<p style="text-align: center;"><b>REGULATORY REQUIREMENTS</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS</b>  <b>December 2018</b></p>
<p><b>WASTEWATER TREATMENT</b></p> <p><b>AE.180</b> <b>General</b></p> <p><b>AE.180.1.US.</b> Industrial POTW treatment plants are required to meet specific emissions standards (40 CFR 63.1580, and 63.1582 through 63.1585) [<b>Revised January 2003</b>].</p>	<p>(NOTE: These requirements apply if the following are all true:</p> <ul style="list-style-type: none"> <li>– the facility owns or operates a POTW that includes an affected source (see definitions)</li> <li>– the affected source is located at a major source of HAP emissions, or at any industrial POTW regardless of whether or not it is a major source of HAP</li> <li>– the POTW is required to develop and implement a pretreatment program as defined by 40 CFR 403.8 (for a POTW owned or operated by a municipality, State, or intermunicipal or interstate agency), or the POTW would meet the general criteria for development and implementation of a pretreatment program (for a POTW owned or operated by a department, agency, or instrumentality of the Federal government).</li> </ul> <p>(NOTE: If the existing POTW treatment plant is not located at a major source as of 26 October 1999, but thereafter becomes a major source for any reason other than reconstruction, then the POTW treatment plant would be considered an existing source. If the POTW treatment plant is reconstructed, then the requirements for a new or reconstructed POTW treatment plant, as defined in 40 CFR 63.1595 (see Definitions), apply.)</p> <p>(NOTE: The following are the characteristics of an industrial POTW treatment plant:</p> <ul style="list-style-type: none"> <li>– the POTW is an industrial POTW treatment plant if an industrial discharger complies with its NESHAP by using the treatment and controls located at the POTW</li> <li>– the POTW accepts the regulated waste stream and provides treatment and controls as an agent for the industrial discharger.</li> </ul> <p>If, in the future, an industrial discharger begins complying with its NESHAP by using the treatment and controls at the POTW, then on the date that the industrial discharger certifies compliance, the POTW treatment plant will be considered an industrial POTW treatment plant. If the POTW treatment plant accepts one or more specific regulated industrial waste streams as part of compliance with one or more other NESHAP, then the POTW is subject to all the requirements of each appropriate NESHAP for each waste stream. In the case of overlapping NESHAP requirements, the more stringent of the requirements applies.)</p> <p>(NOTE: See also the definition of Emission Points and Control Requirements for an Industrial POTW Treatment Plant.)</p>

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>Verify that an existing industrial POTW treatment plant meets the emission points and control requirements specified in the appropriate NESHAPs for the industrial users.</p> <p>Verify that, if it is a new or reconstructed industrial POTW plant, it is first determined which of the following control requirements set forth in the applicable industrial would require more stringent overall control of HAP emissions and that the most stringent requirements are met:</p> <ul style="list-style-type: none"> <li>– particular NESHAPs that apply to the industrial users who discharge their waste to the POTW</li> <li>– the emission points and control requirements applicable to a new or reconstructed non-industrial POTW under 40 CFR 63.1586 (see checklist item AE.180.2.US.).</li> </ul> <p>Verify that an existing industrial POTW treatment plant meets the appropriate NESHAPs for the industrial users which sets the compliance date, or the compliance date is 60 days after 26 October 1999, whichever is later.</p> <p>Verify that new industrial POTW treatment plants are in compliance as soon as they begin accepting waste streams for treatment.</p> <p>Verify that, if the POTW treatment plant begins accepting a specific regulated industrial waste stream for treatment, the plant is in compliance by the time specified in the appropriate NESHAPs for the industrial users.</p> <p>Verify that an existing industrial POTW treatment plant demonstrates compliance by operating treatment and control devices that meet all requirements specified in the appropriate industrial NESHAPs, including performance tests, routine monitoring, recordkeeping, and reporting.</p> <p>Verify that, for a new or reconstructed POTW treatment plant, it is determined which of the following are more stringent, and the most stringent requirement is met:</p> <ul style="list-style-type: none"> <li>– the controls required by the applicable industrial NESHAPs</li> <li>– the control requirements applicable to a new or reconstructed non-industrial POTW treatment plant under 40 CFR 63.1586 (see checklist item AE.180.2.US.).</li> </ul> <p>Verify that, if it is determined that the controls required for a new or reconstructed non-industrial POTW are more stringent, compliance is demonstrated by meeting all requirements in 40 CFR 63.1586 through 63.1590 (see checklist item AE.180.2.US., AE.190.2.US., and AE.190.3.US.).</p>

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<b>AE.180.2.US.</b> Non-industrial POTW treatment plants are required to meet specific operational standards (40 CFR 63.1580, 63.1586 through 63.1588) [Revised January 2003; Revised January 2005].	<p>(NOTE: These requirements apply if the following are all true:</p> <ul style="list-style-type: none"> <li>– the facility owns or operates a POTW that includes an affected source [see definitions]</li> <li>– the affected source is located at a major source of HAP emissions, or at any industrial POTW regardless of whether or not it is a major source of HAP</li> <li>– the POTW is required to develop and implement a pretreatment program as defined by 40 CFR 403.8 [for a POTW owned or operated by a municipality, State, or intermunicipal or interstate agency], or the POTW would meet the general criteria for development and implementation of a pretreatment program [for a POTW owned or operated by a department, agency, or instrumentality of the Federal government].)</li> </ul> <p>(NOTE: If the existing POTW treatment plant is not located at a major source as of 26 October 1999, but thereafter becomes a major source for any reason other than reconstruction, then the POTW treatment plant would be considered an existing source. If the POTW treatment plan is reconstructed, then the requirements for a new or reconstructed POTW treatment plant, as defined in 40 CFR 63.1595 (see Definitions), apply.)</p> <p>(NOTE: There are no control requirements for an existing non-industrial POTW treatment plant. There are no control requirements for any new or reconstructed area source non-industrial POTW treatment plant which is not a major source of HAP.)</p> <p>Verify that a new or reconstructed major source non-industrial POTW treatment plant which is a major source of HAP has covers on the emission points up to, but not including, the secondary influent pumping station or the secondary treatment units.</p> <p>(NOTE: The emission points requiring covers are treatment units that include, but are not limited to, influent waste stream conveyance channels, bar screens, grit chambers, grinders, pump stations, aerated feeder channels, primary clarifiers, primary effluent channels, and primary screening stations.)</p> <p>Verify that, all covered units, except primary clarifiers, have the air in the headspace ducted to a control device in accordance with the standards for closed-vent systems and control devices in 40 CFR 63.693, except that visual inspections may be substituted for leak checks rather than Method 21 of 40 CFR 60, appendix A.</p> <p>Verify that covers are tightly fitted and designed and operated to minimize exposure of the wastewater to the atmosphere.</p> <p>(NOTE: The requirement for a tight fit to minimize wastewater exposure includes, but is not limited to, the absence of visible cracks, holes, or gaps in the roof sections or between the roof and the supporting wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.)</p>

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>Verify that, if wastewater is in a treatment unit, each opening is maintained in a closed, sealed position, unless plant personnel are present and conducting wastewater or sludge sampling, or equipment inspection, maintenance, or repair.</p> <p>(NOTE: As an alternative to the requirements for and pertaining to covers and openings, compliance may be achieved for all units up to the secondary influent pumping station or the secondary treatment units, by demonstrating that the fraction emitted does not exceed 0.014. It must be demonstrated that for the POTW, the sum of all HAP emissions from those units divided by the sum of all HAP mass loadings results in an annual rolling average of the fraction emitted is no greater than 0.014. Any combination of pretreatment, wastewater treatment plant modifications, and control devices may be used to achieve this performance standard; however, it must be demonstrated, to the Administrator's satisfaction that:</p> <ul style="list-style-type: none"> <li>– the POTW's annual HAP mass loadings and the POTW's annual HAP emissions have been accurately determined as of the date of startup</li> <li>– the POTW meets the fraction emitted standard of 0.014 or less</li> <li>– the POTW has established procedures to demonstrate continuous compliance.)</li> </ul> <p>Verify that, if the POTW treatment plant began construction on or after 1 December 1998, compliance with all the requirements in this checklist item is achieved either immediately upon startup, or by 6 mo after 26 October 1999, whichever date is later.</p> <p>Verify that, if the treatment units are required to have covers, the following inspections are done:</p> <ul style="list-style-type: none"> <li>– visually check the cover and its closure devices for defects that could result in air emissions</li> <li>– perform an initial visual inspection with follow-up inspections at least once per year.</li> </ul> <p>(NOTE: Defects include, but are not limited to, visible cracks, holes, or gaps in the roof sections or between the roof and the supporting wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.)</p> <p>Verify that, in the event that a defect is found on a treatment unit in use, the defect is repaired within 45 days.</p> <p>Verify that, if repair cannot be done within 45 days:</p> <ul style="list-style-type: none"> <li>– the USEPA or the designated state authority is notified immediately</li> <li>– the reason for the delay and the date repair is expected to be completed are reported.</li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>Verify that, if a defect is found on a treatment unit that is not in service, the defect is repaired prior to putting the treatment unit back in wastewater service.</p> <p>Verify that, if the facility owns or operates a control device used to meet the emission points and control requirements for non-industrial POTW treatment plants, the owner or operator complies with the inspection and monitoring requirements of 40 CFR 63.695(c).</p> <p>Verify that, if complying with the alternative to the requirements for and pertaining to covers and openings, the non-industrial POTW has an inspection and monitoring plan which includes, at a minimum, the following:</p> <ul style="list-style-type: none"> <li>– a method to determine, to the satisfaction of the Administrator, the influent HAP mass loading, i.e., the annual mass quantity for each HAP entering the wastewater treatment plant</li> <li>– a method to determine, to the satisfaction of the Administrator, the POTW's annual HAP emissions for all units up to and including the secondary influent pumping station or up to and not including the secondary treatment units as of 26 October 1999</li> <li>– documentation, to the satisfaction of the Administrator, that the POTW meets the fraction emitted standard of 0.014 or less, i.e., the sum of all HAP emissions divided by the sum of all HAP mass loadings results in a fraction emitted of 0.014 or less</li> <li>– a method to demonstrate, to the satisfaction of the Administrator, that the POTW is in continuous compliance with the alternative requirements.</li> </ul> <p>Verify that, if complying with the alternative to the requirements for and pertaining to covers and openings, the method used to determine HAP emissions, such as modeling or direct source measurement:</p> <ul style="list-style-type: none"> <li>– is approved by the USEPA Regional Office, state, or local regulatory agency for use at the POTW</li> <li>– accounts for all factors affecting emissions from the plant including, but not limited to, emissions from wastewater treatment units; emissions resulting from inspection, maintenance, and repair activities; fluctuations (e.g., daily, monthly, annual, seasonal) in influent wastewater HAP concentrations; annual industrial loading; performance of control devices; or any other factors that could affect annual HAP emissions</li> <li>– includes documentation that the values and sources of all data, operating conditions, assumptions, etc., used in the selected method result in an accurate estimation of annual emissions from the plant.</li> </ul> <p>(NOTE: When complying with the alternative to the requirements for and pertaining to covers and openings, continuous compliance means that emissions, when averaged over the course of a year, do not exceed the level of emissions that allows the POTW to comply.)</p>

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>Verify that, where emission reductions are due to proper operation of equipment, work practices, or other operational procedures, the demonstration specifies the frequency of inspections and the number of days to completion of repairs.</p> <p>Verify that, if complying with the alternative to the requirements for and pertaining to covers and openings, the following are performed each month to demonstrate that the annual rolling average of the fraction emitted is 0.014 or less:</p> <ul style="list-style-type: none"> <li>–determine the average daily flow of the wastewater entering the POTW treatment plant for the month</li> <li>–determine the flow-weighted monthly concentration of each HAP in the influent listed in Table 1 to 40 CFR 63, Subpart DD (see Appendix 1-20c)</li> <li>–using the current month's average daily flow and the flow-weighted monthly concentration, determine a total annual loading value (Mg/year) of each HAP entering the POTW treatment plant</li> <li>–sum up the values in and determine a total annual loading value (Mg/year) for all HAP entering the POTW treatment plant for the current month</li> <li>–based on the current month's information along with source testing and emission modeling, for each HAP, determine annual emissions (Mg/year) from all wastewater units up to, but not including, secondary treatment units</li> <li>–sum up the values and determine the total annual emissions value for the month for all HAP from all wastewater units up to, but not including, secondary treatment units</li> <li>–calculate the fraction emitted value for the month by dividing the total annual HAP emissions value by the total annual loading</li> <li>–average the fraction emitted value for the month with the values determined for the previous 11 mo, to calculate an annual rolling average of the fraction HAP emitted.</li> </ul>

<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>report the combined emissions from the units sharing the common stack or duct, instead of separately reporting the GHG emissions from the individual units. This monitoring and reporting alternative may also be used when process off-gases or a mixture of combustion products and process gases are combined together in a common stack or duct before exiting to the atmosphere. If this option is selected, the following information shall be reported:</p> <ul style="list-style-type: none"> <li>– common stack or duct identification number, beginning with the prefix “CS”</li> <li>– number of units sharing the common stack or duct (NOTE: Report “1” when the flue gas flowing through the common stack or duct includes combustion products and/or process off-gases, and all of the effluent comes from a single unit (e.g., a furnace, kiln, petrochemical production unit, or smelter).</li> <li>– combined maximum rated heat input capacity of the units sharing the common stack or duct (mmBtu/hr) (NOTE: This data element is required only when all of the units sharing the common stack are stationary fuel combustion units)</li> <li>– each type of fuel combusted in the units during the year</li> <li>– the methodology (tier) used to calculate the CO<sub>2</sub> mass emissions, i.e., Tier 4</li> <li>– the methodology start date</li> <li>– the methodology end date</li> <li>– total annual CO<sub>2</sub> mass emissions measured by the CEMS, expressed in metric tons (NOTE: If any of the units burn both fossil fuels and biomass, separately report the annual non-biogenic CO<sub>2</sub> mass emissions [i.e., CO<sub>2</sub> from fossil fuel combustion plus, if applicable, CO<sub>2</sub> from sorbent and/or process CO<sub>2</sub>] and the annual CO<sub>2</sub> mass emissions from biomass combustion, each expressed in metric tons)</li> <li>– an estimate of the heat input from each type of fuel listed in Table C-2 that was combusted in the units sharing the common stack or duct during the report year</li> <li>– for each type of fuel listed in Table C-2 that was combusted during the report year in the units sharing the common stack or duct during the report year, the annual CH<sub>4</sub> and N<sub>2</sub>O mass emissions from the units sharing the common stack or duct, expressed in metric tons of each gas and in metric tons of CO<sub>2</sub>e..</li> </ul> <p>(NOTE: The common pipe configurations option can be used when two or more stationary combustion units at a facility combust the same liquid or gaseous fuel and the fuel is fed to the individual units through a common supply line or pipe. The facility may report the combined emissions from the units served by the common supply line, instead of separately reporting the GHG emissions from the individual units, provided that the total amount of fuel combusted by the units is accurately measured at the common pipe or supply line using a calibrated fuel flow meter or, for natural gas, the amount of fuel combusted may be obtained from gas billing records. If a portion of the fuel measured or obtained from gas billing records) at the main supply line is diverted to either: A flare; or another stationary fuel combustion unit (or units), including units that use a CO<sub>2</sub> mass emissions calculation method in 40 CFR 75; or a chemical or industrial process (where it is used as a raw material but not combusted), and the remainder of the fuel is distributed to a group of combustion units for which the facility elects to use the</p>

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>common pipe reporting option, the facility may use company records to subtract out the diverted portion of the fuel from the fuel measured (or obtained from gas billing records) at the main supply line prior to performing the GHG emissions calculations for the group of units using the common pipe option. If the diverted portion of the fuel is combusted, the GHG emissions from the diverted portion shall be accounted for. When the common pipe option is selected, the applicable tier shall be used based on the maximum rated heat input capacity of the largest unit served by the common pipe configuration, except where the applicable tier is based on criteria other than unit size. For example, if the maximum rated heat input capacity of the largest unit is greater than 250 mmBtu/hr, Tier 3 will apply, unless the fuel transported through the common pipe is natural gas or distillate oil, in which case Tier 2 may be used. When the common pipe reporting option is selected, the following information shall be reported:</p> <ul style="list-style-type: none"> <li>– common pipe identification number, beginning with the prefix “CP”</li> <li>– effective 1 January 2018, cumulative maximum rated heat input capacity of the units served by the common pipe</li> <li>– the highest maximum rated heat input capacity of any unit served by the common pipe (mmBtu/hr)</li> <li>– the fuels combusted in the units during the reporting year</li> <li>– the methodology used to calculate the CO<sub>2</sub> mass emissions (i.e., Tier 1, Tier 2, or Tier 3)</li> <li>– if the any of the units burns both fossil fuels and biomass, the annual CO<sub>2</sub> mass emissions from combustion of all fossil fuels and annual CO<sub>2</sub> emissions from combustion of all biomass fuels from the units served by the common pipe, expressed in metric tons</li> <li>– annual CO<sub>2</sub> mass emissions and annual CH<sub>4</sub> and N<sub>2</sub>O emissions from each fuel type for the units served by the common pipe, expressed in metric tons of each gas and in metric tons of CO<sub>2</sub>e.</li> <li>– methodology start date</li> <li>– methodology end date</li> <li>– if applicable, the plant code.</li> </ul> <p>(NOTE: The following alternative reporting option applies to facilities at which a common liquid or gaseous fuel supply is shared between one or more large combustion units, such as boilers or combustion turbines (including units subject to subpart D and other units subject to 40 CFR 75) and small combustion sources, including, but not limited to, space heaters, hot water heaters, and lab burners. In this case, the facility may simplify reporting by attributing all of the GHG emissions from combustion of the shared fuel to the large combustion unit(s), provided that:</p> <ul style="list-style-type: none"> <li>– the total quantity of the fuel combusted during the report year in the units sharing the fuel supply is measured, either at the “gate” to the facility or at a point inside the facility, using a fuel flow meter, billing meter, or tank drop measurements (as applicable)</li> <li>– on an annual basis, at least 95 percent (by mass or volume) of the shared fuel is combusted in the large combustion unit(s), and the remainder is combusted in the small combustion sources (NOTE: Company records may be used to</li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>AIR EMISSIONS MANAGEMENT</b> <b>U.S. TEAM Guide</b>

2 The standard for 1992 through 2001 in the Denver-Boulder area designated nonattainment for the 1-hour ozone NAAQS in 1991 (see 40 CFR 81.306) will be 9.0 for June 1 through September 15.

## **Appendix 1-1a**

### **List of Regulated Substances In Relation to the RMP (40 CFR 68.130)**

**[Revised April 2000, Revised January 2014, Revised April 2017]**

Regulated toxic and flammable substances under section 112(r) of the Clean Air Act are the substances listed in Tables 1, 2, 3, and 4. Threshold quantities for listed toxic and flammable substances are specified in the tables.

The basis for placing toxic and flammable substances on the list of regulated substances are explained in the notes to the list.

**To see the most current version of these tables go to the electronic Code of Federal Regulations, 40 CFR Part 68, section 68.130.**

**<http://www.ecfr.gov>**

#### **Appendix 1-1b**

**This appendix on the contents of the RMP was deleted with the addition of new checklist items.**

**[Added July 1999, Deleted January 2014]**

## Appendix 1-2

### Emissions Limitations for Incinerators and Steam Generators of 73 MW (250 MMBtu/h) or Greater

Source Category	Fuel Type	Pollutant	Emission Level	Monitoring Requirement
<b>40 CFR 60.40 through 60.44</b>				
Steam generators >73 MW (250 MMBtu/h) constructed or modified after 17 August 1971	Solid fossil fuel	Particulate	43 ng/J (0.10 lb/MMBtu)	None
		Opacity	20%; 27% 6 min/h	Continuous
		SO <sub>2</sub>	520 ng/J (1.2 lb/MMBtu)	Continuous
		NO <sub>x</sub> (except lignite and coal refuse)	300 ng/J (0.70 lb/MMBtu)	Continuous
	Liquid fossil fuel	SO <sub>2</sub>	340 ng/J (0.80 lb/MMBtu)	Continuous
		NO <sub>x</sub>	129 ng/J (0.30 lb/MMBtu)	Continuous
	Gaseous fossil fuel	NO <sub>x</sub>	86 ng/J (0.20 lb/MMBtu)	Continuous
	Lignite	NO <sub>x</sub>	260 ng/J (0.60 lb/MMBtu)	Continuous
	Lignite mined in ND, SD, or MT burned in a cyclone fired unit	NO <sub>x</sub>	340 ng/J (0.80 lb/MMBtu)	Continuous
<b>40 CFR 60.50 through 60.54</b>				
Incinerators > 45 metric tons (50 tons/day) constructed or modified after 17 August 1971	Incinerators	Particulate	0.18 g/dscm (0.08 g/dscf) corrected to 12% CO <sub>2</sub>	Record of daily charging rates and hours of operation

## Appendix 1-2a

### Emission Limitations for Other Solid Waste Incineration (OSWI) Units (40 CFR 60, Subpart EEEE, Table 1) [Added January 2006; Revised January 2007]

For the air pollutant	You must meet this emission limitation <sup>a</sup>	Using this averaging time	And determining compliance using this method
1. Cadmium	18 micrograms per dry standard cubic meter (dscm)	3-run average (1 h minimum sample time per run).	Method 29 of 40 CFR 60, appendix A
2. Carbon monoxide	40 ppm by dry volume	3-run average (1 h minimum sample time per run during performance test), and 12-h rolling averages measured using CEMS. <sup>b</sup>	Method 10, 10A, or 10B of 40 CFR 60, appendix A and CEMS
3. Dioxins/furans (total basis)	33 nanograms per dscm.	3-run average (1 h minimum sample meter time per run).	Method 23 of 40 CFR 60, appendix A
4. Hydrogen chloride	15 ppm by dry volume	3-run average (1 h minimum sample time per run)	Method 26A of 40 CFR 60, appendix A
5. Lead	226 micrograms per dscm	3-run average (1 h minimum sample time per run)	Method 29 of 40 CFR 60, appendix A
6. Mercury	74 micrograms per dscm	3-run average (1 h minimum sample time per run)	Method 29 of 40 CFR 60, appendix A
7. Opacity	10 percent	6-min average (observe over three 1-h runs; i.e., 30 6-min averages)	Method 9 of 40 CFR 60, appendix A
8. Oxides of nitrogen	103 ppmdv	3-run average (1 h minimum sample time per run)	Method 7, 7A, 7C, 7D, or 7E of 40 CFR 60, appendix A of this part, or ANSI/ASME PTC 19.10-1981 (IBR, see 40 CFR 60.17(h)) in lieu of Methods 7 and 7C only.
9. Particulate matter	0.013 grains/dscf	3-run average (1 h minimum sample time per run)	Method 5 or 29 of 40 CFR 60, appendix A
10. Sulfur dioxide	3.1 ppmdv	3-run average (1 h minimum sample time per run)	Method 6 or 6C of 40 CFR 60, appendix A, or ANSI/ASME PTC 19.10-1981 (IBR, see 40 CFR 60.17(h)) in lieu of Method 6 only.

- <sup>a</sup> All emission limitations (except for opacity) are measured at 7 percent oxygen, dry basis at standard conditions.
- <sup>b</sup> Calculated each hour as the average of the previous 12 operating hours.

## Appendix 1-2b

### Operating Limits for Other Solid Waste Incineration (OSWI) Units (i.e., Incinerators and Wet Scrubbers) (40 CFR 60, Subpart EEEE, Table 2) [Added January 2006]

For these operating parameters	You must establish these operating limits	And monitoring using these minimum frequencies		
		Data measurement	Data recording	Averaging time
1. Charge rate	Maximum charge rate	Continuous	Every hour	Daily for batch units. 3-h rolling for continuous and intermittent units a.
2. Pressure drop across the wet scrubber or amperage to wet scrubber.	Minimum pressure drop or amperage	Continuous.	Every 15 min	3-h rolling a
3. Scrubber liquor flow rate	Minimum flow rate	Continuous	Every 15 min	3-h rolling a.
4. Scrubber liquor pH	Minimum pH	Continuous	Every 15 min	3-h rolling a.

<sup>a</sup> Calculated each hour as the average of the previous 3 operating hours.

**Appendix 1-2c**

**Requirements for CEMS for Other Solid Waste Incineration (OSWI)  
(40 CFR 60, Subpart EEEE, Table 3)  
[Added January 2006]**

<b>For the following pollutants</b>	<b>Use the following span values for your CEMS</b>	<b>Use the following performance specifications (P.S.) in appendix B of 40 CFR 60 for your CEMS</b>	<b>If needed to meet minimum data requirements, use the following alternate methods in appendix A of this part to collect data</b>
1. Carbon Monoxide	125 percent of the maximum hourly potential carbon monoxide emissions of the waste combustion unit.	P.S.4A	Method 10.
2. Oxygen	25 percent oxygen	P.S.3	Method 3A or 3B, or ANSI/ASME PTC 19.10-1981 (IBR, see 40 CFR 60.17(h)) in lieu of Method 3B only.

### Appendix 1-3

#### Formulas for Calculating Emissions Limitations (40 CFR 60.42b and 60.44b)

Steam-generating units that started construction, modification, or reconstruction after 19 June 1984 with a heat input capacity of greater than 29 MW (100 MBtu/h).

##### SO<sub>2</sub> From Facilities Combusting Coal or Oil.

$$E = \frac{K_a H_a + K_b H_b}{H_a + H_b}$$

where:

E = the SO<sub>2</sub> emission limit  
K<sub>a</sub> = 520 ng/J (1.2 lb/MMBtu)  
K<sub>b</sub> = 340 ng/J (0.80 lb/MMBtu)  
H<sub>a</sub> = the heat input from the combustion of coal  
H<sub>b</sub> = the heat input from the combustion of oil

##### SO<sub>2</sub> From Facilities Combusting Coal or Oil Alone or With Other Fuel While Using Emerging Technology.

$$E = \frac{K_c H_c + K_d H_d}{H_c + H_d}$$

where:

E<sub>s</sub> = the SO<sub>2</sub> emission limit (expressed in NO<sub>2</sub>), ng / J (lb /MBtu) heat input  
K<sub>c</sub> = 260 ng / J (0.60 lb/MMBtu)  
K<sub>d</sub> = 170 ng / J (0.40 lb/MMBtu)  
H<sub>c</sub> = the heat input from the combustion of coal, J (MBtu)  
H<sub>d</sub> = the heat input from the combustion of oil, J (Mbtu)

**NO<sub>x</sub> Emissions From Facilities Simultaneously Combusting Coal, Oil, or Natural Gas With By-products/Waste.**

$$E_n = \frac{[ \{EL_{go}H_{go}\} + (EL_{ro}H_{ro}) + \{EL_{c}H_{c}\} ]}{(H_{go} + H_{ro} + H_{c})}$$

where:

$E_n$  = the NO<sub>x</sub> emission limit (expressed as NO<sub>2</sub>), ng/J (lb/MMBtu)

$EL_{go}$  = the appropriate emission limit from paragraph (a)(1) for combustion of natural gas or distillate oil, ng/J (lb/MMBtu)

$H_{go}$  = the heat input from combustion of natural gas or distillate oil and gaseous by-product/waste, ng/J (lb/MMBtu)

$EL_{ro}$  = the appropriate emission limit from paragraph (a)(2) for combustion of residual oil, ng/J (lb/MMBtu)

$H_{ro}$  = the heat input from combustion of residual oil and/or liquid by-product/waste

$EL_{c}$  = the appropriate emission limit from paragraph (a)(3) for combustion of coal

$H_{c}$  = the heat input from combustion of coal.

**NO<sub>x</sub> Emissions From Facilities Simultaneously Combusting Mixtures of Coal, Oil, or Natural Gas.**

$$E_n = \frac{[ \{EL_{go}H_{go}\} + (EL_{ro}H_{ro}) + \{EL_{c}H_{c}\} ]}{(H_{go} + H_{ro} + H_{c})}$$

where:

$E_n$  = the NO<sub>x</sub> emission limit (expressed as NO<sub>2</sub>), ng/J (lb /MBtu)

$EL_{go}$  = the appropriate emission limit from paragraph (a)(1) for combustion of natural gas or distillate oil, ng/J (lb/MMBtu)

$H_{go}$  = the heat input from combustion of natural gas or distillate oil

$EL_{ro}$  = the appropriate emission limit from paragraph (a)(2) for combustion of residual oil

$H_{ro}$  = the heat input from combustion of residual oil

$EL_{c}$  = the appropriate emission limit from paragraph (a)(3) for combustion of coal

$H_{c}$  = the heat input from combustion of coal.

## Appendix 1-4

### Particulate Emission Standards (40 CFR 60.43b) [Revised April 2011]

Steam-generating units with a heat input capacity of greater than 29 MW (100 MBtu/h) that started construction, modification, or reconstruction after 19 June 1984.

Facility Type	Particulate Emissions
Combusts only coal or coal and other fuels with an annual capacity factor for the other fuels of 10 percent or less.	22 ng/J (0.05 lb/MMBtu) heat input
Combusts coal and other fuels and has an annual capacity factor greater than 10 percent and is subject to Federally enforceable requirements limiting operations to an annual capacity factor greater than 10 percent for fuels other than coal.	43 ng/J (0.10 lb/MMBtu) heat input
Combusts coal or coal and other fuels, was constructed after 19 June 1984 but before 25 November 1986, and has: a. an annual capacity factor for coal, and coal and other fuels, of 30 percent or less b. has a maximum heat input capacity of 73 MW (250 MMBtu/h) c. has a Federally enforceable requirement limiting operation of affected facility to an annual capacity factor of 30 percent or less for coal or coal and other solid fuels.	86 ng/J (0.20 lb/MMBtu) heat input
Combusts oil or mixture of oil and uses a conventional or emerging technology to reduce SO <sub>2</sub> emissions.	43 ng/J (0.10 lb/MMBtu) heat input
Combusts wood or wood with other fuels except coal and has an annual capacity factor greater than 30 percent for wood.	43 ng/J (0.10 lb/MMBtu) heat input
Combusts wood or wood with other fuels, except coal, with a maximum heat input capacity of 73 MW (250 MMBtu/h) and has an annual capacity factor of 30 percent or less for wood and is subject to a Federally enforceable requirement limiting operation to an annual capacity factor of 30 percent or less.	86 ng/J (0.20 lb/MMBtu) heat input
Combusts municipal-type solid waste or mixtures of municipal-type solid waste with other fuels with an annual capacity factor of 10 percent or less for other fuels.	43 ng/J (0.10 lb/MMBtu) heat input
Combusts municipal-type solid waste or mixtures of municipal-type solid waste with other fuels with an annual capacity factor of 30 percent or less for other fuels and has a maximum heat input capacity of 73 MW (250 MMBtu/h) or less, constructed between 19 June 1984 and 25 November 1986, with a Federally enforceable requirements limiting operating to an annual capacity factor of 30 percent.	86 ng/J (0.20 lb/MMBtu) heat input

## Appendix 1-5

### Emissions Standards For NO<sub>x</sub> (40 CFR 60.44b) [Revised July 2007]

Fuel burning sources greater than 29 MW (100 MBtu/h) heat input that started construction, modification, or reconstruction after 19 June 1984.

Fuel/Steam-Generating Unit Type	Nitrogen Oxide Emission Limit ng/J (lb/MMBtu) (Expressed as NO <sub>2</sub> ) Heat Input
1. Natural gas and distillate oil except for a duct burner used in combined cycle system – low heat release rate – high heat release rate	  43 (0.10) 86 (0.20)
2. Residual oil – low heat release rate – high heat release rate	 130 (0.30) 170 (0.40)
3. Coal – mass feed stoker – spreader-stoker and fluid bed combustion – pulverized coal – lignite, except lignite mined in ND, SD, or MT – lignite mined in ND, SD, or MT, and combusted in a slag tap furnace – coal-derived synthetic fuels	 210 (0.50) 260 (0.60) 300 (0.70) 260 (0.60) 340 (0.80) 210 (0.50)
4. Duct burner used in combined cycle system – natural gas and distillate oil – residual oil	 86 (0.20) 170 (0.40)

## Appendix 1-6

### Formula for Calculating SO<sub>2</sub> Emissions Limitations (40 CFR 60.42c(e)(2))

The following applies to steam-generating units for which construction, modification, or reconstruction started after 9 June 1989 with a maximum design heat input capacity of 29 MW (100 MBtu/h) or less, but greater than or equal to 2.9 MW (10 MMBtu/h).

$$E = \frac{K_a H_a + K_b H_b + K_c H_c}{(H_a + H_b + H_c)}$$

where:

E = the SO<sub>2</sub> emission limit expressed in ng/J or lb/MBtu heat input.

K<sub>a</sub> = 520 ng/J (1.2 lb/MMBtu).

K<sub>b</sub> = 260 ng/J (0.60 lb/MMBtu).

K<sub>c</sub> = 215 ng/J (0.50 lb/MMBtu).

H<sub>a</sub> = the heat input from the combustion of coal, except coal combusted in a facility that combusts only coal and uses emerging technology, in Joules (J) (MBtu).

H<sub>b</sub> = the heat input from the combustion of coal, except coal combusted in a facility that combusts only coal and uses emerging technology, in J (MBtu).

H<sub>c</sub> = the heat input from the combustion of oil, in J (MBtu).

### Reporting Requirements (40 CFR 63, Subpart DDDDD, Table 9) [Added October 2004; Revised April 2013; Revised January 2016]

You must submit a(n)	The report must contain.....	You must submit the report....
1. Compliance report.....	<p>a. Information required in 40 CFR 63.7550(c)(1) through (5); and</p> <p>b. If there are no deviations from any emission limitation (emission limit and operating limit) that applies to you and there are no deviations from the requirements for work practice standards for periods of startup and shutdown in Table 3 to this subpart that apply to you, a statement that there were no deviations from the emission limitations and work practice standards during the reporting period. If there were no periods during which the CMSs, including continuous emissions monitoring system, continuous opacity monitoring system, and operating parameter monitoring systems, were out-of-control as specified in 40 CFR 63.8(c)(7), a statement that there were no periods during which the CMSs were out-of control during the reporting period; and .....</p> <p>c. If you have a deviation from any emission limitation (emission limit and operating limit) where you are not using a CMS to comply with that emission limit or operating limit, or a deviation from a work practice standard for periods of startup and shutdown, during the reporting period, the report must contain the information in 40 CFR 63.7550(d); and</p>	Semiannually, annually, biennially, or every 5 yr according to the requirements in 40 CFR 63.7550(b).

## Appendix 1-7

### NO<sub>x</sub> Emissions From Stationary Gas Turbines (40 CFR 60.332(a)) [Revised October 2004]

Formula A:

$$\text{STD} = 0.0074 \times 14.4/Y + F$$

Formula B:

$$\text{STD} = 0.0150 \times 14.4/Y + F$$

Where:

**STD** = allowable ISO corrected (if required as given in 40 CFR 60.335(b)(1)) NO<sub>x</sub> emission concentration (percent by volume at 15 percent oxygen and on a dry basis).

**Y** = manufacturer's rated heat rate at manufacturer's rated load (kilojoules per watt hour) or, actual measured heat rate based on lower heating value of fuel as measured at actual peak load for the facility. The value of Y shall not exceed 14.4 kilojoules per watt hour.

**F** = NO<sub>x</sub> emission allowance for fuel-bound nitrogen as defined below. (NOTE: The use of F is optional. That is, the owner or operator may choose to apply a NO<sub>x</sub> allowance for fuel-bound nitrogen and determine the appropriate F-value in accordance with the definition below, or may accept an F-value of zero.

If the owner or operator elects to apply a NO<sub>x</sub> emission allowance for fuel-bound nitrogen, F shall be defined according to the nitrogen content of the fuel during the most recent performance test required under 40 CFR 60.8 as follows:

Fuel-bound nitrogen (percent by weight)	F (NO <sub>x</sub> percent by volume)
N <= 0.015	0
0.015 < N <= 0.1	0.04(N)
0.1 < N <= 0.25	0.004+0.0067(N-0.1)
N > 0.25	0.005

Where:

**N** = the nitrogen content of the fuel (percent by weight).  
or:

Manufacturers may develop and submit to EPA custom fuel-bound nitrogen allowances for each gas turbine model they manufacture. These fuel-bound nitrogen allowances shall be substantiated with data and must be approved for use by the Administrator before the initial performance test required by 40 CFR 60.8. Notices of approval of custom fuel-bound nitrogen allowances will be published in the Federal Register.

## Appendix 1-7a

### Emissions Limitations for CISWI (40 CFR 62, Table 1 and Table 3 of Subpart III) [Added January 2004]

Air Pollutant	Emission Limitation*	Averaging Time	Methodology to Determine Compliance
Cadmium	0.004 milligrams/dscm	3-run average (1 h minimum sample time per run)	Performance test (Method 29 of Appendix A of 40 CFR 60)
Carbon Monoxide	157 ppm <sub>dv</sub>	3-run average (1 h minimum sample time per run)	Performance test (Methods 10, 10A, or 10B of Appendix A of 40 CFR 60)
Dioxins/furans (toxic equivalency basis)	0.41 nanograms/dscm	3-run average (4 h minimum sample time per run)	Performance test (Method 23 of Appendix A of 40 CFR 60)
Hydrogen chloride	62 ppm <sub>dv</sub>	3-run average (1 h minimum sample time per run)	Performance test (Method 26A of Appendix A of 40 CFR 60)
Lead	0.04 milligrams/dscm	3-run average (1 h minimum sample time per run)	Performance test (Method 29 of Appendix A of 40 CFR 60)
Mercury	0.47 milligrams/dscm	3-run average (1 h minimum sample time per run)	Performance test (Method 29 of Appendix A of 40 CFR 60)
Opacity	10 percent	6-min average	Performance test (Method 9 of Appendix A of 40 CFR 60)
Oxides of nitrogen	388 ppm <sub>dv</sub>	3-run average (1 h minimum sample time per run)	Performance test (Methods 7, 7A, 7C, 7D, or 7E of Appendix A of 40 CFR 60)
Particulate matter	70 milligrams/dscm	3-run average (1 h minimum sample time per run)	Performance test (Method 5 or 29 of Appendix A of 40 CFR 60)
Sulfur dioxide	20 ppm <sub>dv</sub>	3-run average (1 h minimum sample time per run)	Performance test (Method 6 or 6c of Appendix A of 40 CFR 60)

\* All emission limitations (except for opacity) are measured at 7 percent oxygen, dry basis at standard conditions.

### Toxic Equivalency Factors

<b>Dioxin/furan congener</b>	<b>Toxic Factor</b>	<b>Equivalency</b>
2,3,7,8-tetrachlorinated dibenzo-p-dioxin	1	
12,3,7,8-pentachlorinated dibenzo-p-dioxin	0.5	
1,2,3,4,7,8-hexachlorinated dibenzo-p-dioxin	0.1	
1,2,3,7,8,9-hexachlorinated dibenzo-p-dioxin	0.1	
12,3,6,7,8-hexachlorinated dibenzo-p-dioxin	0.1	
1,2,3,4,6,7,8-heptachlorinated dibenzo-p-dioxin	0.01	
octachlorinated dibenzo-p-dioxin	0.001	
2,3,7,8-tetrachlorinated dibenzofuran	0.1	
2,3,4,7,8-pentachlorinated dibenzofuran	0.5	
1,2,3,7,8-pentachlorinated dibenzofuran	0.05	
1,2,3,4,7,8-hexachlorinated dibenzofuran	0.1	
1,2,3,6,7,8-hexachlorinated dibenzofuran	0.1	
1,2,3,7,8,9-hexachlorinated dibenzofuran	0.1	
2,3,4,6,7,8-hexachlorinated dibenzofuran	0.1	
1,2,3,4,6,7,8-heptachlorinated dibenzofuran	0.01	
1,2,3,4,7,8,9-heptachlorinated dibenzofuran	0.01	
Octachlorinated dibenzofuran	0.001	

## Appendix 1-7b

### Operating Limits for Wet Scrubbers (40 CFR 62, Table 2 of Subpart III) [Added January 2004]

Operating Parameter	Operating Limits	Monitor Using These Minimum Frequencies		
		Data Measurement	Data Recording	Averaging Time
Charge rate	Maximum charge rate	Continuous	Every Hour	Daily (batch units) 3-h rolling (continuous and intermittent units)*
Pressure drop across the wet scrubber or amperage to wet scrubber	Minimum pressure drop of amperage	Continuous	Every 15 min	3-h rolling*
Scrubber liquor flow rate	Minimum flow rate	Continuous	Every 15 min	3-h rolling*
Scrubber liquor pH	Minimum pH	Continuous	Every 15 min	3-h rolling*

\* Calculated each hour as the average of the previous 3 operating hours.

## Appendix 1-7c

### Summary of Reporting Requirements for CISWI (40 CFR 62, Table 4 of Subpart III) [Added January 2004]

Report	Due Date	Contents	Reference
Waste Management Plan	No later than 5 April 2004.	Waste management plan	40 CFR 62.14715
Initial Test Report	No later than 60 days following the initial performance test.	<ol style="list-style-type: none"> <li>1. Complete test report for the initial performance test.</li> <li>2. The values for the site-specific operating limits.</li> <li>3. Installation of bag leak detection systems for fabric filters.</li> </ol>	40 CFR 62.14720
Annual Report	No later than 12 mo following the submission of the initial test report. Subsequent reports are to be submitted no more than 12 mo following the previous report.	<ol style="list-style-type: none"> <li>1. Name and address</li> <li>2. Statement and signature by responsible official</li> <li>3. Date of report</li> <li>4. Values for the operating limits</li> <li>5. If no deviations or malfunctions were reported, a statement that no deviations occurred during the reporting period</li> <li>6. Highest recorded 3-h average and the lowest 3-h average, as applicable, for each operating parameter recorded for the calendar year being reported</li> <li>7. Information for deviations or malfunctions recorded under 62.14700(b)(6) and 62.14700(c) through 62.14700(e)</li> <li>8. If a performance test was conducted during the reporting period, the results of the test</li> <li>9. If a performance test was not conducted during the reporting period, a statement that the requirements of 62.14680(a) or 62.14680(b) were met</li> </ol>	40 CFR 62.14725 and 62.14730. Subsequent reports are to be submitted no more than 12 mo following the previous report.

Report	Due Date	Contents	Reference
		10. Documentation of periods when all qualified CISWI unit operators were unavailable for more than 8 h but less than 2 weeks	
Emission Limitation or Operating Limit Deviation Report	By August 1 of that year for data collected during the first half of the calendar year.  By February 1 of the following year for data collected during the second half of the calendar year.	1. Dates and times of deviations 2. Averaged and recorded data for these dates 3. Duration and causes for each deviation and the corrective actions taken 4. Copy of operating limit monitoring data and test reports 5. Dates, times, and causes for monitor downtime incidents 6. Whether each deviation occurred during a period of startup, shutdown, or malfunction	40 CFR 62.14735 and 62.14740
Qualified Operator Deviation Notification	Within 10 days of deviation	1. Statement of cause of deviation 2. Description of efforts to have an accessible qualified operator 3. The date a qualified operator will be accessible	40 CFR 62.14745(a)(1)
Qualified Operator Deviation Status Report	Every 4 weeks following deviation	1. Description of efforts to have an accessible qualified operator. 2. The date a qualified operator will be accessible 3. Request for approval to continue operating	40 CFR 62.14745(a)(2)
Qualified Operator Deviation Notification of Resumed Operation	Prior to resuming operation	Notification that operation is resuming	40 CFR 62.14745(b)

# Appendix 1-7d

## Emission Limits for Small, Medium, and Large HMIWI (40 CFR 60, Subpart Ec, Table 1)

[Added December 1997, Revised July 2011]

Pollutant	Units (7 percent oxygen, dry basis)	Emission Limits		
		HMIWI size		
		Small	Medium	Large
Particulate matter	Milligrams per dry standard cubic meter (grains per dry standard cubic foot)	69 (0.03)	34 (0.015)	34 (0.015)
Carbon monoxide	Parts per million by volume	40	40	40
Dioxins/furans	Nanograms per dry standard cubic meter total dioxins/furans (grains per billion dry standard cubic feet) or nanograms per dry standard cubic meter total dioxins/furans TEQ (grains per billion dry standard cubic feet).	125 (55) or 2.3 (1.0)	25 (11) or 0.6 (0.26)	25 (11) or 0.6 (0.26)
Hydrogen chloride	Parts per million by volume or percent reduction	15 or 99%	15 or 99%	15 or 99%
Sulfur dioxide	Parts per million by volume	55	55	55
Nitrogen oxides	Parts per million by volume	250	250	250
Lead	Milligrams per dry standard cubic meter (grains per thousand dry standard cubic feet) or percent reduction	1.2 (0.52) or 70%	0.07 (0.03) or 98%	0.07 (0.03) or 98%
Cadmium	Milligrams per dry standard cubic meter (grains per thousand per dry standard cubic feet) or percent reduction	0.16 (0.07) or 65%	0.04 (0.02) or 90%	0.04 (0.02) or 90%
Mercury	Milligrams per dry standard cubic meter (grains per thousand dry standard cubic feet) or percent reduction.	0.55 (0.24) or 85%	0.55 (0.24) or 85%	0.55 (0.24) or 85%

## Appendix 1-7e

### Operating Parameters for HMIWIs To Be Monitored and Minimum Measurement and Recording Frequencies (40 CFR Subpart Ec, Table 3) [Added December 1997]

Operating parameters to be monitored	Minimum frequency		Control System		
	Data measurement	Data recording	Dry scrubber followed by fabric filter	Wet scrubber	Dry scrubber followed by fabric filter and wet scrubber
<i>Maximum operating parameters:</i>					
Maximum charge rate	Continuous	1xhour	x	x	x
Maximum fabric filter inlet temperature	Continuous	1xminute	x		x
Maximum flue gas temperature	Continuous	1xminute	x	x	
<i>Minimum operating parameter:</i>					
Minimum secondary chamber temp.	Continuous	1xminute	x	x	x
Minimum dioxin/furan sorbent flow rate	Hourly	1xhour	x		x
Minimum HCl sorbent flow rate	Hourly	1xhour	x		x
Minimum mercury (Hg) sorbent flow rate	Hourly	1xhour	x		x
Minimum pressure drop across the wet scrubber or minimum horsepower or amperage to wet scrubber	Continuous	1xminute		x	x
Minimum scrubber liquor flow rate	Continuous	1xminute		x	x
Minimum scrubber liquor pH	Continuous	1xminute		x	x

## Appendix 1-7f

### Exempted HMIWI (40 CFR 62.14400(b))

If you ...	And you...	And you...	Then you...
(1) Own or operate an HMIWI that combusts only pathological waste, low-level radioactive waste, and/or chemotherapeutic waste (all defined in 40 CFR 62.14490).	Notify the USEPA Administrator (or delegated enforcement authority) of an exemption claim.	Keep records on a calendar quarter basis of the periods of time when only pathological waste, low-level radioactive waste, and/or chemotherapeutic waste is combusted, and you submit such records to the USEPA Administrator (or delegated enforcement authority) upon request.	Are not subject to the other sections of this Subpart during periods when only pathological, low-level radioactive, and/or chemotherapeutic wastes are combusted.
(2) Own or operate a co-fired combustor (defined in 40 CFR 62.14490).	Notify the USEPA Administrator (or delegated enforcement authority) of an exemption claim and you provide an estimate of the relative weight of hospital waste, medical/infectious waste, and other fuels and/or wastes to be combusted.	Keep records on a calendar quarter basis of the weight of hospital waste and medical/infectious waste combusted as well as the weight of all other fuels and wastes combusted at the co-fired combustor, and these records reflect that the source continues to meet the definition of co-fired combustor in 40 CFR 62.14490, and you submit such records to the USEPA Administrator (or delegated enforcement authority) upon request.	Are not subject to the other sections of this Subpart.
(3) Own or operate a combustor that must have a permit under Section 3005 of the <i>Solid Waste Disposal Act</i> .	----- --	-----	Are not subject to this Subpart.
(4) Own or operate a combustor which meets the applicability requirements of 40 CFR 60, Subpart Cb [40 CFR 60.30b through 60.39b, see text of regulation],	----- --	-----	Are not subject to this Subpart.

If you ...	And you...	And you...	Then you...
Subpart Ea [40 CFR 60.50a through 60.59a, see checklist items AE.35.1.US through AE.35.3.US], or Subpart Eb [40 CFR 60.50b through 60.59b, see checklist items AE.36.1.US through AE.36.16.US] (standards or guidelines for certain municipal waste combustors).			
(5) Own or operate a pyrolysis unit (defined in 40 CFR 62.14490) processing hospital waste and/or medical/infectious waste.	----- --	-----	Are not subject to this Subpart.
(6) Own or operate a cement kiln firing hospital waste and/or medical/infectious waste.	----- --	-----	Are not subject to this Subpart.

**Appendix 1-7g**

**Emission Limits for Small Rural, Small, Medium, and Large HMIWI  
(Table 1 of 40 CFR 62, Subpart HHH)**

Pollutant	Units (7 percent oxygen dry basis at standard)	Emission limits			
		HMIWI size			
		Small Rural	Small	Medium	Large

a Does not include small rural HMIWI.

## Appendix 1-7i

### Parameter Limit Violations (40 CFR 62.14455)

---

If the HMIWI is a small rural HMIWI:

---

And your HMIWI . . .	Then you are in violation of:
Operates above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI) and below the minimum secondary chamber temperature (3-h rolling average) simultaneously.	The PM, CO, and dioxin/furan emission limits.

---

If the HMIWI is equipped with a dry scrubber followed by a fabric filter:

---

And your HMIWI . . .	Then you are in violation of:
Operates above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI) and below the minimum secondary chamber temperature (3-h rolling average) simultaneously.	The CO emission limit
Operates above the maximum fabric filter inlet temperature (3-h rolling average), above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI), and below the minimum dioxin/furan sorbent flow rate (3-h rolling average) simultaneously.	The dioxin/furan emission limit
Operates above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI) and below the minimum HCl sorbent flow rate (3-h rolling average) simultaneously.	The HCl emission limit
Operates above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI) and below the minimum Hg sorbent flow rate (3-h rolling average) simultaneously.	The Hg emission limit
Uses the bypass stack (except during startup, shutdown, or malfunction).	The PM, dioxin/ furan, HCl, Pb, Cd, and Hg emission limits.

---

If the HMIWI is equipped with a wet scrubber:

---

And your HMIWI . . .	Then you are in violation of:
Operates above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI) and below the minimum secondary chamber temperature (3-h rolling average) simultaneously.	The CO emission limit

Operates above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI) and below the minimum pressure drop across the wet scrubber (3-h rolling average) or below the minimum horsepower or amperage to the system (3-h rolling average) simultaneously.	The PM emission limit
Operates above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI), below the minimum secondary chamber temperature (3-h rolling average), and below the minimum scrubber liquor flow rate (3-h rolling average) simultaneously.	The dioxin/furan emission limit
Operates above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI) and below the minimum scrubber liquor pH (3-h rolling average) simultaneously.	The HCl emission limit
Operates above the maximum flue gas temperature (3-h rolling average) and above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI) simultaneously.	The Hg emission limit
Uses the bypass stack (except during startup, shutdown, or malfunction)	The PM, dioxin/ furan, HCl, Pb, Cd, and Hg emission limits.
<hr/> If the HMIWI is equipped with a dry scrubber followed by a fabric filter and a wet scrubber:	
And your HMIWI . . .	Then you are in violation of:
Operates above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI) and below the minimum secondary chamber temperature (3-h rolling average) simultaneously.	The CO emission limit
Operates above the maximum fabric filter inlet temperature (3-h rolling average), above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI), and below the minimum dioxin/ furan sorbent flow rate (3-h rolling average) simultaneously.	The dioxin/furan emission limit
Operates above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch HMIWI) and below the minimum scrubber liquor pH (3-h rolling average) simultaneously.	The HCl emission limit
Operates above the maximum charge rate (3-h rolling average for continuous and intermittent HMIWI, daily average for batch	The Hg emission limit

HMIWI) and below the minimum Hg sorbent flow rate (3-h rolling average) simultaneously.

Uses the bypass stack (except during startup, shutdown, or malfunction).	The PM, dioxin/ furan, HCl, Pb, Cd, and Hg emission limits.
--	---

---

(NOTE: A performance test may be repeated within 30 days of violation of applicable operating parameter(s) to demonstrate that the HMIWI is not in violation of the applicable emission limit(s). The facility must conduct repeat performance tests using the identical operating parameters that indicated a violation.)

(NOTE: If using a CEMS to demonstrate compliance with any of the emission limits in Appendix A of 40 CFR 62.14412, and the CEMS indicates compliance with an emission limit during periods when operating parameters indicate a violation of an emission limit, then the facility is considered to be in compliance with the emission limit. There is no need to conduct a repeat performance test to demonstrate compliance.)

(NOTE: The facility may conduct a repeat performance test in accordance with 40 CFR 62.14452 at any time to establish new values for the operating parameters.)

## Appendix 1-7j

### Standards for Stationary Combustion Turbines Located at Major Sources of HAP Emissions

(Tables 1 through 6 to Subpart YYYYY of 40 CFR 63)

[Added April 2004]

#### Table 1 to Subpart YYYYY of Part 63.--Emission Limitations

**For each new or reconstructed stationary combustion turbine described in 40 CFR 63.6100 which is:**      **You must meet the following emission limitations . . .**

1. a lean premix gas-fired stationary combustion turbine as defined in this subpart,      Limit the concentration of formaldehyde to 91 ppbvd or less at 15 percent O<sub>2</sub>.
- a lean premix oil-fired stationary combustion turbine as defined in this subpart,
- a diffusion flame gas-fired stationary combustion turbine as defined in this subpart, or
- a diffusion flame oil-fired stationary combustion turbine as defined in this subpart.

#### Table 2 to Subpart YYYYY of Part 63.--Operating Limitations

**For. .**

**You must . . .**

- |   |  |
|---|--|
| each stationary combustion turbine that is required to comply with the emission limitation for formaldehyde and is using an oxidation catalyst.     | maintain the 4-h rolling average of the catalyst inlet temperature within the range suggested by the catalyst manufacturer |
| each stationary combustion turbine that is required to comply with the emission limitation for formaldehyde and is not using an oxidation catalyst. | maintain any operating limitations approved by the Administrator.  |

**Table 3 to Subpart YYYYY of Part 63.--Requirements for Performance Tests and Initial Compliance Demonstrations**

<b>You must . . .</b>	<b>Using . . .</b>	<b>According to the following requirements . . .</b>
a. demonstrate formaldehyde emissions meet the emission limitations specified in Table 1 by a performance test initially and on an annual basis AND.	Test Method 320 of 40 CFR 63, appendix A; ASTM D6348-03 provided that %R as determined in Annex A5 of ASTM D6348-03 is equal or greater than 70% and less than or equal to 130%; or other methods approved by the Administrator.	Formaldehyde concentration must be corrected to 15 percent O <sub>2</sub> , dry basis. Results of this test consist of the average of the three 1 h runs. Test must be conducted within 10 percent of 100 percent load.
b. select the sampling port location and the number of traverse points AND.	Method 1 or 1A of 40 CFR 60, appendix A 40 CFR 63.7(d)(1)(i).	if using an air pollution control device, the sampling site must be located at the outlet of the air pollution control device.
c. determine the O <sub>2</sub> concentration at the sampling port location AND	Method 3A or 3B of 40 CFR 60, appendix A.	measurements to determine O <sub>2</sub> concentration must be made at the same time as the performance test.
d. determine the content at the sampling port location for the purposes of correcting the formaldehyde concentration to a dry basis.	Method 4 of 40 CFR 60, appendix A or Test Method 320 of 40 CFR 63, appendix A, or ASTM D6348-03.	measurements to determine moisture content must be made at the same time as the performance test.

**Table 4 to Subpart YYYYY of Part 63.--Initial Compliance With Emission Limitations**

<b>For the . . .</b>	<b>You have demonstrated initial compliance if . . .</b>
emission limitation for formaldehyde.	the average formaldehyde concentration meets the emission limitations specified in Table 1.

**Table 5 of Subpart YYYYY of Part 63: Continuous Compliance With Operating Limitations**

<b>For each stationary combustion turbine complying with the emission limitation for formaldehyde:</b>	<b>You must demonstrate continuous compliance by:</b>
1. with an oxidation	continuously monitoring the inlet temperature to the catalyst and maintaining the 4-h rolling average of the inlet temperature within the range suggested by the catalyst manufacturer.
2. without the use of an oxidation catalyst.....	continuously monitoring the operating limitations that have been approved in your petition to the Administrator.

**Table 6 of Subpart YYYYY of Part 63.--Requirements for Reports**

<b>If you own or operate a:</b>	<b>you must:</b>	<b>According to the following requirements:</b>
1. stationary combustion turbine which must comply with the formaldehyde emission limitation.	report your compliance status.	Semiannually, according to the requirements of 40 CFR 63.6150
2. stationary combustion turbine which fires landfill gas, digester gas or gasified MSW equivalent to 10 percent or more of the gross heat input on an annual basis.	report (1) the fuel flow rate of each fuel and the heating values that were used in your calculations, and you must demonstrate that the percentage of heat input provided by landfill gas, digester gas, or gasified MSW is equivalent to 10 percent or more of the gross heat input on an annual basis, (2) the operating limits provided in your federally enforceable permit, and any deviations from these limits, and (3) any problems or errors suspected with the meters.	annually, according to the requirements of 40 CFR 63.6150
3. a lean premix gas-fired stationary combustion turbine or a diffusion flame gas-fired stationary combustion turbine as defined by this subpart, and you use any quantity of distillate oil to fire any new or existing stationary	report (1) the number of hours distillate oil was fired by each new or existing stationary combustion turbine during the reporting period, (2) the operating limits provided in your federally enforceable permit, and any deviations from these limits,	annually, according to the requirements in 40 CFR 63.6150.

combustion turbine which is located and (3) any problems or errors  
at the same major source. suspected with the meters.

## Appendix 1-7k

### Nitrogen Oxide Emission Limits for New Stationary Combustion Turbines

(40 CFR 60, Subpart KKKK, Table 1)

[Added April 2009]

Combustion Turbine Type	Combustion Turbine Heat Input at Peak Load (HHV)	NOX Emission Standard
New turbine firing natural gas, electric generating.	$\leq 50$ MMBtu/h	42 ppm at 15 % O <sub>2</sub> or 290 ng/J of useful output (2.3 lb/MWh).
New turbine firing natural gas, mechanical drive	$\leq 50$ MMBtu/h	100 ppm at 15 % O <sub>2</sub> or 690 ng/J of useful output (5.5 lb/MWh).
New turbine firing natural gas	$> 50$ MMBtu/h and $\leq 850$ MMBtu/h	25 ppm at 15% O <sub>2</sub> or 150 ng/J of useful output (1.2 lb/MWh).
New, modified, or reconstructed turbine firing natural gas	$> 850$ MMBtu/h	15 ppm at 15% O <sub>2</sub> or 54 ng/J of useful output (0.43 lb/MWh).
New turbine firing fuels other than natural gas, electric generating	$\leq 50$ MMBtu/h	96 ppm at 15% O <sub>2</sub> or 700 ng/J of useful output (5.5 lb/MWh).
New turbine firing fuels other than natural gas, mechanical drive	$\leq 50$ MMBtu/h	150 ppm at 15% O <sub>2</sub> or 1,100 ng/J of useful output (8.7 lb/MWh).
New turbine firing fuels other than natural gas	$> 50$ MMBtu/h and $\leq 850$ MMBtu/h	74 ppm at 15% O <sub>2</sub> or 460 ng/J of useful output (3.6 lb/MWh).
New, modified, or reconstructed turbine firing fuels other than natural gas	$> 850$ MMBtu/h	42 ppm at 15% O <sub>2</sub> or 160 ng/J of useful output (1.3 lb/MWh).
Modified or reconstructed turbine	$< > 50$ MMBtu/h	150 ppm at 15% O <sub>2</sub> or 1,100 ng/J of useful output (8.7 lb/MWh).
Modified or reconstructed turbine firing natural gas	$> 50$ MMBtu/h and $\leq 850$ MMBtu/h	42 ppm at 15% O <sub>2</sub> or 250 ng/J of useful output (2.0 lb/MWh).
Modified or reconstructed turbine firing fuels other than natural gas	$> 50$ MMBtu/h and $\leq 850$ MMBtu/h	96 ppm at 15% O <sub>2</sub> or 2590 ng/J of useful output (4.7 lb/MWh).
Turbines located north of the Arctic Circle (latitude 66.5 degrees north), turbines operating at less than 75 % of peak load, modified and reconstructed offshore turbines, and turbine operating at temperatures less than 0° F	$\leq 30$ MW output	150 ppm at 15% O <sub>2</sub> or 1,100 ng/J of useful output (8.7 lb/MWh).
Turbines located north of the Arctic Circle (latitude 66.5 degrees north), turbines operating at less than 75 % of peak load, modified and reconstructed offshore turbines, and turbine operating at temperatures less than 0° F	$> 30$ MW output	96 ppm at 15% O <sub>2</sub> or 590 ng/J of useful output (4.7 lb/MWh).
Heat recovery units operating independent of the combustion turbine	All sizes	54 ppm at 15% O <sub>2</sub> or 110 ng/J of useful output (0.86 lb/MWh).

## Appendix 1-8

### Municipal Waste Combustor Operating Standards for CO (40 CFR 60.56a, Table I)

Municipal Waste Combustor Technology	CO emission limit (ppmv)
Mass burn waterwall	100
Mass burn refractory	100
Mass burn rotary waterwall	100
Modular starved air	50
Modular excess air	50
RDF stoker	150
Bubbling fluidized bed combustor	100
Circulating fluidized bed combustor	100
Coal/RDF mixed fuel fired combustor	150
Pulverized coal/RDF mixed fuel fired combustor	150
Spreader Stoker coal/RDF mixed fuel fired combustor	150

## Appendix 1-8a

### MWC Operating Standards (40 CFR 60.53b, Table 1) [Revised December 1997]

MWC Technology	CO Emission limit (ppmv)*	Averaging time (hours)**
Mass burn waterwall	100	4
Mass burn refractory	100	4
Mass burn rotary waterwall	100	24
Modular starved air	50	4
Modular excess air	50	4
Refuse-derived fuel stoker	150	24
Bubbling fluidized bed combustor	100	4
Circulating fluidized bed combustor	100	4
Pulverized coal/refuse-derived fuel mixed fuel fired combustor	150	4
Spreader Stoker coal/refuse-derived fuel mixed fuel fired combustor	150	24

\* Measured at the combustor outlet in conjunction with a measurement of oxygen concentration, corrected to 7 percent oxygen (dry basis). The averaging times are specified in greater detail in 40 CFR 60.58b(i).

\*\* Averaging times are 4--h or 24-h block averages.

## Appendix 1-8b

**Parameters of New Small Municipal Waste Combustion Units**  
**(40 CFR 60, Subpart AAAA [40 CFR 60.1000 through 60.1465,**  
**see checklist items AE.36.17.US through AE.36.28.US], Table 1 through Table 5)**  
**[Added April 2001]**

<b>Table 1</b> <b>Emission Limits for New Small Municipal Waste Combustion Units</b>			
<b>For the following pollutants:</b>	<b>You must meet the following emission limits<sup>a</sup></b>	<b>Use the following averaging times:</b>	<b>And determine compliance by the following methods:</b>
<b>1. Organics</b>			
<b>Dioxins/ Furans (total mass basis),</b>	<b>13 nanograms per dscm.</b>	3-run average (minimum run duration is 4 h).	<b>Stack test.</b>
<b>2. Metals</b>			
<b>Cadmium</b>	<b>0.020 milligrams per dscm.</b>	3-run average (run duration specified in test method).	<b>Stack test.</b>
<b>Lead</b>	<b>0.20 milligrams per dscm.</b>	3-run average (run duration specified in test method).	<b>Stack test.</b>
<b>Mercury</b>	<b>0.080 milligrams per dscm or 85 percent reduction of potential mercury emissions.</b>	3-run average (run duration specified in test method).	<b>Stack test.</b>
<b>Opacity</b>	<b>10-percent</b>	<b>Thirty 6-min averages</b>	<b>Stack test.</b>
<b>Particulate Matter</b>	<b>24 milligrams per dscm</b>	3-run average (run duration specified in test method).	<b>Stack test.</b>
<b>3. Acid Gases</b>			
<b>Hydrogen Chloride</b>	<b>25 ppmdv or 95 percent reduction of potential hydrogen chloride emissions</b>	3-run average (minimum run duration is 41h).	<b>Stack test.</b>
<b>Nitrogen Oxides (Class I Units)<sup>b</sup></b>	<b>150 (180 for 1st year of operation) ppmdv</b>	24-h daily block arithmetic average concentration	<b>Continuous emission monitoring system</b>
<b>Nitrogen Oxides (Class II Units)<sup>b</sup></b>	<b>500 ppmdv</b>	See footnote d	<b>See footnote d</b>

<b>Table 1</b> <b>Emission Limits for New Small Municipal Waste Combustion Units</b>			
<b>For the following pollutants:</b>	<b>You must meet the following emission limits<sup>a</sup></b>	<b>Use the following averaging times:</b>	<b>And determine compliance by the following methods:</b>
<b>Sulfur Dioxide</b>	<b>30 ppmdv or 80 percent reduction of potential sulfur dioxide emissions</b>	24-h daily block geometric average concentration or percent reduction	<b>Continuous emission monitoring system</b>
<b>4. Other</b>			
<b>Fugitive Ash</b>	<b>Visible emission for no more than 5 percent of hourly observation period</b>	Three 1-h observation periods	<b>Visible emission test</b>

- a All emission limits (except for opacity) are measured at 7 percent oxygen.
- b Class I units mean small municipal waste combustion units subject to this subpart that are located at municipal waste combustion plants with an aggregate plant combustion capacity more than 250 tons per day of municipal solid waste. See definitions section
- c Class II units mean small municipal waste combustion units subject to this subpart that are located at municipal waste combustion plants with an aggregate plant combustion capacity no more than 250 tons per day of municipal solid waste. See 40 definitions section.
- d No monitoring, testing, recordkeeping, or reporting is required to demonstrate compliance with the NO<sub>x</sub> limit for Class II units.

<b>Table 2</b> <b>Carbon Monoxide Emission Limits for New Small Municipal Waste Combustion Units</b>		
<b>For the following municipal waste combustion units:</b>	<b>You must meet the following carbon monoxide limits<sup>a</sup></b>	<b>Using the following averaging times <sup>b</sup></b>
<b>1. Fluidized bed</b>	<b>100 ppmdv</b>	<b>4 hour</b>
<b>2. Fluidized bed, mixed fuel, (wood/refuse derived fuel)</b>	<b>200 ppmdv</b>	<b>24 hour <sup>c</sup></b>
<b>3. Mass burn rotary refractory</b>	<b>100 ppmdv</b>	<b>4 hour</b>
<b>4. Mass burn rotary waterwall</b>	<b>100 ppmdv</b>	<b>24 hour</b>
<b>5. Mass burn rotary waterwall and refractory</b>	<b>100 ppmdv</b>	<b>4 hour</b>

<b>6. Mixed fuel-fired (pulverized coal/refuse-derived fuel)</b>	<b>150 ppmdv</b>	<b>4 hour</b>
<b>7. Modular starved-air and excess air</b>	<b>50 ppmdv</b>	<b>4 hour</b>
<b>8. Spreader stoker, mixed fuel-fired (coal/refuse-derived fuel)</b>	<b>150 ppmdv</b>	<b>24 hour daily</b>
<b>9. Stoker, refuse-derived fuel</b>	<b>150 ppmdv</b>	<b>24 hour daily</b>

- a All limits (except for opacity) are measured at 7 percent oxygen. Compliance is determined by continuous emission monitoring systems.
- b Block averages, arithmetic mean. See definitions section.
- c 24-hour block average, geometric mean. See definitions section.

