adopted by a State or Territory have to be at least as stringent as the Federal regulations, RCRA allows States and Territories to impose standards that are more stringent than those in the Federal program. Therefore, compliance requirements may differ from State to State or Territory. In the 12 February 1997 Federal Register, page 6625, the USEPA strongly encourages States to adopt 40 CFR 266, Subpart M for regulating military munitions, the USEPA acknowledges that States may adopt requirements with respect to military munitions that are more stringent or broader in scope than the Federal requirements [Added April 2003].

The waste munitions requirements in 40 CFR 266, Subpart M are not considered as part of the Hazardous and Solid Waste Amendments (HSWA). Therefore, although USEPA retains enforcement authority under RCRA sections 3008, 3013, and 7003, they are not Federally enforceable in an authorized State until the necessary changes to a States' authorization have been approved by USEPA. For a more detailed explanation, see the Military Munitions Rule preamble, page 6648, part V. State Authority of the 12 February 1997 Federal Register (FR),

Some states have adopted the equivalent of 40 CFR 266 Subpart M and have incorporated these requirements into their state HW program but have not yet been authorized by USEPA to incorporate these rules into the federal RCRA program. As of September 2002, 31 states have adopted 40 CFR 266 Subpart M rules. Of these, 21 have been authorized by USEPA to implement those rules as part of the federally authorized RCRA program. Eleven states have not received USEPA authorization, but may still implement these rules on the strength of their state statutory authority. See: [http://www.epa.gov/epaoswer/hazwaste/state/stats/stats\\_rulespecific.htm](http://www.epa.gov/epaoswer/hazwaste/state/stats/stats_rulespecific.htm).) [Added April 2003].

#### **D. Key Compliance Requirements**

- EO 13423 Goals - The following is a summary of the goals outlined in EO 13423 **[Added January 2007]**:
  1. Vehicles: Increase purchase of alternative fuel, hybrid, and plug-in hybrid vehicles when commercially available.
  2. Petroleum Conservation: Reduce petroleum consumption in fleet vehicles by 2% annually through 2015.
  3. Alternative Fuel Use: Increase alternative fuel consumption at least 10% annually.

4. Energy Efficiency: Reduce energy intensity 30% by 2015.
  5. Greenhouse Gases: Reduce greenhouse gas emissions through reduction of energy intensity by 3% annually or 30% by 2105.
  6. Renewable Power: At least 50% of current renewable energy purchases must come from new renewable sources (in service after January 1, 1999).
  7. Building Performance: Construct or renovate buildings in accordance with sustainability strategies, including resource conservation, reduction, and use; siting; and indoor environmental quality.
  8. Water Conservation: Reduce water consumption intensity by 2% annually through 2015.
  9. Procurement: Expand purchases of environmentally-sound goods and services, including biobased products.
  10. Pollution Prevention: Reduce use of chemicals and toxic materials and purchase lower risk chemicals and toxic materials from top priority list.
  11. Electronics Management: Annually, 95% of electronic products purchased must meet Electronic Product Environmental Assessment Tool standards where applicable; enable Energy Star® features on 100% of computers and monitors; and reuse, donate, sell, or recycle 100% of electronic products using environmentally sound management practices.
  12. Environmental Management Systems: By 2010, increase to at least 2,500 the number of Federal operations that implement environmental management systems, up from about 1,000 today.
- EISs/Environmental Assessments (EAs) - An EIS must be produced if a proposed action causes potential for significant degradation of environmental quality, significant threat to public health or safety, there is public controversy concerning significance or nature of the biophysical, environmental impact of an action, or potential for significant impact on protected natural or historic sources. An EA may be produced before any contract for action is entered into or action is begun to determine if an EIS is necessary. All EAs must prompt either the preparation of a finding of no significant impact (FONSI) or an EIS. When used, FONSI must meet certain requirements, such as the name of the action, a brief description of the action, a discussion of environmental effects, the conclusions that have led to the FONSI, and the date of approval and appropriate signature (40 CFR 1502.4, 1502.10 through 1502.13, 1503.4(i), 1508.9, and 1508.13).
  - Environmental Noise - See the Agency-specific Supplement.
  - CERCLA Cleanup Sites - Site investigations are required to be conducted of potentially contaminated sites. If further actions are needed, the staff is required to participate in a detailed process of investigations and community relations.
  - Comprehensive Procurement Guidelines (CPG) - Government agencies are required to increase their purchases of products containing recovered materials. Types of products for which recommended recycle content has been established include:
    1. paper and paper products, excluding building and construction paper grades
    2. vehicular products
    3. construction products
    4. transportation products
    5. park and recreation products
    6. landscaping products
    7. non-paper office products.

CPG requirements apply to all procuring agencies and to all procurement actions involving items designated by USEPA, where the procuring agency purchases \$10,000 or more worth of one of these items during the course of a fiscal year, or where the cost of such items or of functionally equivalent items purchased during the preceding fiscal year was \$10,000 or more. This guideline applies to Federal agencies, to state and local agencies using appropriated Federal funds to procure designated items, and to persons contracting with any such agencies with respect to work performed under such contracts. Federal procuring agencies should note that the requirements of RCRA section 6002 apply to them whether or not appropriated Federal funds are used for procurement of designated items. The \$10,000 threshold applies to procuring agencies as a whole rather than to agency subgroups

such as regional offices or subagencies of a larger department or agency. The CPG guidelines do not apply to purchases of designated items that are unrelated to or incidental to Federal funding, i.e., not the direct result of a contract or agreement with, or a grant, loan, or funds disbursement to, a procuring agency. The guidelines also do not apply to purchases made by private party recipients (e.g., individuals, non-profit organizations) of Federal funds pursuant to grants, loans, cooperative agreements, and other funds disbursements (RCRA, Section 6002(c)(1); 40 CFR 247.2 through 247.17) **[Added July 2000]**.

## **E. Key Compliance Definitions**

- *2-Cycle Engine Oils* - lubricants designed for use in 2-cycle engines to provide lubrication, decreased spark plug fouling, reduced deposit formation, and/or reduced engine wear (7 CFR 3201.25(a)) **[Added July 2008, Citation Revised October 2011]**.
- *Abandoned Property* - property that can be presumed to be deserted, or an intent to relinquish possession or control can be inferred from the general disrepair or lack of activity thereon such that a reasonable person could believe that there was an intent on the part of the current owner to surrender rights to the property (40 CFR 312.10) **[Added April 2006]**.
- *Aboveground Magazines* - any open area, vehicle, or any aboveground structure not meeting the requirements of an ECM that is used for explosives storage (DoD 6055.9-STD, Appendix 1, para AP1.1.) **[Added April 2003, Revised April 2009]**.
- *Acquisition* - the acquiring of supplies and services as defined in Part 2 the Federal Acquisition Regulation. (FAR) (*Instructions for Implementing EO 13423*, Section XIII, Definitions) **[Added July 2007]**.
- *Acquisition* - the acquiring by contract with appropriated funds of supplies or services (including construction) by and for the use of the Federal Government through purchase or lease, whether the supplies or services are already in existence or must be created, developed, demonstrated, and evaluated. Acquisition begins at the point when agency needs are established and includes the description of requirements to satisfy agency needs, solicitation and selection of sources, award of contracts, contract financing, contract performance, contract administration, and those technical and management functions directly related to the process of fulfilling agency needs by contract (48 CFR 2.101) **[Added January 2008]**.
- *Acquisition Planning* - the process by which the efforts of all personnel responsible for an acquisition are coordinated and integrated through a comprehensive plan for fulfilling the agency need in a timely manner and at a reasonable cost. It includes developing the overall strategy for managing the acquisition (48 CFR 2.101) **[Added January 2008]**.
- *Action* - all activities or programs of any kind authorized, funded, or carried out, in whole or in part, by Federal agencies in the United States or upon the high seas. Examples include, but are not limited to (50 CFR 402.02):
  1. actions intended to conserve listed species or their habitat
  2. the promulgation of regulations
  3. the granting of licenses, contracts, leases, easements, rights-of-way, permits, or grants-in-aid
  4. actions directly or indirectly causing modifications to the land, water, or air.
- *Active Range* - a military range that is currently in service and is being regularly used for range activities (40 CFR 266.201) **[Added April 2003]**.
- *Adhesive and Mastic Removers* - solvent products formulated for use in removing asbestos, carpet, and tile mastics as well as adhesive materials, including glue, tape, and gum, from various surface types (7 CFR 3201.16(a)) **[Added July 2008, Citation Revised October 2011]**.

- *Adjoining Properties* - any real property or properties the border of which is (are) shared in part or in whole with that of the subject property, or that would be shared in part or in whole with that of the subject property but for a street, road, or other public thoroughfare separating the properties (40 CFR 312.10) **[Added April 2006]**.
- *Agency* – in relation to FEMP, each authority of the Government of the United States, whether or not it is within or subject to review by another agency, but does not include (10 CFR 436) **[Added April 2009]**:
  1. The Congress, and agencies thereof;
  2. The courts of the United States;
  3. The governments of the territories or possessions of the United States; or
  4. The government of the District of Columbia.
- *Agency* - an executive agency as defined in section 105 of title 5, United States Code, excluding the Government Accountability Office. For the purpose of the E.O., military departments, as defined in 5 U.S.C. 102, are covered under the auspices of DoD (*Instructions for Implementing EO 13423*, Section XIII, Definitions) **[Added July 2007]**.
- *Agency* - an executive agency as defined in section 105 of title 5, United States Code, excluding the Government Accountability Office (EO 13423, Section 9, paragraph a) **[Added January 2007]**.
- *Agency Head or Head of the Agency* - the Secretary, Attorney General, Administrator, Governor, Chairperson, or other chief official of an executive agency, unless otherwise indicated, including any deputy or assistant chief official of an executive agency (48 CFR 2.101) **[Added January 2008]**.
- *Agricultural Materials* - agricultural-based, including plant, animal, and marine materials, raw materials or residues used in the manufacture of commercial or industrial, nonfood/nonfeed products (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Agricultural Spray Adjuvants* - products mixed in the spray tank with the herbicide, pesticide, or fertilizer formulas that will improve the efficiency and the effectiveness of the chemicals, including sticking agents, wetting agents, etc (7 CFR 3201.88) **[Added October 2012]**.
- *Air Fresheners and Deodorizers* - products used to alleviate the experience of unpleasant odors by chemical neutralization, absorption, anesthetization, or masking (7 CFR 3201.75(a)) **[Added April 2012]**.
- *Alternative Fuel* - defined by Section 301 of the *Energy Policy Act of 1992*, as modified from time to time by the Secretary of Energy by rule. See 10 CFR 490.2 (*Instructions for Implementing EO 13423*, Section XIII, Definitions) **[Added July 2007]**.
- *Alternate* - a substantive variation of a basic provision or clause prescribed for use in a defined circumstance. It adds wording to, deletes wording from, or substitutes specified wording for a portion of the basic provision or clause. The alternate version of a provision or clause is the basic provision or clause as changed by the addition, deletion, or substitution (see 48 CFR 52.105(a)) (48 CFR 2.101) **[Added January 2008]**.
- *Alternative Fuel Vehicle* - a dedicated, flexible-fuel, bi-fuel, or dual-fuel vehicle powered by alternative fuel as defined in section 301 of EPCA 1992 (*Instructions for Implementing EO 13423*, Section XIII, Definitions) **[Added July 2007]**.
- *Ammunition* - generic term related mainly to articles of military application consisting of all kinds of bombs, grenades, rockets, mines, projectiles and other similar devices or contrivances (DoD 6055.9-STD, Appendix 1, para AP1.12.) **[Added April 2003, Revised April 2009]**.
- *Ammunition Storage Unit (ASU)* - all types of explosives storage magazines (e.g., open storage areas, sheds, bunkers, ECM, and AGM) (DoD 6055.9-STD, Appendix 1, para AP1.14.) **[Added April 2003, Revised April 2009]**.

- *Animal Cleaning Products* - products designed to clean, condition, or remove substances from animal hair or other parts of an animal (7 CFR 3201.89) **[Added October 2012]**.
- *Animal Repellents* - products used to aid in deterring animals that cause destruction to plants and/or property (7 CFR 3201.61) **[Added October 2011]**.
- *ASTM International* - ASTM International, a nonprofit organization organized in 1898, is one of the largest voluntary standards development organizations in the world with about 30,000 members in over 100 different countries. ASTM provides a forum for the development and publication of voluntary consensus standards for materials, products, systems, and services (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Asphalt and Tar Removers* - cleaning agents designed to remove asphalt or tar from equipment, roads, or other surfaces (7 CFR 3201.76(a)) **[Added April 2012]**.
- *Asphalt Restorers* - products designed to seal, protect, or restore poured asphalt and concrete surfaces (7 CFR 3201.77(a)) **[Added April 2012]**.
- *Awards and Plaques* - free-standing statues and boardlike products generally used as wall-hangings (40 CFR 247.3) **[Added April 2000]**.
- *BEES* - an acronym for “Building for Environmental and Economic Sustainability,” an analytic tool used to determine the environmental and health benefits and life cycle costs of items, developed by the U.S. Department of Commerce National Institute of Standards and Technology, with support from the U.S. Environmental Protection Agency, Office of Pollution Prevention and Toxics (BEES 3.0, Building for Environmental and Economic Sustainability Technical Manual and User Guide, NISTIR 6916, National Institute of Standards and Technology, U.S. Department of Commerce, October 2002). Also, see [http://www.bfrl.nist.gov/oe/software/bees\\_USDA.html](http://www.bfrl.nist.gov/oe/software/bees_USDA.html) for a discussion of how biobased feedstocks are addressed in the BEES Analysis (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Bath Products* - personal hygiene products including bar soaps, liquids, or gels that are referred to as body washes, body shampoos, or cleansing lotions, but excluding products marketed as hand cleaners and/or hand sanitizers (7 CFR 3201.62) **[Added October 2011]**.
- *Bathroom and Spa Cleaners* - products that are designed to clean and/or prevent deposits on surfaces found in bathrooms and spas including, but not necessarily limited to, bath tubs and spas, shower stalls, shower doors, shower curtains, and bathroom walls, floors, doors, and counter and sink tops. Products in this item may be designed to be applied to a specific type of surface or to multiple surface types. They are available both in concentrated and ready-to-use forms (7 CFR 3201.35) **[Added July 2008, Citation Revised October 2011]**.
- *Biobased Components* - any intermediary biobased materials or parts that, in combination with other components, are functional parts of the biobased product (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Biobased Content* - biobased content shall be determined based on the amount of biobased carbon in the material or product as a percent of weight (mass) of the total organic carbon in the material or product (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Biobased Product* - (7 CFR 3201.2) **[Added April 2005; Revised April 2011, Citation Revised October 2011; Revised July 2015]**.

1. A product determined by USDA to be a commercial or industrial product (other than food or feed) that is:

- a. Composed, in whole or in significant part, of biological products, including renewable domestic agricultural materials and forestry materials; or
    - b. An intermediate ingredient or feedstock.
  2. The term ``biobased product'' includes, with respect to forestry materials, forest products that meet biobased content requirements, notwithstanding the market share the product holds, the age of the product, or whether the market for the product is new or emerging.
- *Biobased Product* - a product determined by the U.S. Department of Agriculture to be a commercial or industrial product (other than food or feed) that is composed, in whole or in significant part, of biological products, including renewable domestic agricultural materials and forestry materials (48 CFR 2.101) **[Added January 2008; Revised April 2012]**.
  - *Biodegradability* - a quantitative measure of the extent to which a material is capable of being decomposed by biological agents, especially bacteria (7 CFR 3201.2) **[Added April 2006, Citation Revised October 2011]**.
  - *Biological Products* - products derived from living materials other than agricultural or forestry materials (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
  - *Bioremediation Materials* - dry or liquid solutions (including those containing bacteria or other microbes but not including sorbent materials) used to clean oil, fuel, and other hazardous spill sites (7 CFR 3201.63) **[Added October 2011]**.
  - *Blanket Insulation* - relatively flat and flexible insulation in coherent sheet form, furnished in units of substantial area. Batt insulation is included in this term (40 CFR 247.3) **[Added July 1999]**.
  - *Blast Media* - abrasive particles sprayed forcefully to clean, remove contaminants, or condition surfaces, often preceding coating (7 CFR 3201.78(a)) **[Added April 2012]**.
  - *Board Insulation* - Semi-rigid insulation preformed into rectangular units having a degree of suppleness, particularly related to their geometrical dimensions (40 CFR 247.3) **[Added July 1999]**.
  - *Building Insulation* - a material, primarily designed to resist heat flow, which is installed between the conditioned volume of a building and adjacent unconditioned volumes or the outside. This term includes but is not limited to insulation products such as blanket, board, spray-in-place, and loose-fill that are used as ceiling, floor, foundation, and wall insulation (40 CFR 247.3) **[Added July 1999]**.
  - *Burning for Energy Recovery* – when solid waste is (40 CFR 261.2(c)(2)((i))) **[Added April 2003]**:
    1. burned to recover energy;
    2. used to produce a fuel or are otherwise contained in fuels (in which cases the fuel itself remains a solid waste).
  - *Candles and Wax Melts* - products composed of a solid mass and either an embedded wick that is burned to provide light or aroma, or that are wickless and melt when heated to produce an aroma (7 CFR 3201.79(a)) **[Added April 2012]**.
  - *Carpet and Upholstery Cleaners* – this include (7 CFR 3201.34) **[Added July 2008, Citation Revised October 2011]**:
    1. Cleaning products formulated specifically for use in cleaning carpets and upholstery, through a dry or wet process, found in locations such as houses, cars, and workplaces.
    2. Carpet and upholstery cleaners for which preferred procurement applies are:
      - a. General purpose cleaners. Carpet and upholstery cleaners formulated for use in cleaning large areas such as the carpet in an entire room or the upholstery on an entire piece of furniture.

- b. Spot removers. Carpet and upholstery cleaners formulated for use in removing spots or stains in a small confined area.
- *Carpet Cushion* - also known as carpet underlay, is padding placed beneath carpet to reduce carpet wear caused by foot traffic or furniture indentation, enhance comfort, and prolong appearance (40 CFR 247.3) **[Added April 2000]**.
- *Carpets* – floor coverings composed of woven, tufted, or knitted fiber and a backing system (7 CFR 3201.33) **[Added July 2008, Citation Revised October 2011]**.
- *Ceiling Fan* - a nonportable device that is suspended from a ceiling for circulating air via the rotation of fan blades (10 CFR 430.2) **[Added January 2006]**.
- *Ceiling Fan Light Kit* - equipment designed to provide light from a ceiling fan that can be (10 CFR 430.2) **[Added January 2006]**:
  - 1. Integral, such that the equipment is attached to the ceiling fan prior to the time of retail sale; or
  - 2. Attachable, such that at the time of retail sale the equipment is not physically attached to the ceiling fan, but may be included inside the ceiling fan at the time of sale or sold separately for subsequent attachment to the fan.
- *Cellulose Fiber Loose-Fill* - a basic material of recycled wood-based cellulosic fiber made from selected paper, paperboard stock, or ground wood stock, excluding contaminated materials which may reasonably be expected to be retained in the finished product, with suitable chemicals introduced to provide properties such as flame resistance, processing and handling characteristics. The basic cellulosic material may be processed into a form suitable for installation by pneumatic or pouring methods (40 CFR 247.3) **[Added July 1999]**.
- *CERCLIS* - This is the abbreviation of the CERCLA information system, U.S. Environmental Protection Agency's (USEPA) comprehensive database and management system that inventories and tracks releases addressed or needing to be addressed by the Superfund program (40 CFR 300.5).
- *Certification* - a statement of professional opinion based upon knowledge and belief (40 CFR 260.10) **[Added April 2003]**.
- *Chain and Cable Lubricants* - products designed to provide lubrication in such applications as bar and roller chains, sprockets, and wire ropes and cables. Products may also prevent rust and corrosion in these applications (7 CFR 3201.43(a)) **[Added January 2010, Citation Revised October 2011]**.
- *Chairman of the Council* - the Chairman of the Council on Environmental Quality (CEQ), including in the Chairman's capacity as Director of the Office of Environmental Quality (EO 13423, Section 9, paragraph b) **[Added January 2007]**.
- *Channelizers* - highly visible barrels or drums that can be positioned to direct traffic through detours (40 CFR 247.3) **[Added July 1999]**.
- *Characteristics of Hazardous Waste* - the characteristics of ignitability, corrosivity, reactivity, and toxicity that identify hazardous waste (40 CFR 261.20 through 261.24) **[Added April 2003]**.
- *Chemical Agent (CA)* - a chemical compound (to include experimental compounds) that, through its chemical properties, produces lethal or other damaging effects on human beings, and is intended for use in military operations to kill, seriously injure, or incapacitate persons through its physiological effects. Excluded are research, development, test and evaluation solutions; riot control agents; chemical defoliants and herbicides; smoke and other obscuration materials; flame and incendiary materials; and industrial chemicals (DoD 6055.9-STD, Appendix 1, para AP1.33.) **[Added April 2009]**.

- *Chemical Agent (CA) Hazard* - a condition where danger exists because CA is present in a concentration high enough to present potential unacceptable effects (e.g., death, injury, damage) to people, operational capability, or the environment (DoD 6055.9-STD, Appendix 1, para AP1.34.) **[Added April 2009]**.
- *Chemical Agents and Munitions* - an agent or munition that, through its chemical properties, produces lethal or other damaging effects on human beings, except that such term does not include riot control agents, chemical herbicides, smoke and other obscuration materials (50 U.S.C. section 1521(j)(1)) **[Added April 2003]**.
- *Chemical Warfare Material (CWM)* - items generally configured as a munition containing a chemical compound that is intended to kill, seriously injure, or incapacitate a person through its physiological effects. CWM includes V- and G-series nerve agents or H-series (mustard) and L-series (lewisite) blister agents in other-than-munition configurations; and certain industrial chemicals (e.g., Hydrogen Cyanide (AC), Cyanogen Chloride (CK), or Carbonyl Dichloride (called phosgene or CG)) configured as a military munition. Due to their hazards, prevalence, and military-unique application, chemical agent identification set (CAIS) are also considered CWM. CWM does not include: riot control devices; chemical defoliants and herbicides; industrial chemicals (e.g., AC, CK, or CG) not configured as a munition; smoke and other obscuration-producing items; flame- and incendiary-producing items; or soil, water, debris or other media contaminated with low concentrations of chemical agents where no CA hazards exist (DoD 6055.9-STD, Appendix 1, para AP1.36.) **[Added April 2009]**.
- *Chemical Warfare Material (CWM) Response* - munitions responses and other responses to address the chemical safety; explosives safety, when applicable; human health; or environmental risks presented by CA-filled munitions and CA in other than munitions configurations (DoD 6055.9-STD, Appendix 1, para AP1.37.) **[Added April 2009]**.
- *Commercial Item* – this means (48 CFR 2.101) **[Added January 2008]**:
  1. Any item, other than real property, that is of a type customarily used by the general public or by non-governmental entities for purposes other than governmental purposes, and:
    - a. Has been sold, leased, or licensed to the general public; or
    - b. Has been offered for sale, lease, or license to the general public;
  2. Any item that evolved from an item described in paragraph (1) of this definition through advances in technology or performance and that is not yet available in the commercial marketplace, but will be available in the commercial marketplace in time to satisfy the delivery requirements under a Government solicitation;
  3. Any item that would satisfy a criterion expressed in paragraphs (1) or (2) of this definition, but for:
    - a. Modifications of a type customarily available in the commercial marketplace; or
    - b. Minor modifications of a type not customarily available in the commercial marketplace made to meet Federal Government requirements. Minor modifications means modifications that do not significantly alter the nongovernmental function or essential physical characteristics of an item or component, or change the purpose of a process. Factors to be considered in determining whether a modification is minor include the value and size of the modification and the comparative value and size of the final product. Dollar values and percentages may be used as guideposts, but are not conclusive evidence that a modification is minor;
  4. Any combination of items meeting the requirements of paragraphs (1), (2), (3), or (5) of this definition that are of a type customarily combined and sold in combination to the general public;
  5. Installation services, maintenance services, repair services, training services, and other services if:
    - a. Such services are procured for support of an item referred to in paragraph (1), (2), (3), or (4) of this definition, regardless of whether such services are provided by the same source or at the same time as the item; and
    - b. The source of such services provides similar services contemporaneously to the general public under terms and conditions similar to those offered to the Federal Government;
  6. Services of a type offered and sold competitively in substantial quantities in the commercial marketplace based on established catalog or market prices for specific tasks performed or specific outcomes to be achieved and under standard commercial terms and conditions. For purposes of these services:

- a. Catalog price means a price included in a catalog, price list, schedule, or other form that is regularly maintained by the manufacturer or vendor, is either published or otherwise available for inspection by customers, and states prices at which sales are currently, or were last, made to a significant number of buyers constituting the general public; and
    - b. Market prices means current prices that are established in the course of ordinary trade between buyers and sellers free to bargain and that can be substantiated through competition or from sources independent of the offerors.
  - 7. Any item, combination of items, or service referred to in paragraphs (1) through (6) of this definition, notwithstanding the fact that the item, combination of items, or service is transferred between or among separate divisions, subsidiaries, or affiliates of a contractor; or
  - 8. A nondevelopmental item, if the procuring agency determines the item was developed exclusively at private expense and sold in substantial quantities, on a competitive basis, to multiple State and local governments.
- *Common Item* - material that is common to the applicable Government contract and the contractor's other work (48 CFR 2.101) **[Added January 2008]**.
  - *Composite Panels* – this include (7 CFR 3201.19(a)) **[Added July 2008, Citation Revised October 2011]**:
    - 1. Plastic lumber composite panels. Engineered products suitable for non-structural outdoor needs such as exterior signs, trash can holders, and dimensional letters.
    - 2. Acoustical composite panels. Engineered products designed for use as structural and sound deadening material suitable for office partitions and doors.
    - 3. Interior panels. Engineered products designed specifically for interior applications and providing a surface that is impact-, scratch-, and wear-resistant and that does not absorb or retain moisture.
    - 4. Structural interior panels. Engineered products designed for use in structural construction applications, including cabinetry, casework, paneling, and decorative panels.
    - 5. Structural wall panels. Engineered products designed for use in structural walls, curtain walls, floors and flat roofs in commercial buildings.
  - *Compost* - a thermophilic converted product with high humus content. Compost can be used as a soil amendment and can also be used to prevent or remediate pollutants in soil, air, and storm water run-off (40 CFR 247.3) **[Added April 2000; Revised October 2007]**.
  - *Compost Activators and Accelerators* - products in liquid or powder form designed to be applied to compost piles to aid in speeding up the composting process and to ensure successful compost that is ready for consumer use (7 CFR 3201.64) **[Added October 2011]**.
  - *Computer Monitor* - a video display unit used with a computer (48 CFR 23.701) **[Added January 2008]**.
  - *Concrete and Asphalt Cleaners* - chemicals used in concrete etching as well as to remove petroleum-based soils, lubricants, paints, mastics, organic soils, rust, and dirt from concrete, asphalt, stone and other hard porous surfaces. Products within this item include only those marketed for use in commercial or residential construction or industrial applications (7 CFR 3201.65) **[Added October 2011]**.
  - *Concrete and Asphalt Release Fluids* - products that are designed to provide a lubricating barrier between the composite surface materials (e.g., concrete or asphalt) and the container (e.g., wood or metal forms, truck beds, roller surfaces) (7 CFR 3201.36) **[Added July 2008, Citation Revised October 2011]**.
  - *Conditional Exemption (CE)* - an exemption from the regulatory definition of hazardous waste (and therefore from compliance with specific environmental requirements pertaining to the storage of hazardous waste) conditioned on compliance with certain criteria requirements as in 40 CFR 266.205 [NOTE: This is NOT the same classification as a hazardous waste conditionally exempt small quantity generator (CESQG).] (DoD 6055.9-STD, Appendix 1, para AP1.46.) **[Added April 2003, Citation Revised April 2009]**.

- *Construction* - construction, alteration, or repair (including dredging, excavating, and painting) of buildings, structures, or other real property. For purposes of this definition, the terms "buildings, structures, or other real property" include, but are not limited to, improvements of all types, such as bridges, dams, plants, highways, parkways, streets, subways, tunnels, sewers, mains, power lines, cemeteries, pumping stations, railways, airport facilities, terminals, docks, piers, wharves, ways, lighthouses, buoys, jetties, breakwaters, levees, canals, and channels. Construction does not include the manufacture, production, furnishing, construction, alteration, repair, processing, or assembling of vessels, aircraft, or other kinds of personal property (48 CFR 2.101) **[Added January 2008]**.
- *Contiguous United States (CONUS)* - the 48 contiguous States and the District of Columbia (48 CFR 2.101) **[Added January 2008]**.
- *Contract Action* - any oral or written action that results in the purchase, rent, or lease of supplies or equipment, services, or construction using appropriated dollars, including purchases below the micro-purchase threshold. Contract action does not include grants, cooperative agreements, other transactions, real property leases, requisitions from Federal stock, training authorizations, or other non-FAR based transactions (48 CFR 23.101) **[Added July 2011]**.
- *Contract Clause or Clause* - a term or condition used in contracts or in both solicitations and contracts, and applying after contract award or both before and after award (48 CFR 2.101) **[Added January 2008]**.
- *Contracting* - purchasing, renting, leasing, or otherwise obtaining supplies or services from nonfederal sources. Contracting includes description (but not determination) of supplies and services required, selection and solicitation of sources, preparation and award of contracts, and all phases of contract administration. It does not include making grants or cooperative agreements (48 CFR 2.101) **[Added January 2008]**.
- *Corrosion Preventatives* - products designed to prevent the deterioration (corrosion) of metals (7 CFR 3201.44(a)) **[Added January 2010, Citation Revised October 2011]**.
- *Council* - the Council on Environmental Quality (EO 13423, Section 9, paragraph c) **[Added January 2007]**.
- *Covered Product* - a product that is of a category for which an ENERGY STAR qualification or FEMP designation is established (10 CFR 436.41) **[Added April 2009]**.
- *Cuts, Burns, and Abrasions Ointments* - products designed to aid in the healing and sanitizing of scratches, cuts, bruises, abrasions, sun damaged skin, tattoos, rashes and other skin conditions (7 CFR 3201.66) **[Added October 2011]**.
- *dBA* - sound level in decibels, measured using the A-weighting network of a sound level meter.
- *dB(C)* - a sound level in decibels, measured using the C-weighting network of a sound level meter.
- *Data Gap* - a lack of or inability to obtain information required by the standards and practices listed in subpart C of this part despite good faith efforts by the environmental professional or persons identified under 40 CFR 312.1(b), as appropriate, to gather such information pursuant to 40 CFR 312.20(e)(1) and 312.20(e)(2) (40 CFR 312.10) **[Added April 2006]**.
- *Date of Acquisition or Purchase Date* - the date on which a person acquires title to the property (40 CFR 312.10) **[Added April 2006]**.
- *Decibel (dB)* - sound is measured in decibels. The zero on the decibel scale is based on the lowest sound level that a healthy, unimpaired human ear can hear. Decibels are not linear, but representative points on a sharply rising (exponential) curve.

- *Dehumidifier* - a self-contained, electrically operated, and mechanically encased assembly consisting of (10 CFR 430.2) **[Added January 2006]**:
  1. A refrigerated surface (evaporator) that condenses moisture from the atmosphere;
  2. A refrigerating system, including an electric motor;
  3. An air-circulating fan; and
  4. Means for collecting or disposing of the condensate.
- *Delineator* - a highly visible pavement marker that can be positioned to direct traffic or define boundaries (40 CFR 247.3) **[Added July 1999]**.
- *Deodorants* - products that are designed for inhibiting or masking perspiration and other body odors and that are often combined with an antiperspirant (7 CFR 3201.90) **[Added October 2012]**.
- *Designated Item* - a generic grouping of biobased products identified in subpart B that is eligible for the procurement preference established under section 9002 of FSRIA (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Desktop Computer* - a computer designed for use on a desk or table (48 CFR 23.701) **[Added January 2008]**.
- *Dethatchers* - products used to remove non-decomposed plant material accumulated in grassy areas (7 CFR 3201.91) **[Added October 2012]**.
- *Diesel Fuel Additives* - any substance, other than one composed solely of carbon and/or hydrogen, that is intentionally added to diesel fuel [including any added to a motor vehicle's fuel system] and that is not intentionally removed prior to sale or use. Diesel fuel additive does not mean neat biodiesel [B100] when used as a fuel or blended biodiesel fuel [e.g., B20] (7 CFR 3201.13(a)) **[Added July 2008, Citation Revised October 2011]**.
- *Diluent* - a substance used to diminish the strength, scent, or other basic property of a substance (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Discharge or Hazardous Waste Discharge* - the accidental or intentional spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous waste into or on any land or water (40 CFR 260.10) **[Added April 2003]**.
- *Dishwashing Products* - soaps and detergents used for cleaning and clean rinsing of tableware in either hand washing or dishwashing (7 CFR 3201.67) **[Added October 2011]**.
- *Disposal* - the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that such solid waste or hazardous waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including groundwaters (40 CFR 260.10) **[Added April 2003]**.
- *Disposable Containers* - products designed to be used for temporary storage or transportation of materials including, but not limited to, food items (7 CFR 3201.21(a)) **[Added July 2008, Citation Revised October 2011]**.
- *Disposable Cutlery* - hand-held, disposable utensils designed for one-time use in eating food (7 CFR 3201.29(a)) **[Added July 2008, Citation Revised October 2011]**.
- *Disposable Tableware* - products made from, or coated with, plastic resins and used in dining, such as drink ware and dishware, including but not limited to cups, plates, bowls, and serving platters, and that are designed for one-

time use. This item does not include disposable cutlery, which is a separate item (7 CFR 3201.52) [Added January 2011, Citation Revised October 2011].

- *Disposal Facility* - a facility or part of a facility at which hazardous waste is intentionally placed into or on any land or water, and at which waste will remain after closure. The term disposal facility does not include a corrective action management unit into which remediation wastes are placed (40 CFR 260.10) [Added April 2003].
- *DoD Mishap* - an unplanned event or series of events that result in damage to DoD property, occupational illness to DoD military or civilian personnel, injury to DoD military personnel on or off duty, injury to on-duty civilian personnel; damage to public and private property, or injury and illness to non-DoD personnel as a result of DoD operations (DoD 6055.9-STD, Appendix 1, para AP1.1.1.31.) [Added April 2003].
- *Dust Suppressants* - products formulated to reduce or eliminate the spread of dust associated with gravel roads, dirt parking lots, or similar sources of dust, including products used in equivalent indoor applications (7 CFR 3201.32(a)) [Added July 2008, Citation Revised October 2011].
- *EIS (Environmental Impact Statement)* - a detailed statement by the responsible official on (40 CFR 1508.11):
  1. the environmental impact of the proposed action
  2. any adverse environmental effects which cannot be avoided should the proposal be implemented
  3. alternatives to the proposed action
  4. the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity
  5. any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented.
- *Electronic and Information Technology (EIT)* – this phrase has the same meaning as “information technology” except EIT also includes any equipment or interconnected system or subsystem of equipment that is used in the creation, conversion, or duplication of data or information. The term EIT, includes, but is not limited to, telecommunication products (such as telephones), information kiosks and transaction machines, worldwide websites, multimedia, and office equipment (such as copiers and fax machines) (48 CFR 2.101) [Added January 2008].
- *Electronic Components Cleaners* - products that are designed to wash or remove dirt or extraneous matter from electronic parts, devices, circuits, or systems (7 CFR 3201.80(a)) [Added April 2012].
- *Energy Efficiency* - measures, practices, or programs that reduce the energy used by specific devices and systems, typically without adversely affecting the services provided. Such savings are generally achieved by substituting technically more advanced equipment or by improving operating procedures (e.g., operations and maintenance procedures) to produce the same level of end-use services (e.g., lighting, heating, motor drive) with less energy input (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [Added July 2007].
- *Energy-Efficient Product* - a product that (48 CFR 2.101) [Added January 2008]:
  1. Meets Department of Energy and Environmental Protection Agency criteria for use of the Energy Star trademark label; or
  2. Is in the upper 25 percent of efficiency for all similar products as designated by the Department of Energy's Federal Energy Management Program.
- *Energy-Efficient Standby Power Devices* - products that use (48 CFR 2.101) [Added January 2008]:
  1. External standby power devices, or that contain an internal standby power function; and
  2. No more than one watt of electricity in their standby power consuming mode or meet recommended low standby levels as designated by the Department of Energy Federal Energy Management Program.

- *Energy Intensity* - energy consumption per square foot of building space, including industrial or laboratory facilities (EO 13423, Section 9, paragraph i) [**Added January 2007**].
- *Energy Intensity* - energy consumption per gross square foot of building space, including industrial and laboratory facilities (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
- *Energy-Savings Performance Contract* - a contract that requires the contractor to (48 CFR 2.101) [**Added January 2008**]:
  1. Perform services for the design, acquisition, financing, installation, testing, operation, and where appropriate, maintenance and repair, of an identified energy conservation measure or series of measures at one or more locations;
  2. Incur the costs of implementing the energy savings measures, including at least the cost (if any) incurred in making energy audits, acquiring and installing equipment, and training personnel in exchange for a predetermined share of the value of the energy savings directly resulting from implementation of such measures during the term of the contract; and
  3. Guarantee future energy and cost savings to the Government.
- *Energy Savings Performance Contract (ESPC)* - a contract (such as a task ordered by DOE and awarded to an energy service company) that provides for the performance of services for the design, acquisition, financing, installation, testing, operation, and maintenance and repair, of an identified energy, water conservation or renewable energy measure or series of measures at one or more locations. Such contracts shall provide that the contractor must incur costs of implementing energy savings measures, including at least the cost (if any) incurred in making energy audits, acquiring and installing equipment, and training personnel in exchange for a predetermined share of the value of the energy savings directly resulting from implementation of such measures during the term of the contract. Payment to the contractor is contingent upon realizing a guaranteed stream of future energy and cost savings, with any savings in excess of that guaranteed by the contractor accruing to the Federal government (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
- *Energy Star Product* - a product that is rated for energy efficiency under an Energy Star program (EPACT 2005, Section 104(a)(2)) [**Added October 2006**].
- *Energy Star Program* - the program established by section 324A of the Energy Policy and Conservation Act (EPACT 2005, Section 104(a)(3)) [**Added October 2006**].
- *ENERGY STAR Qualified Product* - a product that is rated for energy efficiency under an ENERGY STAR program established by section 324A of the Energy Policy and Conservation Act (42 U.S.C. 6294a) (10 CFR 436.41) [**Added April 2009**].
- *Engineered Wood Products* - products produced with a combination of wood, food fibers and adhesives (7 CFR 3201.2) [**Added April 2005, Citation Revised October 2011**].
- *Engine Lubricating Oils* - petroleum-based oils used for reducing friction in engine parts (40 CFR 247.3) [**Added July 1999**].
- *Environmental* - environmental aspects of internal agency operations and activities, including those aspects related to energy and transportation functions (48 CFR 23.001) [**Added July 2011**].
- *Environmental* - environmental aspects of internal agency operations and activities, including those environmental aspects related to energy and transportation functions (EO 13423, Section 9, paragraph d) [**Added January 2007**].
- *Environmental Assessment (EA)* - a concise public document for which a Federal agency is responsible that serves to briefly provide sufficient evidence and analysis for determining whether to prepare an EIS or a FONSI (40 CFR 1508.9).

- *Environmental Professional* (40 CFR 312.10) **[Added April 2006]**:
  1. a person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases (see 40 CFR 312.1(c)) on, at, in, or to a property, sufficient to meet the objectives and performance factors in 40 CFR 312.20(e) and 312.20(f).
  2. Such a person must:
    - a. Hold a current Professional Engineer's or Professional Geologist's license or registration from a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) and have the equivalent of 3 yr of full-time relevant experience; or
    - b. Be licensed or certified by the federal government, a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) to perform environmental inquiries as defined in 40 CFR 312.21 and have the equivalent of 3 yr of full-time relevant experience; or
    - c. Have a Baccalaureate or higher degree from an accredited institution of higher education in a discipline of engineering or science and the equivalent of 5 yr of full-time relevant experience; or
    - d. Have the equivalent of ten (10) years of full-time relevant experience.
  3. An environmental professional should remain current in his or her field through participation in continuing education or other activities.
  4. The definition of environmental professional provided above does not preempt state professional licensing or registration requirements such as those for a professional geologist, engineer, or site remediation professional. Before commencing work, a person should determine the applicability of state professional licensing or registration laws to the activities to be undertaken as part of the inquiry identified in 40 CFR 312.21(b).
  5. A person who does not qualify as an environmental professional under the foregoing definition may assist in the conduct of all appropriate inquiries in accordance with this part if such person is under the supervision or responsible charge of a person meeting the definition of an environmental professional provided above when conducting such activities.
- *Environmentally Preferable* - products or services that have a lesser or reduced effect on human health and the environment when compared with competing products or services that serve the same purpose. This comparison may consider raw materials acquisition, production, manufacturing, packaging, distribution, reuse, operation, maintenance, or disposal of the product or service (48 CFR 2.101) **[Added January 2008]**:
- *Environmentally Preferable* - products or services that have a lesser or reduced effect on human health and the environment when compared with competing products or services that serve the same purpose. This comparison may consider raw materials acquisition, product, manufacturing, packaging, distribution, reuse, operation, maintenance, or disposal of the product or service (*Instructions for Implementing EO 13423*, Section XIII, Definitions) **[Added July 2007]**.
- *EPA-designated Item* - an item designated by EPA in a Comprehensive Procurement Guideline and for which EPA recommended procurement practices, including recovered materials content levels, in a Recovered Materials Advisory Notice (RMAN) (*Instructions for Implementing EO 13423*, Section XIII, Definitions) **[Added July 2007]**.
- *EPA-designated Recovered Content Product* - a product, designated under the *Resource Conservation and Recovery Act*, that is subject to Federal procurement as specified in section 6002 of the *Solid Waste Disposal Act* (42 U.S.C. 6962), whereby Federal agencies must give preferred procurement to those products composed of the highest percentage of recovered materials practicable, subject to availability, cost, and performance (7 CFR 3201.2) **[Added April 2006, Citation Revised October 2011]**.
- *Erosion Control Materials* - woven or non-woven fiber materials manufactured for use on construction, demolition, or other sites to prevent wind or water erosion of loose earth surfaces, which may be combined with seed and/or fertilizer to promote growth (7 CFR 3201.68) **[Added October 2011]**.

- *Expanded Polystyrene (EPS) Foam Recycling Products* - products formulated to dissolve EPS foam to reduce the volume of recycled or discarded EPS items (7 CFR 3201.53) [Added January 2011, Citation Revised October 2011].
- *Explosive* - for the purposes of DoD 6055.9-STD, a substance or a mixture of substances that is capable by chemical reaction of producing gas at such temperature, pressure, and speed as to cause damage to the surroundings. The term “explosive” includes all substances variously known as high explosives and propellants, together with igniters, primers, initiators, and pyrotechnics (e.g., illuminant, smoke, delay, decoy, flare, and incendiary compositions) (DoD 6055.9-STD, Appendix 1, para AP1.85.) [Added April 2009].
- *Explosives Facility* - any structure or location containing ammunition and explosives excluding combat aircraft parking areas or ammunition and explosives aircraft cargo areas (DoD 6055.9-STD, Appendix 1, para AP1.1.1.37.) [Added April 2003].
- *Explosives or Munitions Emergency* - a situation involving the suspected or detected presence of unexploded ordnance (UXO), damaged or deteriorated explosives or munitions, an improvised explosive device (IED), other potentially explosive material or device, or other potentially harmful military chemical munitions or device, that creates an actual or potential imminent threat to human health, including safety, or the environment, including property, as determined by an explosives or munitions emergency response specialist. Such situation may require immediate and expeditious action by an explosives or munitions emergency response specialist to control, mitigate, or eliminate the threat (40 CFR 260.10 and 266.201) [Added April 2003].
- *Explosives or Munitions Emergency Response* - all immediate response activities by an explosives and munitions emergency response specialist to control, mitigate, or eliminate the actual or potential threat encountered during an explosives or munitions emergency. An explosives or munitions emergency response may include in-place render safe procedures, treatment, or destruction of the explosives or munitions and/or transporting those items to another location to be rendered safe, treated, or destroyed. Any reasonable delay in the completion of an explosives or munitions emergency response caused by a necessary, unforeseen, or uncontrollable circumstance will not terminate the explosives or munitions emergency. Explosives and munitions emergency responses can occur on either public or private lands and are not limited to responses at RCRA facilities (40 CFR 260.10 and 266.201) [Added April 2003].
- *Explosives or Munitions Emergency Response Specialist* - an individual trained in chemical or conventional munitions or explosives handling, transportation, render-safe procedures, or destruction techniques. Explosives or munitions emergency response specialists include Department of Defense (DoD) emergency explosive ordnance disposal (EOD), technical escort unit (TEU), and DoD-certified civilian or contractor personnel; and other Federal, State, or local government, or civilian personnel similarly trained in explosives or munitions emergency responses (40 CFR 260.10 and 266.201) [Added April 2003].
- *FCEA* - The Food, Conservation and Energy Act of 2008, Pub. L. 110-246 (7 CFR 3201.2) [Added April 2011, Citation Revised October 2011].
- *FONSI (Finding of No Significant Impact)* - a document that briefly presents the reasons why an action, not otherwise excluded, does not need an EIS (40 CFR 1508.13).
- *FSRIA* - the Farm Security and Rural Investment Act of 2002, Public Law 107-171, 116 Stat. 134 (7 U.S.C. 8102) (7 CFR 3201.2) [Added April 2005, Citation Revised October 2011].
- *Facility* - any building, installation, structure, land, and other property owned or operated by, or constructed or manufactured and leased to, the Federal Government, as well as any fixture. This term includes a group of facilities at a single or multiple location(s) managed as an integrated operation, as well as government-owned contractor operated facilities. For purposes of energy reporting, “facility” excludes land and sites where the utilities are not paid by the reporting agency (i.e., in cases where no separate periodic invoice for utilities is required to be paid) (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [Added July 2007].

- *Feasibility Study (FS)* - a study undertaken by the lead agency to develop and evaluate options for remedial action (40 CFR 300.5).
- *Federal Agency* - any executive agency or independent establishment in the legislative or judicial branch of the Government (except the Senate, the House of Representatives, the Architect of the Capitol, and any activities under the Architect's direction) (7 CFR 3201.2) [Added April 2005, Citation Revised October 2011].
- *Federal Agency* - any department, agency, or other instrumentality of the Federal government; any independent agency or establishment of the Federal government including any government corporation; and the Government Printing Office (40 CFR 247.3) [Added July 1999].
- *FEMP Designated Product* - a product that is designated under the Federal Energy Management Program of the Department of Energy as being among the highest 25 percent of equivalent products for energy efficiency (EPACT 2005, Section 104(a)(4) and 10 CFR 436.41) [Added October 2006, Citation Revised April 2009].
- *Fertilizer Made From Recovered Organic Materials* - a single or blended substance, made from organic matter such as plant and animal by-products, manure-based or biosolid products, and rock and mineral powders, that contains one or more recognized plant nutrient(s) and is used primarily for its plant nutrient content and is designed for use or claimed to have value in promoting plant growth (40 CFR 247.3) [Added October 2007].
- *Fertilizers* - products formulated or processed to provide nutrients for plant growth and/or beneficial bacteria to convert nutrients into plant usable forms. Biobased fertilizers, which are likely to consist mostly of biobased components, may include both biobased and chemical components. (NOTE: Biobased fertilizers, as well as other fertilizers, may be made with recycled hazardous waste. Such fertilizers need to meet applicable land disposal restriction standards for any hazardous constituents they contain, as required under 40 CFR 266.20(d).) (7 CFR 3201.22) [Added July 2008, Citation Revised October 2011].
- *Fiberglass Insulation* - insulation which is composed principally of glass fibers, with or without binders (40 CFR 247.3) [Added July 1999].
- *Filler* - a substance added to a product to increase the bulk, weight, viscosity, strength, or other property.
- *Films* – this includes (7 CFR 3201.27) [Added July 2008, Citation Revised October 2011]:
  1. Products that are used in packaging, wrappings, linings, and other similar applications.
  2. Films for which preferred procurement applies are:
    - a. Semi-durable films. Films that are designed to resist water, ammonia, and other compounds, to be re-used, and to not readily biodegrade. Products in this item are typically used in the production of bags and packaging materials.
    - b. Non-durable films. Films that are intended for single use for short-term storage or protection before being discarded. Non-durable films that are designed to have longer lives when used are included in this item.
- *Firearm Lubricants* - lubricants that are designed for use in firearms to reduce the friction and wear between the moving parts of a firearm, and to keep the weapon clean and prevent the formation of deposits that could cause the weapon to jam (7 CFR 3201.38) [Added July 2008, Citation Revised October 2011].
- *Flexible Delineator* - a highly visible marker that can be positioned to direct traffic or define boundaries and that will flex if struck by a vehicle to prevent damage to the vehicle or the delineator (40 CFR 247.3) [Added July 1999].
- *Floor Cleaners and Protectors* - cleaning solutions for either direct application or use in floor scrubbers for wood, vinyl, tile, or similar hard surface floors. Products within this item are marketed specifically for use on industrial, commercial, and/or residential flooring (7 CFR 3201.69) [Added October 2011].

- *Floor Strippers* - products that are formulated to loosen waxes, resins, or varnishes from floor surfaces. They can be in either liquid or gel form, and may also be used with or without mechanical assistance (7 CFR 3201.39) **[Added July 2008, Citation Revised October 2011]**.
- *Flowable Fill* - a low strength material that is mixed to a wet, flowable slurry and used as an economical fill or backfill material in place of concrete, compacted soils, or sand (40 CFR 247.3) **[Added April 2000]**.
- *Floor Coverings (Non-Carpet)* - products, other than carpet products, that are designed for use as the top layer on a floor. Examples are bamboo, hardwood, and cork tiles (7 CFR 3201.81(a)) **[Added April 2012]**.
- *Fluid-filled Transformers* – this includes (7 CFR 3201.20(a)) **[Added July 2008, Citation Revised October 2011]**.
  1. Synthetic ester-based fluid-filled transformers which are electric power transformers that are designed to utilize a synthetic ester-based dielectric (non-conducting) fluid to provide insulating and cooling properties.
  2. Vegetable oil-based fluid-filled transformers which are electric power transformers that are designed to utilize a vegetable oil-based dielectric (non-conducting) fluid to provide insulating and cooling properties.
- *Foam-in-place Insulation* - this is rigid cellular foam produced by catalyzed chemical reactions that hardens at the site of the work. The term includes spray-applied and injected applications such as spray-in-place foam and pour-in-place (40 CFR 247.3) **[Added July 1999]**.
- *Food Cleaners* - anti-microbial products designed to clean the outer layer of various food products, such as fruit, vegetables, and meats (7 CFR 3201.45(a)) **[Added January 2010, Citation Revised October 2011]**.
- *Foot Care Products* - products formulated to be used in the soothing or cleaning of feet (40 CFR 3201.82(a)) **[Added April 2012]**.
- *Forest Product* - a product made from materials derived from the practice of forestry or the management of growing timber. The term "forest product" includes (7 CFR 3201.2) **[Added July 2015]**:
  1. Pulp, paper, paperboard, pellets, lumber, and other wood products; and
  2. Any recycled products derived from forest materials.
- *Forest Thinnings* - refers to woody materials removed from a dense forest, primarily to improve growth, enhance forest health, or recover potential mortality. (To recover potential mortality means to remove trees that are going to die in the near future) (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Forestry Materials* - materials derived from the practice of planting and caring for forests and the management of growing timber. Such materials must come from short rotation woody crops (less than 10 yr old), sustainably managed forests, wood residues, or forest thinnings (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Former or Non-Operational Range* - encompasses Closed, Transferred and Transferring Ranges as these terms are defined in federal regulations (40 CFR 266.201).
  1. A Closed military range has either been taken out of service as a range and has been put to new uses that are incompatible with range activities or that is no longer considered to be a potential range area. A Closed range is still under the control of a DoD Component.
  2. A Transferred range is a military range that is no longer under the control of a DoD Component and has been leased, transferred, or returned to another entity, to include other Federal, non-DoD entities, for use **[Added April 2003]**.

- *Forming Lubricants* - products designed to provide lubrication during metalworking applications that are performed under extreme pressure. Such metalworking applications include tube bending, stretch forming, press braking, and swaging (7 CFR 3201.46(a)) **[Added January 2010, Citation Revised October 2011]**.
- *Formulated Product* - a product that is prepared or mixed with other ingredients, according to a specified formula and includes more than one ingredient (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Fuel Conditioners* - products formulated to improve the performance and efficiency of engines by providing benefits such as removing accumulated deposits, increasing lubricity, removing moisture, increasing the cetane number, and/or preventing microbial growths within the fuel system (7 CFR 3201.92) **[Added October 2012]**.
- *Functional Unit* - a measure of product technical performance that provides a common reference to which all environmental and economic impacts of the product are scaled. This reference is necessary to ensure comparability of performance results across competing products. Comparability of results is critical when competing product alternatives are being assessed to ensure that such comparisons are made on a common basis. For example, the functional unit for competing interior paint products may be defined as “protecting one square foot of interior wall surface for 50 years” (7 CFR 3201.2) **[Added April 2006, Citation Revised October 2011]**.
- *Furniture Cleaners and Protectors* - products designed to clean and provide protection to the surfaces of household furniture other than the upholstery (7 CFR 3201.83(a)) **[Added April 2012]**.
- *Garden Hose* - a flexible tubing that conducts water to a specific location (40 CFR 247.3) **[Added July 1999]**.
- *Gear Lubricants* - products, such as greases or oils, that are designed to reduce friction when applied to a toothed machine part (such as a wheel or cylinder) that meshes with another toothed part to transmit motion or to change speed or direction (7 CFR 3201.47(a)) **[Added January 2010, Citation Revised October 2011]**.
- *Gear Oils* - petroleum-based oils used for lubricating machinery gears (40 CFR 247.3) **[Added July 1999]**.
- *General Purpose De-icers* - chemical products (e.g., salt, fluids) that are designed to aid in the removal of snow and/or ice, and/or in the prevention of the buildup of snow and/or ice, in general use applications by lowering the freezing point of water. Specialized de-icer products, such as those used to de-ice aircraft and airport runways, are not included (7 CFR 3201.37) **[Added July 2008, Citation Revised October 2011]**.
- *General Purpose Household Cleaners* - products designed to clean multiple common household surfaces. This designated item does not include products that are formulated for use as disinfectants. Task-specific cleaning products, such as spot and stain removers, upholstery cleaners, bathroom cleaners, glass cleaners, etc., are not included in this item (7 CFR 3201.48(a)) **[Added January 2010, Citation Revised October 2011]**.
- *Generator* - any person, by site, whose act or process produces hazardous waste identified or listed in 40 CFR 261, or whose act first causes a hazardous waste to become subject to regulation. [NOTE: See also the definition for *Small Quantity Generator*.] (40 CFR 260.10) **Reviewed March 2000; Reviewed October 2001]**.
- *Glass Cleaners* - cleaning products designed specifically for use in cleaning glass surfaces, such as windows, mirrors, car windows, and computer monitors (7 CFR 3201.30) **[Added July 2008, Citation Revised October 2011]**.
- *Good Faith* - the absence of any intention to seek an unfair advantage or to defraud another party; an honest and sincere intention to fulfill one's obligations in the conduct or transaction concerned (40 CFR 312.10) **[Added April 2006]**.
- *Graffiti and Grease Removers* - industrial solvent products formulated to remove automotive, industrial, or kitchen soils and oils, including grease, paint, and other coatings, from hard surfaces (7 CFR 3201.24) **[Added July 2008, Citation Revised October 2011]**.

- *Greases* – this include (7 CFR 3201.31(a)) **[Added July 2008, Citation Revised October 2011]**.
  1. Lubricants composed of oils thickened to a semisolid or solid consistency using soaps, polymers or other solids, or other thickeners.
  2. Greases for which preferred procurement applies are:
    - a. Food grade greases which are lubricants that are designed for use on food-processing equipment as a protective anti-rust film, as a release agent on gaskets or seals of tank closures, or on machine parts and equipment in locations in which there is exposure of the lubricated part to food.
    - b. Multipurpose greases which are lubricants that are designed for general use.
    - c. Rail track greases which are lubricants that are designed for use on railroad tracks or heavy crane tracks.
    - d. Truck greases which are lubricants that are designed for use on the fifth wheel of tractor trailer trucks onto which the semi-trailer rests and pivots.
    - e. Greases not elsewhere specified which are lubricants that meet the general definition of greases as defined in paragraph (1), but are not otherwise covered by paragraphs (2)(a) through (d).
- *Greenhouse Gases* - carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride (EO 13423, Section 9, paragraph e) **[Added January 2007]**.
- *Greenhouse Gases* - carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride (48 CFR 23.001) **[Added July 2011]**.
- *Hair Care Products* – this includes (7 CFR 3201.70) **[Added October 2011]**:
  1. Personal hygiene products specifically formulated for hair cleaning and treating applications, including shampoos and conditioners.
  2. Hair care products for which Federal preferred procurement applies are:
    - a. Shampoos. These are products whose primary purpose is cleaning hair. Products that contain both shampoos and conditioners are included in this subcategory because the primary purpose of these products is cleaning the hair.
    - b. Conditioners. These are products whose primary purpose is treating hair to improve the overall condition of hair.
- *Hand Cleaners and Sanitizers* – this includes (7 CFR 3201.18(a)) **[Added July 2008, Citation Revised October 2011]**:
  1. Hand cleaners are products formulated for personal care use in removing a variety of different soils, greases, and similar substances from human hands with or without the use of water.
  2. Hand sanitizers are products formulated for personal care use in removing bacteria from human hands with or without the use of water. Personal care products that are formulated for use in removing a variety of different soils, greases and similar substances and bacteria from human hands with or without the use of water are classified as hand sanitizers for the purposes of 7 CFR 3201.
- *Hazardous Waste* - a solid waste identified as a characteristic or listed hazardous waste in 40 CFR 261.3 (40 CFR 260.10) **[Added April 2003]**.
- *Hazardous Waste Constituent* - a constituent that caused the hazardous waste to be listed in 40 CFR 261, Subpart D (lists of hazardous wastes from nonspecific and specific sources, and listed hazardous wastes, or a constituent listed in the table of maximum concentrations of contaminants for the toxicity characteristic) (NOTE: The table listing the maximum concentrations of contaminants for the toxicity characteristic appears in 40 CFR 261.24.) (40 CFR 260.10) **[Added April 2003]**.
- *Heat Transfer Fluids* - products with high thermal capacities used to facilitate the transfer of heat from one location to another, including coolants or refrigerants for use in HVAC applications, internal combustion engines, personal cooling devices, thermal energy storage, or other heating or cooling closed-loops (7 CFR 3201.54) **[Added January 2011, Citation Revised October 2011]**.

- *Hydraulic Fluids* - petroleum-based hydraulic fluids (40 CFR 247.3) [**Added July 1999**].
- *Hydraulic Mulch* - a mulch that is a cellulose-based (paper or wood) protective covering that is mixed with water and applied through mechanical spraying in order to aid the germination of seeds and to prevent soil erosion (40 CFR 247.3) [**Added July 1999**].
- *Hydroseeding* - the process of spraying seeds mixed with water through a mechanical sprayer (hydroseeder). Hydraulic mulch, fertilizer, a tacking agent, or a wetting agent can also be added to the water/seed mix for enhanced performance (40 CFR 247.3) [**Added July 1999**].
- *Inactive Range* - a military range that is not currently being used, but that is still under military control and considered by the military to be a potential range area, and that has not been put to a new use that is incompatible with range activities (40 CFR 266.201) [**Added April 2003**].
- *Industrial Cleaners* - products used to remove contaminants, such as adhesives, inks, paint, dirt, soil, and grease, from parts, products, tools, machinery, equipment, vessels, floors, walls, and other production-related work areas. The cleaning products within this item are usually solvents, but may take other forms. They may be used in either straight solution or diluted with water in pressure washers, or in hand wiping applications in industrial or manufacturing settings, such as inside vessels. Task-specific cleaners used in industrial settings, such as parts wash solutions, are not included in this definition (7 CFR 3201.49(a)) [**Added January 2010, Citation Revised October 2011**].
- *Industrial Drums* - cylindrical containers used for shipping and storing liquid or solid materials (40 CFR 247.3) [**Added April 2000**].
- *Ingredient* - a component; part of a compound or mixture; may be active or inactive (7 CFR 3201.2) [**Added April 2005, Citation Revised October 2011**].
- *Ink Removers And Cleaners* - chemical products designed to remove ink, haze, glaze, and other residual ink contaminants from the surfaces of equipment, such as rollers, used in the textile and printing industries (7 CFR 3201.55) [**Added January 2011, Citation Revised October 2011**].
- *Inks* - inks are liquid or powdered materials that are available in several colors and that are used to create the visual image on a substrate when writing, printing, and copying. Inks for which Federal preferred procurement applies are (7 CFR 3201.84(a)) [**Added April 2012**]:
  1. Specialty inks. Inks used by printers to add extra characteristics to their prints for special effects or functions. Specialty inks include, but are not limited to: CD printing, erasable, FDA compliant, invisible, magnetic, scratch and sniff, thermochromic, and tree marking inks.
  2. Inks (sheetfed--color). Pigmented inks (other than black inks) used on coated and uncoated paper, paperboard, some plastic, and foil to print in color on annual reports, brochures, labels, and similar materials.
  3. Inks (sheetfed--black). Black inks used on coated and uncoated paper, paperboard, some plastic, and foil to print in black on annual reports, brochures, labels, and similar materials.
  4. Inks (printer toner--<25 pages per minute (ppm)). Inks that are a powdered chemical, used in photocopying machines and laser printers, which is transferred onto paper to form the printed image. These inks are formulated to be used in printers with standard fusing mechanisms and print speeds of less than 25 ppm.
  5. Inks (printer toner--=25 ppm). Inks that are a powdered chemical, used in photocopying machines and laser printers, which is transferred onto paper to form the printed image. These inks are formulated to be used in printers with advanced fusing mechanisms and print speeds of 25 ppm or greater.
  6. Inks (news). Inks used primarily to print newspapers.

- *Institutional Controls* - non-engineered instruments, such as administrative and/or legal controls, that help to minimize the potential for human exposure to contamination and/or protect the integrity of a remedy (40 CFR 312.10) **[Added April 2006]**.
- *Interior Paints and Coatings* – this includes (7 CFR 3201.71) **[Added October 2011]**:
  1. Pigmented liquids, formulated for use indoors, that dry to form a film and provide protection and added color to the objects or surfaces to which they are applied.
  2. Interior paints and coatings products for which Federal preferred procurement applies are:
    - a. Interior latex and waterborne alkyd paints and coatings.
    - b. Interior oil-based and solventborne alkyd paints and coatings.
- *ISO* - the International Organization for Standardization, a network of national standards institutes from 145 countries working in partnership with international organizations, governments, industries, business, and consumer representatives (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Laminated Paperboard* - board made from one or more plies of kraft paper bonded together, with or without facers, that is used for decorative, structural, or insulating purposes (40 CFR 247.3) **[Added July 1999]**.
- *Land Use Controls (LUC)* - physical, legal, or administrative mechanisms that restrict the use of, or limit access to, real property, to manage risks to human health and the environment. Physical mechanisms encompass a variety of engineered remedies to contain or reduce contamination, or physical barriers to limit access to real property, such as fences or signs (DoD 6055.9-STD, Appendix 1, para AP1.137.) **[Added April 2009]**.
- *Latex Paint* - a water-based decorative or protective covering having a latex binder (40 CFR 247.3) **[Added July 1999]**.
- *Laundry Products* – this includes (40 CFR 3201.40) **[Added July 2008, Citation Revised October 2011]**:
  1. Products that are designed to clean, condition, or otherwise affect the quality of the laundered material. Such products include but are not limited to laundry detergents, bleach, stain removers, and fabric softeners.
  2. Laundry products for which preferred procurement applies are:
    - a. Pretreatment/spot removers. These are laundry products specifically used to pretreat laundry to assist in the removal of spots and stains during laundering.
    - b. General purpose laundry products. These are laundry products used for regular cleaning activities.
- *Lawn Edging* - a barrier used between lawns and landscaped areas or garden beds to prevent grass roots or weeds from spreading to the landscaped areas (40 CFR 247.3) **[Added July 1999]**.
- *Leather, Vinyl, and Rubber Care Products* - products that help clean, nourish, protect, and restore leather, vinyl, and rubber surfaces, including cleaners, conditioners, protectants, polishes, waxes, etc (7 CFR 3201.93) **[Added October 2012]**.
- *Life Cycle Cost* - the sum of the present values of capital costs, installation costs, operating costs, maintenance costs, and disposal costs over the lifetime of the project, product, or measure (*Instructions for Implementing EO 13423*, Section XIII, Definitions) **[Added July 2007]**.
- *Life-cycle Cost-Effective* - the life-cycle costs of a product, project, or measure are estimated to be equal to or less than the base case (i.e., current or standard practice or product) (EO 13423, Section 9, paragraph f) **[Added January 2007]**.
- *Lip Care Products* - personal care products formulated to replenish the moisture and/or prevent drying of the lips (7 CFR 3201.26(a)) **[Added July 2008, Citation Revised October 2011]**.

- *Loose-fill Insulation* - insulation in granular, nodular, fibrous, powdery, or similar form, designed to be installed by pouring, blowing or hand placement (40 CFR 247.3) [**Added July 1999**].
- *Lotions and Moisturizers* - creams and oils used to soften and treat damaged skin (7 CFR 3201.94) [**Added October 2012**].
- *Magazine* - any building or structure used exclusively for the storage of AE (DoD 6055.9-STD, Appendix 1, para AP1.144.) [**Added April 2003, Revised April 2009**].
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Manifest* - the shipping document originated and signed by the generator containing the information required by 40 CFR 262, Subpart B (40 CFR 260.10) [**Added April 2003**].
- *Manual-grade Strapping* - straps of material used with transport packaging to hold products in place on pallets or in other methods of commercial, bulk shipment. Strapping can also prevent tampering and pilferage during shipping (40 CFR 247.3) [**Added April 2000**].
- *Mats* - temporary or semi-permanent protective floor coverings used for numerous applications, including home and office carpet protection, car and truck floor board protection, traction on slippery surfaces, cushion from floor hardness, and reduction of injury risk during athletic events (40 CFR 247.3) [**Added April 2000**].
- *Medium Base Compact Fluorescent Lamp* - an integrally ballasted fluorescent lamp with a medium screw base, a rated input voltage range of 115 to 130 volts and which is designed as a direct replacement for a general service incandescent lamp; however, the term does not include (10 CFR 430.2) [**Added January 2006**]:
  1. Any lamp that is--
    - i. Specifically designed to be used for special purpose applications; and
    - ii. Unlikely to be used in general purpose applications, such as the applications described in the definition of “General Service Incandescent Lamp” in this section; or
  2. Any lamp not described in the definition of “General Service Incandescent Lamp” in this section that is excluded by the Secretary, by rule, because the lamp is:
    - i. Designed for special applications; and
    - ii. Unlikely to be used in general purpose applications.
- *Medium Screw Base* - an Edison screw base identified with the prefix E-26 in the “American National Standard for Electric Lamp Bases”, ANSI--IEC C81.61-2003, published by the American National Standards Institute.
- *Metalworking Fluids* – this includes (7 CFR 3201.41) [**Added July 2008, Citation Revised October 2011**]:
  1. Fluids that are designed to provide cooling, lubrication, corrosion prevention, and reduced wear on the contact parts of machinery used for metalworking operations such as cutting, drilling, grinding, machining, and tapping.
  2. Metalworking fluids for which preferred procurement applies are:
    - a. Straight oils. Metalworking fluids that are not diluted with water prior to use and are generally used for metalworking processes that require lubrication rather than cooling.
    - b. General purpose soluble, semi-synthetic, and synthetic oils. Metalworking fluids formulated for use in a re-circulating fluid system to provide cooling, lubrication, and corrosion prevention when applied to metal feedstock during normal grinding and machining operations.
    - c. High performance soluble, semi-synthetic, and synthetic oils. Metalworking fluids formulated for use in a re-circulating fluid system to provide cooling, lubrication, and corrosion prevention when applied to metal feedstock during grinding and machining operations involving unusually high temperatures or corrosion potential.

- *Military* - the Department of Defense (DoD), the Armed Services, Coast Guard, National Guard, Department of Energy (DOE), or other parties under contract or acting as an agent for the foregoing, who handle military munitions (40 CFR 266.201) **[Added April 2003]**.
- *Military Munitions* - all ammunition products and components produced or used by or for the U.S. DoD or the U.S. Armed Services for national defense and security, including military munitions under the control of the DoD, the Coast Guard, the DOE, and National Guard personnel. The term military munitions includes: confined gaseous, liquid, and solid propellants, explosives, pyrotechnics, chemical and riot control agents, smokes and incendiaries used by DoD components, including bulk explosives and chemical warfare agents, chemical munitions, rockets, guided and ballistic missiles, bombs, warheads, mortar rounds, artillery ammunition, small arms ammunition, grenades, mines, torpedoes, depth charges, cluster munitions and dispensers, demolition charges, and devices and components thereof. Military munitions do not include wholly inert items, improvised explosive devices, and nuclear weapons, nuclear devices, and nuclear components thereof. However, the term does include non-nuclear components of nuclear devices, managed under DOE's nuclear weapons program after all required sanitization operations under the Atomic Energy Act of 1954, as amended, have been completed (40 CFR 260.10) **[Added April 2003]**.
- *Military Munitions Burial Site* - a site, regardless of location, where military munitions or CA, regardless of configuration, were intentionally buried, with the intent to abandon or discard. This term includes burial sites used to dispose of military munitions or CA, regardless of configuration, in a manner consistent with applicable environmental laws and regulations or the national practice at the time of burial. It does not include sites where munitions were intentionally covered with earth during authorized destruction by detonation, or where in situ capping is implemented as an engineered remedy under an authorized response action (DoD 6055.9-STD, Appendix 1, para AP1.153.) **[Added April 2009]**.
- *Military Range* - designated land and water areas set aside, managed, and used to conduct research on, develop, test, and evaluate military munitions and explosives, other ordnance, or weapon systems, or to train military personnel in their use and handling. Ranges include firing lines and positions, maneuver areas, firing lanes, test pads, detonation pads, impact areas, and buffer zones with restricted access and exclusionary areas (40 CFR 266.201) **[Added April 2003]**.
- *Mineral Fiber Insulation* - insulation (rock wool or fiberglass) which is composed principally of fibers manufactured from rock, slag or glass, with or without binders (40 CFR 247.3) **[Added July 1999]**.
- *Mobile Equipment Hydraulic Fluids* - hydraulic fluids formulated for general use in non-stationary equipment, such as tractors, end loaders, or backhoes (7 CFR 3201.10(a)) **[Added July 2008, Citation Revised October 2011]**.
- *Mulch And Compost Materials* - products designed to provide a protective covering placed over the soil, primarily to keep down weeds and to improve the appearance of landscaping. Compost is the aerobically decomposed remnants of organic materials used in gardening and agriculture as a soil amendment, and commercially by the landscaping and container nursery industries (7 CFR 3201.56) **[Added January 2011, Citation Revised October 2011]**.
- *Multipurpose Cleaners* - products used to clean dirt, grease, and grime from a variety of items in both industrial and domestic settings. This designated item does not include products that are formulated for use as disinfectants (7 CFR 3201.50(a)) **[Added January 2010, Citation Revised October 2011]**.
- *Multipurpose Lubricants* - products designed to provide lubrication under a variety of conditions and in a variety of industrial settings to prevent friction or rust. Greases, which are lubricants composed of oils thickened to a semisolid or solid consistency using soaps, polymers or other solids, or other thickeners, are not included in this item. In addition, task-specific lubricants, such as chain and cable lubricants and gear lubricants, are not included in this item (7 CFR 3201.57) **[Added January 2011, Citation Revised October 2011]**.
- *NOI (Notice of Intent)* - a notice that an EIS will be prepared and considered. It should contain (40 CFR 1508.22):

1. a description of the proposed action and possible alternatives
  2. the proposed scoping process and schedule
  3. the name and address of the person who can give more information.
- *Neat Product* - a product that is made of only one ingredient and is not diluted or mixed with other substances (7 CFR 3201.2) [**Added April 2005, Citation Revised October 2011**].
  - *New Renewable Energy* - renewable sources placed in service after 1 January 1999 (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
  - *New Renewable Sources* - sources of renewable energy placed into service after January 1, 1999 (EO 13423, Section 9, paragraph g) [**Added January 2007**].
  - *Non-Operational Military Ranges* - encompasses Closed, Transferred and Transferring Ranges as these terms are defined in federal regulations (40 CFR 266.201).
    1. A Closed military range has either been taken out of service as a range and has been put to new uses that are incompatible with range activities or that is no longer considered to be a potential range area. A Closed range is still under the control of a DoD Component.
    2. A Transferred range is a military range that is no longer under the control of a DoD Component and has been leased, transferred, or returned to another entity, to include other Federal, non-DoD entities, for use [**Added April 2003**].
  - *Non-petroleum Based Fuels* - as used in E.O. 13423, means alternative fuels consistent with the definition presented in section 301 of the EPA Act 1992 (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
  - *Notebook Computer* - a portable-style or laptop-style computer system (48 CFR 23.701) [**Added January 2008**].
  - *Open Burning* - the combustion of any material without the following characteristics (40 CFR 260.10) [**Added April 2003**]:
    1. control of combustion air to maintain adequate temperature for efficient combustion
    2. containment of the combustion-reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion
    3. control of emission of the gaseous combustion products.
  - *Ordinance* - See Waste Explosives.
  - *Oven and Grill Cleaners* - liquid or gel cleaning agents used on high temperature cooking surfaces such as barbeques, smokers, grills, stoves, and ovens to soften and loosen charred food, grease, and residue (7 CFR 3201.72) [**Added October 2011**].
  - *Ozone-depleting Substance* - any substance the Environmental Protection Agency designates in 40 CFR 82 as (48 CFR 2.101) [**Added January 2008**]:
    1. Class I, including, but not limited to, chlorofluorocarbons, halons, carbon tetrachloride, and methyl chloroform; or
    2. Class II, including, but not limited to, hydrochlorofluorocarbons.
  - *Ozone-depleting Substances* - any substance designated as a Class I or Class II substance by the EPA in 40 CFR 82 (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
  - *Packing and Insulating Materials* - pre-formed and molded materials that are used to hold package contents in place during shipping or for insulating and sound proofing applications (7 CFR 3201.85(a)) [**Added April 2012**].

- *Pallet* - a portable platform for storing or moving cargo or freight (40 CFR 247.3) **[Added July 1999]**.
- *Paper* - one of two broad subdivisions of paper products, the other being paperboard. Paper is generally lighter in basis weight, thinner, and more flexible than paperboard. Sheets 0.012 inch or less in thickness are generally classified as paper. Its primary uses are for printing, writing, wrapping, and sanitary purposes. However, in this guideline, the term paper is also used as a generic term that includes both paper and paperboard (40 CFR 247.3) **[Added July 1999]**.
- *Paper Product* - any item manufactured from paper or paperboard. The term paper product is used in this guideline to distinguish such items as boxes, doilies, and paper towels from printing and writing papers (40 CFR 247.3) **[Added July 1999]**.
- *Park Benches and Picnic Tables* - recreational furniture found in parks, outdoor recreational facilities, and the grounds of office buildings and other facilities (40 CFR 247.3) **[Added April 2000]**.
- *Parking Stop* - a barrier used to mark parking spaces and keep parked vehicles from rolling beyond a designated parking area (40 CFR 247.3) **[Added July 1999]**.
- *Parts Wash Solutions* - products that are designed to clean parts in manual or automatic cleaning systems. Such systems include, but are not limited to, soak vats and tanks, cabinet washers, and ultrasonic cleaners (7 CFR 3201.51(a)) **[Added January 2010, Citation Revised October 2011]**.
- *Penetrating Lubricants* - products formulated to provide light lubrication and corrosion resistance in close tolerant internal and external applications including frozen nuts and bolts, power tools, gears, valves, chains, and cables (7 CFR 3201.14(a)) **[Added July 2008, Citation Revised October 2011]**.
- *Performance-Based Acquisition (PBA)* - an acquisition structured around the results to be achieved as opposed to the manner by which the work is to be performed (48 CFR 2.101) **[Added January 2008]**:
- *Performance Work Statement (PWS)* - a statement of work for performance-based acquisitions that describes the required results in clear, specific and objective terms with measurable outcomes (48 CFR 2.101) **[Added January 2008]**.
- *Perlite Composite Board* - insulation board composed of expanded perlite and fibers formed into rigid, flat, rectangular units with a suitable sizing material incorporated in the product. It may have on one or both surfaces a facing or coating to prevent excessive hot bitumen strike-in during roofing installation (40 CFR 247.3) **[Added July 1999]**.
- *Person* - an individual, trust, firm, joint stock company, corporation (including a government corporation), partnership, association, Federal agency, State, municipality, commission, political subdivision of a State, or any interstate body (40 CFR 247.3) **[Added July 1999]**.
- *Personal Computer Product* - a notebook computer, a desktop computer, or a computer monitor, and any peripheral equipment that is integral to the operation of such items. For example, the desktop computer together with the keyboard, the mouse, and the power cord would be a personal computer product. Printers, copiers, and fax machines are not included in peripheral equipment, as used in this definition (48 CFR 23.701) **[Added January 2008]**.
- *Phenolic Insulation* - insulation made with phenolic plastics which are plastics based on resins made by the condensation of phenols, such as phenol or cresol, with aldehydes (40 CFR 247.3) **[Added July 1999]**.
- *Plastic Fencing* - a barrier with an open-weave pattern that can be used to control drifting snow or sand by restricting the force of wind and to provide a warning or barrier in construction and other areas (40 CFR 247.3) **[Added July 1999]**.

- *Plastic Insulating Foam For Residential and Commercial Construction* - spray-in-place plastic foam products designed to provide a sealed thermal barrier for residential or commercial construction applications (7 CFR 3201.17(a)) **[Added July 2008, Citation Revised October 2011]**.
- *Plastic Lumber Landscaping Timbers and Posts* - used to enhance the appearance of and control erosion in parks, highways, housing developments, urban plazas, zoos, and the exteriors of office buildings, military facilities, schools, and other public use areas (40 CFR 247.3) **[Added April 2000]**.
- *Playground Equipment* - includes many components, like slides, merry-go-rounds, hand rails, etc., and is found in parks, schools, child care facilities, institutions, multiple family dwellings, restaurants, resort and recreational developments, and other public use areas (40 CFR 247.3) **[Added April 2000]**.
- *Pneumatic Equipment Lubricants* - lubricants designed specifically for pneumatic equipment, including air compressors, vacuum pumps, in-line lubricators, rock drills, jackhammers, etc (7 CFR 3201.86(a)) **[Added April 2012]**.
- *Pollution Prevention* - any practice that (48 CFR 2.101) **[Added January 2008]**:
  - 1.a. Reduces the amount of any hazardous substance, pollutant, or contaminant entering any waste stream or otherwise released into the environment (including fugitive emissions) prior to recycling, treatment, or disposal; and
  - b. Reduces the hazards to public health and the environment associated with the release of such substances, pollutants, and contaminants;
  2. Reduces or eliminates the creation of pollutants through increased efficiency in the use of raw materials, energy, water, or other resources; or
  3. Protects natural resources by conservation.
- *Pollution Prevention* – “source reduction” as defined in the *Pollution Prevention Act of 1990* (42 U.S.C. 13102), and other practices that reduce or eliminate the creation of pollutants through (*Instructions for Implementing EO 13423*, Section XIII, Definitions) **[Added July 2007]**:
 

increased efficiency in the use of raw materials, energy, water, or other resources, or the protection of natural resources by conservation.
- *Polyisocyanurate Insulation* - insulation produced principally by the polymerization of polymeric polyisocyanates, usually in the presence of polyhydroxyl compounds with the addition of cell stabilizers, blowing agents, and appropriate catalyst to produce a polyisocyanurate chemical structure (40 CFR 247.3) **[Added July 1999]**.
- *Polystyrene Insulation* - an organic foam composed principally of polymerized styrene resin processed to form a homogenous rigid mass of cells (40 CFR 247.3) **[Added July 1999]**.
- *Polyurethane Insulation* - insulation composed principally of the catalyzed reaction product of polyisocyanates and polyhydroxyl compounds, processed usually with a blowing agent to form a rigid foam having a predominantly closed cell structure (40 CFR 247.3) **[Added July 1999]**.
- *Postconsumer Fiber*- in relation to acquisition, this means (48 CFR 52.204-4(a)) **[Added April 2012]**:
  1. Paper, paperboard, and fibrous materials from retail stores, office buildings, homes, and so forth, after they have passed through their end usage as a consumer item, including: used corrugated boxes; old newspapers; old magazines; mixed waste paper; tabulating cards; and used cordage; or
  2. All paper, paperboard, and fibrous materials that enter and are collected from municipal solid waste; but not
  3. Fiber derived from printers’ over-runs, converters’ scrap, and over-issue publications.

- *Postconsumer Material* - a material or finished product that has served its intended use and has been diverted or recovered from waste destined for disposal, having completed its life as a consumer item. Postconsumer material is a part of the broader category of recovered materials (40 CFR 247.3) **[Added July 1999]**.
- *Postconsumer Recovered Paper* - this includes (40 CFR 247.3) **[Added July 1999]**:
  1. paper, paperboard and fibrous wastes from retail stores, office buildings, homes and so forth, after they have passed through their end-usage as a consumer item including: Used corrugated boxes; old newspapers; old magazines; mixed waste paper; tabulating cards and used cordage; and
  2. all paper, paperboard and fibrous wastes that enter and are collected from municipal solid waste.
- *Practicable* - capable of being used consistent with: Performance in accordance with applicable specifications, availability at a reasonable price, availability within a reasonable period of time, and maintenance of a satisfactory level of competition (40 CFR 247.3) **[Added July 1999]**.
- *Preliminary Assessment (PA)* - review of existing information and offsite reconnaissance, if appropriate, to determine is a release may require additional investigation or action. A PA may include an onsite reconnaissance if appropriate (40 CFR 300.5).
- *Printer Ribbon* - a nylon fabric designed to hold ink and used in dot matrix and other types of impact printers (40 CFR 247.3) **[Added July 1999]**.
- *Procurement Actions* - this includes (40 CFR 247.2(b)) **[Added July 1999]**:
  1. purchases made directly by a procuring agency and purchases made directly by any person (e.g., a contractor) in support of work being performed for a procuring agency, and
  2. any purchases of designated items made "indirectly" by a procuring agency, as in the case of procurements resulting from grants, loans, funds, and similar forms of disbursements of monies.
- *Procurement Item* - any device, good, substance, material, product, or other item, whether real or personal property, which is the subject of any purchase, barter, or other exchange made to procure such item (40 CFR 247.3) **[Added July 1999]**.
- *Procuring Agency* - any Federal agency, or any State agency or agency of a political subdivision of a State, which is using appropriated Federal funds for such procurement, or any person contracting with any such agency with respect to work performed under such contract (40 CFR 247.3) **[Added July 1999]**.
- *Procuring Agency* - any Federal agency that is using Federal funds for procurement or any person contracting with any Federal agency with respect to work performed under the contract (7 CFR 3201.2) **[Added October 2006, Citation Revised October 2011]**.
- *Product* - does not include any energy consuming product or system designed or procured for combat or combat-related missions (EPACT 2005, Section 104(a)(5)) **[Added October 2006]**.
- *Purchasing* - the act of and the function of responsibility for the acquisition of equipment, materials, supplies, and services, including: Buying, determining the need, selecting the supplier, arriving at a fair and reasonable price and terms and conditions, preparing the contract or purchase order, and follow-up (40 CFR 247.3) **[Added July 1999]**.
- *Railroad Grade Crossing Surfaces* - materials placed between railroad tracks, and between the track and the road at highway and street railroad crossings, to enhance automobile and pedestrian safety (40 CFR 247.3) **[Added April 2000]**.

- *Range-Related Debris* - debris, other than munitions debris, collected from operational ranges or from former ranges (e.g., target debris, military munitions packaging and crating material) (DoD 6055.9-STD, Appendix 1, para AP1.203.) **[Added April 2009]**.
- *Recovered Materials* - waste materials and byproducts which have been recovered or diverted from solid waste, but such term does not include those materials and byproducts generated from, and commonly reused within, an original manufacturing process (40 CFR 247.3) **[Added July 1999]**.
- *Recovered Materials, For Purposes of Purchasing Paper and Paper Products* - waste material and byproducts that have been recovered or diverted from solid waste, but such term does not include those materials and byproducts generated from, and commonly reused within, an original manufacturing process. In the case of paper and paper products, the term recovered materials includes (40 CFR 247.3) **[Added July 1999]**:
  1. Postconsumer materials such as--
    - a. paper, paperboard, and fibrous wastes from retail stores, office buildings, homes, and so forth, after they have passed through their end-usage as a consumer item, including: Used corrugated boxes; old newspapers; old magazines; mixed waste paper; tabulating cards; and used cordage; and
    - b. all paper, paperboard, and fibrous wastes that enter and are collected from municipal solid waste, and
  2. manufacturing, forest residues, and other wastes such as--
    - a. dry paper and paperboard waste generated after completion of the papermaking process (that is, those manufacturing operations up to and including the cutting and trimming of the paper machine reel in smaller rolls of rough sheets) including: Envelope cuttings, bindery trimmings, and other paper and paperboard waste, resulting from printing, cutting, forming, and other converting operations; bag, box, and carton manufacturing wastes; and butt rolls, mill wrappers, and rejected unused stock; and
    - b. finished paper and paperboard from obsolete inventories of paper and paperboard manufacturers, merchants, wholesalers, dealers, printers, converters, or others;
    - c. fibrous byproducts of harvesting, manufacturing, extractive, or wood-cutting processes, flax, straw, linters, bagasse, slash, and other forest residues;
    - d. wastes generated by the conversion of goods made from fibrous material (that is, waste rope from cordage manufacture, textile mill waste, and cuttings); and
    - e. fibers recovered from waste water which otherwise would enter the waste stream.
- *Re-refined Oils* - used oils from which the physical and chemical contaminants acquired through previous use have been removed through a refining process (40 CFR 247.3) **[Added July 1999]**.
- *Relative Price* - the price of a product as compared to the price of other products on the market that have similar performance characteristics (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Relevant Experience* - as used in the definition of environmental professional in this section, means: participation in the performance of all appropriate inquiries investigations, environmental site assessments, or other site investigations that may include environmental analyses, investigations, and remediation which involve the understanding of surface and subsurface environmental conditions and the processes used to evaluate these conditions and for which professional judgment was used to develop opinions regarding conditions indicative of releases or threatened releases (see 40 CFR 312.1(c)) to the subject property (40 CFR 312.10) **[Added April 2006]**.
- *Remedial Design (RD)* - the technical analysis and procedures which follow the selection of a remedy for a site and results in a detailed set of plans and specifications for implementation of the remedial action (40 CFR 300.5).
- *Remedial Investigation (RI)* - a process undertaken by the lead agency to determine the nature and extent of the problem presented by the release (40 CFR 300.5).
- *Renewable Chemical* - a monomer, polymer, plastic, formulated product, or chemical substance produced from renewable biomass (7 CFR 3201.2) **[Added July 2015]**.

- *Renewable Energy* - energy produced by solar, wind, geothermal, biomass, landfill gas, ocean (including tidal, wave, current, and thermal), municipal solid waste, or new hydroelectric generation capacity achieved from increased efficiency or additions of new capacity at an existing hydroelectric project (Energy Policy Act of 2005, 42 U.S.C. 15852) (48 CFR 2.101(b)(2)) **[Added January 2007, Revised July 2011]**.
- *Renewable Energy Technology* – this phrase means (48 CFR 2.101) **[Added January 2008]**:
  1. Technologies that use renewable energy to provide light, heat, cooling, or mechanical or electrical energy for use in facilities or other activities; or
  2. The use of integrated whole-building designs that rely upon renewable energy resources, including passive solar design.
- *Replacement Ballast* - a ballast that (10 CFR 430.2) **[Added January 2006]**:
  1. Is designed for use to replace an existing fluorescent lamp ballast in a previously installed luminaire;
  2. Is marked “FOR REPLACEMENT USE ONLY”;
  3. Is shipped by the manufacturer in packages containing not more than 10 fluorescent lamp ballasts; and
  4. Has output leads that when fully extended are a total length that is less than the length of the lamp with which the ballast is intended to be operated.
- *Residues* - that which remains after a part is taken, separated, removed, or designated; a remnant; a remainder; and, for this purpose, is from agricultural materials, biological products, or forestry materials (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Restroom Divider/Partition* - a barrier used to provide privacy in public restroom facilities (40 CFR 247.3) **[Added July 1999]**.
- *Retread Tire* - a worn automobile, truck, or other motor vehicle tire whose tread has been replaced (40 CFR 247.3) **[Added July 1999]**.
- *Rock Wool Insulation* - insulation which is composed principally from fibers manufactured from slag or natural rock, with or without binders (40 CFR 247.3) **[Added July 1999]**.
- *Roof Coatings* - coatings formulated for use in commercial roof deck systems to provide a single-coat monolith coating system (7 CFR 3201.11(a)) **[Added July 2008, Citation Revised October 2011]**.
- *Scrap* - personal property that has no value except its basic metallic, mineral, or organic content (48 CFR 2.101) **[Added January 2008]**.
- *Secretary* - the Secretary of the United States Department of Agriculture (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Shaving Products* - products designed for every step of the shaving process, including shaving creams, gels, soaps, lotions, and aftershave balms (7 CFR 3201.95) **[Added October 2012]**.
- *Shower Divider/Partition* - a water-proof barrier used to provide privacy in public shower facilities (40 CFR 247.3) **[Added July 1999]**.
- *Signage* - (including sign posts and supports) is used for identification and directional purposes for public roads and highways, and inside and outside office buildings, museums, parks, and other public places (40 CFR 247.3) **[Added April 2000]**.
- *Slide Way Lubricants* - products used to provide lubrication and eliminate stick-slip and table chatter by reducing friction between mating surfaces, or slides, found in machine tools (7 CFR 3201.73) **[Added October 2011]**.