<b>Table 3</b> <b>Requirements for Validating Continuous Emission Monitoring Systems (CEMS)</b>		
<b>For the following CEMS</b>	<b>Use the following methods in Appendix A of 40 CFR 60 to validate pollution concentration levels</b>	<b>Use the following methods in Appendix A of 40 CFR 60 to measure oxygen (or carbon dioxide)</b>
<b>1. Nitrogen Oxides (Class I units only) a</b>	<b>Method 7, 7A, 7B, 7C, 7D, or 7E</b>	<b>Method 3 or 3A</b>
<b>2. Sulfur Dioxide</b>	<b>Methods 6 or 6C</b>	<b>Method 3 or 3A</b>
<b>3. Carbon Monoxide</b>	<b>Method 10, 10A, or 10B</b>	<b>Method 3 or 3A</b>

- 
- a Class I units mean small municipal waste combustion units subject to this subpart that are located at municipal waste combustion plants with an aggregate plant combustion capacity more than 250 tons per day of municipal solid waste. See definitions section.
-

<b>Table 4</b> <b>Requirements for Continuous Emission Monitoring Systems (CEMS)</b>			
<b>For the following pollutants</b>	<b>Use the following span values for the CEMS</b>	<b>Use the following performance specifications in Appendix B or 40 CFR 60 for the CEMS</b>	<b>If needed to meet minimum data requirements, used the following alternate methods in Appendix A of 40 CFR 60 to collect data</b>
<b>1. Opacity</b>	<b>100 percent opacity</b>	<b>P.S. 1</b>	<b>Method 9</b>
<b>2. Nitrogen Oxides (Class I units only)<sup>a</sup></b>	Control device outlet: 125 percent of the maximum expected hourly potential nitrogen oxides emissions of the municipal waste combustion unit.	<b>P.S. 2</b>	<b>Method 7E</b>
<b>3. Sulfur Dioxide</b>	Inlet to control device: 125 percent of the maximum expected sulfur dioxide emissions of the municipal waste combustion unit. Control device outlet: 50 percent of the maximum expected hourly potential sulfur dioxide emissions of the municipal waste combustion unit.	<b>P.S. 2</b>	<b>Method 6C</b>
<b>4. Carbon Monoxide</b>	<b>125 percent of the maximum expected hourly potential carbon with monoxide emissions of the municipal waste combustion unit.</b>	<b>P.S. 4A</b>	<b>Method 10 alternative interference trap</b>
<b>5. Oxygen or Carbon Dioxide</b>	<b>25 percent oxygen or 25 percent carbon dioxide.</b>	<b>P.S. 3</b>	<b>Methods 3Z or 3B</b>

- a Class I units mean small municipal waste combustion units subject to this subpart that are located at municipal waste combustion plants with an aggregate plant combustion capacity more than 250 tons per day of municipal solid waste. See definitions section.

<b>Table 5</b> <b>Requirements for Stack Tests</b>			
<b>To measure the following pollutants</b>	<b>Use the following methods in Appendix A of 40 CFR 60 to determine the sampling location</b>	<b>Use the methods in Appendix A of 40 CFR 60 to measure pollutant concentration</b>	<b>Also note the following additional information</b>
<b>1. Organics</b>			

<b>Table 5</b> <b>Requirements for Stack Tests</b>

			municipal waste combustion unit is operating at full load.
<b>4. Other</b>			
<b>Fugitive Ash</b>	<b>Not applicable</b>	Method 22 (visible emissions)	The three 1-hour observation period must include periods when the facility transfers fugitive ash from the municipal waste combustion unit to the area where the fugitive ash is stored or loaded into containers or trucks.

- a Must simultaneously measure oxygen (or carbon dioxide) using Method 3A or 3B in appendix A of this part.
- b Use CEMS to test sulfur dioxide, nitrogen oxide, and carbon monoxide. Stack tests are not required except for quality assurance requirements in Appendix F of this part.

## Appendix 1-9

### Lead Concentration in Sewage Sludge Fed to an Incinerator (40 CFR 503.43) [Revised October 1999]

#### Formula 1

$$0.1 \times \text{NAAQS} \times 86,400$$

$$C = \frac{\text{DF} \times (1 - \text{CE}) \times \text{SF}}{\text{DF} \times (1 - \text{CE}) \times \text{SF}}$$

$$\text{DF} \times (1 - \text{CE}) \times \text{SF}$$

Where:

C = Average daily concentration of lead in sewage sludge in mg/kg of total solids (dry weight basis).

NAAQS = National Ambient Air Quality Standard for lead in  $\mu\text{g}/\text{m}^3$ .

DF = Dispersion factor in micrograms per cubic meter per gram per second.

CE = Sewage sludge incinerator control efficiency for lead in hundredths.

SF = Sewage sludge feed rate in metric tons per day (dry weight basis).

(NOTE: When the sewage sludge stack height is 65 m or less, the actual sewage sludge incinerator stack height shall be used in an air dispersion model specified by the permitting authority to determine the dispersion factor (DF) in the above equation. When the sewage sludge incinerator stack height exceeds 65 m, the creditable stack height shall be determined in accordance with 40 CFR 51.100(ii) and the creditable stack height shall be used in an air dispersion model specified by the permitting authority to determine the DF in the above equation.)

#### Formula 2

$$\text{RSC} \times 86,400$$

$$C = \frac{\text{DF} \times (1 - \text{CE}) \times \text{SF}}{\text{DF} \times (1 - \text{CE}) \times \text{SF}}$$

$$\text{DF} \times (1 - \text{CE}) \times \text{SF}$$

Where:

C = Average daily concentration of arsenic, cadmium, chromium, or nickel in sewage sludge in mg/kg of total solids (dry weight basis).

CE = Sewage sludge incinerator control efficiency for arsenic, cadmium, chromium, or nickel in hundredths.

DF = Dispersion factor in micrograms per cubic meter per gram per second.

RSC = Risk-specific concentration for arsenic, cadmium, chromium, or nickel in  $\mu\text{g}/\text{m}^3$ .

SF = Sewage sludge feed rate in metric tons per day (dry weight basis).

(NOTE: The control efficiency (CE) in the above equation shall be determined from a performance test of the sewage sludge incinerator, as specified by the permitting authority.)

(NOTE: See the text of 40 CFR 503.43(d)(2) and 503.43(d)(3) for guidance on calculating the RSC.)

(NOTE: When the sewage sludge incinerator stack height is equal to or less than 65 m, the actual sewage sludge incinerator stack height shall be used in an air dispersion model, as specified by the permitting authority, to determine the DF in the above equation. When the sewage sludge incinerator stack height is greater than 65 m, the creditable stack height shall be determined in accordance with 40 CFR 51.100(ii) and the creditable stack height shall be used in an air dispersion model, as specified by the permitting authority, to determine the DF in the above equation. The CE in the above equation shall be determined from a performance test of the sewage sludge incinerator, as specified by the permitting authority.)

## Appendix 1-10

### Total Hydrocarbon Operational Standards (40 CFR 503.44)

#### Formula 1

$$\text{Corrective Factor (percent moisture)} = \frac{1}{(1-X)}$$

Where:

X - decimal fraction of the percent moisture in the sewage sludge incinerator exit gas in hundredths

#### Formula 2

$$\text{Corrective Factor (oxygen)} = \frac{14}{(21-Y)}$$

Where:

Y - percent oxygen concentration in the sewage sludge incinerator stack exit gas (dry volume/dry volume)

## Appendix 1-10a

### Applicability Criteria and Management Practices for Gasoline Dispensing Facilities and Gasoline Cargo Tanks (40 CFR 63, Subpart CCCCCC, Tables 1 and 2) [Added April 2008; Revised July 2008]

<p style="text-align: center;"><b>Table 1</b></p> <p style="text-align: center;">Applicability Criteria and Management Practices for Gasoline Dispensing Facilities With Monthly Throughput of 100,000 Gallons of Gasoline or More</p>	
If you own or operate:	Then you must:
<p>1. A new, reconstructed, or existing GDF subject to 40 CFR 63.11118.</p>	<p>Install and operate a vapor balance system on your gasoline storage tanks that meets the design criteria in paragraphs (a) through (h).</p> <p>(a) All vapor connections and lines on the storage tank shall be equipped with closures that seal upon disconnect.</p> <p>(b) The vapor line from the gasoline storage tank to the gasoline cargo tank shall be vapor-tight, as defined in 40 CFR 63.11132.</p> <p>(c) The vapor balance system shall be designed such that the pressure in the tank truck does not exceed 18 in water pressure or 5.9 in water vacuum during product transfer.</p> <p>(d) The vapor recovery and product adaptors, and the method of connection with the delivery elbow, shall be designed so as to prevent the over-tightening or loosening of fittings during normal delivery operations.</p> <p>(e) If a gauge well separate from the fill tube is used, it shall be provided with a submerged drop tube that extends the same distance from the bottom of the storage tank as specified in 40 CFR 63.11117(b).</p> <p>(f) Liquid fill connections for all systems shall be equipped with vapor-tight caps.</p> <p>(g) Pressure/vacuum (PV) vent valves shall be installed on the storage tank vent pipes. The pressure specifications for PV vent valves shall be: a positive pressure setting of 2.5 to 6.0 in of water and a negative pressure setting of 6.0 to 10.0 in of water. The total leak rate of all PV vent valves at an affected facility, including connections, shall not exceed 0.17 ft<sup>3</sup>/h at a pressure of 2.0 in of water and 0.63 ft<sup>3</sup>/h at a vacuum of 4 in of water.</p> <p>(h) The vapor balance system shall be capable of meeting the static pressure performance requirement of the following equation:</p> $Pf = 2e-500.887/v$ <p style="text-align: center;">Where:</p> <p>Pf = Minimum allowable final pressure, inches of water. v = Total ullage affected by the test, gallons.</p>

<b>Table 1</b> Applicability Criteria and Management Practices for Gasoline Dispensing Facilities With Monthly Throughput of 100,000 Gallons of Gasoline or More	
<b>If you own or operate:</b>	<b>Then you must:</b>
	$e$ = Dimensionless constant equal to approximately 2.718. $2$ = The initial pressure, inches water.
2. For new or reconstructed GDF, or new storage tank(s) at an existing affected facility subject to 40 CFR 63.11118.	Equip your gasoline storage tanks with a dual-point vapor balance system, as defined in 40 CFR 63.11132, and comply with the requirements of item 1 in this Table.

<b>Table 2</b> — Applicability Criteria and Management Practices for Gasoline Cargo Tanks Unloading at Gasoline Dispensing Facilities With Monthly Throughput of 100,000 Gallons of Gasoline or More	
<b>If you own or operate:</b>	<b>Then you must:</b>
1. A gasoline cargo tank	Not unload gasoline into a storage tank at a GDF subject to the control requirements in 40 CFR 63, Subpart CCCCCC unless the following conditions are met: All hoses in the vapor balance system are properly connected, The adapters or couplers that attach to the vapor line on the storage tank have closures that seal upon disconnect, All vapor return hoses, couplers, and adapters used in the gasoline delivery are vapor-tight, All tank truck vapor return equipment is compatible in size and forms a vapor-tight connection with the vapor balance equipment on the GDF storage tank, and All hatches on the tank truck are closed and securely fastened. The filling of storage tanks at GDF shall be limited to unloading by vapor-tight gasoline cargo tanks. Documentation that the cargo tank has met the specifications of EPA Method 27 shall be carried on the cargo tank.

## Appendix 1-11

### Frequency of Monitoring For Incineration (40 CFR 503.46, Table 1) [Revised October 1999]

Amount of sewage sludge* (metric tons/365 day period)	Frequency
Greater than zero but less than 290	Once per year
Equal to or greater than 290 but less than 1,500	Once per quarter (four times per year)
Equal to or greater than 1,500 but less than 15,000	Once per 60 days (six times per year)
Equal to or greater than 15,000	Once per month (12 times per year)

\* Either the amount of bulk sewage sludge applied to the land or the amount of sewage sludge received by a person who prepares sewage sludge that is sold or given away in a bag or other container for application to the land (dry weight basis).

## Appendix 1-11a

**Organic Hazardous Air Pollutants**  
**(Table 1 to Subpart EEEE of 40 CFR 63).**  
**[Added April 2004]**

Compound name	CAS No.1
2,4-D salts and esters	94-75-7
Acetaldehyde	75-07-0
Acetonitrile	75-05-8
Acetophenone	98-86-2
Acrolein	107-02-8
Acrylamide	79-06-1
Acrylic acid	79-10-7
Acrylonitrile	107-13-1
Allyl chloride	107-05-1
Aniline	62-53-3
Benzene	71-43-2
Biphenyl	92-52-4
Butadiene (1,3-)	106-99-0
Carbon tetrachloride	56-23-5
Chloroacetic acid	79-11-8
Chlorobenzene	108-90-7
2-Chloro-1,3-butadiene (Chloroprene)	126-99-8
Chloroform	67-66-3
m-Cresol	108-39-4
o-Cresol	95-48-7
p-Cresol	106-44-5
Cresols/cresylic acid	1319-77-3
Cumene	98-82-8
Dibenzofurans	132-64-9
Dibutylphthalate	84-74-2
Dichloroethane (1,2-) (Ethylene dichloride) (EDC)	107-06-2
Dichloropropene (1,3-)	542-75-6
Diethanolamine	111-42-2
Diethyl aniline (N,N-)	121-69-7
Diethylene glycol monobutyl ether	112-34-5
Diethylene glycol monomethyl ether	64-67-5
Dimethyl formamide	68-12-2
Dimethylhydrazine (1,1-)	57-14-7
Dioxane (1,4-) (1,4-Diethyleneoxide)	123-91-1
Epichlorohydrin (1-Chloro-2,3-epoxypropane)	106-89-8
Epoxybutane (1,2-)	106-88-7
Ethyl acrylate	140-88-5
Ethylbenzene	100-41-4
Ethyl chloride (Chloroethane)	75-00-3
Ethylene dibromide (Dibromomethane)	106-93-4
Ethylene glycol	107-21-1
Ethylene glycol dimethyl ether	110-71-4
Ethylene glycol monomethyl ether	109-86-4
Ethylene glycol monomethyl ether acetate	110-49-6
Ethylene glycol monophenyl ether	122-99-6

Compound name	CAS No.1
Ethylene oxide	75-21-8
Ethylidene dichloride (1,1-Dichloroethane)	75-34-3
Formaldehyde	50-00-0
Hexachloroethane	67-72-1
Hexane	110-54-3
Hydroquinone	123-31-9
Isophorone	78-59-1

## Appendix 1-11b

### Emission Limits at OLDs

(Table 2 to Subpart EEEE of 40 CFR 63).

[Added April 2004; Revised January 2007; Revised July 2008]

If you own or operate . . .	And if .	Then you must . . .
1. A storage tank at an existing affected source with a capacity greater than or equal to 18.9 m <sup>3</sup> (5,000 gal) and < 189.3 m <sup>3</sup> (50,000 gal)	a. The stored organic liquid is not crude oil and if the annual average true vapor pressure of the total Appendix 1-11a organic HAP in the stored organic liquid is $\geq$ 27.6 kPa (4.0 psia) and < 76.6 kPa (11.1 psia)	i. Reduce emissions of total organic HAP (or, upon approval, TOC) by at least 95 weight-percent or, as an option, to an exhaust concentration $\leq$ 20 ppmv, on a dry basis corrected to 3 percent oxygen for combustion devices using supplemental combustion air, by venting emissions through a closed vent system to any combination of control devices meeting the applicable requirements of 40 CFR Part 63, Subpart SS; OR  ii. Comply with the work practice standards specified in Appendix 1-11d, items 1.a, 1.b, or 1.c for tanks storing liquids described in that appendix.
	b. The stored organic liquid is crude oil.	i. See the requirement in item 1.a.i or 1.a.ii of this table.
2. A storage tank at an existing affected source with a capacity [ge] 189.3 m <sup>3</sup> (50,000 gal).	a. The stored organic liquid is not crude oil and if the annual average true vapor pressure of the total Appendix 1-11a organic HAP in the stored organic liquid is <76.6 kPa (11.1 psia).	i. See the requirement in item 1.a.i or 1.a.ii of this table.
	b. The stored organic liquid is crude oil.	i. See the requirement in item 1.a.i or 1.a.ii of this table.
3. A storage tank at a reconstructed or new affected source with a capacity [ge] 18.9 m <sup>3</sup> (5,000 gal) and < 37.9 m <sup>3</sup> (10,000 gal).	a. The stored organic liquid is not crude oil and if the annual average true vapor pressure of the total Appendix 1-11a organic HAP in the stored organic liquid is [ge] 27.6 kPa (4.0 psia) and < 76.6 kPa (11.1 psia).	i. See the requirement in item 1.a.i or 1.a.ii of this table.
	b. The stored organic liquid is crude oil.	i. See the requirement in item 1.a.i or 1.a.ii of this table.
4. A storage tank at a reconstructed or new affected source with a capacity [ge] 37.9 m <sup>3</sup> (10,000 gal)	a. The stored organic liquid is not crude oil and if the annual average true vapor pressure of the total Appendix 1-11a organic HAP in the	i. See the requirement in item 1.a.i or 1.a.ii of this table.

If you own or operate . . .	And if .	Then you must . . .
and <189.3 m <sup>3</sup> (50,000 gal).	stored organic liquid is [ge]0.7 kPa (0.1 psia) and <76.6 kPa (11.1 psia).	
	b. The stored organic liquid is crude oil.	i. See the requirement in item 1.a.i or 1.a.ii of this table.
5. A storage tank at a reconstructed or new affected source with a capacity [ge]189.3 m <sup>3</sup> (50,000 gal).	a. The stored organic liquid is not crude oil and if the annual average true vapor pressure of the total Appendix 1-11a organic HAP in the stored organic liquid is <76.6 kPa (11.1 psia).	i. See the requirement in item 1.a.i or 1.a.ii of this table.
	b. The stored organic liquid is crude oil.	i. See the requirement in item 1.a.i or 1.a.ii of this table.
6. A storage tank at an existing, reconstructed, or new affected source meeting the capacity criteria specified in Appendix 1-11b, items 1 through 5.	a. The stored organic liquid is not crude oil and if the annual average true vapor pressure of the total Appendix 1-11a organic HAP in the stored organic liquid is >= 76.6 kPa (11.1 psia).	<p>i. Reduce emissions of organic HAP (or, upon approval, TOC) by 95 weight-percent or, as an option, to an exhaust concentration &lt;= 20 ppmv, on a dry basis corrected to 3 percent oxygen for combustion devices using supplemental combustion air, by venting emissions through a closed vent system to any combination of control devices meeting the applicable requirements of 40 CFR 63, Subpart SS.</p> <p>ii. Comply with the work practice standards specified in Appendix 1-11d, item 2.a., for tanks storing liquids described in that appendix.</p>
7. A transfer rack at an existing facility where the total actual annual facility-level organic liquid loading volume through transfer racks out of the facility is >= 800,000 gal and < 10 million gal.	a. The total Appendix 1-11a HAP content of the organic liquid being loaded through one or more of the transfer rack's arms is at least 98% by weight and is being loaded into a transport vehicle.	<p>i. For all such loading arms at the rack, reduce emissions of total organic HAP (or, upon approval, TOC) from the loading of organic liquids either by venting the emissions that occur during loading to any combination of control devices meeting the applicable requirements of 40 CFR 63, Subpart SS, achieving at least 98 weight-percent HAP reduction, OR, as an option, to an exhaust concentration &lt;= 20 ppmv, on a dry basis corrected to 3 percent oxygen for combustion devices using supplement combustion air; OR</p> <p>ii. During the loading of organic liquids, comply with the work</p>

If you own or operate . . .	And if .	Then you must . . .
		practice standards specified in item 3 of Appendix 1-11d.
8. A transfer rack at an existing facility where the total actual annual facility-level organic liquid loading volume through transfer racks is $\geq$ 10 million gal.	a. One or more of the transfer rack's arms is loading an organic liquid into a transport vehicle.	i. See the requirements in items 7.a.i and 7.a.ii of this appendix.
9. A transfer rack at a new facility where the total actual annual facility-level organic liquid loading volume through transfer racks out of the facility is $<$ 800,000 gal.	a. The total Appendix 1-11a organic HAP content of the organic liquid being loaded through one or more of the transfer rack's arms is at least 25 percent by weight and is being loaded into a transport vehicle.	i. See the requirements in items 7.a.i and 7.a.ii of this appendix.
	b. One or more of the transfer rack's arms is filling a container with a capacity $\geq$ 55 gal.	i. For all such loading arms at the rack during the loading of organic liquids, comply with the provisions of 40 CFR 63.924 through 63.927 of 40 CFR 63, Subpart PP- <i>National Emission Standards for Containers</i> , Container Level 3 controls, OR  ii. During the loading of organic liquids, comply with the work practice standards specified in item 3.a. of Appendix 1-11d.
10. A transfer rack at a new facility where the total actual annual facility-level organic liquid loading volume through transfer racks is $\geq$ 800,000 gal.	a. One or more of the transfer rack's arms is loading an organic liquid into a transport vehicle.	i. See the requirements in items 7.a.i and 7.a.ii of this appendix.
	b. One or more of the transfer racks arms is filling a container with a capacity $\geq$ 55 gal.	i. For all such loading arms at the rack during the loading of organic liquids, comply with the provisions of 40 CFR 63.924 through 63.927 of 40 CFR 63, Subpart PP- <i>National Emission Standards for Containers</i> , Container Level 3 controls.  ii. During the loading of organic liquids, comply with the work practices specified in item 3.a of Appendix 1-11d.

#### Appendix 1-11c

### Operating Limits for High Throughput Transfer Racks

(Table 3 to Subpart EEEE of 40 CFR 63).

[Added April 2004; Revised January 2007]

As stated in 40 CFR 63.2346(e) (see checklist items AE.57.1.US and AE.57.2.US), the operating limits for existing, reconstructed, or new affected sources must be met as follows:

For each existing, each reconstructed, and each new affected source using . . .	You must . . .
1. A thermal oxidizer to comply with the emission limit in Appendix 1-11b.	Maintain the daily average fire box or combustion zone temperature greater than or equal to the reference temperature established during the design evaluation or performance test that demonstrated compliance with the emission limit.
2. A catalytic oxidizer to comply with an emission limit in Appendix 1-11b.	a. Replace the existing catalyst bed before the age of the bed exceeds the allowable age established during the design evaluation or performance test that demonstrated compliance with the emission limit; AND b. Maintain the daily average temperature at the inlet of the catalyst bed greater than or equal to the reference temperature established during the design evaluation or performance test that demonstrated compliance with the emission limit; AND c. Maintain the daily average temperature difference across the catalyst bed greater than or equal to the minimum temperature difference established during the design evaluation or performance test that demonstrated compliance with the emission limit.
3. An adsorber to comply with an emission limit in Appendix 1-11b.	a. Maintain the daily average concentration level of organic compounds in the absorber exhaust $\leq$ to the reference concentration established during the design evaluation or performance test that demonstrated compliance with the emission limit; OR b. Maintain the daily average scrubbing liquid temperature $\leq$ to the reference temperature established during the design evaluation or performance test that demonstrated compliance with the emission limit; AND Maintain the difference between the specific gravities of the saturated and fresh scrubbing fluids $\geq$ the difference established during the design evaluation or performance test that demonstrated compliance with the emission limit.
4. A condenser to comply with an emission limit in Appendix 1-11b.	a. Maintain the daily average concentration level of organic compounds at the condenser exit less than or equal to the reference concentration established during the design evaluation or performance test that demonstrated compliance with the emission limit; OR b. Maintain the daily average condenser exit temperature less than or equal to the reference temperature established during the design evaluation or performance test that demonstrated compliance with the emission limit.
5. An adsorption system with adsorbent regeneration to comply with an emission limit in Appendix 1-11b.	a. Maintain the daily average concentration level of organic compounds in the adsorber exhaust less than or equal to the reference concentration established during the design evaluation or performance test that demonstrated compliance with the emission limit; OR b. Maintain the total regeneration stream mass flow during the adsorption bed regeneration cycle $\geq$ the reference stream mass flow established during the design evaluation or performance test that demonstrated compliance with the emission limit; AND Before the adsorption cycle commences, achieve and

For each existing, each reconstructed, and each new affected source using . . .	You must . . .
	maintain the temperature of the adsorption bed after regeneration $\leq$ the reference temperature established during the design evaluation or performance test that demonstrated compliance with the emission limit; AND Achieve a pressure reduction during each adsorption bed regeneration cycle $\geq$ the pressure reduction established during the design evaluation or performance test that demonstrated compliance with the emission limit.
6. An adsorption system without adsorbent regeneration to comply with an emission limit in Appendix 1-11b.	<p>a. Maintain the daily average concentration level of organic compounds in the adsorber exhaust <math>\leq</math> the reference concentration established during the design evaluation or performance test that demonstrated compliance with the emission limit; OR</p> <p>b. Replace the existing adsorbent in each segment of the bed with an adsorbent that meets the replacement specifications established during the design evaluation or performance test before the age of the adsorbent exceeds the maximum allowable age established during the design evaluation or performance test that demonstrated compliance with the emission limit; AND Maintain the temperature of the adsorption bed <math>\leq</math> the reference temperature established during the design evaluation or performance test that demonstrated compliance with the emission limit.</p>
7. A flare to comply with an emission limit in Appendix 1-11b.	<p>a. Comply with the equipment and operating requirements in 40 CFR 63.987(a); AND</p> <p>b. Conduct an initial flare compliance assessment in accordance with 40 CFR 63.987(b); AND</p> <p>c. Install and operate monitoring equipment as specified in 40 CFR 63.987(c).</p>
8. Another type of control device to comply with an emission limit in Appendix 1-11b.	Submit a monitoring plan as specified in 40 CFR 63.995(c) and 63.2366(c), and monitor the control device in accordance with that plan.

## Appendix 1-11d

### Work Practice Standards at OLDs (Table 4 to Subpart EEEE of 40 CFR 63). [Added April 2004; Revised January 2007]

For each . . .	You must . . .
1. Storage tank at an existing, reconstructed, or new affected source meeting any set of tank capacity and organic HAP vapor pressure criteria specified in Appendix 1-11b, items 1 through 5.	<p>a. Comply with the requirements of 40 CFR 63, Subpart WW (control level 2) (40 CFR 63.1060 through 63.1067), if you elect to meet 40 CFR 63, subpart WW (control level 2) requirements as an alternative to the emission limit in Appendix 1-11b, items 1 through 5; OR</p> <p>b. Comply with the requirements of 40 CFR 63.984 in 40 CFR 63, Subpart SS (40 CFR 63.980 through 63.999), for routing emissions to a fuel gas system or back to the process.</p> <p>c. Comply with the requirements of 40 CFR 63.2346(a)(4) for vapor balancing emissions to the transport vehicle from which the storage tank is filled.</p>
2. Storage Tank at an existing, reconstructed, or new affected source meeting any set of tank capacity and organic HAP vapor pressure criteria specified in Appendix 1-11b, item 6.	<p>a. Comply with the requirements of 40 CFR 63.984 for routing emission to a fuel gas system, or back to a process; OR</p> <p>b. Comply with the requirements of 40 CFR 63.2346(a)(4) for vapor balancing emissions to the transport vehicle from which the storage tank is filled.</p>
3. Transfer rack subject to control based on the criteria specified in Appendix 1-11b, items 7 through 10, at an existing, reconstructed, or new source.	<p>a. If the option of a vapor balancing system is selected, install and, during the loading of organic liquids, operate a system that meets the requirements in Appendix 1-11e, item 3.b.i. and item 3.b.ii, as applicable; OR</p> <p>b. Comply with the requirements of 40 CFR 63.984 during the loading of organic liquids for routing emissions to a fuel gas system or back to a process.</p>
4. Pump, valve, and sampling connection that operates in organic liquids service at least 300 h/yr at an existing, reconstructed, or new affected source.	Comply with the requirements for pumps, valves, and sampling connections in 40 CFR 63, Subpart TT (control level 1), Subpart UU (control level 2), or Subpart H.
5. Transport vehicles equipped with vapor collection equipment that are loaded at transfer racks that are subject to control based on the criteria specified in Appendix 1-11b, items 7 through 10.	Follow the steps in 40 CFR 60.502(e) to ensure that organic liquids are loaded only into vapor-tight transport vehicles, and comply with the provisions in 40 CFR 60.502(f), 60.502(g), 60.502(h), and 60.502(i), except substitute the term transport vehicle at each occurrence of tank truck or gasoline tank truck in those paragraphs.
6. Transport vehicles without vapor collection equipment that are loaded at transfer racks that are subject to control based on the criteria specified in Appendix 1-11b, items 7 through 10.	Ensure that organic liquids are loaded only into transport vehicles that have a current certification in accordance with the U.S. DOT pressure test requirements in 49 CFR 180 (cargo tanks) or 49 CFR 173.31 (tank cars).

## Appendix 1-11e

### Initial Compliance With Work Practice Standards

(40 CFR 63, Subpart EEEE, Table 7)

[Added April 2004; Revised January 2007]

For each . . .	If you . . .	You have demonstrated initial compliance if . . .
1. Storage tank at an existing affected source meeting either set of tank capacity and liquid organic HAP vapor pressure criteria specified in Appendix 1-11b, items 1 or 2.	<p>a. Install a floating roof or equivalent control that meets the requirements in Appendix 1-11d, item 1.a.</p> <p>b. Route emissions to a fuel gas system or back to the process.</p> <p>c. Install and, during the filling of the storage tank with organic liquids, operate a vapor balancing system.</p>	<p>i. After emptying and degassing, visually inspect each internal floating roof before the refilling of the storage tank and perform seal gap inspections of the primary and secondary rim seals of each external floating roof within 90 days after the refilling of the storage tank.</p> <p>i. Meet the requirements in 40 CFR 63.984(b) and submit the statement of connection required by 40 CFR 63.984(c).</p> <p>i. Meet the requirements in 40 CFR 63.2346(a)(4) (see checklist item AE.57.1.US).</p>
2. Storage tank at a reconstructed or new affected source meeting any set of tank capacity and liquid organic HAP vapor pressure criteria specified in Appendix 1-11b, items 3 through 5.	<p>a. Install a floating roof or equivalent control that meets the requirements in Appendix 1-11d, item 1.a.</p> <p>b. Route emissions to a fuel gas system or back to the process.</p> <p>c. Install and, during the filling of the storage tank with organic liquids, operate a vapor balancing system.</p>	<p>i. Visually inspect each internal floating roof before the initial filling of the storage tank, and perform seal gap inspections of the primary and secondary rim seals of each external floating roof within 90 days after the initial filling of the storage tank.</p> <p>i. See item 1.b.i of this table.</p> <p>i. See item 1.c.i of this table.</p>
3. Transfer rack that is subject to control based on the criteria specified in Appendix 1-11b, items 7 through 10, at an existing, reconstructed, or new affected source.	<p>a. Load organic liquids only into transport vehicles having current vapor tightness certification as described in Appendix 1-11d, item 5 and item 6.</p> <p>b. Install and, during the loading of organic liquids, operate a vapor balancing system</p>	<p>i. Comply with the provisions specified in Appendix 1-11d, item 5 and item 6, as applicable.</p> <p>i. Design and operate the vapor balancing system to route organic HAP vapors displaced from loading of organic liquids into transport vehicles to the appropriate storage tank from which the liquid being loaded originated or to another</p>

For each . . .	If you . . .	You have demonstrated initial compliance if . . .
		storage tank connected to a common header.
	c. Route emissions to a fuel gas system or back to a process.	ii. Design and operate the vapor balancing system to route organic HAP vapors displaced from loading of organic liquids into containers directly (e.g., no intervening tank or containment area such as a room) to the storage tank from which the liquid being loaded originated or to another storage tank connected to a common header. See item 1.b.i. of this table.
4. Equipment leak component, as defined in 40 CFR 63.2406, that operates in organic liquids service $\geq$ 300 h/yr at an existing, reconstructed, or new affected source.	a. Carry out a leak detection and repair program or equivalent control according to one of the subparts listed in Appendix 1-11d, item 4.a.	i. Specify which one of the control programs listed in Appendix 1-11d you have selected, OR  ii. Provide written specifications for your equivalent control approach.

## Appendix 1-12

### Compliance and Exemptions to 40 CFR 63.320 through 63.325 Concerning Perchloroethylene Drycleaners (40 CFR 63.320)

[Revised October 2006; Revised April 2008; Revised July 2008]

Facility Type	Applicable Citation	Checklist Item Numbers	Date
Coin operated drycleaners.	None	None	None
Dry cleaning systems that started construction or reconstruction on or after 9 December 1991 and before 21 December 2005, except 40 CFR 63.322(o) beginning on 22 September 1993 or immediately upon startup, whichever is later, except for systems complying with Section 112(i)(2) of CAAA90.	63.320 through 63.325	AE.75.1.US. through AE.75.12.US.	22 September 1993 Compliance with 40 CFR 63.322(o) is required beginning on 28 July 2008, except as provided by 40 CFR 63.6(b)(4), as applicable.
Each dry cleaning system that commences construction or reconstruction on or after 21 December 2005 shall be in compliance, except with 40 CFR 63.322(o), immediately upon startup.	63.320 through 63.325	AE.75.1.US. through AE.75.12.US.	Compliance with 40 CFR 63.322(o) is required beginning on 27 July 2006 or immediately upon startup, whichever is later.
Dry cleaning systems that commences construction or reconstruction on or after 21 December 2005, but before 13 July 2006, and are located in a building with a residence, shall be in compliance, except 40 CFR 63.322(o), immediately upon startup;.	63.320 through 63.325	AE.75.1.US. through AE.75.12.US	Compliance with 40 CFR 63.322(o)(5)(ii) is required beginning on 27 July 2006. Compliance with 40 CFR 63.322(o)(5)(i) is required beginning on 27 July 2009.
Dry cleaning systems that started construction or reconstruction on or after 27 July 2006.	63.320 through 63.325	AE.75.1.US. through AE.75.12.US	Upon Startup
Dry cleaning systems that started construction or reconstruction before 9 December 1991, and each new transfer machine system and its ancillary equipment that started construction or reconstruction on or after 9 December 1991 and before 22 September 1993.	63.322(c), (d), (i), (j), (k), (l), (m), 63.323(d) and 63.324(a), (b), (d)(1), (d)(2), (d)(3), (d)(4), and (e)	AE.75.3.US, AE.75.5.US. through AE.75.12.US.	20 December 1993

Facility Type	Applicable Citation	Checklist Item Numbers	Date
	All other citations except 40 CFR 63.322(o)	AE.75.1.US, AE.75.2.US, AE.75.4.US, AE.75.7.US.	23 September 1996
	40 CFR 63.322(o)		28 July 2008
Existing dry-to-dry machines and ancillary equipment located in a dry cleaning facility that includes only a dry-to-dry machines, and each existing transfer machine system and its ancillary equipment, and each new transfer machine system and its new ancillary equipment installed between 9 December 1991 and 22 September 1993, as well as each existing dry-to-dry machine and its ancillary equipment, located in a dry cleaning facility that includes both transfer machine systems and dry-to-dry machines	40 CFR 63.322(c), (d), (i), (j), (k), (l), (m), (o)(1), (o)(4), (o)(5)(i); 63.323(d); and 63.324(a), (b), (d)(1), (d)(2), (d)(3), (d)(4), and (e)	AE.75.3.US, AE.75.5.US. through AE.75.12.US.	22 September 1993
Each existing dry-to-dry machine and its ancillary equipment located in a dry cleaning facility that includes only dry-to-dry machines, and each existing transfer machine system and its ancillary equipment, and each new transfer machine system and its ancillary equipment installed between 9 December 1991, and 22 September 1993, as well as each existing dry-to-dry machine and its ancillary equipment, located in a dry cleaning facility that includes both transfer machine system(s) and dry-to-dry machine(s) Consumption is determined according to 40 CFR 63.323(d).	40 CFR 63.322(c), (d), (i), (j), (k), (l), (m), (o)(1), (o)(3) and (o)(5)(i); 63.323(d); and 63.324(a), (b), (d)(1), (d)(2), (d)(3), (d)(4), and (e) if the total PCE consumption of the dry cleaning facility is less than 530 L/yr (140 gal/yr)	AE.75.3.US, AE.75.5.US. through AE.75.12.US.	22 September 1993

Facility Type	Applicable Citation	Checklist Item Numbers	Date
Each existing transfer machine system and its ancillary equipment, and each new transfer machine system and its ancillary equipment installed between December 9, 1991, and September 22, 1993, located in a dry cleaning facility that includes only transfer machine system(s), is exempt from	40 CFR 63.322(c), (d), (i), (j), (k), (l), (m), (o)(1), (o)(3), (o)(4); 63.323(d); and 63.324(a), (b), (d)(1), (d)(2), (d)(3), (d)(4), and (e) if the PCE consumption of the dry cleaning facility is less than 760 L/yr (200 gal/yr).	AE.75.1.US, AE.75.3.US. through AE.75.10.US.	22 September 1993
Existing transfer machine systems and ancillary equipment, and each new transfer machine system and its ancillary equipment installed between 9 December 1991 and 22 September 1993 located in a dry cleaning facility that includes only transfer machine systems with perchloroethylene consumption at the facility of less than 760 L/yr (200 gal/yr).	63.324(e)		22 September 1993
<b>(NOTE:</b> If the total yearly consumption of perchloroethylene at a dry cleaning facility is initially less than the amounts stipulated above, but later exceeds those amounts, the existing dry cleaning system and new transfer machine systems and its ancillary equipment installed between 9 December 1991 and 22 September 1993 in the facility are required to comply within 180 days of the date that the facility determined it exceeded the baseline amounts or by 23 September 1996, whichever is later.)

\a\ According to Annex C of the Montreal Protocol, "Where a range of ODPs is indicated, the highest value in that range shall be used for the purposes of the Protocol. The ODPs listed as single value have been determined from calculations based on laboratory measurements. Those listed as a range are based on estimates and are less certain. The range pertains to an isomeric group. The upper value is the estimate of the ODP of the isomer with the highest ODP, and the lower value is the estimate of the ODP of the isomer with the lowest ODP.

\b\ This table includes all isomers of the substances above, regardless of whether the isomer is explicitly listed on its own.

## Appendix 1-14

**Maximum Level of Contaminants Permissible in Refrigerant Processed Through  
Equipment Advertised as “Recycling” Equipment  
(40 CFR 82.160(n))

High-pressure appliance, or isolated component of such appliance, with a full charge of less than 200 lbs of refrigerant.	0	0
High-pressure appliance, or isolated component of such appliance, with a full charge of 200 lbs or more of refrigerant.	4	10
Medium-pressure appliance, or isolated component of such appliance, with a full charge of less than 200 lbs of refrigerant.	4	10
Medium-pressure appliance, or isolated component of such appliance, with a full charge of 200 lbs or more of refrigerant.	4	15
Low-pressure appliance	25 mm Hg absolute	25 mm Hg absolute

## **Appendix 1-16a**

### **Definitions Applicable to 40 CFR 82.156(i) (40 CFR 82.156(j)) [Added January 2017]**

#### *Definitions for 40 CFR 82.156(i) Requirements*

Definitions for the leak repair provisions in 40 CFR 82.156(i). These definitions are not applicable to any other portion of subpart F other than 82.156(i). Along with paragraph (i) of this section, the definitions in this section apply only until January 1, 2019.

- (a) **Appliance** - for the purposes of 40 CFR 82.156(i), any device which contains and uses a refrigerant and which is used for household or commercial purposes, including any air conditioner, refrigerator, chiller, or freezer.
- (b) **Commercial refrigeration** - for the purposes of 40 CFR 82.156(i), the refrigeration appliances utilized in the retail food and cold storage warehouse sectors. Retail food includes the refrigeration equipment found in supermarkets, convenience stores, restaurants and other food service establishments. Cold storage includes the equipment used to store meat, produce, dairy products, and other perishable goods. All of the equipment contains large refrigerant charges, typically over 75 pounds.
- (c) **Critical component** - for the purposes of 40 CFR 82.156(i), a component without which industrial process refrigeration equipment will not function, will be unsafe in its intended environment, and/or will be subject to failures that would cause the industrial process served by the refrigeration appliance to be unsafe.
- (d) **Custom-built** means, for the purposes of paragraph (i) of this section, that the equipment or any of its critical components cannot be purchased and/or installed without being uniquely designed, fabricated and/or assembled to satisfy a specific set of industrial process conditions.
- (e) **Follow-up verification test** - for the purposes of 40 CFR 82.156(i), those tests that involve checking the repairs within 30 days of the appliance's returning to normal operating characteristics and conditions. Follow-up verification tests for appliances from which the refrigerant charge has been evacuated means a test conducted after the appliance or portion of the appliance has resumed operation at normal operating characteristics and conditions of temperature and pressure, except in cases where sound professional judgment dictates that these tests will be more meaningful if performed prior to the return to normal operating characteristics and conditions. A follow-up verification test with respect to repairs conducted without evacuation of the refrigerant charge means a reverification test conducted after the initial verification test and usually within 30 days of normal operating conditions. Where an appliance is not evacuated, it is only necessary to conclude any required changes in pressure, temperature or other conditions to return the appliance to normal operating characteristics and conditions.
- (f) **Full charge** - for the purposes of 40 CFR 82.156(i), the amount of refrigerant required for normal operating characteristics and conditions of the appliance as determined by using one or a combination of the following four methods:
  - 1. Use the equipment manufacturer's determination of the correct full charge for the equipment;
  - 2. Determine the full charge by making appropriate calculations based on component sizes, density of refrigerant, volume of piping, and other relevant considerations;
  - 3. Use actual measurements of the amount of refrigerant added or evacuated from the appliance; and/or
  - 4. Use an established range based on the best available data regarding the normal operating characteristics and conditions for the appliance, where the midpoint of the range will serve as the full charge, and where records are maintained in accordance with Sec. 82.166(q).
- (g) **Industrial process refrigeration** - for the purposes of 40 CFR 82.156(i), complex customized appliances used in the chemical, pharmaceutical, petrochemical and manufacturing industries. These appliances are directly linked to the industrial process. This sector also includes industrial ice machines, appliances used directly in the

generation of electricity, and ice rinks. Where one appliance is used for both industrial process refrigeration and other applications, it will be considered industrial process refrigeration equipment if 50 percent or more of its operating capacity is used for industrial process refrigeration.

- (h) Industrial process shutdown - for the purposes of 40 CFR 82.156(i), that an industrial process or facility temporarily ceases to operate or manufacture whatever is being produced at that facility.
- (i) Initial verification test - for the purposes of 40 CFR 82.156(i), those leak tests that are conducted as soon as practicable after the repair is completed. An initial verification test, with regard to the leak repairs that require the evacuation of the appliance or portion of the appliance, means a test conducted prior to the replacement of the full refrigerant charge and before the appliance or portion of the appliance has reached operation at normal operating characteristics and conditions of temperature and pressure. An initial verification test with regard to repairs conducted without the evacuation of the refrigerant charge means a test conducted as soon as practicable after the conclusion of the repair work.
- (j) Leak rate - for the purposes of 40 CFR 82.156(i), the rate at which an appliance is losing refrigerant, measured between refrigerant charges. The leak rate is expressed in terms of the percentage of the appliance's full charge that would be lost over a 12-month period if the current rate of loss were to continue over that period. The rate is calculated using only one of the following methods for all appliances located at an operating facility.

Method 1.

- (A) Step 1. Take the number of pounds of refrigerant added to the appliance to return it to a full charge and divide it by the number of pounds of refrigerant the appliance normally contains at full charge;
- (B) Step 2. Take the shorter of the number of days that have passed since the last day refrigerant was added or 365 days and divide that number by 365 days;
- (C) Step 3. Take the number calculated in Step 1. and divide it by the number calculated in Step 2.; and
- (D) Step 4. Multiply the number calculated in Step 3. by 100 to calculate a percentage. This method is summarized in the following formula: (see text of the regulation).

Method 2.

- (A) Step 1. Take the sum of the quantity of refrigerant added to the appliance over the previous 365-day period (or over the period that has passed since leaks in the appliance were last repaired, if that period is less than one year),
- (B) Step 2. Divide the result of Step 1. by the quantity (e.g., pounds) of refrigerant the appliance normally contains at full charge, and
- (C) Step 3. Multiply the result of Step 2. by 100 to obtain a percentage. This method is summarized in the following formula: (see text of the regulation).

- (k) Normal operating characteristics or conditions - for the purposes of 40 CFR 82.156(i), temperatures, pressures, fluid flows, speeds and other characteristics that would normally be expected for a given process load and ambient condition during operation. Normal operating characteristics and conditions are marked by the absence of atypical conditions affecting the operation of the refrigeration appliance.
- (l) Normally containing a quantity of refrigerant - for the purposes of 40 CFR 82.156(i), containing the quantity of refrigerant within the appliance or appliance component when the appliance is operating with a full charge of refrigerant.
- (m) Refrigerant - for the purposes of 40 CFR 82.156(i), any substance consisting in part or whole of a class I or class II ozone-depleting substance that is used for heat transfer purposes and provides a cooling effect.
- (n) Substitute - for the purposes of 40 CFR 82.156(i), any chemical or product, whether existing or new, that is used by any person as an EPA approved replacement for a class I or II ozone-depleting substance in a given refrigeration or air-conditioning end-use.

- (o) Suitable replacement refrigerant - for the purposes of 40 CFR 82.156(i), a refrigerant that is acceptable under section 612(c) of the Clean Air Act Amendments of 1990 and all regulations promulgated under that section, compatible with other materials with which it may come into contact, and able to achieve the temperatures required for the affected industrial process in a technically feasible manner.
- (p) System mothballing - for the purposes of 40 CFR 82.156(i), the intentional shutting down of a refrigeration appliance undertaken or an extended period of time by the owners or operators of that facility, where the refrigerant has been evacuated from the appliance or the affected isolated section of the appliance, at least to atmospheric pressure.

## Appendix 1-17

### Emission Limits for Cleaning Machines Without a Solvent/Air Interface (40 CFR 63.464(a)(2)(ii)(A))

#### Equation 1

$$EL = 330 * (Vol)^{0.6} \quad (1)$$

EL = the 3-mo rolling average monthly emissions limit (kg/mo)

Vol = the cleaning capacity of the solvent-cleaning machine (m<sup>3</sup>)

**Table 1**

## Appendix 1-18

### Speciality Coating Definitions (Appendix A to Subpart GG of 40 CFR 63) [Added January 1999; Revised January 2016]

- *Ablative Coating* - A coating that chars when exposed to open flame or extreme temperatures, as would occur during the failure of an engine casing or during aerodynamic heating. The ablative char surface serves as an insulative barrier, protecting adjacent components from the heat or open flame.
- *Adhesion Promoter* - A very thin coating applied to a substrate to promote wetting and form a chemical bond with the subsequently applied material.
- *Adhesive Bonding Primer* - A primer applied in a thin film to aerospace components for the purpose of corrosion inhibition and increased adhesive bond strength by attachment. There are two categories of adhesive bonding primers: primers with a design cure at 250 oF or below and primers with a design cure above 250 oF.
- *Aerosol Coating* - A hand-held, pressurized, nonrefillable container that expels an adhesive or a coating in a finely divided spray when a valve on the container is depressed.
- *Antichafe Coating* - A coating applied to areas of moving aerospace components that may rub during normal operations or installation.
- *Bearing Coating* - A coating applied to an antifriction bearing, a bearing housing, or the area adjacent to such a bearing in order to facilitate bearing function or to protect base material from excessive wear. A material shall not be classified as a bearing coating if it can also be classified as a dry lubricative material or a solid film lubricant.
- *Bonding Maskant* - A temporary coating used to protect selected areas of aerospace parts from strong acid or alkaline solutions during processing for bonding.
- *Caulking and Smoothing Compounds* - Semi-solid materials applied by hand application methods that are used to aerodynamically smooth exterior vehicle surfaces or fill cavities such as bolt hole accesses. A material shall not be classified as a caulking and smoothing compound if it can also be classified as a sealant.
- *Chemical Agent-Resistant Coating (CARC)* - An exterior topcoat designed to withstand exposure to chemical warfare agents or the decontaminants used on these agents.
- *Clear Coating* - A transparent coating usually applied over a colored opaque coating, metallic substrate, or placard to give improved gloss and protection to the color coat. In some cases, a clearcoat refers to any transparent coating without regard to substrate.
- *Commercial Exterior Aerodynamic Structure Primer* - A primer used on aerodynamic components and structures that protrude from the fuselage, such as wings and attached components, control surfaces, horizontal stabilizers, vertical fins, wing-to-body fairings, antennae, and landing gear and doors, for the purpose of extended corrosion protection and enhanced adhesion.
- *Commercial Interior Adhesive* - Materials used in the bonding of passenger cabin interior components. These components must meet the FAA fireworthiness requirements.
- *Compatible Substrate Primer* - Includes two categories: compatible epoxy primer and adhesive primer. Compatible epoxy primer is primer that is compatible with the filled elastomeric coating and is epoxy based. The compatible substrate primer is an epoxy-polyamide primer used to promote adhesion of elastomeric coatings such as impact-resistant coatings. Adhesive primer is a coating that (1) inhibits corrosion and serves as a primer applied

to bare metal surfaces or prior to adhesive application, or (2) is applied to surfaces that can be expected to contain fuel. Fuel tank coatings are excluded from this category.

- *Corrosion Prevention System* - A coating system that provides corrosion protection by displacing water and penetrating mating surfaces, forming a protective barrier between the metal surface and moisture. Coatings containing oils or waxes are excluded from this category.
- *Critical Use and Line Sealer Maskant* - A temporary coating, not covered under other maskant categories, used to protect selected areas of aerospace parts from strong acid or alkaline solutions such as those used in anodizing, plating, chemical milling and processing of magnesium, titanium, high-strength steel, high-precision aluminum chemical milling of deep cuts, and aluminum chemical milling of complex shapes. Materials used for repairs or to bridge gaps left by scribing operations (i.e. line sealer) are also included in this category.
- *Cryogenic Flexible Primer* - A primer designed to provide corrosion resistance, flexibility, and adhesion of subsequent coating systems when exposed to loads up to and surpassing the yield point of the substrate at cryogenic temperatures (-275 °F and below).
- *Cryoprotective Coating* - A coating that insulates cryogenic or subcooled surfaces to limit propellant boil-off, maintain structural integrity of metallic structures during ascent or re-entry, and prevent ice formation.
- *Cyanoacrylate Adhesive* - A fast-setting, single component adhesive that cures at room temperature. Also known as “super glue.”
- *Dry Lubricative Material* - A coating consisting of lauric acid, cetyl alcohol, waxes, or other non-cross linked or resin-bound materials that act as a dry lubricant.
- *Electric or Radiation-effect Coating* - A coating or coating system engineered to interact, through absorption or reflection, with specific regions of the electromagnetic energy spectrum, such as the ultraviolet, visible, infrared, or microwave regions. Uses include, but are not limited to, lightning strike protection, electromagnetic pulse (EMP) protection, and radar avoidance. Coatings that have been designated as “Classified National Security Information” by the DoD are exempt.
- *Electrostatic Discharge and Electromagnetic Interference (EMI) Coating* - A coating applied to aerospace vehicles and components to disperse static energy or reduce electromagnetic interference.
- *Elevated-temperature Skydrol-resistant Commercial Primer* - A primer applied primarily to commercial aircraft (or commercial aircraft adapted for military use) that must withstand immersion in phosphate-ester (PE) hydraulic fluid (Skydrol 500b or equivalent) at the elevated temperature of 150 °F for 1000 h.
- *Epoxy Polyamide Topcoat* - A coating used where harder films are required or in some areas where engraving is accomplished in camouflage colors.
- *Fire-resistant (Interior) Coating* - For civilian aircraft, fire-resistant interior coatings are used on passenger cabin interior parts that are subject to the FAA fireworthiness requirements. For military aircraft, fire-resistant interior coatings are used on parts subject to the flammability requirements of MIL-STD-1630A and MIL-A-87721. For space applications, these coatings are used on parts subject to the flammability requirements of SE-R-0006 and SSP 30233.
- *Flexible Primer* - A primer that meets flexibility requirements such as those needed for adhesive bond primed fastener heads or on surfaces expected to contain fuel. The flexible coating is required because it provides a compatible, flexible substrate over bonded sheet rubber and rubber-type coatings as well as a flexible bridge between the fasteners, skin, and skin-to-skin joints on outer aircraft skins. This flexible bridge allows more topcoat flexibility around fasteners and decreases the chance of the topcoat cracking around the fasteners. The result is better corrosion resistance.

- *Flight Test Coating* - A coating applied to aircraft other than missiles or single-use aircraft prior to flight testing to protect the aircraft from corrosion and to provide required marking during flight test evaluation.
- *Fuel Tank Adhesive* - An adhesive used to bond components exposed to fuel and that must be compatible with fuel tank coatings.
- *Fuel Tank Coating* - A coating applied to fuel tank components to inhibit corrosion and/or bacterial growth and to assure sealant adhesion in extreme environmental conditions.
- *High Temperature Coating* - A coating designed to withstand temperatures of more than 350 oF.
- *Insulation Covering* - Material that is applied to foam insulation to protect the insulation from mechanical or environmental damage.
- *Intermediate Release Coating* - A thin coating applied beneath topcoats to assist in removing the topcoat in repainting operations and generally to allow the use of less hazardous repainting methods.
- *Lacquer* - A clear or pigmented coating formulated with a nitrocellulose or synthetic resin to dry by evaporation without a chemical reaction. Lacquers are resolvable in their original solvent.
- *Metalized Epoxy Coating* - A coating that contains relatively large quantities of metallic pigmentation for appearance and/or added protection.
- *Mold Release* - A coating applied to a mold surface to prevent the molded piece from sticking to the mold as it is removed.
- *Nonstructural Adhesive* - An adhesive that bonds nonload bearing aerospace components in noncritical applications and is not covered in any other specialty adhesive categories.
- *Optical Anti-reflection Coating* - A coating with a low reflectance in the infrared and visible wavelength ranges, which is used for anti-reflection on or near optical and laser hardware.
- *Part Marking Coating* - Coatings or inks used to make identifying markings on materials, components, and/or assemblies. These markings may be either permanent or temporary.
- *Pretreatment Coating* - An organic coating that contains at least 0.5 percent acids by weight and is applied directly to metal or composite surfaces to provide surface etching, corrosion resistance, adhesion, and ease of stripping.
- *Rain Erosion-resistant Coating* - A coating or coating system used to protect the leading edges of parts such as flaps, stabilizers, radomes, engine inlet nacelles, etc. against erosion caused by rain impact during flight.
- *Rocket Motor Bonding Adhesive* - An adhesive used in rocket motor bonding applications.
- *Rocket Motor Nozzle Coating* - A catalyzed epoxy coating system used in elevated temperature applications on rocket motor nozzles.
- *Rubber-based Adhesive* - Quick setting contact cements that provide a strong, yet flexible, bond between two mating surfaces that may be of dissimilar materials.
- *Scale Inhibitor* - A coating that is applied to the surface of a part prior to thermal processing to inhibit the formation of scale.
- *Screen Print Ink* - Inks used in screen printing processes during fabrication of decorative laminates and decals.

- *Seal Coat Maskant* - An overcoat applied over a maskant to improve abrasion and chemical resistance during production operations.
- *Sealant* - A material used to prevent the intrusion of water, fuel, air, or other liquids or solids from certain areas of aerospace vehicles or components. There are two categories of sealants: extrudable/rollable/brushable sealants and sprayable sealants.
- *Silicone Insulation Material* - Insulating material applied to exterior metal surfaces for protection from high temperatures caused by atmospheric friction or engine exhaust. These materials differ from ablative coatings in that they are not “sacrificial.”
- *Solid Film Lubricant* - A very thin coating consisting of a binder system containing as its chief pigment material one or more of the following: molybdenum, graphite, polytetrafluoroethylene (PTFE), or other solids that act as a dry lubricant between faying surfaces.
- *Specialized Function Coatings* - Coatings that fulfill extremely specific engineering requirements that are limited in application and are characterized by low volume usage. This category excludes coatings covered in other Specialty Coating categories.
- *Structural Autoclavable Adhesive* - An adhesive used to bond load-carrying aerospace components that is cured by heat and pressure in an autoclave.
- *Structural Nonautoclavable Adhesive* - An adhesive cured under ambient conditions that is used to bond load-carrying aerospace components or for other critical functions, such as nonstructural bonding in the proximity of engines.
- *Temporary Protective Coating* - A coating applied to provide scratch or corrosion protection during manufacturing, storage, or transportation. Two types include peelable protective coatings and alkaline removable coatings. These materials are not intended to protect against strong acid or alkaline solutions. Coatings that provide this type of protection from chemical processing are not included in this category.
- *Thermal Control Coating* - Coatings formulated with specific thermal conductive or radiative properties to permit temperature control of the substrate.
- *Touch-up and Repair Coating* - A coating used to cover minor coating imperfections appearing after the main coating operation.
- *Wet Fastener Installation Coating* - A primer or sealant applied by dipping, brushing, or daubing to fasteners that are installed before the coating is cured.
- *Wing Coating* - A corrosion-resistant topcoat that is resilient enough to withstand the flexing of the wings.

## Appendix 1-19

### Composition Requirements for Approved Cleaning Solvents (40 CFR 63.744, Table 1) [Added January 1999]

Cleaning Solvent Type	Composition Requirements
<b>Aqueous</b>	Cleaning solvents in which water is the primary ingredient ( $\geq 80$ percent of cleaning solvent solution as applied must be water). Detergents, surfactants, and bioenzyme mixtures and nutrients may be combined with the water along with a variety of additives, such as organic solvents (e.g., high boiling point alcohols), builders, saponifiers, inhibitors, emulsifiers, pH buffers, and antifoaming agents. Aqueous solutions must have a flash point greater than 93 °C (200 °F) (as reported by the manufacturer), and the solution must be miscible with water.
<b>Hydrocarbon Based</b>	Cleaners that are composed of photochemically reactive hydrocarbons and oxygenated hydrocarbons and have a maximum vapor pressure of 7 mm Hg at 20 °C (3.75 in. H <sub>2</sub> O at 68 °F). These cleaners also contain no HAP.

## Appendix 19-a

### Specialty Coatings, HAP and VOC Content Limits (40 CFR 63.745, Table 1) [Added January 2016]

Coating Type	HAP Limit g/L (lb/gallon) <sup>1</sup>	VOC Limit g/L (lb/gallon) <sup>1</sup>
Ablative Coating	600 (5.0)	600 (5.0)
Adhesion Promoter	890 (7.4)	890 (7.4)
Adhesive Bonding Primers: Cured at 250°F or below	850 (7.1)	850 (7.1)
Adhesive Bonding Primers: Cured above 250°F	1030 (8.6)	1030 (8.6)
Commercial Interior Adhesive	760 (6.3)	760 (6.3)
Cyanoacrylate Adhesive	1,020 (8.5)	1,020 (8.5)
Fuel Tank Adhesive	620 (5.2)	620 (5.2)
Nonstructural Adhesive	360 (3.0)	360 (3.0)
Rocket Motor Bonding Adhesive	890 (7.4)	890 (7.4)
Rubber-based Adhesive	850 (7.1)	850 (7.1)
Structural Autoclavable Adhesive	60 (0.5)	60 (0.5)
Structural Nonautoclavable Adhesive	850 (7.1)	850 (7.1)
Antichafe Coating	660 (5.5)	660 (5.5)
Bearing Coating	620 (5.2)	620 (5.2)
Caulking and Smoothing Compounds	850 (7.1)	850 (7.1)
Chemical Agent-Resistant Coating	550 (4.6)	550 (4.6)
Clear Coating	720 (6.0)	720 (6.0)
Commercial Exterior Aerodynamic Structure Primer	650 (5.4)	650 (5.4)
Compatible Substrate Primer	780 (6.5)	780 (6.5)
Corrosion Prevention System	710 (5.9)	710 (5.9)
Cryogenic Flexible Primer	645 (5.4)	645 (5.4)
Cryoprotective Coating	600 (5.0)	600 (5.0)
Dry Lubricative Material	880 (7.3)	880 (7.3)
Electric or Radiation-Effect Coating	800 (6.7)	800 (6.7)
Electrostatic Discharge and Electromagnetic Interference (EMI) Coating	800 (6.7)	800 (6.7)
Elevated-Temperature Skydrol-Resistant Commercial Primer	740 (6.2)	740 (6.2)
Epoxy Polyamide Topcoat	660 (5.5)	660 (5.5)
Fire-Resistant (interior) Coating	800 (6.7)	800 (6.7)
Flexible Primer	640 (5.3)	640 (5.3)
Flight-Test Coatings: Missile or Single Use Aircraft	420 (3.5)	420 (3.5)
Flight-Test Coatings: All Other	840 (7.0)	840 (7.0)
Fuel-Tank Coating	720 (6.0)	720 (6.0)
High-Temperature Coating	850 (7.1)	850 (7.1)
Insulation Covering	740 (6.2)	740 (6.2)
Intermediate Release Coating	750 (6.3)	750 (6.3)
Lacquer	830 (6.9)	830 (6.9)
Bonding Maskant	1,230 (10.3)	1,230 (10.3)
Critical Use and Line Sealer Maskant	1,020 (8.5)	1,020 (8.5)
Seal Coat Maskant	1,230 (10.3)	1,230 (10.3)
Metallized Epoxy Coating	740 (6.2)	740 (6.2)
Mold Release	780 (6.5)	780 (6.5)
Optical Anti-Reflective Coating	750 (6.3)	750 (6.3)
Part Marking Coating	850 (7.1)	850 (7.1)
Pretreatment Coating	780 (6.5)	780 (6.5)

Rain Erosion-Resistant Coating	850 (7.1)	850 (7.1)
Rocket Motor Nozzle Coating	660 (5.5)	660 (5.5)
Scale Inhibitor	880 (7.3)	880 (7.3)
Screen Print Ink	840 (7.0)	840 (7.0)
Extrudable/Rollable/Brushable Sealant	280 (2.3)	280 (2.3)
Sprayable Sealant	600 (5.0)	600 (5.0)
Silicone Insulation Material	850 (7.1)	850 (7.1)
Solid Film Lubricant	880 (7.3)	880 (7.3)
Specialized Function Coating	890 (7.4)	890 (7.4)
Temporary Protective Coating	320 (2.7)	320 (2.7)
Thermal Control Coating	800 (6.7)	800 (6.7)
Wet Fastener Installation Coating	675 (5.6)	675 (5.6)
Wing Coating	850 (7.1)	850 (7.1)

<sup>1</sup> Coating limits for HAP are expressed in terms of mass (grams or pounds) of HAP per volume (liters or gallons) of coating less water.

Notes:

fm 305 = Method 305 fraction measure factor.

a. CAS numbers refer to the Chemical Abstracts Services registry number assigned to specific compounds, isomers, or mixtures of compounds.

b. Denotes a HAP that hydrolyzes quickly in water, but the hydrolysis products are also HAP chemicals.

c. Denotes a HAP that may react violently with water, exercise caustic is an expected analyte.

d. Denotes a HAP that hydrolyzes slowly in water.

e. The fm305 factors for some of the more common glycol ethers can be obtained by contacting the Waste and Chemical Processes Group, Office of Air Quality Planning and Standards, Research Triangle Park, NC 27711.

### MSWLFs and Greenhouse Gas Calculations

(40 CFR 98, Tables HH-1 and HH-3)

[Added January 2010; Revised January 2011; Revised January 2014; Revised October 2017]

**Table HH-1: Emission Factors, Oxidation Factors, and Methods**

Factor	Default Value	Units
<b>DOC and k values – Bulk Waste Option</b>		
DOC (bulk waste)	0.20	Weight fraction, wet basis
k (precipitation plus recirculated leachate <sup>a</sup> < 20 in/yr)	0.02	yr <sup>-1</sup>
k (precipitation plus recirculated leachate <sup>a</sup> < 20 – 40 in/yr)	0.038	yr <sup>-1</sup>
k (precipitation plus recirculated leachate <sup>a</sup> > 40 in/yr)	0.057	yr <sup>-1</sup>
<b>DOC and k values – Modified bulk MSW option</b>		
DOC (bulk MSW, excluding inerts and C&D waste)	0.31	Weight fraction, wet basis
DOC (inerts, e.g., glass plastics, metal concrete)	0.00	Weight fraction, wet basis
DOC (C&D waste)	0.08	Weight fraction, wet basis
k (bulk MSW, excluding inerts and C&D waste)	0.02 to 0.057 <sup>b</sup>	yr <sup>-1</sup>
k (inerts, e.g., glass plastics, metal concrete)	0.00	yr <sup>-1</sup>
k (C&D waste)	0.02 to 0.04 <sup>b</sup>	yr <sup>-1</sup>
<b>DOC and k values –Waste Composition Option</b>		
DOC (food waste)	0.15	Weight fraction, wet basis
DOC (garden)	0.2	Weight fraction, wet basis
DOC (paper)	0.4	Weight fraction, wet basis
DOC (wood and straw)	0.43	Weight fraction, wet basis
DOC (textiles)	0.24	Weight fraction, wet basis

Factor	Default Value	Units
DOC (diapers)	0.24	Weight fraction, wet basis
DOC (sewage sludge)	0.05	Weight fraction, wet basis
DOC (inerts, e.g., glass, plastics, metal, cement)	0.00	Weight fraction, wet basis
k (food waste)	0.06 to 0.185 <sup>c</sup>	yr <sup>-1</sup>
k (garden)	0.05 to 0.10 <sup>c</sup>	yr <sup>-1</sup>
k (paper)	0.04 to 0.06 <sup>c</sup>	yr <sup>-1</sup>
k (wood and straw)	0.02 to 0.03 <sup>c</sup>	yr <sup>-1</sup>
k (textiles)	0.04 to 0.06 <sup>c</sup>	yr <sup>-1</sup>
k (diapers)	0.05 to 0.10 <sup>c</sup>	yr <sup>-1</sup>
k (sewage sludge)	0.06 to 0.185 <sup>c</sup>	yr <sup>-1</sup>
k (inerts, e.g., glass, plastics, metal, cement)	0.00	yr <sup>-1</sup>
<b>Other parameter – All MSW landfills</b>		
MCF	1.	
DOC <sub>f</sub>	0.5	
F	0.5	
OX	See text of Table HH-4	
DE	0.99	

<sup>a</sup> Recirculated leachate (in inches/year) is the total volume of leachate recirculated from company records or engineering estimates divided by the area of the portion of the landfill containing waste with appropriate unit conversions. Alternatively, landfills that use leachate recirculation can elect to use the k value of 0.057 rather than calculating the recirculated leachate rate.

<sup>b</sup> Use the lesser value when precipitation plus recirculated leachate is less than 20 in/yr. Use the greater value when precipitation plus recirculated leachate is greater than 40 in/yr. Use the average of the range of values when precipitation plus recirculated leachate is 20 to 40 in/yr (inclusive). Alternatively, landfills that use leachate recirculation can elect to use the greater value rather than calculating the recirculated leachate rate.

<sup>c</sup> Use the lesser value when the potential evapotranspiration rate exceeds the mean annual precipitation rate plus recirculated leachate. Use the greater value when the potential evapotranspiration rate does not exceed the mean annual precipitation rate plus recirculated leachate. Alternatively, landfills that use leachate recirculation can elect to use the greater value rather than assessing the potential evapotranspiration rate or recirculated leachate rate.

**Table HH-3: Landfill Gas Collection Efficiencies**

Description	Landfill Gas Collection Efficiency
A1: Area with no waste in-place	Not applicable; do not use this area in the calculation.
A2: Areas without active gas collection, regardless of cover type.	CE2: 0 percent
A3: Area with daily soil cover and active gas collection	CE3 = 60 percent
A4: Area with intermediate soil cover, or a final soil cover not meeting the criteria for A5 below, and active gas collection	CE4: 75 percent
A5: Area with a final soil cover of 3 ft or thicker and/or geomebrane cover system and active gas collection	CE5: 95 percent
Weighted average collection efficiency for landfills:	
Area weighted average collection efficiency for landfills	$CE_{ave1} = (A2*CE2 + A3*CE3 + A4*CE4 + A5*CE5) / (A2 + A3 + A4 + A5).$

<sup>1</sup> The HHV for components of LPG determined at 60 °F and saturation pressure with the exception of ethylene.

<sup>2</sup> Ethylene HHV determined at 41 °F (5 °C) and saturation pressure.

<sup>3</sup> Use of this default HHV is allowed only for: (a) Units that combust MSW, do not generate steam, and are allowed to use Tier 1; (b) units that derive no more than 10 percent of their annual heat input from MSW and/or tires; and (c) small batch incinerators that combust no more than 1,000 tons of MSW per year.

<sup>4</sup> Reporters subject to subpart X of 40 CFR 98 that are complying with 40 CFR 98.243(d) or subpart Y of 40 CFR 98 may only use the default HHV and the default CO<sub>2</sub> emission factor for fuel gas combustion under the conditions prescribed in 40 CFR 98.243(d)(2)(i) and (d)(2)(ii) and 40 CFR 98.252(a)(1) and (a)(2), respectively. Otherwise, reporters subject to subpart X or subpart Y shall use either Tier 3(Equation C-5) or Tier 4.

<sup>5</sup> Use the following formula to calculate a wet basis HHV for use in Equation C-1:  $HHV_w = ((100 - M)/100) * HHV_d$  where  $HHV_w$  = wet basis HHV, M = moisture content (percent) and  $HHV_d$  = dry basis HHV from Table C-1.

## Appendix 1-21

### Engine Test Cell Emission Limitations (40 CFR 63, Subpart P, Table 1)

[Added July 2003]

<b>For each new or reconstructed affected source located at a major source facility that is used in whole or in part for testing . . .</b>	<b>You must meet one of the following emissions limitations:</b>
1. Internal combustion engines with rated power of 25 hp (19 kW) or more.	a. Limit the concentration of CO or THC to 20 ppmvd or less (corrected to 15 percent O <sub>2</sub> content); or b. Achieve a reduction in CO or THC of 96 percent or more between the inlet and outlet concentrations (corrected to 15 percent O <sub>2</sub> content) of the emission control device.

## Appendix 1-22

### Engine Test Cell Operating Limits (40 CFR 63, Subpart P, Table 2) [Added July 2003]

For the following device ...	You must meet the following operating limit ...	and you must demonstrate continuous compliance with the operating limit by .....
Thermal oxidizer.....	The average combustion temperature in any 3-h period must not fall below the combustion temperature limit established according to 40 CFR 63.9324(a).	Collecting the combustion temperature data according to 40 CFR 63.9306(c); Reducing the data to 3-h block averages; and Maintaining the 3-h average combustion temperature at or above the temperature limit.
Catalytic oxidizer.....	The average temperature measured just before the catalyst bed in any 3-h period must not fall below the limit established according to 40 CFR 63.9324(b).	Collecting the temperature data according to 40 CFR 63.9306(c); Reducing the data to 3-h block averages; and Maintaining the 3-h average temperature before the catalyst bed at or above the temperature limit.
	Either ensure that the average temperature difference across the catalyst bed in any 3-h period does not fall below the temperature difference limit established according to 40 CFR 63.9324(b)(2) or develop and implement an inspection and maintenance plan according to 40 CFR 63.9324(b)(3) and (4).	Either collecting the temperature data according to 40 CFR 63.9306(c), reducing the data to 3-h block averages, and maintaining the 3-h average temperature difference at or above the temperature difference limit; or Complying with the inspection and maintenance plan developed according to 40 CFR 63.9324(b)(3) and (4).
Emission capture system that is a PTE according to 40 CFR 63.9322(a).	The direction of the air flow at all times must be into the enclosure, and ...	Collecting the direction of air flow; and either the facial velocity of air through all natural draft openings according to 40 CFR 63.9306(d)(1) or the pressure drop across the enclosure according to 40 CFR 63.9306(d)(2); and Maintaining the facial velocity of air flow through all natural draft openings or the pressure drop at or above the facial velocity limit or pressure drop limit, and maintaining the

For the following device ...	You must meet the following operating limit ...	and you must demonstrate continuous compliance with the operating limit by .....
		direction of air flow into the enclosure at all times.
	The average facial velocity of air through all natural draft openings in the enclosure must be at least 200 ft/min; or	Follow the requirements in 3ai and 3aaii of this table.
	The pressure drop across the enclosure must be at least 0.007 in H <sub>2</sub> O as established in Method 204 of Appendix M of 40 CFR 51.	Follow the requirements in 3ai and 3aaii of this table.
Emission capture system that is not a PTE according to 40 CFR 63.9322(a).	The average gas volumetric flow rate or duct static pressure in each duct between a capture device and add-on control device inlet in any 3-h period must not fall below the average volumetric flow rate or duct static pressure limit established for that capture device according to 40 CFR 63.9306(d).	Collecting the gas volumetric flow rate or duct static pressure for each capture device according to 40 CFR 63.9306(d); Reducing the data to 3-h block averages; and Maintaining the 3-h average gas volumetric flow rate or duct static pressure for each capture device at or above the gas volumetric flow rate or duct static pressure limit.

## Appendix 1-23

### Engine Test Cell Requirements for Initial Compliance Demonstration (40 CFR 63, Subpart P P P P P, Table 3) [Added July 2003]

For each new or reconstructed affected source complying with . . .	You must . . .	Using . . .	According to the following requirements
1. The CO or THC outlet concentration emission limitation.	a. Demonstrate CO or THC emissions are 20 ppmvd or less.	i. EPA Methods 3A and 10 of appendix A to 40 CFR 60 for CO measurement or EPA Method 25A of appendix A to 40 CFR 60 for THC measurement; or	You must demonstrate that the outlet concentration of CO or THC emissions from the test cell/stand or emission control device is 20 ppmvd or less, corrected to 15 percent O <sub>2</sub> content, using the first 4-hour rolling average after a successful performance evaluation.
		ii. A CEMS for CO or THC and O <sub>2</sub> at the outlet of the engine test cell/stand or emission control device.	This demonstration is conducted immediately following a successful performance evaluation of the CEMS as required in 40 CFR 63.9320(b). The demonstration consists of the first 4-h rolling average of measurements. The CO or THC concentration must be corrected to 15 percent O <sub>2</sub> content, dry basis using Equation 1 in 40 CFR 63.9320.
2. The CO or THC percent reduction emission limitation.	a. Demonstrate a reduction in CO or THC of 96 percent or more.	i. You must conduct an initial performance test to determine the capture and control efficiencies of the equipment and to establish operating	You must demonstrate that the reduction in CO or THC emissions is at least 96 percent using the first 4-h rolling average after a

For each new or reconstructed affected source complying with . . .	You must . . .	Using . . .	According to the following requirements
		limits to be achieved on a continuous basis; or	successful performance evaluation. Your inlet and outlet measurements must be on a dry basis and corrected to 15 percent O <sub>2</sub> content.
		ii. A CEMS for CO or THC and O <sub>2</sub> at both the inlet and outlet of the emission control device.	This demonstration is conducted immediately following a successful performance evaluation of the CEMS as required in 40 CFR 63.9320(b). The demonstration consists of the first 4-h rolling average of measurements. The inlet and outlet CO or THC concentrations must be corrected to 15 percent O <sub>2</sub> content using Equation 1 in 40 CFR 63.9320. The reduction in CO or THC is calculated using Equation 2 in 40 CFR 63.9320.

## Appendix 1-24

### Engine Test Cell Continuous Compliance With Emissions Limitations (40 CFR 63, Subpart P, Table 5) [Added July 2003]

For the . . .	You must ...	By ...
1. CO or THC concentration emission limitation	a. Demonstrate CO or THC emissions are 20 ppmvd or less over each 4-h rolling averaging period.	i. Collecting the CPMS data according to 40 CFR 63.9306(a), reducing the measurements to 1-h averages; or ii. Collecting the CEMS data according to 40 CFR 63.9307(a), reducing the measurements to 1-h averages, correcting them to 15 percent O <sub>2</sub> content, dry basis, according to 40 CFR 63.9320;
2. CO or THC percent reduction emission limitation.	a. Demonstrate a reduction in CO or THC of 96 percent or more over each 4-h rolling averaging period.	i. Collecting the CPMS data according to 40 CFR 63.9306(a), reducing the measurements to 1-h averages; or ii. Collecting the CEMS data according to 40 CFR 63.9307(b), reducing the measurements to 1-h averages, correcting them to 15 percent O <sub>2</sub> content, dry basis, calculating the CO or THC percent reduction according to 40 CFR 63.9320.

## Appendix 1-25

### Engine Test Cell Requirements for Reports (40 CFR 63, Subpart P, Table 6) [Added July 2003]

If you own or operate a new or reconstructed affected source that must comply with emission	The report must contain . . .	You must submit the report . . .
<p>1. Compliance report .....</p>	<p>a. If there are no deviations from the emission limitations that apply to you, a statement that there were no deviations from the emission limitations during the reporting period.</p> <p>b. If there were no periods during which the CEMS or CPMS were out of control as specified in 40 CFR 63.8(c)(7), a statement that there were no periods during which the CEMS or CPMS was out of control during the reporting period.</p> <p>c. If you have a deviation from any emission limitation during the reporting period, the report must contain the information in 40 CFR 63.9350(c).</p> <p>d. If there were periods during which the CEMS or CPMS were out of control, as specified in 40 CFR 63.8(c)(7), that report must contain the information in 40 CFR 63.9350(d).</p> <p>e. ## Appendix 1-26

### Compliance Schedule for Site Remediation Emission Limitations (40 CFR 63.7883) [Added April 2004]

Facility Type	Requirements	Compliance Date
Existing Affected Source*	Emission limitation, work practice standard, and operation and maintenance requirements.	9 October 2006
New affected sources that manage remediation material other than a radioactive mixed waste with an initial startup date on or before 8 October 2003.	Emission limitation, work practice standard, and operation and maintenance requirements.	8 October 2003
New affected sources that manages remediation material other than a radioactive mixed waste with an initial startup date after 8 October 2003.	Emission limitation, work practice standard, and operation and maintenance requirements.	Upon Initial Startup
New affected sources that manages remediation material that is a radioactive mixed waste with an initial startup date is on or before 8 October 2003	Emission limitation, work practice standard, and operation and maintenance requirements.	9 October 2006
New affected sources that manages remediation material that is a radioactive mixed waste with an initial startup date after 8 October 2003.	Emission limitation, work practice standard, and operation and maintenance requirements.	Upon Initial Startup
The facility is an area source that increases its emissions or its potential to emit such that it becomes a major source of HAP, for each source at the facility that is a new affected source.	Emission limitation, work practice standard, and operation and maintenance requirements.	Upon Initial Startup
The facility is an area source that increases its emissions or its potential to emit such that it becomes a major source of HAP, for all other affected sources.	Emission limitation, work practice standard, and operation and maintenance requirements.	No later than 3 yr after the facility becomes a major source.

- Affected Site Remediation Sources are:

1. Process vents. The affected source is the entire group of process vents associated with the in-situ and ex-situ remediation processes used at your site to remove, destroy, degrade, transform, or immobilize hazardous substances in the remediation material subject to remediation. Examples of such in-situ

remediation processes include, but are not limited to, soil vapor extraction and bioremediation processes. Examples of such ex-situ remediation processes include but are not limited to, thermal desorption, bioremediation, and air stripping processes.

2. Remediation material management units. Remediation material management unit means a tank, surface impoundment, container, oil-water separator, organic-water separator, or transfer system, as defined in 40 CFR 63.7957(see definitions) and is used at the site to manage remediation material. The affected source is the entire group of remediation material management units used for the site remediations at the site. For the purpose of 40 CFR 63, Subpart GGGGG [40 CFR 63.7880 through 63.7957, see checklist items AE.300.1.US through AE.300.12.US], a tank or container that is also equipped with a vent that serves as a process vent, as defined in 40 CFR 63.7957, is not a remediation material management unit, but instead this unit is considered to be a process vent affected source under paragraph 1.
3. Equipment leaks. The affected source is the entire group of equipment components (pumps, valves, etc.) used to manage remediation materials and meeting both of the following conditions. If either of these conditions do not apply to an equipment component, then that component is not part of the affected source for equipment leaks.
  - a. The equipment component contains or contacts remediation material having a concentration of total HAP listed in Table 1 of this 40 CFR 63, Subpart GGGG (Appendix 1-27) equal to or greater than 10 percent by weight.
  - b. The equipment component is intended to operate for 300 h or more during a calendar year in remediation material service, as defined in 40 CFR 63.7957.

## Appendix 1-27

### List of Hazardous Air Pollutants (40 CFR 63, Table 1 to Subpart GGGGG) [Added April 2004; Revised January 2007]

CA NO. a	Compound Name	fm305
75070	Acetaldehyde	1.000
75058	Acetonitrile	0.989
98862	Acetophenone	0.314
107028	Acrolein	1.000
107131	Acrylonitrile	0.999
107051	Allyl chloride	1.000
71432	Benzene (includes benzene in gasoline)	1.000
98077	Benzotrichloride (isomers and mixture)	0.958
100447	Benzyl chloride	1.000
92524	Biphenyl	0.864
542881	Bis(chloromethyl)ether b	0.999
75252	Bromoform	0.998
106990	1,3-Butadiene	1.000
75150	Carbon disulfide	1.000
56235	Carbon Tetrachloride	1.000
43581	Carbonyl sulfide	1.000
133904	Chloramben	0.633
108907	Chlorobenzene	1.000
67663	Chloroform	1.000
107302	Chloromethyl methyl ether b	1.000
126998	Chloroprene	1.000
98828	Cumene	1.000
94757	2,4-D, salts and esters	0.167
334883	Diazomethane c	0.999

CA NO. a	Compound Name	fm305
132649	Dibenzofurans	0.967
96128	B1,2-Dibromo-3-chloropropane	1.000
106467	1,4-Dichlorobenzene(p)	1.000
107062	Dichloroethane (Ethylene dichloride)	1.000
111444	Dichloroethyl ether (Bis(2-chloroethylether)).	0.757
542756	1,3-Dichloropropene	1.000
79447	Dimethyl carbamoyl chloridec	0.150
77781	Dimethyl sulfate	0.086
121697	N,N-Dimethylaniline	0.0008
51285	2,4-Dinitrophenol	0.0077
121142	2,4-Dinitrotoluene	0.0848
121142	2,4-Dinitrotoluene	0.0848
123911	1,4-Dioxane (1,4-Diethyleneoxide)	0.869
106898	Epichlorohydrin (1-Chloro-2,3-epoxypropane)	0.939
106887	1,2-Epoxybutane	1.000
140885	Ethyl acrylate	1.000
100414	Ethyl benzene	1.000
75003	Ethyl chloride (Chloroethane)	1.000
106934	Ethylene dibromide (Dibromoethane)	0.999
107062	Ethylene dichloride (1,2-Dichloroethane)	1.000
151564	Ethylene imine (Aziridine)	0.867
75218	Ethylene oxide	1.000
75343	Ethylidene dichloride (1,1-Dichloroethane). Glycol ethersd that have a Henry's Law (e) constant value equal to or greater than 0.1 Y/X(1.8 x 10 <sup>-6</sup> atm/gm-mole/m <sup>3</sup> ) at 25 °C.	1.000
118741	Hexachlorobenzene	0.97
87683	Hexachlorobutadiene	0.88
67721	Hexachloroethane	0.499

CA NO. a	Compound Name	fm305
110543	Hexane	1.000
78591	Isophorone	0.506
58899	Lindane (all isomers)	1.000
67561	Methanol	0.855
74839	Methyl bromide (Bromomethane)	1.000
74873	Methyl chloride (Chloromethane)	1.000
71556	Methyl chloroform (1,1,1-Trichloroethane)	1.000
78933	Methyl ethyl ketone (2-Butanone)	0.990
74884	Methyl iodide (Iodomethane)	1.000
108101	Methyl isobutyl ketone (Hexone)	0.979
624839	Methyl isocyanate	1.000
80626	Methyl methacrylate	0.999
1634044	Methyl tert butyl ether	1.000
75092	Methylene chloride (Dichloromethane)	1.000
91203	Naphthalene	0.994
98953	Nitrobenzene	0.394
79469	2-Nitropropane	0.989
82688	Pentachloronitrobenzene (Quintobenzene)	0.839
87865	Pentachlorophenol	0.0898
75445	Phosgenec	1.000
123386	Propionaldehyde	0.999
78875	Propylene dichloride (1,2-Dichloropropane)	1.000
75569	Propylene oxide	1.000
75558	1,2-Propylenimine (2-Methyl aziridine)	0.945
100425	Styrene	1.000
96093	Styrene oxide	0.830
79345	1,1,2,2-Tetrachloroethane	0.999

CA NO. a	Compound Name	fm305
127184	Tetrachloroethylene (Perchloroethylene)	1.000
108883	Toluene	1.000
95534	o-Toluidine	0.152
120821	1,2,4-Trichlorobenzene	1.000
71556	1,1,1-Trichloroethane (Methyl chloroform)	1.000
79005	1,1,2-Trichloroethane (Vinyl trichloride)	1.000
79016	Trichloroethylene	1.000
95954	2,4,5-Trichlorophenol	0.0108
88062	2,4,6-Trichlorophenol	0.0132
121448	Triethylamine	1.000
540841	2,2,4-Trimethylpentane	1.000
108054	Vinyl acetate	1.000
593602	Vinyl bromide	1.000
75014	Vinyl chloride	1.000
75354	Vinylidene chloride (1,1-Dichloroethylene)	1.000
1330207	Xylenes (isomers and mixture)	1.000
95476	o-Xylenes	1.000
108383	m-Xylenes	1.000
106423	p-Xylenes	1.000

1. fm305 = Fraction measure factor in Method 305, 40 CFR 63, appendix A.

a CAS numbers refer to the Chemical Abstracts Services registry number assigned to specific compounds, isomers, or mixtures of compounds.

b Denotes a HAP that hydrolyzes quickly in water, but the hydrolysis products are also HAP chemicals.

c Denotes a HAP that may react violently with water.

d Denotes a HAP that hydrolyzes slowly in water.

e The fm305 factors for some of the more common glycol ethers can be obtained by contacting the Waste and Chemical Processes Group, Office of Air Quality Planning and Standards, Research Triangle Park, NC 27711.

## Appendix 1-28

### Emission and Operating Limitations for Existing, New, and Reconstructed Spark Ignition, 4SRB Stationary RICE >500 HP Located at a Major Source of HAP Emissions (40 CFR 63, Table 1a and 1b to Subpart ZZZZ)

[Added July 2004; Revised April 2008, Revised April 2010, Revised October 2010, Revised April 2011;  
Revised April 2013]

**Table 1a**

Owners/operators must comply with the following emission limitations at 100 percent load plus or minus 10 percent for existing, new and reconstructed 4SRB stationary RICE > 500 HP located at a major source of HAP emissions:

For each:	You must meet one of the following emission limitations:	During periods of startup you must
1. 4SRB RICE	a. Reduce formaldehyde emissions by 76 percent or more. If construction or reconstruction started between 19 December 2002 and 15 June 2004, you may reduce formaldehyde emissions by 75 percent or more until June 15, 2007, or	Minimize the engine's time spent at idle and minimize the engine's startup time at startup to a period needed for appropriate and safe loading of the engine, not to exceed 30 min, after which time the non-startup emission limitations apply. <sup>1</sup>
	b. Limit the concentration of formaldehyde in the stationary RICE exhaust to 350 ppbvd or less at 15 percent O <sub>2</sub> .	

<sup>1</sup> Sources can petition the Administrator pursuant to the requirements of 40 CFR 63.6(g) for alternative work practices.

**Table 1b**

Owners/operators must comply with the following operating limitations for existing, new, and reconstructed 4SRB stationary RICE > 500 HP located at a major source of HAP emissions.

For each:	Meet one of the following operating limitations:
1. existing, new, and reconstructed 4SRB stationary RICE > 500 HAP located at a major source of HAP emissions complying with the requirement to reduce formaldehyde emissions by 76 percent or more (or by 75 percent or more, if applicable) and using NSCR; or existing, new, and reconstructed 4SRB stationary RICE > 500 HAP located at a major source of HAP emissions complying with the requirement to limit the concentration of formaldehyde in the stationary RICE exhaust to 350 ppbvd or less at 15 percent O <sub>2</sub> and using NSCR;	<p>a. Maintain the catalyst so that the pressure drop across the catalyst does not change by more than 2 in of water at 100 percent load plus or minus 10 percent from the pressure drop across the catalyst measured during the initial performance test; and</p> <p>b. Maintain the temperature of the stationary RICE exhaust so the catalyst inlet temperature is greater than or equal to 750° F and less than or equal to 1250° F.<sup>1</sup></p>

<p>2. existing, new, and reconstructed 4SRB stationary RICE &gt; 500 HAP located at a major source of HAP emissions complying with the requirement to reduce formaldehyde emissions by 76 percent or more (or by 75 percent if applicable) and not using NSCR; or</p> <p>existing, new, and reconstructed 4SRB stationary RICE &gt; 500 HAP located at a major source of HAP emissions complying with the requirement to limit the concentration of formaldehyde in the stationary RICE exhaust to 350 ppbvd or less at 15 percent O<sub>2</sub> and not using NSCR.</p>	<p>Comply with any operating limitations approved by the Administrator.</p>
--	---

<sup>1</sup> Sources can petition the Administrator pursuant to the requirements of 40 CFR 63.8(f) for a different temperature range.

## Appendix 1-29

### Emission and Operating Limitations for New and Reconstructed 2SLB and Compression Ignition Stationary RICE >500 HP and 4SLB Stationary RICE >=250 HP Located at a Major Source of HAP Emissions (40 CFR 63, Table 2a and 2b to Subpart ZZZZ)

[Added July 2004; Revised April 2008; Revised April 2010, Revised October 2010, Revised April 2011;  
Revised April 2013]

**Table 2a**

Owners/operators must comply with the following emission limitations for new and reconstructed lean burn and new and reconstructed compression ignition stationary RICE at 100 percent load plus or minus 10 percent:

For each:	Meet one of the following emission limitations:	During periods of startup you must
1. 2SLB stationary RICE	a. Reduce CO emissions by 58 percent or more; or b. Limit concentration of formaldehyde in the stationary RICE exhaust to 12 ppmvd or less at 15 percent O <sub>2</sub> . If construction or reconstruction started between 19 December 2002 and 15 June 2004, the concentration of formaldehyde may be limited to 17 ppmvd or less at 15 percent O <sub>2</sub> until 15 June 2007.	Minimize the engine's time spent at idle and minimize the engine's startup time at startup to a period needed for appropriate and safe loading of the engine, not to exceed 30 min, after which time the non-startup emission limitations apply. <sup>1</sup>
2. 4SLB stationary RICE	a. Reduce CO emissions by 93 percent or more; or b. Limit concentration of formaldehyde in the stationary RICE exhaust to 14 ppmvd or less at 15 percent O <sub>2</sub> .	
3. CI stationary RICE	a. Reduce CO emissions by 70 percent or more; or b. Limit concentration of formaldehyde in the stationary RICE exhaust to 580 ppbvd or less at 15 percent O <sub>2</sub> .	

<sup>1</sup> Sources can petition the Administrator pursuant to the requirements of 40 CFR 63.6(g) for alternative work practices.

**Table 2b**

Owners/operators must comply with the following operating limitations for new and reconstructed 2SLB and compression ignition (CI) stationary RICE > 500 located at a major source of HAP emissions; new and reconstructed 4SLB stationary RICE  $\geq$  250 HP located at a major source of HAP emissions; existing CI stationary RICE > 500 HP:

<b>For each:</b>	<b>Meet one of the following emission limitations:</b>
<p>1. New and reconstructed 2SLB and CI stationary RICE &gt;500 HP located at a major source of HAP emissions and new and reconstructed 4SLB stationary RICE <math>\geq</math>250 HP located at a major source of HAP emissions complying with the requirement to reduce CO emissions and using an oxidation catalyst; and</p> <p>New and reconstructed 2SLB and CI stationary RICE &gt;500 HP located at a major source of HAP emissions and new and reconstructed 4SLB stationary RICE <math>\geq</math>250 HP located at a major source of HAP emissions complying with requirement to limit the concentration of formaldehyde in the stationary RICE exhaust and using an oxidation catalyst.</p>	<p>a. Maintain the catalyst so that the pressure drop across the catalyst does not change by more than 2 in of water at 100 percent load plus or minus 10 percent from the pressure drop across the catalyst that was measured during the initial performance test; and</p> <p>b. Maintain the temperature of the stationary RICE exhaust so that the catalyst inlet temperature is greater than or equal to 450°F and less than or equal to 1350°F.<sup>1</sup></p>
<p>2. Existing stationary RICE &gt; 500 HP complying with the requirement to limit or reduce the concentration of CO in the stationary RICE exhaust and using an oxidation catalyst.</p>	<p>a. Maintain the catalyst so that the pressure drop across the catalyst does not change by more than 2 in of water at 100 percent load plus or minus 10 percent from the pressure drop across the catalyst that was measured during the initial performance test; and</p> <p>b. Maintain the temperature of the stationary RICE exhaust so that the catalyst inlet temperature is greater than or equal to 450°F and less than or equal to 1350°F.</p>
<p>3. <p>stationary RICE exhaust and not using an oxidation catalyst; and</p> <p>Existing CI stationary RICE &gt; 500 HP complying with the requirement to limit the concentration of CO in the stationary RICE exhaust and not using an oxidation catalyst.</p>	
--	--

<sup>1</sup> Sources can petition the Administrator pursuant to the requirements of 40 CFR 63.6(g) for alternative work practices.

## Appendix 1-29a

### Emission and Operating Limits for Existing Compression Ignition (CI) Stationary RICE Located at Major Sources of HAP Emissions

(40 CFR 63, Table 2c and 2d to Subpart ZZZZ)

[Added April 2010, Revised October 2010; Revised April 2013]

**Table 2c: Requirements for Existing Compression Ignition Stationary RICE Located at a Major Source of HAP Emissions and Existing Spark Ignition Stationary RICE  $\leq$  500 HP Located at a Major Source of HAP Emissions**

For each:	Meet one of the following emission limitations:	During periods of startup you must
1. Emergency stationary CI RICE and black start stationary CI RICE <sup>1</sup>	a. Change oil and filter every 500 h of operation or annually, whichever comes first; <sup>2</sup> b. Inspect air cleaner every 1,000 h of operation or annually, whichever comes first, and replace as necessary c. Inspect all hoses and belts every 500 h of operation or annually, whichever comes first, and replace as necessary. <sup>3</sup>	Minimize the engine's time spent at idle and minimize the engine's startup time at startup to a period needed for appropriate and safe loading of the engine, not to exceed 30 min, after which time the non-startup emission limitations apply. <sup>3</sup>
2. Non-emergency, non-black start stationary CI RICE $< 100$ HP	a. Change oil and filter every 1,000 h of operation or annually, whichever comes first; <sup>2</sup> b. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first, and replace as necessary; c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary. <sup>3</sup>	
3. Non-emergency, non-black start CI stationary RICE 100 $\leq$ HP $\leq$ 300 HP	Limit concentration of CO in the stationary RICE exhaust to 230 ppmvd or less at 15 percent O <sub>2</sub> .	
4. Non-emergency, non-black start CI stationary RICE 300	a. Limit concentration of CO in the stationary RICE exhaust to 49 ppmvd or less at 15 percent O <sub>2</sub> . b. Reduce CO emissions by 70 percent or more.	
5. Non-Emergency. Non-black start stationary CI RICE $> 500$ HP	a. Limit concentration of CO in the stationary RICE exhaust to 23 ppmvd or less at 15 percent O <sub>2</sub> . b. Reduce CO emissions by 70 percent or more.	
6. Emergency stationary SI RICE and black start stationary SI RICE <sup>1</sup>	a. Change oil and filter every 500 hours of operation or annually, whichever comes first; <sup>2</sup> b. Inspect spark plugs every 1,000 hours of operation or annually, whichever comes first, and replace as necessary	

For each:	Meet one of the following emission limitations:	During periods of startup you must
	Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary. <sup>3</sup>	
7. Non-Emergency, non-black start stationary SI RICE < 100 HP that are not 2SLB stationary RICE.	a. Change oil and filter every 1,440 h of operation or annually, whichever comes first; <sup>2</sup>	
	b. Inspect spark plugs every 1,440 h of operation or annually, whichever comes first, and replace as necessary	
	c. Inspect all hoses and belts every 1,440 h of operation or annually, whichever comes first, and replace as necessary. <sup>3</sup>	
8. Non-Emergency, non-black start 2SLB stationary SI RICE < 100 HP.	a. Change oil and filter every 4,320 h of operation or annually, whichever comes first; <sup>2</sup>	
	b. Inspect spark plugs every 4,320 h of operation or annually, whichever comes first, and replace as necessary	
	c. Inspect all hoses and belts every 4,320 hours of operation or annually, whichever comes first, and replace as necessary. <sup>3</sup>	
9. Non-emergency, non-black start 2SLB stationary RICE 100 <= HP <=500.	Limit concentration of CO in the stationary RICE exhaust to 225 ppmvd or less at 15 percent O <sub>2</sub> .	
10. Non-emergency, non-black start 4SLB stationary RICE 100 <= HP <= 500.	Limit concentration of CO in the stationary RICE exhaust to 47 ppmvd or less at 15 percent O <sub>2</sub> .	
11. Non-emergency, non-black start 4SRB stationary RICE 100 <= HP <= 500	Limit concentration of formaldehyde in the stationary RICE exhaust to 10.3 ppmvd or less at 15 percent O <sub>2</sub> .	
12. Non-emergency, non-black start stationary RICE 100 <= HP <= 500 which combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis.	Limit concentration of CO in the stationary RICE exhaust to 177 ppmvd or less at 15 percent O <sub>2</sub> .	

<sup>1</sup> If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the work practice requirements on the schedule required in Table 2c of 40 CFR 63, Subpart ZZZZ, or if

performing the work practice on the required schedule would otherwise pose an unacceptable risk under Federal, State, or local law, the work practice can be delayed until the emergency is over or the unacceptable risk under Federal, State, or local law has abated. The work practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local law has abated. Sources must report any failure to perform the work practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

<sup>2</sup> Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) in order to extend the specified oil change requirement in Table 2c.

<sup>3</sup> Sources can petition the Administrator pursuant to the requirements of 40 CFR 63.6(g) for alternative work practices.

**Table 2d**

For each:	Meet one of the following emission limitations:	During periods of startup you must
1. Non-emergency, non-black start CI stationary RICE $\leq$ 300 HP	a. Change oil and filter every 1000 h of operation or annually, whichever comes first; <sup>1</sup> b. Inspect air cleaner every 1000 h of operation or annually, whichever comes first, and replace as necessary c. Inspect all hoses and belts every 500 h of operation or annually whichever comes first, and replace as necessary.	Minimize the engine's time spent at idle and minimize the engine's startup time at startup to a period needed for appropriate and safe loading of the engine, not to exceed 30 min, after which time the non-startup emission limitations apply.
2. Non-emergency, non-black start CI stationary RICE 300 < HP $\leq$ 500	a. Limit concentration of CO in the stationary RICE exhaust to 23 ppmvd at 15 percent O <sub>2</sub> ; or b. Reduce CO emissions by 70 percent or more.	
3. Non-emergency, non-black start CI stationary RICE > 500 HP	a. Limit concentration of CO in the stationary RICE exhaust to 23 ppmvd at 15 percent O <sub>2</sub> ; or b. Reduce CO emissions by 70 percent or more.	
4. Emergency stationary CI RICE and black start stationary CI RICE. <sup>2</sup>	a. Change oil and filter every 500 h of operation or annually, whichever comes first; <sup>1</sup> b. Inspect air cleaner every 1,000 h of operation or annually, whichever comes first, and replace as necessary; c. Inspect all hoses and belts every 500 h of operation or annually, whichever comes first, and replace as necessary.	
5. Emergency stationary SI RICE; black start stationary SI RICE; non-emergency, non-black start 4SLB stationary RICE > 500 HP that operate 24 h or less per calendar year; non-emergency, non-black start 4SRB stationary RICE > 500 HP that operate 24 h or less per calendar year. <sup>2</sup>	a. Change oil and filter every 500 h of operation or annually, whichever comes first; <sup>1</sup> b. Inspect spark plugs every 1,000 h of operation or annually, whichever comes first, and replace as necessary; c. Inspect all hoses and belts every 500 h of operation or annually, whichever comes first, and replace as necessary.	

For each:	Meet one of the following emission limitations:	During periods of startup you must
6. Non-emergency, non-black start 2SLB stationary RICE	a. Change oil and filter every 4,320 h of operation or annually, whichever comes first; <sup>1</sup> b. Inspect spark plugs every 4,320 h of operation or annually, whichever comes first, and replace as necessary c. Inspect all hoses and belts every 4,320 h of operation or annually, whichever comes first, and replace as necessary.	
7. Non-emergency, non-black start 4SLB stationary <= 500 HP	a. Change oil and filter every 1,440 h of operation or annually, whichever comes first; <sup>1</sup> b. Inspect spark plugs every 1,440 h of operation or annually, whichever comes first, and replace as necessary; c. Inspect all hoses and belts every 1,440 h of operation or annually, whichever comes first, and replace as necessary.	
8. Non-emergency, non-black start 4SLB remote stationary RICE > 500 HP	a. Change oil and filter every 2,160 h of operation or annually, whichever comes first; <sup>1</sup> b. Inspect spark plugs every 2,160 h of operation or annually, whichever comes first, and replace as necessary; c. Inspect all hoses and belts every 2,160 h of operation or annually, whichever comes first, and replace as necessary.	
9. Non-emergency, non-black start 4SLB stationary RICE > 500 HP that are not remote stationary RICE and that operate more than 24 h per calendar year	Install an oxidation catalyst to reduce HAP emissions from the stationary RICE	
10. Non-emergency, non-black start 4SRB stationary RICE <= 500 HP.	a. Change oil and filter every 1,440 h of operation or annually, whichever comes first; <sup>1</sup> b. Inspect spark plugs every 1,440 h of operation or annually, whichever comes first, and replace as necessary c. Inspect all hoses and belts every 1,440 hours of operation or annually, whichever comes first, and replace as necessary.	
11. Non-emergency, non-black start 4SRB remote stationary RICE > 500 HP	a. Change oil and filter every 2,160 h of operation or annually, whichever comes first; <sup>1</sup> b. Inspect spark plugs every 2,160 h of operation or annually, whichever comes first; and c. Inspect all hoses and belts every 2,160 hours of operation or annually, whichever comes first, and replace as necessary.	

For each:	Meet one of the following emission limitations:	During periods of startup you must
12. Non-emergency, non-black start 4SRB stationary RICE > 500 HP that are not remote stationary RICE and that operate more than 24 h per calendar year.	Install NSCR to reduce HAP emission from the stationary RICE.	
13. Non-emergency, non-black start stationary RICE which combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis.	a. Change oil and filter every 1,440 h of operation or annually, whichever comes first; <sup>1</sup>	
	b. Inspect spark plugs every 1,440 h of operation or annually, whichever comes first, and replace as necessary	
	c. Inspect all hoses and belts every 1,440 hours of operation or annually, whichever comes first, and replace as necessary.	

<sup>1</sup> Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) in order to extend the specified oil change requirement in Table 2d above.

<sup>2</sup> If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the management practice requirements on the schedule required in Table 2d above, or if performing the management practice on the required schedule would otherwise pose an unacceptable risk under Federal, State, or local law, the management practice can be delayed until the emergency is over or the unacceptable risk under Federal, State, or local law has abated. The management practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local law has abated. Sources must report any failure to perform the management practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

## Appendix 1-30

### Requirements for Performance Tests (40 CFR 63, Subpart ZZZZ, Table 4)

[Added July 2004; Revised April 2008; Revised April 2010, Revised October 2010; Revised April 2013]

For each. .	Complying with the requirement to...	You must. . .	Using . . .	According to the following requirements . . .
1. 2SLB, 4SLB, and CI RICE.	a. Reduce CO emissions	i. Measure the O <sub>2</sub> at the inlet and outlet of the control device; and	(1) Method 3 or 3A of 40 CFR 60, appendix A or ASTM D6522-00 (Reapproved 2005) <sup>a, c</sup>	(a) Measurements to determine O <sub>2</sub> concentration must be made at the same time as the measurements for CO concentration.
		ii. Measure the CO at the inlet and the outlet of the control device.	(1) ASTM D6522-00 (Reapproved 2005) <sup>a, b, c</sup> or Method 10 of 40 CFR 60, appendix A	(a) The CO concentration must be at 15 percent O <sub>2</sub> , dry basis.
2. 4SRB stationary RICE	a. Reduce formaldehyde emissions.	i. Select sampling port location and the number of traverse points, and	(1) Method 1 or 1A of 40 CFR 60 appendix A, 40 CFR 63.7(d)(1)(i).	(a) Sampling sites must be located at the inlet and outlet of the control device.
		ii. Measure O <sub>2</sub> at the inlet and outlet of the control device; and	(1) Method 3 or 3A or 3B of 40 CFR 60, appendix A of ASTM Method D6522-00 (Reapproved 2005). <sup>a</sup>	(a) Measurements to determine O <sub>2</sub> concentration must be made at the same time as the measurements for formaldehyde or THC concentration.
		iii. Measure moisture content at the inlet and outlet of the control device; and	(1) Method 4 of 40 CFR 60, appendix A, or Test Method 320 of 40 CFR 63, appendix A or ASTM D 6348-03. <sup>a</sup>	(a) Measurements to determine moisture content must be made at the same time and location as the measurements for formaldehyde or THC concentration.

For each. .	Complying with the requirement to...	You must. . .	Using . . .	According to the following requirements . . .
		iv. If demonstrating compliance with the formaldehyde percent reduction requirement, measure formaldehyde at the inlet and the outlet of the control device.	(1) Method 320 or 323 of 40 CFR 63, appendix A; or ASTM D6348-03 <sup>a</sup> , provided in ASTM D6348-03 Annex A5 (Analyte Spiking Technique), the percent R must be $\geq 70$ and $\leq 130$ .	(a) Formaldehyde concentration must be at 15 percent O <sub>2</sub> , dry basis. Results of this test consist of the average of the 3, 1-h or longer runs.
		v. If demonstrating compliance with the THC percent reduction requirement, measure THC at the inlet and the outlet of the control device.	(1) Method 25A, reported as propane, of 40 CFR 60, appendix A	(a) THC concentration must be at 15 percent O <sub>2</sub> , dry basis. Results of this test consist of the average of the three 1-h or longer runs.
3. Stationary RICE	a. Limit the concentration of formaldehyde or CO in the stationary RICE exhaust.	i. Select the sampling port location and the number of traverse points; and	(1) Method 1 or 1A of 40 CFR 60, appendix A 40 CFR 63.7(d)(1)(i).	(a) If using a control device, the sampling site must be located at the outlet of the control device.
		ii. Determine the O <sub>2</sub> concentration of the stationary RICE exhaust at the sampling port location; and	(1) Method 3 or 3A or 3B of 40 CFR 60, appendix A, or ASTM Method D6522-00 (Reapproved 2005) <sup>a</sup> .	(a) Measurements to determine O <sub>2</sub> concentration must be made at the same time and location as the measurements for formaldehyde or CO concentration
		iii. Measure moisture content of the stationary RICE exhaust at the sampling port location; and	(1) Method 4 of 40 CFR 60, appendix A, or Test Method 320 of 40 CFR 63, appendix A or ASTM D 6348-03. <sup>a</sup>	(a) Measurements to determine moisture content must be made at the same time and location as the measurements for formaldehyde or CO concentration.
		iv. Measure formaldehyde at the exhaust of the stationary RICE; or	(1) Method 320 or 323 of 40 CFR 63, appendix A; or ASTM D6348-03 <sup>a</sup> , provided in	(a) Formaldehyde concentration must be at 15 percent O <sub>2</sub> , dry basis. Results of this test consist of the

For each. .	Complying with the requirement to...	You must. . .	Using . . .	According to the following requirements . . .
			ASTM D6348-03 Annex A5 (Analyte Spiking Technique), the percent R must be $\geq$ to 70 and $\leq$ to 130.	average of the 3, 1-h or longer runs.
		v. Measure CO at the exhaust of the stationary RICE.	Method 10 of 40 CFR 60, appendix A. ASTM Method D6522-00 (2005) <sup>a</sup> , Method 320 of 40 CFR 63, appendix A, or ASTM D6348-03 <sup>a</sup> .	CO concentration must be at 15 percent O <sub>2</sub> , dry basis. Results of this test consist of the average of the 3, 1-h longer runs.

<sup>a</sup> Incorporated by reference, see 40 CFR 63.14.

<sup>b</sup> You may also use Method 320 of 40 CFR part 63, appendix A, or ASTM D6348-03.

<sup>c</sup> ASTM-D6522-00 (2005) may be used to test both CI and SI stationary RICE.

## Appendix 1-31

### Subsequent Performance Tests (40 CFR 63, Subpart ZZZZ Table 3)

[Added July 2004; Revised April 2010, Revised October 2010; Revised April 2013]

For Each.....	Complying with the Requirement To...	The Facility Must . . .
1. New or reconstructed 2SLB stationary RICE > 500 HP located at major sources; new or reconstructed 4SLB stationary RICE $\geq$ 250 HP located at major sources; and new or reconstructed CI stationary RICE > 500 HP located at major sources.	Reduce CO emissions and not using a CEMS.	Conduct subsequent performance tests semiannually. <sup>1</sup>
2. 4SRB stationary RICE $\geq$ 5,000 HP located at major sources.	Reduce formaldehyde emissions.	Conduct subsequent performance tests semiannually. <sup>1</sup>
3. Stationary RICE > 500 HP located at major sources and new or reconstructed 4SLB stationary RICE 250 $\leq$ HP $\leq$ 500 located at a major source.	Limit the concentration of formaldehyde in the stationary RICE exhaust.	Conduct subsequent performance tests semiannually. <sup>1</sup>
4. Existing non-emergency, non-black start CI stationary RICE > 500 HP that are not limited use stationary RICE.	Limit or reduce CO or formaldehyde emissions	Conduct subsequent performance tests every 8,760 h or every 3 yr, whichever comes first.
5. Existing non-emergency, non-black start CI stationary RICE > 500 HP that are limited use stationary RICE.	Limit or reduce CO or formaldehyde emission.	Conduct subsequent performance tests every 8,760 h or every 5 yr, whichever comes first.

<sup>1</sup> After demonstrating compliance for two consecutive tests, the facility may reduce the frequency of subsequent performance tests to annually. If the results of any subsequent annual performance test indicate the stationary RICE is not in compliance with the CO or formaldehyde emission limitation, or the facility deviates from any of the operating limitations, semiannual performance tests must be resumed.

## Appendix 1-32

### Requirements for Reports (40 CFR 63, Subpart ZZZZ, Table 7)

[Added July 2004; Revised April 2010, Revised October 2010; Revised April 2013]

For each:	You must submit a(n)	The report must contain. .	You must submit the report . . .
1. Existing non-emergency, non-black start stationary RICE $\leq$ 100 $\leq$ HP $\leq$ 500 located at a major source of HAP; existing non-emergency, non-black start stationary CI RICE $>$ 500 HP located at a major source of HAP; existing non-emergency, 4SRB stationary RICE $>$ 500 HP located at a major source of HAP; existing non-emergency, non black start stationary CI RICE $>$ 300 HP located at an area source of HAP; new or reconstructed non-emergency stationary RICE $>$ 500 HP located at a major source of HAP; and new or reconstructed non-emergency 4SLB stationary RICE $250 \leq$ HP $\leq$ 500 located at a major source of HAP.	Compliance report	<p>a. If there are no deviations from any emission limitations or operating limitations that apply to you, a statement that there were no deviations from the emission limitations or operating limitations during the reporting period. If there were no periods during which the CMS, including CEMS and CPMS, was out-of-control, as specified in 40 CFR 63.8(c)(7), a statement that there were not periods during which the CMS was out-of-control during the reporting period; or</p> <p>b. If you had a deviation from any emission limitation or operating limitation during the reporting period, the information in 40 CFR 63.6650(d). If there were periods during which the CMS, including CEMS and CPMS, was out-of-control, as specified in 40 CFR 63.8(c)(7), the information in 40 CFR 63.6650(e); or</p> <p>c. If you had a malfunction during the reporting period, the information in 40 CFR 63.6650(c)(4).</p>	<p>i. Semiannually according to the requirements in 40 CFR 63.6650(b)(1) – (5) for engines that are not limited use stationary CI RICE subject to numerical emission limitations; and</p> <p>ii. Annually according to the requirements in 40 CFR 63.6650(b)(6)-(9) for engines that are limited use stationary RICE subject to numerical emissions limitations</p> <p>i. Semiannually according to the requirements in 40 CFR 63.6650(b).</p> <p>i. Semiannually according to the requirements in 40 CFR 63.6650(b).</p>
2. New or reconstructed non-emergency stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis.	Report	a. The fuel flow rate of each fuel and the heating values that were used in your calculations, and you must demonstrate that the percentage of heat input provided by landfill gas or digester gas, is equivalent to 10 percent or more of the gross heat input on an annual basis; and	i. Annually according to the requirements in 40 CFR 63.6650.

For each:	You must submit a(n)	The report must contain. .	You must submit the report . . .
		<ul style="list-style-type: none"> <li>b. The operating limits provided in your federally enforceable permit, and any deviations from these limits; and</li> <li>c. Any problems or errors suspected with the meters</li> </ul>	<ul style="list-style-type: none"> <li>i. See item 2.a.i.</li> <li>i. See item 2.a.i.</li> </ul>
3. Existing non-emergency, non-black start 4SLB and 4SRB stationary RICE > 500 HP located at an area source of HAP that are not remote stationary RICE and are operated more than 24 h per calendar year.	Compliance Report	<ul style="list-style-type: none"> <li>a. The results of the annual compliance demonstration, if conducted during the reporting period.</li> </ul>	<ul style="list-style-type: none"> <li>i. Semiannually according to the requirements in 40 CFR 63.6650(b)(1) – (5)</li> </ul>
4. Emergency stationary RICE that operate or are contractually obligated to be available for more than 15 h per year for the purposes specified in 40 CFR 63.6640(f)(2)(ii) and (iii) or that operate for the purposes specified in 63.6640(f)(4)(ii).	Report	<ul style="list-style-type: none"> <li>a. The information in 40 CFR 63.6650(h)(1)</li> </ul>	<ul style="list-style-type: none"> <li>i. Annually according to the requirements in 40 CFR 63.6650(h)(2) – (3).</li> </ul>

## Appendix 1-33

### Initial Compliance With Emission Limitations and Operating Limitations (40 CFR 63, Subpart ZZZZ, Table 5)

[Added July 2004; Revised April 2010, Revised October 2010, Revised April 2011; Revised April 2013]

For each.. .	Complying with the requirement to...	You have demonstrated initial compliance if...
1. New or reconstructed non-emergency 2SLB stationary RICE > 500 HP located at a major source of HAP, new or reconstructed non-emergency 4SLB stationary RICE $\geq$ 250 HP located at a major source of HP, non-emergency stationary CI RICE > 500 HP located at a major source of HAP, and existing non-emergency stationary CI RICE > 500 HP located at an area source of HAP.	a. Reduce CO emissions and using oxidation catalyst, and using a CPMS.	i. the average reduction of emissions of CO determined from the initial performance test achieves the required CO percent reduction; and ii. the facility has installed a CPMS to continuously monitor catalyst inlet temperature according to the requirements in 40 CFR 63.6625(b); and iii. You have recorded the catalyst pressure drop and catalyst inlet temperature during the initial performance test.
2. Non-emergency stationary CI RICE > 500 HP located at a major source of HAP, and existing non-emergency stationary CI RICE > 500 HP located at an area source of HAP.	a. Limit the concentration of CO, using oxidation catalyst, and using a CPMS.	i. the average CO concentration determined from the initial performance test is $\leq$ the CO emission limitation; and ii. the facility has installed a CPMS to continuously monitor catalyst inlet temperature according to the requirements in 40 CFR 63.6625(b); and iii. the facility has recorded the catalyst pressure drop and catalyst inlet temperature during the initial performance test.
3. New or reconstructed non-emergency 2SLB stationary RICE > 500 HP located at a major source of HAP, new or reconstructed non-emergency 4SLB stationary RICE $\geq$ 250 HP located at a major source of HAP, non-emergency stationary CI RICE > 500 HP located at a major source of HAP, and existing non-emergency stationary CI RICE > 500 HP located at an area source of HAP.	a. Reduce CO emissions and not using oxidation catalyst	i. the average reduction of emissions of CO determined from the initial performance test achieves the required CO percent reduction; and ii. the facility has installed a CPMS to continuously monitor operating parameters approved by the Administrator (if any) according to the requirements in 40 CFR 63.6625(b); and iii. the facility has recorded the approved operating parameters (if any) during the initial performance test.

For each.. .	Complying with the requirement to...	You have demonstrated initial compliance if...
4. Non-emergency stationary CI RICE > 500 HP located at a major source of HAP, and existing non-emergency stationary CI RICE > 500 HP located at an area source of HAP.	a. Limit the concentration of CO, and not using oxidation catalyst	i. the average reduction of emissions of CO determined from the initial performance test achieves the required CO percent reduction; and ii. the facility has installed a CPMS to continuously monitor operating parameters approved by the Administrator (if any) according to the requirements in 40 CFR 63.6625(b); and iii. the facility has recorded the approved operating parameters (if any) during the initial performance test.
5. New or reconstructed non-emergency 2SLB stationary RICE > 500 HP located at a major source of HAP, new or reconstructed non-emergency 4SLB stationary RICE >= 250 HP located at a major source of HAP, non-emergency stationary CI RICE > 500 HP located at a major source of HAP, and existing non-emergency stationary CI RICE > 500 HP located at an area source of HAP.	a. Reduce CO emissions, and using a CEMS.	i. the facility has installed a CEMS to continuously monitor CO and either O <sub>2</sub> or CO <sub>2</sub> at both the inlet and the outlet of the oxidation catalyst according to the requirements of 40 CFR 63.6625(a); and ii. the facility has conducted a performance evaluation of their CEMS using PS 3 and 4A of 40 CFR 60, Appendix B; and iii. the average reduction of CO calculated using 40 CFR 63.6620 equals or exceeds the required percent reduction. The initial test comprises the first 4-h period after successful validation of the CEMS. Compliance is based on the average percent reduction achieved during the 4-h period.
6. Non-emergency stationary CI RICE > 500 HP located at a major source of HAP, and existing non-emergency stationary CI RICE > 500 HP located at an area source of the HAP.	a. Limit the concentration of CO, and using a CEMS.	i. the facility has installed a CEMS to continuously monitor CO and either O <sub>2</sub> or CO <sub>2</sub> at both the inlet and the outlet of the oxidation catalyst according to the requirements of 40 CFR 63.6625(a); and ii. the facility has conducted a performance evaluation of their CEMS using PS 3 and 4A of 40 CFR 60, Appendix B; and iii. the average reduction of CO calculated using 40 CFR 63.6620 equals or exceeds the required percent reduction. The initial test comprises the first 4-h period after

For each.. .	Complying with the requirement to...	You have demonstrated initial compliance if...
		successful validation of the CEMS. Compliance is based on the average percent reduction achieved during the 4-h period.
7. Non-emergency 4SRB stationary RICE > 500 HP located at a major source of HAP.	a. Reduce formaldehyde emissions and using NSCR.	<p>i. The average reduction of emissions of formaldehyde determined from the initial performance test is equal to or greater than the required formaldehyde percent reduction, or the average reduction of emissions of THC determined from the initial performance test is equal to or greater than 30 percent; and</p> <p>ii. the facility has installed a CPMS to continuously monitor catalyst inlet temperature according to the requirements in 40 CFR 63.6625(b); and</p> <p>iii. The facility has recorded the catalyst pressure drop and catalyst inlet temperature during the initial performance test.</p>
8. Non-emergency 4SRB stationary RICE > 500 HP located at a major source of HAP.	a. Reduce formaldehyde emissions and not using NSCR.	<p>i. The average reduction of emissions of formaldehyde determined from the initial performance test is equal to or greater than the required formaldehyde percent reduction or the average reduction of emissions of THC determined from the initial performance test is equal to or greater than 30 percent, and</p> <p>ii. the facility has installed a CPMS to continuously monitor operating parameters approved by the Administrator (if any) according to the requirements in 40 CFR 63.6625(b); and</p> <p>iii. the facility has recorded the approved operating parameters (if any) during the initial performance test.</p>
9. New or reconstructed non-emergency stationary RICE > 500 HP located at a major source of HAP, new or reconstructed non-emergency 4SLB stationary RICE 250 </- HP </+ 500 located at a	a. Limit the concentration of formaldehyde in the stationary RICE exhaust and using oxidation catalyst or NSCR	i. the average formaldehyde concentration, corrected to 15 percent O <sub>2</sub> , dry basis, from the 3 test runs is less than or equal to the formaldehyde emission limitation; and

For each.. .	Complying with the requirement to...	You have demonstrated initial compliance if...
major source of HAP, and existing non-emergency 4SRB stationary RICE > 500 HP located at a major source of HAP.		<ul style="list-style-type: none"> <li>ii. the facility has installed a CPMS to continuously monitor catalyst inlet temperature according to the requirements in 40 CFR 63.6625(b); and</li> <li>iii. the facility has recorded the catalyst pressure drop and catalyst inlet temperature during the initial performance test.</li> </ul>
10. New or reconstructed non-emergency stationary RICE > 500 HP located at a major source of HAP, new or reconstructed non-emergency 4SLB stationary RICE 250 <= HP <= 500 located at a major source of HAP, and existing non-emergency 4SRB stationary RICE > 500 HP located at a major source of HAP.	a. Limit the concentration of formaldehyde in the stationary RICE exhaust and not using oxidation catalyst or NSCR.	<ul style="list-style-type: none"> <li>i. The average formaldehyde concentration, corrected to 15 percent O<sub>2</sub>, dry basis, from the three test runs is &lt;= the formaldehyde emission limitation; and</li> <li>ii. the facility has installed a CPMS to continuously monitor catalyst inlet temperature according to the requirements in 40 CFR 63.6625(b); and</li> <li>iii. the facility has recorded the catalyst pressure drop and catalyst inlet temperature during the initial performance test.</li> </ul>
11. Existing non-emergency stationary RICE 100 <= HP <= 500 located at a major source of HAP, and existing non-emergency stationary CI RICE 300 <= HP <= 500 located at an area source of HAP.	a. Reduce CO emissions	i. The average reduction of emissions of CO or formaldehyde, as applicable determined from the initial performance test is >= the required CO or formaldehyde, as applicable, percent reduction.
12. Existing non-emergency stationary RICE 100 <= HP <= 500 located at a major source of HAP, and existing non-emergency stationary CI RICE 300 < HP <= 500 located at an area source of HAP.	a. Limit the concentration of CO or formaldehyde in the stationary RICE exhaust.	i. The average formaldehyde or CO concentration, as applicable corrected to 15 percent O <sub>2</sub> , dry basis, from the three test runs is less than or equal to the formaldehyde or CO emission limitation, as applicable.
13. Existing non-emergency 4SLB stationary RICE > 500 HP located at an area source of HAP that are not remote stationary RICE and that are operated more than 24 h per calendar year.	a. Install an oxidation catalyst	i. The facility has conducted an initial compliance demonstration as specified in 40 CFR 63.6630(e) to show the average reduction of emissions of CO is 93 percent or more, or the average CO concentration is less than or equal to 47 ppmvd at 15 percent O <sub>2</sub> ;

For each.. .	Complying with the requirement to...	You have demonstrated initial compliance if...
<p>14. Existing non-emergency 4SRB stationary RICE &gt; 500 HP located at an area source or HAP that are not remote stationary RICE and that are operated more than 14 h per calendar year.</p>	<p>a. Install NSCR</p>	<p>ii. the facility has installed a CPMS to continuously monitor catalyst inlet temperature according to 40 CFR 63.5525(b), or the facility has installed equipment to automatically shut down the engine if the catalyst inlet temperature exceeds 1350 °F.</p> <p>i. The facility has conducted an initial compliance demonstration as specified in 40 CFR 63.6630(e) to show the average reduction of emissions of CO is 75 percent or more, or the average CO concentration is less than or equal to 270 ppmvd at 15 percent O<sub>2</sub>, or the average reduction of THC is 30 percent or more;</p> <p>ii. the facility has installed a CPMS to continuously monitor catalyst inlet temperature according to 40 CFR 63.5525(b), or the facility has installed equipment to automatically shut down the engine if the catalyst inlet temperature exceeds 1250 °F.</p>

## Appendix 1-34

### Continuous Compliance With Emission Limitations and Operating Limitations, Work Practices, and Management Practices

(40 CFR 63, Subpart ZZZZ, Table 6)

[Added July 2004; Revised April 2010, Revised October 2010, Revised April 2011; Revised April 2013]

For each.. .	Complying with the requirement to...	You must demonstrate continuous compliance by...
1. New or reconstructed non-emergency 2SLB stationary RICE > 500 HP located at a major source of HAP, new or reconstructed non-emergency 4SLB stationary RICE >= 250 HP located at a major source of HAP, and new or reconstructed non-emergency CI stationary RICE > 500 HP located at a major source of HAP.	a. Reduce CO emissions and using an oxidation catalyst, and using a CPMS.	i. Conducting semiannual performance tests for CO to demonstrate that the required CO percent reduction is achieved; <sup>1</sup> and ii. Collecting the catalyst inlet temperature data according to 40 CFR 63.6625(b); and iii. Reducing these data to 4-h rolling averages; and iv. Maintaining the 4-h rolling averages within the operating limitations for the catalyst inlet temperature; and v. Measuring the pressure drop across the catalyst once per month and demonstrating that the pressure drop across the catalyst is within the operating limitation established during the performance test.
2. New or reconstructed non-emergency 2SLB stationary RICE > 500 HP located at a major source of HAP, new or reconstructed non-emergency 4SLB stationary RICE >= 250 HP located at a major source of HAP, and new or reconstructed non-emergency CI stationary RICE > 500 HP located at a major source of HAP.	a. Reduce CO emissions and not using an oxidation catalyst, and using a CPMS.	i. Conducting semiannual performance tests for CO to demonstrate that the required CO percent reduction is achieved; <sup>1</sup> and ii. Collecting the approved operating parameter (if any) data according to 40 CFR 63.6625(b); and iii. Reducing these data to 4-h rolling averages; and iv. Maintaining the 4-h rolling averages within the operating limitations for the operating parameters established during the performance test.
3. New or reconstructed non-emergency 2SLB stationary RICE > 500 HP located at a major source of HAP, new or reconstructed non-emergency 4SLB stationary RICE >= 250 HP located at a major source of	a. Reduce CO emissions or limit the concentration of CO in the stationary RICE exhaust, and using a CEMS.	i. Collecting the monitoring data according to 40 CFR 63.6625(a), reducing the measurements to 1-h averages, calculating the percent reduction of CO emissions according to 40 CFR 63.6620; and

For each.. .	Complying with the requirement to...	You must demonstrate continuous compliance by...
HAP, new or reconstructed non-emergency stationary CI RICE > 500 HP located at a major source of HAP, and existing non-emergency stationary CI RICE > 500 HP.		<ul style="list-style-type: none"> <li>ii. Demonstrating that the catalyst achieves the required percent reduction of CO emissions over the 4-h averaging period, or that the emission remain at or below the CO concentration limit; and</li> <li>iii. ## Appendix 1-36

### Certification Requirements for Stationary Fire Pump Engines (40 CFR 60, Subpart IIII, Table 3) [Added October 2006; Revised July 2011]

New stationary fire pump engines must be certified beginning with the following model years.

Engine Power	Starting model year engine manufacturers must certify new stationary fire pump engines according to 40 CFR 60.4204(d) <sup>1</sup>
KW < 75 (HP < 100)	2011
75 <= KW < 130 (100 <= HP < 175)	2010
130 <= KW <= 560 (175 <= HP <= 750)	2009
KW > 560 (HP > 750)	2008

<sup>1</sup> Manufacturers of fire pump stationary CI ICE with a maximum engine power greater than or equal to 37 kW (50 HP) and less than 450 KW (600 HP) and a rated speed of greater than 2,650 revolutions per minute (rpm) are not required to certify such engines until three model years following the model year indicated in this Table 3 for engines in the applicable engine power category.

## Appendix 1-37

### Emission Standards for Stationary Fire Pump Engines (40 CFR 60, Subpart IIII, Table 4) [Added October 2006]

Maximum engine power	Model year(s)	NMHC + NO <sub>x</sub>	CO	PM
KW < 8 (HP < 11)	2010 and earlier	10.5 (7.8)	8.0 (6.0)	1.0 (0.75)
	2011+	7.5 (5.6)	-----	0.40 (0.30)
8 < =KW < 19 (11 < =HP < 25)	2010 and earlier	9.5 (7.1)	6.6 (4.9)	0.80 (0.60)
	2011+	7.5 (5.6)		0.40 (0.30)
19 < =KW < 37 (25 < =HP < 50)	2010 and earlier	9.5 (7.1)	5.5 (4.1)	0.80 (0.60)
	2011+	7.5 (5.6)		0.30 (0.22)
37 < =KW < 56 (50 < =HP < 75)	2010 and earlier	10.5 (7.8)	5.0 (3.7)	0.80 (0.60)
	2011+ 1	4.7 (3.5)		0.40 (0.30)
56 < =KW < 75 (75 < =HP < 100)	2010 and earlier	10.5 (7.8)	5.0 (3.7)	0.80 (0.60)
	2011+ 1	4.7 (3.5)		0.40 (0.30)
75 < =KW < 130 (100 < =HP < 175)	2009 and earlier	10.5 (7.8)	5.0 (3.7)	0.80 (0.60)
	2010+ 2	4.0 (3.0)		0.30 (0.22)
130 < =KW < 225 (175 < =HP < 300)	2008 and earlier	10.5 (7.8)	3.5 (2.6)	0.54 (0.40)
	2009+ 3	4.0 (3.0)		0.20 (0.15)
225 < =KW < 450 (300 < =HP < 600)	2008 and earlier	10.5 (7.8)	3.5 (2.6)	0.54 (0.40)
	2009+ 3	4.0 (3.0)		0.20 (0.15)
450 < =KW < =560 (600 < =HP < =750)	2008 and earlier	10.5 (7.8)	3.5 (2.6)	0.54 (0.40)
	2009+	4.0 (3.0)		0.20 (0.15)
KW > 560 (HP > 750)	2007 and earlier	10.5 (7.8)	3.5 (2.6)	0.54 (0.40)
	2008+	6.4 (4.8)		0.20 (0.15)

- 1 For model years 2011-2013, manufacturers, owners and operators of fire pump stationary CI ICE in this engine power category with a rated speed of greater than 2,650 revolutions per minute (rpm) may comply with the emission limitations for 2010 model year engines.
- 2 For model years 2010-2012, manufacturers, owners and operators of fire pump stationary CI ICE in this engine power category with a rated speed of greater than 2,650 rpm may comply with the emission limitations for 2009 model year engines.
- 3 In model years 2009-2011, manufacturers of fire pump stationary CI ICE in this engine power category with a rated speed of greater than 2,650 rpm may comply with the emission limitations for 2008 model year engines.

## Appendix 1-38

### Labeling and Recordkeeping Requirements for New Stationary Emergency Engines (40 CFR 60, Subpart IIII, Table 5) [Added October 2006]

Owners and operators must comply with the labeling requirements in 40 CFR 60.4210(f) and the recordkeeping requirements in 40 CFR 60.4214(b) for new emergency stationary CI ICE beginning in the following model years:

Engine Power	Starting model year
19< =KW< 56 (25< =HP< 75)	2013
56< =KW< 130 (75< =HP< 175)	2012
KW>=130 (HP>=175)	2011

## Appendix 1-39

**NO<sub>x</sub>, CO, and VOC Emission Standards for Stationary Non-Emergency SI Engine  $\geq$  100 HP  
(Except Gasoline and Rich Burn LPG), Stationary SI Landfill/Digester Gas Engines, and Stationary  
Emergency Engines  $>25$  HP)  
(40 CFR 60, Subpart JJJJ, Table 1)  
[Added April 2008; Revised July 2011]**

Engine Type and Fuel	Maximum Engine Power	Manu- facture Date	Emission Standards a					
			g/HP-hr			ppmvd at 15% O <sub>2</sub>		
			NO <sub>x</sub>	CO	VOC <sup>d</sup>	NO <sub>x</sub>	CO	VOC <sup>d</sup>
Non-Emergency SI Natural Gas <sup>b</sup> and Non-Emergency SI Lean Burn LPG <sup>b</sup>	100 $\leq$ HP < 500	7/1/2008	2.0	4.0	1.0	160	540	86
		1/1/2011	1.0	2.0	0.7	82	270	60
Non-Emergency SI Lean Burn Natural Gas and LPG	500 $\leq$ HP < 1350	1/1/2008	2.0	4.0	1.0	160	540	86
		7/1/2010	1.0	2.0	0.7	82	270	60
Non-Emergency SI Natural Gas and Non-Emergency SI Lean Burn LPG (except lean burn 500 $\leq$ HP < 1350).	HP $\geq$ 500	7/1/2007	2.0	4.0	1.0	160	540	86
	HP $\geq$ 500	7/1/2010	1.0	2.0	0.7	82	270	60
Landfill/Digester Gas (except lean burn 500 $\leq$ HP < 1350).	HP < 500	7/1/2008	3.0	5.0	1.0	220	610	80
		1/1/2011	2.0	5.0	1.0	150	610	80
	HP $\geq$ 500	7/1/2007	3.0	5.0	1.0	220	610	80
		7/1/2010	2.0	5.0	1.0	150	610	80
Landfill/Digester Gas Lean Burn	500 $\leq$ HP < 1350	1/1/2008	3.0	5.0	1.0	220	610	80
		7/1/2010	2.0	5.0	1.0	150	610	80
Emergency	25 < HP < 130	1/1/2009	<sup>c</sup> 10	387	NA	NA	NA	NA
	HP $\geq$ 130	.....	2.0	4.0	1.0	160	540	86

<sup>a</sup> Owners and operators of stationary non-certified SI engines may choose to comply with the emission standards in units of either g/HP-hr or ppmvd at 15 percent O<sub>2</sub>.

<sup>b</sup> Owners and operators of new or reconstructed non-emergency lean burn SI stationary engines with a site rating of greater than or equal to 250 brake HP located at a major source that are meeting the requirements of 40 CFR 63, subpart ZZZZ, Table 2a do not have to comply with the CO emission standards of Table 1 of 40 CFR 60, Subpart JJJJ.

<sup>c</sup> The emission standards applicable to emergency engines between 25 HP and 130 HP are in terms of NO<sub>x</sub> + HC.

<sup>d</sup> For purposes of this 40 CFR 60, Subpart JJJJ, when calculating emissions of volatile organic compounds, emissions of formaldehyde should not be included.

<sup>a</sup> The GWP for this compound is different than the GWP in the version of Table A-1 published on 30 October 2009.

**Table A-3, Source Category list for 40 CFR 98.2(a)(1)**

Source Categories <sup>a</sup> List Applicable in Reporting Year 2010 and Future Years

- Electricity generation units that report CO<sub>2</sub> mass emissions year round through 40 CFR 75 (subpart D).
- Adipic acid production (subpart E).
- Aluminum production (subpart F).
- Ammonia manufacturing (subpart G).
- Cement production (subpart H).
- HCFC-22 production (subpart O).
- HFC-23 destruction processes that are not collocated with a HCFC-22 production facility and that destroy more than 2.14 metric tons of HFC-23 per year (subpart O).
- Lime manufacturing (subpart S).
- Nitric acid production (subpart V).
- Petrochemical production (subpart X).
- Petroleum refineries (subpart Y).
- Phosphoric acid production (subpart Z).
- Silicon carbide production (subpart BB).
- Soda ash production (subpart CC).
- Titanium dioxide production (subpart EE).
- Municipal solid waste landfills that generate CH<sub>4</sub> in amounts equivalent to 25,000 metric tons CO<sub>2</sub>e or more per year, as determined according to subpart HH of 40 CFR 98.
- Manure management systems with combined CH<sub>4</sub> and N<sub>2</sub>O emissions in amounts equivalent to 25,000 metric tons CO<sub>2</sub>e or more per year, as determined according to subpart JJ of 40 CFR 98.

Additional Source Categories <sup>a</sup> Applicable in Reporting Year 2011 and Future Years

- Electrical transmission and distribution equipment use at facilities where the total nameplate capacity of SF<sub>6</sub> and PFC containing equipment exceeds 17,820 pounds, as determined under 40 CFR 98.301 (subpart DD).
- Underground coal mines liberating 36,500,000 actual cubic feet of CH<sub>4</sub> or more per year (subpart FF).
- Geologic sequestration of carbon dioxide (subpart RR).
- Electrical transmission and distribution equipment manufacture or refurbishment (subpart SS).
- Injection of carbon dioxide (subpart UU).

<sup>a</sup> Source categories are defined in each applicable subpart.

**Table A-4, Source Category list for 40 CFR 98.2(a)(2)**

Source Categories <sup>a</sup> List Applicable in Reporting Year 2010 and Future Years

- Ferroalloy production (subpart K).
- Glass production (subpart N).
- Hydrogen production (subpart P).
- Iron and steel production (subpart Q).
- Lead production (subpart R).
- Pulp and paper manufacturing (subpart AA).
- Zinc production (subpart GG).

Additional Source Categories <sup>a</sup> Applicable in Reporting Year 2011 and Future Years

- Electronics manufacturing (subpart I)
- Fluorinated gas production (subpart L)
- Magnesium production (subpart T).
- Petroleum and Natural Gas Systems (subpart W)
- Industrial wastewater treatment (subpart II).
- Industrial waste landfills (subpart TT).

-----  
<sup>a</sup> Source categories are defined in each applicable subpart.

**Table A-5, Supplier Category list for 40 CFR 98.2(a)(4)**

Supplier Categories <sup>a</sup> List Applicable in Reporting Year 2010 and Future Years

- Coal-to-liquids suppliers (subpart LL):
  - (A) All producers of coal-to-liquid products.
  - (B) Importers of an annual quantity of coal-to-liquid products that is equivalent to 25,000 metric tons CO<sub>2</sub>e or more.
  - (C) Exporters of an annual quantity of coal-to-liquid products that is equivalent to 25,000 metric tons CO<sub>2</sub>e or more.
- Petroleum product suppliers (subpart MM):
  - (A) All petroleum refineries that distill crude oil.
  - (B) Importers of an annual quantity of petroleum products that is equivalent to 25,000 metric tons CO<sub>2</sub>e or more.
  - (C) Exporters of an annual quantity of petroleum products that is equivalent to 25,000 metric tons CO<sub>2</sub>e or more.
- Natural gas and natural gas liquids suppliers (subpart NN):
  - (A) All fractionators.
  - (B) Local natural gas distribution companies that deliver 460,000 thousand standard cubic feet or more of natural gas per year.
- Industrial greenhouse gas suppliers (subpart OO):
  - (A) All producers of industrial greenhouse gases.
  - (B) Importers of industrial greenhouse gases with annual bulk imports of N<sub>2</sub>O, fluorinated GHG, and CO<sub>2</sub> that in combination are equivalent to 25,000 metric tons CO<sub>2</sub>e or more.
  - (C) Exporters of industrial greenhouse gases with annual bulk exports of N<sub>2</sub>O, fluorinated GHG, and CO<sub>2</sub> that in combination are equivalent to 25,000 metric tons CO<sub>2</sub>e or more.
  - (D) Starting with reporting year 2018, all producers of fluorinated heat transfer fluids.
  - (E) Starting with reporting year 2018, importers of fluorinated heat transfer fluids with annual bulk imports of N<sub>2</sub>O, fluorinated GHG, fluorinated heat transfer fluids, and CO<sub>2</sub> that in combination are equivalent to 25,000 metric tons CO<sub>2</sub>e or more.