- *Small and Emerging Private Business Enterprise* - any private business which will employ 50 or fewer new employees and has less than \$1 million in projected annual gross revenues (7 CFR 3201.2) [**Added April 2005, Citation Revised October 2011**].
- *Small Quantity Generator (SQG)* - a generator that generates less than 1000 kg [approx. 2205 lb] of hazardous waste in a calendar month. [NOTE: As commonly used, an SQG generates more than 100 kg [approx. 220 lb] and  $\leq$  1 kg of acute waste in a calendar month. If less than 100 kg [approx. 220 lb] and  $\leq$  1 kg of acute waste is generated in a calendar month, the generator is considered a Conditionally exempt Small Quantity Generator (CESQG)] (40 CFR 260.10) [**Added April 2003**].
- *Soaker Hose* - a perforated flexible tubing that is used to deliver gentle irrigation to plants (40 CFR 247.3) [**Added July 1999**].
- *Solid Waste Military Munitions* - a military munition is not a solid waste when (40 CFR 266.202):
  1. used for its intended purpose, including:
    - a. use in training military personnel or explosives and munitions emergency response specialists (including training in proper destruction of unused propellant or other munitions)
    - b. use in research, development, testing, and evaluation of military munitions, weapons, or weapon systems
    - c. recovery collection, and on range destruction of unexploded ordnance and munitions fragments during range clearance activities at active or inactive ranges. However, “use for intended purposes” does not include the on-range disposal or burial of unexploded ordnance and contaminants when the burial is not a result of product use.
  2. an unused munition, or component thereof, is being repaired, reused, recycled, reclaimed, disassembled, reconfigured, or otherwise subjected to materials recovery activities, unless such activities involve use constituting disposal or burning for energy recovery.

An unused military munition is a solid waste when any of the following occurs:

1. the munition is abandoned by being disposed of, burned, detonated (except during intended use), incinerated, or treated prior to disposal
2. the munition is removed from storage in a military magazine or other storage area for the purpose of being disposed of, burned, or incinerated, or treated prior to disposal; or
3. the munition is deteriorated or damaged (e.g., the integrity of the munition is compromised by cracks, leaks, or other damage) to the point that it cannot be put into serviceable condition, and cannot reasonably be recycled or used for other purposes
4. the munition has been declared a solid waste by an authorized military official.

A used or fired military munition is a solid waste:

1. when transported off range or from the site of use, where the site of use is not a range, for the purpose of storage, reclamation, treatment, disposal, or treatment prior to disposal
2. if recovered, collected, and then disposed of by burial, or landfilling either on or off a range.

See Appendix 6-3 for additional interpretive information as to when a military munitions is a solid waste, including as it is used on ranges [**Added April 2003**].

- *Sorbents* - materials formulated for use in the cleanup and bioremediation of oil and chemical spills, the disposal of liquid materials, or the prevention of leakage or leaching in maintenance applications, shop floors, and fuel storage areas (7 CFR 3201.23(a)) [**Added July 2008, Citation Revised October 2011**].
- *Sorbents (i.e., absorbents and adsorbents)* - materials used to retain liquids and gases in a diverse number of environmental, industrial, agricultural, medical, and scientific applications. Absorbents incorporate a substance while adsorbents gather substances on their surfaces (40 CFR 247.3) [**Added April 2000**].

- *Specialty Precision Cleaners and Solvents* - cleaners and solvents used in specialty applications. These materials may be used in neat solution, diluted with water, or in hand wiping applications (7 CFR 3201.96) **[Added October 2012]**.
- *Specification* - a description of the technical requirements for a material, product, or service that includes the criteria for determining whether these requirements are met. In general, specifications are in the form of written commercial designations, industry standards, and other descriptive references (40 CFR 247.3) **[Added July 1999]**.
- *Spray-in-place Insulation* - insulation material that is sprayed onto a surface or into cavities and includes cellulose fiber spray-on as well as plastic rigid foam products (40 CFR 247.3) **[Added July 1999]**.
- *Spray-in-place Foam* - rigid cellular polyurethane or polyisocyanurate foam produced by catalyzed chemical reactions that hardens at the site of the work. The term includes spray-applied and injected applications (40 CFR 247.3) **[Added July 1999]**.
- *Stationary Equipment Hydraulic Fluids* - fluids formulated for use in stationary hydraulic equipment systems that have various mechanical parts, such as cylinders, pumps, valves, pistons, and gears, that are used for the transmission of power (and also for lubrication and/or wear, rust, and oxidation protection)(7 CFR 3201.28) **[Added July 2008, Citation Revised October 2011]**.
- *Steering Committee* - the Steering Committee on Strengthening Federal Environmental, Energy, and Transportation Management established under subsection 4(b) of this EO (EO 13423, Section 9, paragraph j) **[Added January 2007]**.
- *Structural Fiberboard* - a fibrous-felted, homogenous panel made from lignocellulosic fibers (usually wood, cane, or paper) and having a density of less than 31 lb/ft<sup>3</sup> but more than 10 lb/ft<sup>3</sup>. It is characterized by an integral bond which is produced by interfelting of the fibers, but which has not been consolidated under heat or pressure as a separate stage of manufacture (40 CFR 247.3) **[Added July 1999]**.
- *Sun Care Products* - products including sunscreens, sun blocks, and suntan lotions that are topical products that absorb or reflect the sun's ultraviolet radiation to protect the skin (7 CFR 3201.97) **[Added October 2012]**.
- *Sustainable* - to create and maintain conditions, under which humans and nature can exist in productive harmony, that permit fulfilling the social, economic, and other requirements of present and future generations of Americans (EO 13423, Section 9, paragraph k) **[Added January 2007]**.
- *Sustainable Acquisition* - acquiring goods and services in order to create and maintain conditions (48 CFR 2.101(b)(2)) **[Added July 2011]**:
  1. Under which humans and nature can exist in productive harmony; and
  2. That permit fulfilling the social, economic, and other requirements of present and future generations.
- *Sustainably Managed Forests* - refers to the practice of a land stewardship ethic that integrates the reforestation, management, growing, nurturing, and harvesting of trees for useful products while conserving soil and improving air and water quality, wildlife, fish habitat, and aesthetics (7 CFR 3201.2) **[Added April 2005, Citation Revised October 2011]**.
- *Thermal Shipping Containers* – these include (7 CFR 3201.74) **[Added October 2011]**:
  1. Insulated containers designed for shipping temperature-sensitive materials.
  2. Thermal shipping containers for which Federal preferred procurement applies are:
    - a. Durable thermal shipping container. These are thermal shipping containers that are designed to be reused over an extended period of time.

- b. Non-durable thermal shipping containers. These are thermal shipping containers that are designed to be used once.
- *Tire* - the following types of tires: Passenger car tires, light- and heavy-duty truck tires, high-speed industrial tires, bus tires, and special service tires (including military, agricultural, off-the-road, and slow-speed industrial) (40 CFR 247.3) **[Added July 1999]**.
- *Topical Pain Relief Products* - products that can be balms, creams and other topical treatments used for the relief of muscle, joint, headache, and nerve pain, as well as sprains, bruises, swelling, and other aches (7 CFR 3201.59) **[Added January 2011, Citation Revised October 2011]**.
- *Torchiere* - a portable electric lamp with a reflector bowl that directs light upward to give indirect illumination (10 CFR 430.2) **[Added January 2006]**.
- *Toxic Chemical* - as used in 48 CFR 23, means a chemical or chemical category listed in 40 CFR 372.65 (48 CFR 23.001) **[Added January 2008]**.
- *Toxic Chemical Agent* - a substance intended for military use with lethal or incapacitating effects on personnel through its chemical properties. Excluded from toxic chemical agents for purposes of this document are riot control agents, chemical herbicides, smoke- and flame-producing items, and individual dissociated components of toxic chemical agent munitions (DoD 6055.9-STD, Appendix 1, para AP1.241) **[Added April 2009]**.
- *Treatment* - any method, technique, or process, including neutralization, designed to change the physical, chemical, or biological character or composition of any hazardous waste to neutralize the waste, recover energy or material resources from the waste, or render the waste nonhazardous or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume (40 CFR 260.10) **[Added April 2003]**.
- *Turbine Drip Oils* - products that are lubricants for use in drip lubrication systems for water well line shaft bearings, water turbine bearings for irrigation pumps, and other turbine bearing applications (7 CFR 3201.60) **[Added January 2011, Citation Revised October 2011]**.
- *Unexploded Ordnance* - [NOTE: This definition only applies to requirements based on DoD 6055.9-STD.] explosive ordnance that has been primed, fused, armed, or otherwise prepared for action, and that has been fired, dropped, launched, projected, or placed in such a manner as to constitute a hazard to operations, installations, personnel, or material and remains unexploded either by malfunction or design or for any other cause (DoD 6055.9-STD, Appendix 1, para AP1.1.1.95.) **[Added April 2003]**.
- *Unexploded Ordnance (UXO)* – [NOTE: This definition only applies to requirements based on 40 CFR 266.] military munitions that have been primed, fused, armed, or otherwise prepared for action, and have been fired, dropped, launched, projected, or placed in a such a manner as to constitute a hazard to operations, installation, personnel, or material and remain unexploded either by malfunction, design, or any other cause (40 CFR 266.201) **[Added April 2003]**.
- *United States* - when used in a geographical sense, means the fifty states, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the United States Virgin Islands, and the Northern Mariana Islands, and associated territorial waters and airspace (EO 13423, Section 9, paragraph 1) **[Added January 2007]**.
- *Used In A Manner Constituting Disposal* – when solid wastes is (40 CFR 261.2(d)(2)(i)) **[Added April 2003]**:
  1. applied to or placed on the land in a manner that constitutes disposal; or
  2. used to produce products that are applied to or placed on the land or are otherwise contained in products that are applied to or placed on the land (in which cases the product itself remains a solid waste).

- *Utility Energy Service Contract (UESC)* - a contract between a Federal agency and a local utility providing energy, water, or sewage services, as well as provision of technical services and/or upfront project financing for energy efficiency, water conservation, and renewable energy investments, allowing Federal agencies to pay for the services over time, either on their utility bill, or through a separate agreement (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
- *Waste Explosives* - waste that has the potential to detonate and bulk military propellants that cannot be safely disposed of through other modes of treatment (40 CFR 265.382) [**Added April 2003**].
- *Waste Military Munition* - military munitions are waste when they are solid or hazardous waste under the regulations (42 USC 9601, et seq., reference (ff)) implementing RCRA Subpart EE of 40 CFR 264 or defined as a waste under a DoD Component's written procedures). Waste military munitions are defined in 40 CFR 266.202. (NOTE: Decisions about whether specific munitions are or are not waste should be made with reference to 40 CFR 260.10 and 266.200 through 266.206.) (DoD 6055.9-STD, Appendix 1, para AP1.1.1.97.) [**Added April 2003**].

An unused military munition is a solid waste when any of the following occurs:

1. The munition is abandoned by being disposed of, burned, detonated (except during intended use), incinerated, or treated before disposal;
2. The munition is removed from storage in a military magazine or other storage area for the purpose of being disposed of, burned, or incinerated, or treated prior to disposal;
3. The munition is deteriorated or damaged (e.g., the integrity of the munition is compromised by cracks, leaks, or other damage) to the point that it cannot be put into serviceable condition and cannot reasonably be recycled or used for other purposes; or,
4. An authorized military official has declared the munition a solid waste. (NOTE: Declaration by an "authorized official" that munitions are solid waste has a very limited meaning and applicability. The only example is a declaration by the Army in 1984 that M55 rockets are waste. The USEPA expects that such a declaration would be in writing. A decision that munitions are unserviceable, or that they are to be transferred into a demilitarization account does not, by itself, constitute a decision that the munitions are solid waste.

A used or fired military munition is a solid waste, if as follows:

1. When transported off-range or from the site of use, where the site of use is not a range, for the purposes of storage, reclamation, treatment, disposal, or treatment before disposal; or
  2. If recovered, collected, and then disposed of by burial or landfilling either on or off a range.
  3. For RCRA, a used or fired military munition is a solid waste and, therefore, is potentially subject to RCRA corrective action authorities if the munition lands off-range and is not promptly rendered safe and/or retrieved. Any imminent and substantial threats associated with any remaining material must be addressed. If remedial action is not possible, the operator of the range must maintain a record of the event for as long as any threat remains. The record must include the type of munition and its location (to the extent the location is known).
- *Waste Prevention* - any change in the design, manufacturing, purchase, or use of materials or products, including packaging, to reduce their amount or toxicity before they are discarded. Waste prevention also refers to the reuse of products or materials (*Instructions for Implementing EO 13423*, Section XIII, Definitions) [**Added July 2007**].
  - *Waste Reduction* - preventing or decreasing the amount of waste being generated through waste prevention, recycling, or purchasing recycled and environmentally preferable products (48 CFR 2.101) [**Added January 2008**].
  - *Water Consumption Intensity* - water consumption per square foot of building space (48 CFR 2.101(b)(2)) [**Added July 2011**].

- *Wastewater Systems Coatings* - coatings that protect wastewater containment tanks, liners, roofing, flooring, joint caulking, manholes and related structures from corrosion. Protective coatings may cover the entire system or be used to fill cracks in systems (7 CFR 3201.98) **[Added October 2012]**.
- *Water Clarifying Agents* - products designed to clarify and improve the quality of water by reducing contaminants such as excess nitrites, nitrates, phosphates, ammonia, and built-up sludge from decaying waste and other organic matter (7 CFR 3201.99) **[Added October 2012]**.
- *Water Tank Coatings* - coatings formulated for use in potable water storage systems (7 CFR 3201.12(a)) **[Added July 2008, Citation Revised October 2011]**.
- *Wood and Concrete Sealers* – this includes (7 CFR 3201.42) **[Added July 2008, Citation Revised October 2011]**:
  1. Products that are penetrating liquids formulated to protect wood and/or concrete, including masonry and fiber cement siding, from damage caused by insects, moisture, and decaying fungi and to make surfaces water resistant.
  2. Wood and concrete sealers for which preferred procurement applies are:
    - a. Penetrating liquids. Wood and concrete sealers that are formulated to penetrate the outer surface of the substrate.
    - b. Membrane concrete sealers. Concrete sealers that are formulated to form a protective layer on the surface of the substrate.
- *Wood and Concrete Stains* - products that are designed to be applied as a finish for concrete and wood surfaces and that contain dyes or pigments to change the color without concealing the grain pattern or surface texture (7 CFR 3201.87(a)) **[Added April 2012]**.

#### **F. Records To Review**

- EISs
- EAs
- FONSI
- Pollution Prevention Plans
- MOAs
- Administrative Records
- PAs
- REC
- ROD
- NOI
- CXs
- Environmental agreements
- Maps of CERCLA sites
- Federal Agency property transfer contracts
- Groundwater data for monitoring wells
- Manifests for shipments of WMM to off-site RCRA-permitted TSDFs
- Requests made by the installation to the DDA for determinations of status of munitions,
- DDA declarations of waste (i.e. declaring something to be subject to WMM, including the date each declaration is made)
- Instructions issued by the DDA regarding temporary or interim management of munitions pending decisions on final disposition
- Notices of Ammunition Reclassification (NARs)
- Reports of emergency response activities to address imminent threats
- Emergency permits for on-site treatment and/or disposal (including all documentation required by such permits)

- Documentation of inspections conducted by munitions custodians
- WMM characterization data (including generator knowledge as well as analytical results – e.g. TCLP results)
- Contracts with non-DoD entities on the installation for production, manufacture, or modification of military munitions
- Notifications for alternative use or training requirement associated with munitions that had been previously designated WMM
- Emergency preparedness, contingency, and security plans for facilities that store MM, including conditionally exempt WMM
- EPCRA reports regarding military munitions
- Personnel training records
- Annual inventories of WMM stored in conditionally exempt storage facilities
- Quarterly inspections of conditionally exempt WMM storage facilities
- Transportation-related documentation

#### **G. Physical Features To Inspect**

- Sites that are the subject of EISs or EAs
- Training Sites
- IRP Sites
- Disposal sites
- ASUs

## H. Guidance for Other Environmental Issues Checklist Users

	<b>REFER TO CHECKLIST ITEMS:</b>
NEPA	
All Facilities	O1.1.1.US
Missing, Risk Management and Positive Checklist Items	O1.2.1.US through O1.2.3.US
Documentation	O1.5.1.US through O1.5.15.US
Environmental Noise	
All Facilities	O2.1.1.US
Missing, Risk Management, and Positive Checklist Items	O2.2.1.US through O2.2.3.US
CERCLA Cleanup Sites	
All Facilities	O3.1.1.US through O3.1.8.US
Missing, Risk Management, and Positive Checklist Items	O3.2.1.US through O3.2.3.US
Administrative Record	
Community Relations	O3.5.1.US and O3.5.2.US
All Appropriate Inquiries	O3.10.1.US through O3.10.5.US
NPL Sites	O3.12.1.US. through O3.12.12.US. O3.15.1.US. and O3.15.2.US.
Pollution Prevention	
All Facilities	O4.1.1.US
Missing, Risk Management, and Positive Checklist Items	O4.2.1.US through O4.2.3.US
Plans and Programs	O4.5.1.US and O4.5.4.US
Procurement	O4.6.1.US through O4.6.22.US
ODCs	O4.9.1.US
Program Management

<b>WASTE MUNITIONS</b>  <b>O6.30</b> <b>Personnel Training</b>  <b>O6.30.1.US.</b> All who work directly with chemical agents and ammunition are required to receive enough training to enable them to work safely and to understand the relative significance of agent exposures (DoD 6055-9 STD, para C11.7.2) [Added April 2003, Revised April 2009].	<p>Verify that anyone who works with toxic chemical munitions and agents (e.g., agent workers, firefighters, medical, and security personnel) receives training to enable them to work safely and to understand the significance of toxic chemical agent exposures.</p> <p>Verify that the training includes, but is not limited to, information on sources of exposure, adverse health effects, practices and controls used to limit exposures, environmental issues, medical monitoring procedures, and employee responsibilities in health protection programs.</p>

<p align="center"><b>COMPLIANCE CATEGORY:</b>  <b>OTHER ENVIRONMENTAL ISSUES</b>  <b>U.S. TEAM Guide</b></p>	
<p align="center"><b>REGULATORY REQUIREMENTS:</b></p>	<p align="center"><b>REVIEWER CHECKS:</b>  <b>December 2018</b></p>
<p><b>WASTE MUNITIONS</b></p> <p><b>O6.50.</b>  <b>Conditionally Exempt Waste Munitions Storage</b></p> <p><b>O6.50.1.US.</b> When storing non-chemical waste munitions as Conditionally Exempt (CE), certain parameters must be met (40 CFR 266.205(a), 266.205(c), and 266.205(e)) <b>[Revised June 1998; Revised April 2003].</b></p>	<p>(NOTE: Nonchemical waste munitions being stored according to these requirements are commonly referred to as Conditionally Exempt (CE) Waste Military Munitions in storage. This is NOT the same classification as a hazardous waste conditionally exempt small quantity generator (CESQG).)</p> <p>(NOTE: According to the Military Munitions Rule preamble, page 6636 of the 12 February 1997 Federal Register (FR), the conditional exemption applies only to waste military nonchemical munitions that are subject to the jurisdiction of Department of Defense Explosives Safety Board (DDESB) (which could include military-owned munitions at contractor-operated facilities), including products that DoD determines are solid wastes (see definition for <i>Solid Waste Military Munitions</i>) and unexploded ordnance (UXO) recovered from ranges and moved into storage prior to treatment or disposal. USEPA is not extending the conditional exemption option to owners or operators of storage facilities storing non-military waste munitions and explosives, nor to persons storing “military munitions” who are not subject to the jurisdiction of the DDESB [e.g., DOE or other non-DoD Federal agencies or contractor facilities not directly or by contract subject to DDESB controls].)</p> <p>(NOTE: According to the Military Munitions Rule preamble, page 6638 of the 12 February 1997 Federal Register [FR], USEPA is not extending the conditional exemption to waste chemical agents and munitions.)</p> <p>Verify that, when waste military munitions in storage exhibit a hazardous waste characteristic or are listed as hazardous waste, they are managed as hazardous waste (i.e., subject to the requirements in 40 CFR 260 through 40 CFR 279), unless all of the following conditions are met:</p> <ul style="list-style-type: none"> <li>– the waste military munitions are not chemical agents or chemical munitions</li> <li>– the waste military munitions are subject to the jurisdiction of the DDESB</li> <li>– the waste military munitions are stored in accordance with DDESB storage standards applicable to waste military munitions</li> <li>– within 90 days of 12 August 1997, or within 90 days of when a storage unit is first used to store waste military munitions, whichever is later, the USEPA Director is notified of the location of any waste storage unit used to store waste military munitions for which the conditional exemption is claimed</li> <li>– inventory the waste military munitions annually</li> <li>– inspect the waste military munitions at least quarterly for compliance with the requirements for maintaining conditional exemption status</li> <li>– maintain records of findings of inventories and inspections for at least 3 yr</li> </ul>

<b>COMPLIANCE CATEGORY:</b> <b>OTHER ENVIRONMENTAL ISSUES</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS:</b> <b>December 2018</b>
	<p>– limit access to the stored waste military munitions to appropriately trained and authorized personnel.</p> <p>(NOTE: This exemption applies only to storage requirements, not transportation, treatment, or disposal.)</p> <p>Verify that oral notice is provided to the USEPA Director within 24 h from the time the owner or operator becomes aware of any loss or theft of the waste military munitions or of any failure to meet the requirements to maintain conditional exemption status.</p> <p>Verify that written submission of the theft circumstances is provided within 5 days from the time of theft awareness or any failure to meet the requirements to maintain conditional exemption status.</p> <p>(NOTE: If a facility loses its conditional exemption, an application may be filed with the USEPA Director for reinstatement. If the Director does not take action on the reinstatement application within 60 days after receipt of the application, then reinstatement shall be deemed granted, retroactive to the date of the application. However, the Director may terminate a conditional exemption reinstated by default in the preceding sentence if he/she finds that reinstatement is inappropriate based on factors such as the owner's or operator's failure to provide a satisfactory explanation of the circumstances of the violation, or failure to demonstrate that the violations are not likely to recur.)</p> <p>(NOTE: According to the Military Munitions Rule preamble, page 6637 of the 12 February 1997 FR, if a military facility claims the conditional exemption, but fails to store waste military munitions in compliance with the provisions of that exemption, that facility's mismanaged waste, and any unit in which that waste was mismanaged, would no longer be exempt. Accordingly, the facility would be subject to additional regulatory requirements [e.g., a RCRA storage permit] and could be subject to enforcement action [or citizen suit] for violations of hazardous waste requirements.)</p> <p>(NOTE: According to the Military Munitions Rule preamble, page 6638 of the 12 February 1997 FR, USEPA understands that DoD officials have authority, in some circumstances, to grant waivers or exemptions from DDESB standards for military munitions, where necessitated by strategic or other compelling reasons. However, USEPA believes that a waiver for waste military munitions could be inconsistent with the basis for the conditional exemption. Therefore, a waiver from otherwise applicable DDESB storage standards will terminate the eligibility of affected waste munitions for the conditional exemption, subject to reinstatement by USEPA. The existence of a waiver will not preclude the owner or operator from storing waste military munitions in compliance with the requirements of 40 CFR 264 or 265, subpart EE.)</p>

<b>COMPLIANCE CATEGORY: OTHER ENVIRONMENTAL ISSUES U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
<p><b>WASTE MUNITIONS</b></p> <p><b>O6.100. Transportation</b></p> <p><b>O6.100.1.US.</b> When transporting non-chemical waste munitions as Conditionally Exempt (CE), certain parameters must be met (40 CFR 266.203) [<b>Added April 2003</b>].</p>	<p>Verify that transported waste military munitions that exhibit a hazardous waste characteristic or are listed as hazardous waste under 40 CFR 261, are listed or identified as a hazardous waste unless all the following conditions are met:</p> <ul style="list-style-type: none"> <li>– the waste military munitions are not chemical agents or chemical munitions</li> <li>– the waste military munitions are transported in accordance with the DoD shipping controls applicable to the transport of military munitions</li> <li>– the waste military munitions are transported from a military owned or operated installation to a military owned or operated treatment, storage, or disposal facility (TSDF).</li> </ul> <p>(NOTE: According to the Military Munitions Rule preamble, page 6634 of the 12 February 1997 FR, this provision applies to waste munitions that are not chemical munitions or chemical agents and that are transported by commercial carriers who are under contract with the military and have signed a contractual compliance agreement with the Military Traffic Management Command, and who operate under the DoD system of shipping controls for military munitions. USEPA is not extending the conditional exemption in 40 CFR 266.203 to persons transporting “military munitions” who are not required to comply with the DoD military munitions shipping controls (e.g., DOE or other non-DoD Federal agencies or their contractors). This provision also does not apply to the transport of waste military munitions to a commercial TSDF. Finally, this provision does not apply to waste munitions shipped by the military but not under DoD's shipping controls designed for its munitions inventory.)</p> <p>Verify that the transporter of the waste provides oral notice to the Director within 24 h from the time the transporter becomes aware of any loss or theft of the waste military munitions, or that the waste does not meet the CE conditions and may endanger health or the environment.</p> <p>Verify that a written submission describing the circumstances is provided within 5 days from the time the transporter becomes aware of any loss or theft of the waste military munitions or any failure to meet the CE exemptions from being transported as a hazardous waste.</p> <p>Verify that, if any waste military munitions exempted from being transported as hazardous waste are not received by the receiving facility within 45 days of the day the waste was shipped, the owner or operator of the receiving facility reports this nonreceipt to the Director within 5 days.</p>

<b>COMPLIANCE CATEGORY: OTHER ENVIRONMENTAL ISSUES U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS:</b>	<b>REVIEWER CHECKS: December 2018</b>
	<p>(NOTE: The exemption from regulation as hazardous waste applies only to the transportation of nonchemical waste military munitions. It does not affect the regulatory status of waste military munitions as hazardous wastes with regard to storage, treatment, or disposal.)</p> <p>(NOTE: If any waste military munition loses its conditional exemption, an application may be filed with the USEPA Director for reinstatement. If the Director does not take action on the reinstatement application within 60 days after receipt of the application, then reinstatement shall be deemed granted, retroactive to the date of the application. However, the Director may terminate a conditional exemption reinstated by default in the preceding sentence if he/she finds that reinstatement is inappropriate based on factors such as the owner's or operator's failure to provide a satisfactory explanation of the circumstances of the violation, or failure to demonstrate that the violations are not likely to recur.)</p> <p>(NOTE: The DoD shipping controls applicable to the transport of military munitions are Government Bill of Lading (GBL) (GSA Standard Form 1109), requisition tracking form DD Form 1348, the Signature and Talley Record (DD Form 1907), Special Instructions for Motor Vehicle Drivers (DD Form 836), and the Motor Vehicle Inspection Report (DD Form 626) in effect on 8 November 1995. Any amendments to the DoD shipping controls shall become effective on the date the DoD publishes notice in the FR that the shipping controls have been amended.)</p> <p>(NOTE: According to the Military Munitions Rule preamble, page 6635 of the 12 February 1997 FR, the USEPA has decided to provide the manifest exemption to DoD, DOE, the Coast Guard, the National Guard, commercial transporters and other parties under contract to or acting as an agent for DoD, who are obligated to operate under the DoD shipping requirements. The USEPA has not provided a similar exemption to commercial or other Federal transporters who are not subject to the DoD transportation standards, even if they voluntarily follow the DoD standards.)</p> <p>(NOTE: According to the Military Munitions Rule preamble, page 6635 of the 12 February 1997 FR, if a transporter of waste military munitions claims the conditional exemption, but fails to transport waste military munitions in compliance with this checklist item, the noncompliant waste would no longer be exempt, so the transporter would be subject to additional regulatory requirements and could be subject to enforcement action (or citizen suit) for violations of hazardous waste requirements. For example, where waste military munitions lose their conditional exemption due to a violation of a condition, the transporter of the waste could face penalties for transportation of hazardous waste without a manifest.)</p>

## Appendix 6-0

### Complementary Elements of EMS and NEPA

*(Aligning National Environmental Policy Act Processes with Environmental Management Systems: A Guide for NEPA and EMS Practitioners)*  
*[Added July 2007]*

EMS Element	NEPA	EMS and NEPA Complementary Examples
<p><b>Policy</b></p> <p>The organization states its commitment to environmental compliance, environmental protection, and continual improvement within the scope of the organization's activities and products and services covered by its EMS.</p>	<p>Several provisions in CEQ Regulations address the national environmental policy Congress declared for Federal agencies in Section 101 of the <i>National Environmental Policy Act</i>. The primary provision is at 40 CFR 1500.2 (Policy). Other relevant provisions include 40 CFR 1500.1 (Purpose), 40 CFR 1505.1 (Agency decisionmaking procedures), and 40 CFR 1507.2 (Agency capability to comply).</p>	<p>The EMS Policy Statement defines the scope of the agency's organization and activities covered by the EMS; this is likely to include activities for which NEPA analyses are required or have been prepared.</p> <p>In Section 101 of NEPA, Congress provided a common environmental policy statement for all Federal agencies. This policy statement is a general statement of the Federal government's commitment to environmental protection and interagency coordination in the implementation of that policy. The policy goals of Section 101 can serve as a basis for commitments to prevent pollution and comply with other environmental laws.</p>
<p><b>Environmental Aspects</b></p> <p>An EMS includes procedure(s) to identify, and keep up-to-date environmental aspects and impacts of activities and products and services it can control and influence, including ongoing and new projects. Significant aspects must be taken into account in establishing, implementing, and maintaining the EMS.</p>	<p>Under NEPA, an agency evaluates a new project at the proposal stage to identify how it or reasonable alternatives will interact with the environment, and what the related impacts will be. Impacts are characterized as to significance based on the setting of the proposed action and the intensity of its impacts.</p> <p>NEPA analyses and documentation are described in the CEQ NEPA Regulations at 40 CFR 1500-1508. The relevant provisions include</p> <p>40 CFR 1501.2 (Apply NEPA early in the process);</p> <p>40 CFR 1501.3 (When to prepare an environmental assessment);</p>	<p>The EMS aspects can inform the development and preparation of NEPA analyses and documentation. Aspects can inform an agency's identification of the types of activities that normally merit an EA or EIS which should be included in its agency NEPA procedures developed in accordance with 40 CFR 1507.3(b).</p> <p>An EMS can include procedure(s) that consider the identification of new impacts or the significance of impacts in existing NEPA documents<sup>14</sup> when establishing associated significant aspects. The completed NEPA process can provide information to update the EMS aspects. Aspects addressed in the EMS should be reviewed and updated as new NEPA reviews are</p>

EMS Element	NEPA	EMS and NEPA Complementary Examples
	<p>40 CFR 1501.4 (Whether to prepare an environmental impact statement);</p> <p>1501.7 (Scoping);</p> <p>1502.15 (Affected environment);</p> <p>1502.16 (Environmental Consequences);</p> <p>and</p> <p>1508.27 (Significantly).</p>	<p>completed or as relevant associated monitoring data become available.</p> <p>Thresholds of impact significance considered in the preparation of an EA or EIS may be considered as significance criteria for the EMS aspects procedure.<sup>15</sup></p>
<p><b>Legal and Other Requirements</b></p> <p>An EMS includes procedure(s) to identify and have access to legal and other requirements related to an organization's environmental aspects.</p>	<p>The requirements for complying with the National Environmental Policy Act are found throughout the CEQ NEPA regulations and agency NEPA procedures. Project- and program related NEPA analysis and document preparation processes are conducted in accordance with these procedures.</p> <p>Provisions that address the legal status of the NEPA requirements are at 40 CFR 1500.6 (Agency authority) and 40 CFR 1506.5 (Agency responsibility). Agency compliance requirements are set out in 40 CFR 1507.</p> <p>Decisions made <i>after</i> considering the environmental consequences may establish new requirements. Relevant provisions in the CEQ NEPA Regulations include 40 CFR 1505.2 (Record of decision in cases requiring EISs) and 40 CFR 1505.3 (Implementing the decision).</p>	<p>NEPA imposes requirements which must be identified as part of the EMS "legal and other requirements" where applicable. The requirements could include the procedures to meet NEPA requirements that are in place (e.g., Council on Environmental Quality and agency NEPA regulations and procedures).</p> <p>Regulatory requirements applicable to alternatives should be identified in the NEPA analysis (e.g., permitting, endangered species, etc.).</p> <p>Requirements applicable to the chosen alternative can then be integrated into the EMS. Mitigation and monitoring commitments made in a ROD or FONSI can be incorporated into the EMS and carried through the system.</p>
<p><b>Objectives, Targets, and Environmental Management Programs (EMPs)</b></p> <p>Objectives and targets are established to address significant aspects and legal requirements, unless they can be fully addressed with operational controls, and lead to continual improvement.</p>	<p>Numerous provisions of CEQ's NEPA regulations require activities and performance that can be used to develop objectives, targets and EMPs.</p>	<p>EMS objectives may include complying with requirements established under NEPA. For example, 40 CFR 1501.8 (Time limits) provides for setting dates for NEPA process milestones (i.e., targets) as well as for completing the process (i.e., objectives).</p> <p>The NEPA process can provide information to help establish</p>

EMS Element	NEPA	EMS and NEPA Complementary Examples
<p>EMPs identify the means and responsibilities for achieving objectives and targets. EMPs are developed for each objective, describing specific tasks, milestones, responsible parties, and measurement parameters.</p>		<p>relevant objectives, and the performance measures needed to assess attainment of objectives and targets.</p> <p>Mitigation measures identified in a ROD or FONSI can be incorporated in EMS objectives. An EMS may use the results of NEPA review and associated monitoring data, where applicable, to update its objectives and targets.</p>
<p><b>Resources, Roles, Responsibility and Authority</b></p> <p>Management must ensure resources are available to establish, implement, maintain and improve the EMS. Roles, responsibilities and authorities must be defined, documented and communicated.</p>	<p>The overarching resources, roles, responsibility and authority for complying with NEPA are addressed in the CEQ NEPA regulations at 40 CFR 1506.5 (Agency responsibility) and 40 CFR 1507 (Agency Compliance). Several other relevant provisions include 40 CFR 1501.5 (Lead agencies) and 40 CFR 1501.6 (Cooperating agencies).</p> <p>Decisions on how to proceed are made at the conclusion of the NEPA process, and are identified in the EA/FONSI and EIS/ROD.</p>	<p>The EMS can identify roles and responsibilities and the resources necessary to carry out NEPA review and decision-making requirements.</p> <p>The EMS can define roles and responsibilities for carrying out the chosen alternative, as well as mitigation measures identified in a ROD (EIS) or FONSI (EA).</p> <p>Identifying the resources and responsibilities for EMS monitoring activities may assist the NEPA process when monitoring is necessary to allow, for example, an adaptive management approach. A much stronger case can be made for using adaptive management when the responsibilities and resources for carrying it out are clearly identified in the EMS.</p>
<p><b>Competence, Training and Awareness</b></p> <p>Person(s) performing tasks for the organization or on its behalf that have the potential for significant impacts must be competent as a result of education, training, or experience.</p>	<p>Staff that contributes to, or uses information from, the NEPA process should be knowledgeable about the CEQ NEPA regulations in addition to agency NEPA procedures (see 40 CFR 1507, Agency Compliance). In addition, individuals responsible for the management of agency programs and projects that may have a significant effect on the environment should be aware of specific aspects of the NEPA process, such as those set out in 40 CFR 1506.1 (Limitations on actions</p>	<p>Training that is relevant to the achievement of environmental policies, objectives, and targets should be provided to all person(s) within and working on behalf of the agency covered by the EMS.</p> <p>When NEPA is an integral part of the EMS or linked to the agency's environmental aspects, or when NEPA outcomes are linked to the objectives and targets, the EMS can facilitate the NEPA process by requiring appropriate staff be trained on NEPA and related</p>

EMS Element	NEPA	EMS and NEPA Complementary Examples
	during NEPA process) and 40 CFR 1506.10 (Timing of agency action).	environmental analysis requirements (e.g., how to conduct the process, and how to prepare and document the analysis).
<p><b>Communication</b></p> <p>Procedures are established in an EMS for communicating internally and documenting and responding to relevant external communications. An organization has discretion about communicating externally on significant environmental aspects; however, Federal agencies are in a special position to emphasize the importance of ongoing communication and cooperation with the public and interested parties.</p>	<p>One of NEPA's goals is to effectively communicate environmental information to decisionmakers and the public and to facilitate involvement in decisions which affect the quality of the human environment (40 CFR 1500.2).</p> <p>In addition to the mandate that agencies shall make diligent efforts to involve the public in implementing their NEPA procedures set forth in 40 CFR 1501.4(b) and 1506.6, the CEQ NEPA Regulations address specific stages of the NEPA process when communication with other agencies and the public are required such as 40 CFR 1501.7 (Scoping), 1502.19 (Circulation of the EIS) and 1502.25 (Environmental review and consultation requirements).</p>	<p>The EMS can be used as a platform for ongoing communication and cooperation with the public and interested parties. For example:</p> <ul style="list-style-type: none"> <li>• NEPA procedures for public comment and public involvement at the Scoping stage, and for the Draft and Final EIS, can be part of the EMS procedures for external communication; and</li> <li>• progress toward meeting ROD or FONSI requirements/ commitments may be shared with the public as part of the ongoing EMS communication procedures.</li> </ul> <p>In developing EMS objectives, the agency should consider the views of interested parties. Comments received during the NEPA review process may provide useful insight when developing objectives.</p>
<p><b>Documentation</b></p> <p>Documentation for the EMS must include documents and records necessary for planning, operation and control of processes related to significant environmental aspects.</p>	<p>The CEQ NEPA regulations primarily address the contents of the EA/FONSI in 40 CFR 1508.9 and 1508.13, and the contents of EIS/ROD in 40 CFR 1502.</p> <p>The CEQ NEPA regulations provide for efficient documentation in 40 CFR 1500.4.</p>	<p>NEPA documents may be essential for planning or controlling processes related to significant environmental aspects. In such a case, EMS documentation would include the NEPA documents.</p> <p>The EA/FONSI and EIS/ROD developed during the NEPA process should be reviewed for inclusion in the EMS documentation, particularly when they set forth agency commitments.</p>
<p><b>Control of Documents</b></p> <p>Documents required by the EMS must be controlled using procedures to, among other things, approve documents for adequacy</p>	<p>The process for finalizing EISs described in CEQ NEPA regulations at 40 CFR 1505.2 and 1502.9 are document control procedures that help ensure adequacy, and assist re-approval and updating NEPA documents.</p>	<p>For NEPA documents required by the EMS, there must be an established procedure for ensuring adequacy, and a process for updating and re-approval if necessary.</p>

EMS Element	NEPA	EMS and NEPA Complementary Examples
and update and reapprove as necessary.	Additional relevant provisions include 40 CFR 1502.9(c) (supplemental statements), 1502.20 (Tiering), and 1502.21 (Incorporation by reference).	
<p><b>Operational Control</b></p> <p>In an EMS, an “operational control” is a procedure associated with an operation that is an identified significant environmental aspect.</p> <p>Procedures are established to ensure operations related to significant aspects do not deviate from environmental policy or objectives and targets.</p> <p>Operational controls are process controls necessary for ensuring the system functions as intended.</p> <p>Procedures are required for any operation when their absence can lead to a deviation from EMS requirements.</p>	<p>Agency identification of actions that normally require an EA or EIS, or are categorically excluded, are the foundation for using the NEPA process as part of an environmental management program’s system of operational controls.</p> <p>The CEQ NEPA regulations describe procedures for conducting the NEPA process to review proposed operations—including, but certainly not limited to:</p> <p>Part 1501 NEPA and Agency Planning;</p> <p>Part 1502 Environmental Impact Statement; and</p> <p>Part 1505 NEPA and Agency Decisionmaking.</p> <p>The following sections of the regulations provide examples of elements of the NEPA process that can be operational controls: 1501.8 (Time limits); 40 CFR 1505.1 (Agency decisionmaking procedures); 40 CFR 1506.1 (Limitations on actions during NEPA process); 40 CFR 1506.2 (Elimination of duplication with State and local procedures); 40 CFR 1506.5 (Agency responsibility for: information to applicants; for applicant prepared EAs; for contractor prepared EISs); and 40 CFR 1506.10 (Timing of agency action).</p>	<p>Procedures to perform the NEPA process can be a key operational control.</p> <p>Specific activities and operations (including mitigation) described in a NEPA document can be incorporated into EMS operational procedures.</p> <p>The procedures can include steps to ensure information regarding aspects developed during preparation of an EA or EIS is reviewed for inclusion in the aspects inventory.</p>
<p><b>Emergency Preparedness and Response</b></p> <p>Procedures are required for identifying potential emergencies and accidents and for preventing</p>	<p>CEQ NEPA regulations at 40 CFR 1506.11 set out alternative arrangements that can be used for proposed actions that respond to an emergency and have the potential</p>	<p>EMS procedures developed for emergency planning should include provisions for using NEPA emergency procedures.</p> <p>Decisions regarding what action or</p>

EMS Element	NEPA	EMS and NEPA Complementary Examples
adverse environmental impacts from those emergencies and accidents.	<p>for significant environmental effects.</p> <p>Many NEPA analyses are done for contingency plans or emergency response plans and for actions with potential for accidents or other types of emergency situations.</p>	alternative to take could be used to inform emergency preparedness and response procedures for an EMS
<p><b>Monitoring and Measurement</b></p> <p>An EMS specifies procedures to monitor and measure key characteristics of its operations that can have significant environmental impacts. These include monitoring of performance, operational controls, and conformance with objectives and targets.</p>	<p>40 CFR 1505.2(c) of the CEQ NEPA regulations call for the adoption of a monitoring and enforcement program, where applicable, for mitigation measures identified in an EIS record of decision.</p> <p>Other relevant provisions of the CEQ NEPA regulations address:</p> <p>(1) When supplemental analyses should be prepared (40 CFR 1502.9(c));</p> <p>(2) How to deal with incomplete or unavailable information (40 CFR 1502.22); and</p> <p>(3) Methodology and scientific accuracy (40 CFR 1502.24).</p>	<p>Existing EMS monitoring data may inform analysis and support predictions of environmental impacts throughout the NEPA process.</p> <p>Performance metrics related to activities and mitigation measures identified in the EIS ROD or EA FONSI, may be part of the EMS evaluation process. This can ensure that activities associated with EMS objectives and targets or operational controls are occurring as planned, and the intended results are being achieved.</p> <p>When a monitoring and enforcement program is established through the NEPA process, it can be incorporated into EMS monitoring and measurement activities.</p> <p>An essential component of the adaptive management model (i.e., predict, mitigate, implement, monitor and adapt) is monitoring to assess whether predictions of environmental effects are correct, and that any mitigation implemented is functioning as intended.</p> <p>Monitoring activities implemented for an EMS may subsume or complement the monitoring needed to accomplish adaptive management in the NEPA process.</p>
<b>Evaluation of Compliance</b>	An agency's responsibilities to comply with NEPA requirements	When NEPA compliance is an applicable legal or other requirement within the EMS,

EMS Element	NEPA	EMS and NEPA Complementary Examples
<p>The EMS must include procedures to periodically evaluate compliance with applicable legal and other requirements</p>	<p>are specifically addressed in Part 1507.</p> <p>Other compliance responsibilities identified in the CEQ NEPA regulations include the responsibility to develop alternatives when there are unresolved conflicts concerning alternative uses of resources (40 CFR 1501.2) and the responsibility to implement mitigation that is committed as part of the decision (40 CFR 1505.3).</p>	<p>procedures developed for the EMS must address how the agency will evaluate compliance with NEPA. This can lend support to the agency's NEPA implementation efforts.</p> <p>The EMS would also evaluate compliance with other applicable environmental laws which can inform the NEPA process.</p>
<p><b>Nonconformity, Corrective and Preventive Action</b></p> <p>The EMS must include procedures for identifying and correcting nonconformities, mitigating their environmental impacts, and defining actions to avoid nonconformity occurrence. Procedures must also define requirements for reviewing the effectiveness of the corrective and preventive actions taken.</p> <p>Findings, conclusions, and recommendations reached as a result of monitoring and audits of the EMS are the basis for corrective and preventive actions and the systematic follow-up to ensure their effectiveness.</p>	<p>NEPA requirements are assessed as part of ongoing reviews. Nonconformance in conducting the NEPA process would be addressed by corrective and preventive actions.</p> <p>Relevant provisions of the CEQ NEPA regulations include sections 40 CFR 1502.9(c) (preparation of supplemental analyses), 40 CFR 1503.4 (responding to comments), 40 CFR 1506.1 (limitations that should be included in instructions to applicants), and 40 CFR 1507.3(a) (review NEPA policies and procedures).</p> <p>40 CFR 1505.3 of the CEQ NEPA regulations calls for agencies to ensure mitigation committed to in the "decision" is implemented by making the mitigation a condition of grants, permits or other approvals and funding actions. And cooperating and commenting agencies can request information on the progress of carrying out the mitigation, which can help to ensure the mitigation conforms to stakeholder expectations.</p>	<p>In cases where NEPA procedures are key to maintaining operational controls or meeting objectives and targets, and are not being followed, corrective action should be identified and taken.</p> <p>Changes in procedures as a result of corrective action must be documented.</p> <p>For agency actions reviewed under NEPA and also covered by an EMS, monitoring and adaptation associated with adaptive management may fall squarely within the purview of an EMS's preventive and corrective action program.</p> <p>The checking and corrective action elements of an EMS may also identify instances when environmental mitigation commitments in the EIS ROD or EA FONSI are not being implemented and nonconformance in implementing actions would be addressed by the corrective and preventive actions.</p>
<p><b>Control of Records</b></p> <p>An EMS includes procedures for maintaining records necessary to demonstrate conformance with the</p>	<p>Procedures for controlling NEPA documents that are also EMS records can be added to the agency NEPA procedures developed in accordance with the provisions in</p>	<p>To the extent that NEPA documents are EMS records, they should be maintained in accordance with EMS records management procedures.</p>

EMS Element	NEPA	EMS and NEPA Complementary Examples
EMS standard.	the CEQ NEPA regulations 40 CFR 1505.1 (Agency decisionmaking procedures), and 40 CFR 1507.3 (Agency procedures). They should include procedures for filing records (40 CFR 1506.9) and incorporation by reference (40 CFR 1502.21).	
<b>Internal Audits</b>  An EMS defines audit programs and processes to assess the EMS itself (e.g., assessing conformity to the EMS standard) at planned intervals. The results of audits must be presented to management.	There is no equivalent NEPA requirement.	Commitments for mitigation made pursuant to the NEPA process may be reviewed in an EMS audit when such commitments are linked to objectives and targets or operational controls in the EMS. In these cases, the EMS audit is another means for ensuring that agency commitments made under NEPA are appropriately implemented.  As part of the EMS audit, NEPA processes may be spot-checked and evaluated, and adjustments made to those processes if necessary.
<b>Management Review</b>  Senior management reviews the EMS at regularly scheduled intervals to ensure suitability and effectiveness. Reviews assess the need for change in EMS policy or objectives and targets.	Each agency must be capable of complying with the requirements set out in 40 CFR 1507.2.	Management review of the EMS is an opportunity to assess the effectiveness of the NEPA program, adjust procedures to take advantage of NEPA/EMS synergy, and enhance areas in which NEPA and EMS procedures are complementary.  NEPA procedures that are relevant to maintaining operational controls or meeting objectives and targets should be included in the management review.

## Appendix 6-1

### Recommended Recovered Materials Content Levels for CPG Products

(<http://www.epa.gov/epaoswer/non-hw/procure/products.htm>)

[Added July 2000]

This is a selection of the recommended recovered materials content levels for CPG products. This Appendix does not contain the recommendations for all CPG products. See the above website for more information on product procurement.

### Selected Non-Paper Office Products

#### USEPA's Recommended Recovered Materials Content Levels for Binders, Clipboards, File Folders, Clip Portfolios, and Presentation Folders <sup>1</sup>

Item	Material	Postconsumer Content (%)	Total Recovered Materials Content (%)
<b>Binders</b>	Plastic-covered	--	25-50
	Paper-covered	75-100	90-100
	Pressboard	20	50
	Solid plastic		
	<u>HDPE</u>	90	90
	<u>PE</u>	30-50	30-50
	<u>PET</u>	100	100
	Misc. plastics	80	80
Plastic clipboards	HDPE	90	90
	<u>PS</u>	50	50
	Misc. plastics	15	15-80
Plastic file folders	HDPE	90	90
Plastic clip portfolios	HDPE	90	90
Plastic presentation folders	HDPE	90	90

<sup>1</sup> USEPA's recommendations do not preclude a procuring agency from purchasing binders, clipboards, file folders, clip portfolios, or presentation folders made from another material. They simply require that procuring agencies, when purchasing these items made from the materials above, purchase them made from recovered materials when these items meet applicable specifications and performance requirements.

#### USEPA's Recommended Recovered Materials Content Levels for Plastic Trash Bags <sup>1</sup>

Product:	Material (%):	Postconsumer Content (%):
Plastic Trash Bags	Plastic	10-100

<sup>1</sup> USEPA's recommendation does not preclude procuring agencies from purchasing a trash bag manufactured using another material, such as paper. It merely recommends that procuring agencies, when purchasing plastic trash bags, purchase items made from recovered materials.

**USEPA's Recommended Recovered Materials Content Levels for Office Recycling Containers and Office Waste Receptacles <sup>1</sup>**

<b>Materials</b>	<b><u>Postconsumer</u> Content (%):</b>	<b>Total <u>Recovered</u> Materials Content (%):</b>
Plastic	20 - 100	--
Steel <sup>2</sup>	16	25-30
Paper		
-Corrugated	25-50	25-50
-Solid Fiber Boxes	40	--
-Industrial Paperboard	40-80	100

<sup>1</sup> USEPA's recommendations do not preclude a procuring agency from purchasing containers or receptacles manufactured using another material such as wood. They simply require that procuring agencies, when purchasing office recycling containers or office waste receptacles manufactured from plastic, paper, or steel, purchase such containers made with recovered materials when they meet applicable specifications and performance requirements.

<sup>2</sup> The recommended recovered materials content levels for steel in this table reflect the fact that the designated items are made from steel manufactured in a Basic Oxygen Furnace (BOF). Steel from the BOF process contains 25-30% total recovered materials, of which 16% is postconsumer steel.

**Selected Paper and Paper Products**

**EPA's Recommended Recovered Fiber Content Levels for Uncoated Printing and Writing Papers<sup>1</sup>**

<b>Item</b>	<b><u>Postconsumer</u> Fiber (%):</b>	<b><u>Recovered</u> Fiber (%):</b>
Reprographic Paper (e.g., mimeo and duplicator paper, high-speed copier paper, and bond paper*)	30	30
Offset Paper (e.g., offset printing paper*, book paper*, and bond paper*)	30	30
Tablet Paper (e.g., offset paper such as note pads, stationery*, and other writing* papers)	30	30
Forms Bond (e.g., forms, computer printout paper, and ledger*)	30	30
Envelope Paper		
Wove	30	30
Kraft		
• White and colored (including manila)	10-20	10-20
• Unbleached	10	10

<b>Item</b>	<b><u>Postconsumer</u> Fiber (%) :</b>	<b><u>Recovered</u> Fiber (%) :</b>
Cotton Fiber Paper (e.g., cotton fiber papers, ledger*, stationery* and matching envelopes, and other writing* papers)	30	30
Text & Cover Paper (e.g., cover stock, book paper*, stationery* and matching envelopes, and other writing* paper)	30	30
Supercalendered	10	10
Machine Finish Groundwood	10	10
Papeteries	30	30
Check Safety Paper	10	10

\*These items can be made from a variety of printing and writing papers, depending on the performance characteristics of the item. Some of the papers are a commodity-type and some are specialty papers. USEPA recommends that procuring agencies determine the performance characteristics required of the paper prior to establishing minimum content standards. Bond, ledger, or stationery made from cotton fiber paper or a text & cover paper, for example, have different characteristics than similar items made from commodity papers.

#### **EPA's Recommended Recovered Fiber Content Levels for Coated Printing and Writing Papers**

<b>Item</b>	<b><u>Postconsumer</u> Fiber (%) :</b>	<b><u>Recovered</u> Fiber (%) :</b>
Coated Printing Paper	10	10
Carbonless	30	30

#### **USEPA's Recommended Recovered Fiber Content Levels for Bristols**

<b>Item</b>	<b><u>Postconsumer</u> Fiber (%) :</b>	<b><u>Recovered</u> Fiber (%) :</b>
File Folders (manila and colored)	30	30
Dyed Filing Products	20	20-50
Cards (index, postal, and other, including index sheets)	20	50
Pressboard Report Covers and Binders	20	50
Tags and Tickets	20	20-50

NOTE: The content levels for all USEPA recommendations should be read as X% recovered fiber, including Y% postconsumer fiber and not as X% recovered fiber plus Y% postconsumer fiber.

## Selected Parks and Recreation Products

### EPA's Recommended Recovered Materials Content Levels for Playground Equipment<sup>1</sup>

<b>Material</b>	<b><u>Postconsumer</u> Content (%)</b>	<b>Total <u>Recovered Materials</u> Content (%)</b>
Plastics <sup>2</sup>	90-100	100
Plastic composites	50-75	95-100
Steel <sup>3</sup>	16 67	25-30 100
Aluminum	25	25

<sup>1</sup> USEPA's recommendations do not preclude a procuring agency from purchasing playground equipment manufactured from other materials. They simply require that a procuring agency, when purchasing playground equipment made from plastic, steel, wood, or aluminum, purchase these items with recovered materials when those items meet applicable specifications and performance requirements.

<sup>2</sup> "Plastics" includes both single and mixed plastic resins. Playground equipment made with recovered plastics may also contain other recovered materials such as wood or fiberglass. The percentage of these materials contained in the product would also count toward the recovered materials content level of the item.

<sup>3</sup> The recommended recovered materials content levels for steel in this table reflect the fact that the designated items can be made from steel manufactured in either a Basic Oxygen Furnace (BOF) or an Electric Arc Furnace (EAF). Steel from the BOF process contains 25-30% total recovered materials, of which 16% is postconsumer steel. Steel from the EAF process contains a total of 100% recovered steel, of which 67% is postconsumer.

### USEPA's Recommended Recovered Materials Content Levels for Fencing Containing Recovered Plastic <sup>1, 2</sup>

<b>Material:</b>	<b><u>Postconsumer</u> Content (%):</b>	<b>Total <u>Recovered Materials</u> Content (%):</b>
Plastic	60-100	90-100

<sup>1</sup> USEPA's recommendation does not preclude a procuring agency from purchasing fencing manufactured from another material, such as wood. It simply requires that a procuring agency, when purchasing plastic fencing, purchase this item made with recovered materials when this item meets applicable specifications and performance requirements.

<sup>2</sup> Designation includes fencing containing recovered plastic for use in controlling snow or sand drifting and as a warning/safety barrier in construction or other applications.

### Selected Landscaping Products

#### USEPA's Recommended Recovered Materials Content Levels for Plastic Lumber Landscaping Timbers and Posts <sup>1</sup>

Material	Postconsumer Content (%)	Total <u>Recovered</u> Materials Content (%)
<a href="#">HDPE</a>	25-100	75-100
Mixed plastics/Sawdust	50	100
HDPE/Fiberglass	75	95
Other mixed resins	50-100	95-100

<sup>1</sup> USEPA's recommendations do not preclude a procuring agency from purchasing wooden landscaping timbers and posts. They simply require that procuring agencies, when purchasing plastic landscaping timbers and posts, purchase these items made with recovered materials when the items meet applicable specifications and performance requirements.

### Selected Construction Products

#### USEPA's Recommended Recovered Materials Content Levels for Building Insulation <sup>1</sup>

Product	Material	Postconsumer Content (%)	Total <u>Recovered</u> Materials Content (%)
Rock Wool	Slag	--	75
Fiberglass	Glass Cullet	--	20-25
Cellulose Loose-Fill and Spray-On	Postconsumer Paper	75	75
Perlite Composite Board	Postconsumer Paper	23	23
Plastic Rigid Foam, Polyisocyanurate/ Polyurethane:			
Rigid Foam	--	--	9
	--	--	5
Foam-in-Place	--	--	6
Glass Fiber Reinforced			
Phenolic Rigid Foam	--	--	5
Plastic, Non-Woven Batt	Recovered and/or Postconsumer Plastics	--	100

<sup>1</sup> The recommended recovered materials content levels are based on the weight (not volume) of materials in the insulating core only.

#### USEPA's Recommended Recovered Materials Content Levels for Carpet<sup>1</sup>

Product	Material	Postconsumer Content	Total Recovered Materials Content (%)
Polyester Carpet Face Fiber	PET	25-100	25-100

EPA recommends that, based on the recovered materials content levels shown in the table above, procuring agencies establish minimum content standards for use in purchasing polyester carpet for light- and moderate-wear applications. This recommendation does not include polyester carpet for use in heavy-wear or severe-wear applications; however, procuring agencies are encouraged to evaluate the suitability of polyester carpet in these applications. These recommendations do not preclude a procuring agency from purchasing carpet made of other materials such as nylon, wool, or polypropylene.

#### USEPA's Recommended Recovered Materials Content Levels for Carpet Cushion <sup>1</sup>

Product	Material	Postconsumer Content (%)	Total Recovered Materials Content (%)
Bonded polyurethane	Old carpet cushion	15-50	15-50
Jute	Burlap	40	40
Synthetic fibers	Carpet fabrication scrap	--	100
Rubber	Tire rubber	60-90	60-90

EPA's recommendations do not preclude a procuring agency from purchasing another type of carpet cushion. They simply require that procuring agencies, when purchasing bonded polyurethane, jute, synthetic fiber, or rubber carpet cushions, purchase these items made with recovered materials when these items meet applicable specifications and performance requirement. Refer to Section C-4 in RMAN I for USEPA's recommendations for purchasing polyester [carpet containing recovered materials](#).

#### USEPA's Recommended Recovered Materials Content Levels for Reprocessed and Consolidated Latex Paints <sup>1</sup>

Product	Postconsumer Content (%)	Total Recovered Materials Content (%)
Reprocessed Latex Paint <ul style="list-style-type: none"> <li>White, Off-White, Pastel Colors</li> <li>Grey, Brown, Earthtones, and Other Dark Colors</li> </ul>	20 50-99	20 50-99
Consolidated Latex Paint	100	100

<sup>1</sup> USEPA's recommendations apply to reprocessed latex paints used for interior and exterior architectural applications such as wallboard, ceilings, and trim; gutter boards; and concrete, stucco, masonry, wood, and metal surfaces, and to consolidated latex paints used for covering graffiti, where color and consistency of performance are not primary concerns.

**EPA's Recommended Recovered Materials Content Levels for Shower and Restroom Dividers/Partitions Containing Recovered Plastic or Steel <sup>1</sup>**

<b>Material</b>	<b><u>Postconsumer</u> Content</b>	<b>Total <u>Recovered</u> Materials Content (%)</b>
Steel <sup>2</sup>	16 67	25-30 100
Plastic	20-100	20-100

<sup>1</sup> USEPA's recommendations do not preclude an agency from purchasing shower and restroom dividers/partitions manufactured from another material such as wood. They simply require that procuring agencies, when purchasing shower and restroom dividers/partitions made from plastic or steel, purchase these items made from recovered materials when they meet applicable specifications and performance requirements.

<sup>2</sup> The recommended recovered materials content levels for steel in this table reflect the fact that the designated items can be made from steel manufactured in either a Basic Oxygen Furnace (BOF) or an Electric Arc Furnace (EAF). Steel from the BOF process contains 25-30% total recovered materials, of which 16% is postconsumer steel. Steel from the EAF process contains a total of 100% recovered steel, of which 67% is postconsumer.

**Selected Transportation Products**

**USEPA's Recommended Recovered Materials Content Levels for Parking Stops Made from Concrete or Containing Recovered Plastic or Rubber <sup>1, 2</sup>**

<b>Material</b>	<b><u>Postconsumer</u> Content (%)</b>	<b>Total <u>Recovered</u> Materials Content (%)</b>
Plastic and/or Rubber <sup>3</sup>	100	--
Concrete Containing <a href="#">Coal Fly Ash</a>	--	20-40 <sup>4</sup>
Concrete Containing <a href="#">Ground Granulated Blast Furnace Slag (GGBF)</a>	--	25-70

<sup>1</sup> USEPA's recommendation does not preclude a procuring agency from purchasing parking stops manufactured from another material. It simply requires that a procuring agency, when purchasing concrete parking stops or parking stops made with plastic or rubber, purchase these items made with recovered materials when these items meet applicable specifications and performance requirements.

<sup>2</sup> Transportation products containing recovered materials must conform to the *Manual on Uniform Highway Traffic Control Devices* used by the Federal Highway Administration, as well as other applicable federal requirements and specifications.

<sup>3</sup> Parking stops made with recovered plastics may also include other recovered materials such as sawdust, wood, or fiberglass. The percentage of these materials contained in the product would also count toward the recovered materials content level of the parking stops.

<sup>4</sup> Generally, 20 to 30 percent, but could be up to 40 percent. Fifteen percent when used as a partial cement replacement as an admixture in concrete.

#### **EPA's Recommended Recovered Materials Content Levels for Traffic Cones<sup>1</sup>**

<b>Material</b>	<b>Postconsumer Materials (%):</b>	<b>Total <u>Recovered</u> Materials Content (%)<sup>2</sup></b>
Plastic ( <u>PVC</u> and <u>LDPE</u> )	--	50-100
<u>Crumb rubber</u>	--	50-100

<sup>1</sup> Transportation products containing recovered materials must conform to the *Manual on Uniform Traffic Devices* used by the Federal Highway Administration, as well as other applicable federal requirements and specifications.

<sup>2</sup> The recommended recovered materials content levels are based on the dry weight of the raw materials, exclusive of any additives such as adhesives, binders, or coloring agents.

#### **Selected Vehicular Products**

##### **Recommended Recovered Materials Content Ranges For Engine Coolant:**

USEPA recommends that procuring agencies whose vehicles are serviced by a motor pool or vehicle maintenance facility establish a program for engine coolant reclamation and reuse that consists of either reclaiming the spent engine coolants onsite for use in the agencies' vehicles or establishing a service contract for reclamation of the agencies' spent engine coolant for use in the agencies' vehicles.

USEPA also recommends that procuring agencies request reclaimed engine coolant when having their vehicles serviced at commercial service centers. Additionally, USEPA recommends that agencies purchase reclaimed engine coolant when making direct purchases of this item, such as when necessary to make up for losses due to leakage or spillage.

- USEPA does not recommend one type of engine coolant over another. USEPA recommends, however, that procuring agencies purchase engine coolant containing only one base chemical, typically ethylene glycol or propylene glycol, to prevent the commingling of incompatible types of engine coolant

##### **Recommended Recovered Materials Content Ranges for Re-refined Lubricating Oils:**

USEPA recommends that procuring agencies set their minimum re-refined oil content standard at the highest level of re-refined oil that they determine meets the statutory requirements of RCRA section 6002(c)(1), but no lower than 25 percent re-refined oil.

USEPA recommends that procuring agencies review their procurement practices and eliminate those that would inhibit or preclude procurement of lubricating oils containing re-refined oil. For example, procuring agencies should review the practices of inviting bids and issuing contracts to do the following:

- Supply a broad range of lubricating oil products on an "all or none" basis.
- Supply lubricating oils for an excessively long period of time.

- Deliver lubricating oils to geographic locations throughout the United States or to an excessively broad geographic area.
- Supply excessively large contract quantities.

### Selected Miscellaneous Products

#### EPA's Recommended Recovered Materials Content Levels for Awards and Plaques<sup>1</sup>

Material	Postconsumer Content (%)	Total <u>Recovered</u> Materials Content (%)
Glass	75-100	100
Wood	--	100
Paper	40-100	40-100
Plastic and Plastic/ Wood Composite	50-100	95-100

<sup>1</sup> USEPA's recommendations do not preclude a procuring agency from purchasing awards and plaques manufactured from other materials. They simply require that a procuring agency, when purchasing glass, wood, paper, or plastic awards or plaques, purchase these items containing recovered materials when the item meets applicable specifications and performance requirements.

#### USEPA's Recommended Recovered Materials Content Levels for Sorbents Used in Oil and Solvents Cleanups and for Use as Animal Bedding <sup>1</sup>

Material	Postconsumer Content (%)	Total <u>Recovered</u> Materials Content (%)
Paper	90-100	100
Textiles	95-100	95-100
Plastics	--	25-100
Wood <sup>2</sup>	--	100
Other Organics/Multi-Materials <sup>3</sup>	--	100

<sup>1</sup> USEPA's recommendations do not preclude a procuring agency from purchasing sorbents made from other materials. They simply require that a procuring agency, when purchasing sorbents made from paper, wood, textiles, plastic, or other organic materials, purchase them made with recovered materials when these items meet applicable specifications and performance requirements.

<sup>2</sup> "Wood" includes materials such as sawdust and lumber mill trimmings.

<sup>3</sup> Examples of other organics include, but are not limited to, peanut hulls and corn stover. An example of multimaterial sorbents would include, but not be limited to, a polymer and cellulose fiber combination.

## Appendix 6-2

### Federal Acquisition Clauses

(48 CFR 52.204-4, 52.223-1 through 52.223-5, 52.223-10, 52.223.13 through 52.223-16)

[Added July 2001; Revised October 2003; Revised July 2008, Revised January 2009, Revised April 2012;  
Revised July 2014; Revised October 2015]

#### **FAR 52.204-4 Printed or Copied Double-Sided on Post-Consumer Fiber Content Paper**

As prescribed in 4.303, insert the following clause:

PRINTED OR COPIED DOUBLE-SIDED ON POSTCONSUMER FIBER CONTENT PAPER (MAY 2011)

(a) *Definitions.* As used in this clause:

*Postconsumer fiber* means—(1) Paper, paperboard, and fibrous materials from retail stores, office buildings, homes, and so forth, after they have passed through their end usage as a consumer item, including: used corrugated boxes; old newspapers; old magazines; mixed waste paper; tabulating cards; and used cordage; or (2) All paper, paperboard, and fibrous materials that enter and are collected from municipal solid waste; but not (3) Fiber derived from printers' over-runs, converters' scrap, and over-issue publications.

(b) The Contractor is required to submit paper documents, such as offers, letters, or reports that are printed or copied double-sided on paper containing at least 30 percent postconsumer fiber, whenever practicable, when not using electronic commerce methods to submit information or data to the Government.

(End of clause)

- **FAR 52.223-1 Biobased Product Certification.**

As prescribed in 23.406(a), insert the following provision:

BIOBASED PRODUCT CERTIFICATION (MAY 2012)

As required by the Farm Security and Rural Investment Act of 2002 and the Energy Policy Act of 2005 (7 U.S.C. 8102(c)(3)), the offeror certifies, by signing this offer, that biobased products (within categories of products listed by the United States Department of Agriculture in 7 CFR part 3201, subpart B) to be used or delivered in the performance of the contract, other than biobased products that are not purchased by the offeror as a direct result of this contract, will comply with the applicable specifications or other contractual requirements.

(End of provision)

- **FAR 52.223-2 Affirmative Procurement of Biobased Products Under Service and Construction Contracts.**

As prescribed in 23.406(b), insert the following clause:

AFFIRMATIVE PROCUREMENT OF BIOBASED PRODUCTS UNDER SERVICE AND CONSTRUCTION CONTRACTS (MAY 2012)

- (a) In the performance of this contract, the contractor shall make maximum use of biobased products that are United States Department of Agriculture (USDA)-designated items unless--
- (1) The product cannot be acquired--
    - (i) Competitively within a time frame providing for compliance with the contract performance schedule;
    - (ii) Meeting contract performance requirements; or
    - (iii) At a reasonable price.
  - (2) The product is to be used in an application covered by a USDA categorical exemption (see 7 CFR 3201.3(e)). For example, all USDA-designated items are exempt from the preferred procurement requirement for the following:
    - (i) Spacecraft system and launch support equipment.
    - (ii) Military equipment, i.e., a product or system designed or procured for combat or combat-related missions.
- (b) Information about this requirement and these products is available at <http://www.usda.gov/biopreferred>.
- (c) In the performance of this contract, the Contractor shall--
- (1) Report to the environmental point of contact identified in paragraph (d) of this clause, with a copy to the Contracting Officer, on the product types and dollar value of any USDA-designated biobased products purchased by the Contractor during the previous Government fiscal year, between October 1 and September 30;
  - (2) Submit this report no later than--
    - (i) October 31 of each year during contract performance; and
    - (ii) At the end of contract performance; and
  - (3) Contact the environmental point of contract to obtain the preferred submittal format, if that format is not specified in this contract.
- (d) The environmental point of contact for this contract is: ----- [Contracting Officer shall insert full name, phone number, and email address. In addition, the Contracting Officer may include the agency Web site for reporting.]

(End of clause)

- **FAR 52.223-3 Hazardous Material Identification and Material Safety Data.**

As prescribed in 23.303, insert the following clause:

**HAZARDOUS MATERIAL IDENTIFICATION AND MATERIAL SAFETY DATA (JAN 1997)**

- (a) "Hazardous material," as used in this clause, includes any material defined as hazardous under the latest version of Federal Standard No. 313 (including revisions adopted during the term of the contract).
- (b) The offeror must list any hazardous material, as defined in paragraph (a) of this clause, to be delivered under this contract. The hazardous material shall be properly identified and include any applicable identification number, such as National Stock Number or Special Item Number. This information shall also be included on the Material Safety Data Sheet submitted under this contract.

Material  
(If none, insert "None")

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Identification No.

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

- (c) This list must be updated during performance of the contract whenever the Contractor determines that any other material to be delivered under this contract is hazardous.
- (d) The apparently successful offeror agrees to submit, for each item as required prior to award, a Material Safety Data Sheet, meeting the requirements of 29 CFR 1910.1200(g) and the latest version of Federal Standard No. 313, for all hazardous material identified in paragraph (b) of this clause. Data shall be submitted in accordance with Federal Standard No. 313, whether or not the apparently successful offeror is the actual manufacturer of these items. Failure to submit the Material Safety Data Sheet prior to award may result in the apparently successful offeror being considered nonresponsible and ineligible for award.
- (e) If, after award, there is a change in the composition of the item(s) or a revision to Federal Standard No. 313, which renders incomplete or inaccurate the data submitted under paragraph (d) of this clause, the Contractor shall promptly notify the Contracting Officer and resubmit the data.
- (f) Neither the requirements of this clause nor any act or failure to act by the Government shall relieve the Contractor of any responsibility or liability for the safety of Government, Contractor, or subcontractor personnel or property.
- (g) Nothing contained in this clause shall relieve the Contractor from complying with applicable Federal, State, and local laws, codes, ordinances, and regulations (including the obtaining of licenses and permits) in connection with hazardous material.
- (h) The Government's rights in data furnished under this contract with respect to hazardous material are as follows:
  - (1) To use, duplicate and disclose any data to which this clause is applicable. The purposes of this right are to--
    - (i) Apprise personnel of the hazards to which they may be exposed in using, handling, packaging, transporting, or disposing of hazardous materials;
    - (ii) Obtain medical treatment for those affected by the material; and
    - (iii) Have others use, duplicate, and disclose the data for the Government for these purposes.
  - (2) To use, duplicate, and disclose data furnished under this clause, in accordance with subparagraph (h)(1) of this clause, in precedence over any other clause of this contract providing for rights in data.
  - (3) The Government is not precluded from using similar or identical data acquired from other sources.

**(End of clause)**

*Alternate I (July 1995).* If the contract is awarded by an agency other than the Department of Defense, add the following paragraph (i) to the basic clause:

- (i) Except as provided in paragraph (i)(2), the Contractor shall prepare and submit a sufficient number of Material Safety Data Sheets (MSDS's), meeting the requirements of 29 CFR 1910.1200(g) and the latest version of Federal Standard No. 313, for all hazardous materials identified in paragraph (b) of this clause.
  - (1) For items shipped to consignees, the Contractor shall include a copy of the MSDS's with the packing list or other suitable shipping document that accompanies each shipment. Alternatively, the Contractor is permitted to transmit MSDS's to consignees in advance of receipt of shipments by consignees, if authorized in writing by the Contracting Officer.
  - (2) For items shipped to consignees identified by mailing address as agency depots, distribution centers or customer supply centers, the Contractor shall provide one copy of the MSDS's in or on each shipping container. If affixed to the outside of each container, the MSDS's must be placed in a weather resistant envelope.

- **FAR 52.223-4 Recovered Material Certification.**

As prescribed in 23.406(a), insert the following provision:

RECOVERED MATERIAL CERTIFICATION (MAY 2008)

As required by the Resource Conservation and Recovery Act of 1976 (42 U.S.C. 6962(c)(3)(A)(i)), the offeror certifies, by signing this offer, that the percentage of recovered materials content for EPA-designated items to be delivered or used in the performance of the contract will be at least the amount required by the applicable contract specifications or other contractual requirements.

(End of provision)

- **FAR 52.223-5 Pollution Prevention and Right-to-Know Information.**

As prescribed in 23.1005, insert the following clause:

POLLUTION PREVENTION AND RIGHT-TO-KNOW INFORMATION (MAY 2011)

(a) Definitions. As used in this clause—

Toxic chemical means a chemical or chemical category listed in 40 CFR 372.65.

(b) Federal facilities are required to comply with the provisions of the Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA) (42 U.S.C. 11001–11050), and the Pollution Prevention Act of 1990 (PPA) (42 U.S.C. 13101–13109).

(c) The Contractor shall provide all information needed by the Federal facility to comply with the following:

- (1) The emergency planning reporting requirements of section 302 of EPCRA.
- (2) The emergency notice requirements of section 304 of EPCRA.
- (3) The list of Material Safety Data Sheets, required by section 311 of EPCRA.
- (4) The emergency and hazardous chemical inventory forms of section 312 of EPCRA.
- (5) The toxic chemical release inventory of section 313 of EPCRA, which includes the reduction and recycling information required by section 6607 of PPA.
- (6) The toxic chemical and hazardous substance release and use reduction goals of section 2(e) of Executive Order 13423 and of Executive Order 13514.

(End of clause)

*Alternate I* (MAY 2011). As prescribed in 23.1005(b), add the following paragraph (c)(7) to the basic clause:

(c)(7) The environmental management system as described in section 3(b) of E.O. 13423 and 2(j) of E.O. 13514.

*Alternate II* (MAY 2011). As prescribed in 23.1005(c), add the following paragraph (c)(7) to the basic clause. If Alternate I is also prescribed, renumber paragraph (c)(7) as paragraph (c)(8).

(c)(7) The facility compliance audits as described in section 3(c) of E.O. 13423.

- **FAR 52.223-9. Estimate of Percentage of Recovered Material Content for EPA Designated Items**

As prescribed in 23.406(d), insert the following clause:

ESTIMATE OF PERCENTAGE OF RECOVERED MATERIAL CONTENT FOR EPA-DESIGNATED ITEMS (MAY 2008)

(b) The Contractor, on completion of this contract, shall:

(1) Estimate the percentage of the total recovered material content for EPA-designated item(s) delivered and/or used in contract performance, including, if applicable, the percentage of post-consumer material content; and

(2) Submit this estimate to \_\_\_\_\_

[Contracting Officer complete in accordance with agency procedures].

**(End of clause)**

*Alternate I* (MAY 2008). As prescribed in 23.406(d), redesignate paragraph (b) of the basic clause as paragraph (c) and add the following paragraph (b) to the basic clause:

(b) The Contractor shall execute the following certification required by the Resource Conservation and Recovery Act of 1976 (42 U.S.C. 6962(i)(2)(C)):

**CERTIFICATION**

I, \_\_\_\_\_ (name of certifier), am an officer or employee responsible for the performance of this contract and hereby certify that the percentage of recovered material content for EPA-designated items met the applicable contract specifications or other contractual requirements.

\_\_\_\_\_  
(Signature of the Officer or Employee)

\_\_\_\_\_  
(Typed Name of the Officer or Employee)

\_\_\_\_\_  
(Title)

\_\_\_\_\_  
(Name of Company, Firm, or Organization)

\_\_\_\_\_  
(Date)

**(End of Certification)**

**FAR 52.223-10 Waste Reduction Program.**

(a) Definitions.

- Recycling means the series of activities, including collection, separation, and processing, by which products or other materials are recovered from the solid waste stream for use in the form of raw materials in the manufacture of products other than fuel for producing heat or power by combustion.
- Waste prevention means any change in the design, manufacturing, purchase, or use of materials or products (including packaging) to reduce their amount or toxicity before they are discarded. Waste prevention also refers to the reuse of products or materials.
- Waste reduction means preventing or decreasing the amount of waste being generated through waste prevention, recycling, or purchasing recycled and environmentally preferable products.

- (b) Consistent with the requirements of Section 701 of Executive Order 13101, the Contractor shall establish a program to promote cost-effective waste reduction in all operations and facilities covered by this contract. The Contractor's programs shall comply with applicable Federal, State, and local requirements, specifically including Section 6002 of the Resource Conservation and Recovery Act (42 U.S.C. 6962, et seq.) and implementing regulations (40 CFR 247).

(End of clause)

**FAR 52.223-13 Acquisition of EPEAT® Registered Imaging Equipment (Jun 2014)**

*Definitions.* As used in this clause:

*Imaging equipment* means the following products:

- (1) *Copier*—A commercially available imaging product with a sole function of the production of hard copy duplicates from graphic hard-copy originals. The unit is capable of being powered from a wall outlet or from a data or network connection. This definition is intended to cover products that are marketed as copiers or upgradeable digital copiers (UDCs).
- (2) *Digital duplicator*—A commercially available imaging product that is sold in the market as a fully automated duplicator system through the method of stencil duplicating with digital reproduction functionality. The unit is capable of being powered from a wall outlet or from a data or network connection. This definition is intended to cover products that are marketed as digital duplicators.
- (3) *Facsimile machine (fax machine)*—A commercially available imaging product whose primary functions are scanning hard-copy originals for electronic transmission to remote units and receiving similar electronic transmissions to produce hard-copy output. Electronic transmission is primarily over a public telephone system but also may be via computer network or the Internet. The product also may be capable of producing hard copy duplicates. The unit is capable of being powered from a wall outlet or from a data or network connection. This definition is intended to cover products that are marketed as fax machines.
- (4) *Mailing machine*—A commercially available imaging product that serves to print postage onto mail pieces. The unit is capable of being powered from a wall outlet or from a data or network connection. This definition is intended to cover products that are marketed as mailing machines.
- (5) *Multifunction device (MFD)*—A commercially available imaging product, which is a physically integrated device or a combination of functionally integrated components, that performs two or more of the core functions of copying, printing, scanning, or faxing. The copy functionality as addressed in this definition is considered to be distinct from singlesheet convenience copying offered by fax machines. The unit is capable of being powered from a wall outlet or from a data or network connection. This definition is intended to cover products that are marketed as MFDs or multifunction products.
- (6) *Printer*—A commercially available imaging product that serves as a hardcopy output device and is capable of receiving information from single-user or networked computers, or other input devices (e.g., digital cameras). The unit is capable of being powered from a wall outlet or from a data or network connection. This definition is intended to cover products that are marketed as printers, including printers that can be upgraded into MFDs in the field.
- (7) *Scanner*—A commercially available imaging product that functions as an electro-optical device for converting information into electronic images that can be stored, edited, converted, or transmitted, primarily in a personal computing environment. The unit is capable of being powered from a wall outlet or from a data or network connection. This definition is intended to cover products that are marketed as scanners.

(b) Under this contract, the Contractor shall deliver, furnish for Government use, or furnish for Contractor use at a Federally controlled facility, only imaging equipment that, at the time of submission of proposals and at the time of award, was EPEAT→bronzeregistered or higher.

(c) For information about EPEAT see [www.epa.gov/epeat](http://www.epa.gov/epeat).

**(End of clause)**

*Alternate I* (Oct 2015). As prescribed in 23.705(b)(2), substitute the following paragraph (b) for paragraph (b) of the basic clause:

(b) Under this contract, the Contractor shall deliver, furnish for Government use, or furnish for contractor use at a Federally controlled facility, only imaging equipment that, at the time of submission of proposals and at the time of award, was EPEAT@ silver-registered or gold-registered.

**FAR 52.223-14 Acquisition of EPEAT Registered Televisions (Jun 2014)**

(a) *Definitions.* As used in this clause—

*Television or TV* means a commercially available electronic product designed primarily for the reception and display of audiovisual signals received from terrestrial, cable, satellite, Internet Protocol TV (IPTV), or other digital or analog sources. A TV consists of a tuner/receiver and a display encased in a single enclosure. The product usually relies upon a cathode-ray tube (CRT), liquid crystal display (LCD), plasma display, or other display technology. Televisions with computer capability (*e.g.*, computer input port) may be considered to be a TV as long as they are marketed and sold to consumers primarily as televisions.

(b) Under this contract, the Contractor shall deliver, furnish for Government use, or furnish for Contractor use at a Federally controlled facility, only televisions that, at the time of submission of proposals and at the time of award, were EPEAT→bronzeregistered or higher.

(c) For information about EPEAT→,see [www.epa.gov/epeat](http://www.epa.gov/epeat).

**(End of clause)**

*Alternate I* (Jun 2014). As prescribed in 23.705(c)(2), substitute the following paragraph (b) for paragraph (b) of the basic clause:

(b) Under this contract, the Contractor shall deliver, furnish for Government use, or furnish for Contractor use at a Federally controlled facility, only televisions that, at the time of submission of proposals and at the time of award, were EPEAT→silver-registered or gold-registered.

**FAR 52.223-15 Affirmative Procurement of EPA-designated Items in Service and Construction Contracts**

**ENERGY EFFICIENCY IN ENERGY-CONSUMING PRODUCTS (DEC 2007)**

(a) *Definition.* As used in this clause—

Energy-efficient product—(1) Means a product that—

- (i) Meets Department of Energy and Environmental Protection Agency criteria for use of the Energy Star trademark label; or
- (ii) Is in the upper 25 percent of efficiency for all similar products as designated by the Department of Energy's Federal Energy Management Program.

(2) The term “product” does not include any energy-consuming product or system designed or procured for combat or combat-related missions (42 U.S.C. 8259b).

(b) The Contractor shall ensure that energy-consuming products are energy efficient products (i.e., ENERGY STAR® products or FEMP-designated products) at the time of contract award, for products that are—

- (1) Delivered;
- (2) Acquired by the Contractor for use in performing services at a Federally-controlled facility;
- (3) Furnished by the Contractor for use by the Government; or
- (4) Specified in the design of a building or work, or incorporated during its construction, renovation, or maintenance.

(c) The requirements of paragraph (b) apply to the Contractor (including any subcontractor) unless—

- (1) The energy-consuming product is not listed in the ENERGY STAR® Program or FEMP; or
- (2) Otherwise approved in writing by the Contracting Officer.

(d) Information about these products is available for—

- (1) ENERGY STAR® at <http://www.energystar.gov/products>; and
- (2) FEMP at <http://www1.eere.energy.gov/femp/procurement/eeplrequirements.html>.

(End of Clause)

**FAR 52.223-16 Acquisition of EPEAT® Registered Personal Computer Products (Oct 2015)**

(a) *Definitions.* As used in this clause—

*Computer* means a device that performs logical operations and processes data. Computers are composed of, at a minimum:

- (1) A central processing unit (CPU) to perform operations;
- (2) User input devices such as a keyboard, mouse, digitizer, or game controller; and
- (3) A computer display screen to output information. Computers include both stationary and portable units, including desktop computers, integrated desktop computers, notebook computers, thin clients, and workstations. Although computers must be capable of using input devices and computer displays, as noted in (2) and (3) above, computer systems do not need to include these devices on shipment to meet this definition.

This definition does not include server computers, gaming consoles, mobile telephones, portable hand-held calculators, portable digital assistants (PDAs), MP3 players, or any other mobile computing device with displays less than 4 inches, measured diagonally.

*Computer display* means a display screen and its associated electronics encased in a single housing or within the computer housing (e.g., notebook or integrated desktop computer) that is capable of displaying output information from a computer via one or more inputs such as a VGA, DVI, USB, DisplayPort, and/or IEEE 1394–2008™, Standard for High Performance Serial Bus. Examples of computer display technologies are the cathode-ray tube (CRT) and liquid crystal display (LCD).

*Desktop computer* means a computer where the main unit is intended to be located in a permanent location, often on a desk or on the floor. Desktops are not designed for portability and utilize an external computer display, keyboard, and mouse. Desktops are designed for a broad range of home and office applications.

*Integrated desktop computer* means a desktop system in which the computer and computer display function as a single unit that receives its AC power through a single cable. Integrated desktop computers come in one of two possible forms:

- (1) A system where the computer display and computer are physically combined into a single unit; or
- (2) A system packaged as a single system where the computer display is separate but is connected to the main chassis by a DC power cord and both the computer and computer display are powered from a single power

supply. As a subset of desktop computers, integrated desktop computers are typically designed to provide similar functionality as desktop systems.

*Notebook computer* means a computer designed specifically for portability and to be operated for extended periods of time either with or without a direct connection to an AC power source. Notebooks must utilize an integrated computer display and be capable of operation off of an integrated battery or other portable power source. In addition, most notebooks use an external power supply and have an integrated keyboard and pointing device. Notebook computers are typically designed to provide similar functionality to desktops, including operation of software similar in functionality to that used in desktops. Docking stations are considered accessories for notebook computers, not notebook computers. Tablet PCs, which may use touch-sensitive screens along with, or instead of, other input devices, are considered notebook computers.

*Personal computer product* means a computer, computer display, desktop computer, integrated desktop computer, or notebook computer.

(b) Under this contract, the Contractor shall deliver, furnish for Government use, or furnish for Contractor use at a Federally controlled facility, only personal computer products that, (a) at the time of submission of proposals and at the time of award, were EPEAT→bronze-registered or higher.

(c) For information about EPEAT, see [www.epa.gov/PEAT](http://www.epa.gov/PEAT).

**(End of clause)**

*Alternate I* (Jun 2014). As prescribed in 23.705(d)(2), substitute the following paragraph (b) for paragraph (b) of the basic clause:

(b) Under this contract, the Contractor shall deliver, furnish for Government use, or furnish for Contractor use at a Federally controlled facility, only personal computer products that, at the time of submission of proposals and at the time of award, were EPEAT→silver registered or gold-registered.

## **Appendix 6-2b**

### **EPEAT Contract/Solicitation Clauses (FAR 52.223-10 and 52.223-16) [Added January 2008; Revised July 2011]**

#### **FAR 52.223-10 Waste Reduction Program.**

(b) Definitions.

- Recycling means the series of activities, including collection, separation, and processing, by which products or other materials are recovered from the solid waste stream for use in the form of raw materials in the manufacture of products other than fuel for producing heat or power by combustion.
- Waste prevention means any change in the design, manufacturing, purchase, or use of materials or products (including packaging) to reduce their amount or toxicity before they are discarded. Waste prevention also refers to the reuse of products or materials.
- Waste reduction means preventing or decreasing the amount of waste being generated through waste prevention, recycling, or purchasing recycled and environmentally preferable products.

- (b) Consistent with the requirements of Section 701 of Executive Order 13101, the Contractor shall establish a program to promote cost-effective waste reduction in all operations and facilities covered by this contract. The Contractor's programs shall comply with applicable Federal, State, and local requirements, specifically including Section 6002 of the Resource Conservation and Recovery Act (42 U.S.C. 6962, et seq.) and implementing regulations (40 CFR 247).

(End of clause)

#### **FAR 52.223-16 IEEE 1680 Standard for the Environmental Assessment of Personal Computer Products (December 2007)**

(a) Definitions:

Computer monitor means a video display unit used with a computer.

Desktop computer means a computer designed for use on a desk or table.

Notebook computer means a portable-style or laptop-style computer system.

Personal computer product means a notebook computer, a desktop computer, or a computer monitor, and any peripheral equipment that is integral to the operation of such items. For example, the desktop computer together with the keyboard, the mouse, and the power cord would be a personal computer product. Printers, copiers, and fax machines are not included in peripheral equipment, as used in this definition.