- (F) Starting with reporting year 2018, exporters of fluorinated heat transfer fluids with annual bulk exports of N<sub>2</sub>O, fluorinated GHG, fluorinated heat transfer fluids, and CO<sub>2</sub> that in combination are equivalent to 25,000 metric tons CO<sub>2</sub>e or more.
- (G) Starting with reporting year 2018, facilities that destroy 25,000 mtCO<sub>2</sub>e or more of fluorinated GHGs or fluorinated heat transfer fluids annually.

- Carbon dioxide suppliers (subpart PP):
  - (A) All producers of CO<sub>2</sub>.
  - (B) Importers of CO<sub>2</sub> with annual bulk imports of N<sub>2</sub>O, fluorinated GHG, and CO<sub>2</sub> that in combination are equivalent to 25,000 metric tons CO<sub>2</sub>e or more.
  - (C) Exporters of CO<sub>2</sub> with annual bulk exports of N<sub>2</sub>O, fluorinated GHG, and CO<sub>2</sub> that in combination are equivalent to 25,000 metric tons CO<sub>2</sub>e or more.

Additional Supplier Categories Applicable <sup>a</sup> in Reporting Year 2011 and Future Years

- Importers and exporters of fluorinated greenhouse gases contained in pre-charged equipment or closed-cell foams (subpart QQ):
  - (A) Importers of an annual quantity of fluorinated greenhouse gases contained in pre-charged equipment or closed-cell foams that is equivalent to 25,000 metric tons CO<sub>2</sub>e or more.
  - (B) Exporters of an annual quantity of fluorinated greenhouse gases contained in pre-charged equipment or closed-cell foams that is equivalent to 25,000 metric tons CO<sub>2</sub>e or more.

-----  
<sup>a</sup> Suppliers are defined in each applicable subpart.

## Appendix 1-41

### Emission and Operating Limitations for New Sewage Sludge Incineration Units (40 CFR 60, Table 1 and 2 to Subpart LLLL) [Added April 2011]

**Table 1:** Emission Limits and Standards for New Fluidized Bed Sewage Sludge Incineration Units.

For the air pollutant	Meet this emission limit <sup>a</sup>	Using these averaging methods and minimum sampling volumes or durations	And determining compliance using this method
Carbon monoxide	27 ppm by dry volume	24-h block average (using 1-h averages of data). For determining compliance with the CO concentration limit using CO CEMS, the correction to 7 percent oxygen does not apply during periods of startup or shutdown. Use the measured CO concentration without correcting for oxygen concentration in averaging with other CO concentrations (corrected to 7 percent oxygen) to determine the 24-h average value.	Continuous emissions monitoring system. (Performance Specification 4B of 40 CFR 60, using a low-range span of 100 ppm and a high-range span of 1000 ppm, and a RA of 0.5 ppm instead of 5 ppm specified in section 13.2. For the cylinder gas audit of Procedure 1, +/- 15 percent or 0.5 whichever is greater.
Dioxins/Furans (total mass basis); or  Dioxins/furans (toxic equivalency basis) <sup>b</sup>	0.013 nanograms/dscm (total mass basis); or  0.0044 nanograms/dscm (toxic equivalency basis)	3-run average (collect a minimum volume of 3 dscm per run)	Performance test (Method 23 at 40 CFR 60, Appendix A-7).
Mercury	0.0010 mg/dscm	3-run average (For Method 29 and ASTM D6784-02 [Reapproved 2008] <sup>c</sup> , collect a minimum volume of 3 dscm per run. For Method 30b, collect a minimum sample as specified in Method 30b at 40 CFR 60, Appendix A-8).	Performance test (Method 29 at 40 CFR 60, Appendix A-8; Method 30B at 30 CFR 60, Appendix A-8; or ASTM D6784-02 [reapproved 2008]) <sup>c</sup> .

<b>For the air pollutant</b>	<b>Meet this emission limit<sup>a</sup></b>	<b>Using these averaging methods and minimum sampling volumes or durations</b>	<b>And determining compliance using this method</b>
Oxides of nitrogen	30 ppm by dry volume	3-run average (Collect sample for a minimum duration of 1 hour per run).	Performance test (Method 7 or 7E at 40 CFR 60, Appendix A-4).
Sulfur dioxide	5.3 ppm by dry volume	3-run average (For Method 6, collect a minimum volume of 100 liters per run. For Method 6C, sample for a minimum duration of one hour per run).	Performance test (Method 6 or 6C at 40 CFR 60, Appendix A-4; or ANSI/ASME PTC 19.10-1981. <sup>c</sup> )
Cadmium	0.0011 mg/dscm	3-run average (collect a minimum volume of 1 dscm per run).	Performance test (Method 29 at 40 CFR 60, Appendix A-8). Use GFAAS or ICP/MS for the analytical finish.
Lead	0.00062 mg/dscm	3-run average (collect a minimum volume of 3 dscm per run).	Performance test (Method 29 at 40 CFR 60, Appendix A-8). Use GFAAS or ICP/MS for the analytical finish.
Fugitive emissions from ash handling.	Visible emissions of combustion ash from an ash conveying system (including conveyor transfer points) for no more than 5 percent of the hourly observation period.	Three 1-h observation periods.	Visible emission test (Method 22 of 40 CFR 60, Appendix A-7)

<sup>a</sup> All emission limits are measured at 7 percent oxygen, dry basis at standard conditions.

<sup>b</sup> The facility has the option to comply with either the dioxin/furan emission limit on a total mass basis or the dioxin/furan emission limit on a toxic equivalency basis.

<sup>c</sup> Incorporated by reference, see 40 CFR 60.17.

Table 2: Emission Limits and Standards for New Multiple Hearth Sewage Sludge Incineration Units

<b>For the air pollutant</b>	<b>Meet this emission limit<sup>a</sup></b>	<b>Using these averaging methods and minimum sampling volumes or durations</b>	<b>And determining compliance using this method</b>
Particulate Matter	60 mg/dscm	3-run average (collect a minimum volume of 0.75dscm per run)	Performance test (Method 5 at 40 CFR 60, Appendix A-3; Method 26A or Method

For the air pollutant	Meet this emission limit <sup>a</sup>	Using these averaging methods and minimum sampling volumes or durations	And determining compliance using this method
			19 at 40 CFR 60, Appendix A-8).
Hydrogen chloride	1.2 ppm by dry volume	3-run average (For Method 26, collect a minimum volume of 200 liters per run. For Method 26A, collect a minimum volume of 1 dscm per run).	Performance test (Method 26 or 26A at 40 CFR 60, Appendix A-8).
Carbon monoxide	52 ppm by dry volume	24-h block average (using 1-h averages of data).	Continuous emissions monitoring system. (Performance Specification 4B of 40 CFR 60, using a low-range span of 100 ppm and a high-range span of 1000 ppm, and a relative accuracy of 0.5 ppm specified in section 13.2. For the cylinder gas audit of Procedure 1, +/- 15 percent or 0.5 whichever is greater).
Dioxins/furans (total mass basis); or  Dioxins/furans (toxic equivalency basis) <sup>b</sup>	0.045 nanograms per dry standard cubic meter (total mass basis); or  0.0022 nanograms per dry standard cubic meter (toxic equivalency basis).	3-run average (collect a minimum volume of 3 dry standard cubic meters per run).	Performance test (Method 23 at 40 CFR 60, Appendix A-7).
Mercury	0.15 mg/dscm	3-run average (For Method 29 and ASTM D6784-02 [Reapproved 2008], <sup>c</sup> collect a minimum volume of 1 dscm per run. For Method 30C, collect a minimum sample as specified in Method 30B at 40 CFR 60, Appendix A-8).	Performance test (Method 29 at 40 CFR 60, Appendix A-8; Method 30B at 40 CFR 60, Appendix A-8; or ASTM D6784-02 [Reapproved 2008]. <sup>c</sup> ).
Oxides of nitrogen	210 ppm by dry volume	3-run average (Collect samples for a minimum duration of 1 h per run)	Performance test (Method 7 or 7E at 40 CFR 60, Appendix A-4).

<b>For the air pollutant</b>	<b>Meet this emission limit<sup>a</sup></b>	<b>Using these averaging methods and minimum sampling volumes or durations</b>	<b>And determining compliance using this method</b>
Sulfur dioxide	26 ppm by dry volume	3-run average (For Method 6, collect a minimum volume of 200 L per run. For Method 6C, collect sample for a minimum duration of 1 h per run.	Performance test (Method 6 or 6C at 40 CFR 60, Appendix A-4; or ANSI/ASME PTC 19.10-1981 <sup>c</sup> ).
Cadmium	0.0024 mg/dscm	3-run average (collect a minimum volume of 1 dscm per run).	Performance test (Method 29 at 40 CFR 60, Appendix A-8). Use GFAAS or ICP/ MS for the analytical finish.
Lead	0.0035 mg/dscm	3-run average (collect a minimum volume of 1 dscm per run).	Performance test (Method 29 at 40 CFR 60, Appendix A-8). Use GFAAS or ICP/ MS for the analytical finish.
Fugitive emissions from ash handling	Visible emissions of combustion ash from an ash conveying system (including conveyor transfer points) for no more than 5 percent of the hourly observation period.	Three 1-h observation periods.	Visible emission test (Method 22 of 40 CFR 60, Appendix A-7).

<sup>a</sup> All emission limits are measured at 7 percent oxygen, dry basis at standard conditions.

<sup>b</sup> The facility has the option to comply with either the dioxin/furan emission limit on a total mass basis or the dioxin/furan emission limit on a toxic equivalency basis.

<sup>c</sup> Incorporated by reference, see 40 CFR 60.17.

## Appendix 1-42

### Emission and Operating Limitations for Industrial, Commercial, and Institutional Boilers and Process Heaters At a Major Source of HAP

(40 CFR 63, Table 1, Table 2, Table 3, and Table 4 to Subpart DDDDD)

[Added April 2011; Revised April 2013; Revised January 2016]

**Table 1: Emission Limits for New or Reconstructed Boilers and Process Heaters <sup>a</sup> (Units with heat input capacity of 10 million Btu per hour or greater)**

If the boiler or process heater is in this subcategory:	For the following pollutants:	The emissions must not exceed the following emission limits, except during periods of startup and shutdown	Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)	Using this specified sampling volume or test run duration
1. Units in all subcategories designed to burn solid fuel.	a. Hydrogen Chloride	2.2E-02 lb/MMBtu of heat input.	2.5E-02 lb/MMBtu of steam output or 0.28 lb/MWh.	For M26A, collect a minimum of 1 dscm per run; for M26 collect a minimum of 120 L per run.
	b. Mercury	8.0E-07 <sup>a</sup> lb/MMBtu of heat input.	8.7E-07 <sup>a</sup> lb/MMBtu of steam output or 1.1E-05 <sup>a</sup> lb/MWh	For M29, collect a minimum of 4 dscm per run; for M30A or M30B, collect a minimum sample as specified in the method; for ASTM D6784 <sup>b</sup> collect a minimum of 4 dscm.
2. Units designed to burn coal/solid fossil fuel.	a. Filterable PM (or TSM)	1.1E-03 lb/MMBtu of heat input; or (2.3E-05 lb/≤Btu of heat input)	1.1E-03 lb/MMBtu of steam output or 1.4E-02 lb/MWh; or (2.7E-05 lb/MMBtu of steam output or 2.9E-04 lb/MWh).	Collect a minimum of 3 dscm per run.
3. Pulverized coal boilers designed to burn coal/solid fossil fuel.	a. Carbon monoxide (CO) (or CEMS)	130 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (320 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>d</sup> 30-day rolling average).	0.11 lb/MMBtu of steam output or 1.4 lb/MWh; 3-run average.	1 h minimum sampling time.

<b>If the boiler or process heater is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The emissions must not exceed the following emission limits, except during periods of startup and shutdown</b>	<b>Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)</b>	<b>Using this specified sampling volume or test run duration</b>
4. Stokers designed to burn coal/solid fossil fuel	a. CO (or CEMS)	130 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (340 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>d</sup> 30-day rolling average).	0.12 lb/MMBtu of steam output or 1.4 lb/MWh; 3-run average.	1 h minimum sampling time.
5. Fluidized bed units designed to burn coal/solid fossil fuel.	a. CO (or CEMS)	130 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (230 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>d</sup> 30-day rolling average).	0.11 lb/MMBtu of steam output or 1.4 lb/MWh; 3-run average.	1 h minimum sampling time.
6. Fluidized bed units with an integrated heat exchanger designed to burn coal/solid fossil fuel.	a. CO (or CEMS)	140 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (150 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>d</sup> 30-day rolling average).	1.2E-01 lb/MMBtu of steam output or 1.5 lb/MWh; 3 run average	1 h minimum sampling time.
7. Stokers/sloped grate/others designed to burn wet biomass fuel.	a. CO (or CEMS)	620 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (390 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>d</sup> 30-day rolling average).	5.8E-01 lb/MMBtu of steam output or 6.8 lb/MWh; 3 run average	1 h minimum sampling time.

<b>If the boiler or process heater is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The emissions must not exceed the following emission limits, except during periods of startup and shutdown</b>	<b>Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)</b>	<b>Using this specified sampling volume or test run duration</b>
	b. Filterable PM (or TSM)	3.0E-02 lb/MMBtu of heat input; or (2.6E-05 lb/MMBtu of heat input)	3.5E-02 lb/MMBtu of steam output or 4.2E-01 lb/MWh; or (2.7E-05 lb/MMBtu of steam output or 3.7E-04 lb/MWh).	Collect a minimum of 2 dscm per run.
8. Stokers/sloped grate/others designed to burn kiln-dried biomass fuel.	a. CO	460 ppm by volume on a dry basis corrected to 3 percent oxygen.	4.2E-01 lb/MMBtu of steam output or 5.1 lb/MWh	1 h minimum sampling time
	b. Filterable PM (or TSM)	3.0E-02 lb/MMBtu of heat input; or (4.0E-03 lb/MMBtu of heat input)	3.5E-02 lb/MMBtu of steam output or 4.2E-01 lb/MWh; or (4.2E-03 lb/MMBtu of steam output or 5.6E-02 lb/MWh).	Collect a minimum of 2 dscm per run.
9. Fluidized bed units designed to burn biomass/ biobased solids.	a. CO (or CEMS)	230 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (310 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>d</sup> 30-day rolling average).	2.2E-01 lb/MMBtu of steam output or 2.6 lb/MWh; 3 run average	1 h minimum sampling time
	b. Filterable PM (or TSM)	9.8E-03 lb/MMBtu of heat input; or (8.5E-05 <sup>a</sup> lb/MMBtu of heat input)	1.2E-02 lb/MMBtu of steam output or 0.14 lb/MWh; or (1.1E-04 <sup>a</sup> lb/MMBtu of steam output or 1.2E-03 <sup>a</sup> lb/MWh)	Collect a minimum of 3 dscm per run.
10. Suspension burners designed to burn biomass/biobased solids	a. CO (or CEMS)	2,400 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (2,000 ppm by	1.9 lb/MMBtu of steam output or 27 lb/MWh; 3-run average	1 h minimum sampling time.

<b>If the boiler or process heater is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The emissions must not exceed the following emission limits, except during periods of startup and shutdown</b>	<b>Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)</b>	<b>Using this specified sampling volume or test run duration</b>
		volume on a dry basis corrected to 3 percent oxygen, <sup>d</sup> 10-day rolling average).		
	b. Filterable PM (or TSM)	3.0E-02 lb/MMBtu of heat input; or (6.5E-03 lb/MMBtu of heat input)	3.1E-02 lb/MMBtu of steam output or 4.2E-01 lb/MWh; or (6.6E-03 lb/MMBtu of steam output or 9.1E-02 lb/MWh)	Collect a minimum of 2 dscm per run.
11. Dutch Ovens/Pile burners designed to burn biomass/ biobased solids	c. CO (or CEMS)	330 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (520 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>d</sup> 10-day rolling average).	3.5E-01 lb/MMBtu of steam output or 3.6 lb/MWh; 3-run average	1 h minimum sampling time.
	d. Filterable PM (or TSM)	3.2E-03 lb/MMBtu of heat input; or (3.9E-05 lb/MMBtu of heat input)	4.3E-03 lb/MMBtu of steam output or 4.5E-02 lb/MWh; or (5.2E-05 lb/MMBtu of steam output or 5.5E-04 lb/MWh)	Collect a minimum of 3 dscm per run.
12. Fuel cell units designed to burn biomass/ biobased solids	a. CO	910 ppm by volume on a dry basis corrected to 3 percent oxygen.	1.1 lb/MMBtu of steam output or 1.0E+01 lb/MWh	1 h minimum sampling time.
	b. Filterable PM (or TSM)	2.0E-02 lb/MMBtu of heat input; or (2.9E-05 <sup>a</sup> lb/MMBtu of heat input)	3.0E-02 lb/MMBtu of steam output or 2.8E-01 lb/MWh; or (5.1E-05 lb/MMBtu of steam output or 4.1E-04 lb/MWh)	Collect a minimum of 2 dscm per run.

<b>If the boiler or process heater is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The emissions must not exceed the following emission limits, except during periods of startup and shutdown</b>	<b>Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)</b>	<b>Using this specified sampling volume or test run duration</b>
13. Hybrid suspension grate boiler designed to burn biomass/biobased solids.	a. CO (or CEMS)	1,100 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (900 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>d</sup> 30-0day rolling average).	1.4 lb/MMBtu of steam output or 12 lb/MWh; 3-run average.	1 h minimum sampling time, use a span value of 3000 ppmv.
	b. Filterable PM (or TSM)	2.6E-02 lb/MMBtu of heat input; or (4.4E-04 lb/MMBtu of heat input)	3.3E-02 lb/MMBtu of steam output or 3.7E-01 lb/MWh; or (5.5E-04 lb/MMBtu of steam output or 6.2E-03 lb/MWh)	Collect a minimum of 3 dscm per run.
14. Units designed to burn liquid fuel.	a. Hydrogen Chloride	4.4E-04 lb/MMBtu of heat input.	4.8E-04 lb/MMBtu of steam output or 6.1E-03 lb/MWh	For M26A, collect a minimum of 2 dscm per run; for M26 collect a minimum of 240 L per run.
	b. Mercury	4.8E-07 <sup>a</sup> lb per MMBtu of heat input.	5.3E-07 <sup>a</sup> lb/MMBtu of steam output or 6.7E-06 <sup>a</sup> lb/MWh	For M29, collect a minimum of 4 dscm per run, for M30A or M30B, collect a minimum sample as specified in the method; for ASTM D6784 <sup>b</sup> collect a minimum of 4 dscm.
15. Units designed to burn heavy liquid fuel.	a. CO	130 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average.	0.13 lb/MMBtu of steam output or 1.4 lb/MWh; 3-run average.	1 h minimum sampling time.
	b. Filterable PM (or TSM)	1.3E-02 lb/MMBtu of heat input; or (7.5E-05	1.5E-02 lb/MMBtu of steam output or	Collect a minimum of 3 dscm per run

<b>If the boiler or process heater is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The emissions must not exceed the following emission limits, except during periods of startup and shutdown</b>	<b>Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)</b>	<b>Using this specified sampling volume or test run duration</b>
		lb/MMBtu of heat input).	1.8E-01 lb/MWh; or (8.2E-05 lb/MMBtu or steam output or 1.1E-03 lb/MWh).	
16. Units designed to burn light liquid fuel	a. CO	130 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average.	0.13 lb/MMBtu of steam output or 1.4 lb/MWh; 3-run average.	1 h minimum sampling time.
	c. Filterable PM (or TSM)	1.1E-03 <sup>a</sup> lb/MMBtu of heat input; or (2.9E-05 lb/MMBtu of heat input).	1.2E-03 <sup>a</sup> lb/MMBtu of steam output or 1.6E-02 <sup>a</sup> lb/MWh; or (3.2E-05 lb/MMBtu or steam output or 4.0E-04 lb/MWh).	Collect a minimum of 3 dscm per run
17. Units designed to burn liquid fuel that are non-continental units.	a. CO	130 ppmv on a dry basis corrected to 3 percent oxygen, 3-run average based on stack test.	0.13 lb/MMBtu of steam output or 1.4 lb/MWh; 3-run average.	1 hour minimum sampling time.
	b. Filterable PM (or TSM)	2.3E-02 lb/MMBtu of heat input; or (8.6E-04 lb/MMBtu of heat input).	2.5E-02 lb/MMBtu of steam output or 3.2E-01 lb/MWh; or (9.4E-04 lb/MMBtu or steam output or 1.2E-02 lb/MWh).	Collect a minimum of 4 dscm per run.
a. Units designed to burn gas 2 (other) gases.	a. CO	130 ppmv on a dry basis corrected to 3 percent oxygen.	0.16 lb/MMBTU of steam output or 1.0 lb/MWh	1 h minimum sampling time.
	b. Hydrogen Chloride	1.7E-03 lb/MMBtu of heat input.	2.9E-03 lb/MMBtu of steam output or 1.8E-02 lb/MWh	For M26A, collect a minimum of 2 dscm per run; for M26 collect a minimum of 240 L per run.

<b>If the boiler or process heater is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The emissions must not exceed the following emission limits, except during periods of startup and shutdown</b>	<b>Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)</b>	<b>Using this specified sampling volume or test run duration</b>
	c. Mercury	7.9E-06 lb/MMBtu of heat input	1.4E-05 lb/MMBtu of steam output or 8.3E-05 lb/MWh.	For M29, collect a minimum of 3 dscm per run; for M30A or M30B, collect a minimum sample as specified in the method; for ASTM D6784 <sup>b</sup> collect a minimum of 3 dscm.
	d. Filterable PM (or TSM)	6.7E-03 lb/MMBtu of heat input; or (2.1E-04 lb/MMBtu of heat input).	1.2E-02 lb/MMBtu of steam output or 7.0E-02 lb/MWh; or (3.5E-04 lb/MMBtu of steam output or 2.2E-03 lb/MWh).	Collect a minimum of 3 dscm per run.

<sup>a</sup> If the facility is conducting stack tests to demonstrate compliance and the performance tests for this pollutant for at least 2 consecutive years show that the emissions are at or below this limit, the facility can skip testing according to 40 CFR 63.7515 if all of the other provisions of 40 CFR 63.7515 are met. For all other pollutants that do not contain a footnote "a", the performance tests for this pollutant for at least 2 consecutive years must show that the emissions are at or below 75 percent of this limit in order to qualify for skip testing.

<sup>b</sup> Incorporated by reference.

<sup>c</sup> If your affected source is a new or reconstructed affected source that commenced construction or reconstruction after 4 June 2010, and before 1 April 2013, you may comply with the emission limits in Tables 11, 12 or 13 to 40 CFR 63, Subpart DDDDD until 31 January 2016. On and after 31 January 2016, you must comply with the emission limits in Table 1 to 40 CFR 62, Subpart DDDDD.

<sup>d</sup> An owner or operator may request an alternative test method under § 63.7 of this chapter, in order that compliance with the carbon monoxide emissions limit be determined using carbon dioxide as a diluent correction in place of oxygen at 3%. EPA Method 19 F-factors and EPA Method 19 equations must be used to generate the appropriate CO<sub>2</sub> correction percentage for the fuel type burned in the unit, and must also take into account that the 3% oxygen correction is to be done on a dry basis. The alternative test method request must account for any CO<sub>2</sub> being added to, or removed from, the emissions gas stream as a result of limestone injection, scrubber media, etc.

**Table 2: Emission Limits for Existing Boilers and Process Heaters (Units with heat input capacity of 10 million Btu per hour or greater)**

<b>If the boiler or process heater is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The emissions must not exceed the following emission limits, except during periods of startup and shutdown</b>	<b>Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)</b>	<b>Using this specified sampling volume or test run duration</b>
1. Units in all subcategories designed to burn solid fuel.	a. Hydrogen Chloride	2.2E-02 lb/MMBtu of heat input.	2.5E-02 lb/MMBtu of steam output or 0.27 lb/MWh	For M26A, collect a minimum of 1 dscm per run; for M26 collect a minimum of 120 L per run.
	b. Mercury	4.7E-06 lb/MMBtu of heat input.	6.4E-06 lb/MMBtu of steam output or 7.3E-05 lb/MWh	For M29, collect a minimum of 3 dscm per run; for M30A or M30B, collect a minimum sample as specified in the method; for ASTM D6784 <sup>b</sup> collect a minimum of 3 dscm.
2. Units designed to burn coal/solid fossil fuel.	a. Filterable PM (or TSM)	4.0E-02 lb/MMBtu of heat input; or (5.3E-05 lb/MMBtu or heat input)	4.2E-02 lb/MMBtu of steam output or 4.9E-01 lb/MWh; or (5.6E-05 lb/MMBtu of steam output or 6.5E-04 lb/MWh).	Collect a minimum of 2 dscm per run.
3. Pulverized coal boilers designed to burn coal/solid fossil fuel.	a. CO (or CEMS)	130 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (320 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>c</sup> 30-day rolling average).	0.11 lb/MMBtu of steam output or 1.4 lb/MWh; 3-run average	1 h minimum sampling time.

<b>If the boiler or process heater is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The emissions must not exceed the following emission limits, except during periods of startup and shutdown</b>	<b>Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)</b>	<b>Using this specified sampling volume or test run duration</b>
4. Stokers designed to burn coal/solid fossil fuel	a. CO (or CEMS)	160 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (340 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>c</sup> 30-day rolling average).	0.14 lb/MMBtu of steam output or 1.7 lb/MWh; 3-run average	1 h minimum sampling time.
5. Fluidized bed units designed to burn coal/solid fossil fuel.	a. CO (or CEMS)	130 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (230 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>c</sup> 30-day rolling average).	0.12 lb/MMBtu of steam output or 1.4 lb/MWh; 3-run average	1 h minimum sampling time.
6. Fluidized bed units with an integrated heat exchanger designed to burn coal/solid fossil fuel.	a. CO (or CEMS)	140 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (150 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>c</sup> 30-day rolling average).	1.3E-01 lb/MMBtu of steam output or 1.5 lb/MWh; 3-run average	1 h minimum sampling time.
7. Stokers/sloped grate/others designed to burn wet biomass fuel.	a. CO (or CEMS)	1,500 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (720 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>c</sup> 30-day rolling average).	1.4 lb/MMBtu of steam output or 17 lb/MWh; 3-run average	1 h minimum sampling time.

<b>If the boiler or process heater is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The emissions must not exceed the following emission limits, except during periods of startup and shutdown</b>	<b>Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)</b>	<b>Using this specified sampling volume or test run duration</b>
	b. Filterable PM (or TSM)	3.7E-02 lb/MMBtu of heat input; or (2.4E-04 lb/MMBtu of heat input).	4.3E-02 lb/MMBtu of steam output or 5.2E-02 lb/MWh; or (2.8E-04 lb/MMBtu of steam output or 3.4E-04 lb/MWh).	Collect a minimum of 2 dscm per run.
8. Stokers/sloped grate/others designed to burn kiln-dried biomass fuel..	a. CO	460 ppm by volume on a dry basis corrected to 3 percent oxygen.	4.2E-01 lb/MMBtu of steam output or 5.1E-02 lb/MWh	1 h minimum sampling time.
	b. Filterable PM (or TSM)	3.2E-01 lb/MMBtu of heat input; or (4.0E-03 lb/MMBtu of heat input).	3.7E-01 lb/MMBtu of steam output or 4.5 lb/MWh; or (4.6E-03 lb/MMBtu of steam output or 5.6E-02 lb/MWh).	Collect a minimum of 1 dscm per run.
9. Fluidized bed units designed to burn biomass/ biobased solids.	a. CO (or CEMS)	470 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (310 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>c</sup> 30-day rolling average).	4.6E-01 lb/MMBtu of steam output or 5.2 lb/MWh; 3-run average	1 h minimum sampling time.
	b. Filterable PM (or TSM)	1.1E-01 lb/MMBtu of heat input; or (1.2E-03 lb/MMBtu of heat input).	1.4E-01 lb/MMBtu of steam output or 1.6 lb/MWh; or (1.5E-03 lb/MMBtu of steam output or 1.7E-02 lb/MWh).	Collect a minimum of 1 dscm per run.
10. Suspension burners designed to burn biomass/ biobased solids	a. CO (or CEMS)	2,400 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (2,000 ppm by volume on a dry basis corrected to 3	1.9 lb/MMBtu of steam output or 27 lb/MWh; 3-run average	1 h minimum sampling time.

<b>If the boiler or process heater is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The emissions must not exceed the following emission limits, except during periods of startup and shutdown</b>	<b>Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)</b>	<b>Using this specified sampling volume or test run duration</b>
		percent oxygen, <sup>c</sup> 10-day rolling average).		
	b. Filterable PM (or TSM)	5.1E-02 lb/MMBtu of heat input; or (6.5E-03 lb/MMBtu of heat input).	5.2E-02 lb/MMBtu of steam output or 7.1E-01 lb/MWh; or (6.6E-03 lb/MMBtu of steam output or 9.1E-02 lb/MWh).	Collect a minimum of 2 dscm per run.
11. Dutch Ovens/Pile burners designed to burn biomass/bio-based solid.	a. CO (or CEMS)	770 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; or (520 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>c</sup> 10-day rolling average).	8.4E-01 lb/MMBtu of steam output or 8.4 lb/MWh; 3-run average	1 h minimum sampling time.
	b. Filterable PM (or TSM)	2.8E-01 lb/MMBtu of heat input; or (2.0E-03 lb/MMBtu of heat input).	3.9E-01 lb/MMBtu of steam output or 3.9 lb/MWh; or (2.8E-03 lb/MMBtu of steam output or 2.8E-02 lb/MWh).	Collect a minimum of 1 dscm per run.
12. Fuel cell units designed to burn biomass/biobased solids	a. CO	1,100 ppm by volume on a dry basis corrected to 3 percent oxygen.	2.4 lb/MMBtu of steam output or 12 lb/MWh	1 h minimum sampling time.
	b. Filterable PM (or TSM)	2.0E-02 lb/MMBtu of heat input; or (5.8E-03 lb/MMBtu of heat input).	5.5E-02 lb/MMBtu of steam output or 2.8E-01 lb/MWh; or (1.6E-02 lb/MMBtu of steam output or 8.1E-02 lb/MWh).	Collect a minimum of 2 dscm per run.
13. Hybrid suspension/grate units	a. CO	3,500 ppm by volume on a dry basis corrected to 3	3.5 lb/MMBtu of steam output or 39	1 h minimum sampling time.

If the boiler or process heater is in this subcategory:	For the following pollutants:	The emissions must not exceed the following emission limits, except during periods of startup and shutdown	Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)	Using this specified sampling volume or test run duration
designed to burn biomass/biobased solids.		percent oxygen, 3-run average; or (900 ppm by volume on a dry basis corrected to 3 percent oxygen, <sup>c</sup> 30-day rolling average).	lb/MWh; 3-run average	
	b. Filterable PM (or TSM)	4.4E-01 lb/MMBtu of heat input; or (4.5E-04 lb/MMBtu of heat input).	5.5E-01 lb/MMBtu of steam output or 6.2 lb/MWh; or (5.7E-04 lb/MMBtu of steam output or 6.3E-03 lb/MWh).	Collect a minimum of 1 dscm per run.
14. Units designed to burn liquid fuel.	a. Hydrogen Chloride	2.0E-06 <sup>a</sup> lb/MMBtu of heat input.	2.0E-06 <sup>a</sup> lb/MMBtu of steam output or 2.8E-05 lb/MWh.	For M29, collect a minimum of 3 dscm per run; for M30 or M30b collect a minimum sample as specified in the method, for ASTM D6784, <sup>b</sup> collect a minimum of 2 dscm.
	b. Mercury	2.0E-06 lb per MMBtu of heat input.	2.5E-06 lb/MMBtu of steam output or 2.8E-05 lb/MWh	For M29, collect a minimum of 3 dscm per run; for M30A or M30B collect a minimum sample as specified in the method, for ASTM D6784 <sup>b</sup> collect a minimum of 2 dscm.
15. Units designed to burn heavy liquid fuel.	a. CO	130 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average.	0.13 lb/MMBtu of steam output or 1.4 lb/MWh; 3-run average.	1 h minimum sampling time.
	b. Filterable PM (or TSM)	6.2E-02 lb/MMBtu of heat input; or (2.0E-04	7.5E-02 lb/MMBtu of steam output or	Collect a minimum of 1 dscm per run.

If the boiler or process heater is in this subcategory:	For the following pollutants:	The emissions must not exceed the following emission limits, except during periods of startup and shutdown	Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)	Using this specified sampling volume or test run duration
		lb/MMBtu of heat input).	8.6E-01 lb/MWh; or (2.5E-04 lb/MMBtu of steam output or 2.8E-03 lb/MWh).	
16. Units designed to burn light liquid fuel	a. CO	130 ppm by volume on a dry basis corrected to 3 percent oxygen.	0.13 lb/MMBtu of steam output or 1.4 lb/MWh.	1 h minimum sampling time.
	b. Filterable PM (or TSM)	7.9E-03 <sup>a</sup> lb/MMBtu of heat input; or (6.2E-05 lb/MMBtu of heat input).	9.6E-03 <sup>a</sup> lb/MMBtu of steam output or 1.1E-01 <sup>a</sup> lb/MWh; or (7.5E-05 lb/MMBtu of steam output or 8.6E-04 lb/MWh).	Collect a minimum of 3 dscm per run.
17. Units designed to burn liquid fuel that are non-continental units.	a. CO	130 ppmv on a dry basis corrected to 3 percent oxygen, 3-run average based on stack test.	0.13 lb/MMBtu of steam output or 1.4 lb/MWh; 3-run average.	1 hour minimum sampling time.
	b. Filterable PM (or TSM)	2.7E-01 lb/MMBtu of heat input; or (8.6E-04 lb/MMBtu of heat input).	3.3E-01 lb/MMBtu of steam output or 3.8 lb/MWh; or (1.1E-03 lb/MMBtu of steam output or 1.2E-02 lb/MWh).	Collect a minimum of 2 dscm per run.
c. Units designed to burn gas 2 (other) gases.	a. CO	130 ppm by volume on a dry basis corrected to 3 percent oxygen.	0.16 lb/MMBtu of steam output or 1.8E-02 lb/MWh.	1 h minimum sampling time.
	b. Hydrogen Chloride	1.7E-03 lb/MMBtu of heat input.	2.9E-03 lb/MMBtu of steam output or 1.8E-02 lb/MWh	For M26A, collect a minimum of 2 dscm per run; for M26 collect a minimum of 240 L per run.

If the boiler or process heater is in this subcategory:	For the following pollutants:	The emissions must not exceed the following emission limits, except during periods of startup and shutdown	Or the emissions must not exceed the following output-based limits (lb/MMBtu of steam output)	Using this specified sampling volume or test run duration
			steam output or 8.3E-05 lb/MWh	M30A or M30B, collect a minimum sample as specified in the method; for ASTM D6784 <sup>b</sup> collect a minimum of 2 dscm.
	d. Filterable PM (or TSM)	6.7E-03 lb/MMBtu of heat input or (2.1E-04 lb/MMBtu of heat input).	1.2E-02 lb/MMBtu of steam output or 7.0E-02 lb/MWh; or (3.5E-04 lb/MMBtu of steam output or 2.2E-03 lb/MWh.	Collect a minimum of 3 dscm per run.

<sup>a</sup> If the facility is conducting stack tests to demonstrate compliance and the performance tests for this pollutant for at least 2 consecutive years show that emissions are at or below this limit, the facility can skip testing according to 40 CFR 63.7515 if all of the other provisions of 40 CFR 63.7515 are met. For all other pollutants that do not contain a footnote a, the performance tests for this pollutant for at least 2 consecutive years must show that emissions are at or below 75 percent of this limit in order to qualify for skip testing.

<sup>b</sup> Incorporated by reference.

<sup>c</sup> An owner or operator may request an alternative test method under § 63.7 of this chapter, in order that compliance with the carbon monoxide emissions limit be determined using carbon dioxide as a diluent correction in place of oxygen at 3%. EPA Method 19 F-factors and EPA Method 19 equations must be used to generate the appropriate CO<sub>2</sub> correction percentage for the fuel type burned in the unit, and must also take into account that the 3% oxygen correction is to be done on a dry basis. The alternative test method request must account for any CO<sub>2</sub> being added to, or removed from, the emissions gas stream as a result of limestone injection, scrubber media, etc.

**Table 3: Work Practice Standards**

If the unit is.....	The facility must meet the following...
1. A new or existing boiler or process heater with a continuous oxygen trim system that maintains an optimum air to fuel ratio, or a heat input capacity of less than or equal to 5 million Btu per hour in any of the following subcategories: unit designed to burn gas 1; unit designed to burn gas 2 (other); or unit designed to burn light liquid, or a limited use boiler or process heater.	Conduct a tune-up of the boiler or process heater every 5 yr as specified in 40 CFR 63.7540.

If the unit is....	The facility must meet the following...
<p>2. A new or existing boiler or process heater without a continuous oxygen trim system and with heat input capacity of less than 10 million Btu per hour in the unit designed to burn heavy liquid or unit designed to burn solid fuel subcategories; or a new or existing boiler or process heater with heat input capacity of less than 10 million Btu per hour, but greater than 5 million Btu per hour, in any of the following subcategories: unit designed to burn gas 1; unit designed to burn gas 2 (other); or unit designed to burn light liquid.</p>	<p>Conduct a tune up of the boiler or process heater biennially as specified in 40 CFR 63.7540.</p>
<p>3. A new or existing boiler or process heater without a continuous oxygen trim system and with heat input capacity of 10 million Btu per hour or greater.</p>	<p>Conduct a tune-up of the boiler or process heater annually as specified in 40 CFR 63.7540. Units in either the Gas 1 or Metal Process Furnace subcategories will conduct this tune-up as a work practice for all regulated emissions under 40 CFR 63, subpart DDDDD. Units in all other subcategories will conduct this tune-up as a work practice for dioxins/furans.</p>
<p>4. An existing boiler or process heater located at a major source facility, not including limited use units.</p>	<p>Must have a one-time energy assessment performed by qualified energy assessor. An energy assessment completed on or after 1 January 2008 that meets or is amended to meet the energy assessment requirements in this table, satisfies the energy assessment requirement. A facility that operates under an energy management program developed according to the ENERGYSTAR guidelines for energy management or compatible with ISO 50001 for at least 1 year between 1 Jan 2008 and the compliance date specified in 40 CFR 63.7495 that includes the affected units also satisfies the energy assessment requirement. The energy assessment must include the following with extent of the evaluation for items a to e. appropriate for the onsite technical hours listed in 40 CFR 63.7575:</p> <ul style="list-style-type: none"> <li>a. A visual inspection of the boiler or process heater system.</li> <li>b. An evaluation of operating characteristics of the boiler or process heater systems, specifications of energy using systems, operating and maintenance procedures, and unusual operating constraints.</li> <li>c. An inventory of major energy use systems consuming energy from affected boilers and process heaters and which are under the control of the boiler/process heater owner/operator.</li> <li>d. A review of available architectural and engineering plans, facility operation and maintenance procedures and logs, and fuel usage.</li> </ul>

If the unit is.....	The facility must meet the following...
	<ul style="list-style-type: none"> <li>e. A review of the facility's energy management practices and provide recommendations for improvements consistent with the definition of energy management program, if identified.</li> <li>f. A list of cost-effective energy conservation measures that are within the facility's control.</li> <li>g. A list of the energy savings potential of the energy conservation measures identified, and</li> <li>h. A comprehensive report detailing the ways to improve efficiency, the cost of specific improvements, benefits, and the time frame for recouping those investments.</li> </ul>
<p>5. An existing or new boiler or process heater subject to the emission limits in Tables 1, 2, or 11 through 13 of 40 CFR 63, Subpart DDDDD during startup.</p>	<ul style="list-style-type: none"> <li>a. The facility must operate all CMS during startup.</li> <li>b. For startup of a boiler or process heater, the facility must use one or a combination of the following clean fuels: natural gas, synthetic natural gas, propane, other Gas 1 fuels, distillate oil, syngas, ultra-low sulfur diesel, fuel oil-soaked rags, kerosene, hydrogen, paper, cardboard, refinery gas, liquefied petroleum gas, clean dry biomass, and any fuels meeting the appropriate HCl, mercury and TSM emission standards by fuel analysis.</li> <li>c. The facility has the option of complying using either of the following work practices: <ul style="list-style-type: none"> <li>(1) If you choose to comply using definition (1) of "startup" in § 63.7575, once you start firing fuels that are not clean fuels, you must vent emissions to the main stack(s) and engage all of the applicable control devices except limestone injection in fluidized bed combustion (FBC) boilers, dry scrubber, fabric filter, and selective catalytic reduction (SCR). You must start your limestone injection in FBC boilers, dry scrubber, fabric filter, and SCR systems as expeditiously as possible. Startup ends when steam or heat is supplied for any purpose, OR</li> <li>(2) If you choose to comply using definition (2) of "startup" in 40 CFR 63.7575, once you start to feed fuels that are not clean fuels, vent emissions to the main stack(s) and engage all of the applicable control devices so as to comply with the emission limits within 4 h of start of supplying useful thermal energy. You must engage and operate PM control within one hour of first feeding fuels that</li> </ul> </li> </ul>

If the unit is.....	The facility must meet the following...
	<p>are not clean fuels<sup>a</sup>. Start all applicable control devices as expeditiously as possible, but, in any case, when necessary to comply with other standards applicable to the source by a permit limit or a rule other than this subpart that require operation of the control devices. Develop and implement a written startup and shutdown plan, as specified in 40 CFR 63.7505(e).</p> <p>d. The facility must comply with all applicable emission limits at all times except during startup or shutdown periods at which time the facility meets this work practice. The facility must collect monitoring data during periods of startup, as specified in 40 CFR 63.7535(b). The facility must keep records during periods of startup. The facility must provide reports concerning activities and periods of startup, as specified in 40 CFR 63.7555.</p>
<p>6. An existing or new boiler or process heater subject to the emission limits in Tables 1 or 2 or 11 through 13 of 40 CFR 63, Subpart DDDDD during shutdown.</p>	<p>The facility must operate all CMS during shutdown.</p> <p>While firing fuels that are not clean fuels during shutdown, you must vent emissions to the main stack(s) and operate all applicable control devices, except limestone injection in FBC boilers, dry scrubber, fabric filter, and SCR but, in any case, when necessary to comply with other standards applicable to the source that require operation of the control device.</p> <p>If, in addition to the fuel used prior to initiation of shutdown, another fuel must be used to support the shutdown process, that additional fuel must be one or a combination of the following clean fuels: Natural gas, synthetic natural gas, propane, other Gas 1 fuels, distillate oil, syngas, ultra-low sulfur diesel, refinery gas, and liquefied petroleum gas.</p> <p>The facility must comply with all applicable emissions limits at all times except for startup or shutdown periods conforming with this work practice. The facility must collect monitoring data during periods of shutdown, as specified in 40 CFR 63.7535(b). The facility must keep records during periods of shutdown. The facility must provide reports concerning activities and periods of shutdown, as specified in 40 CFR 63.7555.</p>

**Table 4: Operating Limits for Boilers and Process Heaters**

If the facility demonstrates compliance with...	The facility must meet these operating limits...
1. Wet PM scrubber control on a boiler not using a PM CPMS.	Maintain the 30-day rolling average pressure drop and the 30-day rolling average liquid flow rate at or above the lowest one-hour average pressure drop and the lowest one-hour average liquid flow rate, respectively, measured during the performance test demonstrating compliance with the PM emission limitation according to 40 CFR 63.7530(b) and Table 7 to 40 CFR 63, subpart DDDDD.
2. Wet acid gas (HCl) scrubber <sup>a</sup> control on a boiler or process heater not using a HCl CEMS.	Maintain the 30-day rolling average effluent pH at or above the lowest 1-h average pH and the 30-day rolling average liquid flow rate at or above the lowest 1-h average liquid flow rate measured during the performance test demonstrating compliance with the HCl emission limitation according to 40 CFR 63.7530(b) and Table 7 to 40 CFR 63, subpart DDDDD.
3. Fabric filter control on a boiler or process heater using a PM CPMS.	<p>a. Maintain opacity to less than or equal to 10 percent opacity or the highest hourly average opacity reading measured during the performance test run demonstrating compliance with the PM (or TSM) emission limitation (daily block average) ; or</p> <p>b. Install and operate a bag leak detection system according to 40 CFR 63.7525 and operate the fabric filter such that the bag leak detection system alert is not activated more than 5 percent of the operating time during each 6-mo period.</p>
4. Electrostatic precipitator control on a boiler or process heater not using a PM CPMS.	<p>a. This option is for boilers and process heaters that operate dry control systems (i.e., an ESP without a wet scrubber). Existing and new boilers and process heaters must maintain opacity to less than or equal to 10 percent opacity or the highest hourly average opacity reading measured during the performance test run demonstrating compliance with the PM (or TSM) emission limitation (daily block average); or</p> <p>b. This option is only for boilers and process heaters not subject to PM CPMS or continuous compliance with an opacity limit (i.e., dry ESP). Maintain the 30-day rolling average total secondary electric power input of the electrostatic precipitator at or above the operating limits established during the performance test according to 40 CFR 63.7530(b) and Table 7 to 40 CFR 63, Subpart DDDDD.</p>

<b>If the facility demonstrates compliance with...</b>	<b>The facility must meet these operating limits...</b>
5. Dry scrubber or carbon injection control on a boiler or process heater not using a mercury CEMS	Maintain the minimum sorbent or carbon injection rate as defined in 40 CFR 63.7575, Subpart DDDDD.
6. Any other add-on air pollution control type on a boiler or process heater not using PM CPMS.	This option is for boilers and process heaters that operate dry control systems. Existing and new boilers and process heaters must maintain opacity to less than or equal to 10 percent opacity or the highest hourly average opacity reading measured during the performance test run demonstrating compliance with the PM (or TSM) emission limitation (daily block average).
7. Fuel Analysis	Maintain the fuel type or fuel mixture such that the applicable emission rates calculated according to 40 CFR 63.7530(c)(1), (2) and/or (3) is less than the applicable emission limits.
8. Performance testing	For boilers and process heaters that demonstrate compliance with a performance test, maintain the 30-day rolling average operating load of each unit such that it does not exceed 110 percent of the highest hourly average operating load recorded during the most recent performance test.
9. Oxygen Analyzer System	For boilers and process heaters subject to a CO emission limit that demonstrate compliance with an O <sub>2</sub> analyzer system as specified in 40 CFR 63.7525(a), maintain the 30-day rolling average oxygen content at or above the lowest hourly average oxygen concentration measured during the most recent CO performance test, as specified in Table 8. This requirement does not apply to units that install an oxygen trim system since these units will set the trim system to the level specified in 40 CFR 63.7525(a).
10. SO <sub>2</sub> CEMS	For boilers or process heaters subject to an HCl emission limit that demonstrate compliance with an SO <sub>2</sub> CEMS, maintain the 30-day rolling average SO <sub>2</sub> emission rate at or below the highest hourly average SO <sub>2</sub> concentration measured during the most recent HCl performance test, as specified in Table 8.

<sup>A</sup> As specified in 40 CFR 63.7555(d)(13), the source may request an alternative timeframe with the PM controls requirement to the permitting authority (state, local, or tribal agency) that has been delegated authority for this subpart by EPA. The source must provide evidence that (1) it is unable to safely engage and operate the PM control(s) to meet the “fuel firing + 1 hour” requirement and (2) the PM control device is appropriately designed and sized to meet the filterable PM emission limit. It is acknowledged that there may be another control device that has been installed other than ESP that provides additional PM control (e.g., scrubber).

## Appendix 1-43

### Emission and Operating Limitations for Industrial, Commercial, and Institutional Boilers At An Area Source of HAP (40 CFR 63, Table 1, Table 2, Table 3, to Subpart JJJJJ) [Added April 2011; Revised April 2013]

**Table 1: Emission Limits**

<b>If the facility boiler is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The facility must achieve &lt;= the following emission limits, except during periods of startup and shutdown...</b>
1. New coal-fired boilers with heat input capacity of 30 MMBtu/h or greater that do not meet the definitions of limited-use boiler.	PM (Filterable)	3.0E-02 lb/MMBtu of heat input.
	Mercury	2.2E-05 lb/MMBtu of heat input
	Carbon Monoxide	420 ppm by volume on a dry basis corrected to 3 percent oxygen (3-run average or 10-day rolling average)
2. New coal-fired boilers with heat input capacity of between 10 and 30 MMBtu/h that do not meet the definition of limited-use boiler.	PM (Filterable)	4.2E-01 lb/MMBtu of heat input.
	Mercury	2.2E-05 lb/MMBtu of heat input
	Carbon Monoxide	420 ppm by volume on a dry basis corrected to 3 percent oxygen (3-run average or 10-day rolling average)
3. New biomass-fired boilers with heat input capacity of 30 MMBtu/h or greater that do not meet the definition of seasonal boiler or limited-use boiler.	PM (Filterable)	3.0E-02 lb/MMBtu of heat input.
4. New biomass-fired boilers with heat input capacity between 10 and 30 MMBtu/h that do not meet the definition of seasonal boiler or limited-use boiler.	PM (Filterable)	7.0E-02 lb/MMBtu of heat input.
5. New oil-fired boilers with a heat input capacity of 10 MMBtu pr hour or greater that do not meet the definition of seasonal boiler or limited-use boiler.	PM (Filterable)	3.0E-02 lb/MMBtu of heat input.

<b>If the facility boiler is in this subcategory:</b>	<b>For the following pollutants:</b>	<b>The facility must achieve &lt;= the following emission limits, except during periods of startup and shutdown...</b>
6. Existing coal-fired boilers with heat input capacity of 10 MMBtu/h or greater that do not meet the definition of limited-use boiler.	Mercury	2.2E-05 lb/MMBtu of heat input
	Carbon Monoxide	420 ppm by volume on a dry basis corrected to 3 percent oxygen.

**Table 2: Work Practice Standards, Emission Reduction Measures, and Management Practices**

<b>If the facility boiler is in this subcategory:</b>	<b>The facility must meet the following:</b>
1. Existing or new coal, new biomass-fired, or new oil-fired boilers (units with heat input capacity of 10 MMBtu/h or greater).	Minimize the boiler's startup and shutdown periods and conduct startups and shutdowns according to the manufacturer's recommended procedures. If manufacturer's recommended procedures are not available, the facility must follow recommended procedures for a unit of similar design for which manufacturer's recommended procedures are available.
2. Existing coal-fired boilers with heat input capacity of less than 10 MMBtu/h that do not meet the definition of limited-use boiler, or use an oxygen trim system that maintains an optimum air-to-fuel ration.	Conduct an initial tune-up as specified in 40 CFR 63.11214, and conduct a tune-up of the boiler biennially as specified in 40 CFR 63.11223.
3. New coal-fired boilers with heat input capacity of less than 10 MMBtu/hr that do not meet the definition of limited-use boiler, or use an oxygen trim system that maintains an optimum air-to-fuel ratio.	Conduct a tune-up of the boiler biennially as specified in 40 CFR 63.11223.
4. Existing oil-fired boilers with heat input capacity greater than 5 MMBtu/hr that do not meet the definition of seasonal boiler or limited-use boiler, or use an oxygen trim system that maintains an optimum air-to-fuel ratio.	Conduct an initial tune-up as specified in 40 CFR 63.11214, and conduct a tune-up of the boiler biennially as specified in 40 CFR 63.11223.
5. New oil-fired boilers with heat input capacity greater than 5 MMBtu/hr that do not meet the definition of seasonal boiler or limited-use boiler, or use an oxygen trim system that maintains an optimum air-to-fuel ratio.	Conduct a tune-up of the boiler biennially as specified in 40 CFR 63.11223.

<b>If the facility boiler is in this subcategory:</b>	<b>The facility must meet the following:</b>
6. Existing biomass-fired boilers that do not meet the definition of seasonal boiler or limited-use boiler, or use an oxygen trim system that maintains an optimum air-to-fuel ratio.	Conduct an initial tune-up as specified in 40 CFR 63.11214, and conduct a tune-up of the boiler biennially as specified in 40 CFR 63.11223.
7. New biomass-fired boilers that do not meet the definition of seasonal boiler or limited-use boiler, or use an oxygen trim system that maintains an optimum air-to-fuel ratio.	Conduct a tune-up of the boiler biennially as specified in 40 CFR 63.11223.
8. Existing seasonal boilers	Conduct an initial tune-up as specified in 40 CFR 63.11214, and conduct a tune-up of the boiler every 5 yr as specified in 40 CFR 63.11223.
9. New seasonal boilers	Conduct a tune-up of the boiler every 5 yr as specified in 40 CFR 63.11223.
10. Existing limited-use boilers	Conduct an initial tune-up as specified in 40 CFR 63.11214, and conduct a tune-up of the boiler every 5 yr as specified in 40 CFR 63.11223.
11. New limited-use boilers	Conduct a tune-up of the boiler every 5 yr as specified in 40 CFR 63.11223.
12. Existing oil-fired boilers with heat input capacity of equal to or less than 5 MMBtu/h	Conduct an initial tune-up as specified in 40 CFR 63.11214, and conduct a tune-up of the boiler every 5 yr as specified in 40 CFR 63.11223.
13. New oil-fired boilers with heat input capacity of equal to or less than 5 MMBtu/h	Conduct a tune-up of the boiler every 5 yr as specified in 40 CFR 63.11223.
14. Existing coal-fired, biomass-fired, or oil-fired boilers with an oxygen trim system that maintains an optimum air-to-fuel ratio that would otherwise be subject to a biennial tune-up.	Conduct an initial tune-up as specified in 40 CFR 63.11214, and conduct a tune-up of the boiler every 5 yr as specified in 40 CFR 63.11223.
15. New coal-fired, biomass-fired, or oil-fired boilers with an oxygen trim system that maintains an optimum air-to-fuel ratio that would otherwise be subject to a biennial tune-up.	Conduct a tune-up of the boiler every 5 yr as specified in 40 CFR 63.11223.

If the facility boiler is in this subcategory:	The facility must meet the following:
<p>16. Existing coal-fired, biomass-fired, or oil-fired boilers (units with heat input capacity of 10 MMBtu/h and greater), not including limited-use boilers.</p>	<p>Must have a one-time energy assessment performed by a qualified energy assessor. An energy assessment completed on or after 1 January 2008, that meets or is amended to meet the energy assessment requirements in this table satisfies the energy assessment requirement. Energy assessor approval and qualification requirements are waived in instances where past or amended energy assessments are used to meet the energy assessment requirements. A facility that operates under an energy management program compatible with ISO 50001 that includes the affected units also satisfies the energy assessment requirement. The energy assessment must include the following with extent of the evaluation for items (1) to (4) appropriate for the on-site technical hours listed in 40 CFR 63.11237:</p> <ol style="list-style-type: none"> <li>(1) A visual inspection of the boiler system,</li> <li>(2) An evaluation of operating characteristics of the affected boiler systems, specifications of energy use systems, operating and maintenance procedures, and unusual operating constraints,</li> <li>(3) An inventory of major energy use systems consuming energy from affected boiler(s) and which are under control of the boiler owner or operator,</li> <li>(4) A review of available architectural and engineering plans, facility operation and maintenance procedures and logs, and fuel usage,</li> <li>(5) A list of major energy conservation measures that are within the facility's control,</li> <li>(6) A list of the energy savings potential of the energy conservation measures identified, and</li> <li>(7) A comprehensive report detailing the ways to improve efficiency, the cost of specific improvements, benefits, and the time frame for recouping those investments.</li> </ol>

**Table 3: Operating Limits for Boilers with Emission Limits**

If the facility demonstrates compliance with applicable emission limits using.....	You must meet these operating limits.....
<p>1. Fabric filter control...</p>	<ul style="list-style-type: none"> <li>• Maintain opacity to less than or equal to 10 percent opacity (daily block average); OR</li> <li>• Install and operate a bag leak detection system according to 40 CFR 63.11224 and operate the fabric filter such that the bag leak</li> </ul>

	detection system alarm does not sound more than 5 percent of the operating time during each 6-mo period.
2. Electrostatic precipitator control	<ul style="list-style-type: none"> <li>• Maintain opacity to less than or equal to 10 percent opacity (daily block average); OR</li> <li>• Maintain the 30-day rolling average total secondary electric power of the electrostatic precipitator at or above the minimum total secondary electric power as defined in 40 CFR 63.11237.</li> </ul>
3. Wet scrubber control	<ul style="list-style-type: none"> <li>• Maintain the 30-day rolling average pressure drop across the wet scrubber at or above the minimum scrubber pressure drop as defined in 40 CFR 63.11237 and the 30-day rolling average liquid flow rate at or above the minimum scrubber liquid flow rate as defined in 40 CFR 63.11237.</li> </ul>
4. Dry sorbent or carbon injection control	<ul style="list-style-type: none"> <li>• Maintain the 30-day rolling average sorbent or activated carbon injection rate at or above the minimum sorbent injection rate or minimum activated carbon injection rate as defined in 40 CFR 63.11237. When your boiler operates at lower loads, multiply your sorbent or activated carbon injection rate by the load fraction (e.g., actual heat input divided by the heat input during the performance stack test; for 50 percent load, multiply the injection rate operating limit by 0.5).</li> </ul>
5. Any other add-on air pollution control type...	<ul style="list-style-type: none"> <li>• This option is for boilers that operate dry control systems. Boilers must maintain opacity to less than or equal to 10 percent opacity (daily block average).</li> </ul>
6. Fuel analysis	<ul style="list-style-type: none"> <li>• Maintain the fuel type or fuel mixture (annual average) such that the mercury emission rates calculated according to 40 CFR 63.11211(c) are less than the applicable emission limits for mercury.</li> </ul>
7. Performance stack testing	<ul style="list-style-type: none"> <li>• For boilers that demonstrate compliance with a performance stack test, maintain the operating load of each unit such that it does not exceed 110 percent of the average operating load recorded during the most recent performance stack test.</li> </ul>
8. Oxygen analyzer system	<ul style="list-style-type: none"> <li>• For boilers subject to a CO emission limit that demonstrate compliance with an oxygen analyzer system as specified in 40 CFR 63.11224(a), maintain the 30-day rolling average oxygen level at or above the minimum oxygen level as defined in 40 CFR 63.11237. This requirement does not apply to units that install an oxygen trim system since these units will set the trim system to the level specified in 40 CFR 63.11224(a)(7).</li> </ul>

## SECTION 2

### CULTURAL RESOURCES MANAGEMENT

U.S. TEAM Guide, December 2018

#### A. Applicability

This section applies to any facility or activity with cultural and historic resources. Plans and programs for protection and management of cultural resources, which include historic and prehistoric properties are included in this section.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

#### B. Federal Regulations

- *Antiquities Act* of 1906. Within this act, 16 U.S. Code (USC) 431-433, the President of the United States is authorized to declare historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest, that are situated upon the lands owned or controlled by the Federal Government, to be national monuments (16 USC 431). Permits for the examination of ruins, the excavation of archaeological sites, and the gathering of objects of antiquity upon the lands under their respective jurisdictions, may be granted by the Secretaries of the Interior (SOI), Agriculture, and Army to institutions they may deem properly qualified to conduct such examination, excavation, or gathering, subject to such rules and regulations as they may prescribe (16 USC 432).
- *Historic Sites Act* of 1935. This act, Public Law (PL) 74-292 (16 USC 470-470w-6), authorizes the designation of national historic sites and landmarks, authorizes interagency efforts to preserve historic resources, and establishes a maximum fine of \$500 for violations of the act.
- *National Historic Preservation Act* (NHPA) of 1966. This act, 16 USC 470-470w-6, last amended in August 1992, addresses the issue of preserving our national history. The Congress declares that the historical and cultural foundations of the nation should be preserved as a living part of our community life and development; and that the preservation of this irreplaceable heritage is in the public interest so its vital legacy of cultural, educational, aesthetic, inspirational, economic, and energy benefits will be maintained and enriched for future generations of Americans (16 USC 470(b)(2)(4)). The policy of the Federal Government is to:
  1. use measures, including financial and technical assistance, to foster conditions under which our modern society and our prehistoric and historic resources can exist in productive harmony and fulfill the social, economic, and other requirements of present and future generations
  2. provide leadership in the preservation of the prehistoric and historic resources of the United States and of the international community of nations
  3. administer Federally owned, administered, or controlled prehistoric and historic resources in a spirit of stewardship for the inspiration and benefit of present and future generations
  4. contribute to the preservation of non-Federally owned prehistoric and historic resources and give maximum encouragement to organizations and individuals undertaking preservation by private means
  5. encourage the public and private preservation and utilization of all usable elements of the nation's historic built environment
  6. assist state and local governments and the National Trust for Historic Preservation in the United States to expand and accelerate their historic preservation programs and activities (16 USC 470-1).
- *The National Environmental Policy Act* (NEPA). The purpose of this act, 42 USC 4321-4370c, as last amended in November 1990, was to declare a national policy to encourage productive and enjoyable harmony between man and his environment. Additionally, it provides for the promotion of efforts that will prevent or eliminate damage to the environment and biosphere and stimulate the health and welfare of man (42 USC 4321).

- *Archeological and Historic Preservation Act* of 1974. This act, PL 93-291 (amends PL 86-523); (16 USC 469-469c), directs Federal agencies to notify the SOI when they find that any Federal construction project or Federally licensed activity or program may cause irreparable loss or destruction of significant scientific, prehistoric, historical, or archaeological data. It also provides criteria for funding historical and archaeological protection for such projects.
- *Public Buildings Cooperative Use Act* of 1976. This act, 40 USC 490, 601 note, et seq, was last amended in November 1988. Under this act, the Administrator of General Services must, among other duties, acquire and use space in suitable buildings of historic, architectural, or cultural significance, unless use of such space would not prove feasible and prudent compared with available alternatives (40 USC 601a(a)(1)).
- *American Indian Religious Freedom Act* of 1978. This act, PL 95-341 (42 USC 1996), states the policy of the United States to protect and preserve for American Indians their inherent rights of freedom to believe, express, and exercise the traditional religions of the American Indian, Eskimo, Aleut, and native Hawaiians. These rights include, but are not limited to, access to sites, use and possession of sacred objects, and the freedom to worship through ceremony and traditional rites. The act was amended in 1994 **[Revised July 2003]**.
- *Archaeological Resources Protection Act (ARPA)* of 1979. This act, 16 USC 470aa-470mm, was last amended in October 1988. The purpose of this act is to secure, for the present and future benefit of the American people, the protection of archaeological resources and sites which are on public lands and Indian lands, and to foster increased cooperation and exchange of information between governmental authorities, the professional archaeological community, and private individuals having collections of archaeological resources and data which were obtained before 1 October 1979 (16 USC 470aa(b)).
- *Native American Graves Protection and Repatriation Act (NAGPRA)* of October 1990. This act, 25 USC 3001-3013, permits the intentional removal from or excavation of Native American cultural items from Federal or tribal lands for purposes of discovery, study, or removal of such items only if:
  1. such items are excavated or removed pursuant to a permit issued which must be consistent with this act
  2. such items are excavated or removed after consultation with or, in the case of tribal lands, consent of the appropriate (if any) Indian tribe or Native Hawaiian organization
  3. the ownership and right of control of the disposition of such items must be as provided in subsections (a) and (b) of this section
  4. proof of consultation or consent is shown (25 USC 3002(c)).

Each Federal agency and museum which has possession or control over holdings or collections of Native American human remains and associated funerary objects must compile an inventory of such items and, to the extent possible based on information processed by such museum or Federal agency, identify the geographical and cultural affiliation of such item (25 USC 3003(a)). Each Federal agency or museum that has possession or control over holdings or objects of Native American unassociated funerary objects, sacred objects, or objects of cultural patrimony must provide a written summary of such objects based on available information held by such agency or museum. The summary must describe the scope of the collection, kinds of objects included, reference to geographical location, means and period of acquisition and cultural affiliation, where readily ascertainable.
- *Abandoned Shipwreck Act of 1987*. This act, PL 100-298, defines and clarifies access and ownership rights and directs the Director of the National Park Service to prepare guidelines, in consultation with appropriate public and private section interests, to administer and manage underwater resources.
- *National Historic Lighthouse Preservation Act of 2000*. This Act, 16 U.S.C. § 470w-7, is an amendment to the *National Historic Preservation Act* of 1966, as amended, and provides a mechanism for the disposal of federally-owned historic light stations **[Added January 2005]**.
- Executive Order (EO) 13006, *Locating Federal Facilities on Historic Properties in Our Nation's Central Cities*. This EO, dated 21 May 1996, states that the Federal Government shall utilize and maintain, wherever operationally appropriate and economically prudent, historic properties and districts, especially those located in central business areas.

- EO 13007, *Indian Sacred Sites*. This EO, dated 24 May 1996, addresses the accommodation of sacred sites. Each executive branch agency with statutory or administrative responsibility for the management of Federal lands is required, to the extent practicable, permitted by law, and not clearly inconsistent with agency functions, accommodate access to and ceremonial use of Indian sacred sites by Indian religious practitioners. They shall also avoid adversely affecting the physical integrity of the sacred sites. Where appropriate, agencies will maintain the confidentiality of sacred sites.
- EO 13287, *Preserve America*. This EO, dated 3 March 2003, states that it is the policy of the Federal Government to provide leadership in preserving America's heritage by actively advancing the protection, enhancement, and contemporary use of the historic properties owned by the Federal Government, and by promoting intergovernmental cooperation and partnerships for the preservation and use of historic properties. The EO directs Federal agencies to **[Added April 2003]**:
  - seek partnerships with State and local governments, Indian tribes, and the private sector to promote local economic development and vitality through the use of historic properties in a manner that contributes to the long-term preservation and productive use of those properties.
  - agencies with real property management responsibilities shall prepare an assessment of the current status of its inventory of historic properties required by section 110(a)(2) of the NHPA (16 U.S.C. 470h-2(a)(2)), the general condition and management needs of such properties, and the steps underway or planned to meet those management needs
  - report on its progress in identifying, protecting, and using historic properties in its ownership and make the report available to the Council and the Secretary.
- Executive Order 13327, *Federal Real Property Asset Management*. This EO, dated 4 February 2004, establishes the Federal Real Property Council (Council) to develop guidance for, and facilitate the success of, each agency's asset management plan. The Council is to be composed exclusively of all agency Senior Real Property Officers, the Controller of the Office of Management and Budget, the Administrator of General Services, and any other full-time or permanent part-time Federal officials or employees as deemed necessary by the Chairman of the Council. The Senior Real Property Officer is designated by the head of a department of agency. The Senior Real Property Officer is required to develop and implement an agency asset management planning process that meets the form, content, and other requirements established by the Federal Real Property Council. In relation to cultural resources, the Senior Property Officer shall incorporate planning and management requirements for historic property under Executive Order 13287 of 3 March 2003, and for environmental management under Executive Order 13148 of 21 April 2000.
- Under EO 13327, para 2(a) "federal real property" is defined as any real property owned, leased, or otherwise managed by the Federal Government, both within and outside the United States, and improvements on Federal lands. For the purpose of this order, Federal real property shall exclude: interests in real property assets that have been disposed of for public benefit purposes pursuant to section 484 of title 40, United States Code, and are now held in private ownership; land easements or rights-of-way held by the Federal Government; public domain land (including lands withdrawn for military purposes) or land reserved or dedicated for national forest, national park, or national wildlife refuge purposes except for improvements on those lands; land held in trust or restricted fee status for individual Indians or Indian tribes; and land and interests in land that are withheld from the scope of this order by agency heads for reasons of national security, foreign policy, or public safety **[Added April 2004]**.

### C. State/Local Regulations

For information on regulations in specific states, see the State Supplements to TEAM Guide.

At the state level, the State Historic Preservation Officer (SHPO) provides assistance in determining cultural significance and eligibility for the National Register but may also nominate properties, irrespective of ownership. The SHPO must be consulted whenever there is a Federal undertaking, and for development of cultural resources plans.

States may also issue regulations designating state historical sites.