- (b) Under this contract, the Contractor shall deliver, furnish for Government use, or furnish for contractor use at a Government-owned facility, only personal computer products that at the time of submission of proposals were EPEAT Bronze registered or higher. Bronze is the first level discussed in clause 1.4 of the IEEE 1680 Standard for the Environmental Assessment of Personal Computer Products.

For information about the standard, see <http://www.epeat.net> (End of clause)

Alternate I (DEC 2007)

As prescribed in 23.705(b)(2), substitute the following paragraph (b) for paragraph (b) of the basic clause:

- (b) Under this contract, the Contractor shall deliver, furnish for Government use, or furnish for contractor use at a Government-owned facility, only personal computer products that at the time of submission of proposals were EPEAT Silver registered or higher. Silver is the second level discussed in clause 1.4 of the IEEE 1680 Standard for the Environmental Assessment of Personal Computer Products.

## Appendix 6-2c

### Products in the Biobased Preferred Procurement Program

(7 CFR 3201.10, 7 CFR 3201.11, 3201.12, 3201.13, 3201.14, 3201.15, 3201.16, 3201.17, 3201.18, 3201.19, 3201.20, 3201.21, 3201.22, 3201.23, 3201.24, 3201.25, 3201.26, 3201.27, 3201.28, 3201.29, 3201.30, 3201.31, 3201.32, 3201.35, 3201.36, 3201.40 through 3201.99)

**[Added January 2010, Revised January 2011; Revised April 2012, Revised July 2012; Revised October 2012]**

Product	Minimum Biobased Content	Implementation Date
2-cycle engine oil	34 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Adhesive and mastic remover	58 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Agricultural spray adjuvants	50 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013
Air fresheners and deodorizers	97 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	4 April 2013
Animal cleaning products	57 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013
Animal repellant	79 percent, which shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	23 July 2012
Asphalt and tar removers	80 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	4 April 2013
Asphalt restorers	68 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	4 April 2013
Bath products	61 percent, which shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	23 July 2012
Bathroom and spa cleaners	74 percent based carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Bedding, bed linens, and towels	12 percent based on the amount of qualifying biobased carbon in the finished product as a percent of the weight (mass) of the total organic carbon in	20 November 2007

Product	Minimum Biobased Content	Implementation Date
	the finished product. (NOTE: The 12 percent biobased content must be of a qualifying biobased feedstock. Cotton, wool, linen, and silk are not qualifying biobased feedstocks for the purpose of determining the biobased content of bedding, bed linens, and towels.)	
Bioremediation materials	86 percent, which shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	23 July 2012
Blast media	94 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	3 April 2013
Candle and wax melts	88 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	4 April 2013
Carpet <sup>9</sup>	7 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Chain and cable lubricants	77 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	27 October 2010
Cleaner, general purpose	54 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Cleaner, glass	49 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product. (NOTE: If the finished glass cleaner is to be diluted before use, the biobased content of the cleaner is determined before dilution.)	14 May 2009
Composite panels <sup>3</sup>	<ul style="list-style-type: none"> <li>• 23 percent for plastic lumber composite panels</li> <li>• 37 percent for acoustical composite panels</li> <li>• 55 percent for interior panels</li> <li>• 89 percent for structural interior panels</li> <li>• 94 percent for structural wall panels</li> </ul> <p>The minimum biobased content requirement is based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.</p>	14 May 2009
Compost activators and accelerators	95 percent, which shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	23 July 2012

<b>Product</b>	<b>Minimum Biobased Content</b>	<b>Implementation Date</b>
Concrete and asphalt cleaners	70 percent, which shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	23 July 2012
Concrete and asphalt release fluids	87 percent, based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Containers, disposable <sup>7</sup>	72 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.  (NOTE: At the time a manufacturer offers a disposable container for Federal purchase under the BioPreferred Program, the preferred procurement product must be capable of meeting the current version of ASTM D6400 if disposed of in a non-marine environment, the current version of ASTM D7081 if disposed of in a marine environment, or other appropriate and applicable standard for biodegradability.)	
Corrosion preventatives	53 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	27 October 2010
Cutlery, Disposable	48 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Cuts, burns, and abrasions ointments	84 percent, which shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	23 July 2012
Deicer	93 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Deodorants	73 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013
Dethatchers	87 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013

<b>Product</b>	<b>Minimum Biobased Content</b>	<b>Implementation Date</b>
Diesel fuel additives	90 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	16 March 2007
Dishwashing products	58 percent, which shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	23 July 2012
Disposable dinnerware	72 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	18 October 2011
Dust suppressants	85 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product. (NOTE: if the finished product is to be diluted before use, the biobased content of the suppressant is determined before dilution.)	14 May 2009
Electronic components cleaner	91 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	4 April 2013
Erosion control materials	77 percent, which shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	23 July 2012
Expanded polystyrene (EPS) foam recycling products	90 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	18 October 2011
Fertilizers <sup>8</sup>	71 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Films, non-durable <sup>6</sup>	85 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Films, semi-durable <sup>6</sup>	45 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Firearm lubricants	49 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Floor cleaners and protectors	77 percent, which shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	23 July 2012

<b>Product</b>	<b>Minimum Biobased Content</b>	<b>Implementation Date</b>
Floor coverings (non-carpet)	91 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	4 April 2012
Floor strippers	78 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	
Food cleaners	53 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	27 October 2010
Foot care products	83 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	4 April 2012
Forming lubricants	68 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	27 October 2010
Fuel conditioners	64 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013
Furniture cleaners and protectors	71 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	4 April 2013
Gear lubricants <sup>10</sup>	58 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	27 October 2010
General purpose household cleaners	39 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	27 October 2010
Graffiti and grease removers	34 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product. If the finished product is to be diluted before use, the biobased content of the remover must be determined before dilution.	14 May 2009
Greases	<ul style="list-style-type: none"> <li>• 42 percent for food grade grease</li> <li>• 72 percent for multipurpose grease</li> <li>• 30 percent for rail track grease</li> <li>• 71 percent for truck grease</li> <li>• 75 percent for greases not elsewhere specified.</li> </ul> <p>The minimum biobased content for all greases is based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.</p>	14 May 2009

<b>Product</b>	<b>Minimum Biobased Content</b>	<b>Implementation Date</b>
Hair care products	The minimum biobased content for all hair care products shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product. The applicable minimum biobased contents for the Federal preferred procurement products are: Shampoos--66 percent. Conditioners--78 percent.	23 July 2012
Hand cleaners	64 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Hand sanitizers (including hand cleaners and sanitizers)	73 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Heat transfer fluids	89 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	18 October 2011
Industrial cleaners	41 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	27 October 2010
Ink removers and cleaners	79 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	18 October 2011
Inks	The minimum biobased content for all inks shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product. The applicable minimum biobased contents for the Federal preferred procurement products are: 66 percent for specialty inks 67 percent for inks (sheetfed--color) 49 percent for inks (sheetfed--black) 34 percent for inks (printer toner—less than 25 ppm) 20 percent for inks (printer toner—greater than or equal to 25 ppm) 32 percent for inks (news).	4 April 2013
Interior paints and coatings	The minimum biobased content for all interior paints and coatings products shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product. The applicable minimum biobased contents for the Federal preferred procurement products are:	23 July 2012

<b>Product</b>	<b>Minimum Biobased Content</b>	<b>Implementation Date</b>
	<p>(1) Interior latex and waterborne alkyd paints and coatings--20 percent.</p> <p>(2) Interior oil-based and solventborne alkyd paints and coatings--67 percent.</p>	
Laundry products	46 percent for pretreatment/spot removers and 34 percent for general purpose laundry products. The minimum biobased content is based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Leather, vinyl, and rubber care products	55 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013
Lip care products	82 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Lotions and moisturizers	59 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013
Metalworking fluids	<ul style="list-style-type: none"> <li>• 66 percent for straight oils</li> <li>• 57 percent for general purpose soluble, semi-synthetic, and synthetic oils</li> <li>• 40 percent for high performance soluble, semi-synthetic, and synthetic oils<sup>4</sup>.</li> </ul> <p>The minimum biobased content is based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.</p>	14 May 2009
Mobile equipment hydraulic fluids <sup>1</sup>	44 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	16 March 2007
Mulch and compost materials <sup>11</sup>	95 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	18 October 2011
Multi-purpose cleaners	56 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	27 October 2010
Multi-purpose lubricants <sup>12</sup>	88 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	18 October 2011
Oven and Grill Cleaners	66 percent, which shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	23 July 2012

<b>Product</b>	<b>Minimum Biobased Content</b>	<b>Implementation Date</b>
Packing and insulating materials	74 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	4 April 2013
Parts wash solutions	65 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	27 October 2010
Penetrating lubricants <sup>1</sup>	68 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	16 March 2007
Plastic insulating foam for residential and commercial construction <sup>3</sup>	7 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Pneumatic equipment lubricants	67 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	4 April 2013
Roof coatings <sup>2</sup>	20 percent and is based on the entire product	16 March 2007
Shaving products	92 percent based on the amount of qualifying biobased carbon in the □ product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013
Slide way lubricants	74 percent, which shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	23 July 2012
Sorbents <sup>8</sup>	89 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Specialty precision cleaners and solvents	56 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013
Spot Removers	7 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Stationary equipment hydraulic fluids <sup>1</sup>	44 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Sun care products	53 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013
Thermal shipping containers	The minimum biobased content for all thermal shipping container products shall be based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic	Deferred.

<b>Product</b>	<b>Minimum Biobased Content</b>	<b>Implementation Date</b>
	carbon in the finished product. The applicable minimum biobased contents for the Federal preferred procurement products are: (1) Durable thermal shipping containers--21 percent. (2) Non-durable thermal shipping containers--82 percent.	
Topical pain relief products	91 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	18 October 2011
Transformers, synthetic ester-based fluid-filled	66 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	<sup>5</sup>
Transformers, vegetable oil-based fluid-filled	95 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	14 May 2009
Turbine drip oils	87 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	18 October 2011
Wastewater systems coatings	47 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013
Water clarifying agents	92 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	19 November 2013
Water tank coatings	59 percent based on the entire product.	20 November 2007
Wood and concrete sealers	<ul style="list-style-type: none"> <li>• 79 percent for penetrating liquids</li> <li>• 11 percent for membrane concrete sealers.</li> </ul> <p>The minimum biobased content is based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.</p>	14 May 2009
Wood and concrete stains	39 percent based on the amount of qualifying biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the finished product.	4 April 2013

<sup>1</sup> Qualifying biobased products that fall under the “mobile equipment hydraulic fluids” item, the “penetrating lubricants” item, or the “stationary equipment hydraulic fluids” item may, in some cases, overlap with the EPA-designated recovered content product. See checklist item O4.1.6.US for details on the recycled content product requirements. USDA is requesting that manufacturers of these qualifying biobased products provide information on the BioPreferred Web site of qualifying biobased products about the intended uses of the product, information on whether or not the product contains any recovered material, in addition to biobased ingredients, and performance

standards against which the product has been tested. This information will assist Federal agencies in determining whether or not a qualifying biobased product overlaps with EPA-designated product and which product should be afforded the preference in purchasing.

<sup>2</sup> Qualifying biobased products that fall under the “roofing coatings” item, may, in some cases, overlap with the EPA-designated recovered content product. See checklist item O4.1.6.US for details on the recycled content product requirements. USDA is requesting that manufacturers of these qualifying biobased products provide information on the BioPreferred Web site of qualifying biobased products about the intended uses of the product, information on whether or not the product contains any recovered material, in addition to biobased ingredients, and performance standards against which the product has been tested. This information will assist Federal agencies in determining whether or not a qualifying biobased product overlaps with EPA-designated product and which product should be afforded the preference in purchasing.

<sup>3</sup> Qualifying biobased products that fall under the “plastic insulating foam for residential and commercial construction” item or the “composite panels” item may, in some cases, overlap with the EPA-designated recovered content product. See checklist item O4.1.6.US for details on the recycled content product requirements. USDA is requesting that manufacturers of these qualifying biobased products provide information on the BioPreferred Web site of qualifying biobased products about the intended uses of the product, information on whether or not the product contains any recovered material, in addition to biobased ingredients, and performance standards against which the product has been tested. This information will assist Federal agencies in determining whether or not a qualifying biobased product overlaps with EPA-designated product and which product should be afforded the preference in purchasing.

<sup>4</sup> Determination of the preference compliance date for metalworking fluids--high performance soluble, semi-synthetic, and synthetic oils is deferred until USDA identifies two or more manufacturers of biobased products within this subcategory. At that time, USDA will publish a document in the Federal Register announcing that Federal agencies have one year from the date of publication to give procurement preference to biobased metalworking fluids--high performance soluble, semi-synthetic, and synthetic oils.

<sup>5</sup> Determination of the compliance date for synthetic ester-based fluid-filled transformers is deferred until USDA identifies two or more manufacturers of synthetic ester-based fluid-filled transformers. At that time, USDA will publish a document in the Federal Register announcing that Federal agencies have one year from the date of publication to give procurement preference to biobased synthetic ester-based fluid-filled transformers.)

<sup>6</sup> Qualifying biobased products that fall under the “films” item, may, in some cases, overlap with the EPA-designated recovered content product. See checklist item O4.1.6.US for details on the recycled content product requirements. USDA is requesting that manufacturers of these qualifying biobased products provide information on the BioPreferred Web site of qualifying biobased products about the intended uses of the product, information on whether or not the product contains any recovered material, in addition to biobased ingredients, and performance standards against which the product has been tested. This information will assist Federal agencies in determining whether or not a qualifying biobased product overlaps with EPA-designated product and which product should be afforded the preference in purchasing.

<sup>7</sup> Qualifying biobased products that fall under the “disposable container” item, may, in some cases, overlap with the EPA-designated recovered content product. See checklist item O4.1.6.US for details on the recycled content product requirements. USDA is requesting that manufacturers of these qualifying biobased products provide information on the BioPreferred Web site of qualifying biobased products about the intended uses of the product, information on whether or not the product contains any recovered material, in addition to biobased ingredients, and performance standards against which the product has been tested. This information will assist Federal agencies in determining whether or not a qualifying biobased product overlaps with EPA-designated product and which product should be afforded the preference in purchasing.)

<sup>8</sup> Qualifying biobased products that fall under the “fertilizer” item, or the “sorbents” item may, in some cases, overlap with the EPA-designated recovered content product. See checklist item O4.1.6.US for details on the recycled content product requirements. USDA is requesting that manufacturers of these qualifying biobased products provide information on the BioPreferred Web site of qualifying biobased products about the intended uses of the product, information on whether or not the product contains any recovered material, in addition to biobased ingredients, and

performance standards against which the product has been tested. This information will assist Federal agencies in determining whether or not a qualifying biobased product overlaps with EPA-designated product and which product should be afforded the preference in purchasing.)

<sup>9</sup> Qualifying biobased products that fall under the “carpet” item may, in some cases, overlap with the EPA-designated recovered content product. See checklist item O4.1.6.US for details on the recycled content product requirements. USDA is requesting that manufacturers of these qualifying biobased products provide information on the BioPreferred Web site of qualifying biobased products about the intended uses of the product, information on whether or not the product contains any recovered material, in addition to biobased ingredients, and performance standards against which the product has been tested. This information will assist Federal agencies in determining whether or not a qualifying biobased product overlaps with EPA-designated product and which product should be afforded the preference in purchasing.

<sup>10</sup> Qualifying biobased products that fall under this item may, in some cases, overlap with the following EPA-designated recovered content product: Lubricating oils containing re-refined oil. USDA is requesting that manufacturers of these qualifying biobased products provide information for the BioPreferred Web site of qualifying biobased products about the intended uses of the product, information on whether or not the product contains any recovered material, in addition to biobased ingredients, and performance standards against which the product has been tested. This information will assist Federal agencies in determining whether or not a qualifying biobased product overlaps with EPA-designated re-refined lubricating oils and which product should be afforded the preference in purchasing.

<sup>11</sup> Qualifying products within this item may overlap with the EPA-designated recovered content product: Landscaping products—“compost” and “hydraulic mulch”. USDA is requesting that manufacturers of these qualifying biobased products provide information on the USDA Web site of qualifying biobased products about the intended uses of the product, information on whether or not the product contains any recovered material, in addition to biobased ingredients, and performance standards against which the product has been tested. This information will assist Federal agencies in determining whether or not a qualifying biobased product overlaps with EPA-designated landscaping products and which product should be afforded the preference in purchasing. Biobased mulch and compost materials within this designated item can compete with similar landscaping products with recycled content. Under the Resource Conservation and Recovery Act of 1976, section 6002, the U.S. Environmental Protection Agency designated landscaping products containing recovered materials as items for which Federal agencies must give preference in their purchasing programs. The designation can be found in the Comprehensive Procurement Guideline, 40 CFR 247.15.

<sup>12</sup> Qualifying products within this item may overlap with the EPA-designated recovered content product: Re-refined lubricating oils. USDA is requesting that manufacturers of these qualifying biobased products provide information on the BioPreferred Web site about the intended uses of the product, information on whether or not the product contains any recovered material, in addition to biobased ingredients, and performance standards against which the product has been tested. This information will assist Federal agencies in determining whether or not a qualifying biobased product overlaps with EPA-designated re-refined lubricating oils and which product should be afforded the preference in purchasing. Biobased multipurpose lubricant products within this designated item can compete with similar multipurpose lubricant products with recycled content. Under the Resource Conservation and Recovery Act of 1976, section 6002, the U.S. Environmental Protection Agency designated re-refined lubricating oils containing recovered materials as items for which Federal agencies must give preference in their purchasing programs. The designation can be found in the Comprehensive Procurement Guideline, 40 CFR 247.11.

## Appendix 6-3

### **Military Munitions as Solid Waste** **(Preamble to the Military Munitions Rule (MMR), 12 February 1997 Federal Register)** **[Added April 2003]**

(NOTE: If a military munition is classed as a waste military munition (WMM), that means it will either be a hazardous waste or a non-hazardous waste. Being classed as a WMM does not mean it is trash to be disposed of in the garbage. See the Hazardous Waste Management section of the U.S. TEAM Guide for guidance on waste classification and characterization.)

RCRA refers to the Resource Conservation and Recovery act that is the sources of standards for hazardous waste and non-hazardous waste classification and disposal.

#### **Interpretive guidance is provided for the following situations:**

- **When military munitions are NOT a WMM:**
  - Use as a product
  - Military Training Exercises
  - Tests and evaluations of munitions from operational ranges
  - Range clearance
  - RDT&E and military munitions
  - Unused military munitions
  - Repair, reuse, evaluation of malfunctions and misfires
  - Resource recovery and recycling (R3) of military munitions
  - Weapons testing
- **When military munitions ARE WMM:**
  - Munitions determined by an AMO to be a waste
  - Munitions abandoned with intent to dispose
  - Abandoned and subsequently recovered unused munitions
  - Munitions removed from storage for the purposes of treatment or disposal (The Magazine Door Rule)
  - Damaged, leaking, or deteriorated munitions
  - Off-Range treatment or disposal of debris, UXO, or used/fired military munitions
  - FUDS
  - Disassembly operations
  - Military munitions that land off-range
- *Military Munitions* - all ammunition products and components produced or used by or for the U.S. DoD or the U.S. Armed Services for national defense and security, including military munitions under the control of the DoD, the Coast Guard, the DOE, and National Guard personnel. The term military munitions includes: confined gaseous, liquid, and solid propellants, explosives, pyrotechnics, chemical and riot control agents, smokes and incendiaries used by DoD components, including bulk explosives and chemical warfare agents, chemical munitions, rockets, guided and ballistic missiles, bombs, warheads, mortar rounds, artillery ammunition, small arms ammunition, grenades, mines, torpedoes, depth charges, cluster munitions and dispensers, demolition charges, and devices and components thereof. Military munitions do not include wholly inert items, improvised explosive devices, and nuclear weapons, nuclear devices, and nuclear components thereof. However, the term does include non-nuclear components of nuclear devices, managed under DOE's nuclear weapons program after all required sanitization operations under the Atomic Energy Act of 1954, as amended, have been completed (40 CFR 260.10).

## **When Military Munitions Are NOT a WMM**

### **Use as a Product**

Under RCRA, the use of products for their intended purpose, even when the use of the product results in deposit on the land, does not necessarily constitute “discard,” is not waste management, and is not subject to regulation under RCRA. (FR, 12 February 1997, page 6628, paragraph G(1))

### **Military Training Exercises**

Munitions used in the training of military personnel and explosive ordnance disposal (EOD) personnel are not regulated under RCRA. USEPA views such training, which could include training military personnel in the destruction of unused propellant and other munitions, to constitute the normal use of a product, rather than waste disposal. For example, to ensure that military personnel can safely and efficiently destroy propellant during wartime, military training exercises involving artillery and mortar rounds typically include training in the safe burning of unused propellant. In USEPA's view, the training of military personnel in the wartime use of munitions is a legitimate use that lies outside the scope of RCRA. Such training exercises typically follow detailed protocols for training military personnel in the handling and burning of unused propellants. (FR, 12 February 1997, page 6628, paragraph G(1)(a))

### **Range Clearance**

EPA considers range management to be a necessary part of the safe use of munitions for their intended purpose; thus, the range clearance activity is an intrinsic part of training or testing. Furthermore, from an environmental perspective, it makes no difference whether ordnance explodes on impact or is subsequently detonated by an EOD specialist. Therefore, the MMR excludes range clearance exercises (i.e., the recovery, collection, and on-range treatment or destruction of unexploded ordnance) at active or inactive ranges from RCRA Subtitle C regulation. (FR, 12 February 1997, page 6628, paragraph G(1)(c))

### **Unused Military Munitions**

Unused military munitions that are being repaired, reused, recycled, reclaimed, disassembled, reconfigured, or otherwise subjected to materials recovery activities are not solid waste. Therefore these activities are not subject to RCRA, unless such activities involve use constituting disposal, or burning for energy recovery. (FR, 12 February 1997, page 6629, paragraph G(2))

Unused military munitions, in USEPA's view, are unused “products” comparable to unused commercial products stored by manufacturers or their customers. Under RCRA, unused products do not become “waste” until they become “discarded material.” USEPA believes that an unused product becomes “discarded” when intent to discard the material is demonstrated. FR, 12 February 1997, page 6626, paragraph F(2)

### **Weapons Testing**

Munitions used in weapons research, development, testing, and evaluation programs are not regulated under RCRA. Testing munitions, or using munitions to test a weapon system, to determine their performance capabilities, clearly falls within the definition of use of a material/product for its intended purposes. USEPA also considers the removal of a used or fired munition from a testing or training firing range for further testing and evaluation to be within the definition of use of a material for its intended purpose (FR, 12 February 1997, page 6628, paragraph G(1)(b)).

## **When Military Munitions Are WMM**

### **Munitions Determined by an Authorized Military Official (AMO) To Be a Waste**

An AMO may identify an unused military munition as a RCRA “solid waste.” For example, in 1984, the Department of the Army determined that M55 rockets are hazardous waste. DoD made this decision because the rockets' delivery system no longer existed, and because DoD decided, for operational reasons, that the rockets would not be used in military operations, and that they would not be sold or reclaimed. These rockets are now being regulated as hazardous waste under RCRA interim status or permit requirements. USEPA expects that the declaration would be in writing. As explained earlier, a decision under DoD's classification systems that a munition is “unserviceable,” or the transfer of a munition into a “demilitarization” account would not, by itself, constitute a decision that a munition is a solid waste. (FR, 12 February 1997, page 6627, paragraph F(4))

### **Munitions Abandoned With Intent to Dispose**

An unused munition becomes discarded, and, therefore, a solid waste for regulatory purposes when it is or has been abandoned by being disposed of (e.g., buried or landfilled), burned or incinerated, or otherwise treated prior to disposal. Thus, open burning/open detonation or incineration of unused munitions (except when done during an emergency response or during training in use of a product) is regulated under the RCRA Subtitle C standards for hazardous waste, including the 40 CFR 270 permit requirements (assuming the waste munitions meet the definition of “hazardous waste”). FR, 12 February 1997, page 6626, paragraph F(1))

### **Abandoned and Subsequently Recovered Unused Munitions**

Similarly, unused munitions that were buried or landfilled in the past are considered abandoned, and, therefore, are solid waste, and, if hazardous, they would become subject to applicable Subtitle C regulation when unearthed and further managed. USEPA emphasizes that this provision will not bring use of military munitions for their intended purposes--e.g., the firing of military rounds--within the regulatory scope of RCRA. The use of a product for its intended purpose (in this case a military munition), in USEPA's view, is not a waste management activity and does not constitute abandonment or disposal. (FR, 12 February 1997, page 6626, paragraph F(1))

### **Munitions Removed From Storage for the Purposes of Treatment or Disposal (The Magazine Door Rule)**

A military munition becomes a solid waste for regulatory purposes when it is removed from storage in a military magazine or other storage area for the purposes of disposal, burning, incineration, or other treatment prior to disposal. (FR, 12 February 1997, page 6626, paragraph F(2))

The term “military magazine or other storage area” refers to all types of military munitions storage units allowed under the DoD Explosives Safety Board (DDESB) standards (DoD 6055.9-STD), which are mandatory for use by all DoD components, including outdoor or open storage areas, sheds, bunkers, and earth-covered and aboveground magazines. (FR, 12 February 1997, page 6626, paragraph F(2))

Unused military munitions, in USEPA's view, are unused “products” comparable to unused commercial products stored by manufacturers or their customers. Under RCRA, unused products do not become “waste” until they become “discarded material.” USEPA believes that an unused product becomes “discarded” when intent to discard the material is demonstrated. FR, 12 February 1997, page 6626, paragraph F(2))

DoD's classification of a munition in one of the various DoD "demilitarization" accounts does not, in USEPA's view, constitute a decision to discard the material because, pursuant to DoD's practices, such a classification does not necessarily evidence intent to discard that munition. Ammunition classified as "Condition Code H" or as "unserviceable," or in a demilitarization account (such as the Army's Resource Recovery and Disposition Account) for example, may be either returned to service after further review, or in some cases after reprocessing; sold for non-military purposes or to nations that maintain weapons that utilize these munitions; or otherwise reused, reclaimed, or recycled. Even usable munitions scheduled for disposal may be called back into service, if needed, and thus may still also serve a deterrent purpose.

In USEPA's view, the appropriate point at which to consider most unused military munitions to be a solid waste is when the material is finally removed from storage for the purpose of disposal or treatment prior to disposal. In practical terms, this provision means that storage of unused munitions is, for the most part, not subject to RCRA regulation; however, once a munition is removed from a magazine for the purpose of disposal or treatment prior to disposal, it is a solid waste and is potentially regulated under Subtitle C of RCRA. FR, 12 February 1997, page 6626, paragraph F(2)

EPA emphasizes that this provision will trigger RCRA coverage only where a decision to treat or dispose of the munition has clearly been made (FR, 12 February 1997, page 6626, paragraph F(2)).

Disarmament conventions and Congressional directives to demilitarize a weapons system should not be interpreted as a decision to discard a munition. In many cases, the provisions in the treaties or conventions do not equate to a decision to discard a specific munition in that they allow, for example, for implementation schedules, retaliatory use, and very specific verification procedures that do not equate to the process established under RCRA (FR, 12 February 1997, page 6633, paragraph K).

#### *Damaged, Leaking, or Deteriorated Munitions*

EPA recognizes that under certain circumstances military munitions in storage may deteriorate to a point where they are no longer "products" in any meaningful sense and indeed may present a potential safety hazard or environmental threat. For example, if the stabilizers in a propellant have deteriorated to the point at which there is such a significant hazard of auto-ignition that the only options available to DoD are treatment or disposal, that propellant would be a solid waste. If, however, the propellant had not deteriorated to this point and could reasonably be reclaimed, it would not be a solid waste. Similarly, leaking chemical munitions that cannot be put into serviceable condition, and that cannot be reasonably recycled or used for other purposes would also be a solid waste. A leaking chemical munition that has been overpacked is so unlikely to ever be used, repaired, or recycled, that USEPA views such a munition as a solid waste unless DoD already has in place an established repair or recycling plan (FR, 12 February 1997, page 6627, paragraph F(3)).

A leaking chemical munition or agent container (e.g., a one ton chemical container), however, may be repaired and the material still considered to be a product, not a solid waste (FR, 12 February 1997, page 6627, paragraph F(3)).

#### *Off-Range Treatment or Disposal of Debris, UXO, or Used/Fired Military Munitions*

Any debris or unexploded ordnance (UXO) shipped off-range for treatment or disposal is a solid waste, and if a hazardous waste, it would potentially be subject to the RCRA Subtitle C requirements. However, it would not be a solid waste if shipped off-range for further evaluation, unless the evaluation is related to treatment and disposal (FR, 12 February 1997, page 6628, paragraph G(1)(c)).

Used or fired munitions are solid wastes when they are removed from their landing spot and then either (1) managed off-range--i.e., when transported off-range and stored, reclaimed, treated, or disposed of, or (2) disposed of (i.e., buried or landfilled) on-range. In both cases, once the used or fired munition is a solid waste, it is potentially subject to regulation as a hazardous waste (FR, 12 February 1997, page 6632, paragraph I).

#### FUDS

Former defense installations no longer under military control (i.e., Formerly Used Defense Sites or FUDS) sometimes contain unexploded ordnance or munitions fragments. Used or fired munitions removed from their landing spot and transported off-range would have to be handled under RCRA Subtitle C (if they are "hazardous"), except in emergency situations. Similarly, used or fired munitions resulting from military research or training exercises at locations other than ranges (e.g., in testing laboratories) would be considered solid waste when removed from the site of use and sent to treatment or disposal (FR, 12 February 1997, page 6632, paragraph I).

#### Disassembly Operations

Once the materials recovery activities are completed, any remaining residuals requiring disposal or treatment prior to disposal are solid wastes that, if hazardous, would be subject to the subtitle C regulations (FR, 12 February 1997, page 6629, paragraph G(2)).

#### Military Munitions That Land Off-Range

Munitions that land off range that are not promptly rendered safe (if necessary) and/or retrieved, are statutory solid wastes and potentially subject to RCRA corrective action or section 7003 authorities. This perspective is based on the view that a failure to render safe and retrieve a munition that lands off range would be evidence of intent to discard the munition, just as the failure to respond to a spill of a hazardous material could be evidence of intent to discard. "Rendering safe" might include disarming action to prevent an explosion as well as destruction of the ordnance. If remedial action were infeasible--for example, the off-range munition wastes could not be removed because the munition was deeply buried, located in inaccessible terrain or could not be located--the operator of the range would be required to maintain a record of the event, including the type of munition that was fired off range and its location (if known), for as long as any threat remains (FR, 12 February 1997, page 6632, paragraph I).

## SECTION 7

### PESTICIDE MANAGEMENT U.S. TEAM Guide, December 2018

#### A. Applicability

This section applies to facilities which use, store, or handle pesticides. Pesticides are regulated on the Federal level and the state level.

It must be noted that pesticides by nature are hazardous materials and are subject to hazardous materials management regulations. Please see Section 3, Hazardous Materials Management. In this document, the term pesticides include herbicides, fungicides, insecticides, and rodenticides.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment. Additionally, the requirements in the sections titled Hazardous Materials Management, Hazardous Waste Management, and Wastewater Management need to be assessed when reviewing pesticides

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions which have been added or revised as a result of this review are identified as either being reviewed, revised or added in September 2000, for example [**Added September 2000**].

#### B. Federal Legislation

- *The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)*. This act, as last amended in December 1991, 7 U.S. Code (USC) 136-136y, deals with the sale, distribution, and use of pesticides. FIFRA provides the USEPA with the authority to oversee, among other things, the registration, distribution, sale and use of pesticides. The Act applies to all types of pesticides, including insecticides, herbicides, fungicides, rodenticides, and antimicrobials [**Revised November 2001**].
- *The Endangered Species Act (ESA)* of 1973. The purpose of this act, (16 USC 1531-1547, et al, last amended in October, 1988), is to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions for protection of endangered species (16 USC 1531(b)). Under ESA, the policy of Congress is that all Federal departments and agencies must seek to conserve endangered species and threatened species and must use their authorities in furtherance of the purposes of this act. Further, Federal agencies must cooperate with state and local agencies to resolve water resource issues in concert with conservation of endangered species (16 USC 1531(c)).
- EO 12088, *Federal Compliance with Pollution Standards*. This EO, dated 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the Agency funds meet applicable Federal, state, and local environmental requirements for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure

that sufficient funds for environmental compliance are included in the agency budget. Sections 1-4, "Pollution Control Plan" was revoked by EO 13148 [**Revised October 2002**].

### C. State/Local Requirements

For information on regulations in specific states, see the State Supplements to TEAM Guide.

State pesticide regulatory programs are required to be at least as stringent as FIFRA. State and local programs typically contain regulations which are tailored to an industry or activity which is prevalent or particularly sensitive in a state. State and local pesticide regulations in many cases provide more stringent standards or specifically identify a requirement which may be qualitatively regulated under the Federal program. State and local pesticide programs generally include regulations which address the following topics:

1. restrictions or requirements for the sale, distribution, or use of selected pesticides
2. disposal requirements for excess pesticides and pesticide wastes such as pesticide containers
3. restrictions on the control of specific animal or insect species
4. specifications for bulk pesticide storage tanks, storage facilities
5. operational requirements for selected application methods
6. recordkeeping and applicator certification requirements.

The precise applicability of state pesticide requirements to Federal personnel is currently under discussion. A helpful guide to state requirements for pesticide storage is the USEPA document, USEPA 734-R- 92-012, September 1992, *USEPA State of the States Report: Pesticide Storage, Disposal and Transportation*.

### D. Key Compliance Requirements

- Pesticide Application - The DoD is an USEPA approved Federal Certifying Agency under FIFRA. Therefore the DoD has an USEPA approved training and pesticide application certification plan, *DoD Plan for the Certification of Applicators of Restricted-Use Pesticides*, 1985, that allows the DoD, in the same manner as states, to specify more stringent training, handling, recordkeeping and other requirements than found in Federal regulations. Under this plan, DoD personnel can be trained and certified under the DoD plan are not required to have state certification. The DoD Plan does not apply to the civil works functions of the Army. But contractors used for pest management must have current state certification for the categories of applications being performed. [**Revised October 2002**].
- Experimental Use Permit - Any person accumulating information necessary to register a pesticide or reregister a pesticide for a use not previously approved is required to obtain an experimental use permit (EUP). Pesticides under EUPs cannot be sold or distributed except in limited circumstances. The application process for an experimental use permit requires the submission of extensive data and the data required is based on the pesticide and pesticide use under consideration. Once a permit is granted, the permittee is required to supervise and evaluate the results of testing, submit reports, and maintain extensive documentation (40 CFR Part 172) [**Added October 2001**].
- Pesticide Storage, Mixing, and Preparation Facilities - Pesticide storage, mixing, and preparation activities must provide facilities and procedures to ensure safety of personnel. Facilities should have a ventilation system for all indoor pesticide mixing/preparation areas and an emergency deluge shower and eyewash station located to provide immediate access to all personnel performing mixing. Personal protective clothing and equipment needs to be provided and used by pest management personnel (29 CFR 1910.133).
- Pesticide Labeling - Every pesticide product is required to have label that clearly identifies contents, source, ingredients, and directions for use (40 CFR 156.10(a)) [**Added January 1999**].
- Worker Protection Standards - When applying pesticides in a greenhouse, nursery, farm, or a forest, workers are required to abide by entry restrictions and personal protection equipment (PPE) requirements. Agricultural

employers are required to notify workers of pesticide applications and the hazards associated with those applications and provide safety training. Notification is done orally and through the posting of signs. Agricultural employers are also required to provide decontamination supplies to workers for washing off pesticides and pesticide residues. Pesticide handlers have to meet requirements similar to agricultural employers (40 CFR Part 170) [Added April 2000].

#### E. Key Compliance Definitions

- *Accident* - an unexpected, undesirable event, caused by the use or presence of a pesticide, that adversely affects man or the environment (40 CFR 171.2) [Added October 2001].
- *Active Ingredient* - this term means (FIFRA sec. 2(a) and see also 40 CFR 152.3) [Added October 2001]:
  1. in the case of a pesticide other than a plant regulator, defoliant, desiccant, or nitrogen stabilizer, an ingredient which will prevent, destroy, repel, or mitigate any pest;
  2. in the case of a plant regulator, an ingredient which, through physiological action, will accelerate or retard the rate of growth or rate of maturation or otherwise alter the behavior of ornamental or crop plants or the product thereof;
  3. in the case of a defoliant, an ingredient which will cause the leaves or foliage to drop from a plant;
  4. in the case of a desiccant, an ingredient which will artificially accelerate the drying of plant tissue; and
  5. in the case of a nitrogen stabilizer, an ingredient which will prevent or hinder the process of nitrification, denitrification, ammonia volatilization, or decrease production through action affecting soil bacteria.
- *Acute Dermal LD50* - a statistically derived estimate of the concentration of a substance that would cause 50 percent mortality to the test population under specified conditions (40 CFR 152.3) [Reviewed September 2000].
- *Acute Inhalation LC50* - statistically derived estimate of the concentration of a substance that would cause 50 percent mortality to the test population under specified conditions (40 CFR 152.3) [Added October 2001].
- *Acute Oral LD50* - statistically derived estimate of the single oral dose of a substance that would cause 50 percent mortality to the test population under specified conditions (40 CFR 152.3) [Added October 2001].
- *Agricultural Commodity* - any plant, or part thereof, or animal, or animal product, produced by a person (including farmers, ranchers, vineyardists, plant propagators, Christmas tree growers, aquaculturists, floriculturists, orchardists, foresters, or other comparable persons) primarily for sale, consumption, propagation, or other use by man or animals (40 CFR 171.2) [Added October 2001].
- *Agricultural Emergency* - a sudden occurrence or set of circumstances which the agricultural employer could not have anticipated and over which the agricultural employer has no control, and which requires entry into a treated area during a restricted-entry interval, when no alternative practices would prevent or mitigate a substantial economic loss (40 CFR 170.112(d)) [Added October 2001].
- *Agricultural Employer* - any person who is an owner of, or is responsible for the management or condition of, an agricultural establishment, and who employs any worker or handler (40 CFR 170.305) [Added October 2001, Revised October 2016].
- *Agricultural Establishment* - any farm, forest operation, or nursery engaged in the outdoor or enclosed space production of agricultural plants. An establishment that is not primarily agricultural is an agricultural establishment if it produces agricultural plants for transplant or use (in part or their entirety) in another location instead of purchasing the agricultural plants (40 CFR 170.305) [Added October 2001, Revised October 2016].
- *Agricultural Pesticide* - any pesticide product labeled for use in or on a farm, forest, nursery, or greenhouse (40 CFR 165.3) [Added January 2009].

- *Agricultural Plant* - any plant, or part thereof, grown, maintained, or otherwise produced for commercial purposes, including growing, maintaining or otherwise producing plants for sale or trade, for research or experimental purposes, or for use in part or their entirety in another location. Agricultural plant includes, but is not limited to, grains, fruits and vegetables; wood fiber or timber products; flowering and foliage plants and trees; seedlings and transplants; and turf grass produced for sod. Agricultural plant does not include pasture or rangeland used for grazing (40 CFR 170.305) [**Added October 2001, Revised October 2016**].
- *Application Exclusion Zone* - the area surrounding the application equipment that must be free of all persons other than appropriately trained and equipped handlers during pesticide applications (40 CFR 170.305) [**Added October 2016**].
- *Biological Control Agent* - any living organism applied to or introduced into the environment that is intended to function as a pesticide against another organism declared to be a pest by the USEPA or authorized regulatory agency (40 CFR 152.3) [**Added October 2001**].
- *Calibration of Equipment* - measurement of dispersal or output of application equipment and adjustment of such equipment to control the rate of dispersal, and droplet or particle size of a pesticide dispersed by the equipment (40 CFR 171.2) [**Added October 2001**].
- *Capacity* -, as applied to containers, the rated capacity of the container (40 CFR 165.3) [**Added January 2009**].
- *Categories of Commercial Applicators* - in relation to the certification of pesticide applicators, these include the following (40 CFR 171.3) [**Added October 2001**]:
  1. *Agricultural pest control--Plant*. This category includes commercial applicators using or supervising the use of restricted use pesticides in production of agricultural crops, including without limiting the foregoing, tobacco, peanuts, cotton, feed grains, soybeans and forage; vegetables; small fruits; tree fruits and nuts; as well as on grasslands and non-crop agricultural lands.
  2. *Agricultural pest control -- Animal*. This category includes commercial applicators using or supervising the use of restricted use pesticides on animals, including without limiting the foregoing, beef cattle, dairy cattle, swine, sheep, horses, goats, poultry, and livestock, and to places on or in which animals are confined. Doctors of Veterinary Medicine engaged in the business of applying pesticides for hire, publicly holding themselves out as pesticide applicators, or engaged in large-scale use of pesticides are included in this category.
  3. *Forest pest control*. This category includes commercial applicators using or supervising the use of restricted use pesticides in forests, forest nurseries, and forest seed producing areas.
  4. *Ornamental and turf pest control*. This category includes commercial applicators using or supervising the use of restricted use pesticides to control pests in the maintenance and production of ornamental trees, shrubs, flowers, and turf.
  5. *Seed treatment*. This category includes commercial applicators using or supervising the use of restricted use pesticides on seeds.
  6. *Aquatic pest control*. This category includes commercial applicators using or supervising the use of any restricted use pesticide purposefully applied to standing or running water, excluding applicators engaged in public health related activities included in category 8 below.
  7. *Right-of-way pest control*. This category includes commercial applicators using or supervising the use of restricted use pesticides in the maintenance of public roads, electric powerlines, pipelines, railway rights-of-way or other similar areas.
  8. *Industrial, institutional, structural and health related pest control*. This category includes commercial applicators using or supervising the use of restricted use pesticides in, on, or around food handling establishments, human dwellings, institutions, such as schools and hospitals, industrial establishments, including warehouses and grain elevators, and any other structures and adjacent areas, public or private; and for the protection of stored, processed, or manufactured products.
  9. *Public health pest control*. This category includes state, federal or other governmental employees using or supervising the use of restricted use pesticides in public health programs for the management and control of pests having medical and public health importance.

10. *Regulatory pest control*. This category includes state, federal or other governmental employees who use or supervise the use of restricted use pesticides in the control of regulated pests.
  11. *Demonstration and research pest control*. This category includes:
    - a. individuals who demonstrate to the public the proper use and techniques of application of restricted use pesticides or supervise such demonstration, and
    - b. persons conducting field research with pesticides, and in doing so, use or supervise the use of restricted use pesticides. Included in the first group are such persons as extension specialists and county agents, commercial representatives demonstrating pesticide products, and those individuals demonstrating methods used in public programs. The second group includes: state, federal, commercial and other persons conducting field research on or utilizing restricted use pesticides.
- *Certified Applicator* - any individual who is certified by the USEPA or the state to use or supervise the use of any restricted-use pesticide covered by that individual's certification (7 CFR 110.2).
  - *Chemigation* - the application of pesticides through irrigation systems (40 CFR 170.305) **[Added October 2016]**.
  - *Closed System* - an engineering control used to protect handlers from pesticide exposure hazards when mixing and loading pesticides (40 CFR 170.305) **[Added October 2016]**.
  - *Commercial Applicator* - a certified applicator, other than a private applicator, who uses or supervises the use of any pesticide, for any purpose, on any property, or performs other pest control related activities (40 CFR 171.2) **[Reviewed September 2000]**.
  - *Commercial Pesticide Handler Employer* - any person, other than an agricultural employer, who employs any handler to perform handler activities on an agricultural establishment. A labor contractor who does not provide pesticide application services or supervise the performance of handler activities, but merely employs laborers who perform handler activities at the direction of an agricultural or handler employer, is not a commercial pesticide handler employer (40 CFR 170.305) **[Added October 2016]**.
  - *Commercial Pesticide Handling Establishment* - any enterprise, other than an agricultural establishment, that provides pesticide handler or crop advising services to agricultural establishments (40 CFR 170.305) **[Added October 2016]**.
  - *Competent* - properly qualified to perform functions associated with pesticide application, the degree of capability required being directly related to the nature of the activity and the associated responsibility (40 CFR 171.2) **[Added October 2001]**.
  - *Common Exposure Route* - a likely way (oral, dermal, respiratory) by which a pesticide may reach and/or enter an organism (40 CFR 171.2) **[Added October 2001]**.
  - *Crisis Exemption* - this is utilized in an emergency condition when the time from discovery of the emergency to the time when the pesticide use needed is insufficient to allow for the authorization of a specific quarantine exemption or public health exemption (40 CFR 166.2) **[Reviewed September 2000]**.
  - *Crop Advisor* - any person who is assessing pest numbers, damage, pesticide distribution, or the status or requirements of agricultural plants (40 CFR 170.305) **[Added October 2016]**.
  - *Designated Representative* - any persons designated in writing by a worker or handler to exercise a right of access on behalf of the worker or handler to request and obtain a copy of the pesticide application and hazard information required by 30 CFR 170.309(h) in accordance with 40 CFR 170.311(b) (40 CFR 170.305) **[Added October 2016]**.
  - *Device* - any instrument or contrivance (other than a firearm) which is intended for trapping, destroying, repelling, or mitigating any pest or any other form of plant or animal life (other than man and other than bacteria, virus, or other microorganism on or in living man or other living animals); but not including equipment used for the

application of pesticides when sold separately therefrom (FIFRA sec. 2(h), and see also 40 CFR 167.3 and 40 CFR 169.1) **[Added October 2001]**.