#### D. Key Compliance Requirements

- **Historical Properties** - All Federal agencies are required to establish a program to locate, inventory, and nominate to the SOI all properties under the agency's control that qualify for inclusion on the National Register of Historic Places. Historic properties held in fee by the Federal Government and under the jurisdiction of the Agency are required to be protected and managed and have damage mitigated. These requirements also apply to property held in less than fee by the Federal Government whenever activities have an adverse impact on the property. The effects of a new undertaking on property in the National Register must be considered before beginning an undertaking. The SHPO must be consulted during identification, location, and evaluation of historic properties and in assessing the effect of an undertaking on historic property. The SHPO also needs to be notified where there is no adverse effect, or when there are no historic properties in the area of potential effect. The Advisory Council needs to be notified when there is an adverse effect and no adverse effect. (36 CFR 60.9(7)(f), 60.13, 800.1, 800.4, and 800.5; 32 CFR 229.4(a) and 229.5(b)).
- **Archaeological Requirements** - When unrecorded historic property is discovered during construction or other undertakings, work is required to halt until the situation is properly evaluated. Archaeological resources on either public or Indian lands cannot be excavated, removed, damaged, or otherwise altered without permit. A permit for excavation is not required if the excavation is being done on Federal land under contract to the Federal Agency, and the contractor meets the SOI standards (32 CFR 229.4(a) and 229.5(b)).
- **Native American Graves and Artifacts** - Federal law protects Native American graves and objects of cultural patrimony, funerary, and sacred objects. Measures must be taken to identify and protect them and cooperate with Native American groups in returning them to their rightful owners (43 CFR 10.1 through 10.17 and PL 101-601, Section 3d, Section 5, and Section 6).
- **Collection Management and Curation** - Archaeological and historic collections owned or controlled by Federal facilities are required to be assessed and evaluated. Federal facilities responsible for long-term management and preservation of collections are covered by regulations dealing with curation, recordkeeping, long-term curatorial services, repository security, curatorial staff qualifications, use of collections, and conduct of inspections and inventories of the collections. Collection management centers also are required to write annual reports updating the status of their collections (36 CFR 79).

#### E. Key Compliance Definitions

- **Act** - the National Historic Preservation Act of 1966, as amended, 16 U.S.C. 470-470w-6 (36 CFR 800.16) **[Added October 1999]**.
- **Advisory Council on Historic Preservation (ACHP)** - the ACHP was established by Title II of the NHPA to advise the President and Congress, to encourage private and public interest in cultural preservation, and to comment on Federal agency action under Section 106 of the NHPA (36 CFR 65.3).
- **Agency** - agency as defined in 5 U.S.C. 551 (36 CFR 800.16) **[Added October 1999]**.
- **Approval of the Expenditure of Funds** - any final agency decision authorizing or permitting the expenditure of Federal funds or financial assistance on an undertaking, including any agency decision that may be subject to an administrative appeal (36 CFR 800.16) **[Added October 1999]**.
- **Archaeological Resource** - any material remains of prehistoric or historic human life or activities. Such resources include, but are not limited to: pottery, basketry, bottles, weapons, weapon projectiles, tools, structures or portions of structures, pit houses, rock paintings, rock carvings, intaglios, graves, human skeletal materials, or any portion or piece of any of the foregoing items (16 USC 470bb).
- **Area of Potential Effects** - the geographic area or areas within which an undertaking may directly or indirectly cause changes in the character or use of historic properties, if any such properties exist. The area of potential

effects is influenced by the scale and nature of an undertaking and may be different for different kinds of effects caused by the undertaking (36 CFR 800.16) **[Added October 1999]**.

- *Associated Funerary Objects* - those funerary objects for which the human remains with which they were placed intentionally are also in the possession or control of a museum or Federal agency. This also means those funerary objects that were made exclusively for burial purposes or to contain human remains (43 CFR 10.2(d)(2)(i)).
- *Associated Records* - original records, or copies thereof, that are prepared or assembled, and document efforts to locate, evaluate, record, study, preserve, or recover a prehistoric or historic resource (36 CFR 79.4).
- *Building* - a structure created to shelter any form of human activity, such as a house, barn, church, hotel, or similar structure. Building may refer to a historically related complex such as a courthouse and jail, or a house and barn (36 CFR 60.3).
- *Burial Site* - any natural or prepared physical location, whether originally below, on, or above the surface of the earth, into which, as a part of the death rite or ceremony of a culture, individual human remains are deposited. This includes rock cairns or pyres which do not fall within the ordinary definition of grave site (43 CFR 10.2(d)(2)).
- *Collection* - material remains that are excavated or removed during a survey, excavation, or other study of a prehistoric or historic resource, and associated records that are prepared or assembled in connection with the survey, excavation, or other study (36 CFR 79.4).
- *Comment* - the findings and recommendations of the Council formally provided in writing to the head of a Federal agency under Section 106 (36 CFR 800.16) **[Added October 1999]**.
- *Consultation* - the process of seeking, discussing, and considering the views of other participants, and, where feasible, seeking agreement with them regarding matters arising in the Section 106 process. The Secretary's "Standards and Guidelines for Federal Agency Preservation Programs pursuant to the National Historic Preservation Act" provide further guidance on consultation (36 CFR 800.16) **[Added October 1999]**.
- *Council* - the Advisory Council on Historic Preservation or a Council member or employee designated to act for the Council (36 CFR 800.16) **[Added October 1999]**.
- *Cultural Affiliation* - a relationship of shared group identity which can be reasonably traced historically or prehistorically between a present day Indian tribe or Native Hawaiian organization and an identifiable earlier group (43 CFR 10.2(e)).
- *Cultural Items* - associated and unassociated funerary objects, sacred objects, and cultural patrimony (PL 101-106, Section 2(3)(a-d)).
- *Cultural Patrimony* - an object having ongoing historical, traditional, or cultural importance central to the Native American group or culture itself, rather than property owned by an individual Native American, and which, therefore, cannot be alienated, appropriated, or conveyed by any individual regardless of whether or not the individual is a member of the Indian tribe or Native Hawaiian organization (PL 101-601, Section 2).
- *Curatorial Services* - managing and preserving a collection according to professional museum and archival practices (36 CFR 79.4).
- *Determination of Eligibility* - a decision by the Department of the Interior (DOI) that a district, site, building, structure, or object meets the National Register criteria for evaluation, although the property is not formally listed in the National Register (36 CFR 60.3).

- *District* - a geographically definable area, urban or rural, that possesses a significant concentration, linkage, or continuity of sites, structures, buildings, or objects united by past events or aesthetically by plan or physical development. A district also may comprise individual elements separated geographically but linked by association or history (36 CFR 60.3).
- *Effect* - alteration to the characteristics of a historic property qualifying it for inclusion in or eligibility for the National Register (36 CFR 800.16) **[Added October 1999]**.
- *Effect* - direct effects are caused by the undertaking and occur at the place and time of the undertaking. Indirect effects are those caused by the undertaking that are later in time or further removed in distance, but are still reasonably foreseeable (40 CFR 1508.8).
- *Endangered Property* - a historic property that is, or is about to be, subjected to a major impact that will destroy or seriously damage the qualities of significance that make it eligible for National Historic Landmark or National Register of Historic Places designation (36 CFR 65.3).
- *Federal Agency* - any department, agency, or instrumentality of the United States. Such term does not include the Smithsonian Institute (43 CFR 10.2(a)(1)).
- *Federal Agency Official* - any officer, employer, or agent officially representing the secretary of the department or the head of any other agency or instrumentality of the United States having primary management authority over a collection that is subject to 36 CFR 79 (36 CFR 79.4).
- *Federal Agency Official* - any individual authorized by delegation of authority within a Federal agency to perform the duties related to the regulations in 43 CFR 10.1 through 10.17 (43 CFR 10.2).
- *Federal Lands* - any land other than tribal lands that are controlled or owned by the United States, including lands selected by, but not yet conveyed to, Alaska Native Corporations and groups pursuant to the *Alaska Native Claims Settlement Act* (43 CFR 102(f)(1)).
- *Federal Preservation Officer* - the person who is responsible for coordinating the agency's activities under the NHPA and EO 11593, including nominating properties under the agency's ownership or control to the National Register (36 CFR 60.3).
- *Foreclosure* - an action taken by an Agency Official that effectively precludes the Council from providing comments which the Agency Official can meaningfully consider prior to the approval of the undertaking (36 CFR 800.16) **[Added October 1999]**.
- *Funerary Objects* - items that, as a part of the death rite or ceremony of a culture, are reasonably believed to have been placed intentionally at the time of death or later with or near individual human remains (43 CFR 10.2(d)(2)).
- *Head of the Agency* - the chief official of the Federal agency responsible for all aspects of the agency's actions. If a state, local, or tribal government has assumed or has been delegated responsibility for Section 106 compliance; the head of that unit of government shall be considered the head of the agency (36 CFR 800.16) **[Added October 1999]**.
- *Historic Preservation* - identification, evaluation, documentation, curation, acquisition, protection, rehabilitation, restoration, management, stabilization, maintenance, recording, and reconstruction of cultural resources, and any combination of the foregoing (16 USC 470w(8)).
- *Historic Property* - any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion in, the National Register of Historic Places maintained by the Secretary of the Interior. This term includes artifacts, records, and remains that are related to and located within such properties. The term includes properties of traditional religious and cultural importance to an Indian tribe or Native Hawaiian organization and

that meet the National Register criteria. The term eligible for inclusion in the National Register includes both properties formally determined as such in accordance with regulations of the Secretary of the Interior and all other properties that meet the National Register criteria (36 CFR 800.16) **[Added October 1999]**.

- *Historic Property or Resource* - any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion on, the National Register; such term includes artifacts, records, and remains that are related to such a district, site, building, structure, or object (16 USC 470W).
- *Human Remains* - the physical remains of a human body of a person of Native American ancestry. This term does not include remains or portions of remains that may reasonably be determined to have been freely given or naturally shed by the individual from whose body they were obtained, such as hair made into ropes or nets. For the purposes of determining cultural affiliation, human remains incorporated into a funerary object, sacred object, or object of cultural patrimony must be considered a part of the item (43 CFR 10.2(d)(1)).
- *Inadvertent Discovery* - the unanticipated encounter or detection of human remains, funerary objects, sacred objects, or objects of cultural patrimony found under or on the surface of Federal or tribal lands pursuant to section 3(d) of the act (43 CFR 10.2(g)(4)).
- *Indian Tribe* - an Indian tribe, band, nation, or other organized group or community, including a Native village, Regional Corporation or Village Corporation, as those terms are defined in section 3 of the Alaska Native Claims Settlement Act (43 U.S.C. 1602), which is recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians (36 CFR 800.16) **[Added October 1999]**.
- *Indian Tribe or Tribe* - an Indian tribe, band, nation, or other organized group or community including a native village, Regional Corporation, or Village Corporation as those terms are defined in section 3 of the *Alaska Native Claims Settlement Act* (42 USC 1602), which is recognized as eligible for the special programs and services provided by the United State to Indians because of their status as Indians (NHPA, Section 301(4)).
- *Intentional Excavation* - the planned archaeological removal of human remains, funerary objects, sacred objects, or objects of cultural patrimony found under or on the surface of Federal or tribal lands pursuant to section 3(d) of the act (43 CFR 10.2(g)(3)).
- *Inventory* - an item by item description of human remains and associated funerary objects (43 CFR 10.2(g)(2)).
- *Landmark* - a National Historic Landmark is a district, site, building, structure, or object, in public or private ownership, judged by the SOI to possess national significance in American history, archaeology, architecture, engineering, and culture, and is so designated by the SOI (36 CFR 65.3).
- *Lineal Descendant* - an individual tracing his or her ancestry directly and without interruption by means of the traditional kinship system of the appropriate Indian tribe or Native Hawaiian organization or by the common law system of descendants to a known Native American individual whose remains, funerary objects, or sacred objects are being claimed under 43 CFR 10 (43 CFR 10.2(b)(1)).
- *Local Government* - a city, county, parish, township, municipality, borough, or other general purpose political subdivision of a state (36 CFR 800.16) **[Added October 1999]**.
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Material Remains* - artifacts, objects, specimens, and other physical evidence that are excavated or removed in connection with efforts to locate, evaluate, document, study, preserve or recover a prehistoric or historic resource. Classes of material remains that may be in a collection include, but are not limited to (36 CFR 79.4):
  1. components of structures and features (such as houses, mills, piers, fortifications, earthworks, and mounds)
  2. intact or fragmentary artifacts of human manufacture
  3. intact or fragmentary natural objects used by humans (such as rock crystals, feathers, and pigments)

4. by-products, waste products, or debris resulting from manufacture or use of manmade or natural materials
  5. organic materials (such as vegetable and animal remains)
  6. human remains
  7. components of petroglyphs, pictographs, intaglios, or other works of artistic or symbolic representation
  8. components of shipwrecks
  9. environmental and chronometric specimens
  10. paleontological specimens that are found in direct physical relationship with a prehistoric or historic resource.
- *Memorandum of Agreement (MOA)* - the document that records the terms and conditions agreed upon to resolve the adverse effects of an undertaking upon historic properties (36 CFR 800.16) [**Added October 1999**].
  - *Museum* - any institution or state or local government agency (including any institution of higher learning) that receives Federal funds and has possession of, or control over, Native American cultural items. Such term does not include the Smithsonian Institute or any other Federal agency (PL 101-601, Section 2).
  - *National Historic Landmark* - a historic property that the Secretary of the Interior has designated a National Historic Landmark (36 CFR 800.16) [**Added October 1999**].
  - *National Historic Landmarks Program* - the program that identifies, designates, recognizes, lists, and monitors National Historic Landmarks, conducted by the Secretary through the National Park Service (36 CFR 65.3).
  - *National Park Service* - the bureau of the DOI to which the SOI has delegated the authority and responsibility for administering the National Register program (36 CFR 60.3(h)).
  - *National Register* - the National Register of Historic Places maintained by the Secretary of the Interior (36 CFR 800.16) [**Added October 1999**].
  - *National Register Criteria* - the criteria established by the Secretary of the Interior for use in evaluating the eligibility of properties for the National Register (36 CFR 800.16) [**Added October 1999**].
  - *National Register of Historic Places (National Register)* - the listing of districts, sites, buildings, structures, and objects of national, state, or local significance in American history, architecture, archaeology, or culture that is maintained by the SOI (Keeper of the Register) (36 CFR 65.3).
  - *Native American* - of, or relating to, a tribe, people, or culture that is indigenous to the United States (PL 101-106, Section 2).
  - *Native Hawaiian* - any individual who is a descendent of the aboriginal people who, prior to 1778, occupied and exercised sovereignty in the area that now constitutes the State of Hawaii (43 CFR 10.2(b)(3)(ii)).
  - *Native Hawaiian Organization* - any organization which serves and represents the interests of Native Hawaiians; has as a primary and stated purpose the provision of services to Native Hawaiians; and has demonstrated expertise in aspects of historic preservation that are significant to Native Hawaiians. Native Hawaiian means any individual who is a descendant of the aboriginal people who, prior to 1778, occupied and exercised sovereignty in the area that now constitutes the State of Hawaii (36 CFR 800.16) [**Added October 1999**].
  - *Native Hawaiian Organization* - any organization that services and represents the interests of Native Hawaiians, has as a primary and stated purpose the provision of services to Native Hawaiians, and has expertise in Native Hawaiian affairs (43 CFR 10.2(b)(3)(i)).
  - *Nominate* - to complete and submit a National Register of Historic Places form proposing that a resource be included in the National Register. Nominations can be made for individual resources, multiple resources, or thematic groups (36 CFR 60.4).

- *Possession* - having physical custody of human remains, funerary objects, sacred objects, or objects of cultural patrimony with a sufficient legal interest to legally treat the objects as part of its collection for the purposes of 43 CFR 10.1 through 10.17. Generally, a museum or Federal agency would not be consider to have possession of human remains, funerary objects, sacred objects, or objects of cultural patrimony on loan from another individual, museums, or Federal agency (43 CFR 10.2((a)(3)(i)).
- *Preservation* - identification, evaluation, recordation, documentation, curation, acquisition, protection management, rehabilitation, restoration, stabilization, maintenance, and reconstruction of any constituents of the foregoing activities (16 USC 470W).
- *Programmatic Agreement* - a document that records the terms and conditions agreed upon to resolve the potential adverse effects of a Federal agency program, complex undertaking or other situations in accordance with 36 CFR 800.14(b) (36 CFR 800.16) **[Added October 1999]**.
- *Property* - a site, building, object, structure, or a collection that forms a district (36 CFR 65.3).
- *Public Lands* - lands owned and administered by the United States, including the National Park System, National Wildlife Refuge System, and National Forest System. Additional public lands are those whose fee title is held by the United States, the Outer Continental Shelf, and lands under the jurisdiction of the Smithsonian Institute (PL 96-95, Section 3(3)).
- *Qualified Museum Professional* - a person who possesses knowledge, experience, and demonstrable competence in museum methods and techniques appropriate to the nature and content of the collection under the person's management and care, and commensurate with the person's duties and responsibilities (36 CFR 79.4).
- *Religious Remains* - material remains that the Federal agency official (FAO) has determined are of traditional, religious, or sacred importance to an Indian tribe or other group because of customary use in religious rituals or spiritual activities. This determination is made in consultation with appropriate Indian tribes or other groups (36 CFR 79.4).
- *Repository* - a facility such as a museum, archaeological center, laboratory, or storage facility managed by a university, college, museum, other educational or scientific institution, a Federal, state, or local government agency or Indian tribe that can provide professional, systematic, and accountable curatorial services on a long-term basis (36 CFR 79.4).
- *Restoration* - the act or process of accurately recovering the form and details of property and its setting as it appeared at a particular period of time by means of the removal of later work or by the replacement of missing earlier work (36 CFR 68.2).
- *Sacred Objects* - specific ceremonial objects that are needed by traditional Native American religious leaders for the practice of their traditional Native American religions by their present day adherents (43 CFR 10.2(d)(3)).
- *Secretary* - the Secretary of the Interior acting through the Director of the National Park Service except where otherwise specified (36 CFR 800.16) **[Added October 1999]**.
- *Section 106 Consultation* - a compliance procedure in which an agency requests the concurrence of the SHPO and/or the ACHP when there is a Federal undertaking that may affect a property on, or eligible for, the National Register (36 CFR 800.3 through 800.9).
- *State Historic Preservation Officer (SHPO)* - the official appointed or designated pursuant to section 101(b)(1) of the Act to administer the state historic preservation program or a representative designated to act for the SHPO (36 CFR 800.16) **[Added October 1999]**.

- *State Historic Preservation Officer (SHPO)* - the official, who is responsible for administering the NHPA within the state of jurisdiction, or a designated representative authorized to act for the SHPO (36 CFR 60.3).
- *Summary* - the written description of collections that may contain unassociated funerary objects, sacred objects, and objects of cultural patrimony required by 43 CFR 10.8 (43 CFR 10.2(g)(1)).
- *Traditional Religious Leader* - a person which is recognized by members of an Indian tribe or Native Hawaiian organization as either (43 CFR 10.2(d)(3):
  1. being responsible for performing cultural duties relating to the ceremonial or religious traditions of that Indian tribe or Native Hawaiian organization;
  2. exercising a leadership role in an Indian tribe or Native Hawaiian organization based on the tribe or organizations cultural, ceremonial, or religious practices.
- *Tribal Historic Preservation Officer (THPO)* - the tribal official appointed by the tribe's chief governing authority or designated by a tribal ordinance or preservation program who has assumed the responsibilities of the SHPO for purposes of Section 106 compliance on tribal lands in accordance with section 101(d)(2) of the Act. For the purposes of subpart B of this part, the term also includes the designated representative of an Indian tribe that has not formally assumed the SHPO's responsibilities when an undertaking occurs on or affects historic properties on the tribal lands of the Indian tribe. (See 36 CFR 800.2(c)(2)) (36 CFR 800.16) [**Added October 1999**].
- *Tribal Lands* - all lands within the exterior boundaries of any Indian reservation and all dependent Indian communities (36 CFR 800.16) [**Added October 1999**].
- *Tribal Official* - the chief executive officer or any officer, employee, or agent officially representing an Indian tribe (36 CFR 79.4).
- *Unassociated Funerary Objects* - those funerary objects for which the human remains with which they were placed intentionally are not in the possession or control of a museum or Federal agency. Objects that were displayed with individual human remains as a part of a death rite or ceremony of a culture and subsequently returned or distributed according to traditional custom to living descendants or other individual are not considered unassociated funerary objects (43 CFR 10.2(d)(2)(ii)).
- *Undertaking* - a project, activity, or program funded in whole or in part under the direct or indirect jurisdiction of a Federal agency, including those carried out by or on behalf of a Federal agency; those carried out with Federal financial assistance; and those requiring a Federal permit, license or approval (36 CFR 800.16(y)) [**Added October 1999; Revised April 2005**].
- *Undertaking* - a project, activity, or program funded in whole or in part under the direct or indirect jurisdiction of a Federal agency, including (NHPA 301(7)):
  1. those carried out by or on behalf of the agency
  2. those carried out with Federal financial assistance
  3. those requiring a Federal permit, license, or approval
  4. those subject to state or local regulation administered pursuant to a delegation of approval by a Federal agency.

## F. Records To Review

- For construction activities: documentation of finding of no adverse effect, finding of adverse effect, or memorandum of agreement (MOA) with the SHPO or requests for comment when there is no agreement on historic properties.
- Cultural Resources Inventory/Survey
- Land Use Plans
- Environmental Assessments
- Environmental Impact Statements

- Curation Agreements
- Programmatic Agreements

#### **G. Physical Features To Inspect**

- Sites of historic, archaeological, or Native American interest (designation, protection, and interpretation)
- Buildings and structures of potential historical significance (national, state, or local)
- Archeological collection/curation facilities

#### **H. Guidance for Cultural Resources Management Checklist Users**

## **Appendix 2-1**

### **Future NAGPRA Applicability Guidance (43 CFR 10.13) [Added July 2013]**

#### **New Holdings or Collections.**

- Any museum or Federal agency that, after completion of the summaries and inventories receives a new holding or collection or locates a previously unreported current holding or collection that may include human remains, funerary objects, sacred objects or objects of cultural patrimony, must:
  - Within 6 mo of receiving a new holding or collection or locating a previously unreported current holding or collection provide a summary of the holding or collection to any Indian tribe or Native Hawaiian organization that is, or is likely to be, affiliated with the collection;
  - Within 2 yr of receiving a new holding or collection or locating a previously unreported current holding or collection prepare, in consultation with any affiliated Indian tribe or Native Hawaiian organization, an inventory.

(NOTE: Any museum that has made a good faith effort to complete its inventory, but which will be unable to complete the process by this deadline, may request an extension of the time requirements.)

- Additional pieces or fragments of previously repatriated human remains, funerary objects, sacred objects and objects of cultural patrimony may be returned to the appropriate Indian tribe or Native Hawaiian organization without publication of a notice in the Federal Register if they do not change the number or cultural affiliation of the cultural items listed in the previous notice.
- A museum or Federal agency that receives a new holding or collection for which a summary or inventory was previously prepared may rely upon the previously prepared documents. The receiving museum or Federal agency must provide a copy of the previously prepared summary or inventory to all affiliated Indian tribes or Native Hawaiian organizations, along with notification that the receiving museum or Federal agency has assumed possession and control of the holding or collection.

#### **New Indian Tribes.**

- Any museum or Federal agency that has possession or control of human remains, funerary objects, sacred objects, or objects of cultural patrimony that are, or are likely to be, culturally affiliated with a newly Federally recognized Native American tribe, must:
- Within 6 mo of the publication in the Federal Register of the Native American group's placement on the list of Indian Entities Recognized and Eligible to Receive Services from the United States Bureau of Indian Affairs, or within 6 m of the effective date of this rule, whichever is later, provide a summary of the collection to that Indian tribe; and
- Within 2 yr of the publication in the Federal Register of the Native American group's placement on the list of Indian Entities Recognized and Eligible to Receive Services from the United States Bureau of Indian Affairs, or within 2 yr of the effective date of this rule, whichever is later, prepare, in consultation with the newly recognized culturally affiliated Indian tribe an inventory.

(NOTE: Any museum that has made a good faith effort to complete its inventory, but which will be unable to complete the process by this deadline, may request an extension of the time requirements. The list of Indian Entities Recognized and Eligible to Receive Services from the United States Bureau of Indian

Affairs is published in the Federal Register as required by section 104 of the Federally Recognized Indian Tribe List Act of 1994 [25 U.S.C. 479a-1 (2006)].)

**New Federal Funds.**

- Any museum that has possession or control of human remains, funerary objects, sacred objects, or objects of cultural patrimony and receives Federal funds for the first time after expiration of the statutory deadlines for completion of summaries and inventories must:
  - Within 3 yr of the date of receipt of Federal funds, or within 3 yr of the effective date of this rule, whichever is later, provide a summary of the collection to any Indian tribe or Native Hawaiian organization that is, or is likely to be, culturally affiliated with the collections; and
  - Within 5 yr of the date of receipt of Federal funds, or within 5 yr of the effective date of this rule, whichever is later, prepare, in consultation with any affiliated Indian tribe or Native Hawaiian organization, an inventory.

**Amendment of Previous Decision.**

- Any museum or Federal agency that has previously published a notice in the Federal Register regarding the intent to repatriate unassociated funerary objects, sacred objects, and objects of cultural patrimony under 43 CFR 10.8(f), or the completion of an inventory of Native American human remains and associated funerary objects as required by 43 CFR 10.9(e), must publish an amendment to that notice if, based on subsequent information, the museum or Federal agency revises its decision in a way that changes the number or cultural affiliation of the cultural items listed.
- Repatriation may not occur until at least 30 days after publication of the amended notice in the Federal Register.

**NOTE: All actions taken must also comply with all other relevant sections of 43 CFR 10.**

## SECTION 3

### HAZARDOUS MATERIALS MANAGEMENT

U.S. TEAM Guide, December 2018

#### A. Applicability

This section primarily addresses the proper storage and handling of chemicals and the training, reporting, spill contingency, and response requirements related to hazardous materials. Oil and pesticides are hazardous materials that have additional regulatory requirements that are addressed in separate sections. Radioactive substances and the general category of hazardous wastes also are not included in this section. This section does not focus on individual hazardous chemicals or substances used but deals with the generic requirements and management practices (MP) associated with minimizing impacts on the environment due to spills or releases of hazardous materials because of improper storage and handling.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions that have been added or revised as a result of this review are identified as either being reviewed, revised or added in March 2001, for example [**Reviewed March 2001**].

#### B. Federal Legislation

- *The Occupational Safety and Health Act (OSHA)*. This act, last amended in November 1990, 29 U.S. Code (USC) 651-678, is a Federal statute that governs the issues related to occupational safety and health. The purpose and policy of this act are to assure every working man and woman in the nation safe and healthful working condition and to preserve our human resources by, among other things, providing for the development and publication of occupational safety and health standards, providing for an effective enforcement program, and providing for appropriate reporting procedures with respect to occupational safety and health which procedures will help achieve the objectives of this act and accurately describe the nature of the occupational safety and health (29 USC 651(b)(9)(10)(12)).
- *The Hazardous Materials Transportation Act of 1975*. This act, as last amended in November 1990, 49 USC 1801-1819, et al, is the federal legislation that governs the transportation of hazardous materials in the nation. The policy of Congress is to improve the regulatory and enforcement authority of the Secretary of Transportation to protect the nation adequately against the risks to life and property that are inherent in the transportation of hazardous materials in commerce (49 USC 1801).
- *The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)*. CERCLA, known commonly as Superfund, became law in 1980 and authorizes USEPA to respond to releases or threatened releases of hazardous substances that may endanger public health, welfare, or the environment. The basic purpose of CERCLA is to provide funding and enforcement authority to USEPA for overseeing the clean up of environmental contamination caused by responsible parties. The Superfund Amendments and Reauthorization Act (SARA) of 1986 revised various sections of CERCLA, and created a free-standing law, SARA Title III, also known as the *Emergency Planning and Community Right-to-Know Act (EPCRA)*. The CERCLA hazardous substance release reporting regulations (Section 103; 40 CFR Part 302) direct the person in charge of a facility to report to the

National Response Center any environmental release of a listed hazardous substance that equals or exceeds a reportable quantity. Reportable quantities are listed in 40 CFR Section 302.4. A release report may trigger a response by USEPA or by one or more federal or state emergency response authorities [**Revised March 2001**].

- *Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA)*. This act, also known as SARA Title III, was designed to promote emergency planning and preparedness at both the state and local level. It provides citizens, local governments, and local response authorities with information regarding the potential hazards in their community. EPCRA requires the use of emergency planning and designates state and local governments as recipients of information regarding certain chemicals used in the community. EPCRA has four major components [**Revised March 2001**]:

- Emergency planning (Sections 301-303)
- Emergency release notification (Section 304)
- Community right-to-know reporting (Sections 311-312)
- Toxic chemical release reporting (Section 313).

- *Pollution Prevention Act of 1990 (PPA)*. The goals of PPA were the following: preventing or reducing pollution at the source whenever feasible; pollution that cannot be prevented should be recycled in an environmentally safe manner whenever feasible; pollution that cannot be prevented or recycled should be treated in an environmentally safe manner whenever feasible; and disposal or other release into the environment should be employed only as a last resort and conducted in an environmentally safe manner. Section 6607 of the PPA requires owners or operators of facilities who have to file an annual toxic chemical release form (Form R) under EPCRA Section 313 to include a toxic chemical source reduction and recycling report for the preceding calendar year that has been incorporated into the Form R [**Added March 2001**].
- *The Oil Pollution Act of 1990*. This law, Public Law (PL) 301-308 (33 USC 2701-2761, et al.), as amended, requires the prevention of oil pollution into navigable waters by tank vessels. This includes the preparation of a response plan, construction of oil carriers with double hulls, and inspection of spill response equipment.
- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*. This EO, dated 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements and for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.
- The National Fire Code, *Flammable and Combustible Liquids Code*, NFPA 30. This code prohibits the storage of Class I and Class II liquids in plastic containers in general-purpose warehousing.
- Executive Order (EO) 13693, *Planning for Federal Sustainability in the Next Decade*, was signed by President Obama on 19 March 2015. Section 16 of this EO revokes the following [**Added April 2015**]:
  - Executive Order 13423 of January 24, 2007;
  - Executive Order 13514 of October 5, 2009;
  - Presidential Memorandum of December 2, 2011 (Implementation of Energy Savings Projects and Performance-Based Contracting for Energy Savings);
  - Section 1 of Presidential Memorandum of February 21, 2012 (Driving Innovation and Creating Jobs in Rural America through Biobased and Sustainable Product Procurement); and
  - Presidential Memorandum of December 5, 2013 (Federal Leadership on Energy Management); and
  - Presidential Memorandum of May 24, 2011 (Federal Fleet Performance).

The goal of EO 13693 is to maintain Federal leadership in sustainability and greenhouse gas emission reductions.

### C. State/Local Regulations

For information on regulations in specific states, see the State Supplements to TEAM Guide.

Hazardous materials may be regulated on the state level as well as local agencies (county/city fire departments) that may require flammable/combustible materials to meet certain storage requirements. Usually, these local ordinances will follow the National Fire Protection Association (NFPA), *Fire Protection Guide on Hazardous Materials* (Pamphlets 325A, 325M, 49, 491F and 704M).

### D. Key Compliance Requirements

- Planning and Documentation – There must be a written Hazard Communication Program addressing the chemical hazards in the workplace. Safety data sheet (SDS) files are required for each hazardous chemical it stores and uses, not including such items as hazardous waste, tobacco, or drugs and cosmetics meant for personal use (29 CFR 1910.1200(b) and 1910.1200(g)) [**Revised April 2012**].
- Personnel Training - All employees must be provided with written information about hazardous chemicals to which they are exposed. Personnel who work with hazardous materials are required to be trained in the use of and potential hazards of such materials. All employees and supervisors working on sites exposed to hazardous materials or other hazards are required to be trained before engaging in these activities (29 CFR 1910.1200).
- Emergency Response Plans - 40 CFR 355 establishes requirements for a facility to provide information necessary for developing and implementing State and local chemical emergency response plans, and requirements for emergency notification of chemical releases. 40 CFR 355 also lists Extremely Hazardous Substances (EHSs) and Threshold Planning Quantities (TPQs) in Appendices A and B, which are used in determining if a facility are subject to the requirements of 40 CFR 355 [**Revised January 2009**].
- Community Right-to-Know - 40 CFR 370 establishes reporting requirements for providing the public with important information on the hazardous chemicals in their communities. Reporting raises community awareness of chemical hazards and aids in the development of State and local emergency response plans. The reporting requirements established under this 40 CFR 370 consist of Safety Data Sheet (SDS) reporting and inventory reporting [**Revised March 2001, Revised January 2009**].
- Toxic Chemical Release Reporting. Section 313 of EPCRA and Section 6607 of the PPA require certain facilities to report to the federal and state governments the annual quantity of toxic chemicals (listed in 40 CFR 372.65) entering each environmental medium, either through normal operations or as the result of an accident, quantities transferred offsite in waste, as well as other information. Facilities subject to this requirement must submit to USEPA and state officials a toxic chemical release form (Form R) for each toxic chemical manufactured, processed, or otherwise used in quantities exceeding minimum threshold values during the preceding calendar year. Facilities that have a “reportable waste quantity” of 500 lb of a listed toxic chemical may take advantage of an alternate threshold of one million pounds. If the facility does not manufacture, process or otherwise use more than one million pounds, it may certify by filing a Form A certification statement rather than a Form R. Releases that must be reported include those to air, water, and land (including land disposal and underground injection). In addition, discharges to a POTW and transfers to off-site locations for treatment, disposal, energy recovery, and recycling must also be reported. Facilities must also report on the quantities of the chemicals treated, recycled, or combusted for energy recovery onsite [**Revised March 2001**].

Form R/Form A reports must be submitted to both the USEPA and the state on or before July 1. Copies of Form R/Form A reports and related documentation must be kept at the facility for three years after the report is submitted.

The Pollution Prevention Act requires facilities subject to Form R/Form A reporting to also submit information on source reduction.

- **Hazardous Materials Storage** - Containers for hazardous chemicals are required to be labeled or tagged with the identity of the substance and appropriate warning markings. Areas where hazardous materials are stored or used are required to be kept free from accumulations of materials that create a hazard, such as leaking containers, or a placement of containers in a manner that would create hazards such as tripping, fire, or pests. Substances that together may create a fire hazard must be separated (29 CFR 1910.176(c), 1910.1200(b), and 1910.1200(f)).
- **Hazardous Materials in Laboratories** - A chemical hygiene plan that is reviewed annually is required when hazardous chemicals are used in laboratories. Employees are required to be provided with information and training about the hazardous chemicals in their work areas. Records about the exposure of employees are to be kept along with medical records (29 CFR 1910.1450(e), 1910.1450(f), 1910.1450(h), and 1910.1450(j)).
- **Storage of Flammable Liquids** - In general, containers of flammable liquids are to be stored and handled so not to damage the container or label, block exits, or create a fire hazard (29 CFR 1910.106(d)) **[Revised April 2012]**.
- **Flammable Liquids Storage Cabinets** - Storage cabinets are to be fire resistant and labeled **FLAMMABLE - KEEP FIRE AWAY**. Not more than 60 gal of Category 1, 2, or 3 flammable liquids, nor more than 120 gal of Category 4 flammable liquids can be stored in a storage cabinet (29 CFR 1910.106(d)(3)) **[Revised April 2012]**
- **Flammable Liquids Storage Rooms** - Storage rooms inside a building are to be fire resistant and have a raised sill or ramp to prevent the flow of spilled material from exiting the room. Ventilation and clear aisles must be provided, and dispensing must be done by an approved pump or self-closing faucet (29 CFR 1910.106(d)(4)) **[Revised April 2012]**.
- **Flammable Liquids Warehouses or Storage Buildings** - These structures will have 3 ft wide aisles for access to doors, windows, or standpipe connections. Materials will be stacked using pallets or dunnage when needed for stabilization, and fire protection must be provided (29 CFR 1910.106(d)(5)(iv)) **[Revised April 2012]**.
- **Outside Storage of Flammable Liquids** - Containers of flammable liquids can be stored outside if no more than 1100 gal of liquid are stored adjacent to a building. More than 1100 gal can be stored if there are 10 ft or more between buildings and the nearest flammable container. The storage area must be graded to divert spills or surrounded by a curb (29 CFR 1910.106(d)(6)) **[Revised April 2012]**
- **Storage of Flammable Liquids in Industrial Areas** - Specific guidelines, requirements, or operating standards apply wherever flammable liquids are stored, dispensed, or used in industrial plants, are in incidental storage, or in use in unit operations. This includes availability of portable fire extinguishers, precautions being taken to prevent ignition, and use of maintenance and operating practices to control leakage and prevent accidental escape of flammable liquids (29 CFR 1910.106(e)(2) through 1910.106(e)(9)) **[Revised April 2012]**
- **Compressed Gases** - Regardless of where the cylinders are stored, **NO SMOKING** signs should be posted and actions taken to prevent fire. Compressed gases are required to be stored according to the Compressed Gas Association Pamphlet P-1-1965 (29 CFR 1910.101).
- **Acid Storage** - Bulk storage of acids should be done in buildings that are one story in height with ventilation. Safety equipment and fire protection must be available. The building is labeled **NO SMOKING** and heated to prevent freezing (MP).
- **Hazardous Materials Transportation** - The regulations found in Title 49, Subchapter C of the CFR detail requirements for the transportation of hazardous materials, 49 CFR 171.1(b) stipulates that these requirements apply to any person who, under contract with any department, agency, or instrumentality of the executive, legislative, or judicial branch of the Federal Government, transports, or causes to be transported or shipped, a hazardous material or manufactures, fabricates, marks, maintains, reconditions, repairs, or tests a package or container which is represented, marked, certified, or sold by such person as qualified for use in the transportation of a hazardous material is required to comply with all provisions of the Federal hazardous materials transportation law, all orders and regulations issued thereunder, and all other substantive and procedural requirements of Federal, State, and local governments and Indian tribes (except any such requirements that have been preempted by the

Federal hazardous materials transportation law or any other Federal law), in the same manner and to the same extent as any person engaged in such activities that are in or affect commerce is subject to such provisions, orders, regulations, and requirements **[Revised July 2002]**.

#### **E. Key Compliance Definitions**

- *Aerosol* - a material which is dispensed from its container as a mist, spray, or foam by a propellant under pressure (29 CFR 1910.106(a)(1)).
- *Approval* - a written authorization, including a competent authority approval, from the Associate Administrator or other designated Department official, to perform a function for which prior authorization by the Associate Administrator is required under 49 CFR 171 through 180 (49 CFR 171.8) **[Added April 2005]**.
- *Approved* - approval issued or recognized by the Department unless otherwise specifically indicated in 49 CFR parts 171 through 180 (49 CFR 171.8) **[Added April 2005]**.
- *Approved* - listed or approved by Underwriters Laboratories, Inc., Factory Mutual Engineering Corporation, The Bureau of Mines, National Institute of Occupational Safety and Health (NIOSH), The American National Standards Institute (ANSI), National Fire Protection Association (NFPA), or other nationally recognized agencies that list, approve, test, or develop specifications for equipment to meet fire protection, health or safety requirements (29 CFR 1910.106(a)(35)).
- *Article* - a manufactured item which (40 CFR 372.3) **[Added March 2001]**:
  1. is formed to a specific shape or design during manufacture;
  2. has end use functions dependent in whole or in part upon its shape or design during end use;
  3. does not release a toxic chemical under normal conditions of processing or use of that item at the facility or establishments.
- *Article* - a manufactured item other than a fluid or particle (29 CFR 1910.1200(c)):
  1. which is formed to a specific shape or design during manufacture;
  2. which has end use function(s) dependent in whole or in part upon its shape or design during end use; and
  3. which under normal conditions of use does not release more than very small quantities, e.g., minute or trace amounts of a hazardous chemical, and does not pose a physical hazard or health risk to employees.
- *Barge* - any nonself-propelled vessel (46 CFR 90.10-2).
- *Barrel* - a volume of 42 U.S. gallons (29 CFR 1910.106(a)(33)).
- *Basement* - a story of a building or structure having one-half or more of its height below ground level and to which access for fire fighting purposes is unduly restricted (29 CFR 1910.106(a)(4)).
- *Boiling Point* - the temperature at which a liquid starts to boil when at atmospheric pressure (14.7 psia), as determined by ASTM test D-86-72) (29 CFR 1910.106(a)(5)).
- *Bulk Packaging* - a packaging, other than a vessel or a barge, including a transport vehicle or freight container, in which hazardous materials are loaded with no intermediate form of containment and which has (49 CFR 171.8) **[Added April 2005]**:
  1. A maximum capacity greater than 450 L (119 gal) as a receptacle for a liquid;
  2. A maximum net mass greater than 400 kg (882 lb) and a maximum capacity greater than 450 L (119 gal) as a receptacle for a solid; or
  3. A water capacity greater than 454 kg (1000 lb) as a receptacle for a gas as defined in 49 CFR 173.115.

- *Bulk Plant* - that portion of the property where flammable or combustible liquids are received by tank vessel, pipelines, tank car, or tank vehicle and are stored or blended in bulk for the purpose of distributing such liquids by tank vessel, pipeline, car, tank vehicle, or container (29 CFR 1910.106(a)(7)).
- *Bundle of Cylinders* - assemblies of UN cylinders fastened together and interconnected by a manifold and transported as a unit. The total water capacity for the bundle may not exceed 3,000 L, except that a bundle intended for the transport of gases in Division 2.3 is limited to a water capacity of 1,000 L. Not permitted for air transport (49 CFR 171.8) **[Added April 2015]**.
- *Captain of the Port (COTP)* - the U.S. Coast Guard officer commanding a Captain of the Port Zone described in part 3 of this chapter, or that person's authorized representative (33 CFR 154.105 and 156.105) **[Added October 2013]**.
- *Cargo* - on tank vessels this means combustible liquid, flammable liquid, or liquefied flammable gas, unless otherwise stated (46 CFR 30.10-5).
- *Cargo Areas* - on tank vessels, the part of a vessel that includes the cargo tanks and other tanks into which cargo or cargo vapors are intentionally introduced; holds containing these tanks; all intervening spaces within, between, below, or outboard of these tanks or holds; and the deck areas over the length and beam of the vessel above these tanks, holds, or spaces (46 CFR 30.10-5a).
- *Cargo Control Stations* - on tank vessels means a location that is manned during cargo transfer operations for the purpose of directing or controlling the loading or unloading of cargo (46 CFR 30.10- 5b).
- *Category A Machinery Space* - for a tank vessel this means any space and trunks and ducts to such a space that contains (46 CFR 30.10-6a):
  1. internal combustion machinery used for main propulsion
  2. internal combustion machinery used for purposes other than main propulsion where the total aggregate power is at least 500 brake horsepower
  3. internal combustion machinery that uses a fuel with a flashpoint of less than 43.3 °C (110 °F), or
  4. one or more oil-fired boilers or oil-fuel units.
- *CERCLA Hazardous Substance* - a substance defined in section 101(14) of CERCLA and listed in Table 302.4 of 40 CFR 302) (40 CFR 355.61) **[Added March 2001, Revised January 2009]**.
- *Certificated* - for tank vessels this applies to a vessel covered by a certificate of inspection issued by the Coast Guard; when applied to personnel employed on tank vessels, the term refers to a certificate of ability issued by the Coast Guard (46 CFR 30.10-7).
- *Chemical* - any substance, or mixture of substances (29 CFR 1910.1200(c)) **[Revised April 2012]**.
- *Chemical Manufacturer* - an employer with a workplace where chemical(s) are produced for use or distribution (29 CFR 1910.1200(c)).
- *Chemical Name* - the scientific designation of a chemical in accordance with the nomenclature system developed by the International Union of Pure and Applied Chemistry (IUPAC) or the Chemical Abstracts Service (CAS) rules of nomenclature, or a name that will clearly identify the chemical for the purpose of conducting a hazard classification (29 CFR 1910.1200(c)) **[Revised April 2012]**.
- *Classification* - to identify the relevant data regarding the hazards of a chemical; review those data to ascertain the hazards associated with the chemical; and decide whether the chemical will be classified as hazardous according to the definition of hazardous chemical in 29 CFR 1910.1200. In addition, classification for health and

physical hazards includes the determination of the degree of hazard, where appropriate, by comparing the data with the criteria for health and physical hazards (29 CFR 1910.1200(c)) **[Added April 2012]**.

- *Closed Container* - a container so sealed with a lid or other closing device that neither liquid and/or vapor will escape from it at ordinary temperatures (29 CFR 1910.106(a)(9)).
- *Coastwise* - this includes all tank vessels and vessels normally navigating the waters of any ocean or the Gulf of Mexico at 20 nautical miles or less offshore (46 CFR 90.10-11).
- *Cofferdam* - a void or empty space separating two or more compartments for the purpose of isolation or to prevent the contents of one compartment from entering another compartment in the event of the failure of the walls of one to retain their tightness (46 CFR 30.10-13).
- *Combustible Liquid* - for tank vessels this means any liquid having a flashpoint above 80 °F and include (46 CFR 30.10-15):
  1. Grade D, which is any combustible liquid with a flashpoint below 150 °F and above 80 °F
  2. Grade E, which is any combustible liquid with a flashpoint of 150 °F or above.
- *Commerce* - trade or transportation in the jurisdiction of the United States within a single state; between a place in a state and a place outside of the state; that affects trade or transportation between a place in a state and place outside of the state; or on a United States-registered aircraft (49 CFR 171.8) **[Added April 2005; Revised January 2010]**.
- *Common Name* - any designation or identification such as code name, code number, trade name, brand name or generic name used to identify a chemical other than by its chemical name (29 CFR 1910.1200(c)).
- *Consignee* - the person or place shown on a shipping document, package marking, or other media as the location to which a carrier is directed to transport a hazardous material (49 CFR 171.8) **[Added April 2005]**.
- *Consumer Commodity* - a material that is packaged and distributed in a form intended or suitable for sale through retail sales agencies or instrumentalities for consumption by individuals for purposes of personal care or household use. This term also includes drugs and medicines (49 CFR 171.8) **[Added April 2005]**.
- *Container* - any bag, barrel, bottle, box, can, cylinder, drum, reaction vessel, storage tank, or the like that contains a hazardous chemical. For purposes of this section, pipes or piping systems, and engines, fuel tanks, or other operating systems in a vehicle, are not considered to be containers (29 CFR 1910.1200(c)).
- *Continuous* - continuous release is a release that occurs without interruption or abatement or that is routine, anticipated, and intermittent and incidental to normal operations or treatment processes (40 CFR 302.8(b)) **[Added April 1999; Reviewed March 2001]**.
- *Control Space* - an enclosed space in which is located a ship's radio, main navigating equipment, or emergency source of power, or in which is located centralized fire recording or fire control equipment, but not including firefighting apparatus that must be located in the cargo area or individual pieces of firefighting equipment (46 CFR 30.10-19a).
- *Designated Facility* - a hazardous waste treatment, storage, or disposal facility that has been designated on the manifest by the generator (49 CFR 171.8) **[Added April 2005]**.
- *Designated Representative* - any individual or organization to whom an employee gives written authorization to exercise such employee's rights under this section. A recognized or certified collective bargaining agent shall be treated automatically as a designated representative without regard to written employee authorization (29 CFR 1910.1200(c)).

- *Director* - the Director, National Institute for Occupational Safety and Health, U.S. Department of Health and Human Services, or designee (29 CFR 1910.1200(c)).
- *Discharge* - any release, however caused, from a ship and includes any escape, disposal, spilling, leaking, pumping, emitting, or emptying (33 CFR 151.05).
- *Distributor* - a business, other than a chemical manufacturer or importer, which supplies hazardous chemicals to other distributors or to employers (29 CFR 1910.1200(c)).
- *Division 6.2 (Infectious Substance)* - a material known or reasonably expected to contain a pathogen. A pathogen is a microorganism (including bacteria, viruses, rickettsiae, parasites, fungi) or other agent, such as a proteinaceous infectious particle (prion) that can cause disease in humans or animals. An infectious substance must be assigned the identification number UN 2814, UN 2900, UN 3373, or UN 3291 as appropriate, and must be assigned to one of the following categories (49 CFR 173.134(a)(1)) **[Added July 2006]**:
  1. Category A: An infectious substance in a form capable of causing permanent disability or life-threatening or fatal disease in otherwise healthy humans or animals when exposure to it occurs. An exposure occurs when an infectious substance is released outside of its protective packaging, resulting in physical contact with humans or animals. A Category A infectious substance must be assigned to identification number UN 2814 or UN 2900, as appropriate. Assignment to UN 2814 or UN 2900 must be based on the known medical history or symptoms of the source patient or animal, endemic local conditions, or professional judgment concerning the individual circumstances of the source human or animal.
  2. Category B: An infectious substance that is not in a form generally capable of causing permanent disability or life-threatening or fatal disease in otherwise healthy humans or animals when exposure to it occurs. This includes Category B infectious substances transported for diagnostic or investigational purposes. A Category B infectious substance must be described as "Biological substance, Category B" and assigned identification number UN 3373. This does not include regulated medical waste, which must be assigned identification number UN 3291.
- *Domestic Wastes* - all types of wastes generated in the living spaces on board a ship except victual wastes (33 CFR 151.05).
- *Drums, Barrels, or Other Packages* - this is interpreted to mean portable tanks having a maximum capacity of 110 gal and Department of Transportation (DOT) specification cylinders having a water capacity of not more than 1000 lb that are actually loaded and discharged from vessels with their content intact (46 CFR 30.01-20(a) and 90.05-30).
- *Employee* - a worker who may be exposed to hazardous chemicals under normal operating conditions or in foreseeable emergencies. Workers such as office workers or bank tellers who encounter hazardous chemicals only in non-routine, isolated instances are not covered (29 CFR 1910.1200(c)).
- *Employer* - a person engaged in a business where chemicals are either used, distributed, or are produced for use or distribution, including a contractor or subcontractor (29 CFR 1910.1200(c)).
- *Environment* - includes water, air, and land and the interrelationship that exists among and between water, air, and land and all living things (40 CFR 355.61 and 370.66) **[Added January 2009]**.
- *Exposure or Exposed* - that an employee is subjected in the course of employment to a chemical that is a physical or health hazard, and includes potential (e.g. accidental or possible) exposure. "Subjected" in terms of health hazards includes any route of entry (e.g. inhalation, ingestion, skin contact or absorption.) (29 CFR 1910.1200(c)).
- *Extremely Hazardous Substance* - all substances listed in Appendices A and B of 40 CFR 355 (40 CFR 355.61 and 370.66) **[Reviewed March 2001, Citation Revised January 2009]**.

- *Facility* - either an onshore or offshore facility, except for an offshore facility operating under the jurisdiction of the Secretary of the Department of Interior, and includes, but is not limited to, structure, equipment, and appurtenances thereto, used or capable of being used to transfer oil or hazardous materials to or from a vessel or public vessel. Also included are facilities that tank clean or strip and any floating structure that is used to support an integral part of the facility's operation. A facility includes federal, state, municipal, and private facilities (33 CFR 154.105 and 156.105) **[Added October 2013]**.
- *Facility Operator* - the person who owns, operates, or is responsible for the operation of the facility (33 CFR 154.105 and 156.105) **[Added October 2013]**.
- *Facility* - all buildings, equipment, structures, and other stationary items that are located on a single site or on contiguous or adjacent sites and that are owned or operated by the same person (or by any person that controls, is controlled by, or under common control with, such person). Facility includes manmade structures, as well as all natural structures in which chemicals are purposefully placed or removed through human means such that it functions as a containment structure for human use (40 CFR 370.66) **[Added March 2001, Revised January 2009]**.
- *Facility* - all buildings, equipment, structures, and other stationary items that are located on a single site or on contiguous or adjacent sites and that are owned or operated by the same person (or by any person that controls, is controlled by, or under common control with, such person). Facility includes manmade structures, as well as all natural structures in which chemicals are purposefully placed or removed through human means such that it functions as a containment structure for human use. For purposes of emergency release notification, the term includes motor vehicles, rolling stock, and aircraft (40 CFR 355.61) **[Added January 2009]**.
- *Facility* - all buildings, equipment, structures, and other stationary items which are located on a single site or on contiguous or adjacent sites and which are owned or operated by the same person (or by any person which controls, is controlled by, or under common control with such person). A facility may contain more than one establishment (40 CFR 372.3) **[Added March 2001]**.
- *Fire Area* - that portion of a building separated from the remainder by construction having a rated fire resistance of at least 1 h and having all communicating openings properly protected by an assembly having a fire-resistance rating of at least 1 h (29 CFR 1910.106(a)(12)).
- *Flammable Aerosol* - a flammable aerosol as defined by Appendix B to 29 CFR 1910.1200--Physical Hazard Criteria. For the purposes of 29 CFR 106(d) of this section, such aerosols are considered Category 1 flammable liquids (29 CFR 1910.106(a)(13)) **[Added April 2012]**.
- *Flammable Liquid* - any liquid having a flashpoint at or below 199.4 °F (93 °C). Flammable liquids are divided into four categories as follows (29 CFR 1910.106(a)(19)) **[Revised April 2012]**:
  1. Category 1 shall include liquids having flashpoints below 73.4 °F (23 °C) and having a boiling point at or below 95 °F (35 °C).
  2. Category 2 shall include liquids having flashpoints below 73.4 °F (23 °C) and having a boiling point above 95 °F (35 °C).
  3. Category 3 shall include liquids having flashpoints at or above 73.4 °F (23 °C) and at or below 140 °F (60 °C). When a Category 3 liquid with a flashpoint at or above 100 °F (37.8 °C) is heated for use to within 30 °F (16.7 °C) of its flashpoint, it shall be handled in accordance with the requirements for a Category 3 liquid with a flashpoint below 100 °F (37.8 °C).
  4. Category 4 shall include liquids having flashpoints above 140 °F (60 °C) and at or below 199.4 °F (93 °C). When a Category 4 flammable liquid is heated for use to within 30 °F (16.7 °C) of its flashpoint, it shall be handled in accordance with the requirements for a Category 3 liquid with a flashpoint at or above 100 °F (37.8 °C).
  5. When liquid with a flashpoint greater than 199.4 °F (93 °C) is heated for use to within 30 °F (16.7 °C) of its flashpoint, it shall be handled in accordance with the requirements for a Category 4 flammable liquid.

- *Flammable Liquid* - any liquid that gives off flammable vapors at or below a temperature of 80 °F (46 CFR 30.10-22).
- *Flame Arrester* - any device or assembly of a cellular, tubular, pressure, or other type used for preventing the passage of flames into an enclosed space (46 CFR 30.10-23).
- *Flashpoint* - means the minimum temperature at which a liquid gives off vapor within a test vessel in sufficient concentration to form an ignitable mixture with air near the surface of the liquid, and shall be determined as follows: (29 CFR 1910.106(a)(14)) **[Revised April 2012]**.
  1. For a liquid which has a viscosity of less than 45 SUS at 100 °F (37.8 °C), does not contain suspended solids, and does not have a tendency to form a surface film while under test, the procedure specified in the Standard Method of Test for Flashpoint by Tag Closed Tester (ASTM D-56-70), which is incorporated by reference as specified in 29 CFR 1910.6, or an equivalent test method as defined in Appendix B to 29 CFR 1910.1200--Physical Hazard Criteria, shall be used.
  2. For a liquid which has a viscosity of 45 SUS or more at 100 °F (37.8 °C), or contains suspended solids, or has a tendency to form a surface film while under test, the Standard Method of Test for Flashpoint by Pensky-Martens Closed Tester (ASTM D-93-71) or an equivalent method as defined by Appendix B to 29 CFR 1910.1200--Physical Hazard Criteria, shall be used except that the methods specified in Note 1 to section 1.1 of ASTM D-93-71 may be used for the respective materials specified in the Note. The preceding ASTM standard is incorporated by reference as specified in 29 CFR 1910.6.
  3. For a liquid that is a mixture of compounds that have different volatilities and flashpoints, its flashpoint shall be determined by using the procedure specified in paragraph 1 or 1 of this definition on the liquid in the form it is shipped.
  4. Organic peroxides, which undergo autoaccelerating thermal decomposition, are excluded from any of the flashpoint determination methods specified in this definition.
- *Flexible Bulk Container* - a flexible container with a capacity not exceeding 15 cubic meters and includes liners and attached handling devices and service equipment (49 CFR 171.8) **[Added April 2013]**.
- *Foreseeable Emergency* - any potential occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment which could result in an uncontrolled release of a hazardous chemical into the workplace (29 CFR 1910.1200(c)).
- *Fuel Tank* - a tank other than a cargo tank, used to transport flammable or combustible liquid, or compressed gas for the purpose of supplying fuel for propulsion of the transport vehicle to which it is attached, or for the operation of other equipment on the transport vehicle (49 CFR 171.8) **[Added April 2005]**.
- *Hazard Category* – This term is divided into two categories, health and physical hazards. (40 CFR 370.66) **[Added April 1999; Reviewed March 2001; Citation Revised January 2009; Revised July 2016]**:
  1. Health hazard means a chemical which poses one of the following hazardous effects: Carcinogenicity; acute toxicity (any route of exposure); aspiration hazard; reproductive toxicity; germ cell mutagenicity; skin corrosion or irritation; respiratory or skin sensitization; serious eye damage or eye irritation; specific target organ toxicity (single or repeated exposure); simple asphyxiant; and hazard not otherwise classified (HNOC).
  2. Physical hazard means a chemical which poses one of the following hazardous effects: Flammable (gases, aerosols, liquids or solids); gas under pressure; explosive; self-heating; pyrophoric (liquid or solid); pyrophoric gas; oxidizer (liquid, solid or gas); organic peroxide; self-reactive; in contact with water emits flammable gas; combustible dust; corrosive to metal; and hazard not otherwise classified (HNOC).

- *Hazard Category* - the division of criteria within each hazard class, e.g., oral acute toxicity and flammable liquids include four hazard categories. These categories compare hazard severity within a hazard class and should not be taken as a comparison of hazard categories more generally (29 CFR 1910.1200(c)) **[Added April 2012]**.
- *Hazard Class* - the category of hazard assigned to a hazardous material under the definitional criteria of 49 CFR 173 and the provisions of the 49 CFR 172.101 table. A material may meet the defining criteria for more than one hazard class but is assigned to only one hazard class (49 CFR 171.8) **[Added April 2005]**.
- *Hazard Class* - the nature of the physical or health hazards, e.g., flammable solid, carcinogen, oral acute toxicity (29 CFR 1910.1200(c)) **[Added April 2012]**.
- *Hazard Not Otherwise Classified (HNOC)* - an adverse physical or health effect identified through evaluation of scientific evidence during the classification process that does not meet the specified criteria for the physical and health hazard classes addressed in 29 CFR 1910.1200. This does not extend coverage to adverse physical and health effects for which there is a hazard class addressed in 29 CFR 1910.1200, but the effect either falls below the cut-off value/concentration limit of the hazard class or is under a GHS hazard category that has not been adopted by OSHA (e.g., acute toxicity Category 5) (29 CFR 1910.1200(c)) **[Added April 2012]**.
- *Hazard Statement* - a statement assigned to a hazard class and category that describes the nature of the hazard(s) of a chemical, including, where appropriate, the degree of hazard (29 CFR 1910.1200(c)) **[Added April 2012]**.
- *Hazardous Chemical* - any chemical which is classified as a physical hazard or a health hazard, a simple asphyxiant, combustible dust, pyrophoric gas, or hazard not otherwise classified (29 CFR 1910.1200(c)) **[Added April 2012]**.
- *Hazardous Chemical* - in relationship to laboratories, any chemical which is classified as health hazard or simple asphyxiant in accordance with the Hazard Communication Standard (29 CFR 1910.1450(b)) **[Revised April 2012]**.
- *Hazardous Chemical* - any hazardous chemical as defined under 29 CFR 1910.1200(c), except that this term does not include (40 CFR 355.61 and 370.66) **[Added March 2001; Revised January 2009]**:
  1. Any food, food additive, color additive, drug, or cosmetic regulated by the Food and Drug Administration.
  2. Any substance present as a solid in any manufactured item to the extent exposure to the substance does not occur under normal conditions of use.
  3. Any substance to the extent it is used:
    - a. For personal, family, or household purposes, or is present in the same form and concentration as a product packaged for distribution and use by the general public. Present in the same form and concentration as a product packaged for distribution and use by the general public means a substance packaged in a similar manner and present in the same concentration as the substance when packaged for use by the general public, whether or not it is intended for distribution to the general public or used for the same purpose as when it is packaged for use by the general public;
    - b. In a research laboratory or hospital or other medical facility under the direct supervision of a technically qualified individual; or
    - c. In routine agricultural operations or is a fertilizer held for sale by a retailer to the ultimate customer.
- *Hazardous Material* - a substance or material that the Secretary of Transportation has determined is capable of posing an unreasonable risk to health, safety, and property when transported in commerce, and has designated as hazardous under section 5103 of Federal hazardous materials transportation law (49 U.S.C. 5103). The term includes hazardous substances, hazardous wastes, marine pollutants, elevated temperature materials, materials designated as hazardous in the Hazardous Materials Table (see 49 CFR 172.101), and materials that meet the defining criteria for hazard classes and divisions in 49 CFR 173 (49 CFR 171.8) **[Added April 2005; Revised October 2012]**.

- *Hazardous Material* - a liquid material or substance, other than oil or liquefied gases, listed under 46 CFR 153.40 (a), (b), (c), or (e) (33 CFR 154.105 and 156.105) [**Added October 2013**].
- *Hazardous Substance* - any substance designated pursuant to 40 CFR 302 (40 CFR 302.3) [**Reviewed March 2001**].
- *Hazardous Substance* - for the purposes of this subchapter, means a material, including its mixtures and solutions, that (49 CFR 171.8) [**Added April 2005**]:
  1. Is listed in the appendix A to 49 CFR 172.101;
  2. Is in a quantity, in one package, which equals or exceeds the reportable quantity (RQ) listed in the appendix A to 49 CFR 172.101; and
  3. When in a mixture or solution--
    - a. For radionuclides, conforms to paragraph 7 of the appendix A to 49 CFR 172.101.
    - b. For other than radionuclides, is in a concentration by weight which equals or exceeds the concentration corresponding to the RQ of the material, as shown in the following table:

RQ pounds (kg)	Concentration by weight	
	Percent	PPM
5000 (2270)_	10	10,000
1000 (454)	2	20,000
100 (45.4)	0.2	2,000
10 (4.54)	0.02	200
1 (0.454)	0.002	20

The term does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance in appendix A to 49 CFR 172.101, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).

- *Hazmat* - a hazardous material (49 CFR 171.8) [**Added April 2005**].
- *Hazmat Employee* – this term means (49 CFR 171.8) [**Added April 2005; Revised January 2006**]:
  1. A person who is:
    - a. Employed on a full-time, part time, or temporary basis by a hazmat employer and who in the course of such full time, part time or temporary employment directly affects hazardous materials transportation safety;
    - b. Self-employed (including an owner-operator of a motor vehicle, vessel, or aircraft) transporting hazardous materials in commerce who in the course of such self-employment directly affects hazardous materials transportation safety;
    - c. A railroad signalman; or
    - d. A railroad maintenance-of-way employee.
  2. This term includes an individual, employed on a full time, part time, or temporary basis by a hazmat employer, or who is self-employed, who during the course of employment:
    - a. Loads, unloads, or handles hazardous materials;
    - b. Designs, manufactures, fabricates, inspects, marks, maintains, reconditions, repairs, or tests a package, container or packaging component that is represented, marked, certified, or sold as qualified for use in transporting hazardous material in commerce.
    - c. Prepares hazardous materials for transportation;
    - d. Is responsible for safety of transporting hazardous materials;
    - e. Operates a vehicle used to transport hazardous materials.

- *Hazmat Employer* – this term means (49 CFR 171.8) [**Added January 2006**]:
  1. A person who employs or uses at least one hazmat employee on a full-time, part time, or temporary basis; and who:
    - a. Transports hazardous materials in commerce;
    - b. Causes hazardous materials to be transported in commerce; or
    - c. Designs, manufactures, fabricates, inspects, marks, maintains, reconditions, repairs or tests a package, container, or packaging component that is represented, marked, certified, or sold by that person as qualified for use in transporting hazardous materials in commerce;
  2. A person who is self-employed (including an owner-operator of a motor vehicle, vessel, or aircraft) transporting materials in commerce; and who:
    - a. Transports hazardous materials in commerce;
    - b. Causes hazardous materials to be transported in commerce; or
    - c. Designs, manufactures, fabricates, inspects, marks, maintains, reconditions, repairs or tests a package, container, or packaging component that is represented, marked, certified, or sold by that person as qualified for use in transporting hazardous materials in commerce; or
  3. A department, agency, or instrumentality of the United States Government, or an authority of a State, political subdivision of a State, or an Indian tribe; and who:
    - a. Transports hazardous materials in commerce;
    - b. Causes hazardous materials to be transported in commerce; or
    - c. Designs, manufactures, fabricates, inspects, marks, maintains, reconditions, repairs or tests a package, container, or packaging component that is represented, marked, certified, or sold by that person as qualified for use in transporting hazardous materials in commerce.
- *Health Hazard* - a chemical which is classified as posing one of the following hazardous effects: acute toxicity (any route of exposure); skin corrosion or irritation; serious eye damage or eye irritation; respiratory or skin sensitization; germ cell mutagenicity; carcinogenicity; reproductive toxicity; specific target organ toxicity (single or repeated exposure); or aspiration hazard. The criteria for determining whether a chemical is classified as a health hazard are detailed in Appendix A to 29 CFR 1910.1200--Health Hazard Criteria (29 CFR 1910.1200(c)) [**Revised April 2012**].
- *Health Hazard* - a chemical that is classified as posing one of the following hazardous effects: acute toxicity (any route of exposure); skin corrosion or irritation; serious eye damage or eye irritation; respiratory or skin sensitization; germ cell mutagenicity; carcinogenicity; reproductive toxicity; specific target organ toxicity (single or repeated exposure); aspiration hazard. The criteria for determining whether a chemical is classified as a health hazard are detailed in Appendix A of the Hazard Communication Standard and 29 CFR 1910.1200© [definition of “simple asphyxiant” (29 CFR 1910.1450(b)) [**Added April 2012**].
- *HMR* - the Hazardous Materials Regulations, Parts 171 through 180 of Title 49 (49 CFR 171.8) [**Added April 2005**].
- *Identity* - any chemical or common name which is indicated on the safety data sheet (SDS) for the chemical. The identity used shall permit cross-references to be made among the required list of hazardous chemicals, the label and the MSDS (29 CFR 1910.1200(c)).
- *Immediate Use* - that the hazardous chemical will be under the control of and used only by the person who transfers it from a labeled container and only within the work shift in which it is transferred (29 CFR 1910.1200(c)).
- *IM 101 or 102 Portable Tank* - a portable tank constructed in accordance with 49 CFR 178.270 through 178.272 and approved under 73.32a (46 CFR 98.30-2(a)).
- *Indian Country* - Indian country defined in 18 U.S.C. 1151 as (40 CFR 355.61 and 370.66) [**Added January 2009**]:

1. All land within the limits of any Indian reservation under the jurisdiction of the United States government, notwithstanding the issuance of any patent, and, including rights-of-way running through the reservation;
  2. All dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a State; and
  3. All Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same.
- *Indian Tribe or Tribe* - those Tribes federally recognized by the Secretary of the Interior (40 CFR 355.61 and 370.66) **[Added January 2009]**.
  - *Industrial Vessel* - every vessel which, by reason of its special outfit, purpose, and design for function, engages in certain industrial ventures. Included in this classification are such vessels as drill rigs, missile range ships, dredges, cable layers, derrick barges, pipe lay barges, and construction and wrecking barges.
  - *Inflammable or Combustible Liquid Cargo in Bulk* - this is interpreted on tank vessels to include such cargo in portable tanks of a capacity more than 110 gal (46 CFR 30.01-20(b)).
  - *Institutional Occupancy* - the occupancy or use of a building or structure or any portion thereof by persons harbored or detained to receive medical, charitable or other care or treatment or by persons involuntarily detained (29 CFR 1910.106(a)(16)).
  - *Inventory Form* - the uniform Tier I and Tier II emergency and hazardous chemical inventory forms published by EPA. These forms can be used for reporting inventory information, as described in 40 CFR 370.40 through 370.45 (40 CFR 370.66) **[Added April 1999; Reviewed March 2001; Revised January 2009]**.
  - *Keel Laying Date* - the date upon which progressive construction identifiable with a specific vessel begins, including construction of the first module or prefabricated section of the hull that is identifiable with that vessel (46 CFR 30.10-37).
  - *LEPC* - the Local Emergency Planning Committee appointed by the State Emergency Response Commission (40 CFR 355.61) **[Added January 2009]**.
  - *Label* - an appropriate group of written, printed or graphic information elements concerning a hazardous chemical that is affixed to, printed on, or attached to the immediate container of a hazardous chemical, or to the outside packaging. (29 CFR 1910.1200(c)) **[Revised April 2012]**.
  - *Label Elements* - the specified pictogram, hazard statement, signal word and precautionary statement for each hazard class and category (29 CFR 1910.1200(c)) **[Added April 2012]**.
  - *Laboratory* - a facility where the laboratory use of hazardous chemicals occurs. It is a workplace where relatively small quantities of hazardous chemicals are used on a nonproduction basis (29 CFR 1910.1450(b)).
  - *Laboratory Scale* - work with substances in which the containers used for reactions, transfers, and other handling of substances are designed to be easily and safely manipulated by one person (29 CFR 1910.1450(b)).
  - *Laboratory Use of a Hazardous Chemical* - handling or use of such chemicals in which all of the following conditions are met (29 CFR 1910.1450(b)):
    1. chemical manipulations are carried out on a laboratory scale
    2. multiple chemical procedures or chemicals are used
    3. the procedures involved are not part of a production process, nor in any way simulate a production process
    4. protective laboratory practices and equipment are available and in common use to minimize the potential for employee exposure to hazardous chemicals.

- *Large Salvage Packaging* - a special packaging into which damaged, defective or leaking hazardous materials packages, or hazardous materials that have spilled or leaked are placed for the purpose of transport for recovery or disposal, that (49 CFR 171.8) **[Added April 2015]**:
  1. Is designed for mechanical handling; and
  2. Has a net mass greater than 400 kg (882 pounds) or a capacity of greater than 450 L (119 gallons), but has a volume of not more than 3 cubic meters (106 cubic feet).
- *Lightweight* - the displacement of a vessel in metric tons without cargo, oil fuel, lubricating oil, ballast water, fresh water, feedwater in tanks, consumable stores, and persons and their effects (46 CFR 30.10-38).
- *Liquefied Flammable Gas* - any flammable gas having a Reid vapor pressure exceeding 40 lb, which has been liquefied (46 CFR 30.10-39).
- *Liquid* - any material with a fluidity greater than that of 300 penetration asphalt when tested in accordance with ASTM Test D-5-65 (29 CFR 1910.106(a)(17)) **[Revised April 2012]**.
- *Liquid* - a material, other than an elevated temperature material, with a melting point or initial melting point of 20 °C (68 °F) or lower at a standard pressure of 101.3 kPa (14.7 psia). A viscous material for which a specific melting point cannot be determined must be subjected to the procedures specified in ASTM D 4359 "Standard Test Method for Determining Whether a Material is Liquid or Solid" (IBR, see 49 CFR 171.7).
- *Loading Incidental to Movement* - loading by carrier personnel or in the presence of carrier personnel of packaged or containerized hazardous material onto a transport vehicle, aircraft, or vessel for the purpose of transporting it, including the loading, blocking and bracing a hazardous materials package in a freight container or transport vehicle, and segregating a hazardous materials package in a freight container or transport vehicle from incompatible cargo. For a bulk packaging, loading incidental to movement means filling the packaging with a hazardous material for the purpose of transporting it. Loading incidental to movement includes transloading (49 CFR 171.8) **[Added April 2005]**.
- *Machinery Space* - any space that contains machinery and related equipment including Category A machinery spaces, propelling machinery, boilers, oil fuel units, steam and internal combustion engines, generators and centralized electrical machinery, oil filling stations, refrigeration stabilizing, ventilation, and air-conditioning machinery, and similar spaces and trunks to such spaces (46 CFR 30.10-42).
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Manufacture* - to produce, prepare, import, or compound a toxic chemical. Manufacture also includes coincidental production of a toxic chemical during the manufacture, processing, use, or treatment of another chemical or mixture of chemicals, including a toxic chemical that is separated from that other chemical or mixture of chemicals as a byproduct, and a toxic chemical that remains in that other chemical or mixture as an impurity (>0.1% for carcinogens; otherwise >1%) (40 CFR 372.3) **[Added March 2001]**.
- *Marine Pollutant* - a material which is listed in appendix B to 49 CFR 172.101 (also see 49 CFR 171.4) and, when in a solution or mixture of one or more marine pollutants, is packaged in a concentration which equals or exceeds (49 CFR 171.8) **[Added April 2005]**:
  1. Ten percent by weight of the solution or mixture for materials listed in the appendix; or
  2. One percent by weight of the solution or mixture for materials that are identified as severe marine pollutants in the appendix.
- *Marine Portable Tank (MPT)* - a liquid-carrying tank that has a capacity of 110 gal or more, is designed to be carried on a vessel, can be lifted full or empty onto and off a vessel, can be filled and discharged while on a vessel, is not permanently attached to the vessel, and was inspected by the Coast Guard on or before 30 September 1992 (46 CFR 64.5).

- *Marine Transfer Area* - that part of a waterfront facility handling oil or hazardous materials in bulk between the vessel, or where the vessel moors, and the first manifold or shutoff valve on the pipeline encountered after the pipeline enters the secondary containment required under 40 CFR 112.7 or 49 CFR 195.264 inland of the terminal manifold or loading arm, or, in the absence of secondary containment, to the valve or manifold adjacent to the bulk storage tank, including the entire pier or wharf to which a vessel transferring oil or hazardous materials is moored (33 CFR 154.105 and 156.105) **[Added October 2013]**.
- *Marking* - a descriptive name, identification number, instructions, cautions, weight, specification, or UN marks, or combinations thereof, required by 49 CFR 171 on outer packagings of hazardous materials (49 CFR 171.8) **[Added April 2005]**.
- *Material Poisonous By Inhalation or Material Toxic By Inhalation* - this means (49 CFR 171.8) **[Added January 2010]**:
  1. A gas meeting the defining criteria in 49 CFR 173.115(c) and assigned to Hazard Zone A, B, C, or D in accordance with 49 CFR 173.116(a);
  2. A liquid (other than as a mist) meeting the defining criteria in 49 CFR 173.132(a)(1)(iii) and assigned to Hazard Zone A or B in accordance with 49 CFR 173.133(a); or
  3. Any material identified as an inhalation hazard by a special provision in column 7 of the 49 CFR 172.101 table.
- *Material Safety Data Sheet (MSDS)* – see *Safety Data Sheet* **[Revised April 2012]**.
- *Medium or Media* - the environment (i.e., air, water, land) (40 CFR 355.61) **[Added January 2009]**.
- *Mixture* - a combination or a solution composed of two or more substances in which they do not react (29 CFR 1910.1200(c)) **[Added April 2012]**.
- *Mixture* (EPCRA 311, 312, and 313) - any combination of two or more chemicals, if the combination is not, in whole or in part, the result of a chemical reaction. However, if the combination was produced by a chemical reaction but could have been produced without a chemical reaction, it is also treated as a mixture. A mixture also includes any combination that consists of a chemical and associated impurities (40 CFR 372.3) **[Added March 2001]**.
- *Mixture* - for the purposes of 40 CFR 355, a heterogeneous association of substances where the various individual substances retain their identities and can usually be separated by mechanical means. This definition includes, for the purposes of 40 CFR 355, solutions but does not include alloys or amalgams (40 CFR 355.61) **[Added April 1999; Reviewed March 2001, Revised January 2009]**.
- *Mixture* - any combination of two or more chemicals if the combination is not, in whole or in part, the result of a chemical reaction (40 CFR 370.66) **[Added April 2012]**.
- *Mobile Facility* - any facility that can readily change location, such as a tank truck or tank car, other than a vessel or public vessel (33 CFR 154.105 and 156.105) **[Added October 2013]**.
- *Motor Vehicle* - includes a vehicle, machine, tractor, trailer, or semitrailer, or any combination thereof, propelled or drawn by mechanical power and used upon the highways in the transportation of passengers or property. It does not include a vehicle, locomotive, or car operated exclusively on a rail or rails, or a trolley bus operated by electric power derived from a fixed overhead wire, furnishing local passenger transportation similar to street-railway service (49 CFR 171.8) **[Added April 2005]**.
- *Movement* - the physical transfer of a hazardous material from one geographic location to another by rail car, aircraft, motor vehicle, or vessel (49 CFR 171.8) **[Added April 2005]**.

- *Mutagen* - chemicals that cause permanent changes in the amount or structure of the genetic material in a cell. Chemicals classified as mutagens in accordance with the Hazard Communication Standard shall be considered mutagens for purposes of this section (29 CFR 1910.1450(b)) **[Added April 2012]**.
- *New Ship* - a ship (33 CFR 151.05):
  1. for which the building contract is placed after 31 December 1975
  2. in the absence of a building contract, the keel of which is laid or which is at a similar stage of construction after 30 June 1976
  3. the delivery of which is after 31 December 1979
  4. that has undergone a major conversion:
    - a. for which the contract is placed after 31 December 1979
    - b. in the absence of a contract, the construction work of which is begun after 30 June 1975
    - c. that is completed after 31 December 1979.
- *Non-bulk Packaging* - a packaging which has (49 CFR 171.8) **[Added April 2015]**:
  1. A maximum capacity of 450 L (119 gallons) or less as a receptacle for a liquid;
  2. A maximum net mass of 400 kg (882 pounds) or less and a maximum capacity of 450 L (119 gallons) or less as a receptacle for a solid;
  3. A water capacity of 454 kg (1000 pounds) or less as a receptacle for a gas as defined in 49 CFR 173.115; or
  4. Regardless of the definition of bulk packaging, a maximum net mass of 400 kg (882 pounds) or less for a bag or a box conforming to the applicable requirements for specification packagings, including the maximum net mass limitations, provided in subpart L of 49 CFR 178.
- *Normal Range* - the normal range of a release is all releases (in pounds or kilograms) of a hazardous substance reported or occurring over any 24-hour period under normal operating conditions during the preceding year. Only releases that are both continuous and stable in quantity and rate may be included in the normal range (40 CFR 302.8(b)) **[Added April 1999; Reviewed March 2001]**.
- *Office Occupancy* - the occupancy or use of a building or structure, or any portion thereof, for the transaction of business, or the rendering or receiving of professional services (29 CFR 1910.106(a)(24)).
- *Offshore Facility* - any facility of any kind located in, on, or under, any of the navigable waters of the United States, and any facility of any kind which is subject to the jurisdiction of the United States and is located in, on, or under any other waters, other than a vessel or a public vessel (33 CFR 154.105 and 156.105) **[Added October 2013]**.
- *Oil* - oil of any kind or in any form, including but not limited to, petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil (33 CFR 154.105 and 156.105) **[Added October 2013]**.
- *Onshore Facility* - any facility (including, but not limited to, motor vehicles and rolling stock) of any kind located in, on, or under any land within the United States other than submerged land (33 CFR 154.105 and 156.105) **[Added October 2013]**.
- *Otherwise Use* - any use of a toxic chemical that is not covered by the terms “manufacture” or “process” and includes use of a toxic chemical contained in a mixture, trade name product or waste. Otherwise use of a toxic chemical does not include disposal, stabilization (without subsequent distribution in commerce), or treatment for destruction unless (40 CFR 372.3) **[Added March 2001]**:
  1. the toxic chemical that was disposed, stabilized, or treated for destruction was received from off-site for the purposes of further waste management; or
  2. the toxic chemical that was disposed, stabilized, or treated for destruction was manufactured as a result of waste management activities on materials received from off-site for the purposes of further waste

management activities. Relabeling or redistributing of the toxic chemical where no repackaging of the toxic chemical occurs does not constitute otherwise use or processing of the toxic chemical.

- *Person* - any individual, trust, firm, joint stock company, corporation (including a government corporation), partnership, association, State, municipality, commission, political subdivision of a State, or interstate body (40 CFR 355.61 and 370.66) **[Added January 2009]**.
- *Person* - an individual, corporation, company, association, firm, partnership, society, joint stock company; or a government, Indian Tribe, or authority of a government or Tribe, that offers a hazardous material for transportation in commerce, transports a hazardous material to support a commercial enterprise, or designs, manufactures, fabricates, inspects, marks, maintains, reconditions, repairs, or tests a package, container, or packaging component that is represented, marked, certified, or sold as qualified for use in transporting hazardous material in commerce. This term does not include the United States Postal Service or, for purposes of 49 U.S.C. 5123 and 5124, a Department, agency, or instrumentality of the government. (49 CFR 171.8) **[Added April 2005; Revised October 2011]**.
- *Person Who Offers or Offeror* - any person who does either or both of the following (49 CFR 171.8) **[Added October 2005]**:
  1. Performs, or is responsible for performing, any pre-transportation function required under this subchapter for transportation of the hazardous material in commerce.
  2. Tenders or makes the hazardous material available to a carrier for transportation in commerce.A carrier is not an offeror when it performs a function required by this subchapter as a condition of acceptance of a hazardous material for transportation in commerce (e.g., reviewing shipping papers, examining packages to ensure that they are in conformance with this subchapter, or preparing shipping documentation for its own use) or when it transfers a hazardous material to another carrier for continued transportation in commerce without performing a pre-transportation function.
- *Physical Hazard* - a chemical that is classified as posing one of the following hazardous effects: explosive; flammable (gases, aerosols, liquids, or solids); oxidizer (liquid, solid or gas); self-reactive; pyrophoric (liquid or solid); self-heating; organic peroxide; corrosive to metal; gas under pressure; or in contact with water emits flammable gas. See Appendix B to 29 CFR 1910.1200--Physical Hazard Criteria (29 CFR 1910.1200(c)) **[Revised April 2012]**.
- *Physical Hazard* - a chemical that is classified as posing one of the following hazardous effects: Explosive; flammable (gases, aerosols, liquids, or solids); oxidizer (liquid, solid, or gas); self reactive; pyrophoric (gas, liquid or solid); self-heating; organic peroxide; corrosive to metal; gas under pressure; in contact with water emits flammable gas; or combustible dust. The criteria for determining whether a chemical is classified as a physical hazard are in Appendix B of the Hazard Communication Standard and 29 CFR 1910.1200(c) (definitions of "combustible dust" and "pyrophoric gas")(29 CFR 1910.1450(b)) **[Added April 2012]**.
- *Pictogram* - a composition that may include a symbol plus other graphic elements, such as a border, background pattern, or color, that is intended to convey specific information about the hazards of a chemical. Eight pictograms are designated under this standard for application to a hazard category (29 CFR 1910.1200(c)) **[Revised April 2012]**.
- *Portable Tank* - a closed container having a liquid capacity over 60 U.S. gal and not intended for fixed installation (29 CFR 1910.106(a)(25)) **[Revised April 2012]**.
- *Precautionary Statement* - a phrase that describes recommended measures that should be taken to minimize or prevent adverse effects resulting from exposure to a hazardous chemical, or improper storage or handling (29 CFR 1910.1200(c)) **[Added April 2012]**.
- *Pre-transportation Function* - a function specified in the HMR that is required to assure the safe transportation of a hazardous material in commerce, including (49 CFR 171.8) **[Revised July 2005]**:

1. Determining the hazard class of a hazardous material.
  2. Selecting a hazardous materials packaging.
  3. Filling a hazardous materials packaging, including a bulk packaging.
  4. Securing a closure on a filled or partially filled hazardous materials package or container or on a package or container containing a residue of a hazardous material.
  5. Marking a package to indicate that it contains a hazardous material.
  6. Labeling a package to indicate that it contains a hazardous material.
  7. Preparing a shipping paper.
  8. Providing and maintaining emergency response information.
  9. Reviewing a shipping paper to verify compliance with the HMR or international equivalents.
  10. For each person importing a hazardous material into the United States, providing the shipper with timely and complete information as to the HMR requirements that will apply to the transportation of the material within the United States.
  11. Certifying that a hazardous material is in proper condition for transportation in conformance with the requirements of the HMR.
  12. Loading, blocking, and bracing a hazardous materials package in a freight container or transport vehicle.
  13. Segregating a hazardous materials package in a freight container or transport vehicle from incompatible cargo.
  14. Selecting, providing, or affixing placards for a freight container or transport vehicle to indicate that it contains a hazardous material.
- *Pressure Vacuum Relief Valve* - any device or assembly of a mechanical, liquid, weight, or other type used for the automatic regulation of pressure or vacuum in enclosed spaces (46 CFR 30.10-55).
  - *Private Track or Private Siding* - (49 CFR 171.8) **[Added April 2005]**:
    1. Track located outside of a carrier's right-of-way, yard, or terminals where the carrier does not own the rails, ties, roadbed, or right-of-way, or
    2. Track leased by a railroad to a lessee, where the lease provides for, and actual practice entails, exclusive use of that trackage by the lessee and/or a general system railroad for purpose of moving only cars shipped to or by the lessee, and where the lessor otherwise exercises no control over or responsibility for the trackage or the cars on the trackage.
  - *Produce* - to manufacture, process, formulate, blend, extract, generate, emit, or repackage (29 CFR 1910.1200(c)).
  - *Product Identifier* - the name or number used for a hazardous chemical on a label or in the SDS. It provides a unique means by which the user can identify the chemical. The product identifier used shall permit cross-references to be made among the list of hazardous chemicals required in the written hazard communication program, the label and the SDS (29 CFR 1910.1200(c)) **[Revised April 2012]**.
  - *Protection for Exposure* - adequate fire protection for structures on property adjacent to tanks where there are employees of the establishment (29 CFR 1910.106(a)(27)).
  - *Pyrophoric Gas* - a chemical in a gaseous state that will ignite spontaneously in air at a temperature of 130 °F (54.4 °C) or below (29 CFR 1910.1200(c)) **[Added April 2012]**.
  - *Release* - any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment (including the abandonment or discarding of barrels, containers, and other closed receptacles) of any hazardous chemical, extremely hazardous substance, or CERCLA hazardous substance (40 CFR 355.61) **[Added April 1999; Reviewed March 2001, Citation Revised January 2009]**.
  - *Release* - any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment (including the abandonment or discarding of barrels, containers, and other closed receptacles) of any toxic chemical (40 CFR 372.3) **[Added March 2001]**.

- *Release* - any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment (including the abandonment or discarding of barrels, containers, and other closed receptacles containing any hazardous substance or pollutant or contaminant), but excludes (40 CFR 302.3) **[Added October 2002]**:
  1. any release which results in exposure to persons solely within a workplace, with respect to such claim which such persons may assert against the employer of such persons;
  2. emissions from the engine exhaust of a motor vehicle, rolling stock, aircraft, vessel, or pipeline pumping station engine;
  3. release of source, byproduct, or special nuclear material from a nuclear incident, as those terms are defined in the *Atomic Energy Act of 1954*, if such release is subject to requirements with respect to financial protection established by the Nuclear Regulatory Commission under section 170 of such Act, or for the purposes of section 103 of CERCLA or any other response action, any release of source, byproduct, or special nuclear material from any processing sites designates under section 102(a)(1) or 302(a) of the *Uranium Mill Tailing Radiation Control Act of 1978*; and
  4. the normal application of fertilizer.
- *Reportable Quantity (RQ)* - for any CERCLA hazardous substance, the quantity established in Table 302.4 of 40 CFR 302.4, for such substance. For any extremely hazardous substance (EHS), reportable quantity means the quantity established in Appendices A and B of 40 CFR 355 for such substance. Unless and until superseded by regulations establishing a reportable quantity for newly listed EHSs or CERCLA hazardous substances, a weight of 1 pound shall be the reportable quantity (40 CFR 355.61) **[Added April 1999; Reviewed March 2001, Revised January 2009]**.
- *Reportable Quantity (RQ)* – that quantity, as set forth in 40 CFR 302, the release of which requires notification pursuant to 40 CFR 302 (40 CFR 302.3) **[Added October 2002]**.
- *Responsible Party* - someone who can provide additional information on the hazardous chemical and appropriate emergency procedures, if necessary (29 CFR 1910.1200(c)).
- *Routine* - routine release is a release that occurs during normal operating procedures or processes (40 CFR 302.8(b)) **[Added April 1999; Reviewed March 2001]**.
- *SERC* - the State Emergency Response Commission for the State in which the facility is located except where the facility is located in Indian Country, in which case, SERC means the Emergency Response Commission for the Tribe under whose jurisdiction the facility is located. In the absence of a SERC for a State or Indian Tribe, the Governor or the chief executive officer of the tribe, respectively, shall be the SERC. Where there is a cooperative agreement between a State and a Tribe, the SERC shall be the entity identified in the agreement (40 CFR 355.61 and 370.66) **[Added January 2009]**.
- *Safety Can* - an approved container, of not more than 5 gal capacity, having a spring-closing lid, spout cover, and so designed that it will safely relieve internal pressure when subjected to fire exposure (29 CFR 1910.106(a)(29)).
- *Safety Data Sheet (SDS)* - written or printed material concerning a hazardous chemical that is prepared in accordance with 29 CFR 1910.1200(g) (29 CFR 1910.1200(c)) **[Added April 2012]**.
- *Select Carcinogens* - any substance that meets one of the following criteria (29 CFR 1910.1450(b)):
  1. it is regulated by OSHA as a carcinogen
  2. it is listed under the category “known to be carcinogens” in the Annual Report on Carcinogens published by the National Toxicology Program (NTP)
  3. it is listed under Group 1 (carcinogenic to humans) by the International Agency for Research on Cancer Monographs (IARC)

4. it is listed in either Group 2A or 2B by IARC or under the category “reasonably anticipated to be carcinogens” by NTP, and causes statistically significant tumor incidences in experimental animals under specific situations.
- *Service Space* - spaces that are used for galleys, pantries containing cooking appliances, lockers, storerooms, paint and lamp rooms, and similar spaces that contain highly combustible materials, laundries, garbage and trash disposal and stowage rooms, workshops other than those forming part of the machinery spaces, and similar spaces and trunks to such spaces (46 CFR 30.10-62a).
  - *Ship* - a vessel of any type whatsoever operating in the marine environment (33 CFR 151.05).
  - *Shipping Paper* - a shipping order, bill of lading, manifest or other shipping document serving a similar purpose and containing the information required by 49 CFR 172.202, 172.203 and 172.204 (49 CFR 171.8) **[Added April 2005]**.
  - *Signal Word* - a word used to indicate the relative level of severity of hazard and alert the reader to a potential hazard on the label. The signal words used in this section are “danger” and “warning.” “Danger” is used for the more severe hazards, while “warning” is used for the less severe (29 CFR 1910.1200(c)) **[Added April 2012]**.
  - *Simple Asphyxiant* - a substance or mixture that displaces oxygen in the ambient atmosphere, and can thus cause oxygen deprivation in those who are exposed, leading to unconsciousness and death (29 CFR 1910.1200(c)) **[Added April 2012]**.
  - *Special Permit* - a document issued by the Associate Administrator under the authority of 49 U.S.C. 5117 permitting a person to perform a function that is not otherwise permitted under subchapter A or C of this chapter, or other regulations issued under 49 U.S.C. 5101 et seq. (e.g., Federal Motor Carrier Safety routing requirements). The terms “special permit” and “exemption” have the same meaning for purposes of subchapter A or C of this chapter or other regulations issued under 49 U.S.C. 5101 through 5127. An exemption issued prior to October 1, 2005 remains valid until it is past its expiration date, terminated by the Associate Administrator, or issued as a special permit, whichever occurs first (49 CFR 171.8) **[Added January 2006]**.
  - *Specific Chemical Identity* - the chemical name, Chemical Abstracts Service (CAS) Registry Number, or any other information that reveals the precise chemical designation of the substance (29 CFR 1910.1200(c)).
  - *Stable In Quantity and Rate* - a release that is stable in quantity and rate is a release that is predictable and regular in amount and rate of emission (40 CFR 302.8(b)) **[Added April 1999; Reviewed March 2001]**.
  - *State* - any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the United States Virgin Islands, the Northern Mariana Islands, any other territory or possession over which the United States has jurisdiction and Indian Country (40 CFR 355.61 and 370.66) **[Added January 2009]**.
  - *Statistically Significant Increase* - a statistically significant increase in a release is an increase in the quantity of the hazardous substance released above the upper bound of the reported normal range of the release (40 CFR 302.8(b)) **[Added April 1999; Reviewed March 2001]**.
  - *Storage Incidental to Movement* - storage of a transport vehicle, freight container, or package containing a hazardous material by any person between the time that a carrier takes physical possession of the hazardous material for the purpose of transporting it in commerce until the package containing the hazardous material is physically delivered to the destination indicated on a shipping document, package marking, or other medium, or, in the case of a private motor carrier, between the time that a motor vehicle driver takes physical possession of the hazardous material for the purpose of transporting it in commerce until the driver relinquishes possession of the package at its destination and is no longer responsible for performing functions subject to the HMR with respect to that particular package. Storage incidental to movement includes:

1. Storage at the destination shown on a shipping document, including storage at a transloading facility, provided the shipping documentation identifies the shipment as a through-shipment and identifies the final destination or destinations of the hazardous material; and
2. Rail cars containing hazardous materials that are stored on track that does not meet the definition of “private track or siding” in 49 CFR 171.8, even if those cars have been delivered to the destination shown on the shipping document.

Storage incidental to movement does not include storage of a hazardous material at its final destination as shown on a shipping document (49 CFR 171.8) **[Revised July 2005]**.

- *Substance* - chemical elements and their compounds in the natural state or obtained by any production process, including any additive necessary to preserve the stability of the product and any impurities deriving from the process used, but excluding any solvent which may be separated without affecting the stability of the substance or changing its composition (29 CFR 1910.1200(c)) **[Added April 2012]**.
- *Tank Barge* - a non-self-propelled tank vessel (33 CFR 154.105 and 156.105) **[Added October 2013]**.
- *Tank Barge* - any tank vessel not equipped with means of self-propulsion (46 CFR 30.10-65).
- *Tankship* - a self-propelled tank vessel constructed or adapted primarily to carry oil or hazardous material in bulk in the cargo spaces (33 CFR 154.105 and 156.105) **[Added October 2013]**.
- *Tankship* - any tank vessel propelled by power or sail (46 CFR 30.10-67).
- *Tank Vessel* - a vessel that is constructed or adapted to carry, or that carries, oil or hazardous material in bulk as cargo or cargo residue, and that (33 CFR 154.105 and 156.105) **[Added October 2013]**:
  1. Is a vessel of the United States;
  2. Operates on the navigable waters of the United States; or
  3. Transfers oil or hazardous material in a port or place subject to the jurisdiction of the United States.
- *Tank Vessel* - any vessel especially constructed or converted to carry liquid bulk cargo in tanks (46 CFR 30.10-69).
- *Threshold Planning Quantity* - for a substance listed in Appendices A and B of 40 CFR 355, the quantity listed in the column “threshold planning quantity” for that substance (40 CFR 355.61 and 370.66) **[Added March 2001; Revised January 2009]**.
- *Title III* - Title III of the *Superfund Amendments and Reauthorization Act of 1986*, also titled the *Emergency Planning and Community Right-to-Know Act of 1986* (40 CFR 372.3) **[Added March 2001]**.
- *Toxic Chemical* - a chemical or chemical category listed in 40 CFR 372.65 (40 CFR 372.3).
- *Trade Secret* - any confidential formula, pattern, process, device, information or compilation of information that is used in an employer's business, and that gives the employer an opportunity to obtain an advantage over competitors who do not know or use it. Appendix E to 29 CFR 1910.1200--Definition of Trade Secret, sets out the criteria to be used in evaluating trade secrets (29 CFR 1910.1200(c)) **[Added April 2012]**.
- *Transfer* - any movement of oil or hazardous material to, from, or within a vessel by means of pumping, gravitation, or displacement. A transfer is considered to begin when the person in charge on the transferring vessel or facility and the person in charge on the receiving facility or vessel first meet to begin completing the declaration of inspection as required by § 156.150 of this chapter. A transfer is considered to be complete when all the connections for the transfer have been uncoupled and secured with blanks or other closure devices and both of the persons in charge have completed the declaration of inspection to include the date and time the transfer was complete (33 CFR 154.105 and 156.105) **[Added October 2013]**.

- *Transloading* - the transfer of a hazardous material by any person from one bulk packaging to another bulk packaging, from a bulk packaging to a non-bulk packaging, or from a non-bulk packaging to a bulk packaging for the purpose of continuing the movement of the hazardous material in commerce (49 CFR 171.8) [Revised July 2005].
- *Transportation or Transport* - the movement of property and loading, unloading, or storage incidental to that movement (49 CFR 171.8) [**Added April 2005**].
- *Undeclared Hazardous Material* - a hazardous material that is (49 CFR 171.8) [**Added April 2004**]:
  1. subject to any of the hazard communication requirements in subparts C (Shipping Papers), D (Marking), E (Labeling), and F (Placarding) of 49 CFR 172, or an alternative marking requirement in 49 CFR 173 (such as 49 CFR 173.4(a)(10) and 173.6(c)), and
  2. offered for transportation in commerce without any clear indication of the presence of the hazardous material in or on at least one of the following: an accompanying shipping paper, the outer package, the transport vehicle or freight container, or another written statement by the person offering the hazardous material for transportation.
- *Unloading Incidental to Movement* - moving a packaged or containerized hazardous material from a transport vehicle, aircraft, or vessel, or for a bulk packaging, emptying a hazardous material from the bulk packaging after the hazardous material has been delivered to the consignee when performed by carrier personnel or in the presence of carrier personnel or, in the case of a private motor carrier, while the driver of the motor vehicle from which the hazardous material is being unloaded immediately after movement is completed is present during the unloading operation. (Emptying a hazardous material from a bulk packaging while the packaging is on board a vessel is subject to separate regulations as delegated by Department of Homeland Security Delegation No. 0170.1 at 2(103).) Unloading incidental to movement includes transloading (49 CFR 171.8) [**Revised July 2005**].
- *Unintentional Release* - the escape of a hazardous material from a package on an occasion not anticipated or planned. This includes releases resulting from collision, package failures, human error, criminal activity, negligence, improper packing, or unusual conditions such as the operation of pressure relief devices as a result of over-pressurization, overfill or fire exposure. It does not include releases, such as venting of packages, where allowed, and the operational discharge of contents from packages (49 CFR 171.8) [**Added April 2004**].
- *Unlisted Hazardous Substances* - a solid waste, as defined in 40 CFR 261.2, which is not excluded from regulation as a hazardous waste under 40 CFR 261.4(b), is a hazardous substance under section 101(14) of CERCLA if it exhibits any of the characteristics identified in 40 CFR 261.20 through 261.24 (40 CFR 302.4(b)) [**Added April 1999; Reviewed March 2001**].
- *Use* - to package, handle, react, emit, extract, generate as a byproduct, or transfer (29 CFR 1910.1200(c)).
- *Vapor Pressure* - the pressure, measured in pounds per square inch (absolute) exerted by a volatile liquid (29 CFR 1910.106(a)(30)).
- *Vessel Operator* - a person who owns, operates, or is responsible for the operation of a vessel (33 CFR 154.105 and 156.105) [**Added October 2013**].
- *Work Area* - a room or defined space in a workplace where hazardous chemicals are produced or used, and where employees are present (29 CFR 1910.1200(c)).
- *Workplace* - an establishment, job site, or project, at one geographical location containing one or more work areas (29 CFR 1910.1200(c)).

## F. Records To Review

- Hazardous Substance Spill Control and Contingency Plan
- Spill records
- Emergency plan documents
- SDSs
- Inventory records
- Hazardous substance release reports
- Shipping papers
- Training records
- Placarding of hazardous materials
- Ships log
- Certificate of Inspection
- Classification Society Certificates
- Licenses, documents, and endorsements for crew members
- Vessel Response Plan
- Hazardous Communication Plan
- Chemical Hygiene Plan (labs)

#### **G. Physical Features To Inspect**

- Hazardous material storage areas
- Shop activities
- Shipping and receiving area
- Hazardous material transfer areas

## H. Guidance for Hazardous Materials Management Checklist Users

	<b>REFER TO CHECKLIST ITEMS:</b>
All Facilities	HM.1.1.US through HM.1.4.US
Missing, Risk Management, and Positive Checklist Items	HM.2.1.US through HM.2.3.US
Personnel Training	HM.10.1.US and HM.10.2.US
Hazardous Materials in Laboratories	HM.15.1.US through HM.15.4.US
Releases of Hazardous Materials	HM.20.1.US through HM.20.4.US
Emergency Planning	HM.25.1.US
Right-to-Know	HM.30.1.US through HM.30.3.US
Flammable/Combustible Liquids Storage General Industrial Areas	HM.35.1.US through HM.35.9.US HM.40.1.US through HM.40.3.US
Compressed Gases Storage	HM.45.1.US
Hazardous Materials Transportation	HM.50.1.US through HM.50.12.US
Hazardous Material Transfer Operations To or From Vessels	HM.55.1.US through HM.55.5.US
Fixed Facility Transfer Operations for Hazardous Materials	HM.60.1.US through HM.60.3.US
Hazardous Materials Storage on Floating Plants	HM.65.1.US through HM.65.3.US
Hazardous Materials on Tank Vessels	HM.70.1.US through HM.70.12.US
Hazardous Materials on Cargo and Miscellaneous Vessels	HM.75.1.US
<hr/> Appendix 3-0, Comparison of 40 CFR 355 Emergency Release Notification Requirements and the Release Notification Requirements of CERCLA as Codified In 40 CFR 302	
Appendix 3-0a, Community Right-To-Know Reporting of Mixtures	
Appendix 3-0b, Codes for Tier I and Tier II Inventory Reporting	
Appendix 3-1, Combined List of Chemicals Covered in Title III of SARA	
Appendix 3-1a, Lower Thresholds for Chemicals of Special Concern	
Appendix 3-2, Maximum Allowable Capacity of Containers and Portable Tanks	

Appendix 3-3, Storage in Inside Rooms

Appendix 3-4, Flammable Materials Storage.

Appendix 3-5, Deleted

Appendix 3-6, Placarding Guidelines.

Appendix 3-7, List of Flammable and Combustible Bulk Liquid Cargoes.

Appendix 3-8, Classes of Vessels.

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions that have been added or revised as a result of this review are identified as either being reviewed, revised or added in March 2001, for example [**Reviewed March 2001**].

<p style="text-align: center;"><b>COMPLIANCE CATEGORY</b>  <b>HAZARDOUS MATERIALS MANAGEMENT</b>  <b>U.S. TEAM Guide</b></p>	
<p style="text-align: center;"><b>REGULATORY REQUIREMENTS</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS</b>  <b>December 2018</b></p>
<p><b>HM.1</b></p> <p><b>ALL FACILITIES</b></p> <p><b>HM.1.1.US.</b> The current status of any ongoing or unresolved consent orders, compliance agreements, notices of violation (NOVs), interagency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).</p> <p><b>HM.1.2.US.</b> A Safety Data Sheet (SDS) is required to be on file for each hazardous chemical stored and used (29 CFR 1910.1200(b)(3)(ii), 1910.1200(b)(4)(ii), 1910.1200(b)(6), 1910.1200(g)(1), and 1910.1200(g)(8) through 1910.1200(g)(10)) <b>[Revised April 2012]</b>.</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, interagency agreements, or equivalent state enforcement actions.</p> <p>Verify that copies of any SDS received with incoming shipments of sealed containers of hazardous chemicals are kept.</p> <p>Verify that if an SDS is not received with a shipment of sealed containers of hazardous chemicals, an SDS is obtained as soon as possible.</p> <p>Verify that an SDS is on file and readily accessible to workers on all shifts in the workplace for each hazardous material stored or used.</p> <p>Verify that the employer maintains in the workplace copies of the required SDSs for each hazardous chemical and ensures that the SDSs are readily accessible during each work shift to employees when they are in their work area(s).</p> <p>(NOTE: Electronic access and other alternatives to maintaining paper copies of the safety data sheets are permitted as long as no barriers to immediate employee access in each workplace are created by such options.)</p> <p>(NOTE: Where employees must travel between workplaces during a workshift, (i.e., their work is carried out at more than one geographical location), the SDSs may be kept at the primary workplace facility. In this situation, the employer must ensure that employees can immediately obtain the required information in an emergency.)</p> <p>(NOTE: SDSs may be kept in any form, including operating procedures, and may be designed to cover groups of hazardous chemicals where it may be more appropriate to address the hazards of a process rather than individual hazardous chemicals. However, the employer must ensure that in all cases the required information is provided for each hazardous chemical, and is readily accessible during each work shift to employees when they are in their work area(s).)</p>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS MATERIALS MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>HM.1.3.US.</b> Containers of hazardous chemicals in the workplace are required to be labeled, tagged, or marked with specific information (29 CFR 1910.1200(b)(3)(i), 1910.1200(b)(4)(i), 1910.1200(b)(5), 1910.1200(b)(6), and 1910.1200(f)(6) through</p>	<p>(NOTE: These requirements do not apply to:</p> <ul style="list-style-type: none"> <li>– hazardous waste</li> <li>– CERCLA hazardous substances when the hazardous substance is the focus of remedial or removal action being conducted under CERCLA in accordance with EPA regulations</li> <li>– tobacco or tobacco products</li> <li>– wood or wood products</li> <li>– articles that are defined as a manufactured item other than a fluid or particle which under normal conditions of use does not release more than very small amounts of a hazardous chemical and does not pose a physical hazard or health risk to personnel and that: <ul style="list-style-type: none"> <li>– is formed to a specific shape or design during manufacture</li> <li>– has end use functions dependent in whole or in part upon its shape or design during end use</li> <li>– which under normal conditions does not release more than very small quantities (e.g., minute or trace amounts) and does not pose a physical hazard or health risk to the employee</li> </ul> </li> <li>– food or alcoholic beverages that are sold, used, or prepared in a retail establishment and foods intended for consumption by personnel while in the workplace</li> <li>– any drug as that term is defined in the <i>Federal Food, Drug, and Cosmetic Act</i> when it is in its solid, final form for direct administration</li> <li>– cosmetics that are packaged for sale or intended for personal use</li> <li>– any consumer product or hazardous substance as defined in the <i>Consumer Product Safety Act</i> and the <i>Federal Hazardous Substances Act</i> for which the facility can demonstrate that it is used in the workplace in the same manner as normal consumer use, and which use results in a duration and frequency of exposure not greater than exposure experienced by consumers</li> <li>– ionizing and nonionizing radiation</li> <li>– biological hazards.)</li> </ul> <p>(NOTE: This requirement also applies to work operations where employees handle packaged chemical products or substances.)</p> <p>Verify that all containers of hazardous chemicals in the workplace are labeled, tagged, or marked with one of the following:</p> <ul style="list-style-type: none"> <li>– the manufacturer label with the following information: <ul style="list-style-type: none"> <li>– product identifier</li> <li>– signal word</li> <li>– hazard statement</li> <li>– pictogram(s)</li> <li>– precautionary statement(s)</li> <li>– name, address, and telephone number of the chemical manufacturer, importer, or other responsible party</li> </ul> </li> </ul>

**U.S. TEAM Guide**

<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>(NOTE: A facility may process or otherwise use a toxic chemical in a recycle/reuse operation. To determine whether the facility has processed or used more than an applicable threshold of the chemical, the owner or operator of the facility counts the amount of the chemical added to the recycle/reuse operation during the calendar year. In particular, if the facility starts up such an operation during a calendar year, or in the event that the contents of the whole recycle/reuse operation are replaced in a calendar year, the facility also counts the amount of the chemical placed into the system at these times.)</p> <p>(NOTE: The following exemptions apply:</p> <ul style="list-style-type: none"> <li>– if a toxic chemical is present in a mixture of chemicals at a covered facility and the toxic chemical is in a concentration in the mixture which is below 1 percent of the mixture, or 0.1 percent of the mixture in the case of a toxic chemical which is a carcinogen, the quantity of the toxic chemical present in such mixture does not have to be considered when determining whether an applicable threshold has been met or determining the amount of release to be reported under. This exemption applies whether the person received the mixture from another person or the person produced the mixture, either by mixing the chemicals involved or by causing a chemical reaction that resulted in the creation of the toxic chemical in the mixture. However, this exemption applies only to the quantity of the toxic chemical present in the mixture. If the toxic chemical is also manufactured (including imported), processed, or otherwise used at the covered facility other than as part of the mixture or in a mixture at higher concentrations, in excess of an applicable threshold quantity, the facility is required to report. This exemption does not apply to the chemicals listed in Appendix 3-1a</li> <li>– if a toxic chemical is present in an article at a covered facility, the quantity of the toxic chemical present in such article does not have to be considered when determining whether an applicable threshold has been met or determining the amount of release to be reported. This exemption applies whether the facility received the article from another facility or produced the article. However, this exemption applies only to the quantity of the toxic chemical present in the article. If the toxic chemical is manufactured (including imported), processed, or otherwise used at the covered facility other than as part of the article, in excess of an applicable threshold quantity, reporting is required. If a release of a toxic chemical occurs as a result of the processing or use of an item at the facility, that item does not meet the definition of “article”</li> <li>– if a toxic chemical is used at a covered facility for one of the following purposes, it is not required to consider the quantity of the toxic chemical used for such purpose when determining whether an applicable threshold has been met under or determining the amount of releases to be reported. However, this exemption only applies to the quantity of the toxic chemical used for the purpose described in the following list. If the toxic chemical is also manufactured (including imported), processed, or otherwise used at the covered facility other than as listed, in excess of an applicable threshold quantity, reporting is required. The list includes:</li> </ul>

#### Comparison of 40 CFR 355 Emergency Release Notification Requirements and the Release Notification Requirements of CERCLA as Codified In 40 CFR 302 (40 CFR 355.60) [Added January 2009]

If a reportable quantity of a substance is released within a 24-h period at your facility	And if the release is reportable under EPCRA Section 304, you must	And if the release is reportable under CERCLA Section 103, you must
a. And the substance is on BOTH the list of EHSs (Appendices A and B of 40 CFR 355) AND the list of CERCLA Hazardous Substances (40 CFR 302.4).	Notify the LEPC and the SERC in accordance with 40 CFR 355.40 through 355.43 (except for a release during transportation or from storage incident to transportation; see 40 CFR 355.42(b) (see checklist item HM.20.4.US).	Comply with the release notification requirements of CERCLA Section 103 and its implementing regulations (40 CFR 302, [see checklist items HM.230.2.US and HM.230.3.US]). Call the NRC at 800-424-8802.
b. And the substance is on the list of CERCLA Hazardous Substances (40 CFR 302.4) and not on the list of EHSs (Appendices A and B of 40 CFR 355).	Notify the LEPC and the SERC in accordance with 40 CFR 355.40 through 355.43 (except for a release during transportation or from storage incident to transportation; see 40 CFR 355.42(b) (see checklist item HM.20.4.US).	Comply with the release notification requirements of CERCLA Section 103 and its implementing regulations (40 CFR 302). Call the NRC at 800-424-8802.
c. And the substance is on the list of EHSs (Appendices A and B of 40 CFR 355) and not the list of CERCLA Hazardous Substances (40 CFR 302.4).	Notify the LEPC and the SERC in accordance with 40 CFR 355.40 through 355.43 (except for a release during transportation or from storage incident to transportation; see 40 CFR 355.42(b) (see checklist item HM.20.4.US).	

NOTE: This table only applies to reportable releases, not to exempt releases.

### Appendix 3-0a

#### Community Right-To-Know Reporting of Mixtures (40 CFR 370.14)

[Added January 2009; Revised July 2016]

If your mixture contains a hazardous chemical:	To determine if the threshold level for that hazardous chemical is equaled or exceeded you must:	If the threshold level for the hazardous chemical is exceeded than the facility must:
1. That is an EHS	Determine the total quantity of the EHS present throughout the facility at any one time, by adding together the quantity present as a component in all mixtures and all other quantities of the EHS (the facility must include the quantity present in a mixture even if they are also counting the quantity of that particular mixture toward the threshold level for that mixture).	Report the EHS component <ul style="list-style-type: none"> <li>– submit an MSDS (or SDS) for the EHS (or include the EHS on the list of chemicals submitted in lieu of the MSDSs (or SDS)), as provided under 40 CFR 370.30, and submit Tier I (or Tier II) information for the EHS as provided under 40 CFR 370.40 or report the mixture itself</li> <li>– submit an MSDS (or SDS) for the mixture (or include the mixture on the list of chemicals submitted in lieu of the MSDSs (or SDS)), as provided under 40 CFR 370.30, and submit Tier I (or Tier II) information for the mixture, as provided under 40 CFR 370.40. If the facility reports the mixture itself, then provide the total quantity of that mixture.</li> </ul>
2. That is not an EHS	Determine either: <ul style="list-style-type: none"> <li>– The total quantity of the hazardous chemical present throughout the facility at any one time by adding together the quantity present as a component in all mixtures and all other quantities of the hazardous chemical (the facility will include the quantity present in a mixture even if the facility is also applying that particular mixture as a whole toward the threshold level for that mixture) or</li> </ul>	Report the non-EHS hazardous chemical component <ul style="list-style-type: none"> <li>– submit an MSDS (or SDS) for the non-EHS hazardous chemical (or include the non-EHS on the list of chemicals submitted in lieu of the MSDSs (or SDS)), as provided under 40 CFR 370.30, and submit Tier I (or Tier II) information for the non-EHS chemical as provided under 40 CFR 370.40 or report the mixture itself</li> <li>– submit an MSDS (or SDS) for the mixture (or include the mixture on the list of</li> </ul>

	<ul style="list-style-type: none"> <li>– the total quantity of that mixture present throughout the facility at any one time.</li> </ul>	chemicals submitted in lieu of MSDSs (or SDS)), as provided under 40 CFR 370.30, and submit Tier I (or Tier II) information for the mixture, as provided under 40 CFR 370.40. If the facility reports the mixture itself, then provide the total quantity of that mixture.

### Consolidated List of Chemicals Covered in Title III of SARA [Revised July 2003; Revised January 2005; Revised July 2005; Revised October 2006]

**(NOTE: This list is constantly changing and the Federal Register should be consulted for the most up-to-date information.)**

This consolidated chemical list includes chemicals subject to reporting requirements under Title III of SARA. This consolidated chemical list does not contain all chemicals that are subject to reporting requirements in Sections 311 and 312 of SARA Title III. These hazardous chemicals, for which SDSs must be developed under the *Occupational Safety and Health Act*, Hazard Communication Standards, are identified by broad criteria rather than enumeration. There are over 50,000 such substances that meet the criteria. The consolidated list has been prepared to help determine whether there is a need to submit reports under Section 304 or 313 of Title III and, for a specific chemical, what reports need to be submitted.

The list includes chemicals under the four following Federal statutory provisions:

1. SARA Section 302 Extremely Hazardous Substances - the presence of which, in sufficient quantities, requires certain emergency planning activities to be conducted. Releases of these substances are also subject to reporting under Section 304 of Title III. The final rule listing the extremely hazardous substances and their threshold planning quantities (TPQ) is found in 40 CFR 355.
2. CERCLA Hazardous Substances (RQ) Chemicals - releases of which are subject to reporting under the CERCLA or Superfund of 1980. Such releases are also subject to reporting under Section 304 of Title III. CERCLA hazardous substances, and their RQs, are listed in 40 CFR 302, Table 302.4.
3. SARA Section 313 Toxic Chemicals - emissions or releases of which must be reported annually as part of SARA Title III's community right-to-know provisions. A list of these toxic chemicals is found in 40 CFR 372.65.
4. RCRA Hazardous Wastes - from the "P" and "U" lists (40 CFR 261.33) of specific chemicals. RCRA hazardous wastes from the "F" and "K" lists are not included here; such waste streams are also CERCLA hazardous substances. This listing is provided as an indicator that you may already have data on a specific chemical that can be used for Title III reporting purposes.

There are four columns in the consolidated list corresponding to these four statutory provisions. If a chemical is listed as an extremely hazardous substance under Section 302, its TPQ is given in the extremely hazardous substance column. Similarly, the CERCLA RQ is given for those chemicals that are listed as hazardous substances. A key to the symbols used in Section 302 and CERCLA columns precedes the list. An "X" in the column for 40 CFR 372.65(f) indicates that the chemical is subject to reporting under Section 313.

The letter-and-digit code in the column for 40 CFR 261.33 is the chemical's RCRA hazardous waste code. A blank in any of these columns indicates that the chemical is not subject to the corresponding statutory authorities.

The Chemical Abstract Service (CAS) registry number is provided for each chemical on the list.

#### Key to Symbols in the Consolidated Chemical List

- # Indicates that the RQ is subject to change when an assessment of potential carcinogenicity and/or chronic toxicity is completed; until then, the statutory RQ applies.
- ## Indicates that an adjusted RQ has been proposed, but a final judgment has not been made.
- + USEPA has proposed to adjust the RQ for radionuclides by establishing RQs in units of Curies; until then, the 1 lb RQ applies.

- \* Indicates that the chemical is proposed for deletion from the list of extremely hazardous substances.
- \*\* Indicates that no RQ is assigned to this generic or broad class.

### Appendix 3-1a

#### Lower Thresholds for Chemicals of Special Concern (40 CFR 372.28)

[Added January 2000; Revised January 2001]

#### Chemical Listing in Alphabetic Order.

Chemical Name	CAS NO.	Reporting Threshold
Aldrin	00309-00-2	100
Benzo(g,h,i)perylene	00191-24-2	10
Chlordane	00057-74-9	10
Heptachlor	00076-44-8	10
Hexachlorobenzene	00118-74-1	10
Isodrin	00465-73-6	10
Lead (this lower threshold does not apply to lead when contained in a stainless steel, brass or bronze alloy)	7439-92-1	100
Mercury	07439-97-6	10
Methoxychlor	00072-43-5	100
Octachlorostyrene	29082-74-4	10
Pendimethalin	40487-42-1	100
Pentachlorobenzene	00608-93-5	10
Polychlorinated biphenyl (PCBs)	01336-36-3	10
Tetrabromobisphenol A	00079-94-7	100
Toxaphene	08001-35-2	10
Trifluralin	01582-09-8	100

### Chemical Categories in Alphabetic Order

Category name	Reporting threshold
<p>Dioxin and dioxin-like compounds (Manufacturing; and the processing or otherwise use of dioxin and dioxin-like compounds if the dioxin and dioxin-like compounds are present as contaminants in a chemical and if they were created during the manufacturing of that chemical) (This category includes only those chemicals listed below).</p> <ul style="list-style-type: none"> <li>– 1,2,3,4,6,7,8-Heptachlorodibenzofuran</li> <li>– 1,2,3,4,7,8,9-Heptachlorodibenzofuran</li> <li>– 1,2,3,4,7,8-Hexachlorodibenzofuran</li> <li>– 1,2,3,6,7,8-Hexachlorodibenzofuran</li> <li>– 1,2,3,7,8,9-Hexachlorodibenzofuran</li> <li>– 2,3,4,6,7,8-Hexachlorodibenzofuran</li> <li>– 1,2,3,4,7,8-Hexachlorodibenzo-p-dioxin</li> <li>– 1,2,3,6,7,8-Hexachlorodibenzo-p-dioxin</li> <li>– 1,2,3,7,8,9-Hexachlorodibenzo-p-dioxin</li> <li>– 1,2,3,4,6,7,8-Heptachlorodibenzo-p-dioxin</li> <li>– 1,2,3,4,6,7,8,9-Octachlorodibenzofuran</li> <li>– 1,2,3,4,6,7,8,9-Octachlorodibenzo-p-dioxin</li> <li>– 1,2,3,7,8-Pentachlorodibenzofuran</li> <li>– 2,3,4,7,8-Pentachlorodibenzofuran</li> <li>– 1,2,3,7,8-Pentachlorodibenzo-p-dioxin</li> <li>– 2,3,7,8-Tetrachlorodibenzofuran</li> <li>– 2,3,7,8 Tetrachlorodibenzo-p-dioxin</li> </ul>	0.1 grams
Lead Compounds	100
Mercury compounds	10

### Appendix 3-2

**Maximum Allowable Capacity of Containers and Portable Tanks**  
**(29 CFR 1910.106(d)(2), Table H-12)**  
**[Revised April 2012]**

Container Type	Category 1	Category 2	Category 3	Category 4
Glass or approved plastic	1 pt	1 qt	1 gal	1 gal
Metal (other than DOT drums)	1 gal	5 gal	5 gal	5 gal
Safety cans	2 gal	5 gal	5 gal	5 gal
Metal drums (DOT specifications)	60 gal	60 gal	60 gal	60 gal
Approved portable tanks	660 gal	660 gal	660 gal	660 gal

NOTE: Container exemptions: Medicines, beverages, foodstuffs, cosmetics, and other common consumer items, when packaged according to commonly accepted practices.

### Appendix 3-3

#### Storage in Inside Rooms (29 CFR 1910.106(d)(4), Table H-13)

Fire Protection Provided <sup>1</sup>	Fire Resistance (hours)	Maximum Size	Total Allowable Quantities ((gal/ft <sup>2</sup> ) floor area)
Yes	2	500 ft <sup>2</sup>	10
No	2	500 ft <sup>2</sup>	5
Yes	1	150 ft <sup>2</sup>	4
No	1	150 ft <sup>2</sup>	2

<sup>1</sup>Fire protection system will be sprinkler, water spray, or other approved method.

## Appendix 3-4

### Flammable Materials Storage (29 CFR 1910.106(d)(5) and 1910.106(d)(6), Tables H-14 through H-17) [Revised January 2008; Revised April 2012]

#### Indoor Container Storage (Table H-14)

Category Liquid	Liquid Storage Level	Protected Storage Maximum per Pile	Unprotected Storage Maximums per Pile
1	Ground and upper floors	2750 gal (50, 55-gal drums)	600 gal (12, 55-gal drums)
	Basement	Not permitted	Not permitted
2	Ground and upper floors	5500 gal (100, 55-gal drums)	1375 gal (25, 55-gal drums)
	Basement	Not permitted	Not permitted
3 FP < 100 °F	Ground and upper floors	16,500 gal (300, 55-gal drums)	4125 gal (25, 55-gal drums)
	Basement	Not permitted	Not permitted
3 FP ≥ 100 °F	Ground and upper floors	16,500 gal (300, 55-gal drums)	4125 gal (75, 55-gal drums)
	Basement	5500 gal (100, 55-gal drums)	Not permitted
4	Ground and upper floors	55,000 gal (1000, 55-gal drums)	13,750 gal (250, 55-gal drums)
	Basement	8250 gal (450, 55-gal drums)	Not permitted

NOTE 1: When 2 or more categories of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the 2 or more separate maximum gallonages.

NOTE 2: Aisles will be provided so that no container is more than 12 ft from an aisle. Main aisles will be at least 3 ft wide and side aisles at least 4 ft wide.

NOTE 3: Each pile shall be separated from the others by at least 4 ft.

NOTE 4: FP means Flashpoint

**Outdoor Container Storage**  
(Table H-16)

1 Class	2 Maximum per pile (gal)	3 Distance between piles (ft)	4 Distance to property line that can be built upon (ft)	5 Distance to street, alley or public way (ft)
1	1100	5	20	10
2	2200	5	20	10
3 FP < 100 °FP	4400	5	20	10
3 FP ≥ 100 °FP	8800	5	10	5
4	22,000	5	10	5

NOTE 1: When 2 or more categories of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the 2 or more separate gallonages.

NOTE 2: Within 200 ft of each container, there will be a 12 ft wide access way to permit approach of fire control apparatus.

NOTE 3: The distances listed apply to properties that have protection for exposures as defined. If there are exposures and such protection for exposures does not exist, the distances in column 4 will need to be doubled.

NOTE 4: When total quantity stored does not exceed 50 percent of maximum per pile, the distance in columns 4 and 5 may be reduced 50 percent, but not less than 3 ft.

NOTE 5: FP means Flashpoint

**Indoor Portable Tank Storage**  
(Table H-15)

**NOTE: A “portable tank” is a closed container having a liquid capacity over 60 U.S. gal  
and not intended for fixed installation (29 CFR 1910.106(a)(25))**

Category	Storage Level	Protected Storage Maximum per Pile (gal)	Unprotected Storage Maximums per Pile (gal)
1	Ground and upper floors	Not permitted	Not permitted
	Basement	Not permitted	Not permitted
2	Ground and upper floors	20,000	2000
	Basement	Not permitted	Not permitted
3 FP < 100 °F	Ground and upper floors	40,000	5500
	Basement	Not permitted	Not permitted

3 FP $\geq$ 100 °F	Ground and upper floors	40,000	5500
	Basement	20,000	Not permitted
4	Ground and upper floors	60,000	22,000
	Basement	20,000	Not permitted

NOTE 1: When 1 or more categories of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the 2 or more separate maximum gallonages.

NOTE 2: Aisles will be provided so that no portable tank is more than 12 ft from an aisle. Main aisles will be at least 3 ft wide and side aisles at least 4 ft wide.

NOTE 3: Each pile shall be separated from each other by at least 4 ft.

NOTE 4: FP means Flashpoint

**Outdoor Portable Tank Storage**  
(Table H-17)

**NOTE: A “portable tank” is a closed container having a liquid capacity over 60 U.S. gal and not intended for fixed installation (29 CFR 1910.106(a)(25))**

1 Category	2 Maximum per pile (gal)	3 Distance between piles (ft)	4 Distance to property line that can be built upon (ft)	5 Distance to street, alley, or public way (ft)
1	2200	5	20	10
2	4400	5	20	10
3 FP < 100 °F	8800	5	20	10
3 FP $\geq$ °F	17,600	5	10	5
4	44,000	5	10	5

NOTE 1: When 2 or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the 2 or more separate gallonages.

NOTE 2: Within 200 ft of each container, there will be a 12 ft wide access way to permit approach of fire control apparatus.

NOTE 3: The distances listed apply to properties that have protection for exposures as defined. If there are exposures, and such protection for exposures does not exist, the distances in column 4 will be doubled.

NOTE 4: When total quantity stored does not exceed 50 percent of maximum per pile, the distance in columns 4 and 5 may be reduced 50 percent, but not less than 3 ft.

NOTE 5: FP means Flashpoint

**Appendix 3-5**  
**(Appendix Deleted April 2012)**

### Appendix 3-6

#### Placarding Guidelines (49 CFR 172.504)

[Revised October 2001; Revised October 2013]

Each bulk packaging, freight container, unit load device, transport vehicle or rail car containing any quantity of a hazardous material must be placarded on each side and each end with the type of placards specified in the following tables:

Table 1		
Category of material (Hazard class or division number and additional description, as appropriate)	Placard Name	Placard Design Section Reference (49 CFR)
1.1	EXPLOSIVES 1.1	172.522
1.2	EXPLOSIVES 1.2	172.522
1.3	EXPLOSIVES 1.3	172.522
2.3	POISON GAS	172.540
4.3	DANGEROUS WHEN WET	172.548
5.2 (Organic peroxide, Type B, liquid or solid, temperature controlled).	ORGANIC PEROXIDE	172.552
6.1 (material poisonous by inhalation, see 49 CFR 171.8).	POISON INHALATION HAZARD	172.555
7 (Radioactive Yellow III label only).	RADIOACTIVE <sup>1</sup>	172.556

<sup>1</sup> RADIOACTIVE placard also required for exclusive use shipments of low specific activity material and surface contaminated objects transported in accordance with 49 CFR 173.427(b)(4) and (5) or (c).

Table 2		
Category of material (Hazard class or division number and additional description, as appropriate)	Placard Name	Placard Design Section Reference (49 CFR)
1.4	EXPLOSIVES 1.4	172.523
1.5	EXPLOSIVES 1.5	172.524
1.6	EXPLOSIVES 1.6	172.525
2.1	FLAMMABLE GAS	172.532
2.2	NON-FLAMMABLE GAS	172.528
3	FLAMMABLE	172.542
Combustible liquid	COMBUSTIBLE	172.544
4.1	FLAMMABLE SOLID	172.546
4.2	SPONTANEOUSLY COMBUSTIBLE	172.547
5.1	OXIDIZER	172.550
5.2 (Other than organic peroxide, Type B, liquid or solid, temperature controlled).	ORGANIC PEROXIDE	172.552
6.1 (other than material poisonous by inhalation).	POISON	172.554

Table 2		
Category of material (Hazard class or division number and additional description, as appropriate)	Placard Name	Placard Design Section Reference (49 CFR)
6.2	None	
8	CORROSIVE	172.558
9	Class 9 (see 49 CFR 172.504(f)(9)).	172.560
ORM-D	None	

### Table 2 Considerations

- A freight container, unit load device, transport vehicle, or rail car which contains non-bulk packages with two or more categories of hazardous materials that require different placards specified in Table 2 may be placarded with a DANGEROUS placard instead of the separate placarding specified for each of the materials in Table 2. However, when 1,000 kg (2,205 pounds) aggregate gross weight or more of one category of material is loaded therein at one loading facility on a freight container, unit load device, transport vehicle, or rail car, the placard specified in Table 2 must be applied.
- Except for bulk packagings and hazardous materials subject to 49 CFR 172.505, when hazardous materials covered by Table 2 of this section are transported by highway or rail, placards are not required on:
  - A transport vehicle or freight container which contains less than 454 kg (1001 pounds) aggregate gross weight of hazardous materials covered by Table 2; or
  - A rail car loaded with transport vehicles or freight containers, none of which is required to be placarded.
- Except for hazardous materials subject to 49 CFR 172.505, a non-bulk packaging that contains only the residue of a hazardous material covered by Table 2 need not be included in determining placarding requirements.

### Additional Placarding Exceptions

- When more than one division placard is required for Class 1 materials on a transport vehicle, rail car, freight container or unit load device, only the placard representing the lowest division number must be displayed.
- A FLAMMABLE placard may be used in place of a COMBUSTIBLE placard on—
  - A cargo tank or portable tank.
  - A compartmented tank car which contains both flammable and combustible liquids.
- A NON-FLAMMABLE GAS placard is not required on a transport vehicle which contains non-flammable gas if the transport vehicle also contains flammable gas or oxygen and it is placarded with FLAMMABLE GAS or OXYGEN placards, as required.
- OXIDIZER placards are not required for Division 5.1 materials on freight containers, unit load devices, transport vehicles or rail cars which also contain Division 1.1 or 1.2 materials and which are placarded with EXPLOSIVES 1.1 or 1.2 placards, as required.
- For transportation by transport vehicle or rail car only, an OXIDIZER placard is not required for Division 5.1 materials on a transport vehicle, rail car or freight container which also contains Division 1.5 explosives and is placarded with EXPLOSIVES 1.5 placards, as required.

- The EXPLOSIVE 1.4 placard is not required for those Division 1.4 Compatibility Group S (1.4S) materials that are not required to be labeled 1.4S.
- For domestic transportation of oxygen, compressed or oxygen, refrigerated liquid, the OXYGEN placard in § 172.530 of this subpart may be used in place of a NON-FLAMMABLE GAS placard.
- For domestic transportation, a POISON INHALATION HAZARD placard is not required on a transport vehicle or freight container that is already placarded with the POISON GAS placard.
- For Class 9, a CLASS 9 placard is not required for domestic transportation, including that portion of international transportation, defined in § 171.8 of this subchapter, which occurs within the United States. However, a bulk packaging must be marked with the appropriate identification number on a CLASS 9 placard, an orange panel, or a white square-on-point display configuration as required by subpart D of this part.
- For Division 6.1, PG III materials, a POISON placard may be modified to display the text “PG III” below the mid line of the placard.
- For domestic transportation, a POISON placard is not required on a transport vehicle or freight container required to display a POISON INHALATION HAZARD or POISON GAS placard.
- For shipments of Class 1 (explosive materials) by aircraft or vessel, the applicable compatibility group letter must be displayed on the placards, or labels when applicable, required by this section. When more than one compatibility group placard is required for Class 1 materials, only one placard is required to be displayed, as provided below. For the following, there is a distinction between the phrases explosive articles and explosive substances. Explosive article means an article containing an explosive substance; examples include a detonator, flare, primer or fuse. Explosive substance means a substance contained in a packaging that is not contained in an article; examples include black powder and smokeless powder.
  - Explosive articles of compatibility groups C, D or E may be placarded displaying compatibility group E.
  - Explosive articles of compatibility groups C, D, or E, when transported with those in compatibility group N, may be placarded displaying compatibility group D.
  - Explosive substances of compatibility groups C and D may be placarded displaying compatibility group D.
  - Explosive articles of compatibility groups C, D, E or G, except for fireworks, may be placarded displaying compatibility group E.

			2. All other vessels carrying passengers, <sup>7</sup> except: a. Yachts. b. Documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew.	of the fishery, kelp, or sponge industry.	
Sail	Vessels not over 700 gross tons.	All vessels carrying combustible or liquid cargo in bulk.	All vessels carrying more than 6 passengers. <sup>7</sup>	Those vessels carrying dangerous cargoes when required by 46 CFR part 98 or 49 CFR 171-179.	None
	Vessels over 700 gross tons.	All vessels carrying combustible or liquid cargo in bulk.	All vessels carrying passengers for hire.	Those vessels carrying dangerous cargoes when required by 46 CFR part 98 or 146.	None
Non-self-propelled	Vessels less than 100 gross tons.	All vessels carrying combustible or liquid cargo in bulk.	Those vessels carrying dangerous cargoes when required by 49 CFR parts 171-179.	Those Vessels carrying dangerous cargoes when required by 46 CFR part 98 or 49 CFR parts 171-179.	All barges carrying passengers except those covered by column 4.
	Vessels 100 gross tons or over.	All vessels carrying combustible or flammable liquid cargo in bulk.	All seagoing barges except those covered by columns 3 and 4; and those inland barges carrying dangerous cargoes when required by 49 CFR 171- 179.	All seagoing barges except those covered by columns 3 and 4; and those inland barges carrying dangerous cargoes when required by 46 CFR 98 or 49 CFR 171-179.	All barges carrying passengers except columns 4 and 7.

<sup>1</sup> Where length is used in this table it means the length measured from end to end over the deck, excluding sheer. This expression means a straight line measurement of the overall length from the foremost part of the vessel to the aftermost part of the vessel, measured parallel to the centerline.

<sup>2</sup> Subchapter E (Load Lines), F (Marine Engineering), J (Electrical Engineering), and N (Dangerous Cargoes) of this chapter may also be applicable under certain conditions. The provisions of 49 CFR 171-179 apply whenever hazardous materials are on board vessels (including motorboats), except when specifically exempted by law.

<sup>3</sup> Public nautical schoolships, other than vessels of the Navy and Coast Guard, shall meet the requirements of 49 CFR 167 of subchapter R (Nautical Schools) of this chapter. Civilian nautical schools, as defined by 46 USC 1331, shall meet the requirements of subchapter H (Passenger Vessels) and part 168 of subchapter R (Nautical Schools) of this chapter.

<sup>4</sup> Subchapter H (Passenger Vessels) of this chapter covers only those vessels of 100 gross tons or more. Subchapter T (Small Passenger Vessels) of this chapter covers only those vessels of less than 100 gross tons.

<sup>5</sup> Vessels covered by subchapter H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter, where the principal purpose or use of the vessel is not the carriage of liquid cargo, may be granted a permit to carry a limited amount of flammable or combustible liquid cargo in bulk. The portion of the vessel used for the carriage of the flammable or combustible liquid cargo shall meet the requirements of subchapter D (Tank Vessels) in addition to the requirements of subchapter H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter.

<sup>6</sup> Any vessel on an international voyage is subject to the requirements of the International Convention for Safety of Life at Sea, 1974.

<sup>7</sup> The meaning of the term passenger is as defined in the Act of 10 May 1956 (Section 1, 70 Statute 151; 46 USC 390). On oceanographic vessels, scientific personnel on board shall not be deemed to be passengers or seamen, but for calculations of lifesaving equipment, etc., shall be counted as persons.

<sup>8</sup> Boilers and machinery are subject to examination on vessels over 40 ft in length.

## SECTION 4

### HAZARDOUS WASTE MANAGEMENT U.S. TEAM Guide, December 2018

#### A. Applicability

This section applies to facilities and activities that generate, store, transport, treat, or dispose of any type of hazardous waste. This section and its associated checklists are more complex than other sections in this volume. Not all checklist items will be applicable to a given facility or activity. Guidance is provided on the checklists to direct the assessor to the regulations concerning the type of hazardous waste activities/facilities at the facility or activity. Information on hazardous waste storage tanks is in the section titled Storage Tank Management.

Assessors are required to review state and local regulations and, if applicable, the appropriate Agency Supplement, to perform a comprehensive assessment.

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions that have been added or revised as a result of this review are identified as being reviewed, revised or added in March 2000 or October 2001, for example **[Added March 2000]**.

#### B. Federal Legislation

- *The Resource Conservation and Recovery Act (RCRA)*. RCRA of 1976, which amended the Solid Waste Disposal Act, addresses nonhazardous (Subtitle D) and hazardous (Subtitle C) waste management activities. The Hazardous and Solid Waste Amendments (HSWA) of 1984 strengthened RCRA's waste management provisions and added Subtitle I, which governs underground storage tanks (USTs). This section addresses Subtitle C requirements. See Solid Waste Management for Subtitle D requirements and Storage Tank Management for Subtitle I requirements **[Revised March 2000]**.

Regulations promulgated pursuant to Subtitle C of RCRA (40 CFR 260 through 299) establish a "cradle-to-grave" system governing hazardous waste from the point of generation to disposal. RCRA hazardous wastes include the specific materials listed in the regulations (commercial chemical products designated with the code "P" or "U", hazardous wastes from specific industries/sources designated with the code "K", or hazardous wastes from non-specific sources, designated with the code "F") or materials that exhibit a hazardous waste characteristic (ignitability, corrosivity, reactivity, or toxicity and designated with the code "D").