- *Dietary LC50* – a statistically derived estimate of the concentration of a test substance in the diet that would cause 50 percent mortality to the test population under specified conditions (40 CFR 152.161) **[Added October 2001]**.
- *Dilutable* - that the pesticide product's labeling allows or requires the pesticide product to be mixed with a liquid diluent prior to application or use (40 CFR 165.3) **[Added January 2009]**.
- *Distribute(-d)(-tion) or Sell (Sold) (Sale)* - the acts of distributing, selling, offering for sale, holding for sale, shipping, holding for shipment, delivering for shipment, or receiving and (having so received) delivering or offering to deliver, or releasing for shipment to any person in any state (40 CFR 152.3) **[Added October 2001]**.
- *Dry Pesticide* - any pesticide that is in solid form and that has not been combined with liquids; this includes formulations such as dusts, wettable powders, dry flowables, water-soluble powders, granules, and dry baits (40 CFR 165.3) **[Added January 2009]**.
- *Early Entry* - entry by a worker into a treated area on the agricultural establishment after a pesticide application is complete, but before any restricted-entry interval for the pesticide has expired (40 CFR 170.305) **[Added October 2016]**.
- *Emergency Condition* - an urgent, non-routine situation that requires the use of a pesticide(s) and shall be deemed to exist when (40 CFR 166.3) **[Added October 2001]**:
  1. No effective pesticides are available under the Act that have labeled uses registered for control of the pest under the conditions of the emergency; and
  2. No economically or environmentally feasible alternative practices which provide adequate control are available;
  3. The situation:
    - a. Involves the introduction or dissemination of a pest new to or not theretofore known to be widely prevalent or distributed within or throughout the United States and its territories; or
    - b. Will present significant risks to human health; or
    - c. Will present significant risks to threatened or endangered species, beneficial organisms, or the environment; or
    - d. Will cause significant economic loss due to:
      - i. An outbreak or an expected outbreak of a pest; or
      - ii. A change in plant growth or development caused by unusual environmental conditions where such change can be rectified by the use of a pesticide(s).
- *Employ* - to obtain, directly or through a labor contractor, the services of a person in exchange for a salary or wages, including piece-rate wages, without regard to who may pay or who may receive the salary or wages. It includes obtaining the services of a self employed person, an independent contractor, or a person compensated by a third party, except that it does not include an agricultural employer obtaining the services of a handler through a commercial pesticide handler employer or a commercial pesticide handling establishment (40 CFR 170.305) **[Added October 2016]**.
- *Enclosed Cab* - a cab with a nonporous barrier that totally surrounds dermal contact with pesticides that are being applied outside of the cab (40 CFR 170.305) **[Added October 2016]**.
- *Enclosed Space Production* - production of an agricultural plant indoors or in a structure or space that is covered in whole or in part by any nonporous covering and that is large enough to permit a person to enter (40 CFR 170.305) **[Added October 2016]**.

- *Excepted Agricultural Applications for Handler Standards* - 40 CFR 170.202 through 170.260 does not apply when any pesticide is applied on an agricultural establishment in the following circumstances (40 CFR 170.203) **[Added April 2000]**:
  1. for mosquito abatement, Mediterranean fruit fly eradication, or similar wide-area public pest control programs sponsored by governmental entities
  2. on livestock or other animals, or in or about animal premises
  3. on plants grown for other than commercial or research purposes, which may include plants in habitations, home fruit and vegetable gardens, and home greenhouses
  4. on plants that are in ornamental gardens, parks, and public or private lawns and grounds that are intended only for aesthetic purposes or climatic modification
  5. in a manner not directly related to the production of agricultural plants, including, but not limited to, structural pest control, control of vegetation along rights-of-way and in other noncrop areas, and pasture and rangeland use
  6. for control of vertebrate pests
  7. as attractants or repellents in traps
  8. on the harvested portions of agricultural plants or on harvested timber; and
  9. for research uses of unregistered pesticides.
- *Excepted Agricultural Applications for Worker Standards* - 40 CFR 170.102 through 170.160 does not apply when any pesticide is applied on an agricultural establishment in the following circumstances (40 CFR 170.103) **[Added April 2000]**:
  1. for mosquito abatement, Mediterranean fruit fly eradication, or similar wide-area public pest control programs sponsored by governmental entities
  2. on livestock or other animals, or in or about animal premises
  3. on plants grown for other than commercial or research purposes, which may include plants in habitations, home fruit and vegetable gardens, and home greenhouses
  4. on plants that are in ornamental gardens, parks, and public or private lawns and grounds that are intended only for aesthetic purposes or climatic modification
  5. by injection directly into agricultural plants, except this does not include “hack and squirt,” “frill and spray,” “chemigation, soil-incorporation, or soil-injection
  6. in a manner not directly related to the production of agricultural plants, including, but not limited to, structural pest control, control of vegetation along rights-of-way and in other noncrop areas, and pasture and rangeland use
  7. for control of vertebrate pests
  8. as attractants or repellents in traps
  9. on the harvested portions of agricultural plants or on harvested timber; and
  10. for research uses of unregistered pesticides.
- *Exclusive Use Study* - a study that meets each of the following requirements (provided that, a study is an exclusive use study only during the 10-year period following the date of the first registration) (40 CFR 152.83) **[Added October 2001]**:
  1. The study pertains to a new active ingredient (new chemical) or new combination of active ingredients (new combination) first registered after September 30, 1978;
  2. The study was submitted in support of, or as a condition of approval of, the application resulting in the first registration of a product containing such new chemical or new combination (first registration), or an application to amend such registration to add a new use; and
  3. The study was not submitted to satisfy a data requirement imposed under FIFRA section 3(c)(2)(B).
- *Existing Containment Structure* – one whose installation began on or before 16 November 2006 (40 CFR 165.83(b)) **[Added October 2006]**.

- *Experimental Animals* - individual animals or groups of animals, regardless of species, intended for use and used solely for research purposes and does not include animals intended to be used for any food purposes (40 CFR 172.1) **[Added October 2001]**.
- *Experimental Use Permit Review* - review of an application for a permit pursuant to section 5 of FIFRA to apply a limited quantity of a pesticide in order to accumulate information necessary to register the pesticide. The application may be for a new chemical or for a new use of an old chemical. The fee applies to such experimental uses of a single unregistered active ingredient (no limit on the number of other active ingredients, in a tank mix, already registered for the crops involved) and no more than three crops. This fee does not apply to experimental use permits required for small-scale field testing of microbial pest control agents (40 CFR 152.403) **[Added October 2001]**.
- *Farm* - any operation, other than a nursery or forest, engaged in the outdoor production of agricultural plants (40 CFR 170.3) **[Added October 2001]**.
- *Forest* - any operation engaged in the outdoor production of any agricultural plant to produce wood fiber or timber products (40 CFR 170.3) **[Added October 2001]**.
- *Fumigant* - any pesticide product that is a vapor or gas, or forms a vapor or gas upon application, and whose pesticidal action is achieved through the gaseous or vapor state (40 CFR 170.305) **[Added October 2016]**.
- *Greenhouse* - any operation engaged in the production of agricultural plants inside any structure or space that is enclosed with nonporous covering and that is of sufficient size to permit worker entry. This term includes, but is not limited to, polyhouses, mushroom houses, rhubarb houses, and similar structures. It does not include such structures as malls, atriums, conservatories, arboretums, or office buildings where agricultural plants are present primarily for aesthetic or climatic modification (40 CFR 170.3) **[Added October 2001]**.
- *Hand Labor* - any agricultural activity performed by hand or with hand tools that causes a worker to have substantial contact with plants, plant parts, or soil and other surfaces that may contain pesticide residues, except that hand labor does not include operating, moving, or repairing irrigation or watering equipment or performing crop advisor tasks (40 CFR 170.305) **[Added October 2016]**.
- *Handler* - any person, including a self-employed person, who is employed by an agricultural employer or commercial pesticide handler employer and performs any of the following activities (40 CFR 170.305) **[Added October 2016]**:
  1. Mixing, loading, or applying pesticides.
  2. Disposing of pesticides.
  3. Handling opened containers of pesticides, emptying, triple-rinsing, or cleaning pesticide containers according to pesticide product labeling instructions, or disposing of pesticide containers that have not been cleaned. The term does not include any person who is only handling unopened pesticide containers or pesticide containers that have been emptied or cleaned according to pesticide product labeling instructions.
  4. Acting as a flagger.
  5. Cleaning, adjusting, handling, or repairing the parts of mixing, loading, or application equipment that may contain pesticide residues.
  6. Assisting with the application of pesticides.
  7. Entering an enclosed space after the application of a pesticide and before the inhalation exposure level listed in the labeling has been reached or one of the ventilation criteria established by 40 CFR 170.405(b)(3) or the labeling has been met to operate ventilation equipment, monitor air levels, or adjust or remove coverings used in fumigation.
  8. Entering a treated area outdoors after application of any soil fumigant during the labeling-specified entry restricted period to adjust or remove coverings used in fumigation.
  9. Performing tasks as a crop advisor during any pesticide application or restricted-entry interval, or before the inhalation exposure level listed in the pesticide product labeling has been reached or one of the ventilation criteria established by 40 CFR 170.405(b)(3) or the pesticide product labeling has been met.

- *Handler Employer* - any person who is self-employed as a handler or who employs any handler (40 CFR 170.305) **[Added October 2016]**.
- *Hazard* - a probability that a given pesticide will have an adverse effect on man or the environment in a given situation, the relative likelihood of danger or ill effect being dependent on a number of interrelated factors present at any given time (40 CFR 171.2) **[Added October 2001]**.
- *Host* - any plant or animal on or in which another lives for nourishment, development, or protection (40 CFR 171.2) **[Added October 2001]**.
- *Immediate Family* - limited to the spouse, parents, stepparents, foster parents, father-in-law, mother-in-law, children, stepchildren, foster children, sons-in-law, daughters-in-law, grandparents, grandchildren, brothers, sisters, brothers-in-law, sisters-in-law, aunts, uncles, nieces, nephews, and first cousins. "First cousin" means the child of a parent's sibling, i.e., the child of an aunt or uncle (40 CFR 170.305) **[Added October 2016]**.
- *Institutional Use* - any application of a pesticide in or around any property or facility that functions to provide a service to the general public or to public or private organizations, including but not limited to (40 CFR 152.3) **[Added October 2001]**:
  1. Hospitals and nursing homes.
  2. Schools other than preschools and day care facilities.
  3. Museums and libraries.
  4. Sports facilities.
  5. Office buildings.
- *Label* - the written, printed, or graphic matter on, or attached to, the pesticide or device or any of its containers or wrappers (FIFRA sec. 2(p)(1)) **[Added October 2001]**.
- *Labor Contractor* - a person, other than a commercial pesticide handler employer, who employs workers or handlers to perform tasks on an agricultural establishment for an agricultural employer or a commercial pesticide handler employer (40 CFR 170.305) **[Added October 2016]**.
- *Make Available for Use* - to distribute, sell, ship, deliver for shipment, or receive and (having so received) deliver, to any person. However, the term excludes transactions solely between persons who are pesticide producers, registrants, wholesalers, or retail sellers, acting only in those capacities (40 CFR 171.2) **[Added October 2001]**.
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *New Containment Structure* – a structure whose installation began after 16 November 2006. Installation is considered to have begun if (40 CFR 165.83(a)) **[Added October 2006]**:
  1. the owner or operator has obtained all Federal, State, and local approvals or permits necessary to begin physical construction of the containment structure; and
  2. either a continuous on-site physical construction or installation program has started OR contractual obligations have been entered into where the contract cannot be canceled or modified without substantial loss, and must be for the physical construction or installation of the containment structure within a specific and reasonable time frame.
- *Nonrefillable Container* - a container that is not a refillable container and that is designed and constructed for one-time use and is not intended to be filled again with a pesticide for sale or distribution. Reconditioned containers are considered to be nonrefillable containers (40 CFR 165.3) **[Added January 2009]**.

- *Nursery* - any operation engaged in the outdoor production of any agricultural plant to produce cut flowers and ferns or plants that will be used in their entirety in another location. Such plants include, but are not limited to, flowering and foliage plants or trees; tree seedlings; live Christmas trees; vegetable, fruit, and ornamental transplants; and turfgrass produced for sod (40 CFR 170.3) [**Added October 2001**].
- *Ornamental* - trees, shrubs, and other plantings in and around habitations generally, but not necessarily located in urban and suburban areas, including residences, parks, streets, retail outlets, industrial and institutional buildings (40 CFR 171.2) [**Added October 2001**].
- *Outdoor Production* - production of an agricultural plant in an outside area that is not enclosed or covered in any way that would obstruct the natural air flow (40 CFR 170.305) [**Added October 2016**].
- *Outdoor Use* - any pesticide application that occurs outside enclosed manmade structures or the consequences of which extend beyond enclosed manmade structures, including, but not limited to, pulp and paper mill water treatments and industrial cooling water treatments (40 CFR 152.161) [**Added October 2001**].
- *Owner* - any person who has a present possessory interest (e.g., fee, leasehold, rental, or other) in an agricultural establishment. A person who has both leased such agricultural establishment to another person and granted that same person the right and full authority to manage and govern the use of such agricultural establishment is not an owner for purposes of 40 CFR 170 (40 CFR 170.305) [**Added October 2016**].
- *Package or Packaging*- the immediate container or wrapping, including any attached closure(s), in which the pesticide is contained for distribution, sale, consumption, use, or storage. The term does not include any shipping or bulk container used for transporting or delivering the pesticide unless it is the only such package (40 CFR 152.3 and 40 CFR 157.21) [**Added October 2001**].
- *Personal Protective Equipment (PPE)* - devices and apparel that are worn to protect the body from contact with pesticides or pesticide residues, including, but not limited to, coveralls, chemical-resistant suits, chemical-resistant gloves, chemical-resistant footwear, respirators, chemical-resistant aprons, chemical-resistant headgear, and protective eyewear (40 CFR 170.305) [**Added October 2016**].
- *Pesticide* - any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest; any substance or mixture of substances intended for use as a plant regulator, defoliant, or desiccant; and any nitrogen stabilizer, except that the term “pesticide” shall not include any article that is a “new animal drug” within the meaning of section 201(w) of the Federal Food, Drug, and Cosmetic Act (21 USC 321(w)), that has been determined by the Secretary of Health and Human Services not to be a new animal drug by a regulation establishing conditions of use for the article, or that is an animal feed within the meaning of section 201(x) of such Act (21 USC 321(x)) bearing or containing a new animal drug. The term “pesticide” does not include liquid chemical sterilant products (including any sterilant or subordinate disinfectant claims on such products) for use on a critical or semi-critical device, as defined in section 201 of the Federal Food, Drug, and Cosmetic Act (21 USC 321). For purposes of the preceding sentence, the term “critical device” includes any device which is introduced directly into the human body, either into or in contact with the bloodstream or normally sterile areas of the body and the term “semi-critical device” includes any device which contacts intact mucous membranes but which does not ordinarily penetrate the blood barrier or otherwise enter normally sterile areas of the body (FIFRA sec. 2(u), and see also 40 CFR 152.3, 40 CFR 152.8, and 40 CFR 152.10) [**Added October 2001**].
- *Pesticide Compatible As Applied to Containment* - that the containment construction materials are able to withstand anticipated exposure to stored or transferred substances without losing the capability to provide the required containment of the same or other substances within the containment area (40 CFR 165.3) [**Added January 2009**].
- *Pesticide Product* - a pesticide in the particular form (including composition, packaging, and labeling) in which the pesticide is, or is intended to be, distributed or sold. This includes any physical apparatus used to deliver or apply the pesticide if distributed or sold with the pesticide (40 CFR 152.3) [**Reviewed September 2000**].

- *Private Applicator* - a certified applicator who uses or supervises the use of any restricted-use pesticide for purposes of producing any agricultural commodity (7 CFR 100.2).
- *Public Health Exemption* - this may be authorized in an emergency condition to control a pest that will cause a significant risk to human health (40 CFR 166.2) **[Reviewed September 2000]**.
- *Quarantine Exemption* - this may be authorized in an emergency condition to control the introduction or spread of any pest new to or not theretofore known to be widely prevalent or distributed within and throughout the United States and its territories (40 CFR 166.2) **[Reviewed September 2000]**.
- *Residential Use* - use of a pesticide directly (40 CFR 152.3) **[Added October 2001]**:
  1. On humans or pets,
  2. In, on, or around any structure, vehicle, article, surface, or area associated with the household, including but not limited to areas such as non-agricultural outbuildings, non-commercial greenhouses, pleasure boats and recreational vehicles, or
  3. In any preschool or day care facility.
- *Residential Use* - use of a pesticide or device (40 CFR 157.21) **[Added October 2001]**:
  1. Directly on humans or pets;
  2. In, on, or around any structure, vehicle, article, surface or area associated with the household, including but not limited to areas such as non-agricultural outbuildings, non-commercial greenhouses, pleasure boats and recreational vehicles; or
  3. In or around any preschool or day care facility.
- *Restricted-Entry Interval* - the time after the end of a pesticide application during which entry to the treated area is restricted (40 CFR 156.203) **[Added October 2001]**.
- *Restricted-entry Interval* – the time after the end of a pesticide application during which entry into the treated area is restricted (40 CFR 170.305) **[Added October 2016]**.
- *Restricted-Use Pesticides* - pesticides designated for restricted use under the provisions of Section 3(d)(1)(c) of FIFRA (40 CFR 171.2) **[Reviewed September 2000]**.
- *Rinsate* - the liquid resulting from the rinsing of the interior of any equipment or container that has come in direct contact with any pesticide (40 CFR 165.3) **[Added January 2009]**.
- *Specific Exemption* - this exemption may be authorized in an emergency condition to avert (40 CFR 166.2) **[Reviewed September 2000]**:
  1. a significant economic loss
  2. a significant risk to endangered species, threatened species, beneficial organisms, or the environment.
- *Stationary Pesticide Container* - a refillable container that is fixed at a single facility or establishment, or, if not fixed, remains at the facility or establishment for at least 30 consecutive days, and that holds pesticide during the entire time (40 CFR 165.81(a)) **[Added October 2006]**.
- *Suspension Concentrate* - a stable suspension of solid particulate active ingredients in a liquid intended for dilution with water before use (40 CFR 165.3) **[Added January 2009]**.
- *Toxicity Category* - required warnings and precautionary statements are based on the toxicity category of the pesticide. The category is assigned on the basis of the highest hazard shown in the table listed in 40 CFR 156.10 (40 CFR 156.10(h)) **[Reviewed September 2000]**.

- *Treated Area* - any area to which a pesticide is being directed or has been directed (40 CFR 170.305) [**Added October 2016**].
- *Uncertified Person* - any person who is not holding a currently valid certification document indicating that he is certified under section 4 of FIFRA in the category of the restricted use pesticide made available for use (40 CFR 171.2) [**Added October 2001**].
- *Under the Direct Supervision Of* - the act or process whereby the application of a pesticide is made by a competent person acting under the instructions and control of a certified applicator who is responsible for the actions of that person and who is available if and when needed, even though such certified applicator is not physically present at the time and place the pesticide is applied (40 CFR 171.2) [**Added October 2001**].
- *Use* - as in “to use a pesticide” means any of the following (40 CFR 170.305) [**Added October 2016**]:
  1. Pre-application activities, including, but not limited to:
    - a. Arranging for the application of the pesticide.
    - b. Mixing and loading the pesticide.
    - c. Making necessary preparations for the application of the pesticide, including responsibilities related to worker notification, training of workers or handlers, providing decontamination supplies, providing pesticide safety information and pesticide application and hazard information, use and care of personal protective equipment, providing emergency assistance, and heat stress management.
  2. Application of the pesticide.
  3. Post-application activities intended to reduce the risks of illness and injury resulting from handlers’ and workers’ occupational exposures to pesticide residues during and after the restricted-entry interval, including responsibilities related to worker notification, training of workers or early-entry workers, providing decontamination supplies, providing pesticide safety information and pesticide application and hazard information, use and care of PPE, providing emergency assistance, and heat stress management.
  4. Other pesticide-related activities, including, but not limited to, transporting or storing pesticides that have been opened, cleaning equipment, and disposing of excess pesticides, spray mix, equipment wash waters, pesticide containers, and other pesticide-containing materials.
- *Washwater* - the liquid resulting from the rinsing of the exterior of any equipment or containers that have or may have come in direct contact with any pesticide or system maintenance compound, such as oil or antifreeze (40 CFR 165.3) [**Added January 2009**].
- *Worker* - any person, including a self-employed person, who is employed and performs activities directly relating to the production of agricultural plants on an agricultural establishment (40 CFR 170.305) [**Added October 2016**].
- *Worker Housing Area* - any place or area of land on or near an agricultural establishment where housing or space for housing is provided for workers or handlers by an agricultural employer, owner, labor contractor, or any other person responsible for the recruitment or employment of agricultural workers (40 CFR 170.305) [**Added October 2016**].

## F. Records To Review

- Records of pesticides purchased (purchase orders, inventory)
- Pesticide application records
- Description of the pest control program
- Certification status of pesticide applicators
- Pesticide disposal manifests
- Contract files
- Any emergency exemption granted to the Federal agency by the USEPA
- Recent ventilation rating for pesticide fume hood and pesticide mixing/storage areas

## G. Physical Features To Inspect

- Personnel protection equipment
- Pesticide application equipment
- Pesticide storage areas, including storage containers

## H. Guidance for Pesticide Management Checklist Users

	<b>REFER TO CHECKLIST ITEMS:</b>
All Facilities	PM.1.1.US. through PM.1.8.US.
Missing, Risk Management, and Positive Checklist Items	PM.2.1.US through PM.2.3.US
Pesticide Applicators	PM.5.1.US. and PM.5.2.US
Pesticide Application	
General	PM.10.1.US. and PM.10.2.US.
Agricultural Pesticides	PM.20.1.US. through PM.20.43.US
Documentation	PM.40.1.US
Storage, Mixing, Handling	PM.45.1.US. through PM.45.9.US.
Disposal	PM.55.1.US.

## Appendix 7-1

### Restricted-Use Pesticides (40 CFR 152.175)

The following uses of pesticide products containing the active ingredients specified below have been classified for restricted use and are limited to use by or under the direct supervision of a certified applicator.

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Acrolein	As sole active ingredient. No mixtures registered.	All uses.	Restricted.	Inhalation hazard to humans residue effects on avian species and aquatic organisms
Aldicarb	As sole active ingredient. No mixtures registered.	Ornamental uses (indoor and outdoor).	do	Other hazards-accident history.
		Agricultural crop uses.	Under further evaluation.	
Aluminum phosphide	As sole active ingredient. No mixtures registered.	do	do	Inhalation hazard to humans.
Azinphos methyl	All liquids with a concentration greater than 13.5%.	do	do	do
	All other formulations.	do	Under further evaluation.	
Carbofuran	All concrete suspensions and wettable powders 40% and greater.	do	do	Acute inhalation toxicity.
	All granular formulations.	Rice.	Under evaluation.	
	All granular and Fertilizer formulations.	All uses except rice.	do	
Chloropicrin	All formulations greater than 2%.	All uses	Restricted.	Acute inhalation toxicity
	All formulations.	Rodent control	Restricted.	Hazard to non-target organisms.
	All formulations 2% and less.	Outdoor uses (other than rodent control).	Unclassified.	
Clonitralid	All wettable powders 70% and greater.	All uses	do	Acute inhalation toxicity.
	All granulars and wettable powders.	Molluscide uses.	do	Effects on aquatic organisms.
	Pressurized sprays	Hospital antiseptics.	Unclassified.	

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
	0.55% and less.			
Dicrotophos	All liquid formulations 8% and greater.	All uses.	Restricted.	Acute dermal toxicity; residue effects on avian species (except for tree injections).
Disulfoton	All emulsifiable concentrates 65% and greater, all emulsifiable concentrates and concentrate solutions 21% and greater with fensulfothion 43% and greater, all emulsifiable concentrates 32% and greater in combination with 32% fensulfothion and greater.	do	Restricted.	do  Acute inhalation toxicity.
	Nonaqueous solution 95% and greater.	Commercial seed treatment.	Restricted.	Acute dermal toxicity.
	Granular formulations 10% and greater.	Indoor uses (greenhouse).	do	Acute inhalation toxicity.
Ethoprop	Emulsifiable concentrates 40% and greater.	do	do	Acute dermal toxicity.
	All granular and Fertilizer formulations.	do	Under evaluation.	
Ethyl parathion	All granular and dust formulations greater than 2% fertilizer formulations, wettable powders, emulsifiable concentrates, concentrated suspensions, concentrated solutions.	do	Restricted.	Inhalation hazard to humans. Acute dermal toxicity. Residue effects or mammalian, aquatic, avian species. Inhalation hazard to humans.
	Smoke fumigants.	do	do	Other hazards-accident history.
	Dust and granular formulations 2% and below.	do	do	

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Fenamiphos	Emulsifiable concentrates 35% and greater.	do	do	Acute dermal toxicity.
Fonofos	Emulsifiable concentrates 44% and greater.	All uses.	do	Acute dermal toxicity.
	Emulsifiable concentrates 12.6% and less with pebulate 50.3% and less.	Tobacco.	Unclassified.	
Methamidophos	Liquid formulations 40% and greater.	All uses.	Restricted.	Acute dermal toxicity; residue effects on avian species.
	Dust formulations 2.5% and greater.	All uses.	Restricted.	Residual effects on avian species.
Methidathion	All formulations.	All uses except stock safflower and sunflower.	Restricted.	Residue effects on avian species.
	All formulations.	Nursery stock, safflower, and sun flower.	Unclassified.	Residue effects on avian species.
Methomyl	As sole active ingredient in 1% to 2.5 baits (except 1% fly bait).	Nondomestic outdoor agricultural crops, ornamental and turf. All other registered uses.	Restricted.	Residue effects on mammalian species.
	All concentrated solution formulations.	do	do	Other hazards-accident history.
	90% wettable powder formulations (not in water soluble bags).	do	do	do
	90% wettable powder formulation in water soluble bags.	do	Unclassified.	
	All granular formulations.	do	do	
	25% wettable powder formulations.	do	do	
	In 1.24% to 2.5% dusts as sole active ingredient and in	do	do	

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
	mixtures with fungicides and chlorinated hydrocarbon, inorganic phosphate and biological insecticides.			
Methylbromide	All formulations in containers greater than 1.5 lb.	All uses.	Restricted.	Other hazards-accident history.
	Containers with not more than 1.5 lb of methyl bromide with 0.25% to chloropicrin as an indicator.	Single applications (nondomestic use) for soil treatment in closed systems.	Unclassified.	
	Containers with not more than 1.5 lb having no indicator.	All uses.	Restricted.	do
Methyl parathion	All dust and granular formulations less than 5%.	do	do	Other hazards-accident history. All foliar applications restricted based on residue effects on mammalian and avian species.
	Microencapsulated. All dust and granular formulations 5% and greater and all wettable powders and liquids.	do	do	Residue effects on avian species. Hazard to bees. Acute dermal toxicity. Residue effects on mammalian and avian species.
Nicotine (alkaloid)	Liquid and dry formulations 14% and greater.	Indoor (greenhouse)	Restricted.	Acute inhalation toxicity.
	All formulations.	Applications to cranberries	Restricted.	Effects on aquatic organisms.
	Liquid and dry formulations 1.5% and less.	All uses (domestic and nondomestic).	Unclassified.	
Paraquat (dichloride) and paraquat bis(methylsulfate)	All formulations and concentrations except those listed.	All uses.	Restricted.	Other hazards. Use and accident history, human toxicological data.
	Pressurized spray Formulations containing 0.44%	Spot weed and grass control.	do	

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
	Paraquat bis(methyl sulfate) and 15% petroleum distillates as active ingredients.			
	Liquid fertilizers Containing concentrations of 0.025% paraquat dichloride and 0.03% atrazine; 0.03% paraquat dichloride and 0.37% atrazine, 0.04% paraquat dichloride and 0.49% atrazine.	All uses.	Unclassified.	
Phorate	Liquid formulations 65% and greater.	do	Restricted.	Acute dermal toxicity. Residue effects on avian species (applies to foliar applications only). Residue effects on mammalian species (applies to foliar application only).
	All granular formulations.	Rice.	Restricted.	Effects on aquatic organisms.
Phosphamidon	Liquid formulations 75% and greater.	do	do	Acute dermal toxicity Residue effects on mammalian species. Residue effects on avian species.
	Dust formulations 1.5% and greater.	do	do	Residue effects on mammalian species.
Picloram	All formulations and concentrations except tordon 101R.	do	do	Hazard to non-target organisms (specifically nontarget plants both\ crop and noncrop).
	Tordon 101 R forestry herbicide containing 5.4% picloram and 20.9% 2, 4-D.	Control of unwanted trees by cut surface treatment.	Unclassified.	
Sodium cyanide <sup>3</sup>	All capsules and ball formulations.	All uses.	Restricted.	Inhalation hazard to humans.
Sodium <u>fluoroacetate</u>	All solutions and dry baits.	do	do	Acute oral toxicity. Hazard to nontarget organisms. Use and accident history.
Strychnine	All dry baits pellets	do	do	Acute oral toxicity.

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
	and powder formulations greater than 0.5%.			Hazard to nontarget avian species. Use and accident history.
	All dry baits pellets and powder formulations.	All uses calling for burrow builders.	do	Hazard to nontarget organisms.
	All dry baits, and pellets, and powder formulations 0.5% and below.	All uses except sub soil.	do	do
	do	All subsoil uses.	Unclassified.	do
Sulfotepp	Sprays and smoke generators.	All uses.	Restricted.	Inhalation hazard to humans.
Zinc phosphide	All formulations 2% and less.	All domestic uses and nondomestic uses in and around buildings.	Unclassified.	
	All dry formulations 60% and greater.	All uses.	Restricted.	Acute inhalation toxicity.
	All bait formulations	Nondomestic outdoor uses (other than around buildings).	Restricted.	Hazard to nontarget organisms.
	All dry formulation 10% and greater.	Domestic uses.	Restricted.	Acute oral toxicity.

\*do means same as above (previous column).

<sup>2</sup> Percentages given are the total of dioxathion plus related compounds.

<sup>3</sup> NOTE: M-44 sodium cyanide capsules may only be used by certified applicators who have also taken the required additional training.

## **Appendix 7-1a**

### **Exempted Pesticides (40 CFR 152.20 and 152.25) [Added October 2001]**

These pesticides are exempted from 40 CFR 152.

1. The following pesticides are exempt because it has been determined that they are adequately regulated by another federal agency:

- all biological control agents are exempt from FIFRA requirements except the following:
  - eucaryotic microorganisms, including protozoa, algae and fungi
  - procaryotic microorganisms, including bacteria
  - viruses
- a pesticide product that is offered solely for human use and also is a new drug within the meaning of FFDCA sec. 201(p) or is an article that has been determined by the Secretary of Health and Human Services not to be a new drug by a regulation establishing conditions of use for the article. Such products are subject to regulation in accordance with the FFDCA and implementing regulations.)

2. The pesticides or classes of pesticides listed here have been determined to be of a character not requiring regulation under FIFRA, and are therefore exempt from all provisions of FIFRA when intended for use, and used, only in the manner specified.

- a) Treated articles or substances. An article or substance treated with, or containing, a pesticide to protect the article or substance itself (for example, paint treated with a pesticide to protect the paint coating, or wood products treated to protect the wood against insect or fungus infestation), if the pesticide is registered for such use.
- b) Pheromones and pheromone traps. Pheromones and identical or substantially similar compounds labeled for use only in pheromone traps (or labeled for use in a manner which the USEPA or authorized regulatory agency determines poses no greater risk of adverse effects on the environment than use in pheromone traps), and pheromone traps in which those compounds are the sole active ingredient(s).
  - For the purposes of this paragraph, a pheromone is a compound produced by an arthropod which, alone or in combination with other such compounds, modifies the behavior of other individuals of the same species.
  - For the purposes of this paragraph, a synthetically produced compound is identical to a pheromone only when their molecular structures are identical, or when the only differences between the molecular structures are between the stereochemical isomer ratios of the two compounds, except that a synthetic compound found to have toxicological properties significantly different from a pheromone is not identical.
  - When a compound possesses many characteristics of a pheromone but does not meet the criteria in paragraph (a)(2) of this section, it may, after review by the Agency, be deemed a substantially similar compound.
  - For the purposes of this paragraph, a pheromone trap is a device containing a pheromone or an identical or substantially similar compound used for the sole purpose of attracting, and trapping or killing, target arthropods. Pheromone traps are intended to achieve pest control by removal of target organisms from their natural environment and do not result in increased levels of pheromones or identical or substantially similar compounds over a significant fraction of the treated area.
- c) Preservatives for biological specimens.
  - Embalming fluids.
  - Products used to preserve animal or animal organ specimens, in mortuaries, laboratories, hospitals, museums and institutions of learning.
  - Products used to preserve the integrity of milk, urine, blood, or other body fluids for laboratory analysis.

- d) Vitamin hormone products. Vitamin hormone horticultural products consisting of mixtures of plant hormones, plant nutrients, inoculants, or soil amendments, which meet the following criteria:
  - The product, in the undiluted package concentration at which it is distributed or sold, meets the criteria of 40 CFR 156.10(h)(1) of this chapter for Toxicity Category III or IV; and
  - The product is not intended for use on food crop sites, and is labeled accordingly.
- e) Foods. Products consisting of foods and containing no active ingredients, which are used to attract pests.
- f) Natural cedar blocks, chips, shavings, balls, chests, drawer liners, paneling, and needles (except cedar oil, or formulated products which contain cedar oil, other cedar extracts, or ground cedar wood as part of a mixture) that meet all of the following criteria:
  - The product consists totally of cedarwood or natural cedar.
  - The product is not treated, combined, or impregnated with any additional substance(s).
  - The product bears claims or directions for use solely to repel arthropods other than ticks or to retard mildew, and no additional claims are made in sale or distribution. The labeling must be limited to specific arthropods, or must exclude ticks if any general term such as "arthropods," "insects," "bugs," or any other broad inclusive term, is used. The exemption does not apply to natural cedar products claimed to repel ticks.
- g) Products containing the following active ingredients are exempt from the requirements of FIFRA, alone or in combination with other substances listed in this paragraph, provided that all of the criteria of this section are met.
  - Castor oil (U.S.P. or equivalent)
  - Cedar oil
  - Cinnamon and cinnamon oil
  - Citric acid
  - Citronella and citronella oil
  - Cloves and clove oil
  - Corn gluten meal
  - Corn oil
  - Cottonseed oil
  - Dried blood
  - Eugenol
  - Garlic and garlic oil
  - Geraniol
  - Geranium oil
  - Lauryl sulfate
  - Lemongrass oil
  - Linseed oil
  - Malic acid
  - Mint and mint oil
  - Peppermint and peppermint oil
  - 2-Phenethyl propionate (2-phenylethyl propionate)
  - Potassium sorbate
  - Putrescent whole egg solids
  - Rosemary and rosemary oil
  - Sesame (includes ground sesame plant) and sesame oil
  - Sodium chloride (common salt)
  - Sodium lauryl sulfate
  - Soybean oil
  - Thyme and thyme oil
  - White pepper
  - Zinc metal strips (consisting solely of zinc metal and impurities)

(NOTE: A pesticide product exempt under paragraph (g) may only include inert ingredients listed in the most current List 4A. This list is updated periodically and is published in the Federal Register. The most current list may be obtained by writing to Registration Support Branch (4A Inerts List) Registration Division (7505C),

Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington DC 20460. All of the following conditions must be met for products to be exempted under this section:

- Each product containing the substance must bear a label identifying the name and percentage (by weight) of each active ingredient and the name of each inert ingredient.
- The product must not bear claims either to control or mitigate microorganisms that pose a threat to human health, including but not limited to disease transmitting bacteria or viruses, or claims to control insects or rodents carrying specific diseases, including, but not limited to ticks that carry Lyme disease.
- The product must not include any false and misleading labeling statements, including those listed in 40 CFR 156.10(a)(5)(i) through (viii).)

## **Appendix 7-2**

### **General Standards for All Categories of Certified Commercial Applicators (40 CFR 171.4(b)) [Added October 2001]**

All commercial applicators shall demonstrate practical knowledge of the principles and practices of pest control and safe use of pesticides. Testing shall be based on examples of problems and situations appropriate to the particular category or subcategory of the applicator's certification and the following areas of competency:

#### **Label and Labeling Comprehension:**

1. The general format and terminology of pesticide labels and labeling;
2. The understanding of instructions, warnings, terms, symbols, and other information commonly appearing on pesticide labels;
3. Classification of the product, general or restricted; and
4. Necessity for use consistent with the label.

#### **Safety. Factors including:**

1. Pesticide toxicity and hazard to man and common exposure routes;
2. Common types and causes of pesticide accidents;
3. Precautions necessary to guard against injury to applicators and other individuals in or near treated areas;
4. Need for and use of protective clothing and equipment;
5. Symptoms of pesticide poisoning;
6. First aid and other procedures to be followed in case of a pesticide accident; and
7. Proper identification, storage, transport, handling, mixing procedures, and disposal methods for pesticides and used pesticide containers, including precautions to be taken to prevent children from having access to pesticides and pesticide containers.

**Environment.** The potential environmental consequences of the use and misuse of pesticides as may be influenced by such factors as:

1. Weather and other climatic conditions;
2. Types of terrain, soil, or other substrate;
3. Presence of fish, wildlife, and other non-target organisms; and
4. Drainage patterns.

#### **Pests. Factors such as:**

1. Common features of pest organisms and characteristics of damage needed for pest recognition;
2. Recognition of relevant pests; and
3. Pest development and biology as it may be relevant to problem identification and control.

#### **Pesticides. Factors such as:**

1. Types of pesticides;
2. Types of formulations;
3. Compatibility, synergism, persistence, and animal and plant toxicity of the formulations;
4. Hazards and residues associated with use;
5. Factors which influence effectiveness or lead to such problems as resistance to pesticides; and
6. Dilution procedures.

#### **Equipment. Factors including:**

1. Types of equipment and advantages and limitations of each type; and
2. Uses, maintenance, and calibration.

#### **Application techniques. Factors including:**

1. Methods of procedure used to apply various formulations of pesticides, solutions, and gases, together with a knowledge of which technique of application to use in a given situation;
2. Relationship of discharge and placement of pesticides to proper use, unnecessary use, and misuse; and
3. Prevention of drift and pesticide loss into the environment.

Laws and regulations.

1. Applicable state laws and regulations; and
2. Applicable federal laws and regulations.

### **Appendix 7-3**

#### **Specific Standards for Competency for Each Category of Certified Commercial Applicators (40 CFR 171.4(c)) [Added October 2001]**

Commercial applicators in each category shall be particularly qualified with respect to the practical knowledge standards elaborated below:

- **Agricultural pest control--Plant.** Applicators must demonstrate practical knowledge of crops grown and the specific pests of those crops on which they may be using restricted use pesticides. The importance of such competency is amplified by the extensive areas involved, the quantities of pesticides needed, and the ultimate use of many commodities as food and feed. Practical knowledge is required concerning soil and water problems, pre-harvest intervals, re-entry intervals, phytotoxicity, and potential for environmental contamination, non-target injury and community problems resulting from the use of restricted use pesticides in agricultural areas.
- **Agricultural pest control--Animal.** Applicators applying pesticides directly to animals must demonstrate practical knowledge of such animals and their associated pests. A practical knowledge is also required concerning specific pesticide toxicity and residue potential, since host animals will frequently be used for food. Further, the applicator must know the relative hazards associated with such factors as formulation, application techniques, age of animals, stress, and extent of treatment.
- **Forest pest control.** Applicators shall demonstrate practical knowledge of types of forests, forest nurseries, and seed production in their state and the pests involved. They should possess practical knowledge of the cyclic occurrence of certain pests and specific population dynamics as a basis for programming pesticide applications. A practical knowledge is required of the relative biotic agents and their vulnerability to the pesticides to be applied. Because forest stands may be large and frequently include natural aquatic habitats and harbor wildlife, the consequences of pesticide use may be difficult to assess. The applicator must therefore demonstrate practical knowledge of control methods which will minimize the possibility of secondary problems such as unintended effects on wildlife. Proper use of specialized equipment must be demonstrated, especially as it may relate to meteorological factors and adjacent land use.
- **Ornamental and turf pest control.** Applicators shall demonstrate practical knowledge of pesticide problems associated with the production and maintenance of ornamental trees, shrubs, plantings, and turf, including cognizance of potential phytotoxicity due to a wide variety of plant material, drift, and persistence beyond the intended period of pest control. Because of the frequent proximity of human habitations to application activities, applicators in this category must demonstrate practical knowledge of application methods which will minimize or prevent hazards to humans, pets, and other domestic animals.
- **Seed-treatment.** Applicators shall demonstrate practical knowledge of types of seeds that require chemical protection against pests and factors such as seed coloration, carriers, and surface active agents which influence pesticide binding and may affect germination. They must demonstrate practical knowledge of hazards associated with handling, sorting and mixing, and misuse of treated seed such as introduction of treated seed into food and feed channels, as well as proper disposal of unused treated seeds.
- **Aquatic pest control.** Applicators shall demonstrate practical knowledge of the secondary effects which can be caused by improper application rates, incorrect formulations, and faulty application of restricted use pesticides used in this category. They shall demonstrate practical knowledge of various water use situations and the potential of downstream effects. Further, they must have practical knowledge concerning potential pesticide effects on plants, fish, birds, beneficial insects and other organisms which

may be present in aquatic environments. These applicators shall demonstrate practical knowledge of the principles of limited area application.

- Right-of-way pest control. Applicators shall demonstrate practical knowledge of a wide variety of environments, since rights-of-way can traverse many different terrains, including waterways. They shall demonstrate practical knowledge of problems on runoff, drift, and excessive foliage destruction and ability to recognize target organisms. They shall also demonstrate practical knowledge of the nature of herbicides and the need for containment of these pesticides within the right-of-way area, and the impact of their application activities in the adjacent areas and communities.
- Industrial, institutional, structural and health related pest control. Applicators must demonstrate a practical knowledge of a wide variety of pests, including their life cycles, types of formulations appropriate for their control, and methods of application that avoid contamination of food, damage and contamination of habitat, and exposure of people and pets. Since human exposure, including babies, children, pregnant women, and elderly people, is frequently a potential problem, applicators must demonstrate practical knowledge of the specific factors which may lead to a hazardous condition, including continuous exposure in the various situations encountered in this category. Because health related pest control may involve outdoor applications, applicators must also demonstrate practical knowledge of environmental conditions, particularly related to this activity.
- Public health pest control. Applicators shall demonstrate practical knowledge of vector-disease transmission as it relates to and influences application programs. A wide variety of pests is involved, and it is essential that they be known and recognized, and appropriate life cycles and habitats be understood as a basis for control strategy. These applicators shall have practical knowledge of a great variety of environments ranging from streams to those conditions found in buildings. They should also have practical knowledge of the importance and employment of such non-chemical control methods as sanitation, waste disposal, and drainage.
- Regulatory pest control. Applicators shall demonstrate practical knowledge of regulated pests, applicable laws relating to quarantine and other regulation of pests, and the potential impact on the environment of restricted use pesticides used in suppression and eradication programs. They shall demonstrate knowledge of factors influencing introduction, spread, and population dynamics of relevant pests. Their knowledge shall extend beyond that required by their immediate duties, since their services are frequently required in other areas of the country where emergency measures are invoked to control regulated pests and where individual judgments must be made in new situations.
- Demonstration and research pest control. Persons demonstrating the safe and effective use of pesticides to other applicators and the public will be expected to meet comprehensive standards reflecting a broad spectrum of pesticide uses. Many different pest problems situations will be encountered in the course of activities associated with demonstration, and practical knowledge of problems, pests, and population levels occurring in each demonstration situation is required. Further, they should demonstrate an understanding of a pesticide-organism interactions and the importance of integrating pesticide use with other control methods. In general, it would be expected that applicators doing demonstration pest control work possess a practical knowledge of all of the standards detailed in 40 CFR 171.4(b). In addition, they shall meet the specific standards required for 40 CFR 171.4(c)(1) through (7) as may be applicable to their particular activity.