Regulated entities that generate hazardous waste are subject to waste accumulation, manifesting, and record keeping standards. Facilities generally must obtain a permit either from USEPA or from a state agency that USEPA has authorized to implement the permitting program if they store hazardous wastes for more than 90 days before treatment or disposal. Facilities may operate less- than-90-day tanks or containers of hazardous wastes without a permit. Subtitle C permits contain general facility standards, such as contingency plans, emergency procedures, record keeping and reporting requirements, financial assurance mechanisms, and unit-specific standards. RCRA also contains provisions (40 CFR 264, Subpart S and Section 264.101) for conducting corrective actions that govern the cleanup of releases of hazardous waste or constituents from solid waste management units at RCRA treatment, storage, and disposal facilities.

Many operations and organizations may have numerous operations that result in the generation and management of different types of solid and hazardous waste. These operations may be subject to specific parts of RCRA, depending on the type of waste generated, its management (e.g., stored, transported), and its disposal. Most RCRA requirements are not industry specific but apply to any entity that generates, transports, treats, stores, or disposes of hazardous waste. The following are some important RCRA regulatory requirements:

- **Identification of Solid and Hazardous Wastes** (40 CFR 261) delineates the procedure every generator must follow in determining whether the material in question is considered a hazardous waste or solid waste or is exempted from regulation.
- **Standards for Generators of Hazardous Waste** (40 CFR 262) establish the responsibilities of hazardous waste generators. These include obtaining a USEPA identification number, preparing a manifest, ensuring proper packaging and labeling, meeting standards for waste accumulation units, and meeting record keeping and reporting requirements. Providing they meet additional requirements described in 40 CFR 262.34, generators may accumulate hazardous waste for up to 90 days (or 180 or 270 days depending on the amount of waste generated and the distance the waste will be transported).
- **Land Disposal Restrictions** (LDRs) (40 CFR 268) are regulations prohibiting the disposal of hazardous waste on land without prior treatment. Under the LDR program, materials must meet LDR treatment standards prior to placement in a RCRA land disposal unit (landfill, land treatment unit, waste pile, or surface impoundment). Generators of waste subject to the LDR must provide notification of such to the designated TSD facility to ensure proper treatment prior to disposal.
- **Used Oil Management Standards** (40 CFR 279) impose management requirements affecting the storage, transportation, burning, processing, and re-refining of the used oil. For parties that merely generate used oil, regulations establish storage standards. For a party considered a used oil processor, re-refiner, burner, or marketer (one who generates and sells off-specification used oil directly to a used oil burner), additional tracking and paperwork requirements must be satisfied. These requirements are addressed in the section titled POL Management.
- **Tanks and Containers**, as well as any unit, used to store, treat, or dispose of hazardous waste, are regulated under RCRA. Tanks and containers used to store hazardous waste with a high volatile organic concentration must meet emission standards under RCRA. Regulations (40 CFR 264-265, Subpart CC) require generators to test the waste to determine the concentration of the waste, to satisfy tank and container emissions standards, and to inspect and monitor regulated units. These regulations apply to all facilities that store such waste, including large quantity generators accumulating waste prior to shipment off-site. Storage tanks are addressed in the section titled Storage Tank Management.
- **Boilers and Industrial Furnaces** (BIFs) that use or burn fuel containing hazardous waste must comply with design and operating standards. BIF regulations (40 CFR 266, Subpart H) address unit design, provide performance standards, require emissions monitoring, and restrict the type of waste that may be burned.
- *The Federal Facility Compliance Act (FFCA) of 1992.* This act provides for a waiver of sovereign immunity with respect to Federal, state, and local procedural and substantive requirements relating to RCRA solid and hazardous waste laws and regulations. Additionally, it defines hazardous waste in relation to public vessels, expands the definition of mixed waste, addresses the issue of munitions, and discusses waste discharges to Federally owned treatment works (FOTWs).
- *EO 12088, Federal Compliance with Pollution Standards.* This EO, dated 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the Agency funds meet applicable Federal, state, and local environmental requirements for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure

that sufficient funds for environmental compliance are included in the agency budget. Sections 1-4, "Pollution Control Plan" was revoked by EO 13148 **[Revised October 2002]**.

### C. State/Local Regulations

For information on regulations in specific states, see the State Supplements to TEAM Guide.

Under RCRA, USEPA may authorize a State or Territory, instead of the Federal government, to administer and enforce RCRA, including waste military munitions (WMM). While the regulations adopted by a State or Territory have to be at least as stringent as the Federal regulations, RCRA allows States and Territories to impose standards that are more stringent than those in the Federal program. Therefore, compliance requirements may differ from State to State or Territory. The definitions of when military munitions become WMM and the Designated Disposition Authority (DDA) Evaluation Process apply at all activities. These requirements are not dependent upon a State or Territory's adoption of the Federal MR or adoption of other State or Territory standards **[Revised January 2003]**.

### D. Key Compliance Requirements

- Generator Requirements - Responsibilities are based on the amount of waste being generated in 1 mo. Typical wastes include solvents, paint, contaminated antifreeze or oil, and sludges. In some states, waste oil and other substances have been classified as a hazardous waste and therefore need to be included in the total amount of waste being generated. Within Federal regulations there are three classifications *[Revised January 2017]*:
  1. A Very Small Quantity Generator (VSQG) generates less than or equal to the following amounts in a calendar month (40 CFR 260.10):
    - a. 100 kilograms (220 lbs) of nonacute hazardous waste; and
    - b. 1 kilogram (2.2 lbs) of acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e); and
    - c. 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e).
  2. A Small Quantity Generator (SQG) generates the following amounts in a calendar month (40 CFR 260.10):
    - a. Greater than 100 kilograms (220 lbs) but less than 1,000 kilograms (2200 lbs) of non-acute hazardous waste; and
    - b. Less than or equal to 1 kilogram (2.2 lbs) of acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e); and
    - c. Less than or equal to 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e).
  3. A Large *Quantity Generator* generates any of the following amounts in a calendar month (40 CFR 260.10):
    - a. Greater than or equal to 1,000 kilograms (2200 lbs) of non-acute hazardous waste; or
    - b. Greater than 1 kilogram (2.2 lbs) of acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e); or
    - c. Greater than 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e).

Whether the facility is a VSQG, an SQG, or a LQG determines the type of records they are required to keep and design standards for storage areas. Regardless of the amount of hazardous waste generated, every facility is required to test or use knowledge of materials or processes used to determine if solid waste is a listed hazardous waste or has hazardous characteristics as well as determine their generator size.

### Comparison of RCRA Generator Requirements

Requirement	VSQG	SQG	LQG
Identify HW	Yes	Yes	Yes
Quantity Limits	<100 kg/mo [approx. 220 lb/m]	100 kg/mo [approx. 220 lb] - 1000 kg/mo [approx. 2205 lb]	>1000 kg/mo [approx. 2205 lb/mo]
Acute Waste Limits	<= 1 kg/mo [approx. 2 lb/mo]	<=1 kg/mo [approx. 2 lb/mo]	> 1 kg/mo [approx. 2 lb/mo]
Facility Receiving Waste	LQG or RCRA permitted	RCRA permitted facility.	RCRA permitted facility.
USEPA ID Number	Not Required	Required	Required
RCRA Personnel Training	Not Required	Basic Training Required.	Required
DOT Training	Required if transporting or signing a manifest	Required if transporting OR signing a manifest	Required if transporting or signing a manifest
Exception Report	Not Required	Required > 60 days	Required > 45 days
Biennial Report	Not Required	Not Required	Required
Onsite Accumulation Limits (without permit)	1000 kg [approx. 2205 lb] hazardous waste  < 1 kg [approx. 2 lb] of acute hazardous waste.	6000 kg [approx. 13,228 lb] hazardous waste	Any quantity.
Accumulation Time Limits (without permit)	None	180 days or 270 days if the waste is transported more than 200 mi	<= 90 days + 30 days granted by USEPA
Storage Requirements	None	Basic requirements with technical standards for containers or tanks.	Full compliance with management of containers or tanks.
Use Manifests	No	Yes*	Yes
Episodic Waste Generation Allowance	Yes	Yes	No

\* Unless the waste is reclaimed under contractual agreement and properly marked and labeled.

- Transport Requirements - Containers of hazardous waste shipped offsite must be labeled to identify the waste and its hazard class. Transporters of hazardous waste required to be manifested must have an USEPA identification number and must comply with manifest management requirements.
- Central Accumulation Area Management – A central accumulation area (aka 180-day or 90-day storage area) is an area where hazardous waste is accumulated or stored before being turned in for disposal to a permitted facilities (i.e., a TSDF, recycler etc). Storage in these areas is temporary, and the permissible length of time for accumulation depends on generator classification.

- **Satellite Accumulation Point Management** - A satellite accumulation point is an area at which no more than 55 gal of a hazardous waste or 1 qt of acute hazardous waste is accumulated at or near the point of generation. The satellite accumulation point is under the control of one operator of the process generating the waste. When the 55 gal limit is reached the operator has 3 consecutive calendar days to move the waste to a central accumulation area (i.e. 180-day or 90-day storage area) or a permitted TSDF. The option to accumulated hazardous waste in a satellite accumulation point/area only applies to an SQG or a LQG.
- **Universal Wastes** - These requirements apply to batteries, pesticides, and thermostats as defined in 40 CFR 273. They are alternate standards for the handling of these wastes instead of the requirements found in 40 CFR 260 through 272. Handlers can be classified as either a large quantity handler of universal waste (5000 kg [ $\approx$  11,111 lb] or more in 1 yr) or a small quantity handler of universal waste (less than 5000 kg [ $\approx$  11,111 lb] in 1 yr). Depending on classification, the handler has to meet requirements concerning management of the waste, marking and labeling, notifications, and transportation. Additionally, there are standards for universal waste transporters and universal waste destination facilities (40 CFR 273). These regulations are only effective upon adoption by the state RCRA program, except in those areas without an authorized program.
- **Permitted TSDF Requirements** - The operation of a TSDF is subject to regulation and permitting under Federal and state regulations. These regulations are both administrative and technical in nature. The administrative standards require that various plans be developed to ensure that emergencies can be dealt with, waste received is properly identified, and operating personnel are adequately trained to operate the TSDF and respond to emergencies. These administrative standards also include requirements that the TSDF be inspected routinely, records of operations are compiled and maintained, and reports of both routine and contingency operations are made to the applicable regulatory agency. The administrative standards also require that a plan for ceasing operations and closing the TSDF be developed, kept on hand, and updated frequently.

The technical standards that are applicable to TSDFs fall into two classes: general standards that apply to all TSDFs and specific standards that apply to various types of facilities, i.e., container storage areas, tanks, containment buildings, surface impoundments, waste piles, land treatment facilities, incinerators, landfills, thermal treatment facilities, and chemical, physical, and biological treatment facilities.

Administrative and technical standards are applied to a particular facility through a RCRA permit issued to a facility. Existing TSDFs that have applied for a permit but not yet been issued a RCRA permit are considered to be in interim status if they applied for a part A and part B permit and can continue to operate if they comply with the RCRA mandated interim status standards (ISS) of 40 CFR 265 (interim status standards for owners and operators of hazardous waste TSDF).

- **Ordnance** - Under the provisions of 40 CFR 261.23(a)(6) through 261.23(a)(8) ordnance is classified as a reactive hazardous waste. The open burning and detonation (OB/OD) of waste explosives is allowed at interim status TSDFs as long as a minimum distance is kept from the property line of the property of others. The length of this distance is based on the amount of explosive being OB/OD. For permitted TSDFs, OB/OD activities are regulated by permit to operate a miscellaneous unit. This is often referred to as a Subpart X permit.

## **E. Key Compliance Definitions**

- **Active Life** - the period from the initial receipt of hazardous waste at the facility until the Regional Administrator receives certification of final closure (40 CFR 260.10).
- **Active Portion** - that portion of a facility where treatment, storage, or disposal operations are being or have been conducted and which is not a closed portion (40 CFR 260.10).
- **Acute Hazardous Waste** -hazardous wastes that meet the listing criteria in 40 CFR 261.11(a)(2) and therefore are either listed in 40 CFR 261.31 with the assigned hazard code of (H) or are listed in 40 CFR 261.33(e) (40 CFR 260.10) [**Reviewed October 2001, Revised January 2017**].

- *Agreement State* - a state that has entered into an agreement with the NRC under subsection 274b of the Atomic Energy Act of 1954, as amended (68 Stat. 919), to assume responsibility for regulating within its borders byproduct, source, or special nuclear material in quantities not sufficient to form a critical mass (40 CFR 266.210) **[Added January 2004]**.
- *Ampule* - an airtight vial made of glass, plastic, metal, or any combination of these materials (40 CFR 273.9) **[Added October 2005]**.
- *Aquifer* - a geologic formation or group of formations, or part of a formation capable of yielding a significant amount of groundwater to wells or springs (40 CFR 260.10) **[Reviewed October 2001]**.
- *Automated Export System (AES) Filing Compliance Date* - the date that EPA announces in the Federal Register, on or after which exporters of hazardous waste and exporters of cathode ray tubes for recycling are required to file EPA information in the Automated Export System or its successor system, under the International Trade Data System (ITDS) platform (40 CFR 260.10) **[Added January 2017]**
- *Average Volatile Organic (VO) Concentration* - the mass-weighted average VO concentration of a hazardous waste (40 CFR 265.1081) **[Reviewed October 2001]**.
- *Battery* - a device consisting of one or more electrically connected electrochemical cells that are designed to receive, store, and deliver electric energy. An electrochemical cell is a system consisting of an anode, cathode, and an electrolyte, plus such connections (electrical and mechanical) as may be needed to allow the cell to deliver or receive electrical energy. The term battery also includes an intact, unbroken battery from which the electrolyte has been removed (40 CFR 260.10 and 273.9) **[Reviewed October 2001]**.

In relation to the concept of universal wastes, this term includes all batteries except the following (40 CFR 273.2(b)):

1. spent lead acid batteries that are managed under 40 CFR 266, Subpart G (reclamation of spent lead acid batteries that are recyclable)
2. batteries as defined above that are not yet wastes under 40 CFR 261, including those that do not meet the criteria for waste generation (see definition of Waste Battery)
3. batteries as defined above that are not hazardous waste. A battery is a hazardous waste if it exhibits one or more of the characteristics identified in 40 CFR 261, Subpart C [Revised October 1999, Reviewed March 2000].

See also the definition of *Waste Battery*.

- *Boiler* - an enclosed device using controlled flame combustion and having the following characteristics (40 CFR 260.10) **[Revised October 2001]**:
  1. The unit has physical provisions for recovering and exporting thermal energy in the form of steam, heated fluids, or heated gases; and
  2. The unit's combustion chamber and primary energy recovery section(s) must be of integral design; and
  3. While in operation the unit maintains a thermal energy recovery efficiency of at least 60 percent; and
  4. The unit has been approved by the Administrator of USEPA; and
  5. The unit must export and utilize at least 75% of the recovered energy (40 CFR 260.10).

USEPA may also decide on a case-by-case basis that certain enclosed devices using controlled flame combustion are boilers even though they may not otherwise meet the definition of boiler.
- *Cathode Ray Tube or CRT* - a vacuum tube, composed primarily of glass, which is the visual or video display component of an electronic device. A used, intact CRT means a CRT whose vacuum has not been released. A used, broken CRT means glass removed from its housing or casing whose vacuum has been released (40 CFR 260.10) **[Added July 2006]**.

- *Cathode Ray Tube or CRT* - a vacuum tube, composed primarily of glass, which is the video display component of a television or computer monitor. An intact CRT means a CRT remaining within the monitor whose vacuum has not been released. A broken CRT means glass removed from the monitor after the vacuum has been released (40 CFR 261.40(f)) **[Added January 2003]**.
- *Central Accumulation Area* - any on-site hazardous waste accumulation area with hazardous waste accumulating in units subject to either 40 CFR 262.16 (for small quantity generators) or 40 CFR 262.17 (for large quantity generators). A central accumulation area at an eligible academic entity that chooses to operate under 40 CFR part 262 subpart K is also subject to 40 CFR 262.211 when accumulating unwanted material and/or hazardous waste (40 CFR 260.10) **[Added January 2009; Revised January 2011, Revised January 2017]**.
- *Certification* - a statement of professional opinion based upon knowledge and belief (40 CFR 260.10) **[Reviewed October 2001]**.
- *Certified Delivery* - certified mail with return receipt requested, or equivalent courier service, or other means, that provides the sender with a receipt confirming delivery (40 CFR 266.210) **[Added January 2004]**.
- *Characteristics of Hazardous Waste* - the characteristics of ignitibility, corrosivity, reactivity, and toxicity that identify hazardous waste (40 CFR 261.20 through 261.24) **[Reviewed October 2001]**.
- *Closed Portion* - the portion of a facility that has been closed in accordance with the approved closure plan and all applicable closure requirements (40 CFR 260.10).
- *Closure Device* - a cap, hatch, lid, plug, seal, valve, or other type of fitting that blocks an opening in a cover such that when the device is secured in the closed position it prevents or reduces air pollutant emissions to the atmosphere. Closure devices include devices that are detachable from the cover (e.g., a sampling port cap), manually operated (e.g., hinged access lid or hatch), or automatically operated (e.g., a spring loaded pressure relief valve) (40 CFR 265.1081) **[Reviewed October 2001]**.
- *College/University* - a private or public, post-secondary, degree-granting, academic institution, that is accredited by an accrediting agency listed annually by the U.S. Department of Education (40 CFR 262.200) **[Added January 2009]**.
- *Competent Authority* - the regulatory authority or authorities of concerned countries having jurisdiction over transboundary movements of wastes (40 CFR 262.81) **[Added January 2018]**.
- *Conditionally Exempt Small Quantity Generator* – See Very Small Quantity Generator.
- *Container* - any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled (40 CFR 260.10) **[Reviewed October 2001]**.
- *Containment Building* - a hazardous waste management unit that is used to store or treat hazardous waste under 40 CFR 264.1100 through 264.1103 and 265.1100 through 265.1103 (40 CFR 260.10) **[Reviewed October 2001]**.
- *Contingency Plan* - a document setting out an organized, planned, and coordinated course of action to be followed in case of a fire, explosion, or release of hazardous waste or hazardous waste constituents that could threaten human health or the environment (40 CFR 260.10) **[Reviewed October 2001]**.
- *Countries Concerned* - the countries of export or import and any countries of transit (40 CFR 262.81) **[Added January 2018]**.
- *Country of Export* - any country from which a transboundary movement of hazardous wastes is planned to be initiated or is initiated (40 CFR 262.81) **[Added January 2018]**.

- *Country of Import* - any country to which a transboundary movement of hazardous wastes is planned or takes place for the purpose of submitting the wastes to recovery or disposal operations therein (40 CFR 262.81) **[Added January 2018]**.
- *Country of Transit* - any country other than the country of export or country of import across which a transboundary movement of hazardous wastes is planned or takes place (40 CFR 262.81) **[Added January 2018]**.
- *Cover* - a device that provides a continuous barrier over the hazardous waste managed in a unit to prevent or reduce air pollutant emissions to the atmosphere. A cover may have openings (such as access hatches, sampling ports, gauge wells) that are necessary for operation, inspection, maintenance, and repair of the unit on which the cover is used. A cover may be a separate piece of equipment that can be detached and removed from the unit or a cover may be formed by structural features permanently integrated into the design of the unit (40 CFR 265.1081) **[Reviewed October 2001]**.
- *CRT Collector* - a person who receives used, intact CRTs for recycling, repair, resale, or donation (40 CFR 260.10) **[Added July 2006]**.
- *CRT Glass Manufacturer* - an operation or part of an operation that uses a furnace to manufacture CRT glass (40 CFR 260.10) **[Added July 2006]**.
- *CRT Glass Manufacturing Facility* - a facility or part of a facility located within the Region III States that uses a furnace to manufacture CRT glass (40 CFR 261.40(f)) **[Added January 2003]**.
- *CRT Processing* - conducting all of the following activities (40 CFR 260.10) **[Added July 2006]**:
  1. Receiving broken or intact CRTs; and
  2. Intentionally breaking intact CRTs or further breaking or separating broken CRTs; and
  3. Sorting or otherwise managing glass removed from CRT monitors.
- *CRT Processing* - the conducting of all of the following activities at a facility within the USEPA Region III's States (40 CFR 261.40(f)) **[Added January 2003]**:
  1. receiving broken or intact CRTs;
  2. intentionally breaking intact CRTs or further breaking or separating broken CRTs;
  3. sorting or otherwise managing glass removed from CRT monitors; and
  4. cleaning coatings off the glass removed from CRTs.
- *Debris* - solid material exceeding a 60 mm particle size that is intended for disposal and that is (40 CFR 268.2) **[Reviewed October 2001]**:
  1. a manufactured object
  2. plant or animal matter
  3. natural geologic material.

The following materials are not debris:

1. any material for which a specific treatment standard is provided in Subpart D, 40 CFR 268, namely lead acid batteries, cadmium batteries, and radioactive lead solids
  2. process residuals such as smelter slag and residues from the treatment of waste, wastewater, sludges, or air emissions residues
  3. intact containers of hazardous waste that are not ruptured and retain at least 75 percent of their original volume.
- *Designated Facility* -
    1. A hazardous waste treatment, storage, or disposal facility which:
      - a. Has received a permit (or interim status) in accordance with the requirements of 40 CFR 270 and 124;

- b. Has received a permit (or interim status) from a State authorized in accordance with 40 CFR 271; or
    - c. Is regulated under 40 CFR 261.6(c)(2) or 40 CFR 266, Subpart F; and
    - d. That has been designated on the manifest by the generator pursuant to 40 CFR 262.20.
  - 2. Designated facility also means a generator site designated on the manifest to receive its waste as a return shipment from a facility that has rejected the waste in accordance with 40 CFR 264.72(f) or 40 CFR 265.72(f) of this chapter.
  - 3. If a waste is destined to a facility in an authorized State which has not yet obtained authorization to regulate that particular waste as hazardous, then the designated facility must be a facility allowed by the receiving State to accept such waste (40 CFR 260.10) [Revised April 2005].
- *Destination Facility* - a facility that treats, disposes of, or recycles a particular category of universal waste. A facility at which a particular category of universal waste is only accumulated, is not a destination facility for purposes of managing that category of universal waste. (The management activities of handlers for universal waste batteries and universal waste thermostats are exempt from the definition of a destination facility.) (40 CFR 262.10 and 273.9) [**Revised October 1999; Reviewed March 2000**].
  - *Detonation* - an explosion in which chemical transformation passes through the material faster than the speed of sound (0.33 km/s at sea level) (40 CFR 265.382).
  - *Dike* - an embankment or ridge of either natural or manmade materials used to prevent the movement of liquids, sludges, solids, or other materials (40 CFR 260.10) [**Reviewed October 2001**].
  - *Discharge or Hazardous Waste Discharge* - the accidental or intentional spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous waste into or on any land or water (40 CFR 260.10) [**Reviewed October 2001**].
  - *Disposal* - the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that such solid waste or hazardous waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including groundwaters (40 CFR 260.10) [**Reviewed October 2001**].
  - *Disposal Facility* - a facility or part of a facility at which hazardous waste is intentionally placed into or on any land or water, and at which waste will remain after closure. The term disposal facility does not include a corrective action management unit into which remediation wastes are placed (40 CFR 260.10) [**Reviewed October 2001**].
  - *Disposal Operations* – in relation to the export/import of hazardous waste, activities which do not lead to the possibility of resource recovery, recycling, reclamation, direct re-use or alternate uses, which include (40 CFR 262.81) [**Added January 2018**]:
    - 1. D1 Release or Deposit into or onto land, other than by any of operations D2 through D5 or D12.
    - 2. D2 Land treatment, such as biodegradation of liquids or sludges in soils.
    - 3. D3 Deep injection, such as injection into wells, salt domes or naturally occurring repositories.
    - 4. D4 Surface impoundment, such as placing of liquids or sludges into pits, ponds or lagoons.
    - 5. D5 Specially engineered landfill, such as placement into lined discrete cells which are capped and isolated from one another and the environment.
    - 6. D6 Release into a water body other than a sea or ocean, and other than by operation D4.
    - 7. D7 Release into a sea or ocean, including sea-bed insertion, other than by operation D4.
    - 8. D8 Biological treatment not specified elsewhere in operations D1 through D12, which results in final compounds or mixtures which are discarded by means of any of operations D1 through D12.
    - 9. D9 Physical or chemical treatment not specified elsewhere in operations D1 through D12, such as evaporation, drying, calcination, neutralization, or precipitation, which results in final compounds or mixtures which are discarded by means of any of operations D1 through D12.
    - 10. D10 Incineration on land.
    - 11. D11 Incineration at sea.
    - 12. D12 Permanent storage.

13. D13 Blending or mixing, prior to any of operations D1 through D12.
  14. D14 Repackaging, prior to any of operations D1 through D13.
  15. D15 (or DC17 for transboundary movements with Canada only) Interim Storage, prior to any of operations D1 through D12.
  16. DC15 Release, including the venting of compressed or liquified gases, or treatment, other than by any of operations D1 to D12 (for transboundary movements with Canada only).
  17. DC16 Testing of a new technology to dispose of a hazardous waste (for transboundary movements with Canada only).
- *Electronic Import-Export Reporting Compliance Date* - the date that EPA announces in the Federal Register, on or after which exporters, importers, and receiving facilities are required to submit certain export and import related documents to EPA using EPA's Waste Import Export Tracking System, or its successor system (40 CFR 260.10) **[Added January 2017]**.
  - *Elementary Neutralization Unit* - a device which (40 CFR 260.10) **[Reviewed October 2001]**:
    1. is used for neutralizing wastes that are hazardous only because they exhibit corrosivity characteristic defined in 40 CFR 261.22, or they are listed in Subpart D of 40 CFR 261 only for this reason
    2. meets the definition of tank, tank system, container, transport vehicle, or vessel in 40 CFR 261.10.
  - *Eligible Academic Entity* - a college or university, or a non-profit research institute that is owned by or has a formal written affiliation agreement with a college or university, or a teaching hospital that is owned by or has a formal written affiliation agreement with a college or university (40 CFR 262.200) **[Added January 2009]**.
  - *Eligible Naturally Occurring and/or Accelerator-produced Radioactive Material (NARM)* - NARM that is eligible for the Transportation and Disposal Conditional Exemption. It is a NARM waste that contains RCRA hazardous waste, meets the waste acceptance criteria of, and is allowed by State NARM regulations to be disposed of at a low-level radioactive waste disposal facility (LLRWDF) licensed in accordance with 10 CFR part 61 or NRC Agreement State equivalent regulations (40 CFR 266.210) **[Added January 2004]**.
  - *Enclosure* - a structure that surrounds a tank or container, captures organic vapors emitted from the tank or container, and vents the captured vapors through a closed-vent system to a control device (40 CFR 265.1081) **[Reviewed October 2001]**.
  - *EPA Acknowledgment of Consent (AOC)* - the letter EPA sends to the exporter documenting the specific terms of the country of import's consent and the country(ies) of transit's consent(s). The AOC meets the definition of an export license in U.S. Census Bureau regulations 15 CFR 30.1 (40 CFR 262.81) **[Added January 2018]**.
  - *EPA Hazardous Waste Number* - the number assigned by USEPA to each hazardous waste listed in 40 CFR 261, Subpart D, and to each characteristic identified in 40 CFR 261, Subpart C (40 CFR 260.10) **[Reviewed October 2001]**.
  - *EPA Identification Number* - the number assigned by USEPA to each generator, transporter, and TSDF (40 CFR 260.10) **[Reviewed October 2001]**.
  - *Episodic Event* - an activity or activities, either planned or unplanned, that does not normally occur during generator operations, resulting in an increase in the generation of hazardous wastes that exceeds the calendar month quantity limits for the generator's usual category (40 CFR 262.231) **[Added January 2017]**.
  - *Equipment* - each valve, pump, compressor, pressure relief device, sampling connection system, open-ended valve or line, or flange or other connector, and any control devices or systems required by this subpart (40 CFR 264.1031) **[Added April 1999; Reviewed October 2001]**.
  - *Exempted Hazardous Waste Containers and Surface Impoundments* - containers and surface impoundments are exempt from the air emission requirements (specified under 40 CFR 264.1084 through 264.1087 or under 40 CFR

265.1085 through 265.1088) if the waste management unit is one of the following (40 CFR 264.1082(c) and 265.1083(c)) **[Revised December 1997; Reviewed October 2001]**:

1. containers and surface impoundments for which all hazardous wastes entering the unit have an average VO concentration at the point of waste origination of less than 500 ppmw as determined by using the procedures specified under 40 CFR 264.1083(a) and 40 CFR 265.1084(a). This determination is updated at least every 12 mo
2. containers and surface impoundments for which the organic content of all hazardous wastes entering the unit has been reduced by an organic destruction or removal process that achieves any of the following conditions:
  - d. a. a process that removes or destroys the organics to a level such that the average VO concentration of the hazardous waste at the point of waste treatment is less than the exit concentration limit established for the process as determined by using the procedures specified under 40 CFR 264.1083(a) and 265.1084(b)
  - e. b. a process that removes or destroys the organics contained in the hazardous waste to such a level that the organic reduction efficiency for the process is equal to or greater than 95 percent, and the average VO concentration of the hazardous waste at the point of waste treatment is less than 100 ppmw as determined by using the procedures specified under 40 CFR 264.1083(a) and 265.1084(b)
  - f. c. a process that removes or destroys the organics contained in the hazardous waste to such a level that the actual organic mass removal rate for the process is greater than the required organic mass removal rate established for the process as determined by using the procedures specified under 40 CFR 264.1083(a) and 265.1084(b)
  - g. d. a biological process that destroys or degrades the organics contained in the hazardous waste such that either of the following is met:
    - i. the organic reduction efficiency for the process is equal to or greater than 95 percent and the organic biodegradation efficiency for the process is equal to or greater than 95 percent as determined by using the procedures specified under 40 CFR 264.1083(a) and 265.1084(b)
    - ii. the total actual organic mass biodegradation rate for all hazardous waste treated by the process is equal to or greater than the required organic mass removal rate as determined by using the procedures specified under 40 CFR 264.1083(a) and 265.1084(b)
  - h. e. a process that removes or destroys the organics contained in the hazardous waste and meets all the following conditions:
    - i. from the point of waste origination through the point where the hazardous waste enters the treatment process, the hazardous waste is continuously managed in waste management units which use air emissions controls as specified in 40 CFR 264.1084 through 264.2087 or in 40 CFR 265.1085 through 265.1088, as applicable to the waste management unit
    - ii. from the point of waste origination through the point where the hazardous waste enters the process, any transfer of the hazardous waste is accomplished through continuous hard-piping or other closed system transfer that does not allow exposure of the waste to the atmosphere
    - iii. the average VO concentration of the hazardous waste at the point of waste treatment is less than the lowest average VO concentration at the point of waste origination determined for each of the individual hazardous waste streams entering the process or 500 ppmw, whichever value is lower (The average VO concentration of each individual waste stream at the point of waste origination shall be determined using the procedures specified under 40 CFR 264.1083(a) and 265.1084(b))
  - i. f. a process that removes or destroys the organics contained in the hazardous waste to a level such that the organic reduction efficiency for the process is equal to or greater than 95 percent and the owner/operator certifies that the average VO concentration at the point of waste origination for each of the individual waste streams entering the process is less than 10,000 ppmw, as determined by using the procedures specified under 40 CFR 264.1083(a) and 265.1084(b))
  - j. g. a hazardous waste incinerator for which the owner/operator has been issued a final permit under 40 CFR 270, or has designed and operated the incinerator in compliance with 40 CFR 264, Subpart O
  - k. h. a boiler or industrial furnace for which the owner or operator has been issued a final permit under 40 CFR 270, or has designed and operated the unit in compliance with 40 CFR 266, Subpart H.

3. a tank, container, or surface impoundment for which all hazardous waste placed in the unit either:
  - l. a. meets the numerical concentrations limits for organic hazardous constituents as specified in 40 CFR 268, or
  - m. b. the organic hazardous constituents in the waste have been treated by the treatment technology established by the USEPA for the waste listed under 40 CFR 268.42(a) or have been removed or destroyed by an equivalent method of treatment approved by the USEPA.
  - n.
- *Exempted Hazardous Waste Management Unit* - the air emission standards specified under Subpart CC of 40 CFR 264 and 265 do not apply to the following waste management units (40 CFR 264.1080(b) and 265.1080(b)) **[Revised April 1999; Reviewed October 2001]**:
  1. a waste management unit that holds hazardous waste placed in the unit before 6 December 1996, and in which no hazardous waste is added to the unit on or after 6 December 1996
  2. a container that has a design capacity less than or equal to 0.1 m<sup>3</sup>
  3. a tank in which an owner/operator has stopped adding hazardous waste and the owner/operator has begun implementing or completed closure pursuant to an approved closure plan
  4. a surface impoundment in which an owner/operator has stopped adding hazardous waste (except to implement an approved closure plan) and the owner/operator has begun implementing or completed closure pursuant to an approved closure plan
  5. a waste management unit that is used solely for on-site treatment or storage of hazardous waste that is placed in the unit as a result of implementing remedial activities required under the corrective action authorities of RCRA Sect 3004(u), 3004(v), or 3008(h); CERCLA authorities; or similar federal or state authorities
  6. a waste management unit that is used solely for the management of radioactive mixed waste in accordance with all applicable regulations under the *Atomic Energy Act* and the *Nuclear Waste Policy Act*
  7. a waste management unit that the owner or operator certifies is equipped with and operating air emissions controls in accordance with the requirements of an applicable *Clean Air Act* (CAA) regulation codified under 40 CFR 60, 61, and 63
  8. a tank that has a process vent as defined in 40 CFR 264.1031.
- *Exempted Waste* - a waste that meets the eligibility criteria in 266.225 and meets all of the conditions in 40 CFR 230, or meets the eligibility criteria in 40 CFR 266.310 and complies with all the conditions in 40 CFR 266.315. Such waste is conditionally exempted from the regulatory definition of hazardous waste described in 40 CFR 261.3 (40 CFR 266.210) **[Added January 2004]**.
- *Existing Hazardous Waste Management (HWM) Facility or Existing Facility* - a facility which was in operation or for which construction commenced on or before 19 November 1980 (40 CFR 260.10) **[Reviewed October 2001]**.
- *Export* - the transportation of hazardous waste from a location under the jurisdiction of the United States to a location under the jurisdiction of another country, or a location not under the jurisdiction of any country, for the purposes of recovery or disposal operations therein (40 CFR 262.81) **[Added January 2018]**.
- *Exporter*- also known as primary exporter on the RCRA hazardous waste manifest, means the person domiciled in the United States who is required to originate the movement document in accordance with 40 CFR 262.83(d) or the manifest for a shipment of hazardous waste in accordance with subpart B of this part, or equivalent State provision, which specifies a foreign receiving facility as the facility to which the hazardous wastes will be sent, or any recognized trader who proposes export of the hazardous wastes for recovery or disposal operations in the country of import (40 CFR 262.81) **[Added January 2018]**.
- *Existing Portion* - the land surface area of an existing waste management unit, included in the original Part A permit application, on which wastes have been placed prior to the issuance of a permit (40 CFR 260.10).
- *External Floating Roof* - a pontoon or double-deck type floating roof that rests on the surface of a hazardous waste being managed in a tank that has no fixed roof (40 CFR 265.1081).

- *Explosives or Munitions Emergency* - a situation involving the suspected or detected presence of unexploded ordnance (UXO), damaged or deteriorated explosives or munitions, an improvised explosive device (IED), other potentially explosive material or device, or other potentially harmful military chemical munitions or device, that creates an actual or potential imminent threat to human health, including safety, or the environment, including property, as determined by an explosives or munitions emergency response specialist. Such situation may require immediate and expeditious action by an explosives or munitions emergency response specialist to control, mitigate, or eliminate the threat (40 CFR 260.10 and 266.201) **[Added January 2003]**.
- *Explosives or Munitions Emergency Response* - all immediate response activities by an explosives and munitions emergency response specialist to control, mitigate, or eliminate the actual or potential threat encountered during an explosives or munitions emergency. An explosives or munitions emergency response may include in-place render safe procedures, treatment, or destruction of the explosives or munitions and/or transporting those items to another location to be rendered safe, treated, or destroyed. Any reasonable delay in the completion of an explosives or munitions emergency response caused by a necessary, unforeseen, or uncontrollable circumstance will not terminate the explosives or munitions emergency. Explosives and munitions emergency responses can occur on either public or private lands and are not limited to responses at RCRA facilities (40 CFR 260.10 and 266.201) **[Added January 2003]**.
- *Explosives or Munitions Emergency Response Specialist* - an individual trained in chemical or conventional munitions or explosives handling, transportation, render-safe procedures, or destruction techniques. Explosives or munitions emergency response specialists include Department of Defense (DOD) emergency explosive ordnance disposal (EOD), technical escort unit (TEU), and DOD-certified civilian or contractor personnel; and other Federal, State, or local government, or civilian personnel similarly trained in explosives or munitions emergency responses (40 CFR 260.10 and 266.201) **[Added January 2003]**.
- *Facility* – This term means (40 CFR 260.10) **[Revised January 2009]**:
  1. All contiguous land, and structures, other appurtenances, and improvements on the land, used for treating, storing, or disposing of hazardous waste, or for managing hazardous secondary materials prior to reclamation. A facility may consist of several treatment, storage, or disposal operational units (e.g., one or more landfills, surface impoundments, or combinations of them).
  2. For the purpose of implementing corrective action under 40 CFR 264.101 or 267.101, all contiguous property under the control of the owner or operator seeking a permit under Subtitle C of RCRA. This definition also applies to facilities implementing corrective action under RCRA Section 3008(h).
  3. Notwithstanding paragraph (2) of this definition, a remediation waste management site is not a facility that is subject to 40 CFR 264.101, but is subject to corrective action requirements if the site is located within such a facility.
- *Federally Owned Treatment Work (FOTW)* - a facility that is owned and operated by a department, agency, or instrumentality of the Federal Government treating wastewater, a majority of which is domestic sewage, prior to discharge in accordance with a permit issued under section 402 of the Federal Water Pollution Control Act (42 USC 6939e(d)).
- *Final Closure* - the closure of all hazardous waste management units at the facility in accordance with all applicable closure requirements so that hazardous waste management activities under parts 264 and 265 are no longer conducted at the facility unless subject to the provisions of 262.34 (40 CFR 260.10).
- *Fixed Roof* - a cover that is mounted on a unit in a stationary position and does not move with fluctuations in the level of the material managed in the unit (40 CFR 265.1081) **[Reviewed October 2001]**.
- *Floating Membrane Cover* - a cover consisting of a synthetic flexible membrane material that rests upon and is supported by the hazardous waste being managed in a surface impoundment (40 CFR 265.1081).
- *Floating Roof* - a cover consisting of a double deck, pontoon single deck, or internal floating cover that rests upon and is supported by the material being contained, and is equipped with a continuous seal (40 CFR 265.1081).

- *Food-Chain Crops* - tobacco, crops grown for human consumption, and crops grown for feed for animals whose products are consumed by humans (40 CFR 260.10) **[Reviewed October 2001]**.
- *Foreign Exporter* - the person under the jurisdiction of the country of export who has, or will have at the time the planned transboundary movement commences, possession or other forms of legal control of the hazardous wastes and who proposes shipment of the hazardous wastes to the United States for recovery or disposal operations (40 CFR 262.81) **[Added January 2018]**.
- *Foreign Importer* - the person to whom possession or other form of legal control of the hazardous waste is assigned at the time the exported hazardous waste is received in the country of import (40 CFR 262.81) **[Added January 2018]**.
- *Foreign Receiving Facility* - a facility which, under the importing country's applicable domestic law, is operating or is authorized to operate in the country of import to receive the hazardous wastes and to perform recovery or disposal operations on them (40 CFR 262.81) **[Added January 2018]**.
- *Formal Written Affiliation Agreement for a Non-profit Research Institute* - a written document that establishes a relationship between institutions for the purposes of research and/or education and is signed by authorized representatives, as defined by 40 CFR 260.10, from each institution. A relationship on a project-by-project or grant-by-grant basis is not considered a formal written affiliation agreement. A formal written affiliation agreement for a teaching hospital means a master affiliation agreement and program letter of agreement, as defined by the Accreditation Council for Graduate Medical Education, with an accredited medical program or medical school (40 CFR 262.200) **[Added January 2009]**.
- *Free Liquids* - liquids that readily separate from the solid portion of a waste under ambient temperature and pressure (40 CFR 260.10) **[Reviewed October 2001]**.
- *Groundwater* - water below the land surface in a zone of saturation (40 CFR 260.10) **[Reviewed October 2001]**.
- *Halogenated Organic Compounds (HOCs)* - compounds having a carbon-halogen bond that are listed in Appendix III of 40 CFR 268 (40 CFR 268.2) **[Reviewed October 2001]**.
- *Hazardous Debris* - debris that contains a hazardous waste listed in subpart D of 40 CFR 261, or that exhibits a characteristic of hazardous waste identified in subpart C of 40 CFR 261. Any deliberate mixing of prohibited hazardous waste with debris that changes its treatment classification (i.e., from waste to hazardous debris) is not allowed under the dilution prohibition in 40 CFR 268.3 (40 CFR 268.2) **[Revised July 1999; Reviewed October 2001]**.
- *Hazardous Secondary Material* - a secondary material (e.g., spent material, by-product, or sludge) that, when discarded, would be identified as hazardous waste under 40 CFR 261 (40 CFR 260.10) **[Added January 2009]**.
- *Hazardous Secondary Material Generated and Reclaimed Under the Control of the Generator* – this means (40 CFR 260.10) **[Added January 2009]**:
  1. That such material is generated and reclaimed at the generating facility (for purposes of this definition, generating facility means all contiguous property owned, leased, or otherwise controlled by the hazardous secondary material generator); or
  2. That such material is generated and reclaimed at different facilities, if the reclaiming facility is controlled by the generator or if both the generating facility and the reclaiming facility are controlled by a person as defined in 40 CFR 260.10, and if the generator provides one of the following certifications: “on behalf of [insert generator facility name], I certify that this facility will send the indicated hazardous secondary material to [insert reclaimer facility name], which is controlled by [insert generator facility name] and that [insert the name of either facility] has acknowledged full responsibility for the safe management of the hazardous secondary material,” or “on behalf of [insert generator facility name] I certify that this facility will send the indicated hazardous secondary material to [insert reclaimer facility name], that both facilities

are under common control, and that [insert name of either facility] has acknowledged full responsibility for the safe management of the hazardous secondary material.” For purposes of this paragraph, “control” means the power to direct the policies of the facility, whether by the ownership of stock, voting rights, or otherwise, except that contractors who operate facilities on behalf of a different person as defined in 40 CFR 260.10 shall not be deemed to “control” such facilities, or

3. That such material is generated pursuant to a written contract between a tolling contractor and a toll manufacturer and is reclaimed by the tolling contractor, if the tolling contractor certifies the following: “On behalf of [insert tolling contractor name], I certify that [insert tolling contractor name], has a written contract with [insert toll manufacturer name] to manufacture [insert name of product or intermediate] which is made from specified unused materials, and that [insert tolling contractor name] will reclaim the hazardous secondary materials generated during this manufacture. On behalf of [insert tolling contractor name], I also certify that [insert tolling contractor name] retains ownership of, and responsibility for, the hazardous secondary materials that are generated during the course of the manufacture, including any releases of hazardous secondary materials that occur during the manufacturing process. For purposes of this paragraph, tolling contractor means a person who arranges for the production of a product or intermediate made from specified unused materials through a written contract with a toll manufacturer. Toll manufacturer means a person who produces a product or intermediate made from specified unused materials pursuant to a written contract with a tolling contractor (40 CFR 260.10) **[Added January 2009]**.
- *Hazardous Secondary Material Generator* - any person whose act or process produces hazardous secondary materials at the generating facility. For purposes of this paragraph, “generating facility” means all contiguous property owned, leased, or otherwise controlled by the hazardous secondary material generator. For the purposes of 40 CFR 261.2(a)(2)(ii) and 40 CFR 261.4(a)(23), a facility that collects hazardous secondary materials from other persons is not the hazardous secondary material generator (40 CFR 260.10) **[Added January 2009]**.
  - *Hazardous Waste* - a solid waste identified as a characteristic or listed hazardous waste in 40 CFR 261.3 (40 CFR 260.10) **[Reviewed October 2001]**.
  - *Hazardous Waste Constituent* - a constituent that caused the hazardous waste to be listed in 40 CFR 261, Subpart D (lists of hazardous wastes from nonspecific and specific sources, and listed hazardous wastes, or a constituent listed in the table of maximum concentrations of contaminants for the toxicity characteristic) (40 CFR 260.10) **[Reviewed October 2001]**.
  - *Hazardous Waste Management Unit* - a contiguous area of land on or in which hazardous waste is placed, or the largest area in which there is a significant likelihood of mixing hazardous waste constituents in the same area. Examples are a surface impoundment, a waste pile, a treatment area, a landfill cell, an incinerator, a tank and its associated piping and underlying containment system, and a container storage area. A container alone does not constitute a unit; the unit includes containers and the land or pad upon which they are placed (40 CFR 260.10) **[Reviewed October 2001]**.
  - *Household Waste* - any material (including garbage, trash and sanitary wastes in septic tanks) derived from households (including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds and day-use recreation areas)(40 CFR 261.4(b)) **[Added April 2010]**.
  - *Import* - the transportation of hazardous waste from a location under the jurisdiction of another country to a location under the jurisdiction of the United States for the purposes of recovery or disposal operations therein (40 CFR 262.81) **[Added January 2018]**.
  - *Importer* - the person to whom possession or other form of legal control of the hazardous waste is assigned at the time the imported hazardous waste is received in the United States (40 CFR 262.81) **[Added January 2018]**.
  - *In Light Liquid Service* - the piece of equipment contains or contacts a waste stream where the vapor pressure of one or more of the organic components in the stream is greater than 0.3 kPa at 20 degrees C, the total concentration of the pure organic components having a vapor pressure greater than 0.3 kPa at 20 degrees C is equal to or greater

than 20 percent by weight, and the fluid is a liquid at operating conditions (40 CFR 264.1031) [**Revised December 1997; Reviewed October 2001**].

- *In Light Material Service* - the container is used to manage a material for which both of the following conditions apply (40 CFR 265.1081) [**Reviewed October 2001**]:
  1. the vapor pressure of one or more of the organic constituents in the material is greater than 0.3 kPa at 20 degrees C
  2. the total concentration of the pure organic constituents having a vapor pressure greater than 0.3 kPa at 20 degrees C is equal to or greater than 20 percent by weight.
- *Incinerator* - an enclosed device that either (40 CFR 260.10):
  1. uses controlled flame combustion and neither meets the criteria for classification as a boiler, sludge dryer, or carbon regeneration unit, nor is listed as an industrial furnace
  2. meets the definition of infrared incinerator or plasma arc incinerator.
- *Incompatible Waste* - a hazardous waste that is unsuitable for (40 CFR 260.10) [**Reviewed October 2001**]:
  1. placement in a particular device or facility because it may cause corrosion or decay of containment materials (e.g., container liners or tank walls)
  2. commingling with another waste or material under uncontrolled conditions because the commingling conditions produce heat or pressure, fire or explosion, violent reaction, toxic dusts, mist, fumes or gases, or flammable fumes or gases.
- *Individual Generation Site* - the contiguous site at or on which one or more hazardous wastes are generated. An individual generation site, such as a large manufacturing plant, may have one or more sources of hazardous waste but is considered a single or individual generation site if the site or property is contiguous (40 CFR 260.10) [**Reviewed October 2001**].
- *Industrial Furnace* - any of the following enclosed devices that are integral components of manufacturing processes and that use controlled flame devices to accomplish recovery of materials or energy: cement kilns, lime kilns, aggregate kilns, phosphate kilns, coke ovens, blast furnaces, smelting, melting and refining furnaces, titanium dioxide chloride process oxidation reactors, methane reforming furnaces, pulping liquor recovery furnaces, combustion devices used in the recovery of sulfur values from spent sulfuric acid, halogen acid furnaces, and other devices designated by the administrator (40 CFR 260.10) [**Reviewed October 2001**].
- *Injection Wells* - a well into which fluids are injected (40 CFR 260.10) [**Reviewed October 2001**].
- *Inner Liner* - a continuous layer of material placed inside a tank or container that protects the construction materials of the tank or container from the contained waste or reagents used to treat the waste (40 CFR 260.10) [**Reviewed October 2001**].
- *Intermediate Facility* - any facility that stores hazardous secondary materials for more than 10 days, other than a hazardous secondary material generator or reclaimer of such material (40 CFR 260.10) [**Added January 2009**].
- *International Shipment* - the transportation of hazardous waste into or out of the jurisdiction of the United States (40 CFR 260.10) [**Reviewed October 2001**].
- *Laboratory* - an area owned by an eligible academic entity where relatively small quantities of chemicals and other substances are used on a non-production basis for teaching or research (or diagnostic purposes at a teaching hospital) and are stored and used in containers that are easily manipulated by one person. Photo laboratories, art studios, and field laboratories are considered laboratories. Areas such as chemical stockrooms and preparatory laboratories that provide a support function to teaching or research laboratories (or diagnostic laboratories at teaching hospitals) are also considered laboratories (40 CFR 262.200) [**Added January 2009**].

- *Laboratory Clean-Out* - an evaluation of the inventory of chemicals and other materials in a laboratory that are no longer needed or that have expired and the subsequent removal of those chemicals or other unwanted materials from the laboratory. A clean-out may occur for several reasons. It may be on a routine basis (e.g., at the end of a semester or academic year) or as a result of a renovation, relocation, or change in laboratory supervisor/occupant. A regularly scheduled removal of unwanted material as required by 40 CFR 262.208 does not qualify as a laboratory clean-out (40 CFR 262.200) [**Added January 2009**].
- *Laboratory Worker* - a person who handles chemicals and/or unwanted material in a laboratory and may include, but is not limited to, faculty, staff, post-doctoral fellows, interns, researchers, technicians, supervisors/managers, and principal investigators. A person does not need to be paid or otherwise compensated for his/her work in the laboratory to be considered a laboratory worker. Undergraduate and graduate students in a supervised classroom setting are not laboratory workers (40 CFR 262.200) [**Added January 2009**].
- *Lamp* - the bulb or tube portion of an electric lighting device. A lamp is specifically designed to produce radiant energy, most often in the ultraviolet, visible, and infrared regions of the electromagnetic spectrum. Examples of common universal waste electric lamps include, but are not limited to, fluorescent, high intensity discharge, neon, mercury vapor, high pressure sodium, and metal halide lamps (40 CFR 260.10, 273.9) [**Added October 1999; Reviewed March 2000**].

The following are exempted from the definition of lamp in relation to universal waste (40 CFR 273.5(b)):

1. lamps that are not yet wastes under 40 CFR 261 (see the definition of Waste Lamp)
2. lamps that are not hazardous waste. A lamp is a hazardous waste if it exhibits one or more of the characteristics identified in 40 CFR 261.

See also the definition for *Waste Lamp*.

- *Land-based Unit* - an area where hazardous secondary materials are placed in or on the land before recycling. This definition does not include land-based production units (40 CFR 260.10) [**Added January 2009**].
- *Land Disposal* - placement in or on the land, except in a corrective action management unit, and includes, but is not limited to, placement in a landfill, surface impoundment, waste pile, injection well, land treatment facility, salt dome formation, salt bed formation, underground mine or cave, or placement in a concrete vault, or bunker intended for disposal purposes (40 CFR 268.2) [**Reviewed October 2001**].
- *Land Treatment Facility* - a facility or part of a facility at which hazardous waste is applied onto or incorporated into the soil surface; such facilities are disposal facilities if the waste will remain after closure (40 CFR 260.10) [**Reviewed October 2001**].
- *Landfill* - a disposal facility or part of a facility where hazardous waste is placed in or on land and which is not a pile, a land treatment facility, a surface impoundment, an underground injection well, a salt dome formation, a salt bed formation, an underground mine, a cave, or a corrective action management unit (40 CFR 260.10) [**Reviewed October 2001**].
- *Landfill Cell* - a discrete volume of a hazardous waste landfill that uses a liner to provide isolation of wastes from adjacent cells or wastes. Examples are trenches and pits (40 CFR 260.10).
- *Large Quantity Generator* - a generator who generates any of the following amounts in a calendar month (40 CFR 260.10) [**Added January 2017**]:
  1. Greater than or equal to 1,000 kilograms (2200 lbs) of non-acute hazardous waste; or
  2. Greater than 1 kilogram (2.2 lbs) of acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e); or
  3. Greater than 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e).

- *Large Quantity Handler of Universal Waste* - a universal waste handler (as defined in this section) who accumulates 5,000 kg or more total of universal waste (batteries, pesticides, mercury-containing equipment, or lamps, calculated collectively) at any time. This designation as a large quantity handler of universal waste is retained through the end of the calendar year in which the 5,000 kilogram limit is met or exceeded (40 CFR 273.9) **[Revised October 1999; Reviewed March 2000; Revised October 2005]**.
- *Leachate* - any liquid, including any suspended components in the liquid, that has percolated through or drained from hazardous waste (40 CFR 260.10) **[Reviewed October 2001]**.
- *Leak Detection System* - a system capable of detecting the failure of either the primary or secondary containment structure or the presence of a release of hazardous waste or accumulated liquid in the secondary structure. Such a system must employ operational controls (e.g., daily, visual inspections for releases into the secondary containment system of aboveground tanks) or consist of an interstitial monitoring device designed to detect continuously and automatically the failure of the primary or secondary containment structure or the presence of a release of hazardous waste into the secondary containment structure (40 CFR 260.10) **[Reviewed October 2001]**.
- *License* - a license issued by the Nuclear Regulatory Commission, or NRC Agreement State, to users that manage radionuclides regulated by NRC, or NRC Agreement States, under authority of the Atomic Energy Act of 1954, as amended (40 CFR 266.210) **[Added January 2004]**.
- *Liner* - a continuous layer of natural or manmade materials, beneath or on the sides of a surface impoundment, landfill, or landfill cell, which restricts the downward or lateral escape of hazardous waste, hazardous waste constituents, or leachate (40 CFR 260.10).
- *Low-Level Mixed Waste (LLMW)* - a waste that contains both low-level radioactive waste and RCRA hazardous waste (40 CFR 266.210) **[Added January 2004]**.
- *Low-Level Radioactive Waste (LLW)* - a radioactive waste which contains source, special nuclear, or byproduct material, and which is not classified as high-level radioactive waste, transuranic waste, spent nuclear fuel, or byproduct material as defined in section 11e.(2) of the Atomic Energy Act. (See also NRC definition of "waste" at 10 CFR 61.2) (40 CFR 266.210) **[Added January 2004]**.
- *Malfunction* - any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or usual manner. Failures that are caused in part by poor maintenance or careless operations are not malfunctions (40 CFR 265.1081) **[Reviewed October 2001]**.
- *Management or Hazardous Waste Management* - the systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery, and disposal of hazardous waste (40 CFR 260.10) **[Reviewed October 2001]**.
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Manifest* - the shipping document EPA Form 8700-22 (including, if necessary, EPA Form 8700-22A), originated and signed by the generator or offeror in accordance with the instructions in the appendix to 40 CFR part 262 and the applicable requirements of 40 CFR 262 through 265 (40 CFR 260.10) **[Revised April 2005]**.
- *Manifest Tracking Number* - the alphanumeric identification number (i.e., a unique three letter suffix preceded by nine numerical digits), which is pre-printed in Item 4 of the Manifest by a registered source (40 CFR 260.10) **[Added April 2005]**.

- *Mercury-Containing Equipment* - a device or part of a device (including thermostats, but excluding batteries and lamps) that contains elemental mercury integral to its function (40 CFR 260.10 and 273.9) **[Added October 2005]**.

The requirements of 40 CFR 273 do not apply to persons managing the following mercury-containing equipment (40 CFR 273.4(b)):

1. Mercury-containing equipment that is not yet a waste under 40 CFR 261.
  2. Mercury-containing equipment that is not a hazardous waste. Mercury-containing equipment is a hazardous waste if it exhibits one or more of the characteristics identified in 40 CFR 261, subpart C, or is listed in 40 CFR 261, subpart D; and
  3. Equipment and devices from which the mercury-containing components have been removed.
- *Miscellaneous Unit* - a hazardous waste management unit at which hazardous waste is treated, stored, or disposed of and that is not a container, tank, surface impoundment, pile, land treatment unit, landfill, incinerator, boiler, industrial furnace, underground injection well with appropriate technical standards under 40 CFR 146, containment building, corrective action management unit, or unit eligible for a research development and demonstration permit under 40 CFR 270.65 (40 CFR 260.10).
  - *Mixed Waste* - a waste that contains both RCRA hazardous waste and source, special nuclear, or byproduct material subject to the Atomic Energy Act of 1954, as amended (40 CFR 266.210) **[Added January 2004]**.
  - *Movement* - hazardous waste transported to a facility in an individual vehicle (40 CFR 260.10) **[Reviewed October 2001]**.
  - *Naturally Occurring and/or Accelerator-produced Radioactive Material (NARM)* - radioactive materials that (40 CFR 266.210) **[Added January 2004]**:
    1. Are naturally occurring and are not source, special nuclear, or byproduct materials (as defined by the AEA), or
    2. Are produced by an accelerator. NARM is regulated by the States under State law, or by DOE (as authorized by the AEA) under DOE orders.
  - *New Hazardous Waste Management Facility* - a facility that began operation, or for which construction commenced after 19 November 1980 (40 CFR 260.10) **[Revised March 2010]**.
  - *No Detectable Organic Emissions* - no escape of organics to the atmosphere as determined by using the procedures specified in 40 CFR 265.1084(d) (40 CFR 265.1081) **[Reviewed October 2001]**.
  - *Non-acute Hazardous Waste* - all hazardous wastes that are not acute hazardous waste, as defined in 40 CFR 260.10 (40 CFR 260.10) **[Added January 2017]**.
  - *Non-profit Research Institute* - an organization that conducts research as its primary function and files as a non-profit organization under the tax code of 26 U.S.C. 501(c)(3) (40 CFR 262.200) **[Added January 2009]**.
  - *Nonwastewaters* - wastes that do not meet the criteria for wastewaters (40 CFR 268.2) **[Reviewed October 2001]**.
  - *NRC* - the U. S. Nuclear Regulatory Commission (40 CFR 266.210) **[Added January 2004]**.
  - *OECD* - the Organization for Economic Cooperation and Development (40 CFR 262.81) **[Added January 2018]**.
  - *OECD Area* - all land or marine areas under the national jurisdiction of any OECD Member country. When the regulations refer to shipments to or from an OECD Member country, this means OECD area (40 CFR 262.81) **[Added January 2018]**.

- *OECD Member Country* - the countries that are members of the OECD and participate in the Amended 2001 OECD Decision. (EPA provides a list of OECD Member countries at <https://www.epa.gov/hwgenerators/international-agreements-transboundary-shipments-waste>) (40 CFR 262.81) **[Added January 2018]**.
- *Onsite* - the same or geographically contiguous property which may be divided by a public or private right-of-way, provided the entrance and exit between the properties is at a crossroads intersection, and access is by crossing as opposed to going along the right-of-way. Non-contiguous properties owned by the same person but connected by a right-of-way that he controls and to which the public does not have access is also considered onsite property (40 CFR 260.10) **[Reviewed March 2000; Reviewed October 2001]**.
- *Open Burning* - the combustion of any material without the following characteristics (40 CFR 260.10) **[Reviewed October 2001]**:
  1. control of combustion air to maintain adequate temperature for efficient combustion
  2. containment of the combustion-reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion
  3. control of emission of the gaseous combustion products.
- *Open-ended Valve or Line* - any valve, except pressure relief valves, having one side of the valve seat in contact with hazardous waste and one side open to the atmosphere, either directly or through open piping (40 CFR 264.1031) **[Added April 1999; Reviewed October 2001]**.
- *Ordnance* - See Waste Explosives.
- *Partial Closure* - the closure of a hazardous waste management unit in accordance with the applicable closure requirements of 40 CFR 264 and 265 at a facility that contains other active hazardous waste management units. For example, partial closure may include the closure of a tank (including its associated piping and underlying containment systems) while other units of the same facility continue to operate (40 CFR 260.10).
- *Pesticides* - any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest, or intended for use as a plant regulator, defoliant, or desiccant, other than any article that either (40 CFR 262.10 and 273.9):
  1. is a new animal drug under FFDCA Section 201(w)
  2. is an animal drug that has been determined by regulation of the Secretary of Human Health and Human Services not to be a new animal drug
  3. is an animal feed under FFDCA section 201(x) that bears or contains any substances described by paragraph 1 or 2 of this definition.

Pesticides that are regulated as universal wastes include pesticides that are either (40 CFR 273.3(a):

1. recalled pesticides that are stocks of a suspended and canceled pesticide that are a part of a voluntary or mandatory recall under FIFRA Section 19(b), including, but not limited to, those owned by the registrant responsible for conducting the recall
2. recalled pesticide that are stocks of suspended or canceled pesticides, or a pesticide that is not in compliance with FIFRA, that are part of a voluntary recall by the registrant
3. stocks of other unused pesticide products that are collected and managed as a part of a waste pesticide collection.

Pesticides that are not universal wastes include (40 CFR 273.3(b):

1. the following pesticides when disposed of on a farmers own farm in a manner consistent with the label, and the container is triple rinsed:
  - a. suspended or recalled pesticides that are a part of a voluntary or mandatory recall under FIFRA Section 19(b), including, but not limited to, those owned by the registrant responsible for conducting the recall

- p. b. stocks of suspended or canceled pesticide products that are not in compliance with FIFRA and are part of a voluntary recall by the registrant
  - q. c. stocks of other unused pesticide products
- 2. pesticides not meeting the definition of a universal waste
- 3. pesticides that are not wastes under 40 CFR 261, including those who do not meet the criteria for waste generation or those that are not wastes (see the definition of Waste Pesticide)
- 4. pesticides that are not a hazardous waste [Revised October 1999; Reviewed March 2000].

See also the definition for Waste Pesticides.

- *Pile* - any noncontainerized accumulation of solid, nonflowing hazardous waste used for treatment or storage that is not a containment building (40 CFR 260.10) **[Reviewed October 2001]**.
- *Planned Episodic Event* - an episodic event that the generator planned and prepared for, including regular maintenance, tank cleanouts, short-term projects, and removal of excess chemical inventory (40 CFR 262.231) **[Added January 2017]**.
- *Point of Waste Treatment* - the point where a hazardous waste exits a waste management unit used to destroy, degrade, or remove organics in the hazardous waste (40 CFR 265.1081) **[Reviewed October 2001]**.
- *Point Source* - any discernible, confined, and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or floating craft from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture (40 CFR 260.10) **[Reviewed October 2001]**.
- *Publicly Owned Treatment Works (POTW)* - any device or system used in the treatment (including recycling and reclamation) of municipal sewage or industrial wastes of a liquid nature that is owned by a state or municipality (as defined by section 502(4) of the CWA). This definition includes sewers, pipes, or other conveyances only if they convey wastewater to a POTW providing treatment (40 CFR 260.10) **[Reviewed October 2001]**.
- *Pump Operating Level* - a liquid level proposed by the owner or operator and approved by the Regional Administrator based on pump activation level, sump dimensions, and level that avoids backup into the drainage layer and minimizes head in the sump (40 CFR 264.226(d)(3)).
- *Qualified Groundwater Scientist* - a scientist or engineer who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields as may be demonstrated by state registration, professional certification, or completion of accredited university courses that enable the individual to make sound professional judgments regarding groundwater monitoring and contaminant fate and transport (40 CFR 260.10) **[Reviewed October 2001]**.
- *Reactive Acutely Hazardous Unwanted Material* - an unwanted material that is one of the acutely hazardous commercial chemical products listed in 40 CFR 261.33(e) for reactivity (40 CFR 262.200) **[Added January 2009]**.
- *Receiving Facility* - a U.S. facility which, under RCRA and other applicable domestic laws, is operating or is authorized to operate to receive hazardous wastes and to perform recovery or disposal operations on them (40 CFR 262.81) **[Added January 2018]**.
- *Recognized Trader* - a person domiciled in the United States, by site of business, who acts to arrange and facilitate transboundary movements of wastes destined for recovery or disposal operations, either by purchasing from and subsequently selling to United States and foreign facilities, or by acting under arrangements with a United States waste facility to arrange for the export or import of the wastes (40 CFR 260.10) **[Added January 2017]**.
- *Recovery Operations* - activities leading to resource recovery, recycling, reclamation, direct re-use or alternative uses, which include (40 CFR 262.81) **[Added January 2018]**:

1. R1 Use as a fuel (other than in direct incineration) or other means to generate energy.
  2. R2 Solvent reclamation/regeneration.
  3. R3 Recycling/reclamation of organic substances which are not used as solvents.
  4. R4 Recycling/reclamation of metals and metal compounds.
  5. R5 Recycling/reclamation of other inorganic materials.
  6. R6 Regeneration of acids or bases.
  7. R7 Recovery of components used for pollution abatement.
  8. R8 Recovery of components used from catalysts.
  9. R9 Used oil re-refining or other reuses of previously used oil.
  10. R10 Land treatment resulting in benefit to agriculture or ecological improvement.
  11. R11 Uses of residual materials obtained from any of the operations numbered R1 through R10 or RC14 (for transboundary shipments with Canada only).
  12. R12 Exchange of wastes for submission to any of the operations numbered R1 through R11 or RC14 (for transboundary shipments with Canada only).
  13. Accumulation of material intended for any operation numbered R1 through R12 or RC14 (for transboundary shipments with Canada only).
  14. RC14 Recovery or regeneration of a substance or use or re-use of a recyclable material, other than by any of operations R1 to R10 (for transboundary shipments with Canada only).
  15. RC15 Testing of a new technology to recycle a hazardous recyclable material (for transboundary shipments with Canada only).
  16. RC16 Interim storage prior to any of operations R1 to R11 or RC14 (for transboundary shipments with Canada only).
- *Remediation Waste* - all solid and hazardous wastes, and all media (including ground water, surface water, soils, and sediments) and debris, that are managed for implementing cleanup (40 CFR 260.10) [**Added April 2002**].
  - *Replacement Unit* - a landfill, surface impoundment, or waste pile unit (40 CFR 260.10):
    1. from which all or substantially all of the waste is removed
    2. that is subsequently reused to treat, store, or dispose of hazardous waste. This does not apply to a unit from which waste is removed during closure, if the subsequent reuse solely involves the disposal of waste from that unit and other closing units or corrective action areas at the facility, in accordance with an approved closure plan or USEPA or state-approved corrective action.
  - *Representative Sample* - a sample of a universe or whole (e.g., waste pile, lagoon, groundwater) that can be expected to exhibit the average properties of the universe or whole (40 CFR 260.10) [**Reviewed October 2001**].
  - *Restricted Wastes* - categories of hazardous wastes that are restricted from land disposal either by regulation or by statute, in other words, a hazardous waste that is restricted no later than the date of the deadline established in RCRA Section 3004 (40 CFR 268) [**Reviewed October 2001**].
  - *Runoff* - any rainwater, leachate, or other liquid that drains over land from any part of a facility (40 CFR 260.10) [**Reviewed October 2001**].
  - *Run-On* - any rainwater, leachate, or other liquid that drains over land onto any part of a facility (40 CFR 260.10) [**Reviewed October 2001**].
  - *Sampling Connection System* - an assembly of equipment within a process or waste management unit used during periods of representative operation to take samples of the process or waste fluid. Equipment used to take non-routine grab samples is not considered a sampling connection system (40 CFR 264.1031) [**Added April 1999**].
  - *Sludge* - any solid, semisolid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility exclusive of the treated effluent from a wastewater treatment plant (40 CFR 260.10) [**Reviewed October 2001**].

- *Small Quantity Generator (SQG)* - a generator that generates the following amounts in a calendar month (40 CFR 260.10) **[Revised January 2017]**:
  1. Greater than 100 kilograms (220 lbs) but less than 1,000 kilograms (2200 lbs) of non-acute hazardous waste; and
  2. Less than or equal to 1 kilogram (2.2 lbs) of acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e); and
  3. Less than or equal to 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e).
- *Small Quantity Handler of Universal Waste* - a universal waste handler (as defined in this section) who does not accumulate 5,000 kg or more of universal waste (batteries, pesticides, mercury-containing equipment, or lamps, calculated collectively) at any time (40 CFR 273.9) **[Revised October 1999; Reviewed March 2000; Revised October 2005]**.
- *Soil* - unconsolidated earth material composing the superficial geologic strata (material overlying bedrock), consisting of clay, silt, sand, or gravel size particles as classified by the U.S. Natural Resources Conservation Service, or a mixture of such materials with liquids, sludges or solids which is inseparable by simple mechanical removal processes and is made up primarily of soil by volume based on visual inspection. Any deliberate mixing of prohibited hazardous waste with soil that changes its treatment classification (i.e., from waste to contaminated soil) is not allowed under the dilution prohibition in 40 CFR 268.3 (40 CFR 268.2) **[Added July 1999; Reviewed October 2001]**.
- *Storage* - the holding of hazardous wastes for a temporary period, at the end of which the hazardous wastes are treated, disposed of, or stored elsewhere (40 CFR 260.10) **[Reviewed October 2001]**.
- *Sump* - any pit or reservoir that meets the definition of tank and those troughs/trenches connected to it that serve to collect hazardous waste for transport to hazardous waste TSDFs except that as used in the landfill, surface impoundment, and waste pile rules, sump means any lined pit or reservoir that serves to collect liquids drained from a leachate collection and removal system or leak detection system for subsequent removal from the system (40 CFR 260.10) **[Reviewed October 2001]**.
- *Surface Impoundment* - a facility or part of a facility that is a natural topographic depression, man-made excavation, or diked area formed primarily of earthen materials designed to hold an accumulation of liquid wastes or wastes containing free liquids and which is not an injection well (40 CFR 260.10).
- *Teaching Hospital* - a hospital that trains students to become physicians, nurses or other health or laboratory personnel (40 CFR 262.200) **[Added January 2009]**.
- *Thermal Treatment* - the treatment of hazardous waste in a device that uses elevated temperature as the primary means to change the chemical, physical, or biological character or composition of the hazardous waste (40 CFR 260.10).
- *Thermostat* - a temperature control device that contains metallic mercury in an ampule attached to a bimetal sensing element, and mercury-containing ampules that have been removed from these temperature control devices in compliance with the requirements of 40 CFR 273.12(c)(2) or 273.33(c)(2) (40 CFR 262.10 and 273.9).

The following are exempted from the definition of thermostat in relation to universal waste (40 CFR 273.4(b)):

1. thermostats that are not yet wastes under 40 CFR 261 (see the definition of Waste Thermostat)
2. thermostats that are not hazardous waste **[Revised October 1999; Reviewed March 2000]**.

See also the definition for Waste Thermostat.

- *Totally Enclosed Treatment Facility* - a facility for the treatment of hazardous waste which is directly connected to an industrial production process and which is constructed and operated in a manner which prevents the release of any hazardous waste or any constituent thereof into the environment during treatment. An example is a pipe in which waste acid is neutralized (40 CFR 260.10).
- *Trained Professional* - a person who has completed the applicable RCRA training requirements of 40 CFR 262.17 for large quantity generators, or is knowledgeable about normal operations and emergencies in accordance with 40 CFR 262.16 for small quantity generators and very small quantity generators. A trained professional may be an employee of the eligible academic entity or may be a contractor or vendor who meets the requisite training requirements (40 CFR 262.200) **[Added January 2009; Revised January 2017]**.
- *Transboundary Movement* - any movement of wastes from an area under the national jurisdiction of one OECD Member country to an area under the national jurisdiction of another OECD Member country (40 CFR 262.81) **[Added April 2010]**.
- *Transfer Facility* - any transportation-related facility, including loading docks, parking areas, storage areas and other similar areas where shipments of hazardous waste or hazardous secondary materials are held during the normal course of transportation (40 CFR 260.10) **[Revised January 2009]**.
- *Transport Vehicle* - a motor vehicle or rail car used for the transportation of cargo by any mode. Each cargo-carrying body (trailer, railroad freight car, etc.) is a separate transport vehicle (40 CFR 260.10) **[Reviewed October 2001]**.
- *Transporter* - a person engaged in the offsite transportation of hazardous wastes by air, rail, highway, or water (40 CFR 260.10) **[Reviewed October 2001]**.
- *Treatability Study* - a study in which a hazardous waste is subjected to a treatment process to determine (40 CFR 260.10) **[Reviewed October 2001]**:
  1. whether the waste is amenable to the treatment process
  2. what pretreatment (if any) is required
  3. the optimal process conditions needed to achieve the desired treatment
  4. the efficiency of a treatment process for a specific waste or wastes
  5. the characteristics and volumes of residuals from a particular treatment process.

Also included in this definition for the purpose of the 261.4(e) and (f) exemptions are liner compatibility, corrosion, and other material compatibility studies and toxicological and health effects studies. A treatability study is not a means to commercially treat or dispose of hazardous waste.

- *Treatment* - any method, technique, or process, including neutralization, designed to change the physical, chemical, or biological character or composition of any hazardous waste to neutralize the waste, recover energy or material resources from the waste, or render the waste nonhazardous or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume (40 CFR 260.10) **[Reviewed October 2001]**.
- *Treatment Zone* - a soil area of the unsaturated zone of a land treatment unit within which hazardous constituents are degraded, transformed, or immobilized (40 CFR 260.10).
- *Underground Injection* - the subsurface emplacement of fluids through a bored, drilled, driven, or dug well, when the depth of the dug well is greater than the largest surface dimension (40 CFR 260.10).
- *Unexploded Ordnance (UXO)* - military munitions that have been primed, fused, armed, or otherwise prepared for action, and have been fired, dropped, launched, projected, or placed in a such a manner as to constitute a hazard to operations, installation, personnel, or material and remain unexploded either by malfunction, design, or any other cause (40 CFR 266.201).

- *United States* - the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands (40 CFR 260.10) **[Reviewed October 2001]**.
- *Universal Waste* - any of the following hazardous wastes that are managed under the universal waste requirements of 40 CFR 273 (40 CFR 260.10 and 273.9):
  1. Batteries as described in 40 CFR 273.2 (see definition of Battery)
  2. Pesticides as described in 40 CFR 273.3 (see definition of Pesticides)
  3. Mercury-containing equipment as described in 40 CFR 273.4 (see definition of Mercury-Containing Equipment)
  4. Lamps as described in 40 CFR 273.5 (see definition of Lamp) **[Revised October 1999; Reviewed March 2000; Revised October 2005]**.
- *Universal Waste Handler* - this term means either (40 CFR 262.10 and 273.9):
  1. a generator of universal waste
  2. the owner or operator of a facility, including all contiguous property, that receives universal waste from other universal waste handlers, accumulates universal waste, and sends universal waste to another universal waste handler, to a destination facility, or to a foreign destination.

It does not mean:

  1. a person who treats (except under the provisions of 40 CFR 273.13(a) or (c), or 273.33(a) or (c), disposes of, or recycles universal waste
  2. a person engaged in offsite transportation of a universal waste by air, rail, highway, or water, including a universal waste transfer facility **[Revised October 1999; Reviewed March 2000]**.
- *Universal Waste Transfer Facility* - any transportation related facility including loading docks, parking areas, storage areas, and other similar areas where shipments of universal waste are held during the normal course of transportation for 10 days or less (40 CFR 273.9) **[Revised October 1999; Reviewed March 2000]**.
- *Universal Waste Transporter* - a person engaged in the offsite transportation of universal waste by air, rail, highway, or water (40 CFR 260.10 and 273.9) **[Revised October 1999; Reviewed March 2000]**.
- *Unplanned Episodic Event* - an episodic event that the generator did not plan or reasonably did not expect to occur, including production process upsets, product recalls, accidental spills, or “acts of nature,” such as tornado, hurricane, or flood (40 CFR 262.231) **[Added January 2017]**.
- *Unsaturated Zone or Zone of Aeration* - the zone between the land surface and the water table (40 CFR 260.10) **[Reviewed October 2001]**.
- *Unwanted Material* - any chemical, mixtures of chemicals, products of experiments or other material from a laboratory that is no longer needed, wanted or usable in the laboratory and that is destined for hazardous waste determination by a trained professional. Unwanted materials include reactive acutely hazardous unwanted materials and materials that may eventually be determined not to be solid waste pursuant to 40 CFR 261.2, or a hazardous waste pursuant to 40 CFR 261.3. If an eligible academic entity elects to use another equally effective term in lieu of “unwanted material,” as allowed by 40 CFR 262.206(a)(1)(i), the equally effective term has the same meaning and is subject to the same requirements as “unwanted material” under 40 CFR 262, Subpart K (40 CFR 262.200) **[Added January 2009]**.
- *Uppermost Aquifer* - the geologic formation nearest the natural ground surface that is an aquifer, as well as lower aquifers that are hydraulically interconnected with this aquifer, within the facility’s property boundary (40 CFR 260.10) **[Reviewed October 2001]**.

- *Used Oil* - any oil that has been refined from crude oil, or any synthetic oil, that has been used and as a result of such use is contaminated by physical or chemical impurities [NOTE: See also the definition of Used Oil in POL Management] (40 CFR 260.10) [**Reviewed October 2001**].
- *Very Small Quantity Generator (VSQG)* - a generator who generates less than or equal to the following amounts in a calendar month (40 CFR 260.10) [**Added January 2017**]:
  1. 100 kilograms (220 lbs) of nonacute hazardous waste; and
  2. 1 kilogram (2.2 lbs) of acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e); and
  3. 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e).
- *Volatile Organic (VO) Concentration* - the fraction by weight of the volatile organic compounds in a hazardous waste expressed in terms of ppmw as determined by direct measurement or by knowledge of the waste (40 CFR 265.1081) [**Reviewed October 2001**].
- *Waste Battery* - a used battery becomes a waste on the date that it is discarded (e.g., when sent for reclamation). An unused battery becomes a waste on the date the handler decides to discard it. See also the definition of Battery (40 CFR 273.2(c)) [**Reviewed March 2000**].
- *Waste Explosives* - waste that has the potential to detonate and bulk military propellants that cannot be safely disposed of through other modes of treatment (40 CFR 265.382).
- *Waste Lamp* - a used lamp becomes a waste on the date it is discarded. An unused lamp becomes a waste on the date the handler decides to discard it (40 CFR 273.5(c)) [**Added October 1999; Reviewed March 2000**].
- *Waste Mercury-Containing Equipment* - used mercury-containing equipment becomes a waste on the date it is discarded. Unused mercury-containing equipment becomes a waste on the date the handler decides to discard it (40 CFR 273.4(c)) [**Added October 2005**].
- *Waste Pesticides* - this term applies as follows (40 CFR 273.3(c):
  1. a recalled pesticides becomes a waste on the first date on which both of the following conditions apply:
    - r. a. the generator of the recalled pesticide agrees to participate in the recall; and
    - s. b. the person conducting the recall decides to discard (e.g., burn the pesticides for energy recovery) the pesticides
  2. stocks of unused pesticide products that are collected and managed as part of a waste pesticide collection program becomes a waste on the day the generator decides to discard it.

The following pesticides are not waste (40 CFR 273.3(d):

1. recalled pesticides providing the person conducting the recall either:
    - t. a. has not made a decision to discard (e.g., burn for energy recovery) the pesticide
    - u. b. has made a decision to use a management option that, under 40 CFR 261.2, does not cause the pesticide to be a solid waste (i.e., the selected option is use (other than use constituting disposal), or reuse, or reclamation)
  2. unused pesticide products that are collected and managed as a part of a waste pesticide collection program if the generator of the unused pesticide product has not decided to discard (e.g., burn for energy recovery) them [**Reviewed March 2000**].
- *Waste Stabilization Process* - any physical or chemical process used to either reduce the mobility of hazardous constituents in a hazardous waste or eliminate free liquids as determined by Test Method 9095B (Paint Filter Liquids Test) in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11. A waste stabilization process includes mixing the hazardous

waste with binders or other materials, and curing the resulting hazardous waste and binder mixture. Other synonymous terms used to refer to this process are “waste fixation” or “waste solidification.” This does not include the adding of absorbent materials to the surface of a waste, without mixing, agitation, or subsequent curing, to absorb free liquid (40 CFR 265.1081) [**Reviewed October 2001; Revised July 2005**].

- *Waste Thermostats* - A used thermostat becomes a waste on the date it is discarded (e.g., sent for reclamation). An unused thermostat becomes a waste on the date the handler decides to discard it (40 CFR 273.4(c)) [**Reviewed March 2000**].
- *Wastewater Treatment Unit* - a device that is part of a wastewater treatment facility subject to regulation under section 402 or 307(b) of the CWA and receives and treats or stores an influent wastewater that is a hazardous waste (as defined in 40 CFR 261.3), or that generates and accumulates a wastewater treatment sludge that is a hazardous waste, or treats or stores a wastewater treatment sludge, and meets the definition of tank or tank system (40 CFR 260.10) [**Reviewed October 2001**].
- *Wastewaters* - wastes that contain less than 1 percent by weight total organic compounds and less than 1 percent by weight total suspended solids (TSS) with certain exceptions (40 CFR 268.2) [**Reviewed October 2001**].
- *Working Container* - a small container (i.e., 2 gal or less) that is in use at a laboratory bench, hood, or other work station, to collect unwanted material from a laboratory experiment or procedure (40 CFR 262.200) [**Added January 2009**].
- *Zone of Engineering Control* - an area under the control of the owner/operator that, upon detection of a hazardous waste release, can be readily cleaned up before the release of hazardous waste or hazardous constituents to groundwater or surface water (40 CFR 260.10) [**Reviewed October 2001**].

#### **F. Records To Review [Revised October 1998]**

Generator (including TSDFs if they are also generators):

- Notification (USEPA identification number)
- Hazardous waste manifests
- LDR Restriction Notification Forms
- Manifest exception reports
- Biennial reports
- Inspection Logs (as applicable)
- Delistings
- Land disposal restriction certifications
- Employee training documentation
- Contingency plan
- Notifications of hazardous waste oil fuel marketing or blending activity

In addition to the above, TSDFs would require:

- Permits, if issued, otherwise Part A application
- Unmanifested waste reports
- Waste analysis plan(s)
- Operating record
- Groundwater monitoring records and annual reports (where required)
- Biennial reports
- Closure/postclosure plans
- Closure/postclosure notices (where applicable)
- Location map of the TSDF
- Part A permit, including:
  - inspection plan

- training plan
- closure/postclosure plans
- other documents as required by the permit
- Emergency permits

**G. Physical Features To Inspect**

- Disposal sites
- Accumulations points
- Incinerators
- Vehicles used for transport
- Storage facilities (including drums)
- Surface impoundments
- OB/OD sites
- Treatment units
- Generation sites
- Satellite accumulation points
- Recycling sites

## H. Guidance for Hazardous Waste Management Checklist Users

	<b>REFER TO CHECKLIST ITEMS:</b>
All Facilities	HW.1.1.US. and HW.1.2.US.
Missing, Risk Management, and Positive Checklist Items	HW.2.1.US. through HW.2.3.US
All Sizes of Generators	HW.10.1.US. through HW.10.18.US
Very Small Quantity Generators (VSQGs)	HW.15.1.US. through HW.15.6.US.
Small Quantity Generators (SQGs)	
General	HW.20.1.US. through HW.20.8.US.
Personnel Training	HW.25.1.US. and HW.25.2.US.
Containers	HW.30.1.US. through HW.30.6.US.
Satellite Accumulation Points	HW.35.1.US.
Container Storage Areas	HW.40.1.US. through HW.40.3.US.
Drip Pads	HW.42.1.US through HW.42.6.US
Containment Buildings	HW.43.1.US through HW.43.8.US
Disposal of Restricted Wastes	HW.45.1.US. through HW.45.5.US.
Generators	
General	HW.55.1.US. through HW.55.11.US.
Personnel Training	HW.60.1.US. and HW.60.2.US.
Contingency Plans and Emergency Coordinators	HW.65.1.US. through HW.65.4.US.
Containers	HW.70.1.US. through HW.70.12.US.
Emissions from Process Vents	HW.71.1.US. through HW.71.6.US.
Air Emission Standards for Equipment Leaks	HW.72.1.US. through HW.72.10.US.
Satellite Accumulation Points	HW.75.1.US.
Container Storage Areas	HW.80.1.US. through HW.80.4.US.
Drip Pads	HW.83.1.US through HW.83.6.US
Containment Buildings	HW.85.1.US. through HW.85.7.US.
Disposal of Restricted Waste	HW.90.1.US. through HW.90.6.US.
Transfer Facilities	HW.95.1.US
Transportation of Hazardous Waste	HW.100.1.US. through HW.100.8.US.
Military Munitions	HW.102.1.US. through HW.102.5.US.
All TSDFs	
General	HW.105.1.US. through HW.105.11.US.
Personnel Training	HW.110.1.US. and HW.110.2.US.
Containers	HW.115.1.US. through HW.115.12.US.
Container Storage Areas	HW.120.1.US. through HW.120.3.US.
Drip Pads	HW.123.1.US through HW.123.5.US
Containment Buildings	HW.125.1.US. through HW.125.7.US.
Restricted Wastes	HW.130.1.US. through HW.130.6.US.
Emissions from Process Vents	HW.135.1.US. through HW.135.6.US.
Air Emissions Standards for Equipment Leaks	HW.140.1.US. through HW.140.11.US.
Documentation Requirements	HW.145.1.US. through HW.145.14.US.
Surface Impoundments	HW.150.1.US. through HW.150.8.US.
Waste Piles	HW.155.1.US.

	<b>REFER TO CHECKLIST ITEMS:</b>
Land Treatment Units	HW.160.1.US.
Hazardous Waste Landfills	HW.165.1.US. through HW.165.10.US.
Hazardous Waste Munitions and Explosives Storage	HW.167.1.US. through HW.167.5.US.
Closure	HW.170.1.US. through HW.170.5.US.
Additional Requirements for Permitted TSDFs	
General	HW.180.1.US. through HW.180.14.US.
Surface Impoundments	HW.185.1.US. through HW.185.12.US.
Waste Piles	HW.190.1.US. through HW.190.5.US.
Land Treatment Units	HW.195.1.US. through HW.195.7.US.
Hazardous Waste Landfills	HW.200.1.US. through HW.200.4.US.
Incinerators	HW.205.1.US. through HW.205.4.US.
Miscellaneous Units	HW.210.1.US. through HW.210.3.US.
Additional Requirements for Interim Status TSDFs	
General	HW.220.1.US. through HW.220.9.US.
Surface Impoundments	HW.225.1.US. through HW.225.6.US.
Waste Piles	HW.230.1.US. through HW.230.5.US.
Land Treatment Units	HW.235.1.US. through HW.235.4.US.
Hazardous Waste Landfills	HW.240.1.US and HW.240.2.US
Incinerators	HW.245.1.US. through HW.245.5.US.
Thermal Treatment	HW.250.1.US. through HW.250.3.US.
Chemical/Physical/Biological Treatment	HW.255.1.US. through HW.255.3.US.
Corrective Action Management Unit	HW.262.1.US through HW.262.5.US
Export/Import of Hazardous Waste	HW.265.1.US. through HW.265.13.US.
Hazardous Waste on Public Vessels	HW.270.1.US.
Small Quantity Universal Waste Handlers	
General	HW.280.1.US. through HW.280.4.US.
Specific Wastes	HW.290.1.US. through HW.290.6.US.
Personnel Training	HW.300.1.US.
Containers	HW.310.1.US.
Transportation	HW.330.1.US. and HW.330.2.US.
Large Quantity Universal Waste Handlers	
General	HW.370.1.US. through HW.370.4.US.
Specific Wastes	HW.380.1.US. through HW.380.6.US.
Personnel Training	HW.390.1.US.
Containers	HW.400.1.US.
Notifications	HW.410.1.US.
Transportation	HW.420.1.US. through HW.420.3.US.
Universal Waste Transporters	HW.450.1.US. through HW.450.7.US.
Universal Waste Destination Facilities	HW.470.1.US. through HW.470.4.US.

Appendix 4-13, Interim Primary Drinking Water Standards

Select portions of this section (i.e., Review of Federal Legislation, State and Local Regulations, Key Compliance Requirements, Key Terms and Definitions, Typical Records to Review, Typical Physical Features to Inspect, and the Checklist) have been reviewed by USEPA personnel from the Office of Enforcement and Compliance Assurance (OECA) and USEPA's Office of General Counsel. USEPA's comments and suggestions for changes have been incorporated in this version of the TEAM Guide. USEPA did not review all portions of this section. USEPA also did not review and comment on items pertaining to federal Executive Orders, DOT regulations, OSHA regulations or any other area outside of Title 40 of the Code of Federal Regulations. Portions that have been added or revised as a result of this review are identified as being reviewed, revised or added in March 2000, for example [**Added March 2000**].

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>HW.1.</b></p> <p><b>ALL FACILITIES</b></p> <p><b>HW.1.1.US.</b> The current status of any ongoing or unresolved consent orders, compliance agreements, notices of violation (NOVs), interagency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).</p> <p><b>HW.1.2.US.</b> Specific persons or positions should be designated responsible for areas where hazardous waste is stored or accumulated for all sizes of generators and TSDFs (MP) [Revised October 2011].</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, interagency agreements, or equivalent state enforcement actions.</p> <p>Verify that specific individuals or positions have been designated as responsible for hazardous waste storage or accumulation areas.</p> <p>Verify that the individuals designated responsible for hazardous waste storage or accumulation areas are aware of the precise nature of their responsibilities.</p>

<p style="text-align: center;"><b>REGULATORY REQUIREMENTS</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS</b>  <b>December 2018</b></p>
<p><b>HW.10.</b></p> <p><b>ALL SIZES OF GENERATORS</b></p> <p><b>HW.10.1.US.</b> Generators of solid waste must determine if the wastes are hazardous wastes (40 CFR 260.34(a), 262.11(a) through 262.11(d) through 262.11(f)) <b>[Revised January 2003; Revised January 2009; Revised April 2014; Revised January 2017].</b></p>	<p>Verify that generators of solid waste make an accurate determination whether or not that waste is hazardous waste.</p> <p>Verify that determination is made at the point of waste generation, before any dilution, mixing, or other alteration of the waste occurs.</p> <p>Verify that determination is also made at any time in the course of the wastes management that it has, or may have, changed its properties as a result of exposure to the environment or other factors that may change the properties of the waste.</p> <p>(NOTE: See 40 CFR 261.4 [www.ecfr.gov] for a list of items which are:</p> <ul style="list-style-type: none"> <li>– not considered solid waste and therefore do not have to go through the determination process under Federal regulations</li> <li>– solid waste, but not considered hazardous waste.)</li> </ul> <p>Verify that, if the waste is not excluded under 40 CFR 261.4, the generator uses knowledge of the waste to determine whether it is a listed waste under 40 CFR 261, Subpart D (40 CFR 261.30 – 261.35; see www.ecfr.gov for a current list).</p> <p>(NOTE: Acceptable knowledge to use when making a determination of whether or not a waste is listed may include waste origin, composition, the process producing the waste, feedstock, and other reliable and relevant information.)</p> <p>Verify that, after determining if the waste is listed, the generator determines if the waste exhibits one or more of the following hazardous characteristics:</p> <ul style="list-style-type: none"> <li>– reactivity</li> <li>– corrosivity</li> <li>– ignitability</li> <li>– toxicity.</li> </ul> <p>(NOTE: Accepted procedures for determining whether or not a waste exhibits a hazardous characteristic are:</p> <ul style="list-style-type: none"> <li>– apply knowledge of the hazard characteristic of the waste in light of the materials or the processes used to generate the waste.</li> <li>– When available knowledge is inadequate to make an accurate determination, test the waste according to the applicable methods set forth in subpart C of 40 CFR 261 or according to an equivalent method approved by the Administrator under 40 CFR 260.21 and in accordance with the following: <ul style="list-style-type: none"> <li>– obtain a representative sample of the waste for the testing, as defined at 40 CFR 260.10</li> </ul> </li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>– where a test method is specified in subpart C of 40 CFR part 261, the results of the regulatory test, when properly performed, are definitive for determining the regulatory status of the waste.)</p> <p>(NOTE: When determining if a waste exhibits a hazardous characteristic, acceptable knowledge may include process knowledge (<i>e.g.</i>, information about chemical feedstocks and other inputs to the production process); knowledge of products, by-products, and intermediates produced by the manufacturing process; chemical or physical characterization of wastes; information on the chemical and physical properties of the chemicals used or produced by the process or otherwise contained in the waste; testing that illustrates the properties of the waste; or other reliable and relevant information about the properties of the waste or its constituents. A test other than a test method set forth in subpart C of 40 CFR 261, or an equivalent test method approved by the Administrator under 40 CFR 260.21, may be used as part of a person’s knowledge to determine whether a solid waste exhibits a characteristic of hazardous waste. However, such tests do not, by themselves, provide definitive results. Persons testing their waste must obtain a representative sample of the waste for the testing, as defined at 40 CFR 260.10.)</p> <p>(NOTE: Unidentified waste materials and spilled hazardous materials may have to be disposed of as hazardous waste depending on their constituents or characteristics.)</p> <p>(NOTE: A facility may apply to the Administrator for a formal determination that a hazardous secondary material [see definitions] is not discarded and therefore not a solid waste.)</p> <p>(NOTE: Some batteries, pesticides, thermostats, and mercury lamps may be considered universal wastes instead of hazardous wastes and need to be handled according to the requirements in 40 CFR 273 [see the appropriate definitions for clarification.]</p> <p>(NOTE: If the waste is determined to be hazardous, the generator must refer to 40 CFR 261, 264, 265, 266, 267, 268, and 273 for other possible exclusions or restrictions pertaining to management of the specific waste.)</p> <p>Verify that the appropriate records are kept for 3 yr from the date the waste was last sent to the onsite or offsite TSDF.</p> <p>(NOTE: Hazardous waste determination records are required for SQGs and LQGs but not for VSQGs; but VSQGs are still required to determine whether or not their wastes are hazardous waste.)</p> <p>(NOTE: These records must comprise the generator’s knowledge of the waste and support the generator’s determination. The records must include, but are not limited to, the following types of information:</p>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>HW.10.2.US.</b> Generators of hazardous waste must determine their generator category (40 CFR 262.13) [Added January 2017].</p>	<ul style="list-style-type: none"> <li>– the results of any tests, sampling, waste analyses, or other determinations made in accordance with 40 CFR 262.11</li> <li>– records documenting the tests, sampling, and analytical methods used to demonstrate the validity and relevance of such tests</li> <li>– records consulted in order to determine the process by which the waste was generated, the composition of the waste, and the properties of the waste</li> <li>– records which explain the knowledge basis for the generator’s determination.)</li> </ul> <p>(NOTE: The recordkeeping requirement does not apply to non-hazardous waste determinations.)</p> <p>(NOTE: Periods of retention for reports may be extended automatically during the course of any unresolved enforcement action or at the request of the USEPA Administrator.)</p> <p>(NOTE: A generator’s category is based on the amount of hazardous waste generated each month and may change from month to month.)</p> <p>Verify that a generator who either generates acute hazardous waste or non-acute hazardous waste in a calendar month determines its generator category for that month by doing the following:</p> <ul style="list-style-type: none"> <li>– counting the total amount of hazardous waste generated in the calendar month;</li> <li>– subtracting from the total any amounts of waste exempt from counting; see following list: <ul style="list-style-type: none"> <li>– is exempt from regulation under 40 CFR 261.4(c) through (f), 261.6(a)(3), 261.7(a)(1), or 261.8 (see <a href="http://www.ecfr.gov">www.ecfr.gov</a> for current lists)</li> <li>– is managed immediately upon generation only in on-site elementary neutralization units, wastewater treatment units, or totally enclosed treatment facilities as defined in 40 CFR 260.10</li> <li>– is recycled, without prior storage or accumulation, only in an on-site process subject to regulation under 40 CFR 261.6(c)(2)</li> <li>– is used oil managed under the requirements of 40 CFR 261.6(a)(4) and 40 CFR 279</li> <li>– is spent lead-acid batteries managed under the requirements of 40 CFR 266 subpart G</li> <li>– is universal waste managed under 40 CFR 261.9 and 40 CFR 273</li> <li>– is a hazardous waste that is an unused commercial chemical product (listed in 40 CFR 261 subpart D or exhibiting one or more characteristics in 40 CFR part 261 subpart C) that is generated solely as a result of a laboratory clean-out conducted at an eligible academic entity as defined in 40 CFR 262.200</li> </ul> </li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<ul style="list-style-type: none"> <li>– is managed as part of an episodic event in compliance with the conditions of 40 CFR 262, subpart L (see checklist items HW.15.2.US and HW.20.8.US)</li> <li>– determining the resulting generator category for the hazardous waste generated.</li> </ul> <p>(NOTE: In determining the quantity of hazardous waste generated in a calendar month, a generator need not include:</p> <ul style="list-style-type: none"> <li>– hazardous waste when it is removed from on-site accumulation, so long as the hazardous waste was previously counted once;</li> <li>– hazardous waste generated by onsite treatment (including reclamation) of the generator’s hazardous waste, so long as the hazardous waste that is treated was previously counted once; and</li> <li>– hazardous waste spent materials that are generated, reclaimed, and subsequently reused on site, so long as such spent materials have been previously counted once.)</li> </ul> <p>Verify that a generator who generates both acute hazardous waste and non-acute hazardous waste in the same calendar month determine its generator category for that month by doing the following:</p> <ul style="list-style-type: none"> <li>– counting separately the total amount of acute hazardous waste and the total amount of non-acute hazardous waste generated in the calendar month</li> <li>– subtracting from the total any amounts of waste exempt from counting; see following list: <ul style="list-style-type: none"> <li>– is exempt from regulation under 40 CFR 261.4(c) through (f), 261.6(a)(3), 261.7(a)(1), or 261.8 (see <a href="http://www.ecfr.gov">www.ecfr.gov</a>)</li> <li>– is managed immediately upon generation only in on-site elementary neutralization units, wastewater treatment units, or totally enclosed treatment facilities as defined in 40 CFR 260.10</li> <li>– is recycled, without prior storage or accumulation, only in an on-site process subject to regulation under 40 CFR 261.6(c)(2)</li> <li>– is used oil managed under the requirements of 40 CFR 261.6(a)(4) and 40 CFR 279</li> <li>– is spent lead-acid batteries managed under the requirements of 40 CFR 266 subpart G</li> <li>– is universal waste managed under 40 CFR 261.9 and 40 CFR 273</li> <li>– is a hazardous waste that is an unused commercial chemical product (listed in 40 CFR 261 subpart D or exhibiting one or more characteristics in 40 CFR 261, subpart C) that is generated solely as a result of a laboratory clean-out conducted at an eligible academic as defined in 40 CFR 262.200</li> <li>– is managed as part of an episodic event in compliance with the conditions of 40 CFR 262, subpart L (see checklist items HW.15.2.US and HW.20.8.US)</li> </ul> </li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<ul style="list-style-type: none"> <li>– determining separately the resulting generator categories for the quantities of acute and non-acute hazardous waste generated</li> <li>– comparing the resulting generator categories and applying the more stringent generator category to the accumulation and management of both non-acute hazardous waste and acute hazardous waste generated for that month.</li> </ul> <p>(NOTE: For Federal regulations, the generator categories are Very Small Quantity Generator (VSQG), Small Quantity Generator (SQG), and Large Quantity Generator (LQG). For information on the generation amounts associated with each category see 40 CFR 262.13, Table 1 or the definitions in this Section of the U.S. TEAM Guide.)</p> <p>(NOTE: Hazardous wastes generated by a VSQG may be mixed with solid wastes. VSQGs may mix a portion or all of its hazardous waste with solid waste and remain subject to 40 CFR 262.14 (see checklist item HW.15.1.US) even though the resultant mixture exceeds the quantity limits identified in the definition of VSQG, unless the mixture exhibits one or more of the characteristics of hazardous waste identified in part 261 subpart C. If the resulting mixture exhibits a characteristic of hazardous waste, this resultant mixture is a newly-generated hazardous waste. The VSQG must count both the resultant mixture amount plus the other hazardous waste generated in the calendar month to determine whether the total quantity exceeds the VSQG calendar month quantity limits. If so, to remain exempt from the permitting, interim status, and operating standards, the VSQG must meet the conditions for exemption applicable to either a SQG or a LQG. The VSQG must also comply with the applicable independent requirements for either a SQG or a LQG.)</p> <p>(NOTE: According to 40 CFR 262.1, “condition for exemption” means any requirement in 40 CFR 262.14, 262.15, 262.16, 262.17, 262.70, or subpart K or subpart L that states an event, action, or standard that must occur or be met in order to obtain an exemption from any applicable requirement in 40 CFR 124, 264 through 268, and 270, or from any requirement for notification under section 3010 of RCRA.)</p> <p>(NOTE: According to 40 CFR 262.1, “independent requirement” means a requirement of 40 CFR 262 that states an event, action, or standard that must occur or be met; and that applies without relation to, or irrespective of, the purpose of obtaining a conditional exemption from storage facility permit, interim status, and operating requirements under 40 CFR 262.14, 262.15, 262.16, 262.17, or subpart K or subpart L.)</p> <p>(NOTE: If a VSQG’s wastes are mixed with used oil, the mixture is subject to 40 CFR 279. Any material produced from such a mixture by processing, blending, or other treatment is also regulated under 40 CFR part 279.)</p>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>(NOTE: Hazardous wastes generated by a SQG or LQG may be mixed with solid waste. These mixtures are subject to the following: the mixture rule in 40 CFR 261.3(a)(2)(iv), 261.3(b)(2) and (3), and 261.3(g)(2)(i); the prohibition of dilution rule at 40 CFR 268.3(a); the land disposal restriction requirements of 40 CFR 268.40 if a characteristic hazardous waste is mixed with a solid waste so that it no longer exhibits the hazardous characteristic; and the hazardous waste determination requirement at 40 CFR 262.11. If the resulting mixture is found to be a hazardous waste, this resultant mixture is a newly-generated hazardous waste. A SQG must count both the resultant mixture amount plus the other hazardous waste generated in the calendar month to determine whether the total quantity exceeds the SQG calendar monthly quantity limits. If so, to remain exempt from the permitting, interim status, and operating standards, the SQG must meet the conditions for exemption applicable to a LQG. The SQG must also comply with the applicable independent requirements for a LQG.)</p>
<p><b>HW.10.3.US.</b> Facilities that claim that a particular material is not a solid waste or is conditionally exempt from regulation as a hazardous waste are required to provide specific documentation (40 CFR 261.2(f)) [Added February 1995; Reviewed October 2001].</p>	<p>Determine if the facility has any waste that are typically handled as hazardous waste that it claims are exempt.</p> <p>Verify that, for these wastes, the facility can demonstrate that there is a known market or disposition for the material and that they meet the terms of the exclusion or exemption.</p> <p>Verify that documentation is provided that indicates the material is not a waste, or is exempt from regulation.</p> <p>(NOTE: One example of documentation are contracts showing that a second person uses the material as an ingredient in a production process.)</p> <p>Verify that, if the facility is claiming to recycle material, the equipment for the recycling is actually at the facility and in working order.</p>
<p><b>HW.10.4.US.</b> Checklist item deleted [Added January 2003; Deleted April 2003].</p>	<p>On 24 February 2003, USEPA withdrew the direct final rule for Regulatory Innovations: Pilot-Specific Rule for Electronic Materials in USEPA Region III Mid-Atlantic States; Hazardous Waste Management System; Modification of the Hazardous Waste Program; Cathode Ray Tubes (CRT). The direct final rule was published on 26 December 2002 date (67 FR 78718-78731).</p>
<p><b>HW.10.5.US.</b> In order for low level mixed waste (LLMW) to not be stored or treated as a hazardous waste, certain parameters must be met (40 CFR 266.220 through 266.260) [Added January 2004].</p>	<p>(NOTE: LLMW is exempt from the regulatory definition of hazardous waste in 40 CFR 261.3 if the waste meets the eligibility criteria and conditions in this checklist. This is referred to as a “storage and treatment conditional exemption”.)</p> <p>Verify that LLMW managed under a storage and treatment conditional exemption is generated and managed by the facility under a single NRC or NRC Agreement State license.</p>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>(NOTE: Mixed waste generated at a facility with a different license number and shipped to a facility for storage or treatment requires a permit and is ineligible for this exemption. In addition, NARM waste is ineligible this exemption.)</p> <p>Verify that a facility with LLMW managed under a storage and treatment conditional exemption notifies the USEPA in writing by certified delivery that the facility is claiming a conditional exemption for the LLMW stored on the facility.</p> <p>Verify that notification has been made or is made within 90 days of when a storage unit is first used to store conditionally exempt LLMW.</p> <p>Verify that the dated notification includes the facility name, address, RCRA identification number, NRC or NRC Agreement State license number, the waste code(s) and storage unit(s) for which an exemption is sought, and a statement that the facility meets the conditions of this checklist item.</p> <p>Verify that the notification is signed by the authorized representative who certifies that the information in the notification is true, accurate, and complete.</p> <p>Verify that, to qualify for and maintain an exemption for LLMW, the facility:</p> <ul style="list-style-type: none"> <li>– stores LLMW waste in tanks or containers in compliance with the requirements of the facility’s license requirements that apply to the proper storage of low-level radioactive waste (not including those license requirements that relate solely to recordkeeping)</li> <li>– stores LLMW in tanks or containers in compliance with chemical compatibility requirements of a tank or container in 40 CFR 264.177, 264.199, or 40 CFR 265.177, 265.199 (see checklist items HW.115.5.US and HW.170.5.US)</li> <li>– certifies that facility personnel who manage stored conditionally exempt LLMW are trained in a manner that ensures that the conditionally exempt waste is safely managed and includes training in chemical waste management and hazardous materials incidents response that meets the personnel training standards found in 40 CFR 265.16(a)(3) (see checklist item HW.110.1.US)</li> <li>– conducts an inventory of the stored conditionally exempt LLMW at least annually and inspects it at least quarterly for compliance</li> <li>– maintains an accurate emergency plan and provides it to all local authorities who may have to respond to a fire, explosion, or release of hazardous waste or hazardous constituents.</li> </ul> <p>Verify that the emergency plan describes emergency response arrangements with local authorities; describes evacuation plans; lists the names, addresses, and telephone numbers of all facility personnel qualified to work with local authorities as emergency coordinators; and lists emergency equipment.</p>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>Verify that, if an LLMW managed under a storage and treatment conditional exemption is treated at the facility, it is done in a tank or container in accordance with the terms of the NRC or NRC Agreement State license.</p> <p>(NOTE: Treatment that cannot be done in a tank or container without a RCRA permit [such as incineration] is not allowed under this conditional exemption.)</p> <p>Verify that, if the LLMW loses the exemption, the facility immediately manages that waste which failed the condition as RCRA hazardous waste, and the storage unit storing the LLMW immediately becomes subject to RCRA hazardous waste container and/or tank storage requirements.</p> <p>Verify that, if the LLMW loses the exemption, a report is submitted to the USEPA and the NRC, or the oversight agency in the NRC Agreement State, in writing by certified delivery within 30 days of learning of the failure.</p> <p>Verify that the report of LLMW conditional exemption loss is signed by the authorized representative certifying that the information provided is true, accurate, and complete, and the report includes:</p> <ul style="list-style-type: none"> <li>– the specific condition(s) which were not met</li> <li>– a description of the LLMW (including the waste name, hazardous waste codes, and quantity) and storage location at the facility</li> <li>– the date(s) on which the facility failed to meet the condition(s).</li> </ul> <p>Verify that, if the failure to meet any of the conditions for LLMW conditional exemption may endanger human health or the environment, the facility immediately notifies the USEPA orally within 24 h and follows up with a written notification within 5 days.</p> <p>(NOTE: Failures that may endanger human health or the environment include, but are not limited to, discharge of a CERCLA reportable quantity or other leaking or exploding tanks or containers, or detection of radionuclides above background or hazardous constituents in the leachate collection system of a storage area.)</p> <p>Verify that, if the failure to meet any of the conditions for LLMW conditional exemption may endanger human health or the environment, the facility follows the provisions of the emergency plan.</p> <p>Verify that, in addition to records required by the facility's NRC or NRC Agreement State license, the following records are kept:</p> <ul style="list-style-type: none"> <li>– initial notification records, return receipts, reports to USEPA of failure(s) to meet the exemption conditions, and all records supporting any reclaim of an exemption</li> <li>– records of LLMW annual inventories and quarterly inspections</li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>HW.10.6.US.</b> Recyclable materials used in a manner constituting disposal must be done according to specific parameters (40 CFR 266.20 through 266.23) <b>[Added April 2003; Moved January 2004]</b>.</p>	<ul style="list-style-type: none"> <li>– certification that facility personnel who manage stored mixed waste are trained in safe management of LLMW including training in chemical waste management and hazardous materials incidents response</li> <li>– the facility emergency plan.</li> </ul> <p>Verify that records concerning notification, personnel trained, and the emergency plan are maintained for as long as the exemption is claimed and for 3 yr thereafter, or in accordance with NRC regulations under 10 CFR 20 (or equivalent NRC Agreement State regulations), whichever is longer.</p> <p>Verify that records concerning annual inventory and quarterly inspections are maintained for 3 yr after the waste is sent for disposal, or in accordance with NRC regulations under 10 CFR 20 (or equivalent NRC Agreement State regulations), whichever is longer.</p> <p>(NOTE: When LLMW has met the requirements of the facility NRC or NRC Agreement State license for decay-in-storage and can be disposed of as non-radioactive waste, then the conditional exemption for storage no longer applies. On that date the waste is subject to hazardous waste regulation under the relevant sections of 40 CFR 260 through 271, and the time period for accumulation of a hazardous waste begins.)</p> <p>(NOTE: When conditionally exempt LLMW which has been generated and stored under a single NRC or NRC Agreement State license number is removed from storage, it is no longer eligible for the storage and treatment exemption. However, the waste may be eligible for the transportation and disposal conditional exemption at 40 CFR 266.305 [see checklist item HW.100.8.US].)</p> <p>(NOTE: This was formerly checklist item SO.25.5.US.)</p> <p>(NOTE: This checklist applies to recyclable materials that are applied to or placed on the land in either of the following ways:</p> <ul style="list-style-type: none"> <li>– without mixing with any other substance(s)</li> <li>– after mixing or combination with any other substance(s).</li> </ul> <p>These materials will be referred to throughout this subpart as “materials used in a manner that constitutes disposal.”)</p> <p>(NOTE: Products produced for the general public's use that are used in a manner that constitutes disposal and that contain recyclable materials are not presently subject to regulation if the recyclable materials have undergone a chemical reaction in the course of producing the products so as to become inseparable by physical means and if such products meet the applicable treatment standards in subpart D of 40 CFR 268 [or applicable prohibition levels in 40 CFR 268.32 or RCRA section 3004(d), where no treatment standards have been established] for each recyclable material [i.e., hazardous waste] that they contain.)</p>

<p style="text-align: center;"><b>COMPLIANCE CATEGORY</b>  <b>HAZARDOUS WASTE MANAGEMENT</b>  <b>U.S. TEAM Guide</b></p>	
<p style="text-align: center;"><b>REGULATORY REQUIREMENTS</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS</b>  <b>December 2018</b></p>
<p><b>HW.10.7.US.</b> Recyclable materials reclaimed to recover economically significant amounts of gold, silver, platinum, palladium, iridium, osmium, rhodium, ruthenium, or any combination of these must be managed according to specific parameters (40 CFR 266.70) [Added April 2003; Moved January 2004; Revised July 2010; Revised January 2017].</p>	<p>(NOTE: Commercial fertilizers that are produced for the general public's use and contain recyclable materials also are not presently subject to regulation provided they meet these same treatment standards or prohibition levels for each recyclable material that they contain. However, zinc-containing fertilizers using hazardous waste K061 that are produced for the general public's use are not presently subject to regulation.)</p> <p>(NOTE: Anti-skid/deicing uses of slags, which are generated from high temperature metals recovery (HTMR) processing of hazardous waste K061, K062, and F006, in a manner constituting disposal, are subject to regulation.)</p> <p>Verify that generators and transporters of materials that are used in a manner that constitutes disposal meet the applicable requirements of 40 CFR 262 and 263, and the notification requirement under section 3010 of RCRA (see the checklist items for managing hazardous waste as a generator [VSQG, SQG, or LQG] and/or transporter of hazardous waste in the Hazardous Waste Management section of the U.S. TEAM Guide.)</p> <p>(NOTE: Owners or operators of facilities that store recyclable materials that are to be used in a manner that constitutes disposal, but who are not the ultimate users of the materials, are regulated under all applicable provisions of subparts A through L of parts 40 CFR 264 and 265 and 270.1 and 40 CFR 124 and the notification requirement under section 3010 of RCRA.)</p> <p>(NOTE: Owners or operators of facilities that use recyclable materials in a manner that constitutes disposal are regulated under all applicable provisions of subparts A through N of 40 CFR 124, 264, 265, 268, and 270 and the notification requirement under section 3010 of RCRA.)</p> <p>(NOTE: This was formerly checklist item SO.25.6.US.)</p> <p>Verify that persons who generate, transport, or store recyclable materials reclaimed to recover economically significant amounts of gold, silver, platinum, palladium, iridium, osmium, rhodium, ruthenium, or any combination of these, meet the following:</p> <ul style="list-style-type: none"> <li>– notification requirements under section 3010 of RCRA</li> <li>– manifesting requirements for hazardous waste generators, transporters, or storers as appropriate (see the U.S. TEAM Guide Hazardous Waste Management section.)</li> <li>– for precious metals exported to or imported from other countries for recovery, 40 CFR part 262, subpart H and 40 CFR 265.12.</li> </ul> <p>Verify that persons who store recycled materials that are regulated under this checklist item keep the following records to document that they are not accumulating these materials speculatively:</p>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>HW.10.8.US.</b> Unless all handling requirements are met, samples must be handled as hazardous waste (40 CFR 261.4(d) through 261.4(f)) <b>[Added July 2005; Revised July 2006].</b></p>	<ul style="list-style-type: none"> <li>– records showing the volume of these materials stored at the beginning of the calendar year</li> <li>– the amount of these materials generated or received during the calendar year</li> <li>– the amount of materials remaining at the end of the calendar year.</li> </ul> <p>(NOTE: A material is accumulated speculatively if it is accumulated before being recycled. A material is not accumulated speculatively, however, if the person accumulating it can show that the material is potentially recyclable and has a feasible means of being recycled; and that--during the calendar year (commencing on January 1)--the amount of material that is recycled, or transferred to a different site for recycling, equals at least 75 percent by weight or volume of the amount of that material accumulated at the beginning of the period. In calculating the percentage of turnover, the 75 percent requirement is to be applied to each material of the same type (e.g., slags from a single smelting process) that is recycled in the same way (i.e., from which the same material is recovered or that is used in the same way). Materials that are already defined as solid wastes also are not to be included in making the calculation. Materials are no longer in this category once they are removed from accumulation for recycling.)</p> <p>Verify that recyclable materials regulated under this checklist item that are accumulated speculatively meet all applicable provisions of 40 CFR 262 through 265, 267, 270, and 124 (see the Hazardous Waste Management section of the U.S. TEAM Guide.</p> <p>Verify that, so a sample of solid waste, water, soil, or air collected for the sole purpose of testing to determine its characteristics or composition as hazardous waste does not have to be treated as hazardous waste, one of the following is true:</p> <ul style="list-style-type: none"> <li>– the sample is being transported to a laboratory for the purpose of testing</li> <li>– the sample is being transported back to the sample collector after testing</li> <li>– the sample is being stored by the sample collector before transport to a laboratory for testing</li> <li>– the sample is being stored in a laboratory before testing</li> <li>– the sample is being stored in a laboratory after testing but before it is returned to the sample collector</li> <li>– the sample is being stored temporarily in the laboratory after testing for a specific purpose (for example, until conclusion of a court case or enforcement action where further testing of the sample may be necessary).</li> </ul> <p>Verify that, in order to qualify for the exemptions related to transportation to and from a lab for the purpose of testing, the sample collector shipping samples to a laboratory and a laboratory returning samples to a sample collector meets one of the following:</p> <ul style="list-style-type: none"> <li>– comply with U.S. Department of Transportation (DOT), U.S. Postal Service (USPS), or any other applicable shipping requirements</li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<ul style="list-style-type: none"> <li>– comply with the following requirements if the sample collector determines that DOT, USPS, or other shipping requirements do not apply to the shipment of the sample:               <ul style="list-style-type: none"> <li>– assures that the following information accompanies the sample:                   <ul style="list-style-type: none"> <li>– the sample collector's name, mailing address, and telephone number</li> <li>– the laboratory's name, mailing address, and telephone number</li> <li>– the quantity of the sample</li> <li>– the date of shipment</li> <li>– a description of the sample</li> </ul> </li> <li>– packages the sample so that it does not leak, spill, or vaporize from its packaging.)</li> </ul> </li> </ul> <p>(NOTE: The above exemption does not apply if the laboratory determines that the waste is hazardous but the laboratory is no longer meeting any of the conditions stated in the first “Verify” statement in this checklist item.)</p> <p>Verify that, unless the following are met, persons who generate or collect samples for the purpose of conducting treatability studies handle the samples as hazardous waste unless one of the following is true:</p> <ul style="list-style-type: none"> <li>– the sample is being collected and prepared for transportation by the generator or sample collector</li> <li>– the sample is being accumulated or stored by the generator or sample collector prior to transportation to a laboratory or testing facility</li> <li>– the sample is being transported to the laboratory or testing facility for the purpose of conducting a treatability study.</li> </ul> <p>(NOTE: The exemption from handling treatability studies as hazardous waste is applicable to samples of hazardous waste being collected and shipped for the purpose of conducting treatability studies provided that:</p> <ul style="list-style-type: none"> <li>– the generator or sample collector uses (in “treatability studies”) no more than 10,000 kg of media contaminated with non-acute hazardous waste, 1000 kg of non-acute hazardous waste other than contaminated media, 1 kg of acute hazardous waste, 2500 kg of media contaminated with acute hazardous waste for each process being evaluated for each generated waste stream</li> <li>– the mass of each sample shipment does not exceed 10,000 kg; the 10,000 kg quantity may be all media contaminated with non-acute hazardous waste, or may include 2500 kg of media contaminated with acute hazardous waste, 1000 kg of hazardous waste, and 1 kg of acute hazardous waste</li> <li>– the sample is packaged so that it will not leak, spill, or vaporize from its packaging during shipment and one of the following requirements is met:</li> <li>– the transportation of each sample shipment complies with U.S. Department of Transportation (DOT), U.S. Postal Service (USPS), or any other applicable shipping requirements</li> </ul>

<p><b>SMALL QUANTITY GENERATORS (SQGs)</b></p> <p><b>HW.20. General</b></p> <p><b>HW.20.1.US.</b> Generators of more than 100 kg but less than 1000 kg of hazardous waste per month may qualify as an SQG that can accumulate hazardous waste onsite for 180 days without a permit if specific conditions are met (40 CFR 262.16(a), 262.16(b)(1), 262.16(b)(6)(i), 262.16(c) through 262.16(e), and 262.35) [Reviewed October 2001; Revised April 2005; Revised January 2017].</p>	<p>Verify that generators operating as SQGs generate:</p> <ul style="list-style-type: none"> <li>– less than 1,000 kilograms (2200 lbs) of non-acute hazardous waste in a calendar month</li> <li>– less than or equal to 1 kilogram (2.2 lbs) of acute hazardous waste</li> <li>– less than or equal to 100 kilograms (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 40 CFR 261.31 or 40 CFR 261.33(e) (see <a href="http://www.ecfr.gov">www.ecfr.gov</a> for the current list of acute hazardous waste).</li> </ul> <p>Verify that the onsite accumulation time does not exceed 180 days unless the generator has been granted an extension or received a shipment back as a rejected load (see below in this checklist item for details on handling rejected shipments).</p> <p>(NOTE: For an SQG, the accumulation start date begins when the first waste is poured/placed into the waste container, except for at satellite accumulation points.)</p> <p>(NOTE: The 180-day time period is extended to 270 days if the generator must transport its waste, or offer its waste for transportation over a distance of 200 mi or more. This extension does not apply if a TSDF is available within 200 mi and the SQG chooses to transport the waste to a farther away TSDF.)</p> <p>Verify that the quantity of hazardous waste accumulated onsite never exceeds 6000 kg (13,200 lb).</p> <p>Verify that every container is marked with:</p> <ul style="list-style-type: none"> <li>– the words “Hazardous Waste”</li> <li>– an indication of the hazards of the contents; examples include, but are not limited to: <ul style="list-style-type: none"> <li>– the applicable hazardous waste characteristic(s) (<i>i.e.</i>, ignitable, corrosive, reactive, toxic)</li> <li>– hazard communication consistent with the Department of Transportation requirements at 49 CFR 172 subpart E (labeling) or subpart F (placarding)</li> <li>– a hazard statement or pictogram consistent with the OSHA Hazard Communication Standard at 29 CFR 1910.1200</li> <li>– a chemical hazard label consistent with the NFPA code 704</li> </ul> </li> </ul>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>HW.20.2.US.</b> SQGs that generate, transport, or handle hazardous wastes must obtain an USEPA identification number and renotify EPA every 4 yr (40 CFR 262.18(a), 262.18(b), and 262.18(d)(1)) [Reviewed October 2001; Revised January 2017].</p> <p><b>HW.20.3.US.</b> An SQG must not offer its hazardous waste to transporters or to TSDFs that have not received an USEPA identification number (40 CFR 262.18(c))) [Reviewed</p>	<p>– the date on which each period of accumulation begins so that it is clearly visible for inspection.</p> <p>(NOTE: The container marking/labeling for preparing containers for transportation offsite are covered in checklist item HW.20.7.US.)</p> <p>Verify that the containers and the areas at which containers are stored meet the requirements outlined in the subsections pertaining to SQGs (see checklist items in the HW.30 and HW.40.)</p> <p>(NOTE: When an SQG exceeds the quantity generation or amount accumulation, it becomes subject to either Generator or TSDF requirements. When an SQG exceeds the storage time limitation, the SQG becomes subject to permitting requirements.)</p> <p>Verify that, upon receipt of a returned shipment, the generator signs one of the following:</p> <ul style="list-style-type: none"> <li>– Item 18c of the manifest, if the transporter returned the shipment using the original manifest</li> <li>– Item 20 of the manifest, if the transporter returned the shipment using a new manifest.</li> </ul> <p>Verify that the SQG does not place bulk or non-containerized liquid hazardous waste or hazardous waste containing free liquids (whether or not sorbents have been added) in any landfill.</p> <p>(NOTE: Prior to disposal in a hazardous waste landfill, liquids must meet additional requirements as specified in the requirements for hazardous waste landfill operation in 40 CFR 264.314 and 265.314.)</p> <p>Verify that the SQG has obtained an identification number.</p> <p>Verify that the correct identification number is used on all appropriate documentation (i.e., manifests).</p> <p>Verify that, starting in 2021, the SQG re-notifies EPA every 4 yr using EPA Form 8700-12 and submitting the form by 1 September of each year in which re-notifications are required.</p> <p>Verify that all transporters of hazardous waste of TSDFs have an USEPA identification number by examining records pertaining to these services.</p> <p>(NOTE: Examples of such records could include sales agreements or vendor contracts.)</p>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
<p><b>October 2001; Citation Revised January 2017].</b></p> <p><b>HW.20.4.US.</b> SQGs of hazardous waste are required to use manifests and maintain associated records (40 CFR 262.20, 262.22, 262.23, 262.27, 262.40(a), 262.40(d) 262.42(b), and 262.44) [Revised October 2001; Revised October 2002; Revised January 2003; Revised April 2005; Revised July 2005; Revised July 2010; Revised July 2011; Revised April 2014].</p>	<p>Verify that a SQG who transports, or offers for transport a hazardous waste for offsite treatment, storage, or disposal, or a treatment, storage, and disposal facility who offers for transport a rejected hazardous waste load, prepares a Manifest (OMB Control number 2050-0039) on EPA Form 8700-22, and, if necessary, EPA Form 8700-22A.</p> <p>(NOTE: The State may use a different form including the same information.)</p> <p>Verify that the generator designates on the manifest one facility that is permitted to handle the waste described on the manifest.</p> <p>(NOTE: A generator may also designate on the manifest one alternate facility which is permitted to handle his waste in the event an emergency prevents delivery of the waste to the designated facility.)</p> <p>(NOTE: The manifest consists of at least the number of copies which will provide the SQG, each transporter, and the owner or operator of the designated facility with one copy each for their records and another copy to be returned to the SQG.)</p> <p>Verify that the SQG:</p> <ul style="list-style-type: none"> <li>– signs the manifest certification by hand</li> <li>– obtains the handwritten signature of the initial transporter and date of acceptance on the manifest</li> <li>– retains one copy.</li> </ul> <p>Verify that a SQG who initiates a shipment of hazardous waste certifies the following statement in Item 15 of the uniform hazardous waste manifest: “I am a small quantity generator. I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford.”</p> <p>Verify that the SQG gives the transporter the remaining copies of the manifest.</p> <p>Verify that, for shipments of hazardous waste within the United States solely by water (bulk shipments only), the SQG sends 3 copies of the manifest dated and signed to the owner or operator of the designated facility or the last water (bulk shipment) transporter to handle the waste in the United States if exported by water.</p> <p>(NOTE: For shipments of hazardous waste within the United States solely by water (bulk shipments), copies of the manifest are not required for each transporter.)</p>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>Verify that, for rail shipments of hazardous waste within the United States which originate at the site of generation, the SQG sends at least 3 copies of the manifest dated and signed to one of the following:</p> <ul style="list-style-type: none"> <li>– the next non-rail transporter, if any</li> <li>– the designated facility if transported solely by rail</li> <li>– the last rail transporter to handle the waste in the United States if exported by rail.</li> </ul> <p>(NOTE: For shipments of hazardous waste to a designated facility in an authorized State which has not yet obtained authorization to regulate that particular waste as hazardous, the generator must assure that the designated facility agrees to sign and return the manifest to the generator, and that any out-of-state transporter signs and forwards the manifest to the designated facility.)</p> <p>Verify that, if the transporter is unable to deliver the hazardous waste to the designated facility or the alternate facility, the generator either designates another facility or instructs the transporter to return the waste.</p> <p>(NOTE: The requirement to prepare a manifest does not apply if:</p> <ul style="list-style-type: none"> <li>– the waste is reclaimed under contractual agreement and: <ul style="list-style-type: none"> <li>– the type of waste and frequency of shipments are specified in the agreement</li> <li>– the vehicle used to transport the waste to the recycling facility and to deliver regenerated material back to the generator is owned and operated by the reclaimer</li> </ul> </li> <li>– the generator maintains a copy of the reclamation agreement for at least 3 yr after termination of the agreement.)</li> </ul> <p>(NOTE: The requirement to use a manifest does not apply to the transport of hazardous wastes on a public or private right-of-way within or along the border of contiguous property under the control of the same person, even if such contiguous property is divided by a public or private right-of-way. The generator or transporter must comply with the requirements for transporters set forth in 40 CFR 263.30 and 263.31 (see checklist item HW.100.3.US) in the event of a discharge of hazardous waste on a public or private right-of-way.)</p> <p>Verify that a SQG who does not receive a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 60 days of the date the waste was accepted by the initial transporter submits a legible copy of the manifest, with some indication that the generator has not received confirmation of delivery, to the USEPA Regional Administrator for the Region in which the generator is located.</p> <p>(NOTE: The submission to USEPA need only be a handwritten or typed note on the manifest itself, or on an attached sheet of paper, stating that the return copy was not received.)</p>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>Verify that the generator keeps a copy of each signed manifest for 3 yr or until he receives a signed copy from the designated facility which received the waste.</p> <p>Verify that the returned signed copy is retained as a record for at least 3 yr from the date the waste was accepted by the initial transporter.</p> <p>(NOTE: Any requirement to keep or retain a copy of each manifest is satisfied by the retention of the facility's electronic manifest copies in its account on the e-Manifest system, provided that such copies are readily available for viewing and production if requested by any EPA or authorized state inspector. No owner or operator may be held liable for the inability to produce an electronic manifest for inspection if the owner or operator can demonstrate that the inability to produce the electronic manifest is due exclusively to a technical difficulty with the EPA system for which the owner or operator bears no responsibility.)</p> <p>(NOTE: Periods of retention for records may be extended automatically during the course of any unresolved enforcement action or at the request of the USEPA administrator.)</p> <p>Verify that, for rejected shipments of hazardous waste or container residues contained in non-empty containers that are returned to the SQG by the designated facility, the SQG:</p> <ul style="list-style-type: none"> <li>– signs either: <ul style="list-style-type: none"> <li>– Item 20 of the new manifest if a new manifest is used for the returned shipment</li> <li>– Item 18c of the original manifest if the original manifest is used for the returned shipment</li> </ul> </li> <li>– provides the transporter a copy of the manifest</li> <li>– within 30 days of delivery of the rejected shipment or container residues contained in non-empty containers, sends a copy of the manifest to the designated facility that returned the shipment to the generator</li> <li>– retains at the generator's site a copy of each manifest for at least 3 yr from the date of delivery.</li> </ul> <p>(NOTE: In the 7 February 2014 Federal Register the EPA authorized the use of electronic manifests (or e-Manifests) as a means to track off-site shipments of hazardous waste from a generator's site to the site of the receipt and disposition of the hazardous waste. EPA is establishing a national electronic manifest system (or e-Manifest system.) Upon completion of the e-Manifest system, the electronic manifest documents will be available to manifest users as an alternative to the paper manifest forms, to comply with federal and state requirements respecting the use of the hazardous waste manifest. Users who elect to opt out of the electronic submittal to the e-Manifest system may continue to use the paper manifest to track their shipments during transportation, which then will be submitted by the designated facility for inclusion in the e-Manifest system.)</p>

<p style="text-align: center;"><b>REGULATORY REQUIREMENTS</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS</b>  <b>December 2018</b></p>
<p><b>SMALL QUANTITY GENERATORS (SQGs)</b></p> <p><b>HW.35. Satellite Accumulation Points</b></p> <p><b>HW.35.1.US.</b> All SQGs may accumulate as much as 55 gal of non-acute hazardous waste and/or either 1 qt of liquid acute hazardous waste or 1 kg (2.2 lb) of solid acute hazardous waste in containers at or near any point of generation where wastes initially accumulate without complying with the requirements for central accumulation area storage if specific standards are met (40 CFR 262.15) <b>[Reviewed October 2001; Revised July 2004; Revised January 2017]</b>.</p>	<p>(NOTE: This type of storage is often referred to as a satellite accumulation area or a satellite accumulation point. If an SAA is not managed and operated according to the requirements of this checklist item, it must be considered a central accumulation area and meet the requirements in 40 CFR 262.16(b) (see checklist items in HW.30 and HW.40).)</p> <p>Verify that the satellite accumulation area is at or near any point of generation where wastes initially accumulate and is under the control of the operator of process generating the waste.</p> <p>(NOTE: In the Preamble to the November 2016 rule revision, page 85767 [Column 1], EPA stated that it would not consider a shed outside a building where the waste is initially generated to be “at or near the point of generation.” But, implementing regulatory agencies retain the authority in determining what they consider “at or near the point of generation.”)</p> <p>(NOTE: In the Preamble to the November 2016 rule revision, page 85767, there is a lengthy discussion about the meaning of the phrase “under the control of the operator.” EPA believes that there can be more than one operator per SAA over time. For example, as employees change shifts over the course of a day, the role of the operator can be transferred from one employee to another. Likewise, the EPA believes that there can also be more than one operator per SAA at the same time. For example, multiple operators may be running laboratory equipment in the same room and share hazardous waste containers located in a single SAA. However, the term operator does refer to an individual or individuals responsible for the equipment or processes generating the hazardous waste and does not refer to a company or entity as a whole. In relationship to what constitutes “control,” EPA stated that the intent of the term is to ensure that someone familiar with the operations generating the hazardous waste is aware of and able to attend to the operations, if needed, while also providing some measure of controlled access.)</p> <p>Verify that the satellite accumulation area does not exceed the following:</p> <ul style="list-style-type: none"> <li>– 55 gal of non-acute hazardous waste in containers</li> <li>– either 1 qt of liquid acute hazardous waste or 1 kg (2.2 lb) of solid acute hazardous waste in containers</li> </ul> <p>Verify that, if a container holding hazardous waste is not in good condition, or if it begins to leak, the generator immediately transfers the hazardous waste from this container to a container that is in good condition and does not leak, or immediately</p>

<p style="text-align: center;"><b>COMPLIANCE CATEGORY</b>  <b>HAZARDOUS WASTE MANAGEMENT</b>  <b>U.S. TEAM Guide</b></p>	
<p style="text-align: center;"><b>REGULATORY REQUIREMENTS</b></p>	<p style="text-align: center;"><b>REVIEWER CHECKS</b>  <b>December 2018</b></p>
<p><b>GENERATORS</b></p> <p><b>HW.75. Satellite Accumulation Points</b></p> <p><b>HW.75.1.US.</b> All LQGs may accumulate as much as 55 gal of non-acute hazardous waste and/or either 1 qt of liquid acute hazardous waste or 1 kg (2.2 lb) of solid acute hazardous waste in containers at or near any point of generation where wastes initially accumulate without complying with the requirements for central accumulation area storage if specific standards are met (40 CFR 262.15) [Reviewed October 2001; Revised July 2004; Revised January 2017].</p>	<p>(NOTE: This type of storage is often referred to as a satellite accumulation area or a satellite accumulation point. If an SAA is not managed and operating according to the requirements of this checklist item, it must be considered a central accumulation area and meet the requirements in 40 CFR 262.17(a) (see checklist items in HW.55, HW.60, HW.65, HW.70, HW.71, HW.72, HW.80, HW.83, HW.85, and HW.90).)</p> <p>Verify that the satellite accumulation area is at or near any point of generation where wastes initially accumulate and is under the control of the operator of process generating the waste.</p> <p>(NOTE: In the Preamble to the November 2016 rule revision, page 85767 [Column 1], EPA stated that it would not consider a shed outside a building where the waste is initially generated to be “at or near the point of generation.” But, implementing regulatory agencies retain the authority in determining what they consider “at or near the point of generation.”)</p> <p>(NOTE: In the Preamble to the November 2016 rule revision, page 85767, there is a lengthy discussion about the meaning of the phrase “under the control of the operator.” EPA believes that there can be more than one operator per SAA over time. For example, as employees change shifts over the course of a day, the role of the operator can be transferred from one employee to another. Likewise, the EPA believes that there can also be more than one operator per SAA at the same time. For example, multiple operators may be running laboratory equipment in the same room and share hazardous waste containers located in a single SAA. However, the term operator does refer to an individual or individuals responsible for the equipment or processes generating the hazardous waste and does not refer to a company or entity as a whole. In relationship to what constitutes “control,” EPA stated that the intent of the term is to ensure that someone familiar with the operations generating the hazardous waste is aware of and able to attend to the operations, if needed, while also providing some measure of controlled access.)</p> <p>Verify that the satellite accumulation area does not exceed the following:</p> <ul style="list-style-type: none"> <li>– 55 gal of non-acute hazardous waste in containers</li> <li>– either 1 qt of liquid acute hazardous waste or 1 kg (2.2 lb) of solid acute hazardous waste in containers</li> </ul> <p>Verify that, if a container holding hazardous waste is not in good condition, or if it begins to leak, the generator immediately transfers the hazardous waste from this</p>

<b>COMPLIANCE CATEGORY</b> <b>HAZARDOUS WASTE MANAGEMENT</b> <b>U.S. TEAM Guide</b>	
<b>REGULATORY REQUIREMENTS</b>	<b>REVIEWER CHECKS</b> <b>December 2018</b>
	<p>container to a container that is in good condition and does not leak, or immediately transfers and manages the waste in a compliant central accumulation area (i.e., 90-day storage area).</p> <p>Verify that the generator uses containers made of or lined with materials that will not react with, and are otherwise compatible with, the hazardous waste to be accumulated, so that the ability of the container to contain the waste is not impaired.</p> <p>Verify that incompatible wastes, or incompatible wastes and materials are not placed in the same container unless an extension has been granted by the Regional Administrator.</p> <p>Verify that hazardous waste is not placed in an unwashed container that previously held an incompatible waste or material unless an extension has been granted by the Regional Administrator</p> <p>Verify that a container holding a hazardous waste that is incompatible with any waste or other materials accumulated nearby in other containers is separated from the other materials or protected from them by any practical means.</p> <p>Verify that satellite accumulation area containers holding hazardous waste are closed at all times during accumulation except in one of the following situations:</p> <ul style="list-style-type: none"> <li>– when adding, removing, or consolidating waste</li> <li>– when temporary venting of a container is necessary on one of the following situations: <ul style="list-style-type: none"> <li>– for the proper operation of equipment</li> <li>– to prevent dangerous situations, such as build-up of extreme pressure.</li> </ul> </li> </ul> <p>(NOTE: In the Preamble to the November 2016 rule revision, page 85764, EPA stresses it does not intend to create a loophole to the closed container requirement or to allow intentional evaporation of hazardous waste. Rather, the intent of the flexibility is to address the limited cases in which strict adherence to the container closure requirements could substantially increase a risk of a hazardous waste incident rather than decrease it. The flexibility for containers to remain open in specific situations applies only to containers in SAAs.)</p> <p>Verify that containers at a satellite accumulation area are marked:</p> <ul style="list-style-type: none"> <li>– with the words “Hazardous Waste”</li> <li>– with an indication of the hazards of the contents; examples include, but are not limited to: <ul style="list-style-type: none"> <li>– the applicable hazardous waste characteristic(s) (i.e., ignitable, corrosive, reactive, toxic)</li> <li>– hazard communication consistent with the DoT requirements at 49 CFR 172 subpart E (labeling) or subpart F (placarding)</li> </ul> </li> </ul>