(NOTE: Persons conducting field research or method improvement work with restricted use pesticides should be expected to know the general standards. In addition, they shall be expected to know the specific standards required for the categories applicable to their particular activity, or alternatively, to meet the more inclusive requirements listed under “Demonstration.”)

## Appendix 7-4

### Exceptions For Entry By Workers During Restricted Entry Intervals (40 CFR 170.603) [Revised October 2016]

An agricultural employer may direct workers to enter treated areas where a restricted-entry interval is in effect to perform certain activities as provided in this section, provided that the agricultural employer ensures all of the applicable conditions of this Appendix and 40 CFR 170.605 [see checklist item PM.20.39.US] are met.

**Exception for activities with no contact.** A worker may enter a treated area during a restricted-entry interval if the agricultural employer ensures that all of the following conditions are met:

- (1) The worker will have no contact with anything that has been treated with the pesticide to which the restricted-entry interval applies, including, but not limited to, soil, water, air, or surfaces of plants. This exception does not allow workers to perform any activities that involve contact with treated surfaces even if workers are wearing personal protective equipment.
- (2) No such entry is allowed until any inhalation exposure level listed in the pesticide product labeling has been reached or any ventilation criteria required by 40 CFR 170.405(b)(3) or the pesticide product labeling have been met.

**Exception for short-term activities.** A worker may enter a treated area during a restricted-entry interval for short-term activities, if the agricultural employer ensures that all of the following requirements are met:

- (1) No hand labor activity is performed.
- (2) The time in treated areas where a restricted-entry interval is in effect does not exceed one hour in any 24-h period for any worker.
- (3) No such entry is allowed during the first 4 hours after the application ends.
- (4) No such entry is allowed until any inhalation exposure level listed in the pesticide product labeling has been reached or any ventilation criteria required by 40 CFR 170.405(b)(3) or the pesticide product labeling have been met.

**Exception for an agricultural emergency.**

- (1) An agricultural emergency means a sudden occurrence or set of circumstances that the agricultural employer could not have anticipated and over which the agricultural employer has no control, that requires entry into a treated area during a restricted-entry interval, and when no alternative practices would prevent or mitigate a substantial economic loss. A substantial economic loss means a loss in profitability greater than that which would be expected based on the experience and fluctuations of crop yields in previous years. Only losses caused by the agricultural emergency specific to the affected site and geographic area are considered. Losses resulting from mismanagement cannot be included when determining whether a loss is substantial.
- (2) A worker may enter a treated area where a restricted-entry interval is in effect in an agricultural emergency to perform tasks necessary to mitigate the effects of the agricultural emergency, including hand labor tasks, if the agricultural employer ensures that all the following criteria are met:
  - (i) The State department of agriculture, or the State or Tribal agency responsible for pesticide enforcement declares an agricultural emergency that applies to the treated area, or agricultural employer has determined that the circumstances within the treated area are the same as circumstances the State department of agriculture, or the State or Tribal agency responsible for pesticide enforcement has previously determined would constitute an agricultural emergency.
  - (ii) The agricultural employer determines that the agricultural establishment is subject to the circumstances that result in an agricultural emergency meeting the criteria of paragraph (1).
  - (iii) If the labeling of any pesticide product applied to the treated area requires workers to be notified of the location of treated areas by both posting and oral notification, then the agricultural employer must ensure that no individual worker spends more than four hours out of any 24-hour period in treated areas where such a restricted-entry interval is in effect.
  - (iv) No such entry is allowed during the first 4 hours after the application ends.

- (v) No such entry is allowed until any inhalation exposure level listed in the pesticide product labeling has been reached or any ventilation criteria required by 40 CFR 170.405(b)(3) or the pesticide product labeling have been met.

**Exceptions for limited contact and irrigation activities.** A worker may enter a treated area during a restricted-entry interval for limited contact or irrigation activities, if the agricultural employer ensures that all of the following requirements are met:

- (1) No hand labor activity is performed.
- (2) No worker is allowed in the treated area for more than 8 h in a 24-h period.
- (3) No such entry is allowed during the first 4 hours after the application ends.
- (4) No such entry is allowed until any inhalation exposure level listed in the pesticide product labeling has been reached or any ventilation criteria required by 40 CFR 170.405(b)(3) or the pesticide product labeling have been met.
- (5) The task is one that, if not performed before the restricted-entry interval expires, would cause substantial economic loss, and there are no alternative tasks that would prevent substantial loss.
- (6) With the exception of irrigation tasks, the need for the task could not have been foreseen.
- (7) The worker has no contact with pesticide-treated surfaces other than minimal contact with feet, lower legs, hands, and forearms.
- (8) The labeling of the pesticide product that was applied does not require that workers be notified of the location of treated areas by both posting and oral notification.

## Appendix 7-5

### Entry Restrictions During Enclosed Space Production Pesticide Applications and Exemptions (40 CFR 170.405(b)(4)) [Added October 2016]

(NOTE: After the time specified in column C has expired, the area subject to the labeling-specified restricted-entry interval and the post-application entry restrictions is the area specified in column D.).

<b>A. When pesticide is applied:</b>	<b>B. Workers and other persons, other than appropriately trained and equipped handlers, are prohibited in:</b>	<b>C. Until</b>	<b>D. After the expiration of time specified in Column C, the area subject to the restricted-entry interval is:</b>
1. As a fumigant	Entire enclosed space plus any adjacent structure or area that cannot be sealed off from the treated area.	The ventilation criteria of 40 CFR 170.405(b)(3) are met	No post-application entry restrictions required by 40 CFR 107.403 after criteria in Column C are met.
2. As a..... a. Smoke, or b. Mist, or c. Fog, or d. As a spray using a spray quality (drop spectrum) of smaller than medium (volume median diameter of less than 294 microns)	Entire enclosed space	The ventilation criteria of 40 CFR 170.405(b)(3) are met	Entire enclosed space
3. Not as in (1) or (2) and for which a respiratory protection device is required for application by the pesticide product labeling.	Entire enclosed space	The ventilation criteria of 40 CFR 170.405(b)(3) are met	Treated area
4. Not as in (1), (2), or (3) and ..... a. From a height of > 12 in from the planting medium, or b. As a spray using a spray quality (drop spectrum) of	Treated area plus 25 ft. in all directions of the treated area but not outside the enclosed space	Application is complete	Treated area

<b>A, When pesticide is applied:</b>	<b>B. Workers and other persons, other than appropriately trained and equipped handlers, are prohibited in:</b>	<b>C. Until</b>	<b>D. After the expiration of time specified in Column C, the area subject to the restricted-entry interval is:</b>
smaller than medium (volume median diameter of less than 294 microns)			
5. Otherwise	Treated area	Application is complete	Treated area

## Appendix 7-6

### Exceptions to PPE Requirements Specified on Pesticide Product Labeling (40 CFR 170.607) [Added October 2016]

#### Body Protection.

- (1) A chemical-resistant suit may be substituted for coveralls. If a chemical-resistant suit is substituted for coveralls, any labeling requirement for an additional layer of clothing beneath the coveralls is waived.
- (2) A chemical-resistant suit may be substituted for coveralls and a chemical-resistant apron.

#### Boots.

If chemical-resistant footwear with sufficient durability and a tread appropriate for wear in rough terrain is not obtainable, then leather boots may be worn in such terrain.

#### Gloves.

If chemical-resistant gloves with sufficient durability and suppleness are not obtainable, then during activities with plants with sharp thorns, leather gloves may be worn over chemical-resistant glove liners. However, once leather gloves are worn for this use, thereafter they must be worn only with chemical-resistant liners and they must not be worn for any other use.

#### Closed Systems.

When pesticides are being mixed or loaded using a closed system that meets all of the requirements in paragraph (1), and the handler employer meets the requirements of paragraph (2), the following exceptions to labeling-specified PPE are permitted:

- Handlers using a closed system to mix or load pesticides with a signal word of "DANGER" or "WARNING" may substitute a long-sleeved shirt, long pants, shoes and socks, chemical-resistant apron, protective eyewear, and any protective gloves specified on the labeling for handlers for the labeling-specified PPE.
  - Handlers using a closed system to mix or load pesticides other than those specified above may substitute protective eyewear, long-sleeved shirt, long pants, and shoes and socks for the labeling-specified personal protective equipment.
- (1) The exceptions of above apply only in the following situations:
    - (i) Where the closed system removes the pesticide from its original container and transfers the pesticide product through connecting hoses, pipes and couplings that are sufficiently tight to prevent exposure of handlers to the pesticide product, except for the negligible escape associated with normal operation of the system.
    - (ii) When loading intact, sealed, water soluble packaging into a mixing tank or system. If the integrity of a water soluble packaging is compromised (for example, if the packaging is dissolved, broken, punctured, torn, or in any way allows its contents to escape), it is no longer a closed system and the labeling-specified PPE must be worn.
  - (2) The exceptions above apply only where the handler employer has satisfied the requirements of 40 CFR 170.313 [see checklist item PM.20.35.US] and all of the following conditions:
    - (i) Each closed system must have written operating instructions that are clearly legible and include: Operating procedures for use, including the safe removal of a probe; maintenance, cleaning and repair; known restrictions or limitations relating to the system, such as incompatible pesticides, sizes (or types) of containers or closures that cannot be handled by the system; any limits on the ability to measure a pesticide; and special procedures or limitations regarding partially-filled containers.
    - (ii) The written operating instructions for the closed system must be available at the mixing or loading site and must be made available to any handlers who use the system.
    - (iii) Any handler operating the closed system must be trained in its use and operate the closed system in accordance with its written operating instructions.
    - (iv) The closed system must be cleaned and maintained as specified in the written operating instructions and as needed to make sure the system functions properly.

- (v) All personal protective equipment specified in the pesticide product labeling is immediately available to the handler for use in an emergency.
- (vi) Protective eyewear must be worn when using closed systems operating under pressure.

#### **Enclosed Cabs.**

- (1) If a handler applies a pesticide from inside a vehicle's enclosed cab, and if the conditions listed in paragraph (2) are met, exceptions to the PPE requirements specified on the product labeling for applicators are permitted as provided in paragraph (3).
- (2) All of the personal protective equipment required by the pesticide product labeling for applicators must be immediately available and stored in a sealed container to prevent contamination. Handlers must wear the applicator personal protective equipment required by the pesticide product labeling if they exit the cab within a treated area during application or when a restricted-entry interval is in effect. Once personal protective equipment is worn in a treated area, it must be removed before reentering the cab to prevent contamination of the cab.
- (3) Handlers may substitute a long-sleeved shirt, long pants, shoes and socks for the labeling-specified personal protective equipment for skin and eye protection. If a filtering face piece respirator (NIOSH approval number prefix TC-84A) or dust/mist filtering respirator is required by the pesticide product labeling for applicators, then that respirator need not be worn inside the enclosed cab if the enclosed cab has a properly functioning air ventilation system which is used and maintained in accordance with the manufacture's written operating instructions. If any other type of respirator is required by the pesticide labeling for applicators, then that respirator must be worn.

#### **Aerial Applications**

- (1) Use of gloves. The wearing of chemical-resistant gloves when entering or leaving an aircraft used to apply pesticides is optional, unless such gloves are required on the pesticide product labeling. If gloves are brought into the cockpit of an aircraft that has been used to apply pesticides, the gloves shall be kept in an enclosed container to prevent contamination of the inside of the cockpit.
- (2) Open cockpit. Handlers applying pesticides from an open cockpit aircraft must use the personal protective equipment specified in the pesticide product labeling for use during application, except that chemical resistant footwear need not be worn. A helmet may be substituted for chemical-resistant headgear. A helmet with a face shield lowered to cover the face may be substituted for protective eyewear.
- (3) Enclosed cockpit. Persons occupying an enclosed cockpit may substitute a long-sleeved shirt, long pants, shoes, and socks for labeling-specified personal protective equipment.

#### **Crop Advisors.**

- (1) Provided the conditions of paragraphs (2) through (4) are met, crop advisors and their employees entering treated areas to perform crop advising tasks while a restricted-entry interval is in effect may substitute either of the following sets of personal protective equipment for the personal protective equipment specified on the pesticide labeling for handler activities:
  - (i) The PPE specified on the pesticide product labeling for early entry.
  - (ii) Coveralls, shoes plus socks and chemical-resistant gloves made of any waterproof material, and eye protection if the pesticide product labeling applied requires protective eyewear for handlers.
- (2) The application has been complete for at least four hours.
- (3) No such entry is allowed until any inhalation exposure level listed in the pesticide product labeling has been reached or any ventilation criteria required by 40 CFR 170.405(b)(3) or the pesticide product labeling have been met.
- (4) The crop advisor or crop advisor employee who enters a treated area during a restricted-entry interval only performs crop advising tasks while in the treated area.

## SECTION 8

### PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT U.S. TEAM Guide, December 2018

#### A. Applicability

This section applies to facilities that store, transport, dispose of, or utilize petroleum based fuels, oils, or lubricants (POL). The section presents review action items that respond to regulations, procedures, and organizational mechanisms designed to prevent or limit the accidental release of POL materials to surface water, groundwater, or soils. Specifically, this section addresses spill prevention plans, POL transfer operations, POL storage in containers other than tanks, and used oil. For checklist items pertaining to POL storage tanks, see Section 10, Storage Tank Management.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions that have been added or revised as a result of this review are identified as either being reviewed, revised, or added in March 2000, for example [**Added March 2000**].

#### B. Federal Legislation

- *The Water Quality Improvement Act* of 1974. This law was the primary Federal law governing the discharge of oil into navigable waters. This regulation prohibits the discharge of harmful quantities of oil into navigable waters. 40 Code of Federal Regulations (CFR) 110, *Protection of Environment - Discharge of Oil*, defines harmful quantities as those discharges which will cause a sheen or discoloration of the surface of the water or a sludge or emulsion to be deposited beneath the surface of the water.
- *The Oil Pollution Act* of 1990. This law, Public Law (PL) 301-308 (33 U.S. Code (USC) 2701- 2761, et al), as amended, requires the prevention of oil pollution into navigable waters by tank vessels. This includes the preparation of a response plan, construction of oil carriers with double hulls, and inspection of spill response equipment. Additionally, this act applies to the storage of flammable/combustible liquids.
- EO 12088, *Federal Compliance with Pollution Standards*. This EO, dated 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the Agency funds meet applicable Federal, state, and local environmental requirements for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget. Sections 1-4, "Pollution Control Plan" was revoked by EO 13148 [**Revised October 2002**].
- Executive Order (EO) 13423, *Strengthening Federal Environmental, Energy, and Transportation Management*. This EO, dated 24 January 2007, requires Federal agencies to lead by example in advancing the nation's energy security and environmental performance by achieving goals outlined in the EO. This EO revokes the following prior EOs [**Added January 2007**]:

1. Executive Order 13101, *Greening the Government Through Waste Prevention, Recycling, and Federal Acquisition* dated 14 September 1998;
2. Executive Order 13123, *Greening the Government Through Efficient Energy Management* dated 3 June 1999;
3. Executive Order 13134, *Developing and Promoting Biobased Products and Bioenergy* dated 12 August 1999, as amended;
4. Executive Order 13148, *Greening the Government through Leadership in Environmental Management* dated 21 April 2000; and
5. Executive Order 13149, *Greening the Government Through Federal Fleet and Transportation Efficiency* dated 21 April 2000.

### C. State/Local Regulations

- For information on regulations in specific states, see the State Supplements to TEAM Guide.
- Many states and some major metropolitan and regional planning agencies have developed legislation and implemented regulations that closely parallel the Federal regulations. Some, however, may differ in important ways, and the evaluator should obtain copies of the state or local requirements for the Oil and Hazardous Substances Pollution Contingency (OHSPC) and the Spill Prevention, Control, and Countermeasures (SPCC) plans, where appropriate, and review them for those differences before conducting the evaluations. In particular, the evaluator should check for differences in the definitions of reportable quantities and the specific procedures for reporting spills that may exist in state/local regulations.

### D. Key Compliance Requirements

- The SPCC Plan – 40 CFR 112 establishes requirements for the preparation and implementation of Spill Prevention, Control, and Countermeasure (SPCC) Plans. SPCC Plans are designed to complement existing laws, regulations, rules, standards, policies, and procedures pertaining to safety standards, fire prevention, and pollution prevention rules. The purpose of an SPCC Plan is to form a comprehensive Federal/State spill prevention program that minimizes the potential for discharges. The SPCC Plan must address all relevant spill prevention, control, and countermeasures necessary at the specific facility. Compliance with 40 CFR 112 does not in any way relieve the owner or operator of an onshore or an offshore facility from compliance with other Federal, State, or local laws.

The requirements for an SPCC PLAN apply to any owner or operator of a non-transportation-related onshore or offshore facility engaged in drilling, producing, gathering, storing, processing, refining, transferring, distributing, using, or consuming oil and oil products, which due to its location, could reasonably be expected to discharge oil in quantities that may be harmful, into or upon the navigable waters of the United States or adjoining shorelines, or into or upon the waters of the contiguous zone, or in connection with activities under the Outer Continental Shelf Lands Act or the Deepwater Port Act of 1974, or that may affect natural resources belonging to, appertaining to, or under the exclusive management authority of the United States (including resources under the Magnuson Fishery Conservation and Management Act) that has oil in:

1. any aboveground container;
  2. any completely buried tank (see definitions)
  3. any container that is used for standby storage, for seasonal storage, or for temporary storage, or not otherwise “permanently closed” (see definitions)
  4. any “bunkered tank” or “partially buried tank” (see definitions), or any container in a vault, each of which is considered an aboveground storage container for purposes of 40 CFR 112.) (40 CFR 112.1) **[Revised July 2002].**
- Response Plans - Nontransportation related onshore facilities that, because of location, could reasonably be expected to cause substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shoreline are required to develop response plans. A facility could, because of its location, reasonably be expected to cause substantial harm if it meets any of the following criteria:

1. the facility transfers oil over water to or from vessels and has a total oil storage capacity greater than or equal to 42,000 gal
  2. the facility's total oil storage capacity is greater than or equal to 1 million gal and one of the following is true:
    - a. the facility does not have secondary containment for each aboveground area sufficiently large to contain the capacity of the largest aboveground storage tank (AST) within each storage area plus sufficient freeboard to allow for precipitation
    - b. the facility is located at a distance such that discharge from the facility could cause injury to fish and wildlife and sensitive environment
    - c. the facility is located at a distance such that a discharge from the facility would shut down a public drinking water intake
    - d. the facility has had a reportable oil spill in an amount greater than or equal to 10,000 gal within the last 5 yr.
- **Transportation Spill Plans** - Response plans are required when transporting any liquid petroleum oil in a packaging having a capacity of 3,500 gal or more or any liquid petroleum or non-petroleum oil in a quantity greater than 42,000 gallons per packaging. This requirement does not apply to (49 CFR 130) **[Added October 2000]**:
    1. any mixture or solution in which oil is in a concentration by weight of less than 10 percent transportation of oil by aircraft or vessel
    2. any petroleum oil carried in a fuel tank for the purpose of supplying fuel for propulsion of the transport vehicle to which it is attached
    3. oil transport exclusively within the confines of a non-transportation-related or terminal facility in a vehicle not intended for use in interstate or intrastate commerce (see 40 CFR 112).
  - **Discharges/Spills** - A discharge of oil into navigable waters of the United States, or adjoining shorelines, or into areas that may affect natural resources belonging to or under the exclusive management authority of the United States must be reported to the National Response Center (NRC). Dispersants or emulsifiers cannot be added to oils that are discharged (40 CFR 110.2 through 110.10).
  - **Discharge Prevention/Cleanup** - Appropriate containment and/or diversionary structures and cleanup equipment are to be readily available to prevent discharged petroleum products from reaching navigable water courses. Alternatively, when prevention systems or equivalents are not practicable, a strong oil spill contingency plan and/or a written commitment of manpower, equipment, and materials required to expeditiously control and remove any harmful quantity of oil discharged are needed (40 CFR 112.7(c)) **[Revised January 1999]**.
  - **Piping Systems** - Buried piping at transfer operations, pumping activities and in-plant processing is required to have a protective wrapping or coating and to be cathodically protected if soil conditions warrant (40 CFR 112.7(e)(3)(i) and 112.7(e)(3)(iv)).
  - **Onshore Oil Pipelines** - Facilities with onshore oil pipelines that, because of location, could reasonably be expected to cause substantial harm to the environment by discharging oil into navigable waters are required to prepare a response plan. Copies of the response plan are required to be submitted to the USEPA Research and Special Programs Administration (RSPA) for approval. Copies of the response plan are required to be kept at the operators headquarters, pump stations, and other places where response activities might be conducted. Training is required for the implementation of the response plan. The response plan is required to be reviewed every 3 yr from the date of submission and modified to address new or different operating conditions or information (49 CFR 194).
  - **Service Stations** - The storage of liquids in containers at service stations, specifically Class I liquids, has to be done in containers that are secure and prevents the excess release of vapors (29 CFR 1910.106(g)).
  - **Transfer Terminals** - Terminals transferring oil or hazardous materials to vessels with a capacity of more than 250 bbl [approx. 30,747 L] are required to have an operations manual. If the reception facility at the terminal or port that loads a daily average of more than 1000 metric tons (1100 short tons) of oil, it has to be able to receives

waste such as oily bilge water, sludges, oily ballast, and cargo residue (33 CFR 154.100 through 154.300 and 158.220 through 158.230).

- **Loading and Unloading Racks** - Onshore tank car and tank truck loading/unloading racks are required to have containment and some method to prevent vehicles from leaving before the transfer lines have been disconnected. Personnel at these sites are required to survey drains and outlets of vehicles prior to their departure to ensure that there is no leakage (40 CFR 112.7(e)(4)).
- **Used Oil** - Although used oil has not been declared a hazardous waste at the Federal level, it does need to be stored, handled, and documented according to specific requirements depending on whether the facility is a used oil generator, a used oil collection center and aggregation point, a used oil transporter, a used oil burner, or a used oil marketer (40 CFR 279).
- **Petroleum Conservation** – Under EO 13423 agencies are required to reduce petroleum consumption in fleet vehicles by 2% annually through 2015 [**Added January 2007**].

#### **E. Key Compliance Definitions**

- **Adjacent** - means bordering, contiguous, or neighboring [see definition of *Neighboring*] a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States,” including waters separated by constructed dikes or barriers, natural river berms, beach dunes, and the like. For purposes of adjacency, an open water such as a pond or lake includes any wetlands within or abutting its ordinary high water mark. Adjacency is not limited to waters located laterally to a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States.” Adjacent waters also include all waters that connect segments of a water identified in paragraphs (1) through (5) or are located at the head of a water identified in paragraphs (1) through (5) of the definition for “Waters of the United States,” and are bordering, contiguous, or neighboring such water. Waters being used for established normal farming, ranching, and silviculture activities (33 U.S.C. 1344(f)) are not adjacent (40 CFR 110.1 and 112.2) [**Added July 2015**].
- **Adverse Weather** - the weather conditions that the operator will consider when identifying response systems and equipment to be deployed in accordance with a response plan. Factors to consider include ice conditions, temperature ranges, weather-related visibility, significant wave height as specified in 33 CFR 154, Appendix C, Table 1, and currents within the areas in which those systems or equipment are intended to function (49 CFR 194.5) [**Added April 2005**].
- **Adverse Weather** - the weather conditions that will be considered when identifying response systems and equipment in a response plan for the applicable operating environment. Factors to consider include, but are not limited to, significant wave height as specified in 33 CFR 154.1045, 154.1047, 154.1225, or 154.1325, as appropriate; ice conditions, temperatures, weather-related visibility, and currents within the COTP zone in which the systems or equipment are intended to function (33 CFR 1020) [**Added October 2010**].
- **Alteration** - any work on a container involving cutting, burning, welding, or heating operations that changes the physical dimensions or configuration of the container (40 CFR 112.2) [**Added July 2002**].
- **Animal Fat** - a non-petroleum oil, fat, or grease of animal, fish, or marine mammal origin (40 CFR 112.2) [**Added July 2000; Revised July 2002**].
- **Animal Fat** - a non-petroleum oil, fat, or grease derived from animals, and not specifically identified elsewhere in 33 CFR 154 (33 CFR 1020) [**Added October 2010**].
- **Animal Fat** - a non-petroleum oil, fat, or grease derived from animals, not specifically identified elsewhere in 49 CFR 130 (49 CFR 130.5) [**Added October 2000**].

- *Automotive Service Station* - that portion of property where flammable liquids used as motor fuels are stored and dispensed from fixed equipment into the fuel tanks of motor vehicles and shall include any facilities available for the sale and service of tires, batteries, and accessories, and for minor automotive maintenance work. Major automotive repairs, painting, and body and fender work are excluded (29 CFR 1910.106(a)(3)) **[Revised April 2012]**.
- *Average Most Probable Discharge* - a discharge of the lesser of 50 barrels or 1 percent of the volume of the worst case discharge (33 CFR 1020) **[Added October 2010]**.
- *Barge* - any nonself-propelled vessel (46 CFR 90.10-3).
- *Barrel* - 42 United States gal (159 L) at 60° F (15.6° C) (49 CFR 194.5) **[Added April 2005]**.
- *Breakout Tank* - a tank used to (49 CFR 194.5) **[Added April 2005]**:
  1. Relieve surges in an oil pipeline system or
  2. Receive and store oil transported by a pipeline for reinjection and continued transportation by pipeline.
- *Bulk Plant* – that portion of a property where flammable liquids are received by tank vessel, pipelines, tank car, or tank vehicle, and are stored or blended in bulk for the purpose of distributing such liquids by tank vessel, pipeline, tank car, tank vehicle, or container (29 CFR 1910.106(a)(7)) **[Added April 2012]**.
- *Bulk Storage Container* - any container used to store oil. These containers are used for purposes including, but not limited to, the storage of oil prior to use, while being used, or prior to further distribution in commerce. Oil-filled electrical, operating, or manufacturing equipment is not a bulk storage container (40 CFR 112.2) **[Added July 2002]**.
- *Bunkered Tank* - a container constructed or placed in the ground by cutting the earth and re-covering the container in a manner that breaks the surrounding natural grade, or that lies above grade, and is covered with earth, sand, gravel, asphalt, or other material. A bunkered tank is considered an aboveground storage container for purposes of 40 CFR 112 (40 CFR 112.2) **[Added July 2002]**.
- *Captain of the Port (COTP) Zone* - a zone specified in 33 CFR 3 and, where applicable, the seaward extension of that zone to the outer boundary of the exclusive economic zone (EEZ).
- *Cargo* - on tank vessels this means combustible liquid, flammable liquid, or liquefied flammable gas unless otherwise stated (46 CFR 30.10-5).
- *Cargo Areas* - on tank vessels, that part of a vessel which includes the cargo tanks and other tanks into which cargo or cargo vapors are intentionally introduced; holds containing these tanks; all intervening spaces within, between, below, or outboard of these tanks or holds; and the deck areas over the length and beam of the vessel above these tanks, holds, or spaces (46 CFR 30.10-5a).
- *Cargo Control Stations* - on tank vessels, means a location that is manned during cargo transfer operations for the purpose of directing or controlling the loading or unloading of cargo (46 CFR 30.10-5b).
- *Category A Machinery Space* - for a tank vessel this means any space and trunks and ducts to such a space that contains (46 CFR 30.10-6a):
  1. internal combustion machinery used for main propulsion
  2. internal combustion machinery used for purposes other than main propulsion where the total aggregate power is at least 500 brake horsepower
  3. internal combustion machinery that uses a fuel that has a flashpoint of less than 43.3 °C (110 °F)
  4. one or more oil fired boilers or oil fuel units.

- *Certificated* - for tank vessels this applies to a vessel covered by a certificate of inspection issued by the Coast Guard; when applied to personnel employed on tank vessels, the term refers to a certificate of ability issued by the Coast Guard (46 CFR 30.10-7).
- *Coastal Zone* - all United States waters subject to the tide, United States waters of the Great Lakes and Lake Champlain, specified ports and harbors on inland rivers, waters of the contiguous zone, other waters of the high seas subject to the National Contingency Plan, and the land surface or land substrate, ground waters, and ambient air proximal to those waters. (The term “coastal zone” delineates an area of federal responsibility for response action. Precise boundaries are determined by agreements between the EPA and the U.S. Coast Guard (USCG), and are identified in Federal Regional Contingency Plans and Area Contingency Plans) (49 CFR 194.5) [**Added April 2005**].
- *Coastwise* - this includes all tank vessels and vessels normally navigating the waters of any ocean or the Gulf of Mexico at 20 nautical miles [approx. 37 km] or less offshore (46 CFR 30.10-9 and 90.10-11).
- *Cofferdam* - a void or empty space separating two or more compartments for the purpose of isolation or to prevent the contents of one compartment from entering another compartment in the event of the failure of the walls of one to retain their tightness (46 CFR 30.10-13).
- *Combustible Liquid* - for tank vessels this means any liquid having a flashpoint above 80 F and include (46 CFR 30.10-15):
  1. Grade D, which is any combustible liquid with a flashpoint below 150 F and above 80 F
  2. Grade E, which is any combustible liquid with a flashpoint of 150 F or above.
- *Completely Buried Tank* - any container completely below grade and covered with earth, sand, gravel, asphalt, or other material. Containers in vaults, bunkered tanks, or partially buried tanks are considered aboveground storage containers for purposes of 40 CFR 112 (40 CFR 112.2) [**Added July 2002**].
- *Complex* - a facility possessing a combination of transportation-related and non-transportation-related components that is subject to the jurisdiction of more than one Federal agency under section 311(j) of the CWA (40 CFR 112.2) [**Added July 2002**].
- *Complex* - a facility possessing a combination of marine-transportation related and non-transportation-related components that is subject to the jurisdiction of more than one Federal agency under section 311(j) of the Clean Water Act (33 CFR 1020) [**Added October 2010**].
- *Container* - any portable device in which materials is stored, transported, treated, disposed of, or otherwise handled (40 CFR 279.1) [**Reviewed March 2000**].
- *Contiguous Zone* - the zone established by the United States under Article 24 of the Convention of the Territorial Sea and Contiguous Zone, that is contiguous to the territorial sea and that extends 9 mi seaward from the outer limit of the territorial area (40 CFR 112.2) [**Added July 2002**].
- *Contiguous Zone* - the entire zone established or to be established by the United States under article 24 of the Convention on the Territorial Sea and Contiguous Zone (CWA, Section 311).
- *Continuous Discharge* - a discharge occurring without interruption throughout the operating hours of the facility, except for infrequent shutdowns for maintenance, process changes, or other similar activities (40 CFR 123.3).
- *Contract or Other Approved Means* - (40 CFR 112.2) [**Added July 2002**]:

1. A written contractual agreement with an oil spill removal organization that identifies and ensures the availability of the necessary personnel and equipment within appropriate response times; and/or
  2. A written certification by the owner or operator that the necessary personnel and equipment resources, owned or operated by the facility owner or operator, are available to respond to a discharge within appropriate response times; and/or
  3. Active membership in a local or regional oil spill removal organization that has identified and ensures adequate access through such membership to necessary personnel and equipment to respond to a discharge within appropriate response times in the specified geographic area; and/or
  4. Any other specific arrangement approved by the Regional Administrator upon request of the owner or operator.
- *Contract or Other Approved Means* – This includes (49 CFR 194.5) [**Added April 2005**]:
    1. A written contract or other legally binding agreement between the operator and a response contractor or other spill response organization identifying and ensuring the availability of the specified personnel and equipment within stipulated response times for a specified geographic area;
    2. Certification that specified equipment is owned or operated by the pipeline operator, and operator personnel and equipment are available within stipulated response times for a specified geographic area; or
    3. Active membership in a local or regional oil spill removal organization that has identified specified personnel and equipment to be available within stipulated response times for a specified geographic area.
  - *Contract or Other Means* (49 CFR 130.5) [**Added October 2000**]:
    1. a written contract with a response contractor identifying and ensuring the availability of the necessary personnel or equipment within the shortest practicable time;
    2. a written certification by the owner or operator that the necessary personnel or equipment can and will be made available by the owner or operator within the shortest practicable time; or
    3. documentation of membership in an oil spill response organization that ensures the owner's or operator's access to the necessary personnel or equipment within the shortest practicable time.
  - *Control Space* - an enclosed space in which is located a ship's radio, main navigating equipment, or emergency source of power, or in which is located centralized fire recording or fire control equipment, but not including firefighting apparatus that must be located in the cargo area or individual pieces of firefighting equipment (46 CFR 30.10-19a).
  - *Daily Discharge* - the discharge of a pollutant measured during a calendar day or any 24-h period that reasonably represents the calendar day for purposes of sampling (40 CFR 122.2).
  - *Direct Discharge* - the discharge of a pollutant (40 CFR 122.2).
  - *Discharge* – this term includes, but is not limited to, any spilling, leaking, pumping, pouring, emitting, emptying, or dumping of oil, but excludes discharges in compliance with a permit under section 402 of the CWA; discharges resulting from circumstances identified, reviewed, and made a part of the public record with respect to a permit issued or modified under section 402 of the CWA, and subject to a condition in such permit; or continuous or anticipated intermittent discharges from a point source, identified in a permit or permit application under section 402 of the CWA, that are caused by events occurring within the scope of relevant operating or treatment systems. For purposes of 40 CFR 112, the term discharge shall not include any discharge of oil that is authorized by a permit issued under section 13 of the River and Harbor Act of 1899 (33 U.S.C. 407) (40 CFR 112.2) [**Added July 2002**].
  - *Discharge* - when used in relation to Section 311 of the act, includes, but is not limited to, any spilling, leaking, pumping, pouring, emitting, emptying, or dumping, but excludes (CWA, Section 311):
    1. discharges in compliance with a permit
    2. discharges resulting from circumstances identified and reviewed and made a part of the public record with respect to an issued permit and subject to a condition in the permit

3. continuous or anticipated intermittent discharges from a point source, identified in a permit application that are caused by events occurring within the scope of relevant operating or treatment systems.

- *Discharge* - any release, however caused, from a ship and includes any escape, disposal, spilling, leaking, pumping, emitting, or emptying (33 CFR 151.05).
- *Do-It-Yourself (DIY) Used Oil Collection Center* - any site or facility that accepts, aggregates, and stores used oil collected only from household DIYs (40 CFR 279.1) **[Reviewed March 2000]**.
- *Drums, Barrels, or Other Packages* - this is interpreted to mean portable tanks having a maximum capacity of 110 gal and Department of Transportation (DOT) specification cylinders having a water capacity of not more than 1000 lb which are actually loaded and discharged from vessels with their content intact (46 CFR 30.01-20(a) and 90.05-30).
- *Environmentally Sensitive Area* - an area of environmental importance which is in or adjacent to navigable waters (49 CFR 194.5)
- *Exclusive Economic Zone (EEZ)* - the zone contiguous to the territorial sea of the United States extending to a distance up to 200 nautical miles from the baseline from which the breadth of the territorial sea is measured (33 CFR 1020) **[Added October 2010]**.
- *Facility* - any mobile or fixed, onshore or offshore building, property, parcel, lease, structure, installation, equipment, pipe, or pipeline (other than a vessel or a public vessel) used in oil well drilling operations, oil production, oil refining, oil storage, oil gathering, oil processing, oil transfer, oil distribution, and oil waste treatment, or in which oil is used, as described in Appendix A to 40 CFR 112. The boundaries of a facility depend on several site-specific factors, including but not limited to, the ownership or operation of buildings, structures, and equipment on the same site and types of activity at the site. Contiguous or non-contiguous buildings, properties, parcels, leases, structures, installations, pipes, or pipelines under the ownership or operation of the same person may be considered separate facilities. Only this definition governs whether a facility is subject to 40 CFR 112 (40 CFR 112.2) **[Added July 2002; Revised January 2009]**.
- *Facility That Could Reasonably Be Expected to Cause Significant And Substantial Harm* - any MTR facility (including piping and any structures that are used for the transfer of oil between a vessel and a facility) classified as a "significant and substantial harm" facility under 33 CFR 154.1015(c) and 33 CFR 154.1216 (33 CFR 1020) **[Added October 2010]**.
- *Facility That Could Reasonably Be Expected to Cause Substantial Harm* - any MTR facility classified as a "substantial harm" facility under 33 CFR 154.1015(b) and 33 CFR 154.1216 (33 CFR 1020) **[Added October 2010]**.
- *Farm* - a facility on a tract of land devoted to the production of crops or raising of animals, including fish, which produced and sold, or normally would have produced and sold, \$1,000 or more of agricultural products during a year (40 CFR 112.2) **[Added January 2007]**.
- *Fish and Wildlife and Sensitive Environments* - means areas that may be identified by their legal designation or by evaluations of Area Committees (for planning) or members of the Federal On-Scene Coordinator's spill response structure (during responses). These areas may include wetlands, National and State parks, critical habitats for endangered or threatened species, wilderness and natural resource areas, marine sanctuaries and estuarine reserves, conservation areas, preserves, wildlife areas, wildlife refuges, wild and scenic rivers, recreational areas, national forests, Federal and State lands that are research national areas, heritage program areas, land trust areas, and historical and archaeological sites and parks. These areas may also include unique habitats such as aquaculture sites and agricultural surface water intakes, bird nesting areas, critical biological resource areas, designated migratory routes, and designated seasonal habitats (40 CFR 112.2) **[Revised July 2002]**.

- *Fish and Wildlife and Sensitive Environment* - areas that may be identified by either their legal designation or by Area Committees in the applicable Area Contingency Plan (ACP) (for planning) or by members of the Federal On-Scene Coordinator's spill response structure (during responses). These areas may include: Wetlands, national and state parks, critical habitats for endangered or threatened species, wilderness and natural resource areas, marine sanctuaries and estuarine reserves, conservation areas, preserves, wildlife areas, wildlife refuges, wild and scenic rivers, areas of economic importance, recreational areas, national forests, Federal and state lands that are research areas, heritage program areas, land trust areas, and historical and archaeological sites and parks. These areas may also include unique habitats such as: aquaculture sites and agricultural surface water intakes, bird nesting areas, critical biological resource areas, designated migratory routes, and designated seasonal habitats (33 CFR 1020) [**Added October 2010**].
- *Flame Arrester* - any device or assembly of a cellular, tubular, pressure, or other type used for preventing the passage of flames into an enclosed space (46 CFR 30.10-23).
- *Flammable Liquid* - any liquid having a flashpoint at or below 199.4 °F (93 °C). Flammable liquids are divided into four categories as follows (29 CFR 1910.106(a)(19)) [**Revised April 2012**]:
  1. Category 1 shall include liquids having flashpoints below 73.4 °F (23 °C) and having a boiling point at or below 95 °F (35 °C).
  2. Category 2 shall include liquids having flashpoints below 73.4 °F (23 °C) and having a boiling point above 95 °F (35 °C).
  3. Category 3 shall include liquids having flashpoints at or above 73.4 °F (23 °C) and at or below 140 °F (60 °C). When a Category 3 liquid with a flashpoint at or above 100 °F (37.8 °C) is heated for use to within 30 °F (16.7 °C) of its flashpoint, it shall be handled in accordance with the requirements for a Category 3 liquid with a flashpoint below 100 °F (37.8 °C).
  4. Category 4 shall include liquids having flashpoints above 140 °F (60 °C) and at or below 199.4 °F (93 °C). When a Category 4 flammable liquid is heated for use to within 30 °F (16.7 °C) of its flashpoint, it shall be handled in accordance with the requirements for a Category 3 liquid with a flashpoint at or above 100 °F (37.8 °C).
  5. When liquid with a flashpoint greater than 199.4 °F (93 °C) is heated for use to within 30 °F (16.7 °C) of its flashpoint, it shall be handled in accordance with the requirements for a Category 4 flammable liquid.
- *Great Lakes* - Lakes Superior, Michigan, Huron, Erie, and Ontario, their connecting and tributary waters, the Saint Lawrence River as far as Saint Regis, and adjacent port areas (33 CFR 1020) [**Added October 2010**].
- *High Tide Line* - the line of intersection of the land with the water's surface at the maximum height reached by a rising tide. The high tide line may be determined, in the absence of actual data, by a line of oil or scum along shore objects, a more or less continuous deposit of fine shell or debris on the foreshore or berm, other physical markings or characteristics, vegetation lines, tidal gages, or other suitable means that delineate the general height reached by a rising tide. The line encompasses spring high tides and other high tides that occur with periodic frequency but does not include storm surges in which there is a departure from the normal or predicted reach of the tide due to the piling up of water against a coast by strong winds such as those accompanying a hurricane or other intense storm. This definition is effective 6 February 2020 (33 CFR 328.3(c)(7); 40 CFR 110.1 and 112.2) [**Added July 2015; Revised April 2018**].
- *High Volume Area* - an area which an oil pipeline having a nominal outside diameter of 20 inches (508 millimeters) or more crosses a major river or other navigable waters, which, because of the velocity of the river flow and vessel traffic on the river, would require a more rapid response in case of a worst case discharge or substantial threat of such a discharge. Appendix B to 49 CFR 194 contains a list of some of the high volume areas in the United States (49 CFR 194.5) [**Added April 2005**].
- *Higher Volume Port Area* - the following ports (33 CFR 1020) [**Added October 2010**]:
  1. Boston, MA.

2. New York, NY.
  3. Delaware Bay and River to Philadelphia, PA.
  4. St. Croix, VI.
  5. Pascagoula, MS.
  6. Mississippi River from Southwest Pass, LA. to Baton Rouge, LA.
  7. Louisiana Offshore Oil Port (LOOP), LA.
  8. Lake Charles, LA.
  9. Sabine-Neches River, TX.
  10. Galveston Bay and Houston Ship Channel, TX.
  11. Corpus Christi, TX.
  12. Los Angeles/Long Beach harbor, CA.
  13. San Francisco Bay, San Pablo Bay, Carquinez Strait, and Suisun Bay to Antioch, CA.
  14. Straits of Juan De Fuca from Port Angeles, WA, to and including Puget Sound, WA.
  15. Prince William Sound, AK.
- *Household Do-It-Yourselfer Used Oil* - oil that is derived from households, such as used oil generated by individuals who generate used oil through the maintenance of their personal vehicles (40 CFR 279.1) [**Reviewed March 2000**].
  - *Household "Do-It-Yourselfer" Used Oil Generator* - an individual who generates household "do-it-yourselfer" used oil (40 CFR 279.1) [**Added March 2000**].
  - *Industrial Vessel* - every vessel that, by reason of its special outfit, purpose, and design for function, engages in certain industrial ventures. Included in this classification are such vessels as drill rigs, missile range ships, dredges, cable layers, derrick barges, pipe lay barges, and construction and wrecking barges.
  - *Injury* - a measurable adverse change, either long- or short-term, in the chemical or physical quality or the viability of a natural resource resulting either directly or indirectly from exposure to a discharge, or exposure to a product of reactions resulting from a discharge (40 CFR 112.2) [**Added July 2002**].
  - *Inland Area* - the area shoreward of the boundary lines defined in 46 CFR 7, except in the Gulf of Mexico. In the Gulf of Mexico, it means the area shoreward of the lines of demarcation (COLREG lines) defined in 33 CFR 80.740 through 80.850. The inland area does not include the Great Lakes (33 CFR 1020) [**Added October 2010**].
  - *Inland Area* - the area shoreward of the boundary lines defined in 46 CFR 7, except that in the Gulf of Mexico, it means the area shoreward of the lines of demarcation (COLREG lines) defined in 33 CFR 80.740-80.850. The inland area does not include the Great Lakes (49 CFR 194.5) [**Added April 2005**].
  - *Inland Oil Barge* - a tank barge carrying oil in bulk as cargo certificated by the Coast Guard under 46 CFR chapter I, subchapter D for river or canal service or lakes, bays, and sounds service (33 CFR 155.200).
  - *Inland Zone* - the environment inland of the coastal zone excluding the Great Lakes, Lake Champlain, and specified ports and harbors on inland rivers. (The term inland zone delineates an area of federal responsibilities for response actions. Precise boundaries are determined by agreements between the EPA and the USCG and are identified in Federal Regional Contingency Plans) (49 CFR 194.5) [**Added April 2005**].
  - *Keel Laying Date* - the date upon which progressive construction identifiable with a specific vessel begins, including construction of the first module or prefabricated section of the hull that is identifiable with that vessel (46 CFR 30.10-37).
  - *Lightweight* - the displacement of a vessel in metric tons without cargo, oil fuel, lubricating oil, ballast water, fresh water, feedwater in tanks, consumable stores, and persons and their effects (46 CFR 30.10-38).

- *Line Section* - a continuous run of pipe that is contained between adjacent pressure pump stations, between a pressure pump station and a terminal or breakout tank, between a pressure pump station and a block valve, or between adjacent block valves (49 CFR 194.5) **[Added April 2005]**.
- *Liquid* - a material that has a vertical flow of over two inches (50 mm) within a three-minute period, or a material having one gram or more liquid separation, when determined in accordance with the procedures specified in ASTM D 4359-84, "Standard Test Method for Determining Whether a Material is a Liquid or a Solid," 1990 edition, which is incorporated by reference (49 CFR 130.5) **[Added October 2000]**.
- *Loading/Unloading Rack* - a fixed structure (such as a platform, gangway) necessary for loading or unloading a tank truck or tank car, which is located at a facility subject to the requirements of 40 CFR 112. A loading/unloading rack includes a loading or unloading arm, and may include any combination of the following: piping assemblages, valves, pumps, shut-off devices, overfill sensors, or personnel safety devices (40 CFR 112.2) **[Added January 2009]**.
- *Machinery Space* - any space that contains machinery and related equipment including Category A machinery spaces, propelling machinery, boilers, oil fuel units, steam and internal combustion engines, generators and centralized electrical machinery, oil filling stations, refrigeration stabilizing, ventilation, and air conditioning machinery, and similar spaces and trunks to such spaces (46 CFR 30.10-42).
- *Major River* - a river that, because of its velocity and vessel traffic, would require a more rapid response in case of a worst case discharge. For a list of rivers see "Rolling Rivers, An Encyclopedia of America's Rivers," Richard A. Bartlett, Editor, McGraw-Hill Book Company, 1984 (49 CFR 194.5) **[Added April 2005]**.
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Marine Service Station* - that portion of a property where flammable liquids used as fuels are stored and dispensed from fixed equipment on shore, piers, wharves, or floating docks, into the fuel tanks of self-propelled craft, and shall include all facilities used in connection therewith (29 CFR 1910.106(a)(22)) **[Revised April 2012]**.
- *Marine Transportation-Related Facility (MTR facility)* - any onshore facility or segment of a complex regulated under section 311(j) of the Federal Water Pollution Control Act (FWPCA) by two or more Federal agencies, including piping and any structure used or intended to be used to transfer oil to or from a vessel, subject to regulation under 33 CFR 154 and any deepwater port subject to regulation under 33 CFR 150. For a facility or segment of a complex regulated by two or more Federal agencies under section 311(j) of the FWPCA, the MTR portion of the complex extends from the facility oil transfer system's connection with the vessel to the first valve inside the secondary containment surrounding tanks in the non-transportation-related portion of the facility or, in the absence of secondary containment, to the valve or manifold adjacent to the tanks comprising the non-transportation-related portion of the facility, unless another location has otherwise been agreed to by the COTP and the appropriate Federal official (33 CFR 1020) **[Added October 2010]**.
- *MARPOL 73/78* - the *International Convention for the Prevention of Pollution from Ships*, 1973 as amended by the Protocol of 1978 (33 CFR 151.05).
- *Maximum Extent Practicable* - within the limitations used to determine oil spill planning resources and response times for on-water recovery, shoreline protection, and cleanup for worst-case discharges from onshore non-transportation-related facilities in adverse weather. It includes the planned capability to respond to a worst case discharge in adverse weather, as contained in a response plan that meets the requirements in 40 CFR 112.20 or in a specific plan approved by the Regional Administrator (40 CFR 112.2) **[Added July 2002]**.
- *Maximum Extent Practicable* - the planned capability to respond to a worst case discharge in adverse weather, as contained in a response plan that meets the criteria in this subpart or in a specific plan approved by the cognizant COTP (33 CFR 1020) **[Added October 2010]**.

- *Maximum Extent Practicable* - the limits of available technology and the practical and technical limits on an owner or operator of an onshore facility in planning the response resources required to provide the on-water recovery capability and the shoreline protection and cleanup capability to conduct response activities for a worst-case discharge of oil in adverse weather (49 CFR 130.5) **[Added October 2000]**.
- *Maximum Extent Practicable* - the limits of available technology and the practical and technical limits on a pipeline operator in planning the response resources required to provide the on-water recovery capability and the shoreline protection and cleanup capability to conduct response activities for a worst case discharge from a pipeline in adverse weather (49 CFR 194.5) **[Added April 2005]**.
- *Maximum Most Probable Discharge* - a discharge of the lesser of 1,200 bbls or 10 percent of the volume of a worst case discharge (33 CFR 1020) **[Added October 2010]**.
- *Mobile Refueler* - a bulk storage container onboard a vehicle or towed, that is designed or used solely to store and transport fuel for transfer into or from an aircraft, motor vehicle, locomotive, vessel, ground service equipment, or other oil storage container (40 CFR 112.2) **[Added January 2007]**.
- *Motive Power Container* - any onboard bulk storage container used primarily to power the movement of a motor vehicle, or ancillary onboard oil-filled operational equipment. An onboard bulk storage container which is used to store or transfer oil for further distribution is not a motive power container. The definition of motive power container does not include oil drilling or workover equipment, including rigs (40 CFR 112.2) **[Added January 2007]**.
- *Navigable Waters* - waters of the United States, including the territorial seas. This definition is effective 6 February 2020 (40 CFR 110.1 and 112.2) **[Added July 2002, Revised January 2008; Revised July 2015; Revised April 2018]**.
- *Nearshore Area* - the area extending seaward 12 miles from the boundary lines defined in 46 CFR 7, except in the Gulf of Mexico. In the Gulf of Mexico, it means the area extending seaward 12 mi from the line of demarcation (COLREG lines) defined in 33 CFR 80.740-80.850. (33 CFR 1020) **[Added October 2010]**.
- *Neighboring* - this term means (40 CFR 110.1 and 112.2) **[Added July 2015]**:
  1. all waters located within 100 ft of the ordinary high water mark of a water identified in paragraphs (1) through (5) of the definition for "Waters of the United States." The entire water is neighboring if a portion is located within 100 ft of the ordinary high water mark;
  2. All waters located within the 100-year floodplain of a water identified in paragraphs (1) through (5) of the definition for "Waters of the United States," and not more than 1,500 ft from the ordinary high water mark of such water. The entire water is neighboring if a portion is located within 1,500 feet of the ordinary high water mark and within the 100-year floodplain;
  3. All waters located within 1,500 ft of the high tide line of a water identified in paragraphs (1) or (3) of the definition for "Waters of the United States," and all waters within 1,500 ft of the ordinary high water mark of the Great Lakes. The entire water is neighboring if a portion is located within 1,500 ft of the high tide line or within 1,500 ft of the ordinary high water mark of the Great Lakes.
- *Non-persistent or Group I Oil* - a petroleum-based oil that, at the time of shipment, consists of hydrocarbon fractions: (33 CFR 1020) **[Added October 2010]**.
  1. At least 50 percent of which by volume, distill at a temperature of 340 °C (645 °F); and
  2. At least 95 percent of which by volume, distill at a temperature of 370 °C (700 °F).
- *Non-petroleum Oil* - oil of any kind that is not petroleum-based, including but not limited to: Fats, oils, and greases of animal, fish, or marine mammal origin; and vegetable oils, including oils from seeds, nuts, fruits, and kernels (40 CFR 112.2) **[Added July 2002]**.

- *Non-petroleum Oil* - any animal fat, vegetable oil or other non-petroleum oil (49 CFR 130.5) [**Added October 2000**].
- *Ocean* - the offshore area and nearshore area as defined in this 33 CFR 154 (33 CFR 1020) [**Added October 2010**].
- *Offshore Area* - the area beyond 12 nautical miles measured from the boundary lines defined in 46 CFR 7 extending seaward to 50 nautical miles, except in the Gulf of Mexico. In the Gulf of Mexico, it is the area beyond 12 nautical miles of the line of demarcation (COLREG lines) defined in 33 CFR 80.740-80.850 extending seaward to 50 nautical miles (33 CFR 1020) [**Added October 2010**].
- *Offshore Facility* - any facility of any kind (other than a vessel or public vessel) located in, on, or under any of the navigable waters of the United States, and any facility of any kind that is subject to the jurisdiction of the United States and is located in, on, under any other waters (40 CFR 112.2) [**Added July 2002**].
- *Offshore Facility* - any facility of any kind located in, on, or under any of the navigable waters of the United States, and any facility or any kind that is subject to the jurisdiction of the United States and is located in, on, or under any other waters, other than a vessel or a public vessel (CWA, Section 311 and 33 CFR 153.103).
- *Offshore Oil Barge* - a tank barge carrying oil in bulk as cargo, including dual-mode integrated tug- barges, certificated by the Coast Guard under 46 CFR chapter I, Subchapter D, for navigation in waters outside the boundary lines, as defined in 46 CFR 7, in any ocean or the Gulf of Mexico; any tank barge in Great Lakes service; or any foreign flag tank barge (33 CFR 155.200).
- *Off-Specification Oil* - used oil burned for energy recovery and any fuel produced from used oil that exceeds the following allowable limits (40 CFR 279) [**Reviewed March 2000**]:

Arsenic	5 ppm maximum
Cadmium	2 ppm maximum
Chromium	10 ppm maximum
Lead	100 ppm maximum
Flash point	100 °F minimum
Total halogens	4000 ppm maximum

- *Oil* - oil of any kind or in any form, including, but not limited to: fats, oils, or greases of animal, fish, or marine mammal origin; vegetable oils, including oils from seeds, nuts, fruits, or kernels; and, other oils and greases, including petroleum, fuel oil, sludge, synthetic oils, mineral oils, oil refuse, or oil mixed with wastes other than dredged spoil (40 CFR 112.2) [**Added July 2002**].
- *Oil* - oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse, oil mixed with wastes other than dredge spoil (33 CFR 1020) [**Added October 2010**].
- *Oil* - when used in relation to Section 311 of the act, means oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil (CWA, Section 311 and 33 CFR 153.103).
- *Oil* - petroleum in any form including crude oil, fuel oil, sludge, oil refuse, and refined products (33 CFR 151.05).

- *Oil* - oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil. Note: This definition does not include hazardous substances (see 40 CFR 116) (49 CFR 130.5) **[Added October 2000]**.
- *Oil* - oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, vegetable oil, animal oil, sludge, oil refuse, oil mixed with wastes other than dredged spoil (49 CFR 194.5) **[Added April 2005]**.
- *Oil-filled Operational Equipment* - equipment that includes an oil storage container (or multiple containers) in which the oil is present solely to support the function of the apparatus or the device. Oil-filled operational equipment is not considered a bulk storage container, and does not include oil-filled manufacturing equipment (flow-through process). Examples of oil-filled operational equipment include, but are not limited to, hydraulic systems, lubricating systems (e.g., those for pumps, compressors and other rotating equipment, including pumpjack lubrication systems), gear boxes, machining coolant systems, heat transfer systems, transformers, circuit breakers, electrical switches, and other systems containing oil solely to enable the operation of the device (40 CFR 112.2) **[Added January 2007]**.
- *Oil Fuel* - oil used as a fuel for machinery in the vessel in which it is carried (46 CFR 30.10-48).
- *Oil Fuel Unit* - the equipment used for the preparation of oil fuel for delivery to an oil fired boiler, the equipment used for the preparation of heated oil fuel for delivery to an internal combustion engine, and any oil fuel pressure pumps, filler, and heater that deal with oil at a pressure of more than 1.8 kg/cm<sup>2</sup> (25 psig) (46 CFR 30.10-48a).
- *Oil Spill Removal Organization* - an entity that provides oil spill response resources, and includes any for-profit or not-for-profit contractor, cooperative, or in-house response resources that have been established in a geographic area to provide required response resources (40 CFR 112.2) **[Added July 2002]**.
- *Oil Spill Removal Organization (OSRO)* - an entity that provides response resources (33 CFR 1020) **[Added October 2010]**.
- *Oil Spill Removal Organization* - an entity that provides response resources (49 CFR 194.5) **[Added April 2005]**.
- *Oil Tanker* - a self-propelled vessel carrying oil in bulk as cargo, including integrated tug-barges designed for push-mode operation (33 CFR 155.200).
- *On-Deck Spill* - a discharge of oil on the deck of a vessel during loading, unloading, transfer, or other shipboard operations. An on-deck spill could result from a leaking fitting, an overfill, a bad connection, or similar operational mishap. This is different from spills occurring as a result of a collision or grounding where the hull is punctured and a tank is ruptured, resulting in an uncontrolled discharge of oil into the marine environment (33 CFR 155.200).
- *On-Scene Coordinator (OSC)* - the definition in the National Oil and Hazardous Substances Pollution Contingency Plan (40 CFR 300) (33 CFR 1020) **[Added October 2010]**.
- *On-Scene Coordinator (OSC)* - the federal official designated by the Administrator of the EPA or by the Commandant of the USCG to coordinate and direct federal response under subpart D of the National Contingency Plan (40 CFR 300) (49 CFR 194.5) **[Added April 2005]**.
- *Onshore Facility* - any facility of any kind located in, on, or under any land within the United States, other than submerged lands (40 CFR 112.2) **[Added July 2002]**.
- *Onshore Facility* - any facility (including but not limited to, motor vehicles and rolling stock) of any kind located in, on, or under any land within the United States, other than submerged land (CWA, Sect. 311 and 33 CFR 153.103).

- *Onshore Oil Pipeline Facilities* - new and existing pipe, rights of way and any equipment, facility, or building used in the transportation of oil located in, on, or under, any land within the United States other than submerged land (49 CFR 194.5).
- *Operating Area* - Rivers and Canals, Inland, Nearshore, Great Lakes, or Offshore geographic location(s) in which a facility is handling, storing, or transporting oil (33 CFR 1020) **[Added October 2010]**.
- *Operating Environment* - Rivers and Canals, Inland, Great Lakes, or Ocean. These terms are used to define the conditions in which response equipment is designed to function (33 CFR 1020) **[Added October 2010]**.
- *Operating In Compliance With The Plan* - operating in compliance with the provisions of this subpart including, ensuring the availability of the response resources by contract or other approved means, and conducting the necessary training and drills (33 CFR 1020) **[Added October 2010]**.
- *Operator* - in relationship to onshore oil pipeline facilities, a person who owns or operates onshore oil pipeline facilities (49 CFR 194.5).
- *Ordinary High Water Mark* - that line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas (40 CFR 110.1 and 112.2) **[Added July 2015]**.
- *Other Non-Petroleum Oil* - a non-petroleum oil of any kind that is not generally an animal fat or vegetable oil (33 CFR 1020) **[Added October 2010]**.
- *Other Non-petroleum Oil* - a non-petroleum oil of any kind that is not an animal fat or vegetable oil (49 CFR 130.5) **[Added October 2000]**.
- *Owner or Operator* - any person owning or operating an onshore facility or an offshore facility, and in the case of any abandoned offshore facility, the person who owned or operated or maintained the facility immediately prior to such abandonment (40 CFR 112.2) **[Added July 2002]**.
- *Packaging* - a receptacle and any other components or materials necessary for the receptacle to perform its containment function in conformance with the packaging requirements of this part. A compartmented tank is a single packaging (49 CFR 130.5) **[Added October 2000]**.
- *Partially Buried Tank* - a storage container that is partially inserted or constructed in the ground, but not entirely below grade, and not completely covered with earth, sand, gravel, asphalt, or other material. A partially buried tank is considered an aboveground storage container for purposes of 40 CFR 112 (40 CFR 112.2) **[Added July 2002]**.
- *Permanently Closed* - any container or facility for which (40 CFR 112.2) **[Added July 2002]**:
  1. All liquid and sludge has been removed from each container and connecting line; and
  2. All connecting lines and piping have been disconnected from the container and blanked off, all valves (except for ventilation valves) have been closed and locked, and conspicuous signs have been posted on each container stating that it is a permanently closed container and noting the date of closure.
- *Persistent Oil* - a petroleum-based oil that does not meet the distillation criteria for a non-persistent oil. For the purposes of 33 CFR 154, Subpart F, persistent oils are further classified based on specific gravity as follows (33 CFR 1020) **[Added October 2010]**:
  1. Group II--specific gravity of less than .85.
  2. Group III--specific gravity equal to or greater than .85 and less than .95.

3. Group IV--specific gravity equal to or greater than .95 and less than or equal to 1.0.

4. Group V--specific gravity greater than 1.0.

- *Person* - includes an individual, firm, corporation, association, or partnership (40 CFR 112.2) [**Added July 2002**].
- *Person* - an individual, firm, corporation, partnership, association, State, municipality, commission, or political subdivision of a State, or any interstate body, as well as a department, agency, or instrumentality of the executive, legislative or judicial branch of the Federal Government (49 CFR 130.5) [**Added October 2000**].
- *Petroleum Oil* - petroleum in any form, including but not limited to crude oil, fuel oil, mineral oil, sludge, oil refuse, and refined products (40 CFR 112.2) [**Revised July 2002**].
- *Petroleum Oil* - any oil extracted or derived from geological hydrocarbon deposits, including fractions thereof (49 CFR 130.5) [**Added October 2000**].
- *Petroleum Refining Facility* - an establishment primarily engaged in producing gasoline, kerosene, distillate fuel oils, residual fuel oils, and lubricants, through fractionation, straight distillation of crude oil, redistillation of unfinished petroleum derivatives, cracking or other processes (i.e., facilities classified as SIC 2911) (40 CFR 279.1) [**Added March 2000**].
- *Pipeline* - all parts of an onshore pipeline facility through which oil moves, including, but not limited to, line pipe, valves, and other appurtenances connected to the line pipe, pumping units, fabricated assemblies associated with pumping units, metering and delivery stations and fabricated assemblies therein, and breakout tanks (49 CFR 194.5).
- *Point Source* - any discernible confined and discrete conveyance including, but not limited, to a pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture or agricultural stormwater (40 CFR 122.2 and 40 CFR 401.11(d)).
- *Pressure Vacuum Relief Valve* - any device or assembly of a mechanical, liquid, weight, or other type used for the automatic regulation of pressure or vacuum in enclosed spaces (46 CFR 30.10-55).
- *Processing* - means chemical or physical operations designed to produce from used oil, or to make used oil more amenable for production of fuel oils, lubricants, or other used oil-derived product. Processing includes, but is not limited to blending used oil with virgin petroleum products, blending used oils to meet the fuel specification, filtration, simple distillation, chemical or physical separation, and re-refining (40 CFR 279.1) [**Reviewed March 2000**].
- *Produced Water Container* - a storage container at an oil production facility used to store the produced water after initial oil/water separation, and prior to reinjection, beneficial reuse, discharge, or transfer for disposal (40 CFR 112.2) [**Added January 2009**].
- *Production Facility* - all structures (including but not limited to wells, platforms, or storage facilities), piping (including but not limited to flowlines or intra-facility gathering lines), or equipment (including but not limited to workover equipment, separation equipment, or auxiliary non-transportation-related equipment) used in the production, extraction, recovery, lifting, stabilization, separation or treating of oil (including condensate), or associated storage or measurement, and is located in an oil or gas field, at a facility. This definition governs whether such structures, piping, or equipment are subject to a specific section of 40 CFR 112 (40 CFR 112.2) [**Added July 2002; Revised January 2009**].
- *Public Vessel* - a vessel owned or bare boat chartered and operated by the United States, or by a state or political subdivision thereof, or by a foreign nation, except when such vessel is engaged in commerce (33 CFR 153.103).

- *Qualified Individual* - an English-speaking representative of an operator, located in the United States, available on a 24-h basis, with full authority to: activate and contract with required oil spill removal organizations; activate personnel and equipment maintained by the operator; act as liaison with the On-Scene Coordinator (OSC); and obligate any funds required to carry out all required or directed oil response activities (49 CFR 194.5).
- *Qualified Individual* - an individual familiar with the response plan, trained in his or her responsibilities in implementing the plan, and authorized, on behalf of the owner or operator, to initiate all response activities identified in the plan, to enter into response-related contracts and obligate funds for such contracts, and to act as a liaison with the on-scene coordinator and other responsible officials. The qualified individual must be available at all times the owner or operator is engaged in transportation subject to part 130 (alone or in conjunction with an equally qualified alternate), must be fluent in English, and must have in his or her possession documentation of the required authority (49 CFR 130.5) **[Added October 2000]**.
- *Qualified Individual and Alternate Qualified Individual* - a person located in the United States who meets the requirements of 33 CFR 154.1026 (33 CFR 1020) **[Added October 2010]**.
- *Re-Refining Distillation Bottoms* - the heavy fractions produced by vacuum distillation of filtered and dehydrated used oil. The composition of still bottoms varies with column operation and feedback (40 CFR 279.1) **[Reviewed March 2000]**.
- *Regional Administrator* - the Regional Administrator of the Environmental Protection Agency, in and for the Region in which the facility is located (40 CFR 112.2) **[Added July 2002]**.
- *Repair* - any work necessary to maintain or restore a container to a condition suitable for safe operation, other than that necessary for ordinary, day-to-day maintenance to maintain the functional integrity of the container and that does not weaken the container (40 CFR 112.2) **[Added July 2002]**.
- *Reportable Release* – under 49 CFR 195.50, this is each failure in a pipeline system subject to this part in which there is a release of the hazardous liquid or carbon dioxide transported resulting in any of the following (49 CFR 195.50) **[Added April 2005]**:
  1. Explosion or fire not intentionally set by the operator.
  2. Release of 5 gal (19 L) or more of hazardous liquid or carbon dioxide, except that no report is required for a release of less than 5 barrels (0.8 m<sup>3</sup>) resulting from a pipeline maintenance activity if the release is:
    - a. Not otherwise reportable under this section;
    - b. Not one that resulted in pollution of any stream, river, lake, reservoir, or other similar body of water that violated applicable water quality standards, caused a discoloration of the surface of the water or adjoining shoreline, or deposited a sludge or emulsion beneath the surface of the water or upon adjoining shorelines;
    - c. Confined to company property or pipeline right-of-way; and
    - d. Cleaned up promptly;
  3. Death of any person;
  4. Personal injury necessitating hospitalization;
  5. Estimated property damage, including cost of clean-up and recovery, value of lost product, and damage to the property of the operator or others, or both, exceeding \$50,000.
- *Response Activities* - the containment and removal of oil from the land, water, and shorelines, the temporary storage and disposal of recovered oil, or the taking of other actions as necessary to minimize or mitigate damage to the public health or welfare or the environment (33 CFR 1020) **[Added October 2010]**.
- *Response Activities* - the containment and removal of oil from the water and shorelines, the temporary storage and disposal of recovered oil, or the taking of other actions as necessary to minimize or mitigate damage to the environment (49 CFR 194.5).

- *Response Area* - the inland zone or coastal zone, as defined in the National Contingency Plan, in which response activity is occurring (49 CFR 194.5).
- *Response Plan* - the operator's core plan and the response zone appendices for responding, to the maximum extent practicable, to a worst case discharge of oil, or the substantial threat of such a discharge (49 CFR 194.5).
- *Response Resources* - the personnel, equipment, supplies, and other capability necessary to perform the response activities identified in a response plan (33 CFR 1020) [**Added October 2010**].
- *Response Resources* - the personnel, equipment, supplies, and other resources necessary to conduct response activities (49 CFR 194.5) [**Added April 2005**].
- *Response Zone* - a geographic area, either along a length of pipeline or including multiple pipelines, containing one or more adjacent line sections, for which the operator must plan for the deployment of, and provide, spill response capabilities (49 CFR 194.5).
- *Rivers and Canals* - a body of water confined within the inland area, including the Intracoastal Waterways and other waterways artificially created for navigation, that has a project depth of 12 feet or less (33 CFR 1020) [**Added October 2010**].
- *Service Space* - spaces that are used for galleys, pantries containing cooking appliances, lockers, storerooms, paint and lamp rooms, and similar spaces that contain highly combustible materials, laundries, garbage and trash disposal and stowage rooms, workshops other than those forming part of the machinery spaces and similar spaces and trunks to such spaces (46 CFR 30.10-62a).
- *Sheen* - an iridescent appearance on the surface of the water (40 CFR 110.1).
- *Ship* - a vessel of any type whatsoever, operating in the marine environment (33 CFR 151.05).
- *Ship's Stores* - materials that are on board a vessel for the upkeep, maintenance, safety, operation, or navigation of the vessel, or for the safety or comfort of the vessel's passengers or crew.
- *Significant Nexus* - this definition is effective 6 February 2020. That a water, including wetlands, either alone or in combination with other similarly situated waters in the region, significantly affects the chemical, physical, or biological integrity of a water identified in paragraphs (1) through (3) of the definition for "Waters of the United States." The term "in the region" means the watershed that drains to the nearest water identified in paragraphs (1) through (3) of the definition for "Waters of the United States." For an effect to be significant, it must be more than speculative or insubstantial. Waters are similarly situated when they function alike and are sufficiently close to function together in affecting downstream waters. For purposes of determining whether or not a water has a significant nexus, the water's effect on downstream (1) through (3) waters shall be assessed by evaluating the aquatic functions identified in paragraphs (1) through (9) of this definition below. A water has a significant nexus when any single function or combination of functions performed by the water, alone or together with similarly situated waters in the region, contributes significantly to the chemical, physical, or biological integrity of the nearest water identified in paragraphs (1) through (3) of the definition for "Waters of the United States." Functions relevant to the significant nexus evaluation are the following (33 CFR 328.3(c)(5)) [**Added July 2015; Revised April 2018**]:
  1. Sediment trapping,
  2. Nutrient recycling,
  3. Pollutant trapping, transformation, filtering, and transport,
  4. Retention and attenuation of flood waters,
  5. Runoff storage,
  6. Contribution of flow,
  7. Export of organic matter,
  8. Export of food resources, and

9. Provision of life cycle dependent aquatic habitat (such as foraging, feeding, nesting, breeding, spawning, or use as a nursery area) for species located in a water identified in paragraphs (1) through (3) of the definition for “Waters of the United States.”

- *Sludge* - an aggregate of oil or oil and other matter of any kind in any form other than dredged spoil, having a combined specific gravity equivalent to or greater than water (40 CFR 110.1).
- *Specific Gravity* - the ratio of the mass of a given volume of liquid at 15 °C (60 °F) to the mass of an equal volume of pure water at the same temperature (33 CFR 1020) [**Added October 2010**].
- *Specified Minimum Yield Strength* - the minimum yield strength, expressed in pounds per square inch, prescribed by the specification under which the material is purchased from the manufacturer (49 CFR 194.5) [**Added April 2005**].
- *Spill Event* - a discharge of oil into or upon the navigable waters of the United States or adjoining shorelines in harmful quantities (40 CFR 112.3) [**Added July 2002**].
- *Spill Management Team* - the personnel identified to staff the organizational structure identified in a response plan to manage response plan implementation (33 CFR 1020) [**Added October 2010**].
- *Spill Prevention, Control, and Countermeasure Plan; SPCC Plan, or Plan* - the document required by 40 CFR 112.3 that details the equipment, workforce, procedures, and steps to prevent, control, and provide adequate countermeasures to a discharge (40 CFR 112.2) [**Added July 2002**].
- *Storage Capacity of a Container* - the shell capacity of the container (40 CFR 112.2) [**Added July 2002**].
- *Stress Level* - the level of tangential or hoop stress, usually expressed as a percentage of specified minimum yield strength (49 CFR 194.5) [**Added April 2005**].
- *Substantial Threat of a Discharge* - any incident or condition involving a facility that may create a risk of discharge of oil. Such incidents include, but are not limited to storage tank or piping failures, above ground or underground leaks, fires, explosions, flooding, spills contained within the facility, or other similar occurrences (33 CFR 1020) [**Added October 2010**].
- *Tank Barge* - any tank vessel not equipped with means of self-propulsion (46 CFR 30.10-65).
- *Tankship* - any tank vessel propelled by power or sail (46 CFR 30.10-67).
- *Tank Vessel* - any vessel especially constructed or converted to carry liquid bulk cargo in tanks (46 CFR 30.10-69).
- *Tier* - the combination of required response resources and the times within which the resources must arrive on scene. [Note: Tiers are applied in three categories:
  1. Higher Volume Port Areas,
  2. Great Lakes, and
  3. All other operating environments, including rivers and canals, inland, nearshore, and offshore areas.(NOTE: Appendix C, Table 4 of 33 CFR 154, provides specific guidance on calculating response resources. Sections 33 CFR 154.1045(f) and 154.1135, set forth the required times within which the response resources must arrive on-scene.) (33 CFR 1020) [**Added October 2010**].
- *Transportation-related and Non-transportation-related* - as applied to an onshore or offshore facility, are defined in the Memorandum of Understanding between the Secretary of Transportation and the Administrator of the

Environmental Protection Agency, dated November 24, 1971, (Appendix A of 40 CFR 112) (40 CFR 112.2) **[Added July 2002]**.

- *Transports or Transportation* - any movement of oil by highway or rail, and any loading, unloading, or storage incidental thereto (49 CFR 130.5) **[Added October 2000]**.
- *Tributary and Tributaries* - a water that contributes flow, either directly or through another water (including an impoundment identified in paragraph (4) of the definition for “Waters of the United States”), to a water identified in paragraphs ((1) through (3) of the definition for “Waters of the United States” that is characterized by the presence of the physical indicators of a bed and banks and an ordinary high water mark. These physical indicators demonstrate there is volume, frequency, and duration of flow sufficient to create a bed and banks and an ordinary high water mark, and thus to qualify as a tributary. A tributary can be a natural, man-altered, or man-made water and includes waters such as rivers, streams, canals, and ditches not excluded in the definition of “Waters of the United States.” A water that otherwise qualifies as a tributary under this definition does not lose its status as a tributary if, for any length, there are one or more constructed breaks (such as bridges, culverts, pipes, or dams), or one or more natural breaks (such as wetlands along the run of a stream, debris piles, boulder fields, or a stream that flows underground) so long as a bed and banks and an ordinary high water mark can be identified upstream of the break. A water that otherwise qualifies as a tributary under this definition does not lose its status as a tributary if it contributes flow through a water of the United States that does not meet the definition of tributary or through a non-jurisdictional water to a water identified in paragraphs (1) through (3) of the definition for “Waters of the United States” (40 CFR 110.1 and 112.2) **[Added July 2015]**.
- *United States* - the States, the District of Columbia, the Commonwealth of Puerto Rico, the Commonwealth of the Northern Mariana Islands, Guam, American Samoa, the U.S. Virgin Islands, and the Pacific Island Governments (40 CFR 112.2) **[Added July 2002]**.
- *Used Oil* - any oil that has been refined from crude oil or any synthetic oil that has been used and as a result of such use is contaminated by physical or chemical impurities (40 CFR 279.1) **[Reviewed March 2000]**.
- *Used Oil Aggregation Point* - any site or facility that accepts, aggregates, and/or stores used oil collected only from other used oil generation sites owned or operated by the owner or operator of the aggregation point, from which used oil is transported to the aggregation point in shipments of no more than 55 gal. Used oil aggregation points may also accept used oil from household DIYs (40 CFR 279.1) **[Reviewed March 2000]**.
- *Used Oil Burner* - a facility where used oil not meeting the specification requirements is burned for energy recovery (40 CFR 279.1) **[Reviewed March 2000]**.
- *Used Oil Collection Center* - any site or facility that is registered/licensed/ permitted/recognized by a state/county/municipal government to manage used oil and accepts/aggregates and stores used oil collected from used oil generators who bring used oil to the collection centers in shipments of no more than 55 gal. Used oil collection centers may accept used oil from household DIYs (40 CFR 279.1) **[Reviewed March 2000]**.
- *Used Oil Fuel Marketer* - any person who conducts either of the following activities (40 CFR 279.1) **[Reviewed March 2000]**:
  1. directs a shipment of off-specification used oil from their facility to a used oil burner,
  2. first claims that used oil that is to be burned for energy recovery meets used oil fuel specifications.
- *Used Oil Generator* - any person, by site, whose act or process produces used oil or whose act first causes used oil to become subject to regulation (40 CFR 279.1) **[Reviewed March 2000]**.
- *Used Oil Processor/Re-Refiner* - a facility that processes used oil (40 CFR 279.1) **[Reviewed March 2000]**.

- *Used Oil Transfer Facility* - any transportation-related facility, including loading docks, parking areas, storage areas, and other areas where shipments of used oil are held for more than 24 h during the normal course of transportation and not longer than 35 days (40 CFR 279.2) **[Reviewed March 2000]**.
- *Used Oil Transporter* - any person who transports used oil, any person who collects used oil from more than one generator and transports the collected oil, and owners and operators of used oil transfer facilities. Used oil transporters may consolidate or aggregate loads of used oil for purposes of transportation, but, with the following exception, may not process used oil. Transporters may conduct incidental processing operations that occur in the normal course of used oil transportation (e.g., settling and water separation), but that are not designed to produce or make more amenable for production of used oil derived products or used oil fuel (40 CFR 279.1) **[Reviewed March 2000]**.
- *Vegetable Oil* - a non-petroleum oil or fat of vegetable origin, including but not limited to oils and fats derived from plant seeds, nuts, fruits, and kernels (40 CFR 112.2) **[Added July 2002]**.
- *Vegetable Oil* - a non-petroleum oil or fat derived from plant seeds, nuts, kernels or fruits, and not specifically identified elsewhere in 33 CFR 154 (33 CFR 1020) **[Added October 2010]**.
- *Vegetable Oil* - a non-petroleum oil or fat derived from plant seeds, nuts, kernels or fruits, not specifically identified elsewhere in 49 CFR 130 (49 CFR 130.5) **[Added October 2000]**.
- *Vessel* - every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation on water, other than a public vessel (40 CFR 112.2) **[Added July 2002]**.
- *Vessel* - every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation on water other than a public vessel (CWA, Section 311).
- *Vessel Carrying Oil As Secondary Cargo* - a vessel carrying oil pursuant to a permit issued under 46 CFR 30.01-1, 46 CFR 70.05-30, or 46 CFR 90.05-35 or pursuant to an International Oil Pollution Prevention (IOPP) or Noxious Liquid Substance (NLS) certificate; or any uninspected vessel that carries oil as bulk cargo (33 CFR 155.200).
- *Waters of the United States* – this definition is effective 6 February 2020. This phrase includes the following (40 CFR 110.1 and 112.2) **[Added July 2015; Revised April 2018]**:
  1. All waters which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
  2. All interstate waters, including interstate wetlands [see definition of *Wetlands*];
  3. The territorial seas;
  4. All impoundments of waters otherwise identified as waters of the United States under 40 CFR 110.1;
  5. All tributaries, [see definition of *Tributary*], of waters identified in paragraphs (1) through (3);
  6. All waters adjacent [see definition of *Adjacent*] to a water identified in paragraphs (1) through (5) of this definition, including wetlands, ponds, lakes, oxbows, impoundments, and similar waters;
  7. All waters in paragraphs (a) through (e) of this paragraph (7) where they are determined, on a case-specific basis, to have a significant nexus to a water identified in paragraphs (1) through (3) of this definition. The waters identified in each of paragraphs (a) through (e) of this paragraph (7) are similarly situated and shall be combined, for purposes of a significant nexus analysis, in the watershed that drains to the nearest water identified in paragraphs (1) through (3) of this definition. Waters identified in this paragraph (7) shall not be combined with waters identified in paragraph (6) when performing a significant nexus analysis. If waters identified in this paragraph are also an adjacent water under paragraph (6), they are an adjacent water and no case-specific significant nexus analysis is required.
    - a. *Prairie potholes*. Prairie potholes are a complex of glacially formed wetlands, usually occurring in depressions that lack permanent natural outlets, located in the upper Midwest.
    - b. *Carolina bays and Delmarva bays*. Carolina bays and Delmarva bays are ponded, depressional wetlands that occur along the Atlantic coastal plain.

- c. *Pocosins*. Pocosins are evergreen shrub and tree dominated wetlands found predominantly along the Central Atlantic coastal plain.
  - d. *Western vernal pools*. Western vernal pools are seasonal wetlands located in parts of California and associated with topographic depression, soils with poor drainage, mild, wet winters and hot, dry summers.
  - e. *Texas coastal prairie wetlands*. Texas coastal prairie wetlands are freshwater wetlands that occur as a mosaic of depressions, ridges, intermound flats, and mima mound wetlands located along the Texas Gulf Coast.
8. All waters located within the 100-year floodplain of a water identified in paragraphs (1) through (3) of this definition and all waters located within 4,000 feet of the high tide line or ordinary high water mark [see definition of *High Tide Line* and *Ordinary High Water Mark*] of a water identified in paragraphs ((1) through (5) of this definition where they are determined on a case-specific basis to have a significant nexus to a water identified in paragraphs ((1) through (3) of this definition. For waters determined to have a significant nexus, the entire water is a water of the United States if a portion is located within the 100-year floodplain of a water identified in paragraphs (1) through (3) of this definition or within 4,000 feet of the high tide line or ordinary high water mark. Waters identified in this paragraph (8) shall not be combined with waters identified in paragraph (6) of this definition when performing a significant nexus analysis. If waters identified in this paragraph (8) are also an adjacent water under paragraph (6), they are an adjacent water and no case-specific significant nexus analysis is required.

The following are not “waters of the United States” even where they otherwise meet the terms of paragraphs (4) through (8) above in this definition.

1. Waste treatment systems (other than cooling ponds meeting the criteria of this paragraph)
  2. Prior converted cropland. Notwithstanding the determination of an area’s status as prior converted cropland by any other Federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with EPA.
  3. The following ditches:
    - a. Ditches with ephemeral flow that are not a relocated tributary or excavated in a tributary.
    - b. Ditches with intermittent flow that are not a relocated tributary, excavated in a tributary, or drain wetlands
    - c. Ditches that do not flow, either directly or through another water, into a water identified in paragraphs (1) through (3) of the above definition of waters which are “waters of the United States”.
  4. The following features:
    - a. Artificially irrigated areas that would revert to dry land should application of water to that area cease;
    - b. Artificial, constructed lakes and ponds created in dry land such as farm and stock watering ponds, irrigation ponds, settling basins, fields flooded for rice growing, log cleaning ponds, or cooling ponds;
    - c. Artificial reflecting pools or swimming pools created in dry land;
    - d. Small ornamental waters created in dry land;
    - e. Water-filled depressions created in dry land incidental to mining or construction activity, including pits excavated for obtaining fill, sand, or gravel that fill with water;
    - f. Erosional features, including gullies, rills, and other ephemeral features that do not meet the definition of tributary, non-wetland swales, and lawfully constructed grassed waterways; and
    - g. Puddles.
  5. Groundwater, including groundwater drained through subsurface drainage systems.
  6. Stormwater control features constructed to convey, treat, or store stormwater that are created in dry land.
  7. Wastewater recycling structures constructed in dry land; detention and retention basins built for wastewater recycling; groundwater recharge basins; percolation ponds built for wastewater recycling; and water distributary structures built for wastewater recycling.
- *Wetlands* - those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas (40 CFR 110.1 and 112.2) [**Added July 2002, Revised July 2015**].

- *Worst Case Discharge* - in the case of an onshore facility and deepwater port, the largest foreseeable discharge in adverse weather conditions meeting the requirements of 33 CFR 154.1029 (33 CFR 1020) **[Added October 2010]**.
- *Worst Case Discharge* - the largest foreseeable discharge of oil, including a discharge from fire or explosion, in adverse weather conditions. This volume will be determined by each pipeline operator for each response zone and is calculated according to 49 CFR 194.105 (49 CFR 194.5) **[Revised April 2005]**.
- *Worst Case Discharge* - for the MTR segment of a facility, not less than (33 CFR 154.1029) **[Added October 2010]**:
  1. Where applicable, the loss of the entire capacity of all in-line and breakout tank(s) needed for the continuous operation of the pipelines used for the purposes of handling or transporting oil, in bulk, to or from a vessel regardless of the presence of secondary containment; plus
  2. The discharge from all piping carrying oil between the marine transfer manifold and the non-transportation-related portion of the facility. The discharge from each pipe is calculated as follows:
    - a. The maximum time to discover the release from the pipe in hours, plus the maximum time to shut down flow from the pipe in hours (based on historic discharge data or the best estimate in the absence of historic discharge data for the facility) multiplied by the maximum flow rate expressed in barrels per hour (based on the maximum relief valve setting or maximum system pressure when relief valves are not provided) plus the total line drainage volume expressed in barrels for the pipe between the marine manifold and the non-transportation-related portion of the facility.

For a mobile facility it means the loss of the entire contents of the container in which the oil is stored or transported.
- *Worst Case Discharge for an Onshore Non-transportation-related Facility* - the largest foreseeable discharge in adverse weather conditions as determined using the worksheets in Appendix D to 40 CFR 112 (40 CFR 112.2) **[Added July 2002]**.
- *Worst-case Discharge* – “the largest foreseeable discharge in adverse weather conditions,” as defined at 33 U.S.C. 1321(a)(24). The largest foreseeable discharge from a motor vehicle or rail car is the capacity of the cargo container. The term “maximum potential discharge,” used in 49 CFR 130.31(a), is synonymous with “worst-case discharge.” (49 CFR 130.5) **[Added October 2000]**.
- *Worst Case Discharge For Onshore Oil Pipelines* - the worst case discharge is the largest volume, in barrels (cubic meters), of the following (49 CFR 194.105(b)) **[Added July 2005]**:
  1. The pipeline's maximum release time in hours, plus the maximum shutdown response time in hours (based on historic discharge data or in the absence of such historic data, the operator's best estimate), multiplied by the maximum flow rate expressed in barrels per hour (based on the maximum daily capacity of the pipeline), plus the largest line drainage volume after shutdown of the line section(s) in the response zone expressed in barrels (cubic meters); or
  2. The largest foreseeable discharge for the line section(s) within a response zone, expressed in barrels (cubic meters), based on the maximum historic discharge, if one exists, adjusted for any subsequent corrective or preventive action taken; or
  3. If the response zone contains one or more breakout tanks, the capacity of the single largest tank or battery of tanks within a single secondary containment system, adjusted for the capacity or size of the secondary containment system, expressed in barrels (cubic meters).

## F. Records To Review

- Records of all spills, leaks, and associated site assessment/cleanup activities (for 3 yr)
- Official correspondence with state implementing agency

- Spill Prevention and Response Plan
- Facility response plan required by OPA
- Records of spill response training programs
- Records of all spills, leaks, and associated site assessment/cleanup activities (for 3 yr)
- Ships Log
- Engine room Log
- Oil Record Book
- Certificate of Inspection
- Classification Society Certificates
- Licenses, documents, and endorsements for crew members
- Vessel Response Plan
- Oil transfer procedures
- Training and Drill exercises
- Cathodic protection system routine maintenance logs

#### **G. Physical Features To Inspect**

- Refueling facilities, including:
  - Above and belowground storage tanks and dikes
  - Venting
  - Fill pipe
  - Gauges
  - Cathodic protection test stations
- Washrack areas
- Vehicle maintenance areas
- Oil separators
- Sites where oil is stored in containers other than tanks
- Fire training pits
- Grease racks
- Oil transfer locations (including lighting, communications, emergency shutdowns, and hose assemblies)
- Oil waste retention facilities
- Bilge areas

## H. Guidance for POL Management Checklist Users

(NOTE: Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions which have been added or revised as a result of this review are identified as either being reviewed, revised, or added in March 2000, for example [Added March 2000].)

	<b>REFER TO CHECKLIST ITEMS:</b>
All Facilities	PO.1.1.US.
Missing, Risk Management, and Positive Checklist Items	PO.2.1.US. through PO.2.3.US.
Spill Plans	PO.5.1.US. through PO.5.11.US.
Response Plans	PO.10.1.US. through PO.10.4.US.
Transportation Spill Plans	PO.12.1 and PO.12.2
Marine Spill Plans	PO.13.1.US through PO.13.8.US
Discharges/Spills	PO.15.1.US. and PO.15.2.US.
POL Storage	
General	PO.20.1.US. through PO.20.6.US.
On Vessels/Ships	PO.25.1.US. through PO.25.7.US.
Tank Vessels	PO.30.1.US. through PO.30.6.US.
Cargo and Miscellaneous Vessels	PO.35.1.US. and PO.35.2.US.
Pipelines	PO.40.1.US. through PO.40.11.US.
Service Stations	PO.45.1.US. through PO.45.7.US.
Transfer Terminals	PO.50.1.US. through PO.50.6.US.
POL Loading and Unloading	PO.55.1.US. through PO.55.6.US.
Used Oil	PO.60.1.US. and PO.60.2.US.
Used Oil Generators	PO.65.1.US. through PO.65.13.US.
Used Oil Collection Centers and Aggregation Points	PO.70.1.US. through PO.70.3.US.
Used Oil Transportation	PO.75.1.US. through PO.75.9.US.
Used Oil Burners	PO.80.1.US. through PO.80.12.US.
Used Oil Marketing	PO.85.1.US. through PO.85.9.US.

Used Oil Processors/Re-refiners	PO.87.1.US. through PO.87.16.US.
Dust Suppression With Used Oil	PO.90.1.US.
